News Release

Identillect Incorporates Multi-Factor Authentication with Delivery Trust

Identillect continually advances the security of its platform with multi-factor authentication for login and recipient emails

Irvine, Calif., June 4th, 2019 -- Identillect Technologies Corp. (the "Company" or "Identillect") (TSX-V:ID), a leading provider of email security announced today its deployment of multi-factor authentication for user login verification as well as recipient authentication.

As cyber-crime continues to surge the security measures organizations need to put in place to advance safety for clients must also grow. Cyber-security organizations must continually increase safety measures ensuring the most up-to-date systems available. Identillect has made many advances to ensure their clients have the latest in cyber-protection from their advanced blockchain technology, administrative controls, SSO, and now multi-factor authentication. Multi-Factor greatly reduces the ability for one's identity to be compromised and provides advanced protections for the sender and receiver of emails.

Organizations constantly are increasing security measures to enhance protection for their business and clients as cyber-crime escalates. As regulatory demands create greater restrictions on organizations from a state, federal, and industry perspective businesses must update their security protocols. In a recent survey of attendees at the 2017 Black Hat Conference, conducted by Thycotic, "68% say multi-factor authentication and encryption are the biggest hacker obstacles." This is the main reason Identillect continues to meet and exceed the highest levels of protection for their clients.

Identillect's CEO Todd Sexton stated, "As many industries required increased levels of protection Identillect advances security measures to ensure they are meeting the growing demands of the multitude of industries they serve. Identillect remains one of the simplest security systems on the markets meeting the most cutting-edge security requirements of many industries."

About Identillect

Identillect Technologies is the leading provider of email encryption service Delivery Trust®, empowering enterprises of all sizes to protect their business and their client's critical information against cyber security attacks.

News Release

Delivery Trust® is an award-winning, multi-platform plug-in, which gives users complete control of their emails, for one low price. One simple integration complies with all regulations and most importantly provides peace of mind.
