## **Preliminary Economic Assessment on Treaty Creek Project Launched**

**Victoria, British Columbia, Canada, February 25, 2026.** Teuton Resources Corp. (“Teuton” or “the Company”) (“TUO”-TSX-V) (“TEUTF”- OTCQB) is pleased to report that Joint Venture (“JV”) partner Tudor Gold Corp. (“Tudor Gold” or “Tudor”) has, in a news release dated February 25, 2025, announced that it has retained Fuse Advisors Inc. of Vancouver, British Columbia, to prepare a preliminary economic assessment (“PEA”) on placing the Treaty Creek Project’s Goldstorm Deposit in production. Tudor Gold owns 80% of the Treaty Creek Project and is Operator, while Teuton has a 20% carried interest along with certain net smelter return interests.

The Tudor Gold February 25, 2025 news release contains the following:

### *PEA Terms of Reference*

Fuse Advisors Inc. (“Fuse”) has been retained to prepare a PEA examining the potential for an underground mining operation focused on the higher-grade gold mineralization at Treaty Creek’s Goldstorm Deposit outlined in the 2026 Mineral Resource estimate (“MRE”) for the Goldstorm Deposit (*see below and Tudor’s news release dated January 22, 2026*) [See also Teuton’s news release dated January 22, 2026). Initially, Fuse is tasked with developing an underground mine plan producing up to 10,000 tonnes per day using bulk-tonnage mining techniques with a target of defining mineralized material of approximately 50 million to 100 million tonnes grading in excess of 2.5 grams per tonne gold. Following development of a mine plan, Fuse will utilize the final estimated metallurgical recoveries from the metallurgical program currently under way to develop a flowsheet and economics for the project.

### *Metallurgical Program*

The metallurgical program initiated in late 2025 is currently progressing with composite samples sourced from within and adjacent to the higher-grade Upper, Central, and Lower zones of the Goldstorm Deposit. The program is primarily focused on producing a sulphide gold concentrate, while also evaluating the potential to produce both a copper concentrate and a sulphide gold concentrate through a sequential flotation process.

Preliminary metallurgical testwork indicates that a sequential copper–pyrite flotation circuit has the potential to generate marketable copper and sulphide gold concentrates with target grades of 15 to 25 g/t gold and 26 to 28% copper. Anticipated overall recoveries are estimated to range from 80% to 90% for gold, 75% to 85% for silver, and 75% to 85% for copper.

“The recently announced 2026 Mineral Resource estimate for the Goldstorm Deposit confirmed that lenses of higher-grade gold, silver and copper mineralization are hosted within the broader envelope of bulk tonnage mineralization,” said Joe Ovsenek, President and CEO of Tudor Gold. “We believe that Treaty Creek can be advanced as a mid-size underground operation initially focused on mining these lenses of higher-grade mineralization, then scaled up to process additional mineralization depending on metals prices and as capital costs are paid off. Staged

development de-risks the project with reduced upfront development costs, reduced development risk, less environmental disturbance and faster cash flow."

### *Proposed Timing*

Initial results from the metallurgical program are expected late this quarter. The PEA is targeted for completion in the third quarter of this year. Additional information will be provided as it becomes available with respect to a preliminary economic assessment.

### *Treaty Creek 2026 Mineral Resource Estimate*

The 2026 MRE (see *Tudor's news release dated January 22, 2026*) [See also Teuton's news release dated January 22, 2026] was prepared by Garth Kirkham, P.Geo. of Kirkham Geosystems Ltd. ("KGL") based on 359 diamond drill holes for a total of 191,466 meters, which includes 332 drill holes completed by the Company [Tudor] between 2016 and 2025 and 27 drill holes completed by prior Treaty Creek Project operators between 2007 and 2009. The 2026 MRE is reported at a NSR cut-off value of US\$50 per tonne. A NI 43-101 Technical Report will be prepared and posted on [www.tudor-gold.com](http://www.tudor-gold.com) and the Company's [Tudor's] profile on [www.sedarplus.com](http://www.sedarplus.com) within 45 days of January 22, 2026.

**Table 1: 2026 Treaty Creek Project Mineral Resource Estimate<sup>(1) - (11)</sup>**

| <b>Mineral Resource Classification</b> | <b>Tonnes (M)</b> | <b>Gold Grade (g/t)</b> | <b>Silver Grade (g/t)</b> | <b>Copper Grade (%)</b> | <b>Gold (M oz)</b> | <b>Silver (M oz)</b> | <b>Copper (M lbs)</b> |
|----------------------------------------|-------------------|-------------------------|---------------------------|-------------------------|--------------------|----------------------|-----------------------|
| Indicated                              | 912.3             | 0.85                    | 5.07                      | 0.15                    | 24.9               | 148.7                | 3,048.0               |
| Inferred                               | 86.1              | 1.43                    | 5.22                      | 0.17                    | 4.0                | 18.6                 | 327.7                 |

Notes:

The Mineral Resource statement is subject to the following:

(1) The 2026 MRE has been prepared by Garth Kirkham, P.Geo., an Independent Qualified Person as defined by NI 43-101.

(2) The 2026 MRE has been estimated in accordance with Canadian Institute of Mining and Metallurgy and Petroleum ("CIM") definitions, as required under NI43-101.

(3) The 2026 MRE is reported on a 100% ownership basis.

(4) The 2026 MRE was prepared for a potential underground mining scenario evaluated within block cave mining shapes and constrained by geological and grade-continuity-defined solids using a NSR cut-off value of US\$50/tonne. The NSR value was developed based on initial metallurgical testwork results combined with the Company's [Tudor] and its consultants' knowledge of potential smelter terms, royalities and onsite and offsite costs. The NSR calculation assumes a payable gold-silver-copper concentrate will be generated. The NSR calculation assumes metal prices of US\$2925/ounce gold, US\$34.00/ounce silver and US\$4.25/pound copper; metallurgical recoveries of 90% for gold, 80% for silver and 80% for copper; underground mining costs of C\$8.50/tonne, processing costs of C\$38.50/tonne and G&A of C\$1.50/tonne; a CAD:USD exchange rate of 0.72 and rounded to US\$50.

(5) The 2026 MRE is reported without applying mining dilution, mining losses, or process losses.

(6) The 2026 MRE is constrained within underground shapes based on reasonable prospects of economic extraction, in accordance with NI43-101. Reasonable prospects for economic extraction were met by applying mining shapes, ensuring grade continuity above the cut-off value, and by excluding non-mineable material prior to reporting.

(7) Mineral resources are classified as Indicated, and Inferred based on geological confidence and continuity, spacing of drill holes, and data quality.

(8) The effective date of the 2026 MRE is November 30, 2025.

(9) Mineral Resources are not Mineral Reserves and do not have demonstrated economic viability. The estimate of Mineral Resources may be materially affected by environmental, permitting, legal, title, taxation, sociopolitical, marketing, or other relevant issues.

(10) The Inferred Mineral Resource in this estimate has a lower level of confidence than that applied to an Indicated Mineral Resource and must not be converted to a Mineral Reserve. It is reasonably expected that the majority of the Inferred Mineral Resource could be upgraded to an Indicated Mineral Resource with continued exploration.

(11) All figures are rounded to reflect the relative accuracy of the estimate and therefore numbers may not appear to add precisely.

#### *Treaty Creek Project 2026 Mineral Resource Estimate Higher-Grade Sensitivities*

In addition to the base case NSR cut-off value of \$50 per tonne, NSR cut-off values of \$125 per tonne and \$175 per tonne are reported to demonstrate the potential effect on tonnage, grade and metal content (Table 2). Higher NSR cut-off value sensitivities demonstrate an increase in grade and concomitant decrease in tonnage. The higher cut-off value sensitivities will be evaluated for potential to support an underground mining operation using conventional mining methods. The higher NSR cut-off value sensitivities are for comparison purposes only and should not be considered Mineral Resources.

**Table 2: 2026 Treaty Creek Project Mineral Resource Estimate Higher-Grade Sensitivities<sup>(1)</sup>**

| <b>NSR Cut-Off Value</b> | <b>Mineral Resource Classification</b> | <b>Tonnes (M)</b> | <b>Gold Grade (g/t)</b> | <b>Silver Grade (g/t)</b> | <b>Copper Grade (%)</b> | <b>Gold (M oz)</b> | <b>Silver (M oz)</b> | <b>Copper (M lbs)</b> |
|--------------------------|----------------------------------------|-------------------|-------------------------|---------------------------|-------------------------|--------------------|----------------------|-----------------------|
| <b>US\$125/tonne</b>     | Indicated                              | 102.1             | 1.78                    | 9.19                      | 0.27                    | 5.8                | 30.2                 | 607.2                 |
|                          | Inferred                               | 21.8              | 3.64                    | 10.22                     | 0.14                    | 2.6                | 7.2                  | 67.8                  |
| <b>US\$175/tonne</b>     | Indicated                              | 45.1              | 2.33                    | 9.27                      | 0.17                    | 3.4                | 13.4                 | 167.3                 |
|                          | Inferred                               | 18.3              | 4.02                    | 11.17                     | 0.16                    | 2.4                | 6.6                  | 65.3                  |

(1) See notes to Table 1 above.

#### **Qualified Persons**

The 2026 MRE was prepared by Garth Kirkham, P.Geo. of KGL, who is an independent Qualified Person, as defined by NI 43-101 and responsible for the 2026 MRE. Mr. Kirkham has reviewed and approved the technical contents of this news release relating to the 2026 MRE.

Ken McNaughton, M.A.Sc., P.Eng., Vice President, Development, Tudor Gold, is the Qualified Person, as defined by National Instrument 43-101, responsible for the PEA. Mr. McNaughton has reviewed, verified and approved the scientific and technical information in this news release.

\* \* \*

D. Cremonese, P. Eng., is the Qualified Person for Teuton Resources. Technical data presented in today's Teuton news release is consistent with that presented in the Tudor Gold news release dated February 25, 2026. As Mr. Cremonese is President and also director of Teuton, he is not independent of it.

### **About Treaty Creek**

Teuton was the original staker of the Treaty Creek property, host to the large Goldstorm deposit, assembling the core land position in 1984-5. It presently holds a 20% carried interest in the Treaty Creek Project (Tudor Gold is responsible for paying all exploration costs up until such time as a production decision is made and owns an 80% interest). Additionally, Teuton owns a 0.98% Net Smelter Royalty in the Goldstorm deposit area as well as in the northern portion of the Perfectstorm zone; within the southern portion of the Perfectstorm zone, Teuton owns a 0.49% NSR with an option to increase that to 1.49% by paying \$1 million to the current owner. It also owns numerous additional royalty interests within the Sulphurets Hydrothermal system on formerly 100%-owned properties such as the King Tut, Tuck, High North, Orion, Delta and Fairweather properties (King Tut and Tuck now owned by Newmont Mining; High North, Orion, Delta and Fairweather properties now owned by Goldstorm Metals).

The Treaty Creek Project not only contains the Goldstorm Deposit (a large gold-copper porphyry system) it also hosts several other prospective zones of mineralization lying along a north-northeast trending axis following the trace of the Sulphurets thrust fault. This thrust fault is spatially related to all of the porphyry deposits on the neighbouring KSM property (owned by Seabridge Gold) as well as the Treaty Creek property.

### **About Teuton**

Teuton owns interests in more than twenty-three properties in the prolific "Golden Triangle" area of northwest British Columbia and was one of the first companies to adopt what has since become known as the "prospect generator" model. This model minimizes share equity dilution while at the same time maximizing opportunity. Earnings provided from option payments received, both in cash and in shares of the optionee companies over the past 9 years, has provided Teuton with substantial income.

### **ON BEHALF OF THE BOARD OF DIRECTORS OF TEUTON RESOURCES:**

"Dino Cremonese"

**Dino Cremonese, P. Eng.,**

**President and Chief Executive Officer**

***Cautionary Statements regarding Forward-Looking Information***

*This news release contains "forward-looking information" within the meaning of applicable Canadian securities legislation. "Forward-looking information" includes, but is not limited to, statements with respect to the activities, events or developments that the Company expects or anticipates will or may occur in the future, including the completion and anticipated results of planned exploration activities. Generally, but not always, forward-looking information and statements can be identified by the use of words such as "plans", "expects", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "believes" or the negative connotation thereof or variations of such words and phrases or state that certain actions, events or results "may", "could", "would", "might" or "will be taken", "occur" or "be achieved" or the negative connotation thereof.*

*Such forward-looking information and statements are based on numerous assumptions, including among others, that the Company's planned exploration activities will be completed in a timely manner. Although the assumptions made by the Company in providing forward-looking information or making forward-looking statements are considered reasonable by management at the time, there can be no assurance that such assumptions will prove to be accurate.*

*There can be no assurance that such statements will prove to be accurate and actual results and future events could differ materially from those anticipated in such statements. Important factors that could cause actual results to differ materially from the Company's plans or expectations include risks relating to the actual results of current exploration activities, fluctuating gold prices, possibility of equipment breakdowns and delays, exploration cost overruns, availability of capital and financing, results of negotiations, general economic, market or business conditions, regulatory changes, timeliness of government or regulatory approvals, the outcome of litigation and other risks detailed herein and from time to time in the filings made by the Company with securities regulators.*

*Although the Company has attempted to identify important factors that could cause actual results to differ materially from those contained in the forward-looking information or implied by forward-looking information, there may be other factors that cause results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking information and statements will prove to be accurate, as actual results and future events could differ materially from those anticipated, estimated or intended. Accordingly, readers should not place undue reliance on forward-looking statements or information.*

*The Company expressly disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise except as otherwise required by applicable securities legislation.*

*Certain statements contained in this press release constitute forward-looking information. These statements relate to future events or future performance. The use of any of the words "could", "intend", "expect", "believe", "will", "projected", "estimated" and similar expressions and statements relating to*

matters that are not historical facts are intended to identify forward-looking information and are based on the Company's current belief or assumptions as to the outcome and timing of such future events. Actual future results may differ materially.

All statements relating to future plans, objectives or expectations of the Company are forward-looking statements that involve various risks and uncertainties. There can be no assurance that such statements will prove to be accurate and actual results and future events could differ materially from those anticipated in such statements. Important factors that could cause actual results to differ materially from the Company's plans or expectations include risks relating to the actual results of current exploration activities, fluctuating gold prices, possibility of equipment breakdowns and delays, exploration cost overruns, availability of capital and financing, general economic, market or business conditions, regulatory changes, timeliness of government or regulatory approvals and other risks detailed herein and from time to time in the filings made by the Company with securities regulators. The Company expressly disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise except as otherwise required by applicable securities legislation.

*The Company expressly disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise except as otherwise required by applicable securities legislation.*
