

News Release

IDENTILLECT LAUNCHING SECURE SCAN TECHNOLOGY FOR MICROSOFT® OFFICE365™ CLOUD PLATFORM

Latest Feature Removes the Human Error in Sending Unsecured Emails

Irvine, California— June 13, 2017 – Identillect Technologies Corp. (the “Company” or “Identillect”) (TSX-V:ID | OTCQB: IDTLF | Frankfurt: 8ID) a trusted leading provider of SaaS email security, is pleased to announce the pending launch of Secure Scan technology for Delivery Trust™ email security plugins for O365™ users.

Secure Scan technology coupled with Delivery Trust™ email security eliminates the ability for users to inadvertently send out sensitive information in an unsecured message.

Identillect launched Secure Scan in 2016 as a pilot program specific to their Outlook plugin and received tremendous user feedback.

When it comes to data breaches, human error accounted for roughly 25% of the recorded incidents for 2016 in the US. The implementation of intuitive technologies such as Identillect’s Secure Scan help drastically reduce the possibility of employees unintentionally exposing sensitive data in their email communications by scanning the message and any attachments for any sensitive content and requiring security be applied when matches are identified. Organizations can implement all the most advanced security available, yet if there is no method to ensure it is utilized when most needed, it can all count for nothing.

Identillect CEO Todd Sexton states, “The resounding feedback we received from clients upon launching Secure Scan for our Outlook users in 2016 made it clear there is a very real need for this intuitive security technology across the many other platforms. The growing trend of organizations migrating to cloud technologies, such as O365, opens tremendous opportunities for growth as Identillect continues to develop security services for this expanding market. Secure Scan is one of the multiple initiatives Identillect has developed and continues to develop to make compliance and security simple, automated and intuitive.”

About Identillect
