OnSat.net Canada Inc.

FOR IMMEDIATE RELEASE

March 16, 2000

CDNX: "ONS"

ONSAT AND Wi-LAN TO DELIVER INTEGRATED SATELLITE BASED BROADBAND WIRELESS SERVICE

Joint Technology & Marketing Initiative Announced

Calgary, AB – OnSat.net Canada Inc. ("OnSat," the "Company") ("ONS":CDNX) is pleased to announce that it has entered into an agreement with Wi-LAN Inc. ("WIN":TSE), a leading innovator of wireless data communications products and technology and OnSat Network Communications, Inc. (an affiliated company that owns and operates the Company's satellite hub facilities in Salt Lake City, Utah).

OnSat is a satellite based wireless broadband service provider deploying satellite service and acting as an integrator for customers who would like to deploy their own broadband wireless services. With the OnSat/Wi-LAN integrated solution, customers will now have both the "first 47,000 mile" backbone connection through OnSat's satellite service *and* the "last 5 miles" from their satellite earth stations to many individual locations using Wi-LAN products.

According to David Molinaro, President and CEO for OnSat, "This agreement is a significant advance for everyone. Our customers now will have complete flexibility to have an end-to-end wireless connection to the Internet, voice and video services from any building in roughly a 15 mile-wide area and use only one satellite earth station. They'll save money and get a better system."

The Wi-LAN products currently provide from 4.5 mbs up to 30 mbps connection speed using Wi-LAN's patented W-OFDM technology and spread-spectrum technology that is a natural fit with the OnSat satellite connectivity system.

The agreement targets aggressive deployment of combined satellite and Wi-LAN service solutions in North, Central and South America, the Caribbean and Hawaii but also provides for geographic expansion to other areas of the world as quickly as OnSat's satellite coverage expands.

"OnSat is applying the combined reach, speed and cost advantages of their satellite product and Wi-LAN's broadband wireless access products to address the service needs of a targeted segment.," says Bill Hews Wi-LAN President and COO. "This agreement adds an important vertical solution to the range of applications for our products."

OnSat.net Canada Inc. intends to become a premier supplier of Internet access and related communication services across Canada. The Company has been established to provide cost-effective broadband access to business customers located in areas that are under served by traditional communication technologies. OnSat uses advanced satellite technologies and unique Internet access systems to provide complete bi-directional satellite-based Internet access solutions for Internet Service Providers, Community Access (schools, churches, libraries) and Commercial Facilities (hotels, apartments, etc.). OnSat continues to develop its business plans and has been advancing its business opportunities with potential customers and strategic alliance partners. Detailed information about OnSat can be found on the Web at www.onsatnet.com.
