Annual Report 2024

Consolidated Financial Statements

Parent Company's Draft Financial Statements

This document is an additional version of the official version compliant with Delegated Regulation (EU) 2019/815 of the European Commission (ESEF Regulation – European Single Electronic Format) published on the website at group.intesasanpaolo.com.

This is an English translation of the original Italian document "Bilanci 2024". In cases of conflict between the English language document and the Italian document, the interpretation of the Italian language document prevails. The Italian original is available on group.intesasanpaolo.com.

This document contains certain forward-looking statements, projections, objectives, estimates and forecasts reflecting the Intesa Sanpaolo management's current views with respect to certain future events. Forward-looking statements, projections, objectives, estimates and forecasts are generally identifiable by the use of the words "may," "will," "should," "plan," "expect," "anticipate," "estimate," "believe," "intend," "project," "goal" or "target" or the negative of these words or other variations on these words or comparable terminology. These forward-looking statements include, but are not limited to, all statements other than statements of historical facts, including, without limitation, those regarding Intesa Sanpaolo's future financial position and results of operations, strategy, plans, objectives, goals and targets and future developments in the markets where Intesa Sanpaolo participates or is seeking to participate.

Due to such uncertainties and risks, readers are cautioned not to place undue reliance on such forward-looking statements as a prediction of actual results. The Intesa Sanpaolo Group's ability to achieve its projected objectives or results is dependent on many factors which are outside management's control. Actual results may differ materially from (and be more negative than) those projected or implied in the forward-looking statements. Such forward-looking information involves risks and uncertainties that could significantly affect expected results and is based on certain key assumptions.

All forward-looking statements included herein are based on information available to Intesa Sanpaolo as of the date of approval of this document. Intesa Sanpaolo undertakes no obligation to update publicly or revise any forward-looking statement, whether as a result of new information, future events or otherwise, except as may be required by applicable law. All subsequent written and oral forward-looking statements attributable to Intesa Sanpaolo or persons acting on its behalf are expressly qualified in their entirety by these cautionary statements.

Letter from the Chair

Distinguished Shareholders,

The year just ended was particularly challenging and marked by events, some expected and some unforeseen, that had a significant impact on the economic landscape and will continue to shape its evolution in the years to come.

In 2024, the inflation pressures from earlier periods subsided. Global economic growth showed signs of stability, but with indications of a slowdown emerging in Europe and weaker performance for the manufacturing industry than originally forecast.

On the geopolitical front, instability factors have led to abrupt changes, and their future development remains uncertain. These include the effects of the results of the US elections on the international order, political instability in several key European Union countries, escalation of the conflict in the Middle East and the risk of its spread, the downfall of the Assad regime in Syria, and the mounting concerns stemming from the war in Ukraine, all contributing to a climate of widespread uncertainty. Vulnerabilities emerged in the Western economies, together with potential instability of international relations, which is making them more fragile and volatile in the face of changes in the global landscape.

In a challenging and rapidly shifting global economic scenario, the Italian economy showed considerable resilience and stability, partly due to the execution of the projects envisaged by the National Recovery and Resilience Plan (NRRP).

In the period from 2010 to 2019, Italy’s GDP grew less than the Eurozone average. However, post-Covid, from 2021 to 2024, Italy’s cumulative growth was higher than the European average and that of Germany.

A moderate acceleration in GDP is forecast for 2025, with growth slightly outpacing the previous year, supported by increased consumption. Nevertheless, it is shaping up to be a challenging year, due to the numerous threats that could erode the certainties built over decades of globalisation and cooperation. The shift in international geopolitical balances, coupled with potential trade war escalations between the major economic blocs, could have adverse impacts on economic growth and inflation, with potentially harmful effects on the most vulnerable sections of society and the transition to a sustainable economy.

The shifting landscape, the increase in associated risks, the weakness of European industry, and the accumulated delays in the technology sector are critical challenges for the European Union and for the revival of its role on the international stage. Only a political and economic strengthening of the Union will allow it to speak with one voice at international forums, secure the same opportunities as other global players, and stimulate the public and private investments necessary for the modernisation of energy, transport, and telecommunications infrastructures. Only then will it be able to face new challenges, not just as a bystander, but as a leading actor.

In an era of growing uncertainty and fast-paced technological change, it is crucial to develop players in the banking sector capable of competing, not only with the US and Chinese credit giants, but also with international digital challengers such as big tech firms, fintechs, and native digital banks.

In 2024, Intesa Sanpaolo strengthened its competitive position by pursuing an internal growth strategy, achieving – and in several cases exceeding – the targets set in the 2022-2025 Business Plan. Intesa Sanpaolo’s process of transformation into an efficient and modern bank with a low-risk profile and a strong commitment to environmental and social issues has enabled us to achieve excellent results, including becoming the largest bank in the Eurozone by market capitalisation by the end of 2024, exceeding the 69 billion euro mark.

Technology investments enabled the strengthening of the digital bank Isybank and the implementation of the Group’s digital transformation, effectively integrating cloud technology into the Bank’s business model. The use of technology improved the customer offering through omnichannel services, sustained profitability, and enhanced efficiency, delivering significant savings that will continue in the coming years.

The Group’s strong earnings allowed it to provide substantial resources to the most vulnerable sectors of society and to combat poverty through various Group functions and projects, such as Allowance for Charitable, the Social and Cultural Contributions, which donated 22.9 million euro in 2024, and the “Programme to Combat Inequalities”, which will reach 1.5 billion euro by 2027.

In the year just ended, Intesa Sanpaolo strengthened its Wealth Management, Protection & Advisory business model by bringing the product factories under a single governance. In particular, the Group’s commitment to protecting vulnerable groups such as youth, families, and the elderly, was reaffirmed with the restructuring of the insurance segment, which led to the creation of Intesa Sanpaolo Protezione, a company operating in the non-life and health insurance sector, committed to promoting insurance awareness and understanding in our communities, which are increasingly affected by natural disasters.

In practical terms, Intesa Sanpaolo provided a real contribution to society in the areas of social inclusion, environmental awareness, and cultural enrichment through its eponymously-named project, in addition to promoting quality education and spreading financial literacy, also through the Museo del Risparmio (Museum of Saving), which reached over 100,000 users in 2024.

The excellent results achieved so far have been possible thanks to the dedication and professionalism of Intesa Sanpaolo's people and calm and constructive dialogue with the unions on key issues such as training, professional growth, and generational change. The well-being of our people is a key element of our Business Plan and is evidenced by the careful monitoring of the commitments made, particularly in terms of equity and inclusion. In terms of gender equity, several initiatives have ensured an equal presence of men and women in new senior leadership appointments. Thanks to these initiatives and the positive atmosphere within our company, the internal satisfaction index has reached its highest level in the past ten years. The Bank has received significant accolades, including being named Top Employer 2025 in Europe and Italy, the leading bank for diversity and inclusion in the 2024 FTSE Diversity and Inclusion Index – Top 100, and the best company in Italy for career development and professional growth, according to the LinkedIn Top Companies 2024 ranking.

Our commitment to ESG, also demonstrated by the establishment of a dedicated governance area, is recognised at international level. Intesa Sanpaolo ranks among the top 100 most sustainable companies – the only bank in Italy, the first in Europe, and the second in the world – in the Corporate Knights ranking of the 100 best listed companies, and for the fourteenth year running it is the only Italian bank in the Dow Jones World and Europe Sustainability Indices (recently renamed Dow Jones Best-in-Class World and Europe Indices). The Bank's commitment is also reaffirmed through support for the energy and digital transition of companies, with initiatives complementary to government-provided funds, such as the introduction of the "Your Future is Our Business" programme, which makes 120 billion euro available until 2026.

For the first time, the 2024 Annual Report includes the Consolidated Sustainability Statement, marking a milestone in Intesa Sanpaolo's history, as it evidences the Bank's commitments to truly embedding the green and digital transition into the Group's strategies. It also underscores the close connection between the Bank's excellent financial and operating results and the well-being of its people, customers, and the local communities and areas it serves.

Intesa Sanpaolo will address the challenges of 2025 from a position of strength and leadership, aware of its responsibilities as the Nation's leading bank. Chief among these is the protection of household savings and support for businesses in both domestic and international markets.

Accordingly, the Bank will continue to operate prudently, by managing emerging risks, focusing on credit quality, and maintaining high capital ratios and a strong liquidity position.

For 2024, in consideration of a Group consolidated net income of 8,666 million euro and a Parent Company net income of around 5,604 million euro, a proposal is being made to the Ordinary Shareholders' Meeting to distribute cash dividends for a total of 6,067 million euro, which, taking into account the interim dividend of over 3,022 million euro paid last November, corresponding to a unit dividend of 17 euro cents, results in a proposal to distribute a remaining dividend of over 3,044 million euro, corresponding to a unit dividend of 17.1 euro cents. The total proposed dividend per share for 2024 is therefore 34.1 euro cents.

In addition, a buy-back of own shares for annulment is being proposed for 2 billion euro, already authorised by the ECB, to be launched in June 2025, subject to approval from the Shareholders' Meeting, as a result of which shareholders, without having to make any additional investment, will see their share of Intesa Sanpaolo's total dividends increase.

Gian Maria Gros-Pietro

Intesa Sanpaolo Group Report on operations and consolidated financial statements

Introduction

As set forth by Legislative Decree 38 of 28 February 2005, the Intesa Sanpaolo Group's consolidated financial statements have been prepared in compliance with the IAS/IFRS issued by the International Accounting Standards Board (IASB) and the related interpretations of the International Financial Reporting Standards - Interpretations Committee (IFRS-IC), endorsed by the European Commission, as provided for by EC Regulation 1606 of 19 July 2002.
The consolidated financial statements as at 31 December 2024 have been prepared based on the "Instructions for the preparation of the separate and consolidated financial statements of banks and financial companies, which are parent companies of banking groups" published by the Bank of Italy, in the exercise of powers set forth by Article 43 of Legislative Decree 136/2015, with Regulation of 22 December 2005 issuing Circular 262/2005 as amended. These Instructions set out compulsory financial statement formats and the related methods of compilation, as well as the content of the Notes to the consolidated financial statements.
In particular, these 2024 consolidated financial statements have been prepared according to the formats and the compilation rules contained in the 8th update of 17 November 2022, which amended Circular 262 to take account of the new IFRS 17 Insurance Contracts, which entered into force on 1 January 2023 and was applied for the first time from the financial statements as at 31 December 2023. For the preparation of the 2024 consolidated financial statements, the provisions introduced by IVASS Order no. 152 of 26 November 2024 regarding insurance contracts also applied. Indeed, IVASS provisions are directly applicable pursuant to Bank of Italy Circular 262/2005 for aspects related to insurance contracts pertaining to consolidated insurance companies.

The consolidated financial statements are made up of the Balance sheet, the Income statement, the Statement of comprehensive income, the Changes in shareholders' equity, the Statement of cash flows, the Notes to the consolidated financial statements and the related comparative information. They are accompanied by the Directors' Report on operations, both at overall level and within the various sectors in which the Group operates, on the economic results achieved and on the Group's balance sheet and financial position.
The Report on operations contains financial information taken from or attributable to the consolidated financial statements, as well as other information – for example, figures on quarterly trends, and certain Alternative Performance Measures – not directly attributable to the consolidated financial statements. See the chapter "Alternative Performance Measures" of the Report for the definition of these measures and their calculation methods, confirming that, with specific regard to the military conflict between Russia and Ukraine, in line with the ESMA guidance, no new measures have been added, nor have any changes been made to the measures used.
In view of the ongoing Russian-Ukrainian military conflict, these consolidated financial statements include a disclosure that restates and updates the information previously provided during the year. In particular, the introductory chapter of the Report on operations contains a specific paragraph outlining the risk management actions along with the Intesa Sanpaolo Group's approach regarding the main related accounting aspects. These are further discussed in the Notes to the consolidated financial statements, Part E, credit risk, where details are provided of the existing exposures and the valuation choices adopted.

In support of the comments on results for the year, the Report on operations also provides a reclassified Income Statement and Balance Sheet.
In the reclassified statements, the figures are normally restated, where necessary and if they are material, to enable a like-for-like comparison. In particular, the amounts are provided as consistently as possible with reference to the different periods covered, above all in relation to intervening changes in the scope of consolidation. This uniformity is achieved through "restated" figures, which include/exclude the values of the companies that entered or left the scope of consolidation.
Breakdowns of the restatements made and the reclassifications with respect to the format provided in Bank of Italy Circular 262 are presented in separate tables published in the attachments, as also required by Consob in its Communication 6064293 of 28 July 2006.

In accordance with Legislative Decree 125 of 6 September 2024, which implemented the Directive 2022/2464/EU on corporate sustainability reporting in Italy, starting from the financial year beginning on 1 January 2024, Intesa Sanpaolo is required to prepare the "Consolidated Sustainability Statement" as it is a public-interest entity and the parent company of a large group with an average number of employees during the financial year exceeding five hundred. In accordance with this regulation, the reporting has been included in a specific section of the Report on operations of the consolidated financial statements and contains information necessary to understand the company's impact on sustainability matters and how sustainability matters affect the company's development, performance and position.

The information regarding the Corporate governance and ownership structures required by Article 123-bis of the Consolidated Law on Finance is included, as permitted, in a separate report approved by the Board of Directors and published together with these Financial Statements, available at the Governance/Company Documents section of Intesa Sanpaolo Group's website, at group.intesasanpaolo.com. A summary of this information is also provided in the Report on operations, in the chapter "Corporate Governance and remuneration policies".

The Report on remuneration policy and compensation paid, required by Article 123-ter of the Consolidated Law on Finance, and the Basel 3 Pillar 3 Disclosure are also published and made available on the website, based on their respective approval processes.

Report on operations

Overview of 2024

Income statement figures and Alternative Performance Measures(°)

Consolidated income statement figures (millions of euro)			Changes amount	%
Net interest income	15,718	14,700	1,018	6.9

Overview of 2024

Economic trends

In 2024, global growth remained steady at a moderate pace of 3% per year. World trade continued to show modest expansion. Energy commodity prices showed limited increases and volatility, despite the ongoing conflicts in Ukraine and the Middle East. The disinflation process continued, facilitating the easing of monetary policies. The Federal Reserve reduced its Fed Funds target three times, which stood at 4.25-4.50% at the end of the year. The last months of the year saw a marked increase in uncertainty over economic policies, linked to Donald Trump's victory in the US presidential election, with repercussions also on market dynamics.

In the euro area, economic activity remained weak in both industry and construction; nevertheless, solid demand in services supported quarterly GDP growth up to the third quarter. In the fourth quarter, economic surveys showed a worsening in manufacturing, stability at subdued levels in construction and continued positive performance in services. According to preliminary Eurostat estimates, the year 2024 ended with a stagnant quarter and average annual GDP growth of 0.7%. Despite the modest economic growth, the unemployment rate dropped further (to 6.3% in December). The average annual inflation rate was 2.4%.

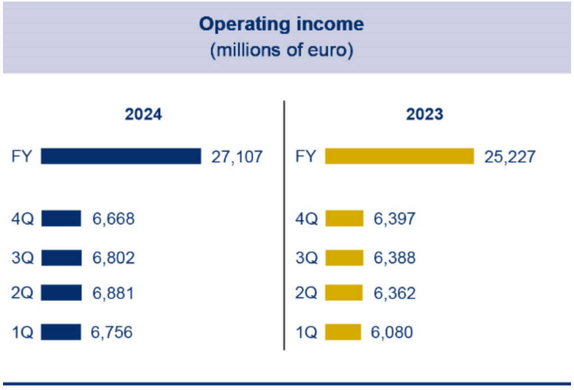
In Italy, industrial production decreased by 3.5% compared to the previous year, continuing the negative trend that had characterised 2023. In construction, on the other hand, production was up by 5.0% compared to the previous year. As to the performance of services, the economic surveys revealed a mixed picture in the fourth quarter, after a moderate expansion in the first nine months. According to the preliminary ISTAT estimate, the average annual GDP growth in 2024 was half a percentage point. In the fourth quarter, the unemployment rate fell to 6.0%, the lowest level since 1981. Employment growth and above-inflation wage increases have supported a recovery in real household income. Until the second quarter, this mainly translated into an increase in gross savings, but in the third quarter the savings rate dropped as the growth in consumption gained momentum.

In 2024, the European Central Bank cut the deposit rate by 100 basis points, to 3%. Market expectations of central bank rate cuts fluctuated. Starting in summer, the change in expectations led to a decline in medium- to long-term government bond yields, which continued until early December. Since then, however, long-term government bond yields have risen again, a move that was reinforced by the outcome of the US presidential election. The yield curves regained a positive slope. The Btp-Bund spread gradually narrowed over the course of the year. The positive performance of Italian government bonds also reflects the improvement of public finances in 2024 and the commitment to bring the budget deficit below 3% by 2026. Since October, the widening of the interest rate differential between the US and the Eurozone and changing expectations about the US economic policy have been accompanied by a strengthening of the US dollar: the EUR/USD exchange rate reached a low of 1.04 at the end of the year.

In the Italian banking market, the year 2024 witnessed an alternating evolution of lending and deposit rates. In the first half of the year, the rate increases applied until 2023 by the ECB continued to be reflected in banks' rates; after the start of the official rate cuts in June, the second half of the year was characterised by a contraction in bank lending and funding rates, which was sharper and faster for lending rates. In annual average terms, however, the spread between the average rate on the stock of loans and the cost of funding was wider than in 2023, narrowing slightly in the second half of the year. Despite the reduction in interest rates, loans to businesses remained on a downward trend due to weak demand, reflecting reliance on self-financing and the postponement of investments. Conversely, the more accommodative financial conditions supported the recovery of loans to households for house purchase, which started to increase again in the spring months and accelerated in the second half of the year. Falling yields have contributed to dampening savers' propensity to buy government bonds directly. Moderate growth was recorded in deposits, while the increase of securities under administration slowed down. A recovery was observed in assets under management, with net flows into investment funds returning to a positive value, driven by inflows into bond funds. The new life insurance business also regained momentum, achieving a significant increase during the year.

Consolidated results of Intesa Sanpaolo

The consolidated income statement for 2024 posted *net income* of 8,666 million euro, up by 12.2% (+942 million euro) on the 7,724 million euro recorded in 2023. This improvement was driven by the positive performance of the operating margin, with continued revenue growth alongside effective management of costs - which only increased slightly despite substantial investments in technology - low cost of risk, in line with the Bank's Zero-NPL status, and despite the recognition of some non-recurring charges.



Operating income rose to 27,107 million euro, from 25,227 million euro in 2023 (+1,880 million euro; +7.5%).

The revenue performance continued to be driven primarily by *net interest income*, which grew by 6.9% to 15,718 million euro[1]. The aggregate benefited from double-digit positive changes in all the main components: interest on financial assets in the portfolio, supported by increased investments in government securities, interest on relations with banks, other net interest income as well as differentials on hedging derivatives, due to the marked reduction in their negative contribution. Only customer dealing declined, due to the higher interest expenses on securities issued in connection with the significant funding plan progressively implemented from 2023 onwards.

Net fee and commission income increased by 9.4% to 9,386 million euro, driven by the management, dealing and consultancy activities segment, which, supported also by the positive market trend, recorded a significant increase in revenues from both placement activities and individual and collective portfolio management schemes (recurring fees and commissions generated by the increase in average assets under management and over-performance fees and commissions), together with an improved contribution from the distribution of insurance products. Commercial banking activities also performed positively, across all the various determinants except for current accounts, due to more favourable conditions applied to customers. Lastly, there was an increase in other net fee and commission income, specifically that related to lending activities.

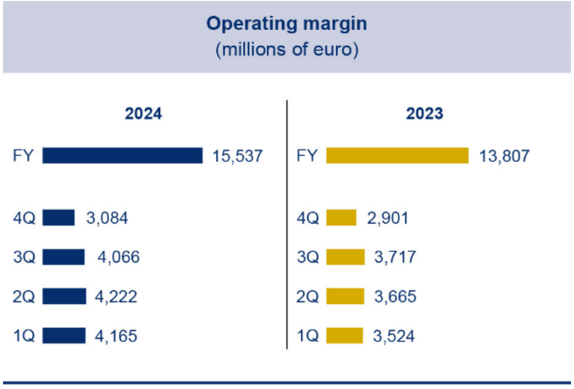
The *income from insurance business* also showed an increase to 1,735 million euro (+4.1%), mainly attributable to the non-life business and, to a lesser extent, the life business (within which the significant recovery of the net investment result, which returned to positive values, was offset by the reduction in the technical margin), while total premiums written increased overall by more than 17%.
The combined contribution of net fee and commission income and income from insurance business accounted for 41% of operating income, confirming the diversification of the Group's business model.

The positive trend of the revenue items described above contrasted with the downward trend of the *profits (losses) on financial assets and liabilities at fair value*, which fell by 16.3% to 256 million euro. It is worth recalling that this performance should always be viewed in conjunction with the increase in net interest income linked to the growth in transactions in certificates, measured at fair value, which has positive effects on net interest income in terms of greater liquidity invested and negative effects on trading related to the management of financial risks in connection with market interest rate movements. Indeed, the decrease is concentrated at the level of "Profits (losses) on trading and on financial instruments under fair value option", only partially offset by the improved contribution of the other components, excluding the repurchase of financial liabilities.

Lastly, the caption *other operating income (expenses)*, which includes profits on investments carried at equity and other income/expenses from continuing operations, showed a positive net balance of 12 million euro, compared to -21 million euro in 2023, having benefited from higher profits on investments carried at equity (from 52 million euro to 57 million euro) and from a decrease in other operating costs.

Overall, *operating costs* increased modestly to 11,570 million euro from 11,420 million euro in the previous year (+150 million euro; +1.3%), with differing trends at the level of individual expense categories.
Personnel expenses increased by 2.3% to 7,185 million euro, despite a reduction in the average workforce (-774 people; -0.8%), as they included salary adjustments resulting from the renewal of the National Collective Bargaining Agreement related to the tranches effective from 1 July 2023 and 1 September 2024.
Administrative expenses decreased by 1.8% to 2,979 million euro thanks to savings in property management, IT services and indirect taxes, compared to increases for all other items.
Lastly, *depreciation/amortisation* increased by 3.3% to 1,406 million euro and summarised a positive change in amortisation of intangible assets, related to investments in technology, and a decrease in depreciation of property and equipment, reflecting the streamlining of the real estate segment.

[1] The two years under comparison are still characterised by different levels of market interest rates, albeit moving closer as a result of the current monetary easing: the average 1-month Euribor was 3.56% in 2024 compared to 3.24% in 2023.



As a result of the revenue and cost dynamics described above, the *operating margin* rose to 15,537 million euro from the previous 13,807 million euro (+1,730 million euro; +12.5%) and the *cost/income ratio* decreased to 42.7% from 45.3% in 2023.

Net adjustments to loans totalled 1,274 million euro, down from 1,529 million euro in the comparative year (-255 million euro; -16.7%).
The improvement essentially reflects (i) lower adjustments on Stage 3 non-performing exposures (-107 million euro), concentrated at the level of bad loans, only partially offset by higher adjustments on unlikely-to-pay loans and past due loans; (ii) increased recoveries on Stage 1 and Stage 2 performing loans, (+277 million euro), mainly attributable to the transition to Stage 3, and to the portfolio management performance; (iii) increased net provisions for credit risk associated with commitments and financial guarantees given (+130 million euro). The cost of risk, represented as the ratio of net adjustments to net loans, consequently stood at 30 basis points (36 basis points for the full year 2023).

Other net provisions and net impairment losses on other assets increased overall to 680 million euro from the 570 million euro of the previous year (+110 million euro; +19.3%). The caption consists of: (i) 505 million euro in other net provisions (256 million euro in 2023), which include, in addition to 91 million euro in net provisions for legal and tax disputes (96 million euro in 2023), also 263 million euro made on consolidation of the Russian investee (114 million euro in 2023) in order to write off its equity contribution to the consolidated financial statements against the net income accrued during the year; (ii) 175 million euro from net impairment losses on securities and other assets, of which 44 million euro on securities in the portfolio and 131 million euro on other assets (314 million euro in 2023, of which 117 million euro mainly for credit risk on securities in the portfolio and 197 million euro on other assets).

Other income (expenses), which include realised gains and losses on investments, equity investments, and financial assets at amortised cost other than loans, as well as income/expenses not strictly related to operations, made a positive contribution of 153 million euro, having benefited – in the first and fourth quarters – from income related to commercial agreements entered into by the Group. This amount compares with 348 million euro recorded in 2023, which included the capital gain of 116 million euro from the sale of the PBZ Card acquiring business line to Nexi and 192 million euro[2] from the sale of the equity investment in Zhong Ou Asset Management.

As a result of the aforementioned accounting entries, the *gross income* rose to 13,736 million euro from the comparative 12,056 million euro (+1,680 million euro; +13.9%).
Taxes on income for the year amounted to 4,048 million euro, compared to 3,440 million euro in 2023 (+608 million euro; +17.7%). The change reflects the growth in the taxable base, partially offset by the benefit of the recognition of deferred tax assets amounting to 499 million euro, relating to losses carried forward pertaining to the merged companies UBI Banca and Provis and intangibles of the merged company ISP Life, which occurred in the fourth quarter (352 million euro in 2023). The tax rate was 29.5% (28.5% in 2023).

After tax, *charges for integration and exit incentives* of 587 million euro (222 million euro in 2023) were recognised, including 295 million euro related to the trade union agreement of October 2024 (in this regard see the paragraph “Other highlights” in this chapter), as well as negative *effects of purchase price allocation* of 94 million euro (-161 million euro in 2023).
Levies and other charges concerning the banking and insurance industry, considered net of taxes, decreased significantly to 348 million euro (508 million euro gross of tax), from 486 million euro (707 million euro gross) previously.
These essentially consisted of: (i) the amount of the 2024 contributions to the deposit guarantee scheme for the Group’s Italian banks (234 million euro net of tax; 349 million euro gross of tax), for which an early call up of the last instalment was made[3]; (ii) the contribution for 2024 (57 million euro net; 83 million euro gross) from the Group’s insurance companies and distribution companies to the Life Insurance Guarantee Fund being set up pursuant to Law 213 of 30 December 2023 (Budget Act)[4]; and (iii) the write-down of the Atlante Fund (31 million euro net; 46 million euro gross).
In contrast, the following main charges were incurred in 2023: (i) 222 million euro net (324 million euro gross) as ordinary contributions to the single resolution fund for the Group’s Italian and international banks, which will no longer apply in 2024[5]; and (ii) 239 million euro net (356 million euro gross) as the contribution to the deposit guarantee scheme for the Group’s Italian banks.

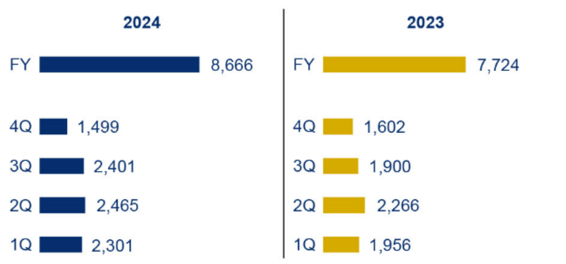
---

[2] This figure included the remaining amount received from the buyer as consideration, following the payment of the Chinese local tax on the capital gain, made by Intesa Sanpaolo in September 2023 and recognised under the caption taxes. Considered in net tax terms, the contribution of the capital gain at consolidated level remained unchanged at 154 million euro.

[3] In line with the DGS Directive, the Statute of the National Interbank Deposit Guarantee Fund had stipulated that the Fund should create a financial endowment until the target level of 0.8% of total covered deposits was reached by 3 July 2024. In order to enable the target level to be reached by the deadline set by law, the National Interbank Deposit Guarantee Fund announced an early call up of the 2024 contribution by 2 July 2024.

[4] The Fund is an association established among insurance companies and participating intermediaries with the primary aim of protecting policyholders up to a maximum limit of 100,000 euro, supporting confidence in the market and contributing to the financial stability of insurance companies. The capital of the Fund, supported by member contributions made at least annually, must gradually reach an amount equal to at least 0.4% of the technical reserves of the life insurance segments held by the member companies as at 31 December of the previous year, starting from 1 January 2024 through to 31 December 2035.

[5] The Single Resolution Board (SRB) had announced that in 2024 no contribution would be required from the European banking system, unless specific circumstances or resolution actions lead to use of the Single Resolution Fund.



Finally, after the allocation of *minority interests* – which showed a loss of 7 million euro compared to net income of 23 million euro recognised in the previous year – the consolidated income statement for 2024 closed, as mentioned, with *net income* of 8,666 million euro, up 12.2% compared to the 7,724 million euro achieved in 2023.

The *consolidated income statement for the fourth quarter of 2024* showed net income of 1,499 million euro, down from the 2,401 million euro recorded in the previous three months (-902 million euro; -37.6%) due to the presence of certain non-recurring expense items recognised in the period and the effects of the valuations made when closing the year-end financial statements.

Compared to the third quarter, operating income, at 6,668 million euro, showed a moderate decrease (-134 million euro; -2%), attributable to net interest income (-3.6%), in a context of a progressive reduction in market rates[6], and to the profits (losses) on financial assets and liabilities at fair value, which fell almost to zero due to offsetting performance of the different components. The decline in net interest income affected customer dealing, relations with banks, due to the decrease in ECB deposits, and the differentials on hedging derivatives, which returned to a negative contribution.

On the other hand, the other revenue items improved: net fee and commission income grew by 4.7%, supported by all the main drivers; the income from insurance business increased by 3.9%, with the technical margin more than offsetting the decrease in the net investment result; other operating income (expenses) made a positive contribution of 22 million euro, compared to -5 million euro in the previous year, thanks to the increase in profits from investments carried at equity and the decrease in other operating costs.

Operating costs rose overall to 3,584 million euro (+848 million euro; +31%). The increase affected to a greater extent personnel expenses (+36.1%), which included a non-recurring variable portion linked to the results and contractual adjustments effective from 1 September 2024, in the presence of a moderate increase in the average workforce (+271 people; +0.3%). Influenced by the usual year-end spike in invoicing, administrative expenses grew by 27.8%, affecting, albeit to varying degrees, almost all expense categories. Finally, depreciation/amortisation increased by 12.8%, with the change mainly driven by intangible fixed assets due to the major technological investments under way.

The described trend in revenues and costs affected the operating margin, of 3,084 million euro (-982 million euro; -24.2%) and the cost/income ratio, equal to 53.7% (40.2% in the third quarter).

Net adjustments to loans rose from 238 million euro to 482 million euro, mainly reflecting: (i) increased adjustments on Stage 3 non-performing exposures (+185 million euro), following the reclassifications from performing to non-performing during the period; lower recoveries on performing exposures (-17 million euro), also in relation to the methodological updates made in application of IFRS 9 (scenario and satellite models, time series, management adjustments for extreme scenarios/risk factors); (iii) higher provisions for credit risk associated with commitments and financial guarantees given (+17 million euro).

Other net provisions and net impairment losses on other assets totalled 353 million euro (150 million euro in the previous three months). The change (+203 million euro) was the result of: (i) +66 million euro in other net provisions, which rose to 205 million euro, including 104 million euro (from 69 million euro in the third quarter) for the write-off of the equity contribution of the Russian investee to the consolidated financial statements and (ii) +137 million euro in higher net impairment losses on securities (+24 million euro) and other assets (+113 million euro).

Other income (expenses), which include realised gains and losses on investments, equity investments, and financial assets at amortised cost other than loans, as well as income/expenses not strictly related to operations, highlighted a positive net contribution of 67 million euro in the fourth quarter (-2 million euro in the previous quarter), having benefited from income related to commercial agreements entered into by the Group.

As a result, gross income amounted to 2,316 million euro from 3,676 million euro in the third quarter (-1,360 million euro; -37%).

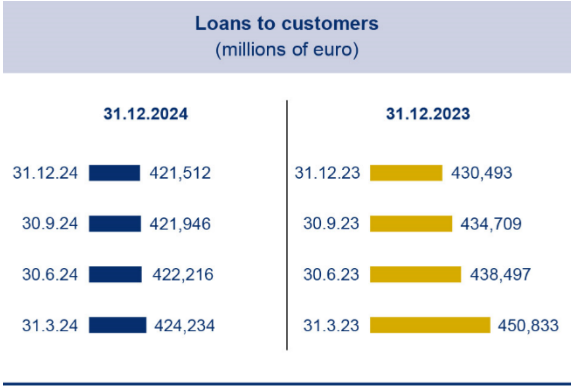
Income taxes for the period amounted to 345 million euro, compared to 1,189 million euro in the previous three months (-844 million euro; -71%). The change in the item reflects both the evolution of the tax base and the aforementioned benefit of the recognition of deferred tax assets of 499 million euro.

Charges for integration and exit incentives of 424 million euro (61 million euro in the third quarter) were also recognised, net of tax. This item includes 295 million euro related to the aforementioned union agreement of October 2024. Negative purchase price allocation effects of 12 million euro (-28 million euro in the third quarter), net of tax, were also recognised.

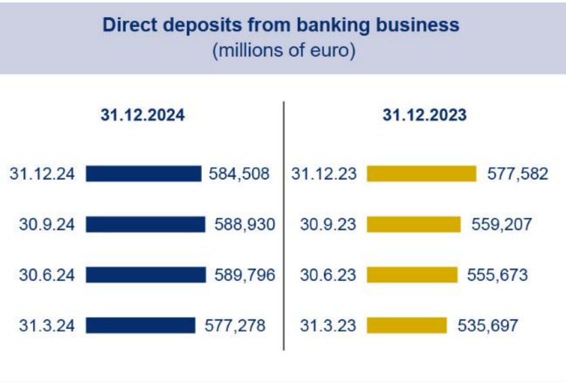
Again net of tax, levies and other charges concerning the banking and insurance industry amounted to 55 million euro (79 million euro gross of pre-tax), compared to recoveries of 1 million euro (4 million euro gross) in the third quarter. This amount includes 29 million euro (42 million euro gross of tax) as the Group's contribution for 2024 to the Life Insurance Guarantee Fund being set up, supplementing the amount charged in the second quarter, and 20 million euro (30 million euro gross) from the write-down of the Atlante Fund.

Finally, the allocation to minority interests in the fourth quarter concerned a loss of 19 million euro (loss of 2 million euro in the previous three months).

[6] In the fourth quarter of 2024, the average 1-month Euribor was 3.06%, compared to 3.55% in the previous three months.



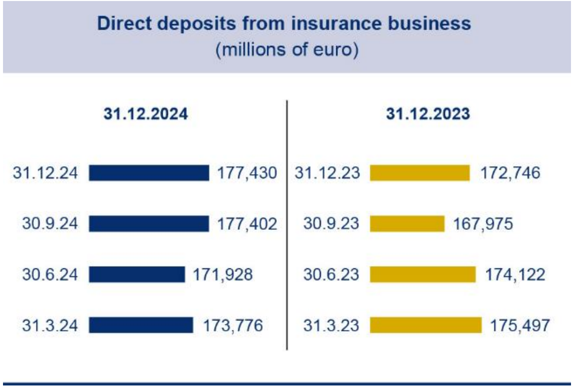
With regard to the main balance sheet aggregates, *loans to customers* amounted to 421.5 billion euro as at 31 December 2024, with no major changes in the fourth quarter but down over the twelve months (-9 billion euro, -2.1%).
Annual performance continued to be driven by commercial banking loans, which, reflecting the system-wide trend since 2023 and despite a recovery in the fourth quarter, declined overall to 392.3 billion euro (-10.7 billion euro, -2.7% compared to December 2023). Against the backdrop of an economic slowdown, demand for credit from businesses remained weak, reflecting their reliance on self-financing. In the second half of the year the recovery of credit demand from households strengthened, particularly for house purchase mortgage loans, favoured by lower rates. The contraction in loan volumes mainly concerned medium/long-term loans (-4.8% to 215 billion euro), due to the greater volume of repayments/extinguishments compared to new lending, and only partially concerned short-term lending, within which current accounts recorded a modest decline (-2.2% to 21.2 billion euro), while advances grew slightly (+0.5% to 156.1 billion euro), thanks to the recovery of working capital financing in the fourth quarter.
The decline in commercial banking loans was only partially offset by the increase in (i) short-term financial loans, composed of repurchase agreements used in overall treasury management which rose to 18 billion euro (+1.4 billion euro, +8.1% from December 2023) despite a significant contraction in the fourth quarter, and by the increase in (ii) loans represented by securities, which rose to 6.3 billion euro (+0.4 billion euro; +7.5% compared to the end of 2023), despite a reduction in the fourth quarter. Net non-performing loans, having benefited from ongoing de-risking initiatives and despite a small increase in the fourth quarter, decreased further to 4.9 billion euro (-0.1 billion euro compared to end-2023).
In terms of credit quality, the NPL ratio remained stable at 2.3% in gross terms and 1.2% in net terms (2.3% and 1.2% in December 2023)[7]. Their coverage marginally decreased to 49.5%, as a result of the exit of the portfolios object of sale/transfer, which had higher coverage levels than the average for the category (49.9% at the end of 2023). Coverage on performing loans, at 0.53%, also decreased slightly from 0.58% in December 2023.



On the funding side, *direct deposits from banking business* totalled 584.5 billion euro at the end of 2024, up by 1.2% (+6.9 billion euro) compared to 577.6 billion euro twelve months earlier, notwithstanding a modest decline in the fourth quarter resulting from the contrasting performance of the various types of funding.
In detail, comparing with December 2023, current accounts and deposits were virtually unchanged at 409 billion euro (-0.3 billion euro; -0.1%), also thanks to the recovery recorded in the last three months (+14.1 billion euro; +3.6%). Within the item, the downward trend in current accounts has eased - both on the part of businesses, which had used liquidity to reduce their recourse to bank lending, and on the part of households, which had reallocated their savings - and has been largely offset by the growth in time deposits.
Current accounts and deposits accounted for 70% of total direct deposits from banking business, confirming their role as a key strength of the Group's liquidity position.
Bonds grew to 80.4 billion euro (+2.1 billion euro; +2.7% compared to December 2023) also thanks to the institutional funding made possible by broad access to international markets. Subordinated liabilities, on the other hand, decreased to 11.8 billion euro (-0.4 billion euro; -3%) as a result of issues totalling 2.6 billion euro in nominal value and maturities/early repayments totalling 3 billion euro in nominal value. Other deposits came close to 65 billion euro, up on 2023 by 2.6 billion euro (+4.1%), an increase entirely attributable to the fair-value component (+8.5% to 32.5 billion euro), almost all consisting of investment certificates. Financial funding, consisting of repurchase agreements and securities lending, used for treasury management and therefore subject to short-term fluctuations, more than halved in the fourth quarter, reaching 15.6 billion euro at the end of the year, while still showing an increase of 2.6 billion euro (+20.2%) compared to December 2023.
Lastly, with regard to certificates of deposit, which rose to 2.6 billion euro (+0.3 billion euro, +13.5%), this form of funding is now very marginal in terms of the Group's overall funding from customers.

As a result of the different trends in the two aggregates, the loan to deposit ratio decreased to 72.1% from 74.5% in December 2023.

[7] Based on the EBA definition, as at 31 December 2024, the gross NPL ratio was 2% and the net NPL ratio was 1%. Compared to the figures as at December 2023 – which were 1.8% and 0.9% respectively – there was a slight increase due to the reduction in the total exposures used as the denominator of the ratio, which also include all exposures to banks (including therefore both the reserve requirement and on-demand receivables, i.e. current accounts and on-demand deposits).



As at 31 December 2024, *direct deposits from insurance business* totalled 177.4 billion euro, stable in the fourth quarter but up by 4.7 billion euro (+2.7%) on the end of the previous year.
The annual performance was driven by insurance liabilities, which rose to 126.1 billion euro (+6.2 billion euro, 5.2%) as a result of the progress of the life business segment in the second half of the year, and came to account for 71% of the total aggregate, having also benefited from significant growth in collected premiums (+16% from 2023).
Affected by the performance of the markets, the financial liabilities of the insurance segment – consisting entirely of unit-linked investment contracts included under Financial liabilities designated at fair value pertaining to insurance companies in the reclassified balance sheet – decreased slightly to 50.6 billion euro (-0.8 billion euro, -1.5%), primarily attributable to the first half, despite an increase in collected premiums (+26.4% compared to 2023). Their weight on the total therefore decreased to 28.6%.
Lastly, the residual portion, amounting to 0.4%, consisted of other insurance deposits – included among Financial liabilities at amortised cost pertaining to insurance companies in the reclassified balance sheet and which also include the subordinated liabilities – falling in the last quarter to 703 million euro (-756 million euro; -51.8% since the end of 2023).

Indirect customer deposits, valued at market prices, amounted to 788.4 billion euro at the end of 2024, up by 68 billion euro or 9.4% over the twelve months (+9 billion euro; +1.2% in the fourth quarter). This item benefited from both the positive trend in net inflows and favourable market price developments.
More in detail, assets under administration reached 315.3 billion euro (+37.1 billion euro, +13.3% on December 2023), equivalent to 40% of total indirect customer deposits, reflecting the shift of customers' savings towards bonds and domestic government securities, which slowed down in the second half of the year as market rates fell.
Assets under management rose to 473.1 billion euro (+30.9 billion euro, +7% from end-2023), corresponding to 60% of total indirect customer deposits, also supported by a recovery in net inflows in the third and fourth quarters. All the captions recorded annual increases: mutual funds (+7.5% to 167.2 billion euro), portfolio management schemes (+13.3% to 90.7 billion euro), and, albeit as a small proportion of the total, deposits from institutional customers (+13.6% to 29.8 billion euro) and pension funds (+15.9% to 17.2 billion euro). Total insurance liabilities and insurance financial liabilities increased more moderately (+1.6% to 168.2 billion euro).

Results of the Business Units

The Intesa Sanpaolo Group organisational structure is based on six business areas: Banca dei Territori, IMI Corporate & Investment Banking, International Banks, Asset Management, Private Banking and Insurance. In addition, there is the Corporate Centre, which is responsible for guidance, coordination and control of the entire Group, as well as for the Treasury and ALM operations.

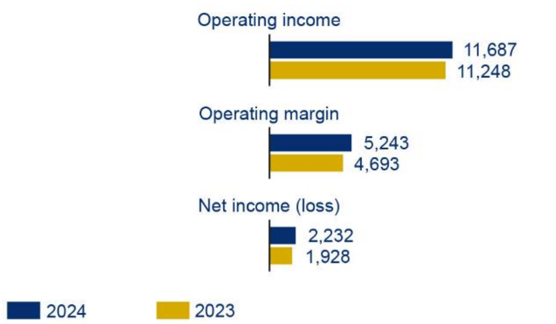
As can be seen in the chart, the share of operating income attributable to each business area (excluding the Corporate Centre) confirmed that commercial banking activities in Italy continue to account for the majority (46.8% of the operating income of the business areas), although significant contributions were also provided by corporate and investment banking (15.9%), private banking (13.4%), commercial banking activity abroad (13.0%), insurance business (6.9%) and asset management (4.0%).

Where necessary and where material, the division figures are restated to reflect the changes in scope of the business units to enable a like-for-like comparison.

Operating income: Breakdown by business area[1]

[1] Excluding Corporate Centre

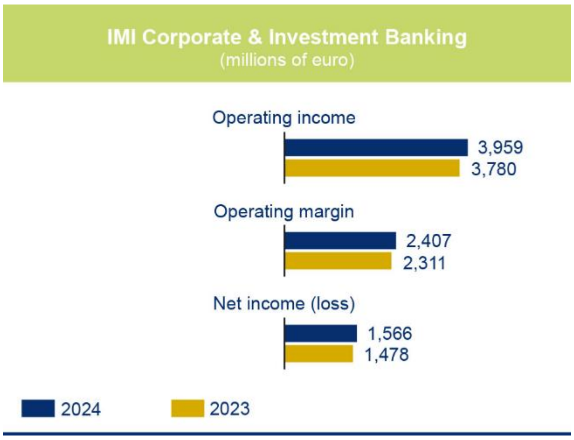
Banca dei Territori
(millions of euro)



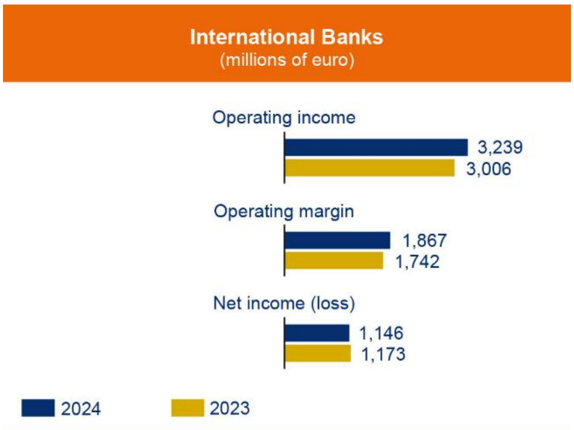
During 2024, the operating income of the Banca dei Territori Division – which oversees the traditional lending and deposit collecting activities in Italy and the related financial services – rose by 3.9% to 11,687 million euro. That trend was driven primarily by net fee and commission income (+6.3%), specifically in the segments of assets under management and non-life insurance, but also by net interest income (+2%), by virtue of the performance of market interest rates which favoured the profitability of customer dealing.

On the other hand, operating costs decreased by 1.7% to 6,444 million euro thanks to savings on personnel expenses, but above all to the containment of administrative expenses, particularly those for property management, IT services and legal fees. As a result, the operating margin rose by 11.7% to 5,243 million euro. Gross income also improved (+23.6% to 4,066 million euro), benefiting from decreased adjustments to loans. Banca dei Territori ended the year with net income up by 15.8% to 2,232 million euro.

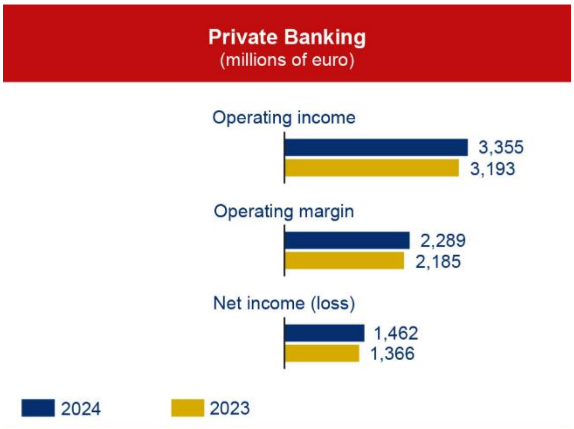
As at 31 December 2024, the Division's balance sheet showed a 4.6% decline in total intermediated volumes of loans and deposits compared to twelve months earlier. In detail, loans to customers (-4.8% to 221.2 billion euro) continued to be affected by demand factors linked to businesses which limited their use of bank loans privileging their own liquidity or alternative funding sources. Direct deposits from banking business (-4.4% to 258.8 billion euro) was, in turn, impacted by those uses of liquidity by businesses and the portfolio decisions by private customers, who reallocated some of the amounts available on current accounts towards more remunerative investment products.



The IMI Corporate & Investment Banking Division – which oversees corporate and transaction banking, investment banking, public finance and capital markets activities, in Italy and abroad – made net operating income of 3,959 million euro, up by 4.7% from 2023. There were increases in net interest income (+11.9% to 3,075 million euro), due to Global Markets and security portfolio operations, as well as in net fee and commission income (+19.1% to 1,286 million euro), essentially due to the positive performance in the segments of structured finance and investment banking and in the International Network. Profits (losses) on financial assets and liabilities at fair value were negative by 402 million euro (similarly, they had been negative by 48 million euro in 2023), attributable to the results of trading operations in the Global Markets area, which were negatively affected by (i) the management of financial risks related to funding in certificates, due to the trend in market interest rates, which, however, produced positive effects on net interest income in terms of greater liquidity invested, as well as (ii) the negative contribution of Own Credit Risk (OCR) of certificates, due to the tightening of the Intesa Sanpaolo credit spread.
With operating costs growing by 5.7% to 1,552 million euro, attributable to personnel expenses and administrative expenses, the operating margin improved by 4.2% to 2,407 million euro. A similar positive development was recorded in gross income (+6.8% to 2,334 million euro), which benefited from a reduction in other net provisions and net impairment losses on other assets. The year ended with net income of 1,566 million euro, an increase of 6%.
Total volumes intermediated by the Division increased by 5.9% compared to the end of 2023. Direct deposits from banking business rose by 10.7% to 125.2 billion euro, driven by increased business in the Global Corporate and Global Markets sector and by the development of certificates. Loans to customers increased by 1.5% to 126.1 billion euro, reflecting the positive performance of international and institutional customers and a declining trend in Global Corporate and Global Markets.

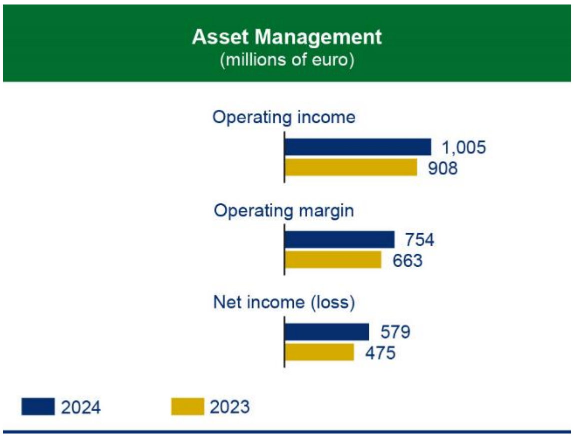


In 2024, the operating income of the International Banks Division – which is responsible for the Group's operations on international markets through commercial banking subsidiaries and associates that mainly carry out retail banking activities – amounted to 3,239 million euro, up on the previous year (+7.8%; around +15% at constant exchange rates). All the main revenue items provided positive contributions: net interest income (+5.8% to 2,525 million euro), net fee and commission income (+7.8% to 648 million euro) and profits (losses) on financial assets and liabilities at fair value (+34.3% to 133 million euro).
At 1,372 million euro, operating costs also increased (+8.5%; around +13% at constant exchange rates), mainly due to personnel and administrative expenses. As a result of the combined performance of the two aggregates, the operating margin increased by 7.2% to 1,867 million euro. Gross income showed a smaller improvement (+5.1%) to 1,688 million euro, as 2023 had benefited from the capital gain from the sale of the PBZ Card acquiring business line: net of this item, the change in gross income would be +13.3%. The Division ended the year with a slightly lower net income at 1,146 million euro (-2.3%).
As at 31 December 2024, total intermediated volumes showed an increase of 3.8% compared to twelve months earlier, attributable to both loans to customers (+5.2% to 45.3 billion euro) and direct deposits from banking business (+2.7% to 60.9 billion euro).



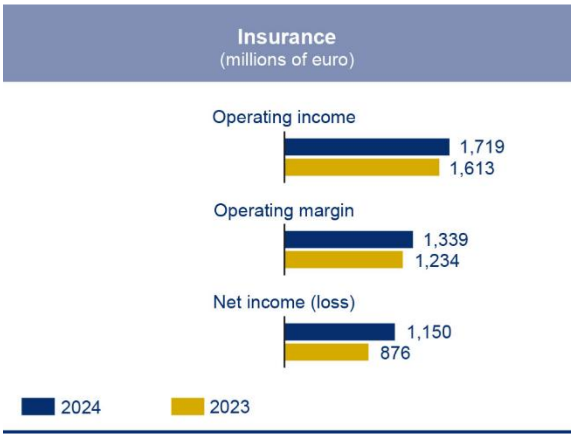
The Private Banking Division – which serves the top customer segment (Private and High Net Worth Individuals), creating value by offering top products and services – posted operating income up 5.1% to 3,355 million euro. The development was supported by net fee and commission income (+12.7% to 2,094 million euro) – both recurring commissions, in relation to the increase in average assets under management, and those related to the reception and transmission of orders and the placement of mutual funds and bonds – against a decline in net interest income (-6.8% to 1,181 million euro), particularly on debt securities and relations with banks.
Operating costs increased by 5.8% to 1,066 million euro; this trend affected all components: administrative expenses, due to higher charges for services rendered by third parties, personnel expenses and amortisation and depreciation. Given the performance described, the operating margin improved by 4.8% to 2,289 million euro. Benefiting from lower adjustments and provisions, gross income rose by 7.3% to 2,241 million euro. The year ended with net income of 1,462 million euro, an increase of 7%.

At the end of 2024, assets under management and administration, which also include the contribution of the trust mandates to SIREF Fiduciaria, amounted to 335 billion euro (+31.4 billion euro over the twelve months). This trend was due to the market performance, which had a favourable impact on assets and, to a lesser extent, to positive net inflows. The assets under management component amounted to 171.4 billion euro (+13.9 billion euro).



The Asset Management Division – which pursues the mission of developing the best asset management solutions aimed at the Group's customers and its presence on the open market segment through Eurizon Capital SGR and its subsidiaries – posted operating income of 1,005 million euro in 2024, up 10.7%. The growth in revenue is mainly attributable to the performance of net interest income (61 million euro compared to the previous 18 million euro) and of net fee and commission income (+9.6% to 894 million euro), especially placement fees on mutual funds and incentive fees. In the presence of operating costs that reported a slight change overall (+2.4% to 251 million euro), the operating margin rose to 754 million euro, with an increase of 13.7%. Significant improvements were also recorded for gross income (+17.9% to 782 million euro) and net income (+21.9% to 579 million euro).

As at 31 December 2024, the Division's assets under management totalled 333.1 billion euro (+21.8 billion euro compared to the end of 2023), having benefited from the revaluation of managed assets related to the good market performance and, to a lesser extent, from positive net inflows (+2.5 billion euro).



The Insurance Division – with the mission of synergically developing the insurance product mix targeting Group customers – generated operating income up by 6.6% to 1,719 million euro in 2024, almost completely composed of income from insurance business (+5.6% to 1,716 million euro), due to the contributions from both the life business and the non-life business, the former primarily through the financial component and the latter thanks to the technical contribution and the net investment result. By virtue of a substantial stability of operating costs (+0.3% to 380 million euro), the operating margin improved by 8.5% to 1,339 million euro. Given the small amount of provisions made, gross income amounted to 1,338 million euro (+3.3%). The income statement for the year, which also recorded the charge of 46 million euro for the Life Insurance Guarantee Fund being set up and the recognition of deferred tax assets for 293 million euro, ended with net income for the Insurance Division increased by 31.3% to 1,150 million euro.

The performance of the direct deposits from insurance business was described in the section above containing the commentary on the Group's results.

The Corporate Centre departments generated an operating margin of 1,638 million euro in 2024, compared to 979 million euro in the previous year. This development was driven by growth in net operating income, attributable to net interest income, which benefited from higher average short-term market rates, and to the profits (losses) on financial assets and liabilities at fair value. Operating costs remained stable. Gross income amounted to 1,287 million euro compared to 927 million euro in 2023. The income statement of the Corporate Centre recorded charges aimed at maintaining the stability of the banking industry, after tax, totalling 67 million euro compared to 245 million euro in 2023, which included 222 million euro related to the Resolution fund that is currently funded for the EU countries of the banking union. The year ended with net income of 531 million euro, compared to 428 million euro realised in the previous year.

Highlights

The military conflict between Russia and Ukraine

The ISP subsidiaries in Russia and Ukraine

The Group is present in Russia and Ukraine through two subsidiaries:

– *Joint-Stock Company Banca Intesa (Banca Intesa Russia)*, 47% owned by Intesa Sanpaolo and 53% by Intesa Sanpaolo Holding International (Luxembourg). This is a Moscow-based corporate bank, which operates with 22 branches and 797 staff. The Group's presence in Russia dates back almost 50 years (initially as a Representative Office, closed in August 2023). The bank has participated in the financing of large national and international Russian projects, also offering a full range of banking services for small and medium-sized enterprises, retail customers and companies. The regional branch network extends from Kaliningrad to Vladivostok;

– *Pravex Bank Joint-Stock Company*, 100%-owned by Intesa Sanpaolo. This is a small commercial bank based in Kyiv, part of the International Banks Division, which operates with 39 branches mainly in the Kyiv region and employs 612 people. Intesa Sanpaolo acquired the bank in 2008 and has been operating in the country continuously since that date.

The observations made concerning Intesa Sanpaolo's continued control over the two entities, as reported in Section 5 – Other Aspects of Part A of the Notes to the Consolidated Financial Statements, still apply.
Despite the objective constraints imposed by the current situation, particularly for Pravex, the two subsidiaries are continuing to operate with the support of the Parent Company structures while the overall exposure to the Russian Federation has decreased significantly over the past three years, as required by the European regulators and the ECB recommendations, the latest of which was issued in December 2024.

Risk management

In light of the continuing military conflict between Russia and Ukraine, in 2024 the Group maintained the internal controls described in the previous financial reports.
The situation continues to be monitored both at Parent Company level and in all the Group banks directly involved in the conflict or close to it, where direct and continuous contacts are being maintained.
Appropriate information is also always prepared for the Board Committees and the Board of Directors.

The Risk Management and Control Task Force
With regard to the monitoring of credit risk, in 2024 there were no significant new developments to report. In continuity with the second half of 2022, there were no specific initiatives under the Credit Action Plan dedicated to the conflict between Russia and Ukraine. However, the specific diagnostic initiatives designed to prevent flows into non-performing status for exposures showing signs of difficulty, but without being past due, are still being implemented for companies in the energy and gas sectors that are particularly sensitive to fluctuations in the cost of energy, also linked to the continuation of the conflict.
In light of the further tightening of the sanctions imposed on Russia by Western countries, in order to ensure regulatory compliance, the close supervision continued through a specific dashboard at Group level, aimed at monitoring the changes in the lists of sanctioned persons and entities at European and international level, identifying sanctioned persons and entities for the purpose of blocking positions and payments, complying with the specific ban on accepting deposits above the threshold set by the European regulations, and identifying and blocking financial instruments subject to sanctions. As at 31 December 2024, the exposure to Russian counterparties included in the OFAC (Office of Foreign Assets Control) SDN and/or EU asset freeze lists amounted to 219.5 million euro, compared to 237 million euro at the end of 2023. Despite the inclusion of new sanctioned parties – as a result of the application of the thirteenth, fourteenth and fifteenth packages of sanctions, enacted on 23 February, 24 June and 16 December 2024 respectively – the Group's overall exposure has reduced as a result of a series of repayments of loans already in place with several EU/OFAC SDN sanctioned parties, authorised by the competent Authorities.
Since the beginning of the conflict, the Group has also continued to monitor the evolution of the fallout of the Russian-Ukrainian crisis on the real economy and the main financial variables, also by conducting specific scenario analyses and stress tests to assess the potential impacts in terms of profitability and capital adequacy. Although the situation is constantly evolving, leaving aside extreme scenarios of conflict escalation that could lead to outcomes that are difficult to assess, these analyses confirm the Group's ability to ensure compliance – also through the implementation of specific actions – with the regulatory requirements and the stricter limits set internally.

The Operational Resilience Task Force
Regarding the initiatives implemented from the early stages of the conflict for Pravex employees, to support their expatriation and/or that of their families, where requested, as at 31 December 2024 there were no longer any employees or family members housed in the Group-owned apartments and residential facilities provided in Bergamo (64 residents at the end of December 2023 compared to 200 initially hosted during 2022). All those who received assistance from the Bank have become independent (some have returned to their home country, while others have settled independently in Italy) while continuing to maintain contact with the staff who assisted them.
With regard to business continuity in Ukraine, operations have been maintained throughout the three years of the conflict by adopting solutions to ensure normal functioning in the event of interruptions to essential services. Specifically, to address the electricity supply issues, generators were installed at all operational branches, and power banks were provided to central offices and personnel with critical and strategic roles. During the second half of the year, the branches were also equipped with inverter generators that were easier and quicker for the staff to use.

In terms of connectivity, satellite devices were installed from the beginning of 2023 to ensure data connectivity. The measures implemented are continuing to ensure the uninterrupted provision of services, and are still considered valid and sufficient to deal with the situation, even in light of increasing Russian attacks on Ukrainian power plants.
From the third quarter onwards, the number of branches opened daily stabilised consistently at the total number of available branches compared to over 90% in the first half of the year. The decision-making process regarding the operations of the individual branches continues to be based on a risk assessment methodology agreed with the Parent Company, which involves the use of specific indicators, always prioritising the safety of the staff. No branches were temporarily damaged by Russian attacks in 2024. However, a branch in Kharkiv, which had incurred heavy damage from the conflict, was permanently closed in the first half of the year following an assessment of the alteration of the risk scenario in the area.
At Banca Intesa Russia, the systems have always functioned without any operational problems since the beginning of the conflict.
In 2024, the monitoring also continued of the operations of Banca Comerciala Eximbank, the Group's Moldovan subsidiary, which still has no operational problems to report, despite the temporary worsening of the conflict in the area.
In terms of cybersecurity, the monitoring and threat intelligence activities continue, alongside the continued strengthening of the cybersecurity controls throughout the Intesa Sanpaolo Group. Within the threat intelligence activities aimed at monitoring possible cyber threats to Pravex, the containment measures have enabled the management of the attacks suffered, ensuring service delivery with minimal disruption. Specific educational initiatives on cyber risks, through training courses and in-depth studies on specific topics, are regularly implemented to continually raise awareness among all the Group's staff.
As usual, the additional costs incurred for business continuity and any losses resulting from physical damage to premises/branches located in the conflict zone form part of the monitoring of the exposure to operational risk, including that relating to the Risk Appetite Framework.

The main accounting aspects and the approach adopted by the Intesa Sanpaolo Group

The main accounting issues arising from the ongoing conflict between the Russian Federation and Ukraine and the Intesa Sanpaolo Group's approach to addressing them are summarised in the paragraphs below. The situation of the Russian/Ukrainian crisis has been the subject of close attention since the outbreak of hostilities at the end of February 2022. The Group had significant cross-border exposures to counterparties resident in the Russian Federation, as well as, as already mentioned, two subsidiaries operating in the warring countries, which were therefore particularly exposed to the consequences of the conflict: Pravex and Banca Intesa Russia.

At the beginning of 2022, loans to Russian customers represented around 1% (almost 5 billion euro) of the Intesa Sanpaolo Group's total loans to customers (net of the exposures backed by Export Credit Agency - ECA guarantees). The de-risking has therefore focused on reducing these exposures; the Group already started carrying it out in the second half of 2022 and continued during 2023 and 2024. In particular, the business conducted in the Russian Federation has significantly decreased over the past three years, as also requested by the European regulators. Total gross exposures (customers, banks and securities) as at 31 December 2024 to counterparties resident in Russia and Ukraine amounted to just 1,625 million euro gross (1,421 million euro after adjustments), a decrease of 264 million euro or -14% (-159 million euro in net values, -10%) from 31 December 2023, when the gross exposures amounted to 1,889 million euro (1,580 million euro in net values). More specifically, as at 31 December 2024, the remaining exposures to customers amounted, in terms of gross values, to 126 million euro (71 million euro net) for Banca Intesa Russia and 421 million euro (338 million euro net) for cross-border exposures to customers resident in Russia (net of ECA guarantees). The exposures to Russian counterparties were also accompanied by gross exposures to banks totalling 759 million euro (751 million euro net), of which 721 million euro (717 million euro net) due to Banca Intesa Russia from central banks, and in securities totalling 1 million euro (book value nil in net terms)[8]. Gross exposures to customers resident in Ukraine amounted to 193 million euro (138 million euro net), of which 54 million euro (book value nil in net terms) related to the subsidiary Pravex (figures as at 30 September 2024, as described below)[9], in addition to exposures to banks and in Ukrainian short-term government bonds totalling 125 million euro gross (123 million euro net).

That said, the situation as at 31 December 2024 is essentially the same as that described in the Annual Report as at 31 December 2023 and the 2024 Half-yearly Report. The Intesa Sanpaolo Group continued to exercise control over the two banks, which operated on the basis of the Parent Company's instructions in their respective environments. Consequently, the main methodological choices – both in terms of consolidation of the two subsidiaries and valuation of the credit exposures – are essentially the same as those used in the 2023 Annual Report. Before outlining the valuation issues regarding the two subsidiaries and the aspects related to the valuation of the cross-border exposures, it is necessary to provide some preliminary information about how Pravex and Banca Intesa Russia contributed to the consolidated financial statements as at 31 December 2024. In particular, while it was possible to consolidate an accounting situation aligned to that of the Parent Company for Banca Intesa Russia (therefore, consolidated with reference to the results as at 31 December 2024), for Pravex, the specific situation in the city of Kyiv (where the bank is based) led to the conclusion that – in order to contain the "operational" risk – it was considered more appropriate to use the accounting situation as at 30 September 2024, translated at the exchange rate of 31 December 2024, for the consolidation. The results of Pravex are therefore incorporated by means of the line-by-line consolidation of a consolidation package prepared in accordance with the IAS/IFRS for the previous quarter, in keeping with the approach already adopted for the 2022 and 2023 Annual Reports. However, it is worth recalling here that the balance sheet balances of the Ukrainian subsidiary are substantially immaterial in the context of those of the Intesa Sanpaolo Group. The above method of consolidation is also supported by the fact that the balance sheet management data as at

[8] There were also 29 million euro (25 million euro net) in gross off-balance sheet exposures to customers at Banca Intesa Russia and 20 million euro cross-border (with no impact in terms of net values) with customers resident in Russia (net of ECA). Lastly, there were 27 million euro (gross and net values) of cross-border positions with Russian resident banks.

[9] The cross-border exposures to customers resident in Ukraine are, for the corporate part, backed by guarantees provided by European and US entities, while, for the household part, these mainly relate to exposures disbursed by the subsidiary VUB to Ukrainian families with permanent residence in Slovakia.

31 December 2024 do not show any significant differences – in the total aggregates – compared to those at the end of September.

With regard to the valuation choices, the absolutely serious situation in all of Ukraine resulted in the definition, for the purpose of measuring Pravex's loan portfolio, of a specific approach, significantly based on prudent rationales, in light of the continuation of the conflict and the consequent repercussions on the Ukrainian economy. As at 31 December 2024, as in the 2023 Consolidated Financial Statements, it was considered appropriate to maintain the full write down of Pravex's on-balance sheet loans to customers, with consequent classification to Stage 3. As a result of that choice, for the purposes of the Group's consolidated financial statements, the equity of the subsidiary has essentially been reduced to zero. Also for Banca Intesa Russia, an approach to classifying and measuring performing loans continued to be adopted that strongly considers the geopolitical risk deriving from the ongoing crisis. Therefore, as was already the case in the 2023 Annual Report, the assessments carried out as at 31 December 2024 on the loans of the subsidiary included a centrally determined prudent factor that takes account of the worsening of the domestic economic situation in light of the continuation of the conflict and the increased isolation of the Russian economy. As a result of the recomposition of the portfolio following repayments and reclassifications to non-performing loans, the total coverage of performing loans of the Russian subsidiary amounted to around 36% of their gross value, up slightly on 35% in December 2023. As in the past accounting closings, the provision aimed at reducing the equity of the investee to zero has also been maintained. The significant adjustments on the credit exposures of Banca Intesa Russia and Pravex were maintained, which were made on a prudential basis to reflect the current war situation that generates the need for careful consideration of the above-mentioned country risk, with appropriate measurement of the risk that the capital invested abroad is exposed to, connected to the possibility that political or economic circumstances may result in non-repayment of the loan (irrespective of the specific credit risk of the individual counterparty).

For the cross-border positions, the Group continued to adopt the measurement approach guided by the emergence of the so-called "transfer" risk (an approach applied both for the determination of the SICR and the related classification to Stage 2, and for the calculation of the ECL through the application of managerial adjustments) in order to better incorporate provisions related to the risk associated with the current conflict that would otherwise not be properly captured by the risk measurement systems normally used. At the same time, the ratings for the highest risk class already assigned to the most significant counterparties exposed to conflict-related risk have been maintained.

In 2024, the Group recorded a negative profit and loss impact, before tax, of 273 million euro related to the exposures to Russian or Ukrainian counterparties. This impact was essentially due to the provision of 263 million euro made upon consolidation of Banca Intesa Russia to write off its equity contribution to the Group's consolidated financial statements, while the other effects relating to collections and valuations of other items related to Russian or Ukrainian counterparties were substantially offset, which amounted to a total of -10 million euro. With regard to the year 2023, it is worth recalling that the flow of collections and the valuation processes established upon closure of the financial statements led to the recognition of write-backs on loans and securities, before tax, totalling 205 million euro, partially offset by the provision made upon consolidation of Banca Intesa Russia to write off its equity contribution to the Group's consolidated financial statements, amounting to 114 million euro, with an overall positive impact of 91 million euro.

Other highlights

The other significant events that occurred in 2024, as well as some updates since the end of the year, are described below.

The transfer from Intesa Sanpaolo to Isybank of the second business line – consisting of the set of assets and legal relations operationally organised for the management of private individual customers holding transactional products (accounts and payment cards), loans and mortgages (with related CPI and fire protection insurance), meeting a number of requirements including being aged under 65, the prevalent use of digital channels, and express consent to the transfer – took legal effect on 18 March 2024.
The deed of transfer, signed on 13 March, was implemented upon subscription and release of the second tranche of the 700-thousand-euro capital increase approved by the Extraordinary Shareholders' Meeting of 11 October 2023. As a result, Isybank's share capital increased to 31,000,000 euro. The related IT migration was completed over the weekend of 16 and 17 March. The transfers from Intesa Sanpaolo to Isybank involved a total of around 350,000 customers.
As detailed in Part E – Risks and relative hedging policies, 1.5 Operational risks, of the Notes to the consolidated financial statements, on 12 June 2024 the Italian Antitrust Authority announced the closure of the proceedings brought against Intesa Sanpaolo and Isybank, accepting the commitments proposed by the two Banks, while on 14 June 2024 Intesa Sanpaolo, Isybank and the consumer association "Associazione Movimento Consumatori" announced the settlement agreement reached at the end of May to remedy the issues raised by the association in the representative injunction action to protect the collective interests of consumers brought in December 2023. On 3 January 2025, following an investigation during which Intesa Sanpaolo had duly responded to the information requests received, the Italian Personal Data Protection Authority notified the Bank of breaches to the General Data Protection Regulation and initiated the related sanctions procedure.

On 28 March 2024, the Board of Directors of Intesa Sanpaolo, upon proposal by the Managing Director and CEO Carlo Messina, adopted a new organisational structure that leverages the strengths that have established the Bank as a leader in Europe and focuses on the Group's capacity to innovate. The renewed organisation readies the Group to tackle the challenges facing the European banking sector, by harnessing the best new managerial talents and by valuing internal resources, all with a long-term perspective. These significant and wide-ranging changes were marked by a generational transition introducing new talents in key positions, guided and supported by highly-experienced individuals who have long held leadership roles within the Group. The average age of those taking on new top-level responsibilities is 49. The new organisational structure, effective from 2 April 2024, also represents a particularly important step in the longstanding initiative to nurture female talent.

Below is a summary of the most significant measures implemented:
- streamlining of the governance areas reporting directly to the CEO, through a new organisational tier of Chiefs;
- establishment of the new "Wealth Management Divisions" structure, which provides unified oversight of the strategically important wealth management businesses, with the aim of accelerating their growth and increasing the integration of the product factories;
- establishment of a new governance area focused on ESG (Chief Sustainability Officer) to steer the Group's sustainable development strategies, with a special commitment to social matters and the fight against inequalities. The new area has been tasked with strategic direction, activity planning, and monitoring;
- creation of a new governance area (Chief Transformation & Organisation Officer) containing a specific newly established structure dedicated to the Group's transformation strategies to respond to the new challenges of technological innovation and Artificial Intelligence, by developing innovative organisational and operational models;
- strengthening of the Chief Lending Officer area, which is responsible for a new credit decision-making model, consolidating the important milestones achieved and ensuring further sustainability of the results (Zero-NPL Bank).

Two new control rooms have also been created: the first, called "Fees & Commissions" and chaired directly by the Managing Director and CEO, is focused on monitoring, overseeing and coordinating the strategies necessary to develop the Group's fee and commission income; the second, launched at the end of May, called "Acceleration of Synergies of International Banks", is aimed at promoting the transfer of the best practices adopted by the Banca dei Territori and the IMI Corporate & Investment Banking Division to the international banks.
The new organisational structure of Intesa Sanpaolo was subsequently completed with the establishment of the new "Chief Security Officer" Governance Area, as resolved by the Board of Directors on 17 October 2024, reporting directly to Managing Director and CEO Carlo Messina and assigned to General Antonio De Vita.
The new Governance Area will oversee physical security, IT security (cybersecurity) and business continuity to ensure:
- a single point of control for security models and solutions;
- governance of the budget;
- identification of priorities;
- strengthening alignment with the best international security standards and models.

On 19 April 2024, Intesa Sanpaolo and COIMA – a company specialising in investing in, developing and managing Italian real estate assets on behalf of institutional investors – signed an agreement to evaluate the best opportunities to develop the Banking Group's properties in a changing real estate market environment.
The agreement, approved by the Board of Directors of Intesa Sanpaolo on 28 March 2024, which reflects changing strategies in real estate in response to the increased emphasis on ESG objectives in the sector, includes the contribution of two real estate asset portfolios held by Intesa Sanpaolo to several funds established and managed by COIMA SGR, with a total value of over 0.5 billion euro, identified based on their type and the related strategy for optimising their value.
In 2024, the necessary preliminary activities were carried out for the completion of the transaction, expected in 2025 after the conditions precedent established by the parties have been fulfilled. Specifically, the contribution, which will result in a significant reduction in the real estate assets of the Parent Company, will involve (i) three prime assets located in Rome in Via dei Crociferi 44, and in Milan in Via Clerici 4-6 / Piazza Ferrari 10 and Via Verdi 9-11-13; and (ii) a portfolio of investment properties located in various towns, the scope of which was initially identified upon signing of the agreement and confirmed in the third quarter of the year.
Therefore, as at 31 December 2024, all the properties that will be contributed upon the closing were reclassified among assets held for sale.
The agreement is part of the Group's broader smart property management strategy, set out in the 2022-2025 Business Plan, which, for the owner-occupied properties, envisages a strong acceleration towards the new way of working and a significant modernisation of the working environments in department spaces, and, for the investment properties, the value optimisation of the assets through disposals and/or active management via leasing or the creation of new businesses.

On 24 April 2024, the Shareholders' Meeting of Intesa Sanpaolo was held, duly constituted, on single call, to pass resolutions as those in attendance through the designated representative (in accordance with Article 106, paragraph 4, of Decree Law No. 18 dated 17 March 2020, converted by Law No. 27 dated 24 April 2020, whose effects were extended by Law No. 18 dated 23 February 2024) counted 3,598 holders of voting rights attached to 11,256,788,156 ordinary shares without nominal value, representing 61.57038% of the share capital. The Shareholders' Meeting voted in favour of all the items on the agenda (for details on the majority of votes please see the press release published on the Group's official website).
In the ordinary session, the resolutions concerned:
- *the approval of the 2023 financial statements of the Parent Company Intesa Sanpaolo and the allocation of the net income for the year with the distribution to shareholders of a dividend and part of the Share premium reserve.* The cash distribution to shareholders of a remaining amount of 2,778,985,446.33 euro (corresponding to 15.20 euro cents for each of the 18,282,798,989 ordinary shares constituting the share capital) was approved, of which 2,373,107,308.77 euro as dividends from the net income for the year (corresponding to 12.98 euro cents per share) and 405,878,137.56 euro as an assignment of reserves drawn on the Share premium reserve (corresponding to 2.22 euro cents on each share)[10]. Also taking into account the interim dividend paid in November 2023, amounting to 2,628,985,341.02 euro[11] (corresponding to 14.40 euro cents per share), the total interim and remaining dividends distributed for the year 2023 amounted to 5,405,295,975.10 euro, corresponding to a 70% payout of the consolidated net income;
- *the remuneration policies and incentive plans*. The Shareholders' Meeting (i) approved the remuneration and incentive policies for 2024, together with the related adoption and implementation procedures, as described respectively in

[10] The remaining dividend for the year 2023, paid on 22 May 2024 (with coupon presentation on 20 May and record date on 21 May), amounted to 2,776,310,634.08 euro, corresponding to 15.20 euro cents for each of the 18,265,201,540 ordinary shares without nominal value outstanding on the record date (thus excluding the 17,597,449 own shares held by the Bank on the same date, to which no dividends are due, for an amount of 2,674,812.25 euro that was allocated to the Extraordinary Reserve).

[11] Interim dividends are considered net of the portion not distributed to the 25,956,343 own shares held by the Bank at the record date, amounting to 3,737,713.40 euro.

chapters 4 and 1 of Section I of the Report on remuneration policy and compensation paid; (ii) passed a resolution agreeing on the Disclosure on compensation paid in 2023 as described in Section II of the same Report; and (iii) approved the 2024 Annual Incentive System, which provides for the use of Intesa Sanpaolo ordinary shares to be purchased on the market;

– *authorisation to purchase own shares for annulment with no reduction of the share capital*. More specifically, the Shareholders' Meeting authorised: (i) the purchase, also in part or in fractions, of Intesa Sanpaolo shares for a maximum overall outlay of 1.7 billion euro and not exceeding 1,000,000,000 shares, with execution by 25 October 2024; (ii) the Board of Directors to carry out the purchases at a price to be identified from time to time, subject to the condition that the price cannot be more than 10% below or above the reference price of the Intesa Sanpaolo shares on the regulated market Euronext Milan managed by Borsa Italiana S.p.A. the day before the execution of each individual purchase, through transactions to be carried out in accordance with the provisions of Article 132 of the Consolidated Law on Finance, Article 144-bis, paragraph 1, letter b) of the Issuers' Regulation and with any other legislative and regulatory provisions (including the regulations and other rules of the European Union) applicable and in force from time to time; and (iii) the Board of Directors, with the power to delegate to the Managing Director and CEO, to carry out the purchases using the Extraordinary Reserve;
– *the authorisation to purchase and dispose of own shares to serve the incentive plans and for trading purposes.*

In the extraordinary session, the Shareholders' Meeting approved the proposal to annul Intesa Sanpaolo's own shares purchased and held by the Company by virtue of the authorisation from the Shareholders' Meeting in the ordinary session, delegating the Board of Directors – with the option of sub-delegating the Chair and the Managing Director and CEO, jointly or severally – to execute the annulment, in one or more tranches, by 25 October 2024 and to update Article 5 of the Articles of Association accordingly. The required Supervisory Authority assessment had already been obtained for the statutory changes approved by the Shareholders' Meeting.

The execution of the programme of purchase of own shares for annulment (buyback) – which was authorised by the ECB with decision notified on 11 March 2024 – began on 3 June 2024 in the manner and within the terms approved by the above-described Shareholders' Meeting of Intesa Sanpaolo of 24 April 2024 and ended on 18 October 2024[12]. During the period, a total of 479,128,488 shares were purchased, equal to around 2.62% of the share capital outstanding at the end of the programme, at an average purchase price of 3.5481 euro per share, for a total countervalue of 1,699,999,992.53 euro.
The transactions took place on the regulated market Euronext Milan managed by Borsa Italiana through the third-party intermediary appointed to execute the programme, in full independence and without any involvement of the Intesa Sanpaolo Group.
The annulment of the shares took place on 23 October 2024. While the share capital remained unchanged at 10,368,870,930.08 euro, the number of ordinary shares without nominal value decreased from 18,282,798,989 to 17,803,670,501. The Articles of Association amended to reflect said annulment were filed with the Turin Company Register on 28 October and registered on 30 October 2024.

During the period from 9 September to 11 September 2024 an Intesa Sanpaolo ordinary share buyback programme was also implemented to service plans for the assignment of shares, free of charge, to the employees and the Financial Advisors of the Group, in relation to (i) mainly, the Intesa Sanpaolo Group share-based incentive system for 2023; and (ii) to a lesser extent, the incentive systems of certain subsidiaries (Intesa Sanpaolo Private Banking, for the network in Italy, and Fideuram - Intesa Sanpaolo Private Banking Group for the Relationship Managers of the international commercial networks and non-employee Financial Advisors), also relating to 2023. These incentive systems are reserved for Risk Takers who accrue a bonus in excess of the so called "materiality threshold"[13], for those who are paid a "particularly high" amount[14] and for those who, among Middle Managers or Professionals that are not Risk Takers, accrue a bonus exceeding both the so called "materiality threshold"[15] and 100% of the fixed remuneration. In addition, the programme was implemented in order to grant, when certain conditions occur, severance payments upon early termination of employment.
Intesa Sanpaolo carried out the purchases according to the methods and within the terms authorised by the Shareholders' Meeting of 24 April 2024, also on behalf of the subsidiaries involved, which thereby concluded the programmes regarding the purchase of the parent company shares approved by their respective corporate bodies within their remits and analogous to the programme approved by the Parent Company Shareholders' Meeting.
In the three days during which the programme was executed, a total of 21,000,000 Intesa Sanpaolo ordinary shares were purchased, through the IMI Corporate & Investment Banking Division, tasked with the programme execution, representing around 0.11% of the share capital outstanding at the end of the programme. The average price was 3.7154 euro per share, for a total countervalue of 78,023,430.57 euro.
The Parent Company purchased 10,301,330 shares at an average price of 3.7146 euro per share, for a countervalue of 38,265,555.39 euro.
The transactions were executed in compliance with provisions included in Articles 2357 et seq., and 2359-bis et seq.of the Italian Civil Code and within the limits determined in the resolutions passed by the competent corporate bodies.

[12] The purchases were suspended during the three days (from 9 to 11 September 2024) of execution of the share buyback programme relating to plans of assignment, free of charge, of Intesa Sanpaolo ordinary shares to the employees and the financial advisors of the Group.

[13] Equal to 50 thousand euro or one third of the total remuneration (unless otherwise provided for by specific local regulations).

[14] Pursuant to the Group Remuneration and Incentive Policies, for the three-year period 2022-2024 a variable remuneration exceeding 400 thousand euro constitutes a "particularly high" amount.

[15] Pursuant to the Group Remuneration and Incentive Policies, for Middle Managers and Professionals who are not Risk Takers, the materiality threshold is generally equal to 80 thousand euro (unless otherwise provided for by specific local regulations). This threshold is increased to 150 thousand euro in order to significantly reduce the potential competitive disadvantage in the attraction and the retention of the best staff members in countries other than the Group's domestic market and in businesses in which there is a high competitive pressure on the staff (i.e. high cost of living, intense compensation dynamics and high resignation rate) and, outside the EU, in which the regulatory framework concerning the materiality threshold is less strict (or absent).

Pursuant to Article 132 of the Consolidated Law on Finance and Article 144-bis, paragraph 1, letter b) of the Issuers' Regulation and subsequent amendments, purchases were executed on the regulated market Euronext Milan managed by Borsa Italiana in accordance with trading methods laid down in the market rules for these transactions.
Moreover, the execution method complied with the conditions and the restrictions under Article 5 of Regulation (EU) no. 596/2014 of the European Parliament and of the Council of 16 April 2014, and Articles 2, 3, and 4 of Commission Delegated Regulation (EU) 2016/1052 of 8 March 2016.
The number of shares purchased daily did not exceed 25% of the daily average volume of the Intesa Sanpaolo ordinary shares traded in August 2024, which was equal to 70.2 million shares, as well as the additional limit, to the above-mentioned regulatory conditions and restrictions, of 15% of the volume traded on the Euronext Milan market on each of the days when purchases were executed.
Note that, pursuant to Article 2357-ter of the Italian Civil Code, the Intesa Sanpaolo Shareholders' Meeting authorised the disposal on the regulated market of own ordinary shares exceeding the actual requirement, under the same conditions as those applied to the purchases, and at a price of no less than the reference price recorded by the share in the stock market session on the day prior to each single disposal transaction, less 10%. Alternatively, these shares may be retained for future incentive plans and/or remuneration payable upon early termination of employment relationship (Severance).

With regard to the scope of consolidation, on 31 May 2024, after obtaining the necessary approvals from the various supervisory authorities, Intesa Sanpaolo S.p.A. completed the acquisition of 99.98% of the shares of the Romanian bank First Bank S.A. held by JCF IV Tiger Holdings S.à R.L. (Luxembourg). The related sale agreement had been signed on 28 October 2023 by Intesa Sanpaolo with the US private investment fund J.C. Flowers & Co and had already been announced in the 2023 Annual Report.
First Bank is a medium-sized local bank primarily focused on the SME and Corporate sectors, with a notable presence in the Retail (consumer lending) segment.
The acquisition strengthens Intesa Sanpaolo Group's presence in Central and Eastern Europe, particularly in Romania, where it has been operating since 1996 through Banca Comerciala Intesa Sanpaolo Romania S.A. (Intesa Sanpaolo Bank Romania), part of the International Banks Division, and now ranks among the top 10 banks in the country. Cost synergies are also expected, mainly related to the streamlining of the branch network, together with revenue synergies, through an expanded offering of high-quality financial services.
From an accounting perspective, the Purchase Price Allocation (PPA) process required by IFRS 3 was completed during the second half of the year, with the determination of the fair value of First Bank's assets and liabilities and the identification of any specific intangibles not previously recognised in its financial statements. The comparison between the acquisition cost and the shareholders' equity at fair value identified a difference of around 10 million euro, which was recognised as negative goodwill within the positive items in the consolidated income statement.

After having received the ECB and FINMA authorisations (issued on 3 June and 12 July respectively), on 8 August 2024 the CHF 40 million capital increase was completed and registered in the Swiss Company Register for Alpian S.A., the digital wealth bank in the start-up phase set up in 2019 and based in Geneva, which as at 31 December 2023 was 41.626% owned by the Intesa Sanpaolo Group (of which 28.134% held by Fideuram - Intesa Sanpaolo Private Banking and 13.492% by Reyl & Cie) and recognised in the consolidated financial statements under companies subject to significant influence in accordance with IAS 28.
The subscription to the recapitalisation of Alpian was approved by the Boards of Directors of Fideuram - Intesa Sanpaolo Private Banking on 26 February 2024 and of Intesa Sanpaolo, for the issuance of the necessary approval, on the following 27 February with the intention of fully subscribing any unsubscribed capital to ensure the success of the transaction, in view of the asset's strategic importance. In March, Fideuram - Intesa Sanpaolo Private Banking subscribed the capital increase for an amount of CHF 38,572,344.52, equal to its pro-rata share (including the share of Reyl & Cie) and the total of the unsubscribed capital. The conditions of the recapitalisation enabled the exercise, already authorised by the respective competent bodies, of the anti-dilution option in favour of Fideuram - Intesa Sanpaolo Private Banking and Reyl & Cie, which jointly subscribed a further capital increase at nominal value of CHF 2,431,349.67 on 10 September 2024.
Upon completion of the overall transaction (capital increase and exercise of the anti-dilution option), the Intesa Sanpaolo Group's ownership percentage rose to 61.599% (with 51.141% held by Fideuram - Intesa Sanpaolo Private Banking and 10.458% by Reyl & Cie), resulting in the acquisition of control of the company in accordance with IFRS 10 and its inclusion in the scope of line-by-line consolidation.
From an accounting perspective, the transaction was classified as a business combination achieved in stages. The Purchase Price Allocation process required by IFRS 3 was completed in the fourth quarter. The comparison between the acquisition cost (calculated by adding the subscribed capital increase and the fair value of the interest already held) and the pro-rata shareholders' equity at fair value of the company identified a residual difference of 28 million euro, which was allocated to goodwill.

On 19 November 2024, the merger deed was signed for the incorporation of Intesa Sanpaolo RBM Salute S.p.A., a company specialising in health insurance, into Intesa Sanpaolo Assicura S.p.A., a company specialising in damage insurance coverage for people, vehicles, and home, as well as loan protection. Both companies were 100% controlled by Intesa Sanpaolo Vita S.p.A., the Parent Company of the Intesa Sanpaolo Vita Insurance Group.
The merger was approved by the Extraordinary Shareholders' Meetings of Intesa Sanpaolo Assicura and Intesa Sanpaolo RBM Salute on 11 September 2024, in accordance with the merger plan approved on 8 April 2024 by the Boards of Directors of the two companies and registered with the Company Registers of Turin and Venice Rovigo on 19 July 2024, following the receipt of authorisation no. 173294 from the Institute for the Supervision of Insurance (IVASS) on 17 July 2024.
The merger took legal effect from 1 December 2024. On that date, the absorbing company adopted the new name "Intesa Sanpaolo Protezione S.p.A.". The civil and tax effects, on the other hand, commenced from 1 January 2024. Given that it was a merger in which both the share capital of the incorporated company and that of the absorbing company were wholly owned by the same shareholder, it was completed through the simplified procedure provided for in Article 2505 of the Italian Civil Code.

From a strategic perspective, the corporate transaction – which had no impact on the policies subscribed by customers – is part of the process of streamlining the Intesa Sanpaolo Group's non-life insurance segment by creating a single hub for asset and personal protection, combining the expertise gained by the two companies to develop an integrated offering and facilitating simpler and more efficient relations with the networks (both within the ISP Group and external) by standardising and unifying processes, particularly at the after-sales stage. The expected benefits also include organisational, administrative, and operational simplification.
From 1 December 2024, the name of the parent company Intesa Sanpaolo Vita was also changed to "Intesa Sanpaolo Assicurazioni S.p.A." with the related change in the name of the Intesa Sanpaolo Vita Insurance Group to "Intesa Sanpaolo Assicurazioni Group". This change was approved by the Extraordinary Shareholders' Meeting of the Company held on 11 April 2024 and authorised by IVASS by Order no. 0119676 of 6 May 2024[16].

The streamlining process also involved the Private Banking Division. Specifically, on 20 November 2024, the deed of merger was signed for the merger by incorporation of IW Private Investments Società di Intermediazione Mobiliare S.p.A. into its 100% parent company, Fideuram - Intesa Sanpaolo Private Banking S.p.A.
The transaction, completed through the simplified procedure set out in Article 2505 of the Italian Civil Code, with legal effect from 2 December 2024 and accounting and tax effects from 1 January 2024, was approved by the Extraordinary Shareholders' Meetings of the two companies on 24 September 2024, based on the merger plan approved by the two Boards of Directors on 15 May 2024[17] and following the authorisation issued by the European Central Bank with a letter dated 17 July 2024.
This completes the process of integration of the company into Fideuram - Intesa Sanpaolo Private Banking's operational model, which had already begun with the transformation of IW Bank (a company of the former UBI Banca Group) into a securities brokerage firm, while maintaining the customer relations and the network of Financial Advisors, brand value, and service excellence. Following the transaction, the product and service catalogue offered to customers was retained, together with the distribution model based on the network of Financial Advisors, which was transferred to Fideuram - Intesa Sanpaolo Private Banking and the "IW Private Investments" brand, to accompany the "Fideuram" brand.

Lastly, to complete the disclosure for 2024, the voluntary exits plan continued in accordance with the trade union agreements of 29 September 2020 and 16 November 2021.
In the year, there were 1,543 voluntary exits (32 in the fourth quarter, 405 in the third quarter, of which 377 with effect from 1 July; 295 in the second quarter, of which 265 with effect from 1 April; 811 in the first quarter, of which 774 with effect from 1 January) for a total since the beginning of 2021 of 8,661 exits, against the 9,200 exits expected to take place by the first quarter of 2025 under the terms of the two above-mentioned trade union agreements.
During 2024, there were approximately 1,550 hires (with slight differences in the four quarters) under those agreements, for a total of around 4,550 since the beginning of 2021 against the 4,600 planned by the end of 2025.
In addition, there were further voluntary exits on 1 January 2025 involving a total of 1,314 Group employees, of which 966 linked to the new Agreement signed in the fourth quarter of 2024.

In this regard, it is noted that, on 23 October 2024, Intesa Sanpaolo signed an agreement with the Trade Unions, which aims at enabling generational change at no social cost, also owing to significant investment in technology. The agreement also aims at defining the steps of a path leading to enabling service and offering models oriented towards greater simplicity and effectiveness for customers, as well as freeing up time for professional development through a major upskilling/reskilling training programme to better address the need for new widespread digital skills and new professions.
The agreement – addressed to all the people who meet pension requirements by 31 December 2030 of the Intesa Sanpaolo Group's Italian companies, including the managers – identifies ways and criteria to reach the target of 4,000 people voluntary leaving the Group by 2027, either by retiring or accessing the Solidarity Fund. Furthermore, by June 2028, the Group will hire 3,500 young people on indefinite-term contracts, 1,500 of whom as Global Advisors for the Network commercial activities in order to ensure greater proximity to customers, specifically in Wealth Management & Protection. The new hires will sustain the Group's growth and its new activities and are in addition to the aforementioned 4,600 hires by December 2025 already envisaged under the 2022-2025 Business Plan against 9,200 people leaving the Group by the end of the first quarter 2025.
Furthermore, by 2027, 3,000 exits are expected to take place in Italy and 2,000 net exits in the international subsidiaries, the latter entirely involving roles in central functions with no impact on the commercial roles, through actions on natural turnover.
Overall, upon full implementation (from 2028), the Group is expected to achieve annual savings in personnel expenses, taking into account the above-mentioned hires, of around 500 million euro compared to costs recognised in the fourth quarter of 2024 of 439 million euro before tax, including the discounting effect (295 million euro net of tax).

Under the Next Way of Working project – aimed at implementing a new working model based on strengthening individual responsibility and improving work-life balance – the preliminary real estate and technological interventions continued throughout 2024 and are still ongoing, aimed at constructing new workspaces designed to enhance the moments of presence in the office. At the end of 2024, the work had been completed at the sites in Treviso, Bologna, Padua, and Sarmeola di Rubano, Bari, Chieti, and Rome Via Lamaro. The work on the sites in Milan via Bisceglie and Moncalieri was completed in the initial weeks of 2025. In Rome, some minor refinements still need to be made to complete the functional layout of the spaces in Via del Corso. In Cuneo, the work is scheduled to start in February 2025.
The renovation of the spaces is continuing alongside the implementation of technological tools (release of the space booking function within the planning and reservation tool) and specific communication campaigns.

[16] With regard to (i) the merger by incorporation of Intesa Sanpaolo RBM Salute S.p.A. into Intesa Sanpaolo Assicura S.p.A., (ii) the amendments to the Articles of Association of the absorbing company Intesa Sanpaolo Assicura S.p.A. related to the merger and its re-branding, as well as (iii) the amendments to the Articles of Association resulting from the re-branding of Intesa Sanpaolo Vita and the Insurance Group, the Board of Directors of Intesa Sanpaolo had given its prior approval on 28 March 2024.

[17] The prior approval for the transaction was given by the Parent Company Intesa Sanpaolo to Fideuram - Intesa Sanpaolo Private Banking on 3 May 2024.

In parallel, the implementation continued of the plan aimed at expanding national coverage by progressively increasing the number of Flexible Work HUBs available to employees, providing them alternative spaces to their main offices to carry out their work. At the end of 2024, the number of available workstations had more than doubled (over 1,200 compared to around 600 at the beginning of the year). Currently, HUB spaces bookable by the Network staff and governance structures authorised for flexible work are available in all the Italian regions.
In addition, to promote increasing access to the flexibility tools by the Network staff who intend to use them on a voluntary basis, a significant expansion of the scope of application of these tools has been implemented in the Banca dei Territori and Private Banking Divisions starting from July.
Lastly, as part of the Energy Management strategies, and in particular as part of the initiatives aimed at improving ESG performance, the pilot phase initiated in December 2023 was continued in August 2024 and during the Christmas period (23 December 2024 - 3 January 2025) with the temporary closure of several head offices, making other company spaces in nearby areas available through booking to provide the possibility of working on-site, as an alternative to voluntary remote working.

The 2022-2025 Business Plan

The 2022-2025 Business Plan sets out a strategy based on four fundamental pillars of the Plan and implemented thanks to the quality of the Bank's People:
– massive upfront de-risking, slashing cost of risk;
– structural cost reduction enabled by technology;
– growth in commissions, driven by Wealth Management, Protection & Advisory;
– significant ESG commitment, with world-class positioning in social impact and strong focus on climate.

Over the years, the Intesa Sanpaolo Group has confirmed its solidity and strengths, and in particular its earnings resilience, solid capitalisation, risk control, and high flexibility in managing operating costs.
The implementation of the Plan is proceeding at full speed. The results achieved in 2024 confirm that the Intesa Sanpaolo Group is able to generate sustainable profitability even in complex environments thanks to its well-diversified business model. During the year, the Group strengthened its competitive position by pursuing a strategy of organic growth, achieving – and in some cases exceeding – the targets set out in the 2022-2025 Business Plan.

In relation to the Group's strong commitment to ESG, the following information is provided in line with previous years, some of which is also presented in the Consolidated Sustainability Statement, included in this Report, where further details can be found.

Massive upfront de-risking, slashing Cost of risk

During the year, the Intesa Sanpaolo Group achieved a further improvement in asset quality, both through credit risk transfers and capital efficiency initiatives, leading to a reduction of 5.5 billion euro in the stock of gross non-performing loans since the start of the Plan, with gross and net NPL ratios, calculated according to the EBA methodology, of 2% and 1% respectively in 2024.
In 2024, the Balance Sheet Optimisation (BSO) unit continued to expand its credit risk coverage schemes for optimising capital absorption, reporting an outstanding volume of synthetic securitisations included in the GARC (Gestione Attiva Rischio di Credito – Active Credit Risk Management) Programme of around 29 billion euro. Several new synthetic securitisations were completed during the year, details of which are provided in the Notes to the Consolidated Financial Statements, Part E – Information on risks and relative hedging policies, Credit risk, Securitisations.
The work also continued on the further strengthening of capital efficiency initiatives and the expansion of the scope of application of the lending strategy to ESG criteria, with around 38 billion euro new loans in 2022-2023 and around 21 billion euro since the beginning of 2024 directed towards more sustainable economic sectors with the best risk/return profile and broadening the scope of alternative financing solutions for high-risk customers.
The Group has introduced a Sectoral Framework to enhance its credit assessment capabilities, which assesses the forward-looking profile of each economic sector on a quarterly basis across different countries and aims to evolve the main credit processes (granting and proactive management) by adding sectoral information. The approval of a sectoral view by a specialised managerial committee, which feeds into all the credit processes, improves the effectiveness of the credit decisions and action plans.
With regard to the proactive management of other risks, anti-fraud cybersecurity protection has been extended to new products and services for retail customers, also through the use of Artificial Intelligence solutions. Open Source Intelligence solutions have also been adopted to enhance the ability to respond to cyber threats and increase the protection from cyber attacks (in relation to detection and recovery) and internal awareness of threats of this kind, such as phishing. Under the EBA Clearing "Fraud Pattern and Anomaly Detection" (FPAD) project, Intesa Sanpaolo is one of the first European banks to incorporate the risk score established by the EBA into its anti-fraud system for corporate transactions (bank transfers and instant payments).
Significant attention has also been given to improving security in identity and access management both for employees and customers. Employees have been provided increased protection both for remote access to applications and for on-site company workstations, through the implementation of multi-factor authentication, while customers have benefited from an improved level of security in digital services, aided by the adoption of advanced solutions and technologies for the remote biometric recognition of users, which has also enhanced the user experience.
In 2022, the Bank established the Anti-Financial Crime Digital Hub (AFC Digital Hub), a national and international centre also open to other financial institutions and intermediaries in the industry, aimed at combating money laundering and terrorism by means of increasingly advanced technologies. The aim of the centre is to use new technologies and Artificial Intelligence to

create a public-private collaboration model which promotes the introduction of innovation in business processes through applied research.

With regard to the de-risking initiatives, on April 15, 2024, a newly established Alternative Investment Fund (AIF) acquired a portfolio from Intesa Sanpaolo with a total Gross Book Value (GBV) of around 0.2 billion euro, consisting of both non-performing exposures classified as unlikely-to-pay (UTP) and positions not yet classified as non-performing but considered high-risk. The transaction was approved by the Board of Directors in December 2023 and the loans identified, after having verified the fulfilment of the requirements of IFRS 5, were reclassified as assets held for sale as at 31 December 2023. There are some remaining minor short-term exposures that will be sold in 2025.
With regard to de-risking initiatives, three projects were launched in the second quarter, for the disposal of non-performing loans of Intesa Sanpaolo, mainly through transfers to Alternative Investment Funds (AIF) that invest in credit exposures, all completed within the set timeframes. More specifically, the three transactions involved:

– the transfer to an AIF of a portfolio of UTP small ticket loans with a Gross Book Value (GBV) of around 0.2 billion euro;
– the cash sale of bad loans with a GBV of around 0.2 billion euro;
– the transfer of non-performing loans (UTP and past due loans), divided into three distinct perimeters for a total GBV of over 0.6 billion euro, to the same number of AIFs, selected based on the characteristics of the transferred exposures.

The closing of the first two transactions was carried out in July, while the third was partially finalised in July and partially in October[18].
In the fourth quarter, a new transaction was initiated involving the true sale of an Intesa Sanpaolo portfolio of bad loans with a GBV of 0.3 billion euro. The transaction is scheduled to be completed in 2025. Since the conditions of IFRS 5 applied, the portfolio was reclassified as held for sale as at 31 December 2024, aligning its carrying amount to the sale price.

Structural Cost reduction, enabled by technology

The streamlining of the retail network and the real estate scale back in Italy continued, with the closure of 1,190 branches[19] (of which around 360 in 2024) and the release of around 713,000 square metres of owned or leased property[20] (of which around 227,000 in 2024). Since the beginning of the Plan, 178 owned real estate assets have been sold for a total value of around 137 million euro. The streamlining of the branch network was enabled by Group's continuous strategic investments in technology, leading to a profound digital transformation over the years, strongly oriented towards customer relationship care.
The Group's new digital bank, Isybank, was launched in 2023 and plays a key role in Intesa Sanpaolo's customer service model and digital development strategy. Its creation is aimed at further strengthening the Group's competitive advantage in cost management and achieving leadership in Europe in operational efficiency and customer service innovation. In 2024, the technological developments necessary to complete Isybank's digital offering for loans, protection and investments were completed according to plan.
The development of isytech, the new cloud-native digital platform and technology infrastructure of Isybank, which is being extended to the entire Group, is also continuing. At the end of 2024, the progress of the isytech adoption at the Parent Company was in line with the plan, which targets completion in 2026, both for the areas being redesigned in the cloud (i.e. Apps, Loans, Current Accounts, Payments, Investments and Data) and for the necessary adjustments to the remaining applications.
During the year, artificial intelligence emerged as a strategic enabler and now provides the foundation for Intesa Sanpaolo's strategy for improving risk management, enhancing operational efficiency, and creating new business opportunities through targeted investments. In particular:

– launch of the AIXeleration programme, with the aim of creating around 150 solutions to support the business and governance areas within timeframe of the Plan. There are currently around 215 staff dedicated to the development of AI use cases (104 already developed in 2024) supporting Business, Planning and Control, Compliance, Risk Management and HR processes;
– adoption of a conscious approach to AI ("Responsible AI") through the definition of risk-based rules and operational processes which will enable the Group to adopt AI solutions safely and responsibly, including those that address Fairness, Explainability, Data Quality and Human Oversight;
– continuation of the activities of the Centai Institute, artificial intelligence laboratory in Turin;
– continuation of the digitalisation strategy for E2E (End-to-End) processes, using both Process Intelligent Automation (e.g. with Artificial Intelligence and/or Robotic Process Automation) and traditional re-engineering methods;
– Eurizon's launch of digitalisation projects related to Artificial Intelligence (implementation phase of the Proof of Concept on Group infrastructure) and Digital Ledger Technology (successful completion of the trial on the tokenisation of fund units and launch of the pilot project for their distribution).

The numerous other technological initiatives pursued by the Group since the beginning of the Plan include the:

– hiring of around 2,320 people in the technology area;
– establishment of the new digital platform for analytical cost management, which uses integrated advanced analytics and benchmarking techniques and has led to the identification of 44 cost efficiency initiatives;
– extension of the Hub Procurement system to the entire centralised procurement management perimeter and launch of the first pilot projects in the area of procurement analytics;
– modernisation of technology solutions in the International Branches, in particular with regard to Originate to Share and data management solutions;
– reduction of loan disbursement times (-50% for Corporate and -30% for Retail) thanks to the new credit granting process;
– start, in line with the SkyRocket plan (a cloud solution enabled by the partnership with Google Cloud and TIM), of the operations of the new Cloud Region in Turin, adding to the one in Milan; at the end of 2024, the progress of the migration

[18] The transactions described were also accompanied by sales of single name loans for a total of 0.1 billion euro completed during 2024.
[19] From the fourth quarter of 2021.
[20] From the fourth quarter of 2021.

onto the Skyrocket Cloud infrastructure in Turin and Milan, involving the migration to Skyrocket of 60% of the cloud ready applications, was on schedule and the cost reduction in terms of Total Cost of Ownership (TCO) was also in line with project objectives;
- launch of the new core banking system in Egypt and gradual release of applications for the target platform in all the countries of the International Banks Division;
- launch of the new core banking system in Albania.

Lastly, the reduction in staff due to voluntary exits, amounting to over 8,650 people since 2021, continues to be supported and offset by the ongoing digital transformation strategy.

Growth in Commissions, driven by Wealth Management, Protection & Advisory

The expansion continues of "Valore Insieme", the advanced advisory service for Affluent and Exclusive customers of Banca dei Territori, with new insurance and asset management products. At the end of 2024, Valore Insieme's stock of financial assets amounted to 81.5 billion euro, with around 67 thousand new contracts signed and approximately 18.5 billion euro of new financial asset flows gathered since the beginning of the year. In early March, the marketing began of Eurizon mutual funds dedicated to customers with the Valore Insieme Exclusive Package. In September, a communication campaign targeting potential customers was launched via direct emails and ATM messages.
In Private Banking, We Add, the new advanced advisory service for the Intesa Sanpaolo Private Banking network, has been released, and the new Aladdin Robo4advisory features have been added to support the advisory activities for the Fideuram network. New features have also been developed for the advisory tools dedicated to UHNWI (Ultra High Net Worth Individual) customers and the service model for family offices has been strengthened. In addition, the new SEI (Advanced Advisory Services) agreement for Fideuram was launched, which allows for the inclusion of assets under administration into its scope.
The strengthening is continuing of Fideuram Direct (Fideuram's digital wealth management service for investing in managed products and trading in over 50 cash and derivatives markets, with advanced services). The new remote advisory service, Direct Advisory, allows customers to open accounts and subscribe to asset management products themselves, in addition to building investment portfolios with the help of direct bankers operating remotely. Cash deposits have also been added to the catalogue, to complement wealth management product solutions, and the range of advanced trading services offered by Fideuram Direct has been expanded. In addition, the Direct Advisory services have been extended to customers of traditional networks, based on their preferences and operational characteristics.
The offering of Alpian, Switzerland's first digital private bank with a mobile-only platform, including multi-currency, wealth management and financial advisory services with experienced consultants, was strengthened through the introduction of the in-self configurable mandates and the Apple Pay service.
Reyl & Cie, the Swiss hub of the Private Banking Division, continues to contribute to the growth in fees and commissions generated internationally, together with Intesa Sanpaolo Wealth Management in Luxembourg. The implementation of the Reyl's growth strategy is continuing through synergies with the Italian Private Banking networks and the other Group companies and the launch of a project to implement a distribution model for selected Reyl banking products within the Italian networks. In November 2024, a new strategic initiative was announced, designed to accelerate the growth of the Digital Wealth Management offering in Europe (Belgian and Luxembourg markets) in collaboration with BlackRock. A new fully digital Business Unit will be established within Intesa Sanpaolo Wealth Management aimed at expanding the customer base across Europe by offering cutting-edge solutions.
Intesa Sanpaolo was the first bank in Italy to offer Nexi SoftPOS in 2023, a solution allowing contactless digital payments from smartphones/tablets without a card payment machine (POS terminal). Since June 2024, the service has been extended to the iOS operating system and the advanced SoftPOS PRO version for medium/large-sized corporate customers has been launched on Android.
In addition, the ring wearable payment service was launched in the first quarter of 2024, in collaboration with Mastercard and Tapster, a pioneering Swedish company operating in the contactless payments sector.
In 2024, a strategic partnership became operational with Man Group in Asteria Investment Managers, focused on the creation of a wide range of alternative and strictly long-term investment strategies using cutting-edge technology, with the aim of generating innovative investment opportunities for Fideuram - Intesa Sanpaolo Private Banking customers. In March 2024, the first fund classified as Article 8 SFDR was launched on the Italian networks, which has already exceeded 1 billion euro in funding. In addition, 100% of Carnegie Fund Services S.A., an active player in fund distribution, was acquired and merged into Reyl & Cie S.A. with accounting effect from 1 January 2024.
The expansion continues of Eurizon's offering for captive and third-party distributors through the progressive enhancement of the ESG product offering for asset management and insurance, which has brought their penetration to over 76.4% of Eurizon's total assets under management. Eurizon's continues its commitment to financial education, ESG training (towards distributors and academics) and stewardship.
A business partnership was also initiated with Eurobank Asset Management, a management company wholly-owned by Eurobank, involving the distribution of Eurizon funds by Eurobank and support from Eurizon for growth in asset management, and a memorandum of understanding was signed in July 2024, which will allow Eurizon to enter the Greek market.
From 1 January 2024, InSalute Servizi, a company of the Insurance Division of Intesa Sanpaolo, became the TPA (Third Party Administrator) of the Intesa Sanpaolo Group's Health Fund. The company, which also manages the Banca dei Territori customers with Intesa Sanpaolo Protezione health policies, is currently the fourth-largest TPA in the Italian market, handling over 1.5 million cases per year. Thanks to partnerships with leading healthcare facilities, new online booking services for medical treatments have been released, with the possibility of receiving reports directly on the App, which are currently aimed at the Group's individual customers.
As already mentioned in the paragraph above, in December 2024 Intesa Sanpaolo Vita changed its name to Intesa Sanpaolo Assicurazioni. In addition, in the non-life business, Intesa Sanpaolo Protezione was created from the merger of Intesa Sanpaolo RBM Salute with Intesa Sanpaolo Assicura to consolidate the leadership in the Italian insurance market.

The Group has dedicated numerous initiatives to businesses and financial institutions, including the:
- launch of IncentNow, a digital platform able to provide information to Italian companies and institutions on the opportunities offered by the public tenders related to the National Recovery and Resilience Plan, and the offering of webinars and workshops with customers aimed at educating and sharing views on key topics such as the digital transition;
- commercial initiatives to support customers in different sectors to optimise the incorporation of European and Italian post-pandemic recovery plans;
- strengthening of the Global Transaction Banking platform through digital enhancement initiated by the IMI Corporate & Investment Banking Division, in collaboration with isytech at Group level. IMI C&IB's capital light toolkit is also being expanded, with the introduction of new instruments such as credit risk insurance and portfolio hedging;
- origination and distribution activities, both in Italy and abroad, also through the enhancement of the Originate-to-Share model, with the introduction of additional risk-sharing instruments and the strengthening of relationships with institutional customers;
- ESG advisory services to corporates to steer the energy transition through a scalable approach, with a focus on energy, infrastructure and the automotive & industrial sectors, also through supply chain agreements with specialised partners, and integrating working capital funding solutions;
- enhancement of the digital platforms serving Corporate customers, with a focus on Cash and Trade services and the Global Markets offering, also through the launch of Cardea, an innovative and digital platform for financial institutions;
- development of the synergies between the IMI Corporate & Investment Banking Division and the Group's main international banks and continuation of (i) the ESG value proposition initiative, dedicated to the priority sectors of the commercial strategy, for the Corporate and SME customer segments of the Group banks in Slovakia, Hungary, Croatia, Serbia and Egypt; and (ii) the business partnership with a leading insurance group for the distribution of bancassurance products in Slovakia, Croatia, Hungary, Serbia and Slovenia.

Also worth noting were:
- the launch of a synergy project between the International Banks (IBD) and Banca dei Territori Divisions, which will further enhance the cross-border business opportunities for mid-corporates operating in markets where the international subsidiaries are present;
- the launch of initiatives for the development of synergies – in Global Market, Structured Finance and Investment Banking – between IMI C&IB and the Group's main international banks with a significant increase in business and pipeline since the start of the Business Plan;
- the acquisition, in May 2024, of 99.98% of First Bank, a Romanian commercial bank focused on services to SME and retail customers, which will strengthen the Group's presence in Romania and offer new opportunities to Italian companies.

Intesa Sanpaolo, through its IMI Corporate & Investment Banking Division, received the awards for Best Investment Bank and Best Bank for Corporates in Italy at the 2024 Euromoney Awards for Excellence. The Group's subsidiaries in Croatia, Slovakia and Serbia also received the awards for best banks in their respective countries.

Significant ESG commitment, with a world-class position in Social Impact and strong focus on climate

As a large banking Group, Intesa Sanpaolo is aware that it has a considerable impact on the social and environmental context in which it carries out its business and chooses to act not only on the basis of profit, but also with the aim of creating long-term value for the Bank and the community, in the knowledge that it can contribute to reducing the impact of phenomena such as climate change and social inequalities.

The Group's commitment to ESG issues is ensured by the numerous initiatives it is pursuing for each of the main strategic drivers it has decided to adopt:
- support to address social needs;
- focus on financial inclusion;
- commitment to culture;
- promoting innovation;
- accelerating on commitment to Net-Zero;
- supporting clients through the ESG/climate Transition.

In 2024, Intesa Sanpaolo continued to expand the Food and shelter for the needy programme to combat poverty by providing concrete aid throughout Italy and abroad, with over 54 million interventions completed since the beginning of the year, including meals, shelters and beds, clothing items, and medication prescriptions. The social housing initiatives underway were strengthened by promoting housing units and identifying some new partnerships with leading operators in the sector, to achieve the Business Plan targets (promotion of 6,000 - 8,000 units of social housing and student beds).

In the area of employability, the "Giovani e Lavoro" programmes continued, aimed at training and introducing more than 3,000 young people to the Italian labour market over the 2022-2025 Business Plan horizon, together with "Digital Restart", focused on training and reintegrating unemployed people aged between 40 and 50 into the labour market, by funding a Master's degree in Data Analysis to develop new digital skills and re-enter the workforce.

In 2024, the Group's educational inclusion initiative strengthened its partnerships with top Italian universities and schools, maintaining its commitment to merit and social mobility. Additionally, since the beginning of the Plan, the Group has launched "Futura" – a new programme promoted by Save the Children, Forum Disuguaglianze e Diversità and Yolk, with the collaboration of Intesa Sanpaolo, to combat female educational poverty, educational failure and early school leaving – as well as "In Action ESG NEET", a social impact initiative launched by the Insurance Division dedicated to the promotion and inclusion of NEET – Not (engaged) in Education, Employment or Training youths and other vulnerable categories in the world of work.

Intesa Sanpaolo's focus on financial inclusion in 2024 was supported by the disbursement of around 5.6 billion euro in social lending and urban regeneration and 271 million euro in lending to non-profit entities, in addition to the "Fund for Impact" programme (110 million euro provided through dedicated initiatives to meet the needs of individuals and families, to ensure wider and more sustainable access to credit) and the urban regeneration programme (234 million euro of commitments made for new investments for initiatives in housing, services, and sustainable infrastructure, in addition to the most important urban regeneration initiatives underway in Italy).

The promotion of art and culture is a core part of the Group's identity in its role as a key player in Italy's social and cultural development and contributes to making the Bank a recognised leader in the Italian and European cultural landscape. More details on the Group's numerous initiatives in this area are provided in the section dedicated to this subject.

Intesa Sanpaolo recognises that promoting innovation is a strategic factor in becoming the driving force for a more aware, inclusive, and sustainable economy. The continued commitment to the growth of start-ups and the development of innovation ecosystems is reflected in the activities carried out during the year and since the beginning of the Plan.
These consisted of the launch of 241 innovation projects by ISPIC – Intesa Sanpaolo Innovation Center in 2024, bringing the total to 572 projects since 2022, as well as numerous initiatives for the growth of start-ups and the development of innovation ecosystems (more than 230 start-ups accelerated and over 450 proofs of concept and other collaborations since 2019), the development of multidisciplinary applied research projects, with 18 research projects currently ongoing and a total of 27 projects launched since 2022, and the implementation of 5 industrialisations and the acquisition of one patent.
The key activities included the business transformation initiatives, with 79 companies engaged in open innovation programmes since 2022, including 11 focused on circular economy projects, and the advancement of an innovation mindset and culture, with the organisation of 41 positioning and match-making events[21] attended by over 12,000 participants in 2024 (around 110 events and more than 17,000 participants since 2022), the release from the start of the year of 18 reports and publications focusing on technology innovation (around 50 since 2022), and lastly over 33 million euro of investments made by Neva SGR in support of start-ups in 2024 (around 118 million euro since 2022).
The acceleration towards "net-zero" emissions (carbon neutrality) continues following the Group's adherence to the Net-Zero alliances (NZBA, NZAOA and FIT, formerly NZIA)[22], which began with the publication of the interim 2030 targets in the 2022-2025 Business Plan for four high-emission sectors (Oil & Gas, Power Generation, Automotive, and Coal Mining). Further targets have been set for additional sectors (Iron & Steel, Commercial Real Estate, Agriculture – Primary Farming, Aluminium, Cement, and Residential Real Estate), alongside a revision of those related to Power Generation and Automotive in terms of value chain and scope, to align with the Science-Based Targets Initiative (SBTi) requirements.
Other important initiatives included the "Think Forestry" project, aimed at reforestation and the preservation of natural capital, to promote environmental sustainability and the transition towards a zero-emissions economy, as well as Intesa Sanpaolo's signing of the "Finance Leadership Statement on Plastic Pollution" with over 160 other financial institutions involved in an ambitious environmental agreement to end plastic pollution.
The main activities carried out by the Group to support its customers in the ESG/climate transition included:

- the disbursement since 2021 of around 68.3 billion euro out of the 76 billion euro in new lending available for the green economy, circular economy and green transition envisaged in the 2022-2025 Business Plan;
- the disbursement of around 4.1 billion euro of Green Mortgages in 2024 (9 billion euro since 2022), out of the 12 billion euro of new Green lending to individuals envisaged in the Plan;
- in the circular economy, in addition to the 8 billion euro of dedicated credit lines announced in the Business Plan, in 2024 Intesa Sanpaolo, a Strategic Partner of the Ellen MacArthur Foundation since 2015, assessed and validated 285 projects for a total of around 13.1 billion euro, granted around 8.3 billion euro in 170 transactions (of which around 4.4 billion euro related to green criteria), and disbursed 4 billion euro taking into account previously granted projects (of which 2.2 billion euro related to green criteria). Overall, since 2022, over 1,050 projects have been assessed and validated for a value of around 34 billion euro, with over 20 billion euro granted in 642 transactions (of which around 12 related to green criteria), with around 12.6 billion euro disbursed taking into account previously granted projects (of which 9.1 billion euro related to green criteria). The collaboration also continued between Intesa Sanpaolo, ISPIC, Fondazione Cariplo and Cariplo Factory on issues related to the circular economy, also through the Circular Economy Lab;
- activation in Italy of 16 ESG Laboratories, physical and virtual meeting points to support enterprises in approaching sustainability, and evolution of the advisory services offered by partners;
- streamlining of the S-Loan offering, from six to three lines in 2024 (S-Loan ESG, S-Loan CER and S-Loan Diversity), and the disbursement of 1.6 billion euro during the year (around 6.8 billion euro since the launch of the product line in July 2020);
- implementation of the ESG/Climate evolution of the credit framework for non-financial companies, leveraging on the ESG sectoral assessment and the ESG sectoral strategy, the ESG scoring at counterparty level and new guidelines on sustainable products; in addition to the development of the analysis methodology for the transition plan for Oil & Gas, Power Generation, and Automotive customers, and extension to Iron & Steel;
- ESG advisory services to corporates to steer the energy transition through a scalable approach, with a focus on energy, infrastructure and the automotive & industrial sectors;
- significant development of the ESG value proposition for the Corporate, SME and Retail customer segments in all the banks of the International Banks Division (excluding Moldova and Ukraine), with the expansion of the Retail product catalogue and the launch of the Green Dedicated S-Loan in VUB Banka (Slovakia), CIB Bank (Hungary) and BIB (Serbia);

[21] In a positioning event, a key player discusses innovation issues, while a matchmaking event facilitates the matching of supply and demand in innovation.

[22] On 25 April 2024, the UN Environment Programme (UNEP) announced the creation of the Forum for Insurance Transition to Net Zero (FIT), a new UN-led and convened structured dialogue and multistakeholder forum to support the necessary acceleration and strengthening of voluntary climate action by the insurance industry and key stakeholders. Intesa Sanpaolo Assicurazioni is one of the Founding FIT Participants. On the same date, NZIA ceased its operations. (NZBA = Net-Zero Banking Alliance; NZAOA = Net-Zero Asset Owner Alliance; FIT = Forum for Insurance Transition to Net Zero; and NZIA = The Net-Zero Industry Act)

- enhancement of the ESG investment products for asset management, continued expansion of the Insurance Based Investment Products (IBIPs), and the continued maintenance and increase in investment options with underlying insurance products for customers;
- strong commitment to Stewardship, with Eurizon Capital SGR taking part in 1,566 shareholder meetings (of which 90% involving international listed issuers) and 837 engagements (of which 37% on ESG issues) from the beginning of the year; during the same period, the subsidiaries Eurizon Capital S.A. and Epsilon SGR took part in 3,870 and 409 shareholder meetings respectively (both of which with 97% involving internationally listed issuers), while Fideuram took part in 47 shareholder meetings and 166 engagements (of which 83% on ESG issues);
- establishment of the "ESG Ambassador" role in the Private Banking Division, with the aim of promoting a culture of sustainability in their local areas, promoting sustainable behaviour and providing a listening point for the needs of customers and Private Bankers.

The Group's commitment to ESG issues is also ensured by the strengthening of ESG governance. This has led to the transformation of the Risks Committee into the Risks and Sustainability Committee, with the assignment of more ESG responsibilities, and the recent appointment of the Chief Sustainability Officer. A dedicated governance area has been created to consolidate ESG activities and strengthen the steering of the ESG business, with a strong commitment to social initiatives and combating inequality, continuous support for culture and a significant contribution to sustainability through innovation projects and investments in start-ups.

The Group's people as its most important asset

Intesa Sanpaolo continues its commitment to investing strengthening its human capital through a range of initiatives aimed at its People, for their growth, development, and satisfaction. Creating a unique ecosystem of skills aligned with the Bank's evolution is one of the primary goals for the Group, which actively focuses on talent and the promotion of diversity and inclusion, because it recognises that People are the most important resource for achieving the Plan objectives and the enablers for future success.
The generational change continues, aimed at supporting the Group's growth and best meeting the challenges of coming years by developing and maintaining suitable skills, with the hiring of professionals and reskilling and training of internal staff. The target over the Plan period is to make 4,600 permanent hires (around 4,550 professionals hired since 2021).
The engagement of the Group's People in achieving the Plan's objectives is pursued through the reskilling and redeployment of people towards priority and strategic initiatives, in addition to long-term incentive plans that also foster individual entrepreneurship. The third edition of the International Talent Program also continues, alongside targeted development and training initiatives for a selected number of key middle management staff.
The staff training strategy, a key aspect for the Group, is being implemented through the new leading education player in Italy, created through the combination between Intesa Sanpaolo Formazione and Digit'Ed (a Nextalia Fund company). Today's environment requires the ongoing development of skills and flexibility and, in 2024, the Bank delivered around 40.7 million hours of training since 2022, against a target of 50 million hours envisaged over the Plan period.
Supporting the well-being and work-life balance of Group's People remains a key element of its strategy. In response to the need for flexibility, a new organisational framework has been set up that provides greater flexibility in terms of daily work schedule, remote working, together with the introduction of a four-day working week on a voluntary basis with no change in remuneration. This has been accompanied by the launch of dedicated platform, in support of the physical, emotional, psychological and social well-being of the Group's employees, which offers video content, podcasts, articles, tools and apps, accompanied by events and initiatives organised both in-person and digitally.
Intesa Sanpaolo pursues the objective of fostering an inclusive working environment, promoting the respect and value of diversity and enhancing the multicultural heritage, experiences and characteristics of the Group's People. It is also committed to promoting people management and development policies based on fairness, meritocracy and nurturing each person's talent without discrimination of any kind. To this end, the Diversity, Equity & Inclusion objectives of each Division and Governance Area are closely monitored, and the collaboration has been strengthened with ISPROUD, the Group's first employee community, which now includes LGBTQ+ people and allies, and the cooperation with the new internal community ARTICOLO19 on disability issues has been initiated.
In addition to the Group's presence in important sustainability indexes and rankings, the attention paid to our People is also reflected in the numerous awards received:

- Top Employer Europe 2025 for the first time and Top Employer Italy 2025 for the fourth year running (given to the bank by the Top Employers Institute, a global authority on HR best practices) and first place in the LinkedIn Top Companies 2024 ranking as the best company in Italy in which to develop one's career and grow professionally;
- world leader among the 100 most inclusive and diversity-conscious workplaces: Intesa Sanpaolo was included in the FTSE Diversity & Inclusion Index Top 100, where it was ranked seventh in the world, the first and only Banking Group;
- achievement of the Gender Equality European & International Standard (GEEIS) – Diversity Certification (first bank in Italy and one of the first in Europe);
- "Prassi di Riferimento (PDR) 125:2022" certification for gender equality envisaged by the National Recovery and Resilience Plan (NRRP) (first major Italian banking group to obtain it), successfully maintained through an annual audit;
- ranked first in the global ESG Corporate Award ranking, in the Best Company for Diversity Equity & Inclusion category, among large cap companies.

The Intesa Sanpaolo People Satisfaction Index continues to rise, reaching its highest level for the last ten years (84% in 2023 compared to 79% in 2021 and 66% in 2013).

* * *

The Group's strategy outlined in the 2022-2025 Business Plan recognises that: 1) intellectual capital, comprising organisational capital and the value of knowledge; 2) human capital, representing the collective skills, abilities, experiences, and innovation drive of our people; and 3) social and relational capital, which includes our interactions with diverse stakeholders and information exchange capabilities, are unique intangible resources that are crucial to achieving the goals set. These resources are described in the Report on operations and the Consolidated Sustainability Statement to highlight their fundamental contribution to the corporate strategies and their ability to serve as a source of value creation for the business.

Progetto Cultura

Progetto Cultura is the multi-year programme of initiatives through which Intesa Sanpaolo actively expresses its commitment to promoting art and culture, providing a direct and tangible contribution to Italy's cultural and social growth. The activities are conceived and implemented by the Art, Culture and Heritage structure in dialogue with public and private, national and international organisations and institutions.

For a full discussion of the topic discussed below, see also the Consolidated Sustainability Statement, and in particular the chapter ESRS S3 "Affected communities".

Gallerie d'Italia

Gallerie d'Italia is Intesa Sanpaolo's museum network with four venues, in Milan, Naples, Turin and Vicenza, developed from the transformation of historic buildings owned by the Bank, which now serve as public museums that offer access to art collections, exhibitions and cultural and social programmes.
In 2024, the Gallerie d'Italia received a total of around 754,000 visitors, with free admission for under 18s and school groups (131,000 children and young people).

Exhibition Projects
The Gallerie d'Italia host selections of Intesa Sanpaolo's artworks from their own collections in permanent itineraries, which are regularly updated. During the year, the sections dedicated to 20th-century art in Milan and Naples were expanded with three installations featuring the works of Alighiero Boetti, Robert Ryman, and Dan Flavin from the Agrati Collection.
Twelve major temporary exhibitions were inaugurated, organised together with national and international partners and featuring loans from around 180 museums and collections. In Milan: *Il genio di Milano*, under the High Patronage of the President of the Italian Republic, curated by Marco Carminati, Fernando Mazzocca, Alessandro Morandotti, and Paola Zatti, in partnership with Veneranda Biblioteca Ambrosiana (a tribute to the city of Milan as a centre of innovation and inclusion for foreign artists from the Middle Ages to the 20th century); and *Felice Carena*, curated by Luca Massimo Barbero, Virginia Baradel, Luigi Cavallo, and Elena Pontiggia (a project for the "rediscovery" of a significant twentieth-century painter). In Naples: *Sir William and Lady Hamilton*, curated by Fernando Mazzocca and Francesco Leone, in collaboration with the Italian Embassy in the United Kingdom and the British Embassy in Italy (an in-depth look at the figure of the ambassador and collector William Hamilton in 18th-century Naples); *Velázquez*, in partnership with The National Gallery in London (two masterpieces from the National Gallery as part of the "L'Ospite illustre", and an exchange of loans for Intesa Sanpaolo's Caravaggio exhibition in London); and *Andy Warhol*, curated by Luca Massimo Barbero, in coordination with the "Vitalità del Tempo" museum section (the first exhibition to feature Warhol's artworks from the Group's collections). In Turin: photographic projects related to ESG issues: *Cristina Mittermeier*, curated by Lauren Johnston, in collaboration with National Geographic (the beauty and defence of the planet in the images of one of the world's most influential activist photographers); *Mitch Epstein*, curated by Brian Wallis (works by the well-known American photographer on the relationship between society, progress and nature, partly commissioned by Gallerie d'Italia); *Antonio Biasiucci*, curated by Roberto Koch (third event in the "La Grande Fotografia Italiana" series); *Non ha l'età* curated by Aldo Grasso, in collaboration with RAI (photos of the first editions of the Sanremo Festival from the Intesa Sanpaolo Publifoto Archive); and *Gentileschi e Van Dyck,* in partnership with Gallerie Nazionali di Arte Antica in Rome (two masterpieces from the Galleria Corsini as part of the "L'Ospite illustre" series). In Vicenza: *Francesco Bertos*, curated by Monica De Vincenti and Fernando Mazzocca (a project of "rediscovery" of a great 18th-century sculptor present in the Bank's collections with his major work, *La caduta degli angeli ribelli*); and *Javier Jaén* curated by Francesco Poroli (exhibition featuring the Spanish designer and illustrator as part of the "Illustrissimo" section of the Illustri Festival of Vicenza). In parallel, 4 dossier exhibitions were organised alongside 8 digital exhibitions at the Gallerie di Torino, including highlights such as *Cronache d'acqua* (second chapter, focusing on Southern Italy, of the photographic project commissioned by the Bank in collaboration with Green&Blue on the theme of water and the climate crisis) and *In viaggio con l'America* (an image-based depiction of the American elections in collaboration with Mario Calabresi).
Gallerie d'Italia exhibitions were also held at other venues in Italy and abroad (featuring both existing projects previously shown at the Gallerie and new productions): *Mimmo Jodice* at Villa Bardini in Florence, with the Fondazione CR Firenze; *Luca Locatelli-The Circle* at the IED in Milan, with Fondazione Cariplo; *Gregory Crewdson* at the VB Photography Center in Kuopio, Finland and the Marubi Museum in Albania; *Cronache d'acqua* at the Cortona On The Move International Photography Festival; *Non solo signorine* (photos from the Historical Archive and Publifoto) at the Turin International Book Fair; *Io sono una forza del passato* at Miart in Milan, with Intesa Sanpaolo Private Banking; *Le vedute urbane di Olivo Barbieri nelle collezioni Intesa Sanpaolo* at Artissima in Turin; and *Il caso Africo* (photos from the Publifoto Archive) at the Trame Festival in Lamezia Terme, Catanzaro.
Other initiatives included the joint organisation of exhibitions, originating from ongoing collaborations with other institutions: in partnership with Fondazione CR Cuneo, the exhibition *Canaletto, Van Wittel, Bellotto* (with artworks from the Gallerie Nazionali di Arte Antica in Rome, third edition of the series of exhibitions hosted in the Complesso Monumentale in Cuneo); and with Fondazione Costruiamo il Futuro*, Caravaggio, Palazzo Barberini's Narcissus* at Villa Confalonieri in Merate (with the masterpiece from the Gallerie Nazionali di Arte Antica, second edition of the "*La Grande Arte in Brianza*" exhibition); in

addition to jointly organised exhibitions in key Italian regions, aimed at promoting selections of the bank's artworks (see the Art Assets section).

Workshops with schools, social inclusion activities, activities for adults and families, and cultural initiatives
The Gallerie offer a range of activities and initiatives for the public, in line with the ICOM-International Council of Museums' definition of a museum as a key place for promoting participation, growth, accessibility and social inclusion. In 2024, around 4,300 educational activities were organised (visits and workshops for students from local schools of all levels), involving over 97,000 children and young people. Around 690 itineraries were designed for audiences with disabilities or in situations of vulnerability, involving around 8,300 participants. All of these educational and inclusive proposals, carried out in partnership with Civita Mostre Musei, are free of charge. Around 895 visits and activities were also organised for adults and families, which attracted around 14,290 participants. The Gallerie hosted around 480 initiatives and cultural events (study days, meetings, talks, courses, book presentations, press conferences, and musical events), with around 38,490 participants. Highlights included over 60 sessions of the public programme #Inside (in-depth sessions on exhibition themes), the international study conference dedicated to the painter Velázquez, and over 70 concerts from the *È aperto a tutti quanti* series with students from the Conservatory of Music in Naples. The museum venues also host events in support of the Bank's other structures.

Creation of new spaces
In the inner courtyard of the Gallerie di Torino, the *Urban woods-Il bosco urbano* project was implemented in collaboration with Aboca and the International Book Fair, creating a green and wholesome space open to the entire city. The Gallerie di Vicenza completed the renovation of the former stables area, which now serve as a multi-purpose room for hosting discussions and small exhibitions.

Lastly, Progetto Cultura also includes the coordination of the activities of the Palazzo degli Alberti Gallery in Prato and the Casa Museo of the Fondazione Ivan Bruschi in Arezzo.

Restituzioni

One of the most iconic components of Progetto Cultura, alongside the Gallerie d'Italia, is the *Restituzioni* restoration programme dedicated to the preservation and promotion of Italy's artistic and architectural heritage. The programme is managed by the Bank in collaboration with the Ministry of Culture and the Entities responsible for protecting art assets (Inspectorates, Regional Museum Directorates, and Autonomous Museums) under the scientific supervision of Giorgio Bonsanti and Carla Di Francesco, with Carlo Bertelli serving as honorary curator.
In 2024, the organisation continued of the 20th edition involving 122 artworks from all 20 Italian regions (as well as Belgium from European areas), with the participation of 51 conservation bodies, 63 owner entities, 57 restoration centres, and hundreds of art historians. The final exhibition for the presentation of the results of the restorations will be held in Rome in the current Jubilee year.
Under the *Restituzioni monumentali* programme, restorations are underway of two large 17th-18th century altarpieces by Andrea Celesti and Sebastiano Ricci, housed in two churches in the Brescia area, in collaboration with the Bergamo and Brescia ABAP Inspectorate, in addition to the important series of medieval frescos at Castelseprio, in collaboration with the Regional Museum Directorate in Lombardy region. Lastly, in 2024 the *Restituzioni* project was presented at the International Restoration Exhibition in Ferrara and at the EU Council Conference in Brussels as an example of international best practice in the field of art restoration.

Art Assets

Intesa Sanpaolo's art collections contain over 35,000 artworks, ranging from archaeology to contemporary art. In terms completeness and quality it is considered one of the most prestigious corporate collections in the world. The assets are constantly subject to study, protection, and promotion activities, aimed at increasing their accessibility to the public, mainly at the Gallerie d'Italia venues.
The management of the owned assets (from protection to loans) includes the artworks from the Luigi and Peppino Agrati Collection and Fondazione Cariplo e Cariplo Iniziative Collection (artistic assets under management).
The main activities carried out during the year are described below.

- the Diogene Project (a programme for verifying the location, conservation status, and classification of artworks distributed across the Bank's various venues) continued with initiatives on 2,500 artworks classified under the "other assets of historical and decorative interest" category, as well as on assets belonging to the Fondazione Cariplo Collection and on assets of the Group's Italian and international companies;
- 253 maintenance and restoration interventions (some of which carried out at the laboratories of the Fondazione Centro Conservazione e Restauro "La Venaria Reale" and the Scuola di Restauro di Botticino, also for educational purposes, in support youth training in restoration);
- 300 logistical operations (ranging from outfitting of bank sites to the reorganisation of storage facilities) involving the movement of around 4,000 artworks;
- in addition to the exhibition projects at the Gallerie d'Italia described above, the promotion of the Bank's collections through loans for use to national institutions that provide public access to the collections, loans for exhibitions both in Italy and abroad, joint organisation of initiatives in key strategic areas of Italy for the Group, also considering the presence of the bank foundations, to strengthen ties with local communities and institutions, as detailed below:

- loans for use to 10 entities (for a total of 126 artworks) including the Municipality of Clusone (Bergamo), the Regional Museum Directorate Campania-Museum and Certosa di San Martino in Naples; Fondazione CR Bologna, Fondazione CR Jesi, and Fondazione Ivan Bruschi in Arezzo; and ASST Papa Giovanni XXIII (Bergamo);
- loan of a total of 297 artworks for 72 temporary exhibitions in Italian venues (including Castello di Rivoli, Museo del Duomo in Milan, Fondazione Prada in Venice, Scuderie del Quirinale and GNAM in Rome, Civic Museums of Pesaro as part of the Italian Capital of Culture 2024, and Palazzo Reale in Naples) and abroad (from the work of Michelangelo Pistoletto at the National Museum in Bucharest, to three pieces by Lucio Fontana at the Musée Soulages in Rodez);
- exhibition of the masterpiece from the Bank's collections, the *Martyrdom of St. Ursula*, at the National Gallery in London in the exclusive exhibition *The Last Caravaggio*, organised by the British museum to celebrate its bicentenary; this event was the tenth most visited exhibition in the history of the National Gallery;
- promotion and protection initiatives in Italy, including the projects with Fondazione CR Pistoia e Pescia at the Fondazione Pistoia Musei venues (substantial loan of artworks for the *Pop Art Italia* exhibition and presentation of a work by Maria Lai for the "In visita" series); the two-part exhibition *La libera maniera* jointly organised with Fondazione Bruschi in Arezzo and Fondazione CR Jesi, hosted in their respective exhibition venues and dedicated to a collection of Intesa Sanpaolo's 20th-century artworks; the *Francesco Trevisani* exhibition at Fondazione CR Jesi Palazzo Bisaccioni, with five of the Bank's paintings on long-term loan; and the restoration projects in collaboration with Fondazione CR Mirandola on the paintings from the former CR Mirandola collection that were relocated to Florence after the 2012 earthquake in Emilia.

– "Linee di Energia", a series of conferences in collaboration with Fondazione Centro Conservazione e Restauro La Venaria Reale and IGIIC-Italian Group International Institute for Conservation, dedicated to the restoration of contemporary artworks: the 8th edition took place at the Gallerie d'Italia-Torino during Artissima, focused on video art;

– Fair value and art advisory: following the 2023 update of the fair value of the entire "valuable art assets" asset class, in current financial year the work involved the planned monitoring of market trends carried out through scenario analysis (which covered 97% of the valuable artworks). The management of acquisitions and donations included the collection of over 160 artworks donated by the photographers showcased at the Gallerie di Torino exhibitions (Jodice, Locatelli, and Biasiucci). Lastly, the significant initiatives included participation in major art fairs such as Miart, Artissima, and Luxembourg Art Week, as well as the publication of the third volume of the biennial research project *Collezionisti e valore dell'arte in Italia*, produced with Intesa Sanpaolo Private Banking and the CFO-Research structure.

Historical archive

The Group's Historical Archive is one of the first and most important bank archives in Europe. It holds 20 linear kilometres of papers, spanning from the 1360s to the 2000s, from the banks merged into the Group, and manages the Publifoto Archive consisting of 7 million photographs kept at the Gallerie d'Italia in Turin. The archive assets are subject to extensive activities for their conservation, restoration, digitalisation, inventorying, cataloguing, and promotion, with particular attention to improving public access, also through the most advanced digital technologies available (especially online publication in the innovative LOD-Linked Open Data format, which ensures greater visibility and data sharing, forming part of Intesa Sanpaolo's activities for the NRRP).

Group Archives

The core activities continued, which included the restoration of 5,647 documents; the digitalisation of 470,000 pages of paper documentation (to date, over a million digitised pages have been made available online, including the Board minutes of many banks); the inventorying of historical documentation (projects such as *Carte dei Vertici,* dedicated to the papers of the Group's senior executives, *Fondi del Personale,* dedicated to the personnel records of the banks, and *Patrimonio IMI* for the integration of the mortgage series database) with over 11,000 new record cards (as they are completed the inventories are made available online and the documents described are open for consultation, with tens of thousands of record cards been published so far).
The projects published in LOD format achieved significant results (in particular *Project EGELI* on data concerning the seizure of Jewish assets by banks, *Archivi che imprese!* regarding the data on loans to businesses from the banks, and the *Publifoto Archive*). On the *Historical Map* website, the inclusion of profiles for the former UBI banks made it possible to complete the publication of all the 629 profiles of the Group's banks.
Usage of the Archive's websites is growing, with over 267,000 users and more than 495,000 views. In the reading rooms in Milan, Rome, and Turin, there were 634 consultation days, 331 research requests, and 27 ongoing theses, facilitated by the opening of four new consultation points in Milan, Arezzo, Bergamo, and Jesi for the preservation of the former UBI archives.
Notable achievements have been made through the *Carte dell'arte* project, involving the reorganisation and research of documents verifying the acquisition and origin of valuable artworks in the Group's collection (the records of 10,000 valuable artworks have been recovered to date), while the *Archivi Digitali* project saved over 12,000 digitally native documents produced by the bank. The commitment to encouraging the engagement of university and other students with the Archives continues. The notable educational activities included the two modules held in the Archive for the History degree course at the University of Milan and the *A scuola di impresa* training project for secondary school students promoted by Museimpresa.
Numerous research and promotion projects were conducted in collaboration with other institutions (ranging from the *EGELI Project* with Fondazione 1563, to the digital atlas *Spatializing Jews and Economy* with the Universities of Rome, Bologna, Pisa, and Milan, to other collaborations with the City of Milan-Libraries Area, Archivio Flamigni in Rome, Museimpresa, Rete Fotografia, ICCD-Istituto Centrale per il Catalogo e la Documentazione, and Osservatorio Innovazione Digitale per la Cultura).
Lastly, material from the Archive was promoted through exhibitions, conferences, documentaries and publications.

Publifoto Archive
The activities in 2024 included the restoration of 6,600 negatives; the digitalisation of 5,532 photos (with around 60,000 photos digitised to date, and a space was set up at the Gallerie d'Italia in Turin that will be dedicated to the "Digital Archives Hub"); cataloguing produced 24,421 new record cards of individual photos and photo series, and 460 personal authority record cards; currently, around 33,000 photographs and around 27,000 photo record cards are accessible online, also in LOD format, and through the interactive *Archivio Vivo* wall at the Gallerie di Torino.
In the educational sphere, the Archive hosted 130 visits and activities (for schools, people with disabilities, sensitive audiences, and families) involving 2,246 participants. Collections of images were promoted in the Gallerie d'Italia exhibitions mentioned above, in addition to exhibitions at other venues such as the Italian Cultural Institute in Paris, the Rectorate of the University of Milan, and the Biblioteca Nazionale Braidense. The special projects included the *Prints Project*, focused on original historical prints (with over 25,000 prints catalogued and 2,297 photographers identified, from Robert Doisneau to Mario De Biasi), and the *Eva Barret Project*, dedicated to cataloguing the British photographer's plates (48 project record cards and 436 individual photo record cards).

The Bank's historical, artistic and archive assets are also promoted to create opportunities for engagement of the Group's staff through the initiatives of the multi-year ***Art & People*** project aimed at colleagues and conducted with the various internal stakeholders. During the year, these activities focused again on themes such as accessibility, inclusion, appreciation of differences, multiculturalism, and multidisciplinarity (such as the various initiatives under the *Arte e inclusione* programme designed with Diversity, Equity and Inclusion), reaching over 1,000 of the Group's people in 2024. In addition, the *Arte e Cultura* tribe, launched in June in collaboration with Remuneration Policies and Learning, has attracted over 2,400 colleagues to date.

Partnerships, sponsorships and donations

Progetto Cultura, in particular through the Gallerie d'Italia, builds and nurtures partnerships with public and private entities, both national and international, using a network approach that reinforces the common goal of promoting Italy's cultural heritage, with a preference for forms of collaboration where the Bank's contribution consists of support and also co-design and the sharing of content, spaces, and relationships.
In 2024 these included:

- partnerships with the bank foundations, including Fondazione Compagnia di San Paolo, Fondazione Cariplo, Fondazione Cariparo, Fondazione CR Firenze, Fondazione CR Cuneo and Fondazione CR Forlì, collaborating in educational projects (*Gallerie d'Italia Academy* with Compagnia di San Paolo and Cariplo), Art bonus contribution (such as *Liber* project in Mondovì, Cuneo), and artistic and cultural initiatives (such as the support to the *Preraffaelliti* exhibition in Musei di San Domenico in Forlì); the relations with Fondazione Caript, Fondazione CR Jesi and Fondazione CR Mirandola are mainly based on projects for the promotion of their own collections;
- 15 initiatives supporting public cultural heritage through Art Bonus grants (including construction of the new venue of the GAMeC museum in Bergamo; restoration of the church of Sant'Aspreno ai Crociferi in Naples, now the Jago Museum, under a redevelopment project for the Rione Sanità; renovation of the inner courtyard of the Palazzo del Collegio dei Nobili as part of the bicentenary of the Egyptian Museum in Turin; restoration of the facades of the Teatro Olimpico in Vicenza; promotion of the Historical Fund of the town of Mondovì in the *Liber* cultural complex; and support for the activities of a number of Italian museums, from the Palazzo Ducale in Genoa, to the Gallerie dell'Accademia in Venice, and the Museo e Real Bosco di Capodimonte);
- signing of a collaboration agreement with the Ministry of the Interior-Department for civil liberties and immigration-Fund for places of worship (FEC) (with the Chief Institutional Affairs and External Communication Officer Governance Area), for which Progetto Cultura will provide its expertise to support a project for the fair value measurement of a selection of art, archive and book assets of 862 churches owned by the FEC;
- main partnership in international modern and contemporary art fairs and exhibitions in Italy: *Miart*, Milan and *Artissima*, Turin, also contributing with our own exhibits; and *Padiglione della Santa Sede* at the Venice Art Biennale (with the Communications and Corporate Image Department);
- collaborations with museum and cultural institutions in Italy, supporting their activities and implementing joint initiatives, including the Egyptian Museum of Turin (for the bicentenary, main partnership for the reinstallation of the Hall of Kings, inaugurated in November with the President of the Italian Republic, and the sharing of the *Paesaggi/Landscapes* programme at the Gallerie di Torino during the museum's closure for renovations); Gallerie Nazionali di Arte Antica, Rome; Palazzo Strozzi, Florence (main partnership in the *Anselm Kiefer* exhibition); Museo Poldi Pezzoli, Milan (institutional partnership in the *Piero della Francesca* exhibition); Veneranda Biblioteca Ambrosiana, Milan; Museo del Risorgimento, Turin (main partnership in the *Rileggere il Risorgimento* exhibition with the Communications and Corporate Image Department); Fondazione Costruiamo il Futuro; Fondazione Ivan Bruschi, Arezzo; Castello di Rivoli (programme of meetings with artists at the Gallerie di Torino); Italics (support for the *Panorama Monferrato* project); and Polo del 900, Turin;
- collaborations with local entities: institutional partnership in the traditional Christmas exhibition of the City of Milan at Palazzo Marino *(Federico Barocci*) and joint organisation of the Christmas exhibition *Tre capolavori in Basilica* of the City of Vicenza in the Basilica Palladiana *(Leonardo da Vinci, Jacopo Bassano,* and *Andrea Gazzola*);
- promotion of books and reading: main partnership in the Turin *International Book Fair*, also contributing with our own exhibit, initiatives linked to the Fair (*Un Libro Tante Scuole* and *Portici di Carta*), partnership in *Una Basilica di Libri*, Vicenza, *Circolo dei Lettori*, Milan (with events hosted in the respective Gallerie d'Italia in Turin, Vicenza, Milan); and main partnership in *La Grande Invasione,* Ivrea;
- promotion of photography: main partnership in the *International Festival of Photography Cortona On The Move* and institutional partnership in the *Exposed-Torino Foto Festival*, also with our own exhibition contributions; and institutional partnership in Camera-Centro Italiano per la Fotografia in Turin;

- promotion of archive assets (as part of the activities of our Historical Archive): main partnership in *Archivissima*, Turin, also contributing our own content and hosting events; and support and collaborations with Fondazione 1563 per l'Arte e la Cultura, Turin; Museimpresa; Rete fotografia; and EABH-European Association for Banking and Financial History;
- promotion of music and other forms of creativity: implementation of the *Gallerie sonore* project in collaboration with the artist Boosta; main partnership in *To Listen To-Festival dell'ascolto sperimentale*, Turin, with events at the Gallerie d'Italia; sponsorship of musical events (concert season of the Società del Quartetto and *Palazzo Marino in Musica* in Milan, *Festival Milano Musica*, and *Stresa Festival*) and musical education projects (*Esperienza Orchestra* with Orchestra Filarmonica del Teatro Regio in Turin and *MusiCasanova* with Associazione Scarlatti in Naples); and collaboration with *Buonissima*, Turin;
- support for CIRCI-Associazione Centro Internazionale di Ricerca della Cultura dell'Infanzia, and contributions to the organisation of conferences (including *Lucio Fontana* at the Giorgio Cini Foundation in Venice) and publications;
- relationships with universities and higher education schools: IED in Turin and Milan, IAAD in Turin, Fondazione Scuola dei beni e delle attività culturali (see paragraph below); and University of Turin (three-year research initiative on measuring the social impact of Progetto Cultura); and Brera Academy of Fine Arts (joint funding of a PhD scholarship);
- international partnerships: collaborations with the National Gallery in London and the presentation of Progetto Cultura at the Philharmonie Luxembourg in cooperation with the Italian Embassy, Fondation Cavour, Intesa Sanpaolo Bank Luxembourg and Eurizon Capital.

Training and skill development projects in the arts and culture

Training and skill development projects in the arts and culture are offered in collaboration with higher education institutions and schools, with a particular focus on young people, in recognition of the potential of cultural heritage, also as a driver of economic and employment growth.
The following projects were carried out in 2024:

- *Gallerie d'Italia Academy*, with Fondazione Compagnia di San Paolo, Fondazione Cariplo, Ministry of Culture-Fondazione Scuola dei beni e delle attività culturali, Fondazione 1563, and Digit'Ed: 4th edition of the Advanced Training Course in *Management of Artistic-Cultural Heritage and Corporate Collections* aimed at strengthening the expertise of professionals in the culture sector, based on the sharing of Progetto Cultura's experience in managing museums, collections, and cultural activities and relations; over 100 applications, 29 participating students, 8 scholarships, around 60 lecturers, and 162 hours of lessons (at the Gallerie d'Italia venues and via webinar). The Course also included the production of the position paper *L'occupazione culturale in Italia* written by Franco Amato, Lucio Aragno and Michele Coppola, and published by Aragno; 5th edition of the Course was initiated, which will be take place in 2025;
- the *Euploos Project* with the Gallerie degli Uffizi in Florence: this year marked the conclusion of the interdisciplinary educational research programme, supported over three triennial periods, aimed at creating the online accessible digital catalogue of the drawings kept in the Gabinetto dei Disegni e delle Stampe degli Uffizi, curated by a team of young art historians, IT specialists, and photographers. A total of 2,252 scientific record cards and 3,250 images were produced in 2024. More than 73,500 artworks have been made accessible since the start of the project, over 9,600 of which with a scientific record card. The exceptional value of the database has been publicly recognised by the scientific community;
- projects of Gallerie d'Italia in Turin with academic institutions in the visual arts: with students of the IAAD-Istituto d'Arte Applicata e Design in Turin (digital project dedicated to the Gallerie d'Italia App and the storytelling project linked to the exhibition *Cronache d'acqua*, also with the Scuola Holden of Turin); with IED-Istituto Europeo di Design in Turin (third and last stage of the three-year photographic project *Bureau Metamorfosi* dedicated to the transformations of the Turin area); and with students of the IED in Milan (the *Rethink* photographic project connected to the exhibition *The Circle* and the theme of the circular economy).

Lastly, over 120 young art historians work at the Gallerie d'Italia under the collaboration with Civita Mostre e Musei.

Digital promotion

The promotion of the Gallerie d'Italia activities (exhibitions, accessibility and inclusion initiatives, and events) and the owned art and archive assets, as well as partnership projects, is also carried out through the production and dissemination of original content on the web and social channels of Gallerie d'Italia and the Group, which complement the "physical" experience and promote the engagement of an increasingly broad and diverse audience. The content is generating interesting results in terms of views and interactions[23].
The Gallerie d'Italia app, a digital guide that offers an enhanced and interactive visit experience, was extended in 2024 to all 4 museum venues (almost 61,400 downloads to date), and the *Archivio Vivo* ledwall at the Gallerie di Torino, which allows visitors to download photos from the Publifoto Archive, has registered 26,322 downloads to date.
In parallel, the work continued on the company intranet aimed at encouraging staff engagement (156 news items, 8 articles on Mosaic, and 14 clips/podcasts).

[23] For example, the digital content, organic social media, and advertising dedicated to the Gallerie d'Italia exhibitions inaugurated in 2023 and concluded in early 2024 (*Moroni*, *Rebell*, *The Circle*, *Mimmo Jodice*, and *Le trecce di Faustina*) generated an average of 18 million impressions (with a peak of 27 million for *The Circle*). For the exhibitions inaugurated and concluded in 2024, there were 17.2 million impressions for *Mittermeier*, 14.5 million for *Carena*, 16.5 million for *Velázquez*, 13.5 million for *Jaén*, 9.5 million for *Biasiucci.* And, for the exhibitions inaugurated in 2024 and continuing in 2025, 14.4 million impressions were received by *Warhol*, 14.1 million by *Il genio di Milano*, 13.5 million by *Epstein*, 13.5 million by *Gentileschi e Van Dyck*, 9.3 million by *Hamilton*, and 9.2 million by *Bertos* (data provided by the Communications and Corporate Image Head Office Department).

Publishing

Within the Edizioni Gallerie d'Italia-Skira, dedicated to the Progetto Cultura initiatives, 15 publications were produced during the year (ranging from exhibition catalogues to volumes from the Historical Archive and the 20th edition of Vox Imago, this year dedicated to *La rondine* by Giacomo Puccini as staged at the Teatro alla Scala).
December saw the announcement of the acquisition of Società Editrice Allemandi by Intesa Sanpaolo, Fondazione 1563 of the Fondazione Compagnia di San Paolo, and Fondazione CR Cuneo. This prestigious publishing house, established in 1982, specialises in books on art and culture and publishes the leading magazine in the sector, *Il Giornale dell'Arte*.

Main risks and uncertainties

The main information on risks and uncertainties to which the Intesa Sanpaolo Group is exposed are described in the Report on operations and in the Notes to the consolidated financial statements.

As usual, the introductory part of this chapter provides a summary of the background scenario, which is discussed in more detail in the chapter "The macroeconomic context and the banking system" and supplemented, in the chapter "Forecast for 2025", with the forward-looking information regarding the main associated risks.

This chapter also includes an update of the disclosure on the management of the main risk aspects for the Intesa Sanpaolo Group linked to the military conflict between Russia and Ukraine. Further information in this regard is provided in the Notes to the consolidated financial statements: (i) in Part A – Accounting policies, Section 5 – Other Aspects, which discusses certain aspects of the risks and uncertainties related to the war; and (ii) Part E – Information on risks and relative hedging policies, in the section on credit risk, where details are provided of the exposures to Russia and Ukraine and the related valuation aspects.

The information on risks at a general level, and in particular on financial risks (credit risks and market risks), operational risks and the risks of insurance companies is as usual contained in Part E of the Notes to the consolidated financial statements.

In relation to ESG (Environmental, Social and Governance) risks and climate risk, Part A, Section 5 – Other Aspects, of the Notes to the consolidated financial statements describes the characteristics and risk aspects of the financial instruments within the Group's green financing activities. Information is also provided on how the Intesa Sanpaolo Group identifies and monitors climate-related issues, to be read together with Part E, Scope of risks, which discusses the integration into the risk management framework of ESG risks and climate risk in particular.
Additional information can also be found in the Consolidated Sustainability Statement.

Lastly, with regard to capital strength, the Report on operations includes, as usual, the disclosure on own funds and capital ratios, supplemented by Part F of the Notes to the consolidated financial statements and the further details provided in the update of the Basel 3 Pillar 3 Disclosure.

With regard to the going concern assumption, the Directors of Intesa Sanpaolo re-affirm that they have a reasonable certainty that the Company and the Group will continue in operational existence in the foreseeable future and consequently the 2024 Financial Statements have been prepared on a going concern basis. The Directors have not detected any uncertainties in the consolidated balance sheet and financial structure or in the operating performance of the Group that question the going concern assumption.

The macroeconomic context and the banking system

The macroeconomic context and the banking system

The macroeconomic context

The economy and the financial and foreign exchange markets

In 2024, global growth remained steady at a moderate pace of 3% per year. World trade volumes continued their recovery, but showed only modest growth. Energy commodity prices showed limited increases and volatility, despite the ongoing conflicts in Ukraine and the Middle East. The disinflation process continued, facilitating the easing of monetary policies. The only country currently raising official rates is Japan, but with considerable caution and from a very low base. The Federal Reserve reduced its Fed Funds target three times, which stood at 4.25-4.50% at the end of the year. The last months of the year saw a marked increase in uncertainty over economic policies, linked to Donald Trump's victory in the US presidential election, with repercussions also on market dynamics.

In the euro area, economic activity remained weak in both industry and construction; nevertheless, solid demand in services supported quarterly GDP growth up to the third quarter. In the fourth quarter, economic surveys showed a worsening in manufacturing, stability at subdued levels in construction and continued positive performance in services. According to preliminary Eurostat estimates, the year 2024 ended with a stagnant quarter and average annual GDP growth of 0.7%. Despite the modest economic growth, the unemployment rate dropped further (to 6.3% in December). The average annual inflation rate was 2.4%.

In Italy, industrial production fell by 3.5% year-on-year, continuing the negative trend that marked 2023. In the construction industry, instead, production posted growth of 5.0% year-on-year. As to the performance of services, the economic surveys revealed a mixed picture in the fourth quarter, after a moderate expansion in the first nine months. According to the preliminary ISTAT estimate, the average annual GDP growth in 2024 was half a percentage point. Despite modest overall GDP growth, the employment rate rose during the year (62.3% in December) and the unemployment rate fell to 6.0% in the fourth quarter, its lowest level since 1981. Employment growth and above-inflation wage increases have supported a recovery in real household income. Until the second quarter, this mainly translated into an increase in gross savings, which rose to 10.2% of disposable income, but in the third quarter the savings rate dropped to 9.2% as growth in consumption gained momentum.

In 2024, the European Central Bank cut the deposit rate by 100 basis points, to 3%. The main refinancing operations rate fell by 135 basis points, as the central bank implemented the decision to narrow the official interest rate corridor in September. On the other hand, the draining of excess reserves has intensified. In addition to the APP (Asset Purchase Programme) portfolio, from July the non-reinvestment of maturities has also been partially extended to the PEPP (Pandemic Emergency Purchase Programme) portfolio. Additionally, the repayment of TLTRO III has not been offset by an increase in demand for liquidity at the regular open market operations.

Market expectations of central bank rate cuts fluctuated. Starting in summer, changing expectations led to a decline in the medium- and long-term government bond yields, which continued until early December. Since then, however, long-term government bond yields have risen sharply, a move that was reinforced by Donald Trump's victory in the US presidential election. The yield curves regained a positive slope, extending to increasingly longer time frames. Furthermore, a widening in the differentials between government bond yields and swap rates has been observed, probably reflecting supply dynamics and the gradual reduction of portfolios accumulated in the past by central banks. The Btp–Bund spread progressively narrowed over the year as a whole, with a short pause at the end of June/early July in response to tensions over French debt. The positive performance of Italian government bonds, despite high net issuances, also reflects improvements in the public accounts already seen in 2024 and the Italian government's commitment to bring the deficit back below 3% by 2026. Since October, the widening of the interest rate differentials between the USA and the Eurozone and changing expectations about the US economic policy have been accompanied by a significant strengthening of the US dollar in the foreign exchange markets, with the EUR/USD exchange rate reaching a low of 1.04 at the end of the year.

In 2024, the international equity markets were positive overall, with differences witnessed across geographical areas and some periods of volatility. In the initial months of the year, the gradual improvement in global growth prospects and expectations of a rapid loosening of monetary policy by central banks fuelled greater risk appetite in investors. After peaking in May, stock markets stabilized as the slower-than-expected fall in consumer prices led investors to prudentially review their expectations for interest rate cuts over the year. The uncertainty following the results of the European elections prompted a first correction on the European equity markets. A sharper fall in stock prices came in August, triggered by the closing of major Yen carry-trade positions, resulting in heightened market volatility. The ground lost by indices was later recovered, in part thanks to the ECB's decision to ease monetary policy.

Half-yearly earnings announcements highlighted a slowdown in profit growth in the Non-Financial securities segment, especially in cyclical sectors such as Automotive industry. The Financial segment instead confirmed its positive growth trend in profitability. Company figures for the third quarter showed signs of earnings stabilisation in the Non-Financial segment, with year-end targets for 2024 generally confirmed.

The Euro Stoxx index closed the year 2024 up by 6.6%. It was outperformed by the DAX, which closed the year at +18.9% and by the IBEX 35, which posted growth of 14.8% for the period. The CAC 40 instead closed the year down by -2.2%, hampered by political uncertainty. Outside the euro area, the Swiss SMI market index closed the year at +4.2%, while the FTSE 100 index in the UK rose by +5.7%.

The US stock market performed largely positively in 2024, with the S&P 500 index up by 23.3% and NASDAQ 100 technology sector index up by 24.9%. The major Asian stock markets also posted positive performances, with the NIKKEI 225 index closing the year at +19.2% and China's SSE Composite index up by 12.7%.
The Italian stock market similarly posted positive growth in 2024, with the FTSE MIB index closing the year at +12.6%, after peaking in mid-May at +16.7%, while the FTSE Italia All Share index closed at +12%. By contrast, mid-cap stocks underperformed, posting a negative performance (-5.1%).

Europe's corporate bond markets were positive overall in 2024, with risk premiums (measured by the asset swap spread, or ASW) generally declining from the start of the year. In the cash segment, the strong growth of High Yield (HY) securities was driven by investors looking for higher returns. Investment Grade (IG) securities closed the year largely in line with the previous one. The breakdown by sector shows financial securities performed positively, whereas spreads widened in the non-financial segment. Volatility during the year was more subdued than in 2023, as evidenced by the performance of CDS indices (iTraxx).
Expectations of a normalization in monetary policy by central banks proved the underlying driver for markets throughout the period. Following a positive start to the year, indices entered a phase of substantial consolidation in March, also due to more prudent expectations regarding the decrease of interest rates. In the first half of June, the results of the European elections produced a short phase of spread widening, which was then partially reversed in the following weeks. The second half of the year was marked by a slowdown, especially in the Investment Grade (IG) segment.
Bloomberg data show a growthing primary market. In this framework, favourable financing conditions paired with the search for returns by investors led to a marked rise in issues of subordinated hybrid instruments by non-financial issuers. Corporate ESG issues also increased in volume. The breakdown by type of sustainable bond shows that the growth was driven by green bonds (accounting for approx. 80% of all issues).
In performance terms, IG securities closed the first half of the year with an ASW (source: IHS Markit iBoxx) of 98 basis points, versus 94 basis points at the start of the year. Financial issuers in the segment performed positively (-13 basis points to 105 basis points), whereas the spread widened for non-financial securities (+14 basis points to 94 basis points). Expectations on interest rates favoured shorter maturities with a steepening of the curves. HY securities markedly performed better, with spreads closing at 290 basis points compared to 331 at the start of the year. Even in this case, the financial segment outperformed non-financial securities.

The economies and markets of the countries where the Intesa Sanpaolo Group has a presence

In the main countries where ISP has a presence, GDP of Central Eastern Europe (CEE) expanded by 1.9% year-on-year in the first nine months of 2024 (vs. +0.8% in the fourth quarter of 2023). Economic growth was strongest in Poland (2.7%) and Slovakia (2.2%), with more modest rates posted by the Czech Republic and Hungary (0.7% in both countries). In South-Eastern Europe (SEE), GDP growth reached almost 1.9% (vs. +2.7% in the fourth quarter of 2023), driven primarily by the strong performances of Croatia (+3.8%) and Serbia (+3.9%), which partially offset the weakness shown by the Romanian economy (+0.8%). Over the same period in Eastern Europe (EE), GDP expanded in Russia in the second and third quarter (+4.1% and +3.1%) but contracted in Moldova by 0.9% in the third quarter after two quarters of growth (+0.9% and +1.2%), while in Ukraine the growth rate slowed (+6.5%, +3.7% and +2% for each quarter, respectively). Finally, Egypt's growth accelerated to 3.5% year-on-year in the third quarter, from +2.2% yoy in the first quarter and +2.4% yoy in the second quarter.
In line with the global scenario, inflation slowed down in 2024. In December, the year-on-year change in the harmonised index of consumer prices was 4% in the CEE area and 4.4% in the SEE area, with individual country rates ranging from 1.8% in Slovenia to 5.0% in Romania. In Eastern Europe (EE), due to the significant weight of the figure for Russia, inflation in November had risen by 9.1% year-on-year. In Egypt, inflation slowed down to 24.1% year-on-year (vs. 33.7% in December 2023).
With regard to monetary policy, the picture is mixed, reflecting the different levels of inflation. In the CEE and SEE countries where ISP has a presence, the monetary easing cycle has paused. Central banks have kept key interest rates unchanged in their last meetings in the Czech Republic (at 4%), in Poland (at 5.75%) and in Hungary (at 6.5%), as well as in the SEE countries of Albania (at 2.75%), Romania (at 6.5%) and Serbia (at 5.75%). In Russia, the policy rate increased by 5 percentage points over the year to reach 21%, due to persistent inflationary pressures. By contrast, the central bank of Ukraine cut interest rates from 15% to 13% in the first half of the year, but then raised them again to 13.5% at the end of the year due to persistent inflationary pressures. In Moldova, the central bank has made four cuts since the beginning of 2024, bringing the rate down from 4.75% to 3.60%. Finally, in Egypt, the key interest rate was raised twice over the year, from 20.25% to 28.25%, in an effort to curb price growth.
Turning to financial markets, in 2024 the MSCI Emerging Markets Equity Index, denominated in US dollars, rose moderately (+5%). Among the countries where ISP has a presence in the CEE/SEE area, some of the local currency stock indices recorded double-digit gains, with the biggest rises seen in Hungary, Serbia, Slovenia, Croatia and the Czech Republic. Bosnia Herzegovina, Romania and Poland posted more moderate rises. Slovakia's performance was penalised by sales. Stock markets in Russia and Ukraine continued to be affected by operational difficulties due to the ongoing war. In the Middle East and North Africa (MENA) region, the Egyptian stock exchange ended the year well into positive territory.
In the foreign exchange markets, in relation to the US Dollar (USD/local currency), there was a widespread weakening in the main currencies of the CEE/SEE/EE countries where ISP subsidiaries operate, in particular the Russian rouble (27.2%). In the MENA area, the Egyptian pound depreciated sharply. In relation to the exchange rates of CEE/SEE currencies with the Euro, the Albanian lek appreciated markedly, while the Polish zloty gained to a lesser extent.
Yield spreads between emerging market and US government bonds widened marginally in 2024 (EMBI Plus +19 basis points) despite some volatility, while the cost of credit risk protection remained in line with last year (CDS +6 basis points).

The Italian banking system

Interest rates and spreads

An alternating evolution was observed in 2024 in lending and funding rates. In the first half of the year, interest rate hikes applied until 2023 by the ECB continued to be reflected in banks' rates, but once official rate cuts began in June, lending and funding rates fell in the second half. As such, while in the comparison between annual averages the rates on the stocks of loans and funding were higher than in 2023, in the comparison of year-end rates the decline is almost generalized in 2024, albeit at different speeds and intensities for bank lending and bank funding. In the case of new transactions, the drop in interest rates got underway in the early months of 2024. The average interest rate on new loans to non-financial companies at the end of 2024 stood at 4.4%, a fall of 105 basis points year-on-year. Even more marked was the decline in the interest rate on new mortgage loans to households in the same period, falling by 1.3 basis points to 3.1%, its lowest level since the end of 2022. The average lending rate on the stock of loans to households and businesses also fell, but at a slower pace, dropping by just 31 basis points year-on-year to 4.4%.
On the funding side, the reductions occurred in 2024 were marginal for the rates on outstanding deposits, just as the increases in the previous two years had been limited. By contrast, rates on new time deposits were highly reactive, falling significantly. The minimal drop in the average deposit rate was due to the stickiness of the on-demand rates and the high proportion of overnight deposits on total deposits. The substantial stability in the overall cost of funding from customers also reflected average bond rates, which remained unchanged for most of the year.
The spread between lending and funding rates narrowed by just under 30 basis points year-on-year, whereas in terms of annual averages, the spread widened from 3.3% in 2023 to 3.5%. A turnaround was seen during the year in the mark-down on sight deposits, which after the all-time high posted at the end of 2023 began falling. By contrast, the mark-up on short-term lending rates showed little movement in 2024, after the drop witnessed in response to the tightening in monetary policy in 2022–2023. Only a slight increase was seen in the last part of the year, as cuts in reference rates passed on quickly to the rates on loans with a duration of up to 1 year.

Loans

In 2024, the credit market saw the first signs of improvement in lending criteria, as interest rates fell in line with the progressive easing of monetary policy, while on the bank balance sheets side, no lending supply constraints emerged, with the good liquidity and funding situation maintained, the degree of capitalisation further strengthened and credit quality stable. Despite the reduction in interest rates, demand for loans by businesses continued to drop for most of the year, due to the use of self-financing options and the postponement of investments. Demand for credit experienced a recovery in the last quarter, driven by large corporates and motivated by financing needs for fixed investments, inventory and working capital. Nevertheless, loans to businesses continued to fall, on the back of the negative trend already posted in 2023. The decline was particularly sharp and persistent for medium-to-long-term loans, which posted a constant drop – at an annual average of -4.5% – due to weakness in investment and, like in 2023, the repayment of outstanding loans.
Unlike business loans, lending to households showed a steady improvement through the second half of 2024, with the downward trend associated with the tighter monetary policy stance of 2022–2023 bottoming out and a progressive recovery in loan stock, albeit still modest at the end of the year. The recovery was driven by the return to growth of mortgage loans for house purchase and continued increase in consumer credit. Thanks to the drop in interest rates on new loans, which began at the start of 2024 for fixed rates, the spring quarter saw a recovery in new mortgage granted to households, with growth rising to double-digit figures in the second half of the year. In June, the stock of mortgage loans began growing again, posting a rise of +1.2% year-on-year in December.
With regard to the credit quality, there continue to be no particular signs of deterioration. The default rate in terms of annualised flow of non-performing loans in relation to total performing loans rose slightly but remained historically low at 1.3% in September, compared to an average 1.1% for the last four years. The slight rise in the default rate was driven by loans to businesses, whereas the rate on loans to households remained at its low. As a percentage of total loans, for significant banking groups, the NPL ratio was stable in September at 2.4% gross of value adjustments, in line with the figure recorded during 2023.

Funding from customers

Bank deposits in 2024 bounced back to growth, initially driven by those from non-financial companies, which have recorded a recovery since the start of the year, with subsequent accelerations and a net inflows of liquidity. The process of reallocating savings to domestic government securities has gradually lost strenght, and household deposits posted a gradual recovery, with moderately positive annual changes in the second half, after 18 months of decreases. In terms of deposit aggregates, reallocations towards time deposits slowed, while current accounts returned to growth, rising by 1.4% in December. The sharp dynamics in bank bonds also decelerated, following over a year of double digit growth. Nonetheless, the pace of bonds remained robust, contributing to supporting the increase in total funding from customers. The evolution of total funding, which includes the ECB refinancing and deposits of non-residents, and has been dropping since the fourth quarter of 2022, was sharply impacted by the reduction in liabilities due to the Eurosystem.

Indirect deposits and asset management

In 2024, assets under administration also recorded a slowdown in the strong growth, which continued at a robust pace until the first half of the year. Interest rate cuts put an end to the process of reallocation of savers' portfolios to domestic government securities and bank bonds. Debt securities of households in custody at banks continued to show a positive trend until August, subsequently registering the first net outflows, which could indicate the beginning of a consecutive phase of shifting savings towards managed forms. Overall, the stock of consumer household assets under administration rose by 47 billion euro over the year, significantly less than the staggering rise recorded in 2023 of 149 billion euro.

By contrast, a turnaround was witnessed in the asset management industry, with net flows to open-ended investment funds back into positive, thanks to strong investments in bond funds which more than offset outflows from the equity, balanced and flexible segments. Portfolio management also saw a turnaround in net inflows at the end of the year driven by institutional mandates, after a long period of outflows, while the retail segment posted constant inflows throughout the year.

Life insurance recorded a slightly negative balance between gross premiums and incurred claims for 2024, but performed decisively better than in 2023, with the third quarter marking a return to positive net flows. This result was primarily driven by traditional policies, which saw a fall in incurred claims and a continuous increase in gross premiums throughout 2024 and new business that was also growing. For unit-linked policies, despite the ongoing rise in incurred claims, gross premiums and new business turned around to post strong growth. Overall, new life insurance business increased by approximately 25% in 2024.

Economic results and balance sheet aggregates

Economic results

General aspects

A condensed reclassified consolidated income statement has been prepared to give a more immediate understanding of results. In addition to the amounts for the reporting period, the format adopted shows the comparative figures for the same period 2023 and their quarterly movements.
To ensure comparison on a like-for-like basis, the income statement data referring to previous periods are normally restated, where necessary and material, to make them as consistent as possible with the different periods presented, particularly in relation to any changes in the scope of consolidation.

In this Report on operations, the reclassified consolidated income statement figures for the four quarters of 2023 and the first two quarters of 2024 were restated to take account of the following changes in the scope of consolidation, with the conventional attribution of the net economic effect to the caption Minority interests:
- the inclusion of the Romanian bank First Bank, acquired on 31 May 2024;
- the inclusion of Alpian S.A., previously consolidated using the equity method. Following the completion of the capital increase (in this regard, see the information in the Highlights section of the opening chapter), the percentage of the Group's stake in the company increased from 41.626% as at 31 December 2023 (comprising 28.134% attributable to Fideuram - Intesa Sanpaolo Private Banking and 13.492% to Reyl & Cie) to 61.599% (of which 51.141% held by Fideuram - Intesa Sanpaolo Private Banking and 10.458% by Reyl & Cie), resulting in the change to line-by-line consolidation of the company. On consolidating the income statement of Alpian for the quarters indicated on a line-by-line basis, the contribution of the company in terms of dividends and profits (losses) on investments carried at equity, included among Other operating income (expenses) of the reclassified consolidated income statement, was derecognised.

Certain aggregations and reclassifications have been made with respect to the model provided in Circular 262 of the Bank of Italy. Breakdowns of restatements, aggregations and reclassifications are provided in separate tables included in the attachments to this report, as also required by Consob in its Communication 6064293 of 28 July 2006.

The reclassifications and aggregations of captions in the reclassified consolidated income statement refer to:
- dividends relating to shares or units in portfolio and dividends collected or paid within the framework of securities lending, which have been reallocated to the caption Profits (losses) on financial assets and liabilities at fair value;
- insurance companies' portions of Net interest income, Dividends, Profits (Losses) on other financial assets and liabilities at fair value, Net losses/recoveries for credit risk associated with financial assets measured at amortised cost and with financial assets measured at fair value through other comprehensive income, which are posted, along with the Insurance service result and the Balance of financial income and expenses related to insurance operations, in the specific caption Income from insurance business. The Insurance service result is considered excluding the related operating costs (personnel expenses, administrative expenses and amortisation/depreciation) and the fees and commissions paid to financial advisors of the Private Banking Division for placing and managing insurance products which, in line with the representation of costs by the nature of the expense, are attributed to the specific captions;
- differentials on derivatives, classified to the trading book and contracted to hedge transactions in foreign currencies, which have been allocated among Net interest income owing to the close correlation;
- net fee and commission income, which includes the above-mentioned fees and commissions paid to financial advisors of the Private Banking Division for placing and managing insurance products, in line with the representation of costs by the nature of the expense;
- Profits (losses) on trading, Fair value adjustments in hedge accounting, Profits (losses) on other financial assets and liabilities measured at fair value through profit or loss, Profits (losses) on disposal or repurchase of financial assets measured at fair value through other comprehensive income and on disposal or repurchase of financial liabilities – for the portion contributed by the banking segment – which have been reallocated to the single caption Profits (losses) on financial assets and liabilities at fair value, except for any amounts relating to adjustments on portions of loans mandatorily measured at fair value which, as they relate to the measurements of credit positions, are reclassified to the caption Net adjustments to loans in order to permit unitary representation of the adjustments relating to the same position;
- the share of the premium on the issue of the certificates paid to the networks for their placement, which is reclassified from Profits (losses) on trading and Profits (losses) on other financial assets and liabilities measured at fair value through profit or loss to Net fee and commission income;
- the return components of the insurance policies taken out to cover contractual indemnities and retention plans for financial advisors, which are deducted directly from Profits (Losses) on financial assets and liabilities at fair value, in accordance with the valuation effect of the assets in question, rather than being presented – as attributable to the advisors – among Other net provisions and net impairment losses on other assets (for valuation effects) or among Net fee and commission income or Other operating income (expenses), depending on the type of insurance policy used (for effects from realisation);
- the operating income and costs of entities operating in sectors entirely distinct from banking and finance, synthetically reallocated to Other operating income (expenses), including that of the entities not subject to management and coordination within the framework of the Group (Risanamento and its subsidiaries);

- the costs of several incentive systems for employees of the Group's distribution networks, where funded by fee and commission income generated by the networks in question on the basis of deterministic quantification criteria correlated to the revenues concerned, which are reclassified from Personnel expenses to Fee and commission expense by analogy to the accounting treatment of incentive systems for non-employee financial advisors;
- the recoveries of expenses and indirect taxes, which are deducted from Administrative expenses, rather than being included under Other operating income (expenses), as well as the amounts relating to certain taxes of some international subsidiary banks, which – due to their nature – have been reclassified from Administrative expenses to Taxes on income;
- operating costs, which include the above operating costs relating to the Insurance service result attributed to the specific captions (personnel expenses, administrative expenses and amortisation/depreciation), in line with the representation of costs by the nature of the expense;
- profits and losses on disposal or repurchase of financial assets measured at amortised cost (loans and debt securities representing loans), which have been allocated to Net adjustments to loans;
- the portion of net losses/recoveries for credit risk associated with financial assets measured at amortised cost (loans and debt securities representing loans) and financial assets measured at fair value through other comprehensive income contributed by the banking segment, the effects on the income statement of the changes in contracts without derecognition as well as the net provisions for risks and charges for credit risk relating to commitments and guarantees given, attributed to the single caption Net adjustments to loans. The caption also includes any amounts relating to credit risk adjustments to portions of loans mandatorily measured at fair value, which, as they relate to the measurement of credit positions, are reclassified to the caption Net adjustments to loans to permit unitary representation of the adjustments relating to the same position;
- the reversal in the time value of Employee termination indemnities and Allowances for risks and charges, which has been included among Net interest income, as a phenomenon deriving directly from the application of the amortised cost criterion, in the absence of changes in projected future cash flows, in keeping with the treatment of the time value of financial assets measured at amortised cost;
- Net losses for credit risk associated with financial assets measured at amortised cost other than loans and net impairment losses on equity investments, as well as property and equipment and intangible assets (including property and other assets, also those resulting from the enforcement of guarantees or purchase at auction and intended for sale on the market in the near future), which have been reclassified to Other net provisions and net impairment losses on other assets. This last caption consequently includes – in addition to the provisions for risks and charges other than those relating to commitments and guarantees – the valuation effects of the assets other than loans, with the sole exception of impairment losses on intangible assets that have been reclassified to Impairment (net of tax) of goodwill and other intangible assets;
- realised profits (losses) on financial assets measured at amortised cost other than loans, on equity investments and on other investments, which have been reclassified to Other income (expenses). Accordingly, in addition to the income and expenses not strictly related to operations, this caption represents the summary of the effects from the realisation of assets other than loans. Profits (Losses) realised on debt securities represent an exception; in view of their business model, which involves management closely correlated with the other financial instruments, they are classified to Profits (Losses) on financial assets and liabilities at fair value;
- the amount paid by Intesa Sanpaolo to the National Resolution Fund under the settlement agreement signed by Intesa Sanpaolo (as the absorbing company of the former UBI Banca) and the Bank of Italy (as the managing entity of the National Resolution Fund) – aimed at regulating an aspect of the contract signed on 18 January 2017 between UBI Banca and the National Resolution Fund for the transfer from the Fund to UBI Banca of the entire share capital of Nuova Banca delle Marche S.p.A., Nuova Banca dell'Etruria e del Lazio S.p.A. and Nuova Cassa di Risparmio di Chieti S.p.A. – which was reclassified from Other operating expenses (income) to Taxes on income;
- Charges (net of tax) for integration and exit incentives, which are reclassified from Personnel expenses, Administrative expenses and other captions of the income statement to a separate caption;
- the Effects of purchase price allocation, net of tax, which are indicated in a specific caption. They normally represent adjustments to and any impairment losses on financial assets and liabilities as well as property, equipment and intangible assets which are measured at fair value as provided for by IFRS 3;
- levies and other charges concerning the banking and insurance industry, with the latter relating to the Group's contribution to the Life Insurance Guarantee Fund being set up, which have been reclassified, net of tax, to the specific caption;
- impairment of goodwill and other intangible assets, which – where present – is shown net of tax in this specific caption, as stated above.

Operating income

In an economic environment featuring weak growth and continuing uncertainty at international level, in 2024 the Intesa Sanpaolo Group achieved excellent results in terms of profitability, liquidity and capital position, which translated into the best performance in terms of net income and gross operating margin since 2007, the year the Group was established. Operating income amounted to 27,107 million euro in 2024, up by 7.5% from 25,227 million euro in 2023. This performance was mainly driven by the increase in net interest income, which benefited from the high levels of interest rates, and by the growth in net fee and commission income. There was also a rise in income deriving from insurance business and the caption Other operating income (expenses). In contrast, profits (losses) on financial assets and liabilities at fair value decreased.

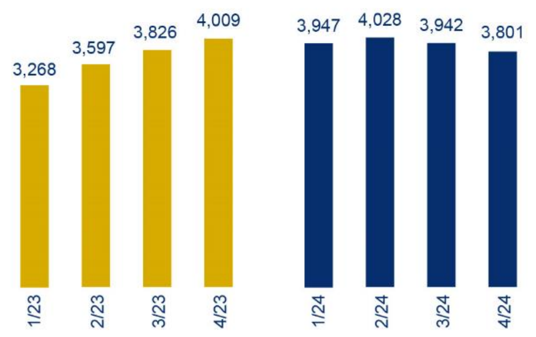
Quarterly development
Net interest income
(millions of euro)



Net interest income was 15,718 million euro, up by 6.9% on 2023. In particular, financial assets and liabilities made a higher contribution (+28.8%, or +972 million euro) thanks to the positive performance of other financial assets measured at fair value through other comprehensive income (+792 million euro) and instruments measured at amortised cost which do not constitute loans (+198 million euro). Other financial assets and liabilities at fair value through profit or loss decreased.
Good performance was also recorded by both net interest income on relations with banks (+182 million euro) and negative differentials on hedging derivatives, which decreased by 78.2%.
In contrast, customer dealing recorded a decrease (-10.9%, or -1,144 million euro), mainly attributable to higher interest expense on securities issued, only partially offset by the increase in interest on relations with customers.
Finally, other net interest income, inclusive of the income accrued on non-performing assets and other transactions with customers reached 1,549 million euro, an increase of 500 million euro.

The performance of relations with banks also incorporated the effects of the changes, in terms of end-of-period and average balances, in the amounts placed in on-demand deposits with the ECB and the funds obtained through the TLTROs, as well as the interest rate applied, both end-of-period and average. More specifically, the TLTROs III with the ECB led to an interest expense of 526 million euro in 2024, compared to 1,958 million euro in 2023, also as a result of the progressive repayment of all the existing operations in the first three quarters of 2024. In 2023, on the other hand, the average stock of TLTRO was around 58 billion euro, with progressively rising rates applied (deposit facility rate): the weighted average rate was 3.3% in 2023 compared to 3.9% in 2024.
The liquidity invested in on-demand deposits (overnight deposits) with the ECB generated interest income of 1,792 million euro, compared to 3,220 million euro recorded in 2023, a year when the average balance was double that of 2024, despite lower rates applied (deposit facility rate).

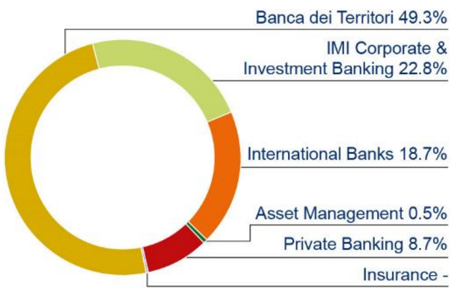
Business areas
Net interest income



The Banca dei Territori Division, which accounts for 49.3% of the operating business areas' results, recorded net interest income of 6,673 million euro, up compared to 2023 (+2%, equal to +134 million euro), due to the performance of market interest rates, which favoured the profitability of customer dealing.
A higher contribution to net interest income was also provided by the IMI Corporate & Investment Banking Division (+11.9%, or +327 million euro), mainly attributable to the operations of Global Markets and the securities portfolio, by the International Banks Division, formerly the International Subsidiary Banks Division (+5.8%, or +138 million euro), primarily due to the positive performance of the subsidiaries operating in Slovakia, Serbia, Croatia and Egypt, and by Asset Management (+43 million euro).
Conversely, the Private Banking Division recorded a decline (-6.8%, equal to -86 million euro), due to higher interest expense on funding from customers, only partly offset by the increase in interest income on debt securities and on interbank relations.
The Corporate Centre's net interest income grew sharply (+462 million euro), benefiting from higher short-term market interest rates than in the previous year.

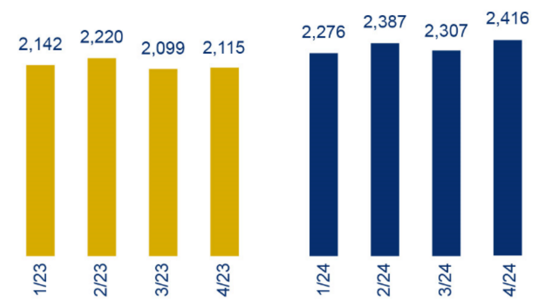
Quarterly development
Net fee and commission income
(millions of euro)



The net fee and commission income earned in 2024 amounted to 9,386 million euro, up by 9.4% from the 8,576 million euro recorded in 2023.
This result was driven by the increase in fees and commissions on management, dealing and consultancy activities (+12.5%, or +635 million euro) and, to a lesser extent, on commercial banking (+1.7%, or +44 million euro). In detail, in the first type of fees and commissions, there was an increase in the contribution from dealing and placement of securities (+37.1%, or +284 million euro), supported by new placements of mutual funds, portfolio management schemes (+7.5%, or +190 million euro), both collective and individual, which showed accelerating net inflows, other management and dealing commissions (+97 million euro), in particular related to advisory activities, and fee and commission from the distribution of insurance products (+62 million euro), largely attributable to the non-life business.
In the commercial banking area, there was an increase for fee and commission income on collection and payment services (+42 million euro), on guarantees given/received (+32 million euro) and on ATM and credit card services (+9 million euro), partly offset by current accounts (-39 million euro), related to the Bank's reduction of the account maintenance fees charged to customers.
Lastly, other net fee and commission income increased (+131 million euro), mainly due to higher fee and commission income on loans.

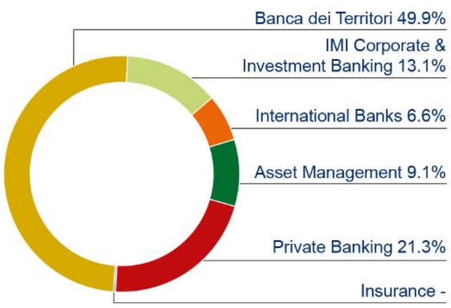
Business areas
Net fee and commission income



With regard to the business areas, the Banca dei Territori Division, which accounts for 49.9% of the business areas' results, recorded an increase in fee and commission income in 2024 (+6.3%, or +288 million euro), mainly deriving from assets under management and, to a lesser extent, from advisory services. The other Divisions also posted an increase in fee and commission income, specifically: Private Banking (+12.7%, or +236 million euro), attributable to recurring fees related to the increase in average assets under management, and up-front fees, as a result of increased placements; IMI Corporate & Investment Banking Division (+19.1%, or +206 million euro), essentially due to the performance of structured finance and investment banking and in the International Network; Asset Management (+9.6%, or +78 million euro), due to growth in placement fees for mutual funds and incentive fees; and International Banks (+7.8%, or +47 million euro), mainly thanks to the positive contribution of the subsidiaries operating in Slovakia, Serbia and Egypt.
The Corporate Centre recorded an increase in the negative balance of net fee and commission income, which grew from -385 million euro in the previous year to -430 million euro in 2024.

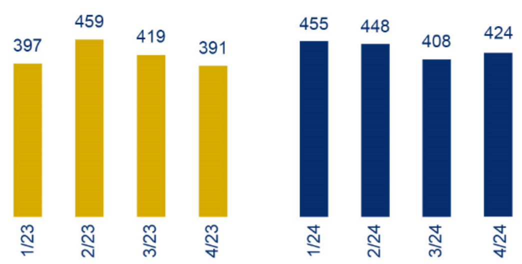
Quarterly development
Income from insurance business
(millions of euro)



Income from insurance business includes the cost and revenue captions of the insurance business, including the reinsurance component, of the Group’s life and non-life companies. In 2024, this income amounted to 1,735 million euro, an improvement of 4.1% compared to the previous year. This trend was mainly attributable to the non-life business, which benefited from higher insurance revenues as well as from financial components, specifically net interest income. The life business showed moderate growth as a result of the increase in the net investment result, due to higher realised gains, net interest income and dividends, and the decline in the technical margin, largely attributable to higher insurance costs, as well as the reduction in the release of the contractual service margin (CSM) due to the increase in surrenders across the entire insurance sector.

Total business	**19,471**	***18,057***	**16,591**

Figures restated, where necessary and material, considering the changes in the scope of consolidation.

In 2024 total business in the insurance segment amounted to 19.5 billion euro, higher than the business recorded in 2023 (16.6 billion euro). The growth in premiums was mainly driven by the increase in the life business, particularly traditional products (+1 billion euro), unit-linked policies of a mainly insurance nature (+0.9 billion euro), and multi-line policies (+0.3 billion euro), while pension funds were substantially stable. Class III unit-linked policies of a mainly financial nature grew (+0.6 billion euro). In the non-life business (+49 million euro), performance was good for both the motor segment and the non-motor segment, including the CPI – Credit Protection Insurance.
New business totalled 18.1 billion euro, accounting for over 90% of the total collected premiums of the Group's insurance companies.

Profits (losses) on financial assets and liabilities at fair value

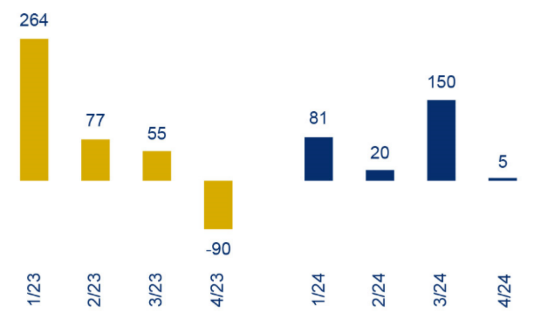
Figures restated, where necessary and material, considering the changes in the scope of consolidation.

Quarterly development
Profits (Losses) on financial assets and liabilities at fair value
(millions of euro)



In 2024, profits (losses) on financial assets and liabilities at fair value, amounting to 256 million euro, declined by 50 million euro compared to 2023. In interpreting this performance it should be considered that the transactions in certificates, measured at fair value, generated positive effects on net interest income in terms of greater liquidity invested and negative effects on trading related to the management of financial risks as a result of the market interest rate conditions as well as the increase in the average volumes of certificates funding.
The decrease, amounting to 16.3%, was attributable to profits (losses) on trading and on financial instruments under fair value option (-329 million euro), due in particular to the transactions in certificates described above, as well as the negative impact of the Own Credit Risk (OCR) of the certificates. There was also a decrease in the profits (losses) on the repurchase of financial liabilities (-39 million euro). In contrast, assets measured at fair value through profit or loss provided a positive contribution, with an increase of 176 million euro, attributable to equities and quotas of UCI, including dividends, and to loans. Profits (losses) on dividends and on disposal of assets measured at fair value through other comprehensive income and disposal of assets at amortised cost also increased (+76 million euro), following the disposal of mainly government HTCS and HTC securities. Lastly, profits (losses) on hedges under hedge accounting went from a loss of 59 million euro in 2023 to a profit of 7 million euro in 2024.

(millions of euro)

	2024				Changes%		
	Fourth quarter (a)	Third quarter (b)	Second quarter (c)	First quarter (d)	(a/b)	(b/c)	(c/d)

Profits (Losses) on financial assets and liabilities at fair value	**5**	**150**	**20**	**81**	**-96.7**		**-75.3**

Figures restated, where necessary and material, considering the changes in the scope of consolidation.

The result for the fourth quarter of 2024 was significantly lower than in previous quarters, reflecting the high volatility of the assets measured at fair value and trading operations.

Other operating income (expenses)

In 2024, other net operating income amounted to 12 million euro, compared with expenses of -21 million euro recorded in 2023. This caption includes both operating income and expenses – including those of subsidiaries not subject to management and coordination and operating in sectors completely distinct from banking and finance – and profits on equity investments carried at equity. The performance of this caption was due to the decrease in other operating expenses (-28 million euro) and, to a lesser extent, the higher contribution from dividends and profits on investments carried at equity (+5 million euro).

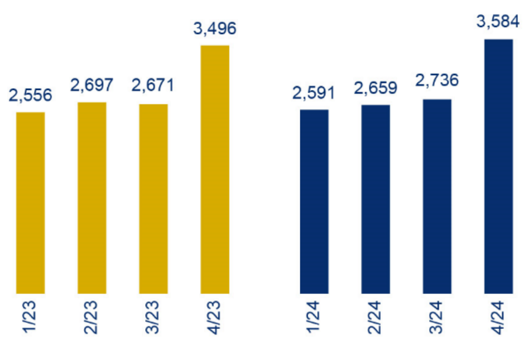
Figures restated, where necessary and material, considering the changes in the scope of consolidation.

Quarterly development
Operating costs
(millions of euro)



In 2024, operating costs amounted to 11,570 million euro, up slightly on the figure recorded in 2023 (+1.3%).
Personnel expenses, amounting to 7,185 million euro, were up (+2.3%), mainly as a consequence of the renewal of the National Collective Bargaining Agreement at the end of 2023, partially offset by the savings due to the exits negotiated with the trade unions.
Administrative expenses amounted to 2,979 million euro, down by 1.8%. The main savings were recorded in property management expenses (-51 million euro), mainly due to lower energy tariffs and the actions to reduce consumption, in information technology expenses (-27 million euro), related to lower outsourcing costs and indirect taxes and duties (-23 million euro), due to higher recoveries.
Adjustments to property, equipment and intangible assets, which in accordance with IFRS 16 also include the share relating to rights of use acquired under operating leases, increased (+3.3%) on 2023, due to the intangible assets, driven by technology investments focused on software which continue the process of development already reported in the previous year. Despite significant investments in technology, the cost/income ratio in 2024 stood at 42.7%, among the best in the European banking sector, compared to the higher figure for 2023 (45.3%).

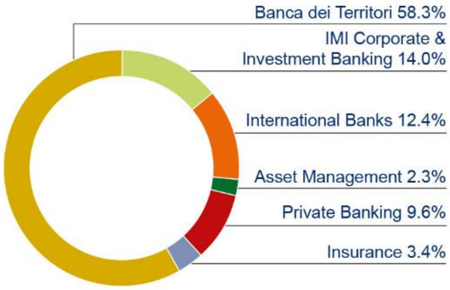
Business areas
Operating costs



At the level of operating costs, the Banca dei Territori Division, which accounts for 58.3% of the costs of the operating business areas, reported a decrease (-1.7%, or -111 million euro), primarily due to savings on administrative expenses. Conversely, there were increases for the International Banks (+8.5%, or +108 million euro) and for IMI Corporate & Investment Banking (+5.7%, or +83 million euro), mainly attributable to personnel and administrative expenses, for the Private Banking Division (+5.8%, or +58 million euro), related to all the expense captions, and for Asset Management (+2.4%, +6 million euro), largely attributable to personnel expenses. Operating costs for the Insurance Division and the Corporate Centre were substantially stable.

Operating margin

The operating margin amounted to 15,537 million euro, up by 12.5% from the figure recorded in the previous year, due to an increase in revenues that exceeded the moderate rise in operating costs.

Net adjustments to loans

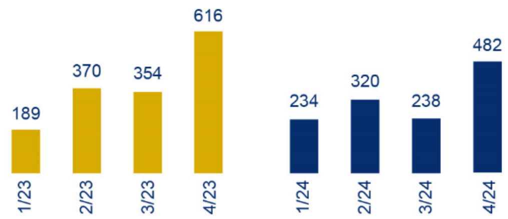
Quarterly development
Net adjustments to loans
(millions of euro)



Net adjustments to loans amounted to 1,274 million euro, down from those recorded in 2023 (1,529 million euro).
The movement in the caption was essentially attributable to recoveries on Stage 1 loans (+179 million euro) and Stage 2 loans (+98 million euro) – mainly attributable to transfers to Stage 3 and to operational performance of the portfolio – and a reduction in adjustments to non-performing loans in Stage 3 (-107 million euro). With the latter resulting from adjustments of -290 million euro to bad loans, +134 million euro to unlikely-to-pay loans, and +49 million euro to past due loans.
In contrast, there were net provisions for commitments and guarantees amounting to 80 million euro in 2024, compared with 50 million euro in recoveries in the previous year.
In December 2024, the ratio of gross non-performing loans to total loans stood at 2.3%, at the same levels as December 2023.
The cost of credit – expressed as the ratio of net adjustments to net loans – decreased in 2024 to 30 bps, without release of prudential provisions (overlays), compared to 36 bps in 2023. This figure, which represents a historic low, was supported by the reduction in adjustments in the presence of low inflows from performing loans to non-performing loans during 2024 (2.9 billion euro net of outflows from non-performing loans to performing loans).
The coverage ratio of non-performing loans in December 2024 amounted to 49.5%. In detail, bad loans required net adjustments of 246 million euro, down 54.1% on the 2023 figure (536 million euro), with a coverage ratio of 68%. Net adjustments to unlikely-to-pay loans, totalling 795 million euro, were up (20.3%) from 661 million euro recorded in 2023; the coverage ratio for these exposures amounted to 39.8%. Net adjustments to past-due loans amounted to 344 million euro (295 million euro for the previous year), with a coverage ratio of 29.8%. The coverage ratio for forborne positions within the non-performing loan category was 44.8%. Finally, the coverage ratio of performing loans was 0.5% and incorporated the physiological risk inherent in the loan portfolio.

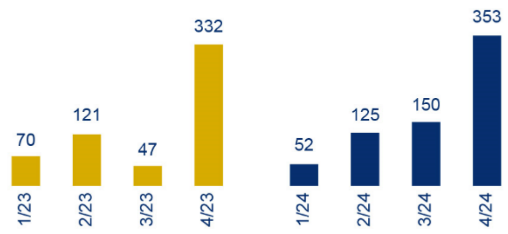
Net impairment losses on other assets	-131	-197	-66	-33.5
Other net provisions and net impairment losses on other assets	**-680**	**-570**	**110**	**19.3**

Figures restated, where necessary and material, considering the changes in the scope of consolidation.

Quarterly development
Other net provisions and net impairment losses on other assets
(millions of euro)



Within the layout of the reclassified income statement, this caption primarily consists of other net provisions for risks and charges and net impairment losses on other assets and on securities measured at amortised cost and at fair value. In 2024, other net provisions and net impairment losses on other assets amounted to 680 million euro, a value in excess of the 570 million euro recognised in 2023. The increase is related to the caption Other net provisions, which rose from 256 million euro in 2023 to 505 million euro in 2024, largely attributable to the higher charges to offset the net income (loss) of the subsidiary Banca Intesa Russia recognised upon consolidation to write off its equity contribution to the Group's consolidated financial statements. Conversely, there was a reduction in both net adjustments on securities measured at amortised cost and securities measured at fair value through other comprehensive income, which decreased to -44 million euro from -117 million euro in 2023, mainly referring to the credit risk component inherent in those portfolios, and net impairment losses on other assets, which amounted to 131 million euro (197 million euro in 2023).

(millions of euro)

	2024				Changes %		
	Fourth quarter (a)	Third quarter (b)	Second quarter (c)	First quarter (d)	(a/b)	(b/c)	(c/d)
Other net provisions	-205	-139	-108	-53	47.5	28.7	
Net impairment losses on instruments measured at amortised cost and on instruments measured at fair value through other comprehensive income	-31	-7	-10	4		-30.0	
Net impairment losses on other assets	-117	-4	-7	-3		-42.9	
Other net provisions and net impairment losses on other assets	**-353**	**-150**	**-125**	**-52**		**20.0**	

Figures restated, where necessary and material, considering the changes in the scope of consolidation.

In conjunctural terms, the provisions in the fourth quarter of 2024 were significantly higher than in the previous three quarters. Specifically, there was an increase in other net provisions, also related to charges for the consolidation of the above-mentioned Russian bank, as well as the net impairment losses on other assets.

Other income (expenses)

Other income (expenses), which include realised gains and losses on investments, equity investments, and financial assets at amortised cost other than loans, as well as income/expenses not strictly related to operations, made a positive contribution of 153 million euro, having benefited – in the first and fourth quarters – from income related to commercial agreements entered into by the Group. This amount compares with 348 million euro recorded in 2023, which included the capital gain of 116 million euro from the sale of the PBZ Card acquiring business line to Nexi and 192 million euro from the sale of the equity investment in Zhong Ou Asset Management.

Gross income (loss)
In 2024, income before tax from continuing operations came to 13,736 million euro, up by 13.9% compared with 12,056 million euro for 2023.

Taxes on income
Current and deferred taxes amounted to 4,048 million euro – including a benefit of 499 million euro from the recognition of deferred tax assets (352 million euro in 2023) related to losses carried forward pertaining to the merged UBI Banca and Provis and intangibles of the merged ISP Life – corresponding to a tax rate of 29.5%, one percentage point higher than in 2023 (28.5%).

Charges (net of tax) for integration and exit incentives
In 2024 this caption amounted to 587 million euro, compared to the 222 million euro recorded in the previous year.
The large increase was mainly attributable to charges related to staff leaving incentives under the agreement of 23 October 2024.

Effect of purchase price allocation (net of tax)
This caption comprises amounts attributable to the revaluation of loans, debts, real estate and the recognition of new intangible assets, in application of IFRS 3, upon recognition of acquisition of equity investments and/or aggregate assets. In 2024 this caption amounted to -94 million euro, compared to the -161 million euro recorded in the previous year.

Levies and other charges concerning the banking and insurance industry (net of tax)
The caption includes the levies imposed by legislative provisions and/or aimed at maintaining the stability of the banking and insurance industry and consequently outside the company management. In 2024, those charges amounted to 348 million euro, compared with 486 million euro in 2023, which included 222 million euro in charges for the European Resolution Fund, which is currently funded for the EU countries in the banking union.
The levies recognised during the reporting period may be broken down as follows: 236 million euro attributable to deposit guarantee funds, 2 million euro to the European Resolution Fund, 22 million euro to levies recognised by the international subsidiary banks, 31 million euro to the write-down of the Atlante Fund, and 57 million euro to the new Life Insurance Guarantee Fund (46 million euro relating to the insurance segment and 11 million euro to the banking segment).

Minority interests
In 2024, this caption showed net losses of 7 million euro attributable to minority interests relating to companies subject to line-by-line consolidation, compared with net income of 23 million euro in 2023.

Net income (loss)
The Intesa Sanpaolo Group closed 2024 with a net income of 8,666 million euro, up on 2023 (+12.2%). This result represents the best performance since 2007, underscoring a diversified business model, with leadership in Wealth Management, Protection & Advisory, which enabled the Group to swiftly take advantage of the growth in volumes of assets under management. The double-digit increase was the result of the healthy revenue performance, which benefited from the strong momentum of the interest component and the recovery of net fee and commission income and income from insurance business, as well as the limited adjustments to loans and the focused management of operating costs, despite significant investments in technology.

Balance sheet aggregates

General aspects

A reclassified consolidated balance sheet has been prepared to permit a more immediate understanding of the Group's assets and liabilities.
In addition to the amounts as at the reporting date, the format adopted shows the comparative figures as at 31 December 2023 and their quarterly development. To enable a like-for-like comparison, the figures from the previous periods are normally restated, where necessary and material, to make them as consistent as possible, particularly in relation to any changes in the scope of consolidation.
In this Report on operations, the reclassified consolidated balance sheets for the four quarters of 2023 and the first two quarters of 2024 have been restated to take account of the following changes in the scope of consolidation, with the usual attribution of the equity of the companies being restated to the caption Minority interests:

- the inclusion of the Romanian bank First Bank, acquired on 31 May 2024;
- the inclusion of Alpian S.A., previously consolidated using the equity method. Following the completion of the capital increase (in this regard, see the information in the Highlights section of the opening chapter), the percentage of the Group's stake in the company increased from 41.626% as at 31 December 2023 (comprising 28.134% attributable to Fideuram - Intesa Sanpaolo Private Banking and 13.492% to Reyl & Cie) to 61.599% (of which 51.141% held by Fideuram - Intesa Sanpaolo Private Banking and 10.458% by Reyl & Cie), resulting in the change to line-by-line consolidation of the company.

Certain aggregations and reclassifications have been made with respect to the model provided in Circular 262 of the Bank of Italy. Breakdowns of restatements, aggregations and reclassifications are provided in separate tables included in the attachments to this report, as also required by Consob in its Communication 6064293 of 28 July 2006.

Aggregations and reclassifications of captions in the consolidated reclassified balance sheet refer to:

- the separate presentation of financial assets of the banking segment constituting Due from banks and Loans to customers, regardless of the accounting portfolios to which they have been allocated;
- the separate presentation of financial assets of the banking segment not constituting loans, divided into financial assets measured at amortised cost, financial assets measured at fair value through profit or loss and financial assets measured at fair value through other comprehensive income, net of the amounts reclassified to Due from banks and Loans to customers;
- the separate presentation of financial assets and liabilities of the insurance segment, grouped based on the valuation method adopted for the purposes of IFRS 9 (fair value or amortised cost);
- the aggregation in one single caption of Property, equipment and intangible assets, broken down into the sub-captions Assets owned and Rights of use acquired under leases;
- the inclusion of Hedging derivatives of the banking segment and Fair value change of financial assets/liabilities in hedged portfolios under Other assets/Other liabilities;
- the inclusion of Insurance assets in Other assets;
- the separate presentation of Due to banks at amortised cost of the banking segment;
- the aggregation of Due to customers at amortised cost and Securities issued of the banking segment into one caption;
- the aggregation in one single caption (Allowances for risks and charges) of allowances for specific purposes (Employee termination indemnities and Allowances for risks and charges regarding: commitments and guarantees given, post-employment benefits and other allowances for risks and charges);
- the reclassification of Lease payables to a specific sub-caption of Other liabilities;
- the presentation of Reserves as an aggregate and net of any own shares.

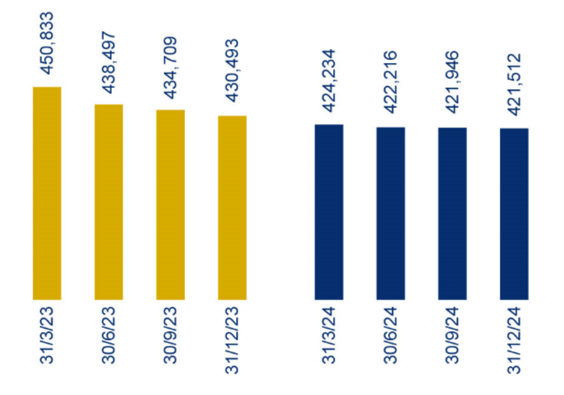
Quarterly development
Loans to customers
(millions of euro)



As at 31 December 2024, loans to customers of the Group totalled 421.5 billion euro, down slightly (-2.1%) from the end of 2023. This performance was driven by commercial banking loans (-2.7%, or -10.7 billion euro), notably the medium to long-term component represented by mortgage loans (-10.9 billion euro), particularly to businesses. The were no significant changes for other commercial banking loans, with the increase in advances and loans (+0.7 billion euro) offsetting the decrease in overdraft facilities (-0.5 billion euro). With regard to businesses, the Intesa Sanpaolo Group's policy has been based on close attention to risk, as well as safeguarding profitability in a highly competitive environment. For their part, businesses, in response to high interest rates, have limited their use of bank loans, relying instead on their own liquidity or alternative sources of funding. Additionally, the expiry of loans granted during the pandemic to support the economy using state aid has continued.
Among the other components, which represent a less significant proportion of the total aggregate, there was an increase in repurchase agreements (+8.1%, or +1.4 billion euro) and loans represented by securities (+7.5%, or +0.4 billion euro). Lastly, non-performing loans remained at levels slightly below those at the end of 2023.

In 2024, the Group made total medium/long-term disbursements of 69.8 billion euro, consisting of 43.4 billion euro for Italy and 26.4 billion euro for the international operations.
In the domestic market, the Banca dei Territori recorded loans of 29.4 billion euro, of which 17.6 billion euro to households (retail and exclusive segments), 9.3 billion euro to SMEs (companies with a turnover of up to 350 million euro), 1.9 billion euro to agribusiness, and 0.6 billion euro to the non-profit sector, third party networks, Prestitalia and Isybank. In addition, disbursements of the IMI Corporate & Investment Banking Division amounted to 13.6 billion euro and Originate to Share (OTS) operations totalled 0.4 billion euro.
For the international operations, the loans included IMI C&IB international, for 15.2 billion euro, and the International Banks Division (formerly International Subsidiary Banks), for 11.2 billion euro.
As at 31 December 2024, the Intesa Sanpaolo Group's share of the Italian domestic market was estimated at 17.8% for total loans to customers. This estimate was based on the sample deriving from the ten-day report of the Bank of Italy for December, as the global banking system figures were not yet available.

Business areas
Loans to customers

In the breakdown by business area, the Banca dei Territori Division, which accounts for 54.4% of the aggregate of the Group's business areas, recorded a decrease from the end of 2023 (-4.8%, or -11.2 billion euro), essentially due to the performance of loans to businesses which, in response to high interest rates, have limited their use of bank loans, relying instead on their own liquidity or alternative sources of funding. The loans of the Private Banking Division also decreased (-2.4%, or -0.4 billion euro), mainly due to the reduction in mortgages. In contrast, loans of the International Banks Division increased (+5.2%, or +2.3 billion euro), mainly attributable to the higher contribution from the subsidiaries operating in Slovakia and Croatia, as well as those of the IMI Corporate & Investment Banking Division (+1.5%, or +1.8 billion euro), due to the positive performance with international and institutional customers, partially offset by the decline for Global Corporate and Global Markets.
The loans of the Asset Management Division, which are relatively modest in scope owing to its line of business, increased by 4.5%.
The Corporate Centre's loans decreased by 9.6% (-1.6 billion euro).

With regard to the specific measures to support the production system, established in response to the COVID-19 pandemic, Intesa Sanpaolo was the first Bank in Italy to sign the collaboration protocol with SACE. Overall, Intesa Sanpaolo provided a plafond of 50 billion euro dedicated to loans in favour of companies under which, also through the SME Fund, a total of 49 billion euro[24] in loans backed by government guarantee were disbursed from the start of the pandemic (in application of the "*Liquidità*" Decree Law no. 23 of 8 April 2020): 13.4 billion euro backed by SACE guarantee and around 35.6 billion euro backed by SME Fund guarantee. The data regarding the monitoring of the guarantees from the "Fondo Centrale di Garanzia" (Central Guarantee Fund), despite showing higher impairment rates than the rest of the loans, do not identify significant risks, thanks to the careful and timely management.
At consolidated level, also considering the operations in the other countries where the Group has a presence, as at the end of 2024 the residual debt of exposures subject to government guarantee schemes totalled 15.4 billion euro, compared to 24.5 billion euro in December 2023. The decrease, essentially attributable to the Parent Company, was correlated with the redemptions and partial extinguishments during the period.

Under the Bank's initiatives related to the measures established by the "Rilancio" Decree (Decree Law 34/2020) for the relaunch of the construction sector, Intesa Sanpaolo – through the Banca dei Territori and IMI Corporate & Investment Banking Divisions – has purchased tax credits of 37.5 billion euro (27.1 billion euro as at 31 December 2023) from the start of the operations through to 31 December 2024. In addition, there is an amount of 1.7 billion euro of contracts signed and applications received, which will be assessed in light of the changed regulatory framework introduced by Decree Law no. 39 of 29 March 2024 converted into Law no. 67 of 23 May 2024.
Net of the overall decreases of around 15 billion euro (attributable to offsetting carried out during the year, deferrals recognised, resales carried out and fair value adjustments, where required by the business model of reference), as at 31 December 2024 tax credits of 22.5 billion euro (20.1 billion euro at the end of 2023) were recognised in the financial statements under caption 130 Other assets of the Consolidated balance sheet, which in the Reclassified consolidated balance sheet converge in the caption Other assets.

[24] Including the former UBI Banca Group and considering the sale of branches carried out in the first half of 2021.

Figures restated, where necessary and material, considering the changes in the scope of consolidation and discontinued operations.

As at 31 December 2024, the Group's net non-performing loans amounted to 4,920 million euro, lower than the figure recorded as at 31 December 2023 (4,980 million euro), confirming the virtuous trend already seen in previous quarters, consistent with the status of Zero NPL Bank declared in the 2022-2025 Business Plan. The ratio of non-performing loans to total net loans to customers came to 1.2% (1% according to the EBA definition) with the coverage ratio for non-performing loans decreasing to 49.5% from 49.9% at the end of 2023.
In further detail, in December 2024 bad loans amounted to 1,120 million euro (+19.1% from 31 December 2023), net of adjustments, representing 0.3% of total net loans with a coverage ratio of 68%. Loans included in the unlikely-to-pay category amounted to 3,438 million euro, down by 3.8%, accounting for 0.8% of total net loans to customers, with a coverage ratio of 39.8%. Past due loans amounted to 362 million euro (-22.2% from the end of 2023), with a coverage ratio of 29.8%. Within the non-performing loan category, forborne exposures, generated by forbearance measures for borrowers experiencing difficulty in meeting their financial obligations, amounted to 1.7 billion euro, with a coverage ratio of 44.8%. Forborne exposures in the performing loan category amounted to 4.2 billion euro.

At the end of December 2024, net performing loans amounted to 410.2 billion euro, down by 9.3 billion euro (-2.2%) on the end of 2023, with an overall coverage ratio of 0.53% of which 4.6% (from 4.59% at the end of 2023) for Stage 2 loans and 0.15% (0.18% at the end of December 2023) for Stage 1 loans. In terms of stock, net loans in Stage 1 decreased by 1.7% to 376.1 billion euro and those in Stage 2 fell by 7.9% to 33.4 billion euro.

Loans to customers classified as non-current assets held for sale	**330**	**-291**	**39**	**181**	**-42**	**139**	**-100**

Figures restated, where necessary and material, considering the changes in the scope of consolidation and discontinued operations.

As at 31 December 2024, the Group's gross non-performing loans fell to 9.7 billion euro, down by 0.2 billion euro (-2.1%) compared to December 2023. This performance was driven by unlikely-to-pay loans (-3%, or -174 million euro) and past-due loans (-20.5%, or -133 million euro), against an increase in bad loans of 102 million euro (+3%).

As already described above, this result was attributable to the ongoing de-risking initiatives and benefited from low new inflows from performing loans, thanks to the results of the prevention initiatives.

The NPL ratio was 2.3% gross of adjustments and 1.2% net (2% and 1%, respectively, gross and net according to the EBA methodology).

In 2024, gross inflows amounted to 3.5 billion euro (1.5 billion euro in the first half and 2 billion euro in the second half year), slightly higher than the figure recorded in 2023 (3.3 billion euro). In net terms, that is, net of outflows to performing loans, inflows amounted to 2.9 billion euro (1.3 billion euro in the first half and 1.6 billion euro in the second half), compared to 2.5 billion euro in 2023.

(*) The amount of the item does not include certificates which are included in the direct deposits from banking business table.

The table above shows the breakdown of other financial assets and liabilities, excluding those pertaining to insurance companies. Financial liabilities held for trading do not include certificates, which are included in the direct deposits from banking business aggregates.
The Intesa Sanpaolo Group’s other financial assets, excluding those of the insurance companies, amounted to 185 billion euro, up by 15.1 billion euro compared to the end of the year (+8.9%). Financial liabilities held for trading decreased by 3.1% to 33.8 billion euro.

The increase in total financial assets was essentially due to the performance of debt securities (+9.3 billion euro) and, to a lesser extent, equities and quotas of UCI (+6.2 billion euro), while the decline in financial derivatives (-2.1 billion euro) was largely offset by an increase in credit derivatives (+1.8 billion euro).

Financial assets measured at fair value through profit or loss amounted to 45.7 billion euro, up by 3.7 billion euro from the end of 2023. The change was attributable to an increase in equities and quotas of UCI (+6.1 billion euro), only partially offset by the reduction in debt securities (-2.1 billion euro).

Instruments measured at amortised cost which do not constitute loans amounted to 63 billion euro, up by 4.7%, due to the performance of government debt securities. HTC debt securities have primarily been classified to Stage 1 (91%).
Financial assets measured at fair value through other comprehensive income, which reached 76.3 billion euro, also increased from the end of 2023 (+12.7%), essentially due to the performance of debt securities. HTCS debt securities have been classified almost exclusively to Stage 1 (98%).

(a) The netting relates to components of indirect customer deposits that also constitute types of direct deposits (financial liabilities of the insurance segment measured at fair value and insurance liabilities).

As at 31 December 2024 customer financial assets, after netting, reached 1,382 billion euro, up from the year-end (+5.9%, or +77 billion euro), driven by indirect customer deposits (+9.4%, or +68 billion euro) and, to a lesser extent, by direct deposits from banking business (+1.2%, or +6.9 billion euro). Direct deposits from insurance business also increased (+2.7%, or 4.7 billion euro) compared to the end of December.

Direct deposits from banking business

The table below sets out amounts due to customers, securities issued, including those measured at fair value, and certificates, which represent an alternative form of funding to bonds.

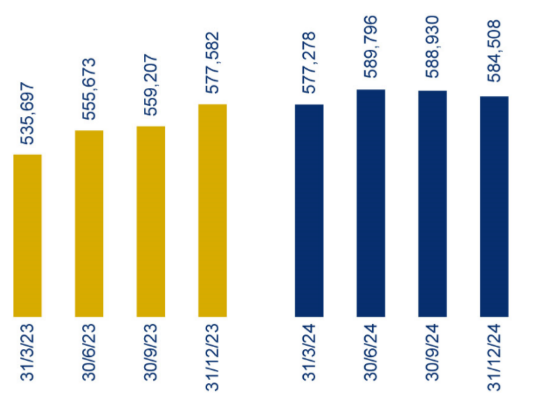
(*) Figures relating to investment certificates and other forms of funding included in the Balance sheet under “Financial liabilities held for trading” and “Financial liabilities designated at fair value”. Specifically:
- as at 31 December 2024, this caption consisted of 9,042 million euro of certificates classified under “Financial liabilities held for trading” and 23,437 million euro of certificates (23,432 million euro) and other forms of funding (5 million euro) classified under “Liabilities designated at fair value”;
- as at 31 December 2023, this caption consisted of 8,586 million euro of certificates classified under “Financial liabilities held for trading” and 21,344 million euro of certificates (21,340 million euro) and other forms of funding (4 million euro) classified under “Liabilities designated at fair value”.

Bearer instruments issued are conventionally fully attributed to funding from customers.

Quarterly development
Direct deposits from banking business
(millions of euro)



The Group’s direct deposits from banking business amounted to 584.5 billion euro, up slightly from the end of the year (+1.2%, or +6.9 billion euro), essentially due to an increase in repurchase agreements (+2.6 billion euro), bonds (+2.1 billion euro), and other funding (+2.6 billion euro), thanks to the growth of certificates, while current accounts and deposits remained substantially stable.
The recomposition within the direct deposits aggregate, already underway in 2023, should be viewed in a scenario of continued high interest rates, where companies used their liquidity to reduce their use of bank loans, and retail customers redirected a portion of their available funds held on current accounts to more remunerative investment products, such as certificates and asset under management products, as well as government and corporate bond issues, which increased the dossiers of assets under administration (+37.1 billion euro).
As at 31 December 2024, the Intesa Sanpaolo Group's direct deposits (deposits and bonds) represented a share of the domestic market of 21.6%. As described above with reference to loans, this estimate is based on the sample deriving from the ten-day report produced by the Bank of Italy.

(millions of euro)

Figures restated, where necessary and material, considering the changes in the scope of consolidation and in business unit constituents and discontinued operations.

Business areas
Direct deposits from banking business

In the analysis of funding by sector, the Banca dei Territori Division, which accounts for 52.5% of the aggregate attributable to the Group's operating business areas, came in below the levels of the end of 2024 (-4.4%, or -11.8 billion euro), in view of the decrease in amounts due to customers. In response to continued high interest rates, businesses used their liquidity to limit the use of bank loans, and households redirected a portion of their available funds on current accounts to more remunerative investment products.
In contrast, there was a rise in direct deposits for the IMI Corporate & Investment Banking Division (+10.7%, or +12.1 billion euro), as a result of the increase in operations in Global Corporate, Global Markets, and the growth in operations in certificates, for the Private Banking Division (+4.5%, or +2.1 billion euro), due to the increase in inflows in current account deposits, and for International Banks (+2.7%, or +1.6 billion euro), as a result of the performance in Slovakia, Serbia, and Croatia, only partially offset by the negative performance of the subsidiary operating in Egypt.
The growth in Corporate Centre funding (+3 billion euro) was mainly attributable to transactions in wholesale securities.

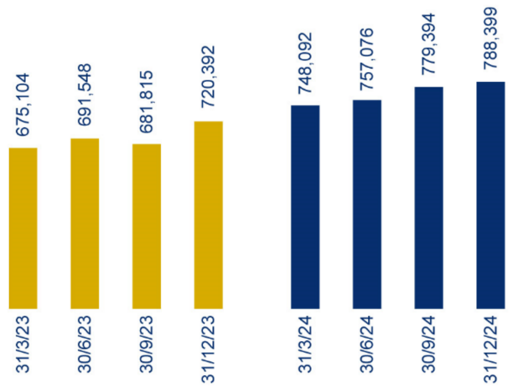
(a) This caption does not include funds held by Group insurance companies and managed by the Group's asset management companies, whose values are included in the insurance liabilities and insurance financial liabilities, and the funds established by third parties and managed by Group companies, whose values are included in assets under administration and in custody.

Quarterly development
Indirect customer deposits
(millions of euro)



As at 31 December 2024, indirect customer deposits exceeded 788 billion euro, up by 9.4% from the end of 2023. The trend was due to assets under administration and assets under management, which benefited from strong market performance, as well as positive net inflows.
Assets under management, which at 473.1 billion euro accounted for 60% of the total aggregate, recorded an increase (+7%, or +30.9 billion euro). This increase was attributable to mutual funds (+11.7 billion euro), portfolio management schemes (+10.6 billion euro), relations with institutional customers (+3.6 billion euro), insurance liabilities and insurance financial liabilities (+2.6 billion euro) and open pension funds and individual pension policies (+2.4 billion euro). In 2024, the new life business of the insurance companies of the Intesa Sanpaolo Group, including pension products and those of a predominantly financial nature, amounted to 17.8 billion euro. Assets under administration, amounting to 315.2 billion euro, increased (+13.3%, or +37.1 billion euro), concentrated in securities and third-party products in custody, to which investors have transferred part of their liquidity in order to benefit from higher yields.

NET INTERBANK POSITION	**27,697**	**24,476**	**3,221**	**13.2**

Figures restated, where necessary and material, considering the changes in the scope of consolidation and discontinued operations.

(*) Of which with European Central Bank: 26,496 million euro as at 31 December 2024 and 75,162 million euro as at 31 December 2023.

(**) Of which with European Central Bank: 4,018 million euro as at 31 December 2024 and 4,603 million euro as at 31 December 2023.

As at 31 December 2024, the Group's net interbank position – calculated considering all the on-demand liquidity, both at Central Banks and at other banks, recognised under "Cash and cash equivalents", and no longer just that with the ECB – presented a positive imbalance of 27.7 billion euro, an improvement compared to 24.5 billion euro at the end of 2023.
The change reflects a 51.3% reduction in liabilities, mainly attributable to the total repayment of the TLTROs III during the year (36 billion euro in March, 9 billion euro in June, and 60 million euro in September).
On the side of assets held at banks, there was also a decrease, although smaller (-37.8%), due to liquidity in on-demand deposits with central banks (-49.4 billion euro), and in particular with the ECB (-48.7 billion euro). The amounts due from banks increased by 15.4% overall, driven by operations in repurchase agreements which more than offset the slight decreases in other technical forms.

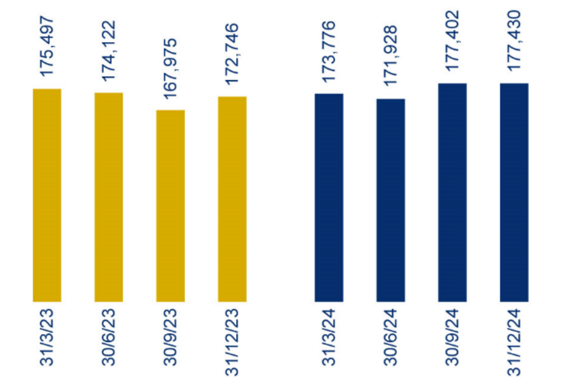
Quarterly development
Direct deposits from insurance business
(millions of euro)



Direct deposits from insurance business stood at 177.4 billion euro as at 31 December 2024, up (+2.7%, or +4.7 billion euro) on the end of 2023. The change was attributable to insurance liabilities (+5.2%, or +6.2 billion euro), particularly liabilities for remaining coverage. In contrast, there was a decrease in the financial liabilities of the life business (-1.5%, or -0.8 billion euro), consisting of unit-linked products. Other insurance deposits, which represent a marginal component of the total aggregate and include subordinated liabilities, halved compared to December 2023.

NON-CURRENT ASSETS HELD FOR SALE AND DISCONTINUED OPERATIONS AND RELATED LIABILITIES

This caption contains assets and related liabilities which no longer refer to continuing operations as they are being disposed of.
As at 31 December 2024, assets held for sale amounted to 667 million euro, mainly consisting of: (i) the investment in Cronos Vita Assicurazioni, acquired by Intesa Sanpaolo Assicurazioni (formerly Intesa Sanpaolo Vita) as part of the system-wide transaction aimed at protecting the policyholders of Eurovita, for which there was a clear intention from the outset on the part of the shareholder companies to hold the investment for a limited period of time (already held for sale at the end of December 2023); (ii) properties, including those with a total value of around 0.5 billion euro, subject to transfer under the agreement between Intesa Sanpaolo and COIMA, due to be completed in 2025; and (iii) non-performing loans of 0.3 billion euro gross, due to be sold under a de-risking transaction approved in December 2024. The associated liabilities amounted to 5 million euro.
At the end of 2023, assets held for sale amounted to 0.3 billion euro, including a portfolio consisting of both unlikely-to-pay loans and high-risk performing positions with a total gross book value of around 0.2 billion euro. The majority of this exposure was sold on 15 April 2024, with only minor amount remaining that will be sold in 2025. The associated liabilities amounted to 2 million euro.

SHAREHOLDERS' EQUITY

As at 31 December 2024, the Group's shareholders' equity amounted to 65,176 million euro compared to the 63,963 million euro as at 31 December 2023. This aggregate included the net income earned in the current year (8,666 million euro) and reflected the remaining dividend for 2023 paid in May 2024 (-2.8 billion euro) and the interim dividend from the 2024 net income paid in November 2024 (3 billion euro; 2.6 billion euro in November 2023).
The shareholders' equity as at 31 December 2024 also includes a deduction of 1.7 billion euro related to purchases made under the programme of purchase of own shares for annulment (buyback), which was authorised by the ECB by decision notified on 11 March 2024. The execution of the programme – in accordance with the terms and conditions approved by the Shareholders' Meeting of Intesa Sanpaolo on 24 April 2024 – began on 3 June and ended on 18 October 2024.
The shareholders' equity at the end of the year included the allocation to the Reserve pursuant to Article 26 (one-off tax calculated on the increase in banks' net interest income), paragraph 5-bis of Decree Law no. 104 of 10 August 2023, converted with amendments by Law no. 136 of 9 October 2023 (2.1 billion euro) in accordance with the resolutions adopted by the Shareholders' Meetings, called to approve the 2023 Financial Statements of Intesa Sanpaolo and the other Group banks affected by the measure, upon allocation of the net income for 2023.

Valuation reserves

	Reserve 31.12.2023	Change of the period	Reserve 31.12.2024

Portion of the valuation reserves connected with investments carried at equity	1	34	35
Legally-required revaluations	311	1	312
Valuation reserves (excluding valuation reserves pertaining to insurance companies)	**-1,711**	**-324**	**-2,035**
Valuation reserves pertaining to insurance companies	**-298**	**1**	**-297**

Bank valuation reserves were negative (-2,035 million euro), up by 324 million euro compared to 31 December 2023 (-1,711 million euro). The negative impact was mainly due to the reserves on debt securities, the exchange rate differences, primarily related to the devaluation of the Egyptian pound, and, to a lesser extent, the financial liabilities designated at fair value through profit or loss. The valuation reserves of the insurance companies, amounting to -297 million euro, remained substantially stable compared to the end of 2023.

(a) The caption includes all other elements not contemplated in the foregoing captions that are considered when calculating total capital requirements.

Own Funds, risk-weighted assets and the capital ratios as at 31 December 2024 were calculated according to the harmonised rules and regulations for banks and investment firms contained in Directive 2013/36/EU (CRD) and in Regulation (EU) 575/2013 (CRR) as amended, which transpose into the European Union the standards defined by the Basel Committee on Banking Supervision (the Basel Framework), and on the basis of the related Bank of Italy Circulars.

Own funds

As at 31 December 2024, Own funds amounted to 56,397 million euro.

Even if the transitional period of IFRS 9 has ended, own funds take account of the provisions of the 2019 Budget Act, which temporarily called for - up to 2028 - the adjustments upon first-time adoption of the Standard to be applied in instalments for tax purposes, with the recognition of the resulting DTAs. These DTAs were fully included in the calculation of the thresholds established in Article 48 CRR, over the same time period. Moreover, it is noted that the Intesa Sanpaolo Group did not apply either the new transition regime for IFRS 9 (in force up to 31 December 2024), or the FVOCI prudential filter. These were both introduced by Regulation (EU) no. 873/2020 (Quick Fix) in the context of the pandemic.

Own Funds also take into account the applicable amount, object of deduction from CET1, related to the minimum coverage of losses on non-performing exposures, known as Minimum Loss Coverage, based on the provisions of Regulation (EU) 630/2019 of 17 April 2019.

Moreover, in compliance with Article 3 of the CRR ("Application of stricter requirements by institutions"), the calculation of the own funds as at 31 December 2024 included the voluntary deduction of around 31 basis points from the CET 1 of the calendar provisioning[25] on exposures within the scope of Pillar 2.
Since 30 June 2023, the Intesa Sanpaolo Group has been complying with EBA Q&A 2021_6211, which clarifies that the amount of goodwill to deduct from an institution's CET 1 must be that relating to directly controlled insurance companies, recognised at the date of acquisition of the significant investment in those companies, without considering the goodwill referring to subsequent acquisitions made. The latter amount was included in the calculation of risk-weighted assets (RWA), thus falling under the ordinary treatment that the Group reserves for equity investments in insurance companies.
For the purposes of calculating own funds as at 31 December 2024 the net income for 2024 was considered, less the related dividend and other foreseeable charges[26]. These foreseeable charges also take into account the maximum amount (2 billion euro), authorised by the ECB, for the share buyback to be initiated in June 2025, which the Board of Directors resolved on 4 February 2025 to submit for approval to the Shareholders' Meeting.

Risk-weighted assets

As at 31 December 2024, risk-weighted assets came to 296,366 million euro, resulting primarily from credit and counterparty risk and, to a lesser extent, operational and market risks.
Common Equity Tier 1 Capital and risk-weighted assets as at 31 December 2024 take account of the impact of the application of the "Danish Compromise" (Art. 49.1 of Regulation (EU) 575/2013), as per the specific authorisation received from the ECB in 2019, according to which insurance investments are treated as risk-weighted assets instead of being deducted from capital.

Capital ratios

On the basis of the foregoing, capital ratios as at 31 December 2024 highlighted a Common Equity ratio of 13.3%, a Tier 1 ratio of 15.8% and a Total capital ratio of 19.0%.
Finally, on 30 November 2023, Intesa Sanpaolo announced that it had received notification of the ECB's final decision concerning the capital requirement that the Bank has to meet, on a consolidated basis, as of 1 January 2024, following the results of the Supervisory Review and Evaluation Process (SREP).
The overall requirement to be met in terms of Common Equity Tier 1 ratio is currently 9.88%, inclusive of the Capital Conservation Buffer, O-SII Buffer and Countercyclical Capital Buffer[27] and Systemic Risk Buffer[28] requirements.

[25] The addendum to ECB Guidance on non-performing loans of 2018 contemplates the possibility that banks "deduce" on their own initiative specific amounts from CET 1, to anticipate supervisory requests, in the event of divergence between the prudential framework, which expects adjustments not based on credit risk measurement criteria, and the accounting framework.

[26] Coupons accrued on Additional Tier 1 issues (406 million euro) and proposed assignment to the Allowance for charitable, social and cultural contributions (24 million euro).

[27] The Countercyclical Capital Buffer is calculated taking into account the exposure as at 31 December 2024 in the various countries where the Group has a presence, as well as the respective requirements set by the competent national authorities and relating to 2026, where available, or the most recent update of the reference period (requirement was set at zero per cent in Italy for 2024 and for the first quarter of 2025).

[28] Fully loaded. On 26 April 2024, the Bank of Italy announced the introduction of the new Systemic Risk Buffer (SyRB) amounting to 1% of the risk-weighted exposures to credit and counterparty risks for residents in Italy. The target rate must be reached gradually by establishing a reserve equal to 0.5% of the relevant exposures by 31 December 2024 and the remaining 0.5% by 30 June 2025.

Reconciliation of Shareholders' equity and Common Equity Tier 1 capital

(millions of euro)

	31.12.2024	31.12.2023
Group Shareholders' equity	65,176	63,963
Minority interests	145	164
Shareholders' equity as per the Balance Sheet	**65,321**	**64,127**
Interim dividend (a)	3,022	2,629
Adjustments for instruments eligible for inclusion in AT1 or T2 and net income for the period		
- Other equity instruments eligible for inclusion in AT1	-7,551	-7,707
- Minority interests eligible for inclusion in AT1	-	-
- Minority interests eligible for inclusion in T2	-	-
- Ineligible minority interests on full phase-in	-145	-164
- Ineligible net income for the period (b)	-6,217	-5,787
- Own shares included under regulatory adjustments (c)	2,176	165
- Buyback of own shares (d)	-2,000	-
- Other ineligible components on full phase-in (e)	-1,247	-325
Common Equity Tier 1 capital (CET1) before regulatory adjustments	**53,359**	**52,938**
Regulatory adjustments (f)	**-14,052**	**-11,462**
Common Equity Tier 1 capital (CET1) net of regulatory adjustments	**39,307**	**41,476**

(a) As at 31 December 2024 and 31 December 2023 the Shareholders' equity as per the Balance Sheet did not include the interim dividend, of 3,022 and 2,629 million euro respectively (net of the undistributed portion in respect of the own shares held at the record date).

(b) Common Equity Tier 1 capital as at 31 December 2024 includes the net income as at that date, less the related dividend, the accrued coupon on Additional Tier 1 instruments net of tax effects and charity allowance.

(c) The amount includes, in addition to the book value of own shares, the unused portion of the ceiling for which the Bank has received the buyback authorisations.

(d) As at 31 December 2024, the amount refers to the total value of the programme of purchase of own shares for annulment (buyback), amounting to 2 billion euro, as the related authorisation from the Supervisory Authority was received on January 31, 2025, subject to the approval of the Shareholders' Meeting.

(e) As at 31 December 2024, the amount includes a deduction of 1,150 million euro following the authorisation - received during the fourth quarter - for the repurchase of two AT1 instruments.

(f) The regulatory adjustments as at 31 December 2024 no longer include the impact of the application of the IFRS 9 transitional filter - the applicability of which ended in 2022 - conversely, they include 941 million euro of Article 3 CRR additional deduction (for the calendar provisioning on exposures included within the scope of Pillar 2).

Performance of risk-weighted assets

(millions of euro)

Risk-weighted assets as at 31.12.2023	**302,110**
Credit and counterparty risk	-8,420
Market and settlement risk	69
Operational risks	2,627
Other specific risks	-20
Risk-weighted assets as at 31.12.2024	**296,366**

In 2024, the risk-weighted assets for credit and counterparty risk decreased by around +8.4 billion euro, mainly attributable to the improvement in credit quality, portfolio optimisation measures, and movements in volumes.
The figure for risk-weighted assets relating to market risks (around +0.1 billion euro) was essentially stable.
The increase in risk-weighted assets for operational risks (around +2.6 billion euro) was mainly attributable to the update of the components measured using internal models and, to a lesser extent, to the increase in the relevant indicator for the components measured using the standard approach.
There were no significant changes for the other specific risk-weighted assets.

Breakdown of consolidated results by business area and geographical area

Breakdown of consolidated results by business area and geographical area

The Intesa Sanpaolo Group

Banca dei Territori	IMI Corporate & Investment Banking	International Banks	Private Banking	Asset Management	Insurance	Corporate Centre (*)

(*) Includes Group Treasury & Capital Management and the NPE Head Office Department

The Intesa Sanpaolo Group organisational structure is based on Business Units. In addition, there is the Corporate Centre, which is charged with providing guidance, coordination and control for the entire Group.

The Intesa Sanpaolo Group's segment reporting is based on the elements that management uses to make its own operating decisions (the "management approach") and is therefore consistent with the disclosure requirements of IFRS 8.
In addition to reflecting the operating responsibilities assigned in accordance with the Group's organisational structure, the business areas are an aggregation of business lines similar in the type of products and services they sell.

The table below shows the main data summarising the trend of the business areas of the Intesa Sanpaolo Group in 2024 compared to the like-for-like comparison data.

The following itemised analysis of the business areas contains a description of the products and services offered, the type of customers served and the initiatives carried out in the year; it also illustrates income statement figures and the main balance sheet aggregates. Finally, for each business area, the capital absorbed based on Risk Weighted Assets (RWAs) was also calculated. RWAs were determined in accordance with the provisions in force (Circular 285) issued by the Bank of Italy following the implementation of Directive 2013/36/EU (CRD IV) and Regulation (EU) 575/2013 (CRR) of 26 June 2013, amended by Regulation (EU) 876/2019 of 20 May 2019, known as CRR II, which transpose the banking supervision standards defined by the Basel Committee (the Basel 3 Framework) to European Union laws. Absorbed capital also takes account of the regulatory changes introduced by the ECB with effect from 12 March 2020, allowing the Pillar 2 requirement to be met partially using equity instruments not classified as Common Equity Tier 1. For each Division, the absorbed capital is supplemented, where necessary, with management data on "economic" capital to take into account the risks not covered by the regulatory metric.

Division figures for the comparative periods have been restated to reflect the changes in scope of the Business Units, where necessary and if they are material. In particular:
- the entry into the scope of consolidation of the Romanian bank First Bank S.A. (International Banks Division, formerly International Subsidiary Banks Division), acquired on 31 May 2024;
- the entry into the line-by-line scope of consolidation of Alpian S.A. (Private Banking Division), previously consolidated using the equity method, following the completion of the capital increase which brought the Group's percentage ownership to 61.599% (of which 51.141% held by Fideuram - Intesa Sanpaolo Private Banking and 10.458% by Reyl & Cie);
- the reallocation of Banca Intesa Russia from the IMI Corporate & Investment Banking Division to the Corporate Centre from the first quarter of 2024, with no impact on net income.

The **Banca dei Territori Division** oversees the traditional lending and deposit collection operations in Italy and associated financial services, targeted to Retail, Exclusive and SMEs, including Agribusiness and non-profits.
This Division also includes leasing, factoring and subsidised finance activities, as well as the digital bank Isybank (which also operates in instant banking through Mooney, in partnership with Enel) and Prestitalia (operating in the consumer credit segment).

Banca dei Territori's operating income was 11,687 million euro in 2024, amounting to 43% of the Group's consolidated revenues, showing growth (+3.9%) on the previous year.
In detail, net interest income increased (+2%), due to the trend in market interest rates, which favoured the profitability of customer dealing. Net fee and commission income also increased (+6.3%), largely driven by the assets under management segment, bolstered by higher placement levels than in 2023, by the higher contribution from advisory services and the non-life insurance segment. Within the commercial banking fees, there was a positive contribution from cards and other payment services, against a decrease in fee and commission income on current accounts, related to the decrease in the account maintenance fees charged by the Bank to customers. Among the other revenue components, which provide a marginal contribution to the Division's operating income, the profits (losses) on financial assets and liabilities at fair value came to 120 million euro (+9 million euro) and other net operating income amounted to 3 million euro (compared to a net expense of

5 million euro in the previous year). Operating costs of 6,444 million euro decreased by 1.7%, mainly thanks to the containment of administrative expenses, particularly those related to property management, IT services, and legal fees. As a result of the above, the operating margin rose to 5,243 million euro compared to 4,693 million euro in 2023 (+11.7%) and the gross income came to 4,066 million euro, up 23.6%, benefiting from lower net adjustments to loans. Lastly, after allocation to the Division of taxes of 1,337 million euro, charges for integration of 287 million euro, the effects of purchase price allocation of 20 million euro and the levies and other charges concerning the banking and insurance industry of 190 million euro, net income came to 2,232 million euro, up by 15.8% on 1,928 million euro in 2023.

In quarterly terms, the operating margin decreased on the third quarter of 2024, attributable to an increase in operating costs, typical of the end of the year, against a slight increase in revenues. Gross income also showed a declining trend, which was impacted by higher provisions and adjustments to other assets, as well as the net income, impacted by higher charges for exit incentives for personnel.

The balance sheet figures at the end of December 2024 showed a decline in total intermediated volumes of funding and deposits from the end of December 2023 (-4.6%). In detail, loans to customers, amounting to 221,231 million euro, decreased (-4.8%, or -11.2 billion euro) mainly due to the trend in loans to businesses, which, in response to high interest rates, limited their use of bank loans, relying instead on their own liquidity or alternative sources of funding. In a highly competitive environment, the Division maintained profitability, while closely controlling risk in credit provision. Direct deposits from banking business, amounting to 258,772 million euro, stood at lower levels than the end of 2023 (-4.4%, equal to -11.8 billion euro) in relation to the decrease in amounts due to customers. Businesses drew on their liquidity to reduce their use of bank loans, and retail customers redirected a portion of their available funds on current accounts to more remunerative investment products, such as Intesa Sanpaolo certificates structured by the IMI Corporate & Investment Banking Division and asset management products, as well as government and corporate bond issuances, which increased the dossiers of the assets under administration.

Business

Traditional lending and deposit collection operations in Italy and associated financial services.

Mission

To serve Retail, Exclusive, and Small and Medium Enterprise customers, including Agribusiness and non-profits, creating value through:
- widespread local coverage;
- focus on the characteristics of local markets, and the needs of customer segments serviced;
- development of service levels to customers using different channels in order to improve the efficiency of the commercial offering;
- development and management of products and services for the target customers, as well as of leasing, factoring and subsidised finance products for the Group in Italy;
- the centrality of the roles of the officers responsible for the Regional Governance Centres, Area Governance Centres and branches as points of reference for the Group at local level.

Organisational structure

Wealth Management & Protection Sales & Marketing; Digital Retail Sales & Marketing and SME Sales & Marketing Departments	Overseeing the Retail sector, which consists of the segments Individuals, Affluent and Retail Companies, the Exclusive sector (retail customers with high asset and wealth standing and complex financial needs) and the SME area (small businesses, businesses and top businesses with high complexity and potential for growth).
Agribusiness Department	Serving agriculture and agribusiness.
Impact Department	Aimed at developing the initiatives of Impact Bank and serving non-profit organisations.
Isybank	The Group's new digital bank developed for customers that primarily use on-line channels, who can carry out operations that meet their needs autonomously and remotely, using the app and with the support of the Digital Branch.
Product companies	Prestitalia: a financial intermediary operating in the Italian market of consumer credit, specialising in the salary-backed loans segment.

Distribution structure

2,700 branches, including Retail, Exclusive and Business branches, distributed broadly throughout Italy, the Agribusiness branches dedicated to companies operating in agribusiness, and Impact branches dedicated to the non-profit sector. The territorial structure is divided into 14 Governance Centres: Agribusiness, Impact and 12 Regional Governance Centres, with around 320 commercial areas. In order to favour the commercial focus and guarantee a better control of the service level, there are three Commercial Managers, specialised by "commercial territory" (Retail, Exclusive and Corporates) that report directly to the Regional Manager. These were joined by the Digital Channels Bdt structure, as part of the strategic initiatives to develop the new digital bank, and the Digital Branch Department, to oversee commercial relations with customers via the telephone channel and other related channels (chat, video calls) and the remote offering.

Wealth Management & Protection Sales & Marketing, Digital Retail Sales & Marketing and SME Sales & Marketing Departments

Investment and Pension Funds

The advanced advisory paid service "Valore Insieme", launched in 2017, proposes a global advisory model over all of the customer's assets, including real estate, also assisting customers in planning the transfer of wealth to their loved ones. From March, customers who have subscribed to the Exclusive Package have been offered three flexible "Eurizon Exclusive Multimanager Trend" mutual funds, with a predominantly multimanager component. Since April, it has been possible to send proposals by remote offering to customers that have subscribed to the "Valore Insieme" service for subscriptions and contract changes. In addition, again from April, a "Welcome Letter" has been introduced for new customers of the service, to promote the advisory content in all the wealth areas. In December, securities reporting was updated.

The offering in support of asset management products has also been expanded promoting solutions aligned to the pursuit of medium- to long-term growth objectives, in addition to capital-protected solutions. The range of protected funds was expanded with the new funds Epsilon Orizzonte Protetto 5 Anni and Epsilon Progressione 20 Protetto, whose launch contributed to extending - during the year - the reference time horizon in a range from 2 to 5 years. With regard to the offering aimed at portfolio diversification and capital growth, the offering of funds with the gradual entry into the equity markets was enriched with the funds Eurizon Bilanciato 25 and Eurizon Bilanciato 50 and, more recently, with the funds Eurizon Progressione 25 and Eurizon Progressione 50, which, in their first year, before the phase of gradual entry, have Buy&Watch bond management and the distribution of a preset amount. The following were also launched: the new 8-year bond fund Epsilon Bond Opportunità and, in April, the portfolio management service GP Strategia Valore Opportunità, featuring a high level of personalisation, with which the customer can choose from 18 exclusively bond components differentiated by the maturity date of the securities, including short term, and by issuer type. In the second half, the fund Epsilon Imprese Protezione 1 anno, was made available for legal persons. This fund provides ongoing protection of invested capital and the distribution of a preset amount on maturity.

Within the insurance investment products, in the first part of the year, two new business Class I policies were launched by Intesa Sanpaolo Assicurazioni (formerly Intesa Sanpaolo Vita): "Patrimonio Garanzia 5 anni" and "Patrimonio Garanzia 3 anni" which provide the guarantee from the insurance company that it will return the invested amount at maturity and in the case of surrender or claim. Patrimonio Garanzia 5 anni, also offers customers a bonus, at the 5-year maturity, of 1.5%, before tax, of the revalued capital. In the second half, Intesa Sanpaolo Assicurazioni's offering was enriched and updated with the policies Patrimonio Sprint, Traguardo Sicuro 7 Plus and Patrimonio Domani Plus. Patrimonio Sprint offers predetermined returns on 30% of the amount invested during the initial phase of the investment, while Traguardo Sicuro 7 Plus and Patrimonio Domani Plus provide significant enrichment of the insurance component due to the present of accessory insurance cover, which are mandatory at the time of underwriting, to protect and support customers and their loved ones in the event of unforeseen events (accidental death or permanent loss of self-sufficiency). Moreover, Patrimonio Garanzia 5 anni supported Class I policies with accessory insurance cover, which was replaced at the end of the year with Patrimonio Garanzia Solida 5 anni, for customers that do not need additional cover. As regards Class II (unit-linked) insurance investment products, from the end of April to 21 June, the new protected internal fund Base Protetta 100 ed. 04/24 was made available within Prospettiva Dublin Branch and Patrimonio Pro Dublin Branch, as well as in the stock products, which made it possible to support advisory services and capture opportunities in the bond markets while also participating in any potential growth in the equity markets.

The placement of certificates continued during 2024, with a diversified offering, differentiated by structure, level of protection and duration. Products with protected capital on maturity were privileged, selecting new underlyings to increase the variety of instruments and guarantee greater diversification of the portfolio. Moreover, the evolution of monetary policy, featuring lower interest rates, resulted in a trend of extending durations.

Lastly, the offering of savings certificates has been maintained, also in combination with the subscription of asset management products.

With the aim of expanding the ways customers can access financial advice through the bank's digital channels, the RoboAdvisor feature has been activated for a selected group of customers, allowing customers to receive centrally generated investment suggestions or request them independently through the App and Internet Banking. This runs alongside Robo4Advisor available to the relationship managers, which has seen a steady rise in usage since the beginning of the year.

Starting from June, the new "Gold Deposit" service has been available on the entire network, offering customers the opportunity to buy and sell gold bars stored in the Bank's vault or at third-party custodians. The initiative is aimed at customers who prefer physical assets and who are interested in diversifying their portfolio with an asset class that complements traditional investments.

Mortgages

In 2024, Intesa Sanpaolo introduced new offerings for customers aimed at further enhancing its catalogue, with a particular focus on "Green", "Youth", "Consap", and "Subrogations".

For under-36s applying for a loan for the purchase of their first home, the offering continued of the dedicated fixed-rate mortgage loans, also with high LTV (over 80%) and a duration of up to 40 years. The discounts, applicable to all durations and LTV levels, have also been maintained, which include the waiver of instalment collection fees and payment due or receipt notice fees, and the activation of flexibility options, while for applications for fixed-rate mortgages with a duration of 35 or 40 years and LTV of less than 80%, a discount of 50% was applied on processing fees.

The 2024 budget act maintained the possibility until 31 December 2024 of accessing the public guarantee of the First Home Guarantee Fund up to a maximum of 80% for high LTV mortgages, introducing a new priority category for large households (at least 3 children). Intesa Sanpaolo has therefore added the option to this category of subscribing to the Mutuo a Tasso Fisso Domus Fondo di Garanzia Prima Casa – Consap, which provides an interest rate discount of 35 basis points for LTV up to 80% and 115 basis points for LTV above 80%, in addition to the waiver of processing fees, collection fees and payment notice fees, and additional options.

The trend in interest rates in the money markets has provided the opportunity to subrogate considerable volumes disbursed,

also recently, by other banks. Intesa Sanpaolo has therefore introduced a new Subrogation Promotion, offering a discount of 40 basis points for LTV up to 80% on fixed-rate subrogations exceeding 100 thousand euro. Additionally, the increasing customer focus on Green loans and the success of this type of product prompted the desire to enhance the financial solutions available in Green Subrogation, with the following repayment plans: Multi-Option Plan, Rate Cap Plan, and Balanced Plan.
Also in the area of "Green" products, on 25 November, in line with the Bank's objectives and the need to offer products increasingly aligned with the indications of European Taxonomy, Intesa Sanpaolo renewed the product "Mutuo Domus Green", for those who buy properties with high energy efficiency or who carry out renovation of the property to increase its energy efficiency, to enhance the characteristic elements regarding how much the property consumes and the climate context. The new Mutuo Domus Green mortgage loan considers the energy consumption of the property expressed in Kwh/m^2 (PED) of the year of construction (pre- or post-2020) its location in one of the six climate zones of Italy. This made it possible to ensure the utmost transparency to customers, giving them the option to subscribe a product in line with regulations and to preserve their properties from a possible "energy downgrade". The favourable terms were confirmed, eliminating processing fees. This "Green" discount can also be combined with the Youth and Consap promotions.
People are increasingly choosing their properties and mortgages online, through portals that compare offerings for loans. For that reason, in December, Intesa Sanpaolo signed an agreement with Mutui Master, a credit brokerage operating in online comparison. As a result of these partnerships with online brokers, the Bank can capture customers' needs from the moment the need is born, as well as strengthen its leadership in the household mortgage market.

Personal loans

The offering on multi-channel personal loans continued, with a particular focus on digital sales supported by various commercial initiatives. As part of the digital evolution of the Bank, which is based on principles of using multiple channels and simplifying products, in October, the pilot phase was begun for the release of the new product XME Prestito, which replaces XME Prestito Facile, still offered for the rest of the network.
Moreover, to combat the loss in value of purchasing power of pensions and favour access to credit for socio-economically fragile persons, from September to the end of the year, a promotion was activated for retirees up to 80 years of age at the time of expiry of the loan, with net monthly pensions of less than 1,000 euro, which provides an annual nominal rate of 5.75% on the XME Prestito Pensionati INPS, without processing fees.
Intesa Sanpaolo also continued the activity of directing customers towards Prestitalia, a Group company specialised in the sale of salary-backed loans, for the XME Prestito Cessione del Quinto (CQS), XME Prestito Pensionati INPS (CQP) and XME Anticipo TFS (Trattamento di Fine Servizio) products for public sector pensioners. For the latter product, in December, to favour customers who need loans of significant amounts to execute large projects (home renovation, car purchases, etc.), a promotional rate was defined, with fixed annual nominal rate and annual percentage rate at 3.45%, for loans exceeding 50 thousand euro.

Protection and Welfare

"XME Protezione" is a flexible multi-guarantee insurance solution that allows customers to purchase coverage (modules) in the areas they need, relating to Healthcare, the Home and Family. In the Healthcare area, the coverage was expanded for the Physiotherapy and Ophthalmology and visual wellness modules, generating an increase in value for policyholders. Innovative services were also launched to access healthcare services, such as direct booking on the facility's structure and telemedicine for several affiliated structures. In the Home area, in July, coverage was restyled to keep the pace with the evolution of the range of homes, and the needs for protection, both for home owners and tenants. The changes introduced include the extension of coverage also to owners of homes built of laminated wood, a specific extension dedicated to photovoltaic plants and solar plants, and new coverage dedicated to customers who run bed and breakfasts or short-term rentals not as a company. Also in the Family area, in December, the Mugging Theft and Assistance module was updated to improve the value for customers, increasing the limits and sub-limits, and eliminating the deductible, where provided. Moreover, all the (private and business) policies offered which require a healthcare questionnaire to be filled out have been aligned with the new regulations on the "right to be forgotten for former cancer patients".
Also in the Health area, from September to 17 January 2025 (extended up to 31 March), two initiatives were activated: one for retail customers and one for business customers. The first initiative, "XME Protezione Salute e Infortuni", for retail customers, protects the health of customers and their family members, with a discount of 20% on the premium for Infortuni+ coverage for those purchasing a healthcare module and an accident module. The second initiative, "Salute Protetta", dedicated to all business customers who have already subscribed a Healthcare product (Piano Sanitario Rimborso Spese Mediche or the Collettiva Malattie Gravi policy) provides a discount of 20% on the premium for the first year of the second product purchased between the two.
The following promotions continued until July 2024 in the Motor segment: buyers of a ViaggiaConMe a Consumo policy got free assistance for travel by bicycle; and holders of a ViaggiaConMe or MotoConMe policy who bought another policy (for themselves or for a friend) received Legal Protection cover for the token price of 1 euro.
In the Business segment, starting in 2024, the Insurance Company partnered with Intesa Sanpaolo Insurance Agency (ISIA) in offering tailor-made products, strengthening the model created to best serve business customers with specific and non-standard insurance needs. From April, business customers who underwrote a new Cyber Protection Business policy availed of a discount on the first year's premium, up to October. Additionally, the Tutela Business - Commercio e Manifattura can be subscribed to both in branch and via remote offering. For the Tutela Business policies (Agricoltura, Commercio, Manifattura, Uffici and Studi), at the end of June, the new after-sales function "Replace through Upgrade" was made available, which enables customers to expand the level or type of cover without waiting for the end of the year of the policy.
Note that, on 1 December, following the reorganisation of the Intesa Sanpaolo Insurance Group, Intesa Sanpaolo RBM Salute was merged by incorporation into Intesa Sanpaolo Assicura, which then took on the name Intesa Sanpaolo Protezione. Intesa Sanpaolo Vita took on the name Intesa Sanpaolo Assicurazioni. The corporate transaction makes the Insurance Group a more recognisable player on the market, with a complete offering, both in the area of protection (pension, non-life, health and welfare) and in investment and savings management.

Young people

In addition to the above mortgage initiatives, Intesa Sanpaolo has continued its efforts to attract young customers with personalised and free solutions such as "XME Conto UP!", the current account for under-18s, and for the under-35s, Intesa Sanpaolo and Isybank signed an agreement to offer the isyLight Plan and isyPrime Plan at the branches at a discount, with zero monthly fees and stamp duty paid by the Bank until the customer reaches 35 years of age. Intesa Sanpaolo participates in the Carta Giovani Nazionale (CGN) project, an initiative promoted by the President of the Council of Ministers - Department of Youth Policies and Universal Civil Service, targeted to young Italians and Europeans resident in Italy, aged 18 to 35 (until they reach their 36th birthday) which provides them with subsidised access to goods, services, experiences and opportunities. Intesa Sanpaolo allows holders of the Carta Giovani Nazionale to open an XME Conto with a single account holder, availing of zero monthly fee or stamp duty until they reach 40 years of age, and zero monthly fee for the XME Card Plus debit card and the Classic Card for the holder. Holders of the Carta Giovani Nazionale also have the right to a 50% reduction in processing fees when they apply for a fixed or floating-rate Giovani loan or mortgage. The "Giovani e Lavoro" programme continued, aimed at supporting the employment of young people aged 18 to 29, which offers targeted training, free of charge, both for young people and for the participating businesses, favouring the effective matching of labour demand and supply, in addition to the Generation4Universities, which helps young university students start a career that offers opportunities for professional and personal growth, and involves around 50 universities throughout the country.

Transactional products and digital payments

Since February, Intesa Sanpaolo has expanded the range of payment solutions available with the launch of the ring wearable payment service, in collaboration with Mastercard and Tapster, a pioneering Swedish company operating in the contactless payments sector. The wearable is a ring that can be worn and linked to the customer's Intesa Sanpaolo Mastercard (and also Visa, from December) to make contactless payments. Intesa Sanpaolo received the "Product of the Year 2024" award for the Tapster smart ring and SoftPOS, the solution that turns your smartphone into a POS terminal. In December, the Tapster ring was joined by a new wristband which is not only a useful tool for digital payments, but also has the innovative feature "Tapster Share", which can be used to quickly share the information that customers decide to upload and make accessible. In June, the Bancomat co-badge card became available for use with Apple Pay, including the international circuit, and BANCOMAT Pay could be used for purchases on Amazon's website. In the issuing are, the solution for Commercial Visa credit cards for integration with the management systems of business customers (Visa Business Solution) was released. The Cross Border Account has also been introduced for international and Italian corporate customers who want to develop their business in a country other than their home country and need a current account. For these customers, a standardised agreement in English has been created for the 27 entities of the Group, and the intragroup handling of current account opening requests between countries has been simplified. The Virtual Account service has been launched to meet the needs of businesses that receive or make a large number of payments, by SEPA or international bank transfer. The service improves the efficiency of the administrative tasks within the companies, enables faster reporting, and streamlines the reconciliation of payments. The promotional offers for POS terminals continued, including the Micropayments initiative, which enables small business owners to obtain refunds of the commissions charged on transactions of amounts up to 10 euro. Additionally, in June, the advanced SoftPOS PRO solution for Android was introduced for integration with the management systems of medium and large-sized customers. Lastly, in December, the networks available to merchants were expanded with SoftPOS and SoftPOS PRO, which introduce the American Express network.

Multichannel Project

In 2024, the development of multi-channel and digital banking continued, in line with the Group's ESG objectives, with the introduction of new multi-channel customer journeys and the expansion of those available, to improve the offering and the customer experience, increasing the remote usability of the services offered by the digital channels. The goal of that transformation is greater customer oversight, with increased penetration of products and services. In particular, for business customers, thanks to the introduction of digital signatures on an increasing range of products (POS terminals and credit advance requests), a growing number of document sets have been signed remotely through a fully digital process, in addition to cutting paper consumption. To enable customers to independently manage their interactions and enhance their digital experience, the new customer journey for import loans has been introduced, which allows customers to make self requests for import loans in euro and foreign currencies through the Inbiz portal, with funds credited to their current account, and to monitor their progress. Since June, Inbiz has become a content-rich platform, enabling customers to obtain all the information on the available offerings and solutions. Additionally, a new feature has been created within the Inbiz workspaces to provide a new way of communicating with the Bank and sending documentation. After it has been received and digitised, the documentation can now be tracked and archived digitally within the Bank's systems. Also for business customers, in November, the Anticipo Fatture product was added in the Credit User Journey, which enables automatic approval of a loan application.

In the second half, as part of the Group's digital transformation, the "Isytech" project began, implemented by adopting cloud native technological structure and processes. In addition to simplifying the activities required by the network, this new system enables the move from a multichannel approach to an omnichannel approach, where the user's experience is the same between the branch manager and the customer, irrespective of the channel used to purchase the product (App, website or branch). The programme includes a series of gradual releases of products and services, first tested on the pilot branches and then gradually extended to all Regional Governance Centres. The first step was carried out in October with XME Prestito, which will be released to the entire network by the end of the first quarter of 2025, along with the loan protection policies. This will be followed by current accounts, credit cards, mortgage loans and investments. During 2024, the new process of Digital Onboarding of Natural Persons was released, which provides the digital management, with fully-automated checks, of both the registering of prospects, with remote subscription of services using My Key, and positions of previously registered persons. Also with a view to digital transformation, in September improvements were made which resulted in benefits for payments (aligning due dates for all products that provide the option of scheduling a payment at a future date, up to 12 calendar months in the future, blocking the funds only on the future execution dates of the scheduled payments and introducing the new Paym0 platform to manage payments of F24 tax forms, utility bills, CBILLs and MAV (payments by notice)). In addition, improvements were made linked to releases in the App of the new credential management and identification systems, adding a new section of the App called "Recurring charges", including planned, recurring and scheduled transactions, and the streamlining of the product catalogue, updated with an interface in the Isybank style.

Agreements

Also in 2024, Intesa Sanpaolo has renewed its commitment to tourism, due to its collaboration launched with the main sector trade associations, including Federalberghi, Faita Federcamping and Confindustria Alberghi. The Intesa Sanpaolo Group's support for investments in the tourism and hospitality sector has accompanied the industry through the different stages of the pandemic to date and has recently been strengthened with the allocation of 10 billion euro in new credit for hospitality refurbishment and digital and sustainable transformation. This is part of the Group's broader plan, which envisages medium to long-term disbursements of over 410 billion euro by 2026, of which 120 billion euro allocated to SMEs, to support the NRRP investments. Intesa Sanpaolo has also signed a new Framework Agreement "Innoviamo le relazioni 3.0 2024 – 2026" with the Consumer Associations of the CNCU (National Council of Consumers and Users), in line with the previous agreements of 2019 and 2021, confirming the shared commitment to an open and constructive dialogue for greater consumer protection and customer satisfaction. The new features introduced by the new agreement include the new digital education program and joint projects on sustainability and technological innovation. The partnership agreements with the trade associations Confcommercio, Confartigianato, and Confesercenti have also been strengthened. Specifically, concessions have been reserved for eligible members under the CresciBusiness Programme, which supports Retail Companies and self-employed professionals in their process of digital growth and sustainable transition. Within the same programme, an agreement was signed with Cassa Forense, as part of the broader collaboration strategy between Intesa Sanpaolo and Adepp, aimed at stimulating professional growth and facilitating access to credit for members of Cassa Forense. To promote business investments in environmental sustainability and renewable energy sources, an agreement was signed in March with the National Council of Shopping Centres (CNCC), which is one of the main objectives of the "Motore Italia Transizione Energetica" programme. Specifically, companies affiliated with the CNCC will be aided by Intesa Sanpaolo and specialised partners with solutions focused on the energy transition, including loans with interest rate incentives upon attaining agreed sustainability goals. In addition, thanks to the new agreement with the European Investment Bank (EIB), Intesa Sanpaolo is providing 1 billion euro for credit lines to companies specialising in wind farms and companies that supply and install interconnection systems for these farms to the "Made in Europe" power grids, using EIB guarantees of 500 million euro. The transaction favours the wind energy industry at a crucial time for the green transition in Europe, to safeguard the competitiveness of the European manufacturers of the plants, who are often restricted in terms of credit and guarantees. Also regarding environmental sustainability, Intesa Sanpaolo and ACEA have signed the first national agreement for the protection and sustainable management of water in company production processes, also in relation to the measures of the National Recovery and Resilience Plan. The aim is to develop new systemic initiatives with solutions to encourage the efficient use of water resources through technological advisory services, along with investments for the reuse of purified water within "water communities". Intesa Sanpaolo will make available 20 billion euro to support the initiatives of companies and operators in the water supply chain. In addition, Intesa Sanpaolo and APE-Associazione Produttori Esecutivi Italiani (Association of Italian Executive Producers) have signed an agreement to support foreign executive productions in Italy, confirming the Bank's commitment to the cinematographic industry and the entire audiovisual industry.

Loans

Intesa Sanpaolo has launched the new programme "Your Future is Our Business", designed to aid the recovery and future growth of Italian businesses, with a range of services that can assist businesses of all sizes and across different industries. The Bank is committed to offering a credit plafond of 120 billion euro for the period 2024-2026 to accelerate the sustainable and innovative recovery of investments. The priority areas of intervention are: investments to enhance business competitiveness by capitalising on opportunities linked to Transition 5.0 and other initiatives such as the Renewable Energy Communities (RECs) and self-consumption; research and access to new markets for the growth of Italian businesses; promotion of digitalisation and protection against cyber risks; and concentration on particular industries in Italy, with a particular focus Agribusiness and Tourism. The transition plan towards Industry 5.0 builds on the existing 4.0 paradigm, focusing on innovation for the green transition. The new Transition Plan 5.0 offers a tax credit to businesses that invest in new production facilities in 2024 and in 2025, for projects that achieve a reduction in energy consumption. Intesa Sanpaolo is the first bank to support companies in benefiting from this incentive, providing financial incentives on investment funding, advice through Forvalue, and an audit service via a network of Deloitte auditors. As previously mentioned, another priority of the programme "Your Future is Our Business", is to favour the digital progress of businesses, without forgetting security systems that can protect customers. For this reason, Intesa Sanpaolo has set up financial instruments including the new D-Loan, which can be used to support all types of investments targeted to companies' digital and innovative transformations. The loan can be used for training and learning programs, hardware supply and cybersecurity and robotics solutions. From February, Intesa Sanpaolo has streamlined the S-Loan range, consolidating the Climate Change, Agribusiness, and Tourism lines into the new S-Loan Green Projects product, which offers greater financial benefits. S-Loan Progetti Green is a flexible loan supporting all types of business investments capable of generating a positive environmental impact on processes, infrastructure, technologies, services, and products. Significant changes have been made to the agreement governing the SACE Green guarantee (intended for projects aimed at achieving environmental objectives as defined by the Green MEF agreement signed with SACE), raising the maximum amount for each individual loan to 50 million euro. The new SACE Futuro Agreement was launched in January to assist SMEs in relation to international expansion, economic security, and the activation of production and employment processes in Italy. For businesses that do not benefit from public guarantees, in pursuing investments targeted to ecological transition, digitalisation and internationalisation, in June the Plus initiative was activated, which provides a benefit for new loans, also applicable in addition to discounts normally granted by agreements.
In relation to ESG, the Bank activated the Condominio per Autoconsumo Collettivo loan, which meets the need for credit for condominiums to buy energy generation plans fuelled by renewable resources. additionally, in February Cassa Depositi e Prestiti (CDP) and Intesa Sanpaolo made 800 million euro available for the social impact investments of Italian SMEs and Mid-Caps, and in June, CDP provided Intesa Sanpaolo with a new dedicated funding line of 1 billion euro to fund Italian SMEs

and Mid Caps, promote new investments, and support working capital to encourage the development of the Italian production sector. Also thanks to the funds from the European Investment Bank (EIB), Intesa Sanpaolo offered loans dedicated to supporting investments and the need for liquidity at financial conditions that are normally more beneficial than those of other ordinary types of loans. Specifically, in the second half, the EIB made available to Intesa Sanpaolo 500 million euro to disburse to SMEs and Mid Caps as loans and leases at subsidised rates, up to a maximum of 12.5 million euro. A portion of the funding is reserved for investments that contribute to climate and environmental sustainability action. From June, the scope of the EIF InvestEU guarantees was expanded to support investments in research and innovation and sustainability, thanks to the increase in the coverage percentage of the guarantee. The Green and Sustainability credit plafond has now been increased from 50 to 150 million euro, and the InvestEU guaranteed loans, on the two thematic Innovation and Digitalisation and Green and Sustainability funds, are able to benefit from interest rate reductions. Also regarding subsidised finance, the Ministry for Business and Made in Italy (MIMIT) issued the new measure “Smart Specialisation” to support R&D projects in less developed regions (Sicily, Sardinia, Calabria, Campania, Basilicata, Puglia and Molise), which the Bank is participating in. Moreover, as part of the subsidy for Capital Goods – New Sabatini, the MIMIT set out a higher grant to SMEs that are established as corporations which intend to implement a capitalisation process against investments in machinery, plant, and capital goods of the business, production equipment, hardware, software and digital technologies. Starting in November, medium/long-term Capital Goods – New Sabatini loans can also be supported by EIB funding. This way, businesses will be able to use the benefits provided by those funds, in terms of conditions of funding costs. Intesa Sanpaolo acts to help customers benefit from this grant through the financing or lease of capital goods.

Sviluppo Filiere

The “Sviluppo Filiere Programme” is designed to support businesses of all sectors and sizes by facilitating access to credit and focusing on the relationship between the lead companies and their network of direct and indirect suppliers and/or their reseller network, enabling a better understanding of the financial needs of the individual sectors. Starting in October, in response to businesses’ growing needs for protection against cyber risk, with the support of partner companies, Intesa Sanpaolo has developed a new offering of services ranging from diagnostics to protection and financing solutions to activate investments in hardware, software and training and learning.

Agribusiness Department

The Agribusiness Department is the Intesa Sanpaolo Group’s national network dedicated to the agri-food sector, which acts as a strategic partner to support the sector, contributing to the growth, innovation and resilience of companies that represent one of Italy’s most important production sectors. The Department has 246 branches located throughout Italy, with specialist professionals, concentrated in the most agricultural areas of the country, serving over 80,000 customers. The Agribusiness Department positions itself as the main qualified interlocutor to assist operators in all phases of development, supporting their investments and promoting new business projects, with specific attention to the criteria of sustainability and the circular economy. The Agribusiness Programme was launched in February, consisting of a range of solutions designed to enhance and develop the offering for customers in the sector. This includes “Crescita Agri”, the new loan to support investment and development programmes for agri-food businesses, which can be combined with government guarantees (ISMEA Diretta, Guarantee Fund). The activities of this Department also contributed to the finalisation of important agreements. In particular, Intesa Sanpaolo, the Ministry of Agriculture, Food and Forestry and Cassa Depositi e Prestiti (CDP) signed an agreement in May to promote lending policies and synergies aimed at the development of the agricultural and agri-food sector, also in relation to the measures of the National Recovery and Resilience Plan. The Bank will make 20 billion euro available to the sector for the revival of Italian agriculture – under the broader credit plafond of 410 billion euro in support of the NRRP initiatives – also using the funding provided by CDP. Moreover, thanks to “Your Future is Our Business”, the new programme to support the plans of SMEs and smaller companies, which at national level is making 120 billion euro available until 2026, Intesa Sanpaolo allocated 15 billion euro to companies that are customers of the Agribusiness Department. The agri-food sector is an important part of this programme, presenting unique characteristics and the need for specific support in transitioning to more innovative, profitable and sustainable models.

Impact Department

The Impact Department is dedicated to managing non-profit customers and coordinating the activation and management of social impact funds created to foster the financial inclusion of individuals, households and non-profit organisations. Specifically, the Fund for Impact, with a value of 300 million euro, has made it possible to disburse new loans up to 1.5 billion euro, specifically targeted to categories that have difficulty in accessing credit, for the purpose of realising their projects. The first beneficiaries were University students, working mothers, families involved in their children's education and growth processes, unemployed persons nearing retirement, caregivers dealing with assisting non-self-sufficient family members and civil service volunteers. This is accompanied by the "Solidarity and Development Fund", with a value of over 50 million euro, which enables loans to non-profit organisations with important projects, which would otherwise be excluded from ordinary credit.
The Department also continued its commitment to promoting the Impact offering and related credit inclusion initiatives across the network, developing collaborations with the non-profit sector, and supporting communities, also through specific agreements. During the year, the third Finance and the Non-Profit Sector Monitor was carried out, with the report "Verso Nuovi Strumenti di Economia Sociale", which involved 350 enterprises, including cooperatives, social enterprises and consortia, to investigate their relationships with banks. The monitor highlighted that the satisfaction with the Bank's people and services, along with greater support for realising projects, are the key elements of banks' relationships with the local areas. Moreover, the Impact Counter, a proprietary tool for measuring impacts, and the analysis of 533 questionnaires showed that in 2023, 144 million euro in loans of the Bank supported around 3,300 jobs, generating a multiplier effect on the social impact generated on the community.
Lastly, in the area of donations, in 2024, the "For Funding" platform maintained its leadership in Italian crowdfunding, enabling non-profit organisations to secure donations across the country.

Isybank

Isybank is the digital bank of Intesa Sanpaolo, based on state-of-the-art technology, which targets both Intesa Sanpaolo customers who do not use the physical branches as they are mainly digital users of banking services and oriented to mobile banking, and to new customers. Isybank offers customers a complete experience through its App and website, with the support of the Digital Branch. Isybank was established in June 2023, opening to new customers in October 2023 and March 2024, followed by two migrations of existing Intesa Sanpaolo customers only after the Group responded positively to the observations from the Italian Antitrust Authority, which closed the proceedings initiated against Intesa Sanpaolo and Isybank, accepting the commitments proposed by the two banks.
During the year, Isybank further strengthened its offering by expanding its product catalogue, services, and features. Specifically, in February, the Bank made the new Internet Banking available online, which allows customers to easily and quickly manager their accounts via App, PC and tablets. Since May, the "Insurance" section has been available on the App, allowing Isybank customers to subscribe to four new small ticket protection policies dedicated to them: isyProtezione Casa, isyProtezione Smartphone, isyProtezione Sport, and isyProtezione Bici&Monopattino. Also in May, the offering of cards was expanded with a credit card and prepaid card, made of recycled plastic and issued on the Mastercard network. In the area of loans, in 2024, the Anticipo Stipendio and Spensierata loans were offered to Isybank customers through digital engagement activities, promoting both product awareness and dedicated commercial initiatives. At the end of June, the Loan catalogue was expanded with isyPrestito, a fully digital personal loan, also offered on favourable terms until the end of the year. Isybank has a specific focus on young people, who can take advantage of a promotion, for people under 35, that eliminates the fee of the isyPrime account - the most complete plan - and provides payment of stamp duty by the bank. Just as Intesa Sanpaolo, Isybank participates in the Carta Giovani Nazionale (CGN) project and, in December, allowed cardholders to open the isyPrime plan, availing of the free monthly fee and stamp duty on the account until the account holders turn 40.

Product companies

Prestitalia is the "product company" of the Intesa Sanpaolo Group for salary-backed loans and advances on employee termination indemnities.
A financial company that operates in the consumer credit market, highly specialised in salary-backed loans, it is one of the leading operators in the sector, with an average stock of around 2.7 billion euro.
As at 31 December, with 50 thousand completed applications, it had disbursed loans totalling 1,005 million euro, through three main channels: Intesa Sanpaolo branch network supported by "light" agents (tied agents that are natural persons), third-party agencies, and online channel.
The range of offerings includes "Cessione del Quinto per Pensionati", "Anticipo TFS" (a product reserved for former public employees who want to access all or part of their severance pay without waiting for the periods set by the Public Administration), and "Cessione del Quinto per dipendenti pubblici e privati".
In addition, the agents supporting Intesa Sanpaolo branches may propose POS terminals to customers.

The **IMI Corporate & Investment Banking Division** oversees corporate and transaction banking, investment banking, public finance and capital markets activities, in Italy and abroad.

In 2024, the Division recorded operating income of 3,959 million euro (representing around 15% of the Group's consolidated total), up 4.7% compared to the previous year.
In detail, net interest income, amounting to 3,075 million euro, was up 11.9%, mainly due to the operations of Global Markets and the securities portfolio. Net fee and commission income, amounting to 1,286 million euro, increased by 19.1%, essentially due to the performance of the structured finance and investment banking segments, and in the International Network. The losses on financial assets and liabilities at fair value, which amounted to -402 million euro, grew sharply compared to -48 million euro in 2023, attributable to the results of trading activities in the Global Markets area. The segment was negatively impacted by the management of financial risks related to funding in certificates due to the market interest rate conditions, which also had positive effects on net interest income in terms of greater liquidity invested, as well as the negative contribution from the Own Credit Risk (OCR) of the certificates, impacted by the tightening of Intesa Sanpaolo's credit spread.
Operating costs amounted to 1,552 million euro, an increase of 5.7%, essentially attributable to personnel and administrative expenses. As a result of the above revenue and cost trends, the operating margin came to 2,407 million euro, up 4.2% compared to the value recorded in 2023. The performance for gross income was similar, with a rise to 2,334 million euro

(+6.8%), benefiting from lower provisions and net impairment losses on other assets. Lastly, net income reached 1,566 million euro, above the 1,478 million euro realised in 2023 (+6%).

In the fourth quarter of 2024, the operating margin of the IMI Corporate & Investment Banking Division decreased on the third quarter, attributable to higher operating costs and a small decrease in revenues. Gross income and net income were also down, impacted by the adjustments to loans made in the quarter compared to recoveries recognised in the previous quarter.

The Division's intermediated volumes increased compared to the end of 2023 (+5.9%). Specifically, direct deposits from banking business, amounting to 125,194 million euro, were up (+10.7%, or +12.1 billion euro) thanks to the increase in operations in Global Corporate and Global Markets and to the growth in operations in certificates. Loans to customers, amounting to 126,059 million euro, increased (1.5%, or 1.8 billion euro) due to the positive performance of operations with international and institutional customers, partially offset by the decline in Global Corporate and Global Markets.

Business

Corporate and transaction banking, investment banking, public finance and capital markets, in Italy and abroad.

Mission

To act as a strategic, global partner in supporting companies and financial institutions in achieving balanced, sustainable growth, including at the international level, through a specialised network of hubs, branches, representation offices and subsidiaries that engage in corporate banking operations. To foster collaboration between the public and private sectors with the aim of supporting the creation of infrastructure and sustainable investments, including by pursuing international growth opportunities in countries of strategic interest to the Group. To provide all customers of the Intesa Sanpaolo Group with specialised skills in the areas of Investment Banking, Structured Finance, Capital Markets and Transaction Banking.

Organisational structure

Client Coverage & Advisory Coordination Area

This structure develops and handles relations with Italian and international Global Corporate customers, availing, at central level, of the commercial action of the Industry units (Automotive & Industrials; Basic Materials & Healthcare; Energy; Food & Beverage and Distribution; Infrastructure; Real Estate; Retail and Luxury; Telecom, Media and Technology) and at local level of the Italian and international network of the Distribution Platform & GTB Coordination Area. The Department is responsible for commercial relationships with financial institutions on domestic and international markets, with a dedicated service model organised by customer segment (i.e., Banks, Insurance Companies, Asset Managers, Financial Sponsors, Sovereign Funds and Governments).
The Department guarantees the oversight and development of origination and advisory activities for customers, including M&A, Debt and ESG issues, also through specifically dedicated units, pursuing the cross-selling of products and services with an Originate to Share approach, maximising the synergies between corporate, institutional investor and product desk relations.

Distribution Platform & Global Transaction Banking Coordination Area

The structure oversees the development of the Italian and international network of the Division, ensuring the correct handling of operating and commercial activities for its major customers, through a specialised network of local structures in Italy and abroad. It guarantees the oversight, for the entire Group, of a wide range of transactional services, such as cash management, trade & export finance and securities services, also through Inbiz, the Corporate Internet Banking platform. It contributes to identifying and distributing loans and marketable assets through a single hub which mobilises and optimises the Division's credit balance sheet, in line with the Originate to Share process.

Global Banking & Markets Coordination Area

The scope of this structure includes capital markets, structured finance and primary markets (equity and debt capital markets) supporting all Group customers, including medium-sized enterprises.
Moreover, portfolio management and ownership risk are monitored through direct or indirect access to the markets.

Distribution structure

In Italy, the IMI Corporate & Investment Banking Division has a total of 6 geographical areas dedicated to corporate customers and public customers. At the international level, it operates in 24 countries in support of the cross-border operations of its customers through a specialised network of hubs, branches, representative offices and subsidiaries that engage in corporate banking activity.

Client Coverage & Advisory Coordination Area

In a market environment that is gradually improving but is still complex and marked by a cautious approach to risk by investors, the structures of the Client Coverage & Advisory Coordination Area continued to assist their customers in complex, strategic financial transactions, confirming its leadership on the market and positive performance in terms of the results achieved in recent years. Specifically, the Customer Relations, Global Corporate and Institutional Clients worked in constant synergy with the Corporate Finance & Advisory structure and Product Desk, pursuing the goal of favouring and consolidating strategic dialogue with its target customers, making it possible to identify numerous business opportunities.

In 2024, Intesa Sanpaolo confirmed to perform its role as strategic partner to its Italian and international Global Corporate customers, supporting them by organising and participating in a number of financing and investment banking transactions, thanks to its specialised expertise linked to the Industry model and the cooperation with the other structures of the Division. The Bank continued to play an active role in supporting the revival of the Italian economy, including through development of its production chains, an indispensable driver for Italy and the heart of its economic and entrepreneurial system, and also through support to the various initiatives launched by the National Recovery and Resilience Plan (NRRP). In this context, Intesa Sanpaolo, together with a pool of banks, arranged a substantial loan, through a public-private partnership (PPP), in favour of the National Strategic Hub, a pillar of the Cloud Italy Strategy of the Department for Digital Transformation of the Prime Minister's Office, to create an innovative infrastructure serving the Italian Public Administration. The Bank also entered into an agreement with the EIB to support investments to accelerate the energy transition, as well as, in line with the objectives of the National Recovery and Resilience Plan, a partnership agreement with Edison Next, an Edison Group company, to promote the use of renewable energies and the decarbonisation of companies. The Group participated in several international syndicated loans, including those in favour of the JAB Group, LVMH, Kering, Volkswagen Financial Services, General Motors, Nordex, Mercedes-Benz, BIP Miro and, in the role of Global Coordinator, Bookrunner and MLA, in the syndicated loan in favour of Ferrero International.

In Sustainable Finance, advisory services were provided to customers for the structuring of Green, Social, Sustainability, and Sustainability-linked products and instruments. This resulted in securing the role of Sustainability/Green Coordinator and ESG Framework Structurer in numerous transactions involving syndicated loans and bond issuances. Specifically, the Bank acted as Green or Sustainability Coordinator in the syndicated transactions for Italgas, Illy, Ferrovie dello Stato, A2A, Maire, Valentino and Acque Bresciane and, on the back the expertise gained on ESG issues, took part in various loans, including those for Enel, Prada, Reno de Medici, Snam, Inwit, Coima, Publiacqua, and Axpo Holding. The bilateral ESG loans included loans to Terna and Ferrovie dello Stato. In addition, in early 2024, the ESG Rating Advisory service was introduced to assist customers in obtaining or improving their ESG rating. In project financing, the Bank participated in various transactions, including the loans to Abertis SPV for the acquisition of four motorway sections (Puerto Rico), to Energia Mayakan of the ENGIE Group for the expansion of natural gas transport capacity in the Yucatán Peninsula (Mexico), to Consorcio Eléctrico Yapay to support two of the largest electricity transmission projects in Peru, to Aguas Esperanza for projects to improve the supply of seawater and electricity in Chile, to QTS Richmond for the construction of a hyperscale data centre in Virginia (USA), and to various other loan operations to build and develop data centres, such as EdgeconneX in Europe, CyrusOne in the USA and AdaniconneX in India. The latter will be built through a sustainability-linked loan (the largest sustainability-linked loan on the Indian market). The Bank also participated in structured operations to develop projects in the sector of renewable energies in Europe, with Recurrent Energy, Sonnedix and Lightsource BP. Lastly, financial support was provided for major extraordinary transactions carried out during the period, including the loans to Douglas following its listing on the Frankfurt Stock Exchange, the loan to CEZ for the acquisition of a stake in GasNet, an operator active in gas distribution in the Czech Republic, the loan to Tages Capital for the purchase of several renewable power plants in Italy, and the loan to Prysmian for the acquisition of 100% of Encore Wire.

In the real estate sector, the Group participated as Bookrunner and MLA in the medium-long-term loan to Central Sicaf (Covivio group), to refinance the existing debt. The Bank also participated in a refinancing operation of a portfolio of upper scale/luxury hotels held by the Star Fund managed by Castello SGR.

In the Debt Capital Markets, the Bank acted as Global Coordinator and Active Bookrunner in the Mundys issuance, as Joint Global Coordinator & Bookrunner for La Doria, and as Joint Bookrunner in numerous issues, including Metro, El Corte Inglés, Enel, A2A, CNH, LVMH, Swisscom, Cellnex, ENI, CEPSA, General Motors, Pirelli and KPN. In addition, it managed various placements of Green or Sustainability-Linked bonds, including those carried out by Volkswagen Financial Services, Heidelberg Materials, Terna, Compagnie de Saint Gobain, VMED O2, Air Products and Chemicals, Metlen Energy & Metals, Avangrid, Enel, ERG, Iren and Snam. The Bank also acted as Joint Lead Manager in the issue of Snam's hybrid bond and as Joint Bookrunner in Abertis' hybrid issue.

In M&A, the Group continues to be one of the leading M&A advisors in the Italian market and provided its services in various transactions, including advising A2A on the acquisition of 90% of several Enel electricity distribution assets in Lombardy, Enel on the partnership agreement entered into with Masdar to manage photovoltaic plants in Spain, Edison on the sale of Edison Stoccaggio to SNAM, Verdalia, a company of Goldman Sachs Asset Management, on the acquisition of several biomethane plants in Italy, Snam on the acquisition of Adriatic LNG, GIP on the process of selling Italo, Antin on the process of selling Grandi Stazioni Retail and Ardian on the process of selling 2i Aeroporti.

Equity Capital Markets activities showed good volumes of secondary placements, supported by the high valuations of listed securities, a partial recovery in the volumes of IPOs in Europe and a reopening of capital increases offered in option. Instead, the volumes of equity-linked issues decreased, against the positive trend in the primary bond market. With the aim of maintaining a strong leadership position in the ECM and Equity-Linked markets in Italy and continuing the successful process of international expansion, the origination operations focused on capturing the best market opportunities and proposing structured solutions to customers. In this context, the Bank acted as Joint Global Coordinator in the capital increase of

Fincantieri to support the acquisition of Wass, in the issue of bonds by Salini which can be exchanged for Webuild ordinary shares, and in the placement by Campari of new shares and a convertible bond regarding the acquisition of Courvoisier, in the sale of a stake in Saipem held by ENI and, internationally, as Joint Bookrunning Manager in the convertible bond issuance by Southern Company and Co-Bookrunner in the capital increase of Merlin Properties.

With regard to customers in the banking sector, within the Institutional Clients structure, the Bank carried out numerous transactions for primary market issuances, refinancing, securitisation and optimisation of liquidity profiles. At domestic level, the roles included Joint Bookrunner in the AT1 issuance of BPER Banca and in the Tier 2 issuance of BP Sondrio, as well as the transactions with Credem, Unicredit, ICCREA, Banca Sella and Illimity Bank Senior loans within securitisations of performing assets also continued to be provided. Numerous transactions were also carried out in the international markets, both in the United States and in Europe: the Group acted as Joint Bookrunner in the euro benchmark covered bond issuances of Toronto Dominion, Commerzbank, Erste Group, Bawag, and in the senior issuances of BBVA, Santander, UBS Group, Deutsche Bank and Wells Fargo. In the French market, the Group participated in numerous transactions involving covered bonds and senior non-preferred bonds with country's main banks. The Bank has also maintained a significant presence in the Greek market, where it has achieved a prominent position in various products/services such as Debt Capital Markets, Synthetic Securitisation, and Global Transaction Banking, helping to strengthen the engagement and partnership built up over the years with local banks. During 2024, due to the ongoing challenging market conditions, operations with banks in emerging markets featured a selective approach and the assumption of short-term risk, primarily supporting the commercial activities of our Italian and international customers. The development of operations in Global Markets products continued, particularly in Eastern Europe, Turkey, the Middle East, and selectively in Latin America. Loans for supply chain financing continue to be of interest to the Bank, and, in this context, the strategy of gradually expanding the number of counterparties and target geographies has been consolidated. Operations with non-banking financial institutions continued to achieve positive results. The transactions in the near-banking sector included the portfolio financing through the subscription of senior tranches of securitisations, such as IBL Banca, with underlying salary- or pension-backed loans, Creditis, with underlying consumer credit assets, and Santander Consumer Bank, with underlying auto loans and consumer loans, in addition to the extension of the revolving period of the securitisation of factoring trade receivables originated by Banca IFIS with its Italian SME customers. The Bank also acted as Joint Bookrunner in the two public securitisations of (salary and pension-backed) assets of IBL Banca and in the securitisation of consumer credit originated by Compass Banca and Agos. In addition to asset based financing, the Bank continued to oversee the unsecured bilateral loans market, carried out with the leading operators in the consumer credit sector, in particular Agos. It is important to note the Bank's participation in the acquisition of Gardant by doValue, a leading group in credit servicing in Italy, as Mandated Lead Arranger and Lender for the syndicated loan and, as Joint Global Coordinator, in the capital increase to support the acquisition.

As regards operations with domestic and international asset managers, inflows showed good volumes, both for equity and credit. There was also a notable increase in interactions and operations with the Family Office segment.

With regard to the insurance industry, in a difficult market context, the Bank's activities mainly focused on the separate portfolio management of the life business, on repo transactions to support liquidity management and on structures for Class III retail products and private placement. It is worth mentioning the role of Active Lead Manager and Bookrunner for Generali's dual-tranche senior green issuance and the role of Joint Bookrunner in UnipolSai's Tier 2 issuance.

Operations in the public sector (governments, public entities, local authorities, and institutional investors), with particular regard to public debt management, included the roles of Joint Bookrunner for the Ministry of the Economy and Finance in the placement of institutional BTP and BTP Italia issuances aimed at the retail market and, on behalf of CDP, in the placement of Social and USD bond issuances. The mandates received from the Emirate of Sharjah were also worth noting, as Global Coordinator in the debut bond issuance in Euro and as Joint Bookrunner in the Sukuk issuance. Moreover, the Bank operated in export finance, participating in a syndicated loan in favour of the Minister of Finance of Indonesia. Lastly, on the domestic market, it is worth noting the roles in structuring bond, Green and Sustainability-Linked loans on behalf of leading operators in local public transportation and the trade show sector.

With regard to the operations related to Private Equity Funds, the Group recorded a good number of transactions completed with its customers during the reporting period, in a market environment characterised by an improvement in liquidity and in spreads, which led to numerous refinancing operations of existing financing structures, in addition to new transactions supported by a gradual recovery in M&A. On the Italian market, it is worth noting the roles of M&A Advisor for shareholders and Joint Bookrunner in the bond issuance to support L-Catterton in the acquisition of KIKO, a leading make up brand. These also included the roles of M&A Advisor for the acquisitions of SACMI Beverage, SACMI Labelling and Tecnomaco to support Omnia Technologies, a leading group in automation solutions for the food, beverage and pharma sectors held by Investindustrial, as well as Joint Global Coordinator and Joint Bookrunner in the bond issuance to refinance the group. On international markets, where the Group continues to consolidate its presence, the Bank acted as Mandated Lead Arranger and Bookrunner to support KPS Capital in the acquisition of the German company Innomotics, a global leader in electric motors and large transmission systems, Joint Lead Arranger and Joint Bookrunner to support Blackstone in the refinancing of Geosyntec, a consulting and engineering services firm in the United States, and Mandated Lead Arranger, Bookrunner and Co-Lead Manager to support EQT and Adia in a refinancing transaction.

In Fund Financing, financing operations to the main Italian and international alternative investment funds grew. On the domestic market, it held the role of Arranger and Sole Lender in the GP (General Partners) financing for the continuation fund Ambienta Water Pumps. Internationally, the Group participated in several of the most important subscription lines as Lender and Co-Arranger, including the funds managed by Apollo, Ardian, HIG, KKR and Vista Equity Partners. The operations with Sovereign wealth funds and pension funds continued successfully in various Areas, such as direct support to sovereign funds, assistance in competitive investments and the financing of portfolio companies, particularly in the sectors of TMT, Energy, and Infrastructure, with a focus on projects with ESG characteristics. The long-standing relations with the major sovereign funds has enabled the Bank to participate in numerous transactions to directly support their needs, renewing the direct financing lines, subscribing to bonds and financing dedicated funds (separately managed accounts). Of particular importance were the roles of Bookrunner assigned to the Bank in the recent bond issuances and refinancing by ADQ and Mubadala. In its investment-related activities, the Group acted in leading roles in various loans, including for the benefit of KLP for the acquisition of the leading Norwegian maritime company, a subsidiary of Mubadala, for the acquisition of a minority share of a portfolio of photovoltaic plants of Endesa, and of the Canadian pension fund Omers, for the acquisition of Grandi Stazioni Retail. Numerous transactions were also carried out to support the portfolio companies, such as the pool refinancings of Caruna (OTPP), a Finnish Distribution System Operator, Nexus Water Group (BCI), a leading Canadian water operator, Saudi Electricity (PIF), an energy company in Saudi Arabia, Spark Infrastructure (OTPP/PSP), a portfolio of electrical assets in Australia, Associated British Ports (CPPIB/Omers/KIA), a maritime operator in the United Kingdom, and Al Dahra (ADQ), a multinational operating in the agri-food sector.

Distribution Platform & Global Transaction Banking Coordination Area

During 2024, IMI C&IB Italian Network confirmed its role as a strategic partner for Italian customers, providing high quality financial products and services. Thanks to an extensive nationwide network in 6 Regions and with 15 Corporate Centres, and the support of a team specialised in extraordinary transactions (Italian Specialized Coverage), the network assisted customers by structuring and participating in various loan and investment banking transactions.
A distinctive element was the full use of public guarantee instruments made available under support measures adopted to mitigate the challenges stemming from the international geopolitical situation. Significant support was also provided to companies through the issue of domestic and international guarantees, facilitating the participation in tenders under the National Recovery and Resilience Plan and open competitive bidding for infrastructure projects, both in Italy and abroad.
The main initiatives in 2024 included the first annual "Obiettivo Italia", a tour organised by the IMI C&IB Division to dialogue with the top management of leading public and private companies. The tour, which had six stops (Padua, Rimini, Torino, Lonato del Garda, Naples and Rome), was developed over the year to ensure continuity of the project and dialogue with customers. It involved over 250 company officers, giving an in-depth look at topics such as the (green and digital) twin transition, support for investments and management of financial risks and liquidity.
Internationally, the IMI C&IB Division operated in 24 countries, through an international network comprised of 16 wholesale branches (including the hubs), 8 representative offices (in addition to the Brussels office at Group level, reporting to European Regulatory & Public Affairs and in charge of managing relations with supranational regulators), 3 Corporate Banks (Intesa Sanpaolo Bank Ireland, Intesa Sanpaolo Bank Luxembourg and Intesa Sanpaolo Brasil S.A.), which carry out corporate and investment banking operations, in addition to Intesa Sanpaolo IMI Securities Corporation in New York. The network continued to support Italian and international customers, carefully handling the challenges deriving from the geopolitical crisis and evolution of regulations. In line with the 2022-2025 Business Plan, the International Network consolidated the offering of ESG products and undertook initiatives to optimise its operating platform, further improving support to customers.
In 2024, Global Transaction Banking (GTB) accelerated digital innovation, expanding the offering through the InBiz portal and platforms dedicated to the digitalisation of trade finance. Commercial actions targeted to IMI C&IB customers resulted in a significant increase in commissions in all operating areas (cash management, trade finance and digital payments and solutions). A new version of the showcase website of InBiz was launched, with content targeted to the various stakeholder companies to favour digital growth. Strategic partnerships, such as the one with a fintech leader in Treasury Management Systems, made it possible to offer innovative solutions to optimise treasury management.
Internationally, modern infrastructure for payment management, gradually extended also to non-EU locations. Lastly, the development of ESG solutions, including green guarantees, continued, as well as participation in institutional projects such as the Central Bank Digital Currency for the digital euro and digital assets. With regard to the latter, GTB has developed a custody service for digital assets, currently used only for property. Within the New Technologies for Wholesale Settlement Contact Group (NTW-CG), during the second wave of the Eurosystem trials that aim to explore new technologies of Wholesale Central Bank Money Settlement, the Group issued a digital financial instrument (Euro Commercial Paper – ECP), together with the Bank of Italy and Deutsche Börse.
In relation to Syndication & Risk Sharing activities, in 2024 issues of syndicated loans grew in all geographic areas and in all segments (corporate, infrastructure and leveraged finance), due to the improvement in market conditions. Syndication and Risk Sharing contributed to the structuring and distribution of significant transactions on the Italian and international markets where Intesa Sanpaolo operates, obtaining roles as Bookrunner, in all geographical areas and asset classes covered. In addition to confirming its leadership role on the Italian market, Intesa Sanpaolo improved its strategic positioning in the various international markets, acting as lead bank in numerous high visibility transactions.
During the year, the IMI C&IB Division implemented a series of strategic initiatives to optimise capital and reduce RWAs in the portfolio. Those measures regarded direct sales (Loan Stock Disposal) and the use of innovative instruments for the synthetic transfer of risk, such as credit risk insurance and single-name tranched transactions. These instruments were applied to a diversified range of typical underlyings and products of the IMI C&IB Division, including corporate loans, project financing, capital call financing and ABS senior notes. These include a financial guarantee on a portfolio of subscription lines. Moreover, insurance cover was completed on Corporate and Project Finance positions, involving a panel of 12 Lloyds Syndicates. Innovation activities also concentrated on developing risk spreading solutions, including the first Tranched Single-Loan, which enabled the synthetic disposal of first loss risk on Project and Leveraged Finance positions. Lastly, the extension of the Originate to Share model to new products continued, including securitisation and loan securities for Infrastructural and Private Equity Funds.

Global Banking & Markets Coordination Area

2024 featured a steady decrease in interest rates, correlated with the expansive monetary policies adopted by the Central Banks in Europe and the United States. That trend was partially mitigated by the most recent figures on US GDP growth and the US presidential elections, events which resulted in revisions of price forecasts on all the main asset classes: Interest Rate, FX, Equity and Credit.
The decrease in interest rates favoured the structuring of certificates at significant levels of placement, with an average duration higher than the previous year, with the goal of guaranteeing total capital protection on maturity.

The Market Hub's bond dealing increased on the previous year. The FX market featured high volatility, mainly caused by the US presidential elections. Trade volumes increased due to expectations that the spread between the Euro and the US dollar would expand. The interest in peripheral currencies continued, and their characteristics of liquidity and geopolitical implications had a significant impact on the comprehensive income of the asset class.
In the Equity area, the scenario described supported the equity markets, despite the fears of a return to tariff policies, and the continuing crisis in the Chinese real estate market, with increases in terms of value and number of orders executed, both on the domestic and international markets, with positive performance in the United States. The IMI C&IB Division developed activities linked to digital assets.

As regards investments of the IMI C&IB Division on banking books, government bonds were purchased from developed countries and emerging markets, as well as covered bonds, while in the second half of the year, several divestments were carried out on various issuers, for the purpose of the subsequent increase in allocation on new ESG issuances. The management of the HTC Emerging Markets banking book pursued a strategy based on geographical diversification. On corporate bond portfolios, in the first quarter of the year, most of the new investments planed were implemented, both on HTC and HTCS, due to high spreads on the primary market. From an ESG perspective, investments continued in thematic issuances (Green and Social) and in securities of leading issuers in terms of sustainability and commitment to decarbonisation processes.
In the first half, management of the DVA covered most of the narrowing of the ISP senior spread for the period. Following the elections in France, the coverage ratio decreased, favouring a positive performance on DVA management.
The opportunities arising on equity risk were captured during the year, creating exposures to the banking, finance and technology sectors, with highly positive performance. In addition to guaranteeing the financing of proprietary portfolios and the management of liquidity of the IMI C&IB Division, secured financing with customers was overseen, which recorded a sharp increase and diversification.

With regard to market making with customers, volumes on credit products and on certificates remained high, driven by highly active primary and secondary markets. Foreign exchange and commodities trading returned to growth in the second half, both in terms of flows and market volatility.
In the Private Investments sector, the investment in Private Equity and Private Debt funds slowed in the second half of the year, while it continued in Hedge Funds in UCITs format. Despite the adverse scenario in terms of the cost of funding, the portfolio continued generating positive results on all areas.

Regarding the primary equity market, in a favourable domestic context in the ABB and capital increase segments, but with low activity in terms of IPOs, the IMI C&IB Division concluded a number of transactions in line with the previous year, holding significant roles: Joint Global Co-ordinator and Joint Bookrunner in the ABB/placements of Salini-Webuild and Saipem, Co-lead Manager in the Galderma IPO (Zurich) and intermediary assigned to coordinate the collection of subscriptions as part of the Public Takeover Bids on Tod's, Unieuro and Monrif.

On the bond market, which saw an increase on 2023 in volumes issued, both at European and domestic level, the IMI C&IB Division recorded growth in volumes issued and a number of transactions higher than the market average, taking first place for those indicators in Italy in the general and corporate rankings (source. LSEG/Refinitiv).
In the corporate segment, the Division acted as Joint Bookrunner in numerous senior issues by Italian and international issuers, including many ESG issues (Terna, EDF, Unibail and CTP). In the High Yield segment, the Bank stood out in the issues of Neopharmed Gentili, Omnia della Toffola, Rino Mastrotto, Zegona, Ineos and Virgin Media. It carried out the private placement in euro of Fincantieri. In the financial institutions segment, it acted as Joint Bookrunner, overseeing various issues of leading financial institutions, including Banco BPM, LBBW, D-Bank, TD Bank, Eurobank and NBG (covered, SP, SNP and hybrid issues). The ABS segment included Stella Loans, Golden Bar, Sunrise, Quarzo and Alba Leasing. In the Supranational, Sovereigns and Agencies (SSA) areas, the Division stood out in its role as Joint Bookrunner in the issue of BTP Valore and 7- and 15-year BTPs in the green private placements of ATM and AGSM. In emerging markets, the Division acted as Joint Bookrunner, overseeing the issues of PIF, MDGH and Adani.

Also in 2024, Structured Finance activities carried out by the IMI C&IB Division confirmed the Bank's leadership on the Italian market (also on ESG/Circular/Green issues) and the successful continuation of the business on the international market. Corporate loans granted to Italian and international customers (including those for the purpose of acquisitions and investments for growth, in addition to those with SACE SupportItalia guarantees) reported volumes higher than the previous year, primarily driven by refinancing activities. Leverage & Acquisition Finance saw a recovery in volumes and in the number of transactions on the domestic market, as well as an increase in the participation in international transactions. Project Finance pursued various opportunities in the Energy Transition and Transport sectors: it is worth noting the continuous flows of loans in the renewables sector, both to support operators' investment plans and M&A transactions, and the refinancing of the SPV Metro 4.
The "originate to share" approach and the geographical diversification resulted in entering into numerous financing transactions to support Italian and international industrial and financial operators in various infrastructure and public utility services sectors, in line with the growth strategy of the Division, both in terms of volumes and positioning, with specific attention to ESG/Circular/Green issues.

Securitisations carried out by the IMI C&IB Division confirmed the Bank's leadership in Italy, both in supporting customers in managing financial risks and through innovative ESG-linked solutions, and in asset-based financing. Solutions for the Division's customers and the Group were structured, financed and distributed, aimed at streamlining funding and improving asset quality ratios, optimising economic and regulatory capital, and improving customers' net financial position. The Division strengthened its international presence, providing both risk management and financial support to European and non-European corporate customers and financial institutions, along with major international investors in their acquisitions of granular portfolios.
The Division also acted as a competence centre and point of reference for the Group for corporate finance transactions of customers of the Banca dei Territori Division and the banks in the International Banks Division. The most important transactions relating to this activity concluded in 2024 include the role held in the IPO of Next Geosolutions Europe on Euronext Growth Milan, in the sale of a minority share in the capital of BF International Best Fields Best Food Limited, in the acquisition of WeTransfer NV by Bending Spoons and of Tecnomaco and in the transaction supporting the public takeover bid launched by the shareholders of Finhold and of Morgan Stanley Infrastructure Partners on the shares of the Salcef Group.

The **International Banks Division** is responsible for the Group's activities in foreign markets through commercial banking subsidiaries and associates, mainly active in retail banking.

In 2024, the Division's operating income came to 3,239 million euro, growing compared to the previous year (+7.8%; around +15% at constant exchange rates). A detailed analysis shows that net interest income came to 2,525 million euro (+5.8%), mainly due to the favourable performance of VUB Banka (+58 million euro), Banca Intesa Beograd, including Intesa Leasing Beograd (+44 million euro), PBZ – including Intesa Sanpaolo Bank (Slovenia) and Intesa Sanpaolo Banka Bosna i Hercegovina (+43 million euro) – and Bank of Alexandria (+34 million euro), only partly offset by the fall for CIB Bank (-60 million euro). Net fee and commission income, amounting to 648 million euro, reported an increase (+7.8%), mainly attributable to VUB Banka (+13 million euro), Banca Intesa Beograd (+8 million euro), Bank of Alexandria (+6 million euro) and CIB Bank and PBZ (+4 million euro each). Within the other income components, there was an increase in profits (losses) on financial assets and liabilities at fair value (+34 million euro), essentially attributable to the subsidiaries operating in Hungary, Serbia and Slovakia, offset by the weaker performance of the Egyptian investee and a reduction in other net operating costs (-14 million euro), mainly attributable to PBZ, VUB Banka and CIB Bank. Operating costs, amounting to 1,372 million euro, were up (+8.5%; around +13% at constant exchange rates), mainly due to personnel and administrative expenses.
As a result of the above revenue and cost trends, the operating margin increased by 7.2%, amounting to 1,867 million euro. Gross income, amounting to 1,688 million euro, increased by 5.1% on the figure for 2023, while net income came to

1,146 million euro, compared to 1,173 million euro in the previous year (-2.3%). Net of the capital gain on the sale of the acquiring business line of PBZ Card, recorded under other income in 2023, gross income and net income would be up by 13.3% and 6.3%, respectively.

In the quarterly comparison, the fourth quarter 2024 showed declining trend in the operating margin compared to the third, attributable to the increase in operating costs typical of the end of the year, and a moderate decrease in revenues. Gross income and net income were also lower than in the previous quarter, mainly impacted by higher adjustments to loans.

Intermediated volumes of the Division showed a rise (+3.8%) at the end of December 2024 compared to the end of 2023, attributable to the increase in both loans to customers (+5.2%) and direct deposits from banking business (2.7%). The performance of loans was mainly attributable to the increase recorded by the subsidiaries operating in Slovakia and Croatia. For deposits, the increase was essentially attributable to the growth recorded in Slovakia, Serbia and Croatia, only partially offset by the declining trend in the subsidiary operating in Egypt.

In 2024, the International Banks Division continued its process of business development, adopting a business model targeted to increasing fee and commission income in the main European subsidiaries and maintaining a constant focus on wealth management in China.
Specifically, the Wealth Management service model was consolidated for the highest added value segments, with a focus on overseeing relationships and developing an offering of products and services that meets customers' latent, unexpressed needs. There was specific focus on increasing ESG solutions and diversifying the portfolio asset mix to guarantee beneficial performance both for customers and the distribution network. It is currently being assessed whether to upgrade the service model for Affluent and Private customers with advanced financial and service needs, working with other Group Divisions and leveraging the best expertise of the Banca dei Territori Division.
In bancassurance, the partnership with a leading insurance group continued for the distribution of bancassurance products in Slovakia, Croatia, Hungary, Serbia and Slovenia.
With regard to increasing fee and commission income, commercial initiatives continued in synergy with the IMI Corporate & Investment Banking Division in the Global Markets, Structured Finance and Investment Banking sectors in the countries identified as priority (Slovakia, Czech Republic, Hungary and Croatia), with a significant increase in operations and the pipeline since the start of the plan. The scope of observation is currently being expanded to other markets.
With regard to the development and strengthening of the service model for customers shared with the Banca dei Territori Division, the commercial initiatives to increase cross-border business opportunities of customers operating in countries of the Division continued. Specifically, joint commercial campaigns were developed on customer companies of Banca dei Territori, in all the Regional Governance Centres and Agribusiness, with foreign subsidiaries. A specific initiative has been launched for Romania involving relationship managers from both Divisions, while the joint commercial campaigns in the other countries involved continued, with new development actions in Serbia and Croatia.
As part of the ESG Business Positioning initiatives for the Corporate & SME segments in Slovakia, Hungary, Croatia, Serbia, and Egypt, following the identification of priority sectors, the work continued on developing a commercial strategy aimed at improving the ESG offering. In that sense, a multi-country loan product was launched, dedicated to achieving green objectives, as part of the S-Loan offering, in Slovakia, Hungary and Serbia, with a plan to extend it also to Croatia, Bosnia and Herzegovina and Slovenia. A survey was also completed at the main banks of the Division, with the goal of identifying the financial needs of customers in the ESG area.
Within the digital banking initiatives of Corporate & SME, following the launch of the Italy-Hungary interconnection and the activation of the "Confirming" product in six additional geographies of the Division (Slovakia, Serbia, Romania, Slovenia, Albania and, most recently, Bosnia and Herzegovina), the process of extension to Croatia and the Czech Republic) is at an advanced stage. For the new "Factoring Digital Platform", the external provider for the new IT platform was chosen, and the contract between the parties (IVS and CODIX) was signed, and a pilot phase was launched at the Prague branch of VUB Banka, with the subsequent gradual extension to other banks. The requirements of the new platform are currently being defined. For Retail & WM, the expansion of functions and digital services in the main countries where the Division operates continued. The activities to improve the customer experience of digital processes of branches in Hungary, Slovenia, Albania and Croatia were completed (for example, using Artificial Intelligence and the new Navigated Experience functionality of the chatbot), and the release of the conversational banking feature was finalised for several customer segments in Serbia.
In the IT area, the implementation of the new strategy which entails focusing on the convergence of IT applications supporting the business, continued.
Lastly, with regard to Wealth Management in China, the business activities of Yi Tsai continued through the streamlining of the network, strengthening of the coverage for institutional customers, expansion of the product mix.

Business	It is responsible for the Group's operations on the international markets through commercial bank subsidiaries and associates.
Mission	Guidance, coordination and support for international subsidiaries, which engage primarily in retail banking operations. The Division is responsible for setting the Group's strategic development guidelines in terms of its direct presence on international markets, involving systematic exploration and analysis of new growth opportunities on markets already served and new markets, the coordination of international subsidiary banks' operations and the management of the relationships between international subsidiary banks and the Parent Company's central units and the branches or other foreign offices of the IMI Corporate & Investment Banking Division.
Organisational structure	
South-Eastern Europe HUB (SEE HUB)	Presence in Croatia, Bosnia-Herzegovina and Slovenia.
Danube HUB (DNB HUB)	Presence in Slovakia, Romania and the Czech Republic.
Other banks	Presence in Albania, Hungary, Serbia, Egypt, Ukraine and Moldova.
Distribution structure	907 branches in 12 countries.

South-Eastern Europe Hub (SEE HUB)

In 2024, the operating income of the **Privredna Banka Zagreb** group amounted to 669 million euro, up on the previous year (+5.9%), due to the favourable performance of net interest income. Operating costs of 240 million euro increased (+11.9%). The operating margin came to 429 million euro (+2.8%). Gross income, amounting to 421 million euro, and net income, which amounted to 340 million euro, were down (-16% and -14.4%, respectively) compared to those of 2023. Excluding the gross capital gain from the sale of the acquiring business line of PBZ Card in the first quarter of 2023, they would have increased by 9.2% and 12.5%, respectively.

Intesa Sanpaolo Banka Bosna i Hercegovina closed 2024 with an operating margin of 21 million euro (-7.5%). This performance is attributable to the increase in operating costs, which more than offset the increase in operating income. Gross income, amounting to 18 million euro, recorded growth (+4.9%), while net income, which amounted to 13 million euro, was substantially in line with the value of 2023.

Intesa Sanpaolo Bank (Slovenia) reported operating income of 166 million euro, growing on 2023 (+7.2%), essentially due to the evolution of net interest income. Operating costs increased (+10.1%) on the previous year. As a result of the above revenue and cost trends, the operating margin increased by 5.7%. Gross income, amounting to 100 million euro, increased by 7.5%, while net income decreased by 4.2%, amounting to 69 million euro.

Danube HUB (DNB HUB)

The **VUB Banka** Group reported an operating margin of 498 million euro, up on 2023 (+13.2%) as a result of the growth in operating income (+11.6%), particularly in net interest income, only partially offset by the increase in operating costs (+8.7%). Gross income amounted to 461 million euro, up on the previous year (+22.6%). In contrast, net income was down (-3.9%) as a result of the new extraordinary tax on windfall profits introduced by the Slovakian government in 2024.

Intesa Sanpaolo Bank Romania generated an operating margin of 17 million euro, up on 2023 (+32.2%), due to higher operating income (+13.7%), specifically of net interest income. The company closed 2024 with net income of 12 million euro, up by 67.3% on the value of 2023, benefiting from the reversals of impairment losses on loans.

First Bank. On 31 May 2024, the closing was completed for the acquisition of the company First Bank S.A. in Romania, after obtaining the authorisation from the National Bank of Romania. The operating margin amounted to 22 million euro, recording an increase of 53.8% compared to the like-for-like figure in the previous year, due to the growth in operating income, specifically in net interest income, and the decrease in operating costs, specifically in personnel expenses. Gross income reached 26 million euro, an increase of 78.2% on 2023, while net income dropped by 60.4%, mainly due to charges for integration.

Other banks

Intesa Sanpaolo Bank Albania reported an operating margin of 45 million euro, up by 13.1% on 2023, due to the growth in revenues (+16.6%), particularly net interest income, which more than offset the increase in operating costs. Net income came to 31 million euro, up by 10.6% on the previous year.

The **CIB Bank** group reported net operating income of 406 million euro, a decrease compared to 2023 (-4.6%,) due to a lower contribution from net interest income, attributable to falling interest rates, partially offset by the growth in profits (losses) on financial assets and liabilities at fair value. Operating costs rose by 8.7%. As a result of the above revenue and cost trends, the operating margin decreased by 11.2% to 253 million euro. Net income rose to 175 million euro, exceeding that of the previous year (+4.5%).

Banca Intesa Beograd, including Intesa Leasing Beograd, reported an operating margin of 351 million euro, up 13.8% on 2023, supported by the development of operating income (+13.6%), which more than offset the increase in operating costs (+13.2%). Gross income amounted to 302 million euro (+25.4%), and net income was 234 million euro (+27.4%).

Bank of Alexandria, which was adversely affected by the depreciation of the Egyptian pound, reported an operating margin of 306 million euro, up by 14.7% on the previous year (+68% at constant exchange rates). Operating income of 419 million euro was up (+8.3%; around +59% at constant exchange rates, due to the performance of net interest income). Operating costs decreased (-5.8%; around +38% at constant exchange rates). Net income amounted to 153 million euro, up by 26.7% on 2023 (around +86% at constant exchange rates).

Pravex. Despite the extremely serious/uncertain situation in Ukraine, Pravex was again consolidated on a line-by-line basis in December 2024. Nonetheless, in light of the obvious logistical and execution difficulties for the administrative structures of the local bank, also with regard to the IT channels, the Group decided to consolidate the results achieved up to September 2024, recording them at the exchange rate of 31 December 2024.

Eximbank generated an operating margin of 2.2 million euro, down by 45% on 2023, due to the lower contribution from operating income and the growth in operating costs. Net income, amounting to 0.6 million euro, decreased by 76.4%.

Figures restated, where necessary and material, considering the changes in the scope of consolidation and in business unit constituents and discontinued operations.

The **Private Banking Division** serves the top customer segment (Private and High Net Worth Individuals), creating value by offering top products and services.
The Division coordinates the operations of Fideuram - Intesa Sanpaolo Private Banking, Intesa Sanpaolo Private Banking, Fideuram - Intesa Sanpaolo Private Banking Asset Management SGR, SIREF Fiduciaria, Fideuram Asset Management (Ireland), Fideuram Asset Management UK, the Swiss banking group Reyl (present in Switzerland, the United Kingdom, Singapore, the United Arab Emirates and Malta) and Intesa Sanpaolo Wealth Management, a Luxembourg private bank with branches also in Belgium and, from August, of Alpian S.A., a Swiss digital bank in the start-up phase. Moreover, with the goal of offering a large, dedicated range of products, using digital solutions that will be expanded over time, the Fideuram Direct business line, created in 2023, meets the needs of customers that want to independently handle their investments and online trading. At the beginning of December 2024, the merger by incorporation of IW Private Investments SIM into Fideuram - Intesa Sanpaolo Private Banking was finalised.

In 2024, the Division achieved gross income of 2,241 million euro, up by 152 million euro (+7.3%) compared to the previous year. The operating margin showed a positive trend (+104 million euro), attributable to higher operating income (+162 million euro), against an increase in operating costs (+58 million euro). The revenue performance was mainly attributable to net fee and commission income (+236 million euro), particularly for recurring fee and commission income, in connection with the increase in average assets under management, and upfront fees, related to the higher contribution from the receipt and transmission of orders and the placement of Intesa Sanpaolo mutual funds and bonds. In contrast, net interest income fell to 1,181 million euro (-86 million euro), due to higher interest expense on customer deposits, only partly offset by the increase in interest on debt securities and on interbank relationships. Among the other revenue components, other net operating income (+5 million euro) and profits (losses) on financial assets and liabilities at fair value (+7 million euro) were up. For operating costs, there was an increase in administrative expenses due to higher charges for services rendered by third parties, in personnel expenses and in amortisation for software and rights of use on leased assets. The Division closed 2024 with net income of 1,462 million euro, up by 7% compared to the previous year.

The values of assets under management and administration have been presented in accordance with the reporting criteria for indirect customer deposits used in the Intesa Sanpaolo Group's consolidated financial statements, specifically eliminating customer current accounts correlated with investment transactions, bonds and certificates that, despite being part of customers' assets, are already included in direct deposits. Moreover, third party products are reallocated from assets under management to assets under administration.

As at 31 December 2024, assets under management and administration, which also include the contribution of the trust mandates for SIREF Fiduciaria, amounted to 335 billion euro (+31.4 billion euro from the end of 2023). This trend was due to the market performance, which had a favourable impact on assets and, to a lesser extent, to positive net inflows. The assets under management component amounted to 171.4 billion euro (+13.9 billion euro).

In 2024, the following corporate operations were finalised:
- the merger by incorporation of Carnegie Fund Services S.A. into Reyl & Cie S.A.;
- the liquidation of the companies IIF SME Managers LTD and Morval Bank & Trust Cayman Ltd;
- the subscription by Fideuram of the capital increase of Alpian S.A. (including the unsubscribed portion), acquiring control of the company;
- the merger by incorporation of IW Private Investments SIM into Fideuram – Intesa Sanpaolo Private Banking.

Business	Generating new inflows of assets and managing them, using a network of financial advisors and in-house private bankers serving a customer base with high savings potential.
Mission	Taking care of customers' well-being and protecting all of their assets through top notch advisory services. A relationship based on listening, satisfaction and trust between the customer and the private banker is what makes the business model of the Private Banking Division unique.
Organisational structure	
Fideuram-Intesa Sanpaolo Private Banking (Italy)	Dedicated to the production, management and distribution of financial products and services to high profile customers, using a network of 5,649 Fideuram, Sanpaolo Invest and IW Private Investments financial advisors and the provision of digital advisory and advanced trading through Fideuram Direct.

The **Asset Management Division** pursues the mission of developing the best asset management solutions aimed at the Group's customers and its presence on the open market segment through the subsidiary Eurizon Capital SGR and its subsidiaries.

Operating income in 2024, amounting to 1,005 million euro, was up by 10.7% compared to the previous year, due to the performance of net interest income (+43 million euro) and net fee and commission income (+78 million euro). The latter have benefited from the growth in placement fees for mutual funds and incentive fees, partially offset by the reduction in recurring fee and commission income as a result of customer investment choices in the new macroeconomic reference environment of positive interest rates, and of the product innovation by Eurizon Capital SGR and its subsidiaries to improve the competitiveness of the mutual funds against other alternative financial products. Within the other revenue components, the contribution from the fair value measurement of the financial portfolio was a positive 2 million euro (20 million euro in 2023). The Chinese subsidiary Penghua, consolidated at equity, provided a positive contribution to operating income of 47 million euro, compared to 54 million euro in the previous year. Operating costs posted an increase (+2.4%), mainly attributable to personnel expenses. As a result of the above revenue and cost trends, the operating margin came to 754 million euro, up 13.7% on 2023. The Division closed 2024 with net income of 579 million euro (+21.9%).

As at 31 December 2024, assets under management of the Asset Management Division came to 333.1 billion euro, up by 21.8 billion euro (+7%) compared to the end of 2023. This trend was attributable to the revaluation of assets under management, correlated with the positive performance of the markets and, to a lesser extent, to the positive net inflows (+2.5 billion euro). The net inflows were attributable to mutual funds (4.4 billion euro), institutional mandates from non-captive customers (+1.9 billion euro) and portfolio management schemes for retail and private customers (+1.3 billion euro), only partially offset by outflows on mandates received from Group counterparties on insurance and pension products (-5.1 billion euro).

As at 31 December 2024, Eurizon Capital's Italian market share of assets under management was 15.6% (gross of duplications). Excluding the closed-end funds segment, in which the company has a limited presence, the share of assets under management at the end of December rose to 16%.

Business	Asset management.
Mission	To provide collective (UCI) and individual asset management products to the Group's internal banking networks and develop its presence on the open market through specific distribution agreements with other networks and institutional investors.
Organisational structure	
Eurizon Capital SGR (Italy)	Specialised in active asset management on behalf of both retail customers (mutual funds and portfolio management schemes) and institutional customers, to which it offers a wide range of investment products and services.
Eurizon Capital Real Asset SGR (Italy)	Specialised in alternative investments. It is controlled by Eurizon Capital SGR, which holds 51% of the voting right and 20% of the company's share capital, and an investee of Intesa Sanpaolo Assicurazioni, formerly Intesa Sanpaolo Vita (40% of capital) and the Poste Italiane Group (40% of the capital).
Epsilon SGR (Italy)	Specialised in portfolio management on quantitative bases. It is a 100% subsidiary of Eurizon Capital SGR.
Eurizon Capital S.A. (Luxembourg)	The company manages and distributes Luxembourg UCI products aimed at retail and institutional customers and offers a wide range of services dedicated to institutional investors. It specialises in limited tracking error (LTE) management, factor-based and money market products. It is a 100% subsidiary of Eurizon Capital SGR.
Eurizon Capital Asia Limited (Hong Kong)	A company wholly owned by Eurizon Capital SGR, mainly focused on financial consulting activities and distribution in the Asian market.
Eurizon Asset Management Slovakia (Slovakia)	A Slovak asset management company, 100%-owned by Eurizon Capital SGR, which heads up Eurizon Asset Management Hungary and Eurizon Asset Management Croatia d.o.o. (Eastern European asset management hub). It promotes and manages Slovak mutual funds targeted to the local market.
Eurizon Asset Management Croatia d.o.o. (Croatia)	A Croatian asset management company and wholly owned subsidiary of the Slovak company Eurizon Asset Management Slovakia. It promotes and manages Croatian mutual funds and offers individual portfolio management services to retail and institutional customers.
Eurizon Asset Management Hungary (Hungary)	A Hungarian asset management company and wholly owned subsidiary of the Slovak company Eurizon Asset Management Slovakia. It promotes and manages Hungarian mutual funds and offers individual portfolio management services to institutional customers.
Eurizon SLJ Capital (England)	An English company controlled by Eurizon Capital SGR through a 65% interest, which conducts research and provides investment and advisory services.
Penghua Fund Management Company Limited (China)	Chinese fund manager 49%-owned by Eurizon Capital SGR.

(1) Including the subordinated securities issued by the companies.

Figures restated, where necessary and material, considering the changes in the scope of consolidation and in business unit constituents and discontinued operations.

The **Insurance Division** includes Intesa Sanpaolo Assicurazioni, Fideuram Vita and Intesa Sanpaolo Protezione, with the mission of synergically developing the insurance product mix targeting Group customers. The scope of the Division also includes Intesa Sanpaolo Insurance Agency and InSalute Servizi.
Starting on 1 December 2024, Intesa Sanpaolo Vita took on the new name Intesa Sanpaolo Assicurazioni, the company that leads the Intesa Sanpaolo Assicurazioni Insurance Group. At the same time, the name of the Dublin branch, established on 1 December 2023, specialising in managing unit-linked policies, was changed to Intesa Sanpaolo Assicurazioni Dublin Branch. Intesa Sanpaolo Protezione, born from the merger of Intesa Sanpaolo RBM Salute into Intesa Sanpaolo Assicura, and 100%-controlled by Intesa Sanpaolo Assicurazioni was established, becoming a single company for the non-life and health classes.

In 2024, the Division reported income from insurance business of 1,716 million euro, up (+5.6%, equal to +91 million euro) on 2023. Both the life and non-life businesses were up, the former mainly due to the financial component, and the latter due to both the technical contribution and the net investment result.
Gross income, amounting to 1,338 million euro, reported growth (+3.3%) due to higher operating income (+6.6%) against substantially stable operating costs (+0.3%).
The cost/income ratio, at 22.1%, remained at very good levels, lower than those recorded in the previous year.
Lastly, net income came to 1,150 million euro (+31.3%) after the attribution of taxes of 107 million euro (benefiting from the recognition of deferred tax assets of 293 million euro), charges for integration and exit incentives of 27 million euro, effects of

purchase price allocation of 8 million euro and levies and charges of the banking and insurance system of 46 million euro, with the latter relating to the Guarantee Fund for life insurance policies pursuant to Law no. 213 of 30 December 2023.

Direct deposits from insurance business, amounting to 177,448 million euro, were up (+2.7%, or +4.7 billion euro) on the end of 2023, attributable to insurance liabilities.

The Division's collected premiums for life policies (including financial products) and pension products, equal to 18.1 billion euro, increased by 18.4% on 2023, attributable to the growth in inflows on traditional products (+11.9%) and on unit-linked products by over 40%. In contrast, inflows for pension funds segment decreased (-3.3%).

Collected premiums for the protection business totalled 1.5 billion euro, up by 3.3% on 2023. Premiums in the non-motor business (excluding CPI – Credit Protection Insurance) rose by 1.9%, mainly driven by the Businesses, Home and Family, and Accident Lines of Business (LoBs). The motor component (+5.2%) and credit-related products (+33.8%) also increased.

Business	Life and non-life insurance.
Mission	Develop the offering of insurance products for the Group's customers.
Organisational structure	
Intesa Sanpaolo Assicurazioni	Insurance parent company specialised in offering insurance, pension and personal and asset protection services through the network of Banca dei Territori. Starting on 1 December 2024, Intesa Sanpaolo Vita took on the new name Intesa Sanpaolo Assicurazioni. At the same time, the name of the Dublin branch, established on 1 December 2023, specialising in managing unit-linked policies, was changed to Intesa Sanpaolo Assicurazioni Dublin Branch. The company holds 100% of Intesa Sanpaolo Protezione, born on 1 December 2024 from the merger of Intesa Sanpaolo RBM Salute into Intesa Sanpaolo Assicura, and of Intesa Sanpaolo Insurance Agency and 65% of InSalute Servizi. Lastly, it holds 40% of Eurizon Capital Real Asset SGR, a company operational since 31 December 2019, controlled by Eurizon Capital SGR (Asset Management Division), which holds 51% of the voting rights and 20% of the capital.
Fideuram Vita	Specialised in offering insurance, pension and personal and asset protection products in service of the Private Banking Division.
Intesa Sanpaolo Protezione	A single company for the non-life and health classes, whose identity is gaining brand awareness on the market, capable of enabling business, operational and economic synergies by developing a fully comprehensive non-life offering.
InSalute Servizi	Dedicated to managing healthcare benefits.
Intesa Sanpaolo Insurance Agency	Agency that performs insurance brokerage activities of both life and non-life products.

Corporate Centre

The Corporate Centre is responsible for guidance, coordination and control of the whole Group, as well as for the NPE Department, Treasury and Strategic ALM.

The Corporate Centre Departments generated an operating margin of 1,638 million euro in 2024, compared to 979 million euro in the previous year. This performance was mainly driven by growth in net operating income, attributable to net interest income, which benefited from higher average short-term market rates, and to the profits (losses) on financial assets and liabilities at fair value. Operating costs remained substantially stable. Gross income amounted to 1,287 million euro compared to 927 million euro in 2023. The net income in 2024 was 531 million euro, compared to 428 million euro in the previous year. The income statement of the Corporate Centre includes charges aimed at maintaining the stability of the banking industry, after tax, totalling 67 million euro compared to 245 million euro in 2023, which included 222 million euro related to the European resolution fund that is currently funded for the EU countries of the banking union.

Treasury and Funding activities

In 2024 Intesa Sanpaolo kept its market shares in Settlement, at national and international levels, thus confirming its role as a systemic bank and its status as a T2 Critical Participant within the cash (T2) and securities (T2S) settlement systems of the Eurosystem.
The conclusion of the European Collateral Management System (ECMS), the new centralised collateral management system on which Intesa Sanpaolo constantly worked over the year, was postponed following the decision of the ECB's Governing Council to postpone the implementation from November 2024 to June 2025.
In 2024 Intesa Sanpaolo played a leading role in the trials conducted by the European Central Bank for the digitalisation of wholesale payment systems, which could lead, in the coming years, to cash and securities settlement solutions based on new technologies (such as Distributed Ledger Technology).

Following the initial easing of monetary policy in June 2024, the ECB continued cutting the three official rates of the Eurosystem, resulting in - at the December meeting - a deposit rate at the Central Bank of 3%, to gradually moderate the level of restriction. Inflation expectations, price dynamics, and the degree of monetary policy transmission influenced the Governing Council's decisions, which reiterated that the deflationary process is well under way. Future actions will depend on the data, and will be taken at the upcoming meetings to ensure the prompt return of inflation to its medium-term target of 2%. Market interest rates fully absorbed the monetary policy measures adopted over the year.

The official US rates remained unchanged in the range of 5.25-5.50% up to the meeting of 18 September, when, due to the significant improvement in the medium-term trend in inflation towards the target of 2%, the Fed decided to decrease the rates for the first time in more than two years, ending the long cycle of restrictive monetary policy begun in March 2022. In the following meetings of November and December, the Fed further decreased the official rates, bringing them to the range of 4.25-4.50% at the end of the year, 100 basis points lower than at the start of the year.

Intesa Sanpaolo's euro liquidity position remained very solid over the entire year, with a significant excess of liquidity even after the repayment of the last tranche of the TLTRO at the end of June. Also for the dollar, the liquidity position remained abundant and the wholesale market funding activities did not experience any stress situations.

In 2024, outstanding short-term securities grew, confirming investors' interest in the Bank's issues.

During the period, the total amount of the Group's medium/long-term issues placed on the domestic market, through own networks and direct listing, came to 13,429 million euro, of which 11,536 million euro in certificates, 1,753 million euro in issues placed through the Private Banking Division and 140 million euro in securities traded on the MOT and/or EuroTLX markets of Borsa Italiana (direct listing).
The bonds placed through the Private Banking Division reserved for professional customers and qualified investors comprised 1,308 million euro of subordinated T2 bonds, with fixed and floating rates and a 10-year term; 374 million euro of senior preferred fixed-rate bonds with 2- and 5-year terms; and 71 million euro of private placement senior preferred bonds with fixed rates and 2- and 10-year terms.
Among the securities placed, there was a predominance of structured financial instruments made up of 33% of index-linked structures, 28% of interest rate-linked structures, and 25% of equity-linked structures, while the plain vanilla issuance component accounted for 14%. A breakdown by average maturity shows that 51% are comprised of instruments with 2- and 4-year maturities, 36% of 5- and 8-year maturities, and the remaining 13% with maturities over 8 years.

During the year, a total of 7,370 million euro in institutional unsecured funding transactions were placed, of which 6,819 million euro in debt securities issued by the Bank and 551 million euro of securities (bonds and certificates) issued by the IMI Corporate & Investment Banking Division on third-party networks.
Specifically, with regard to bond funding, the following public issuances were carried out: (i) in March, an issuance of fixed-rate senior preferred green bonds aimed at the Asian market for a total amount of 37.1 billion JPY (corresponding to around 229 million euro) divided into three tranches: 35 billion JPY with a 2-year maturity, 1.9 billion JPY with a 3-year maturity, and 200 million JPY with a 7-year maturity; (ii) in April, an issuance of senior preferred bonds for a total amount of 2 billion euro issued in two tranches: 1 billion euro of a green bond, with fixed rate and a 6.5-year maturity, and 1 billion euro of a floating-rate bond with a 3-year maturity; and (iii) in May, AT1 subordinated bonds for an amount of 1 billion euro at fixed rate. These are perpetual financial instruments with an early redemption option that can be exercised by the issuer from the eighth year; (iv) in September, fixed-rate senior non preferred bonds for 1.5 billion euro, with 8-year maturity, with an early redemption option by the issuer in the seventh year; (v) in November, T2 subordinated bonds for 1.25 billion euro, at a fixed rate and with

12-year maturity, with an early redemption option that can be exercised by the issuer from the seventh year.
In the reporting period, the following private placements were made: in February, fixed-rate senior preferred social bonds for 800 million euro, with 6.5-year maturity; in November, floating-rate senior preferred bonds for 40 million euro, with 3-year maturity.
The "green" issuances are aimed at funding all the projects in line with the green categories described in the Intesa Sanpaolo's Green, Social and Sustainability Bond Framework: "Renewable Energy", "Energy Efficiency", "Green Buildings", "Clean Transportation" and "Circular Economy". The "social" issuances are aimed at funding the assets that come under the social categories described in the Green, Social and Sustainability Bond Framework: "Access to Essential Services (Non-Profit Entities)", "Socio-economic Advancement and Empowerment" and "Employment Generation and Programmes Designed to Prevent and/or Alleviate Unemployment Stemming from Crises". Currently, the social portfolio is mainly composed of loans to SMEs operating in disadvantaged areas (including COVID-19 loans) and to non-profit organisations operating in sectors with a specific social focus (Healthcare, Education, Welfare and Solidarity).

With regard to the Covered Bond issuance programmes, under the covered bond programme guaranteed by ISP CB Pubblico, the 13th and 14th series (both retained) amounting to a total of 1.85 billion euro were redeemed in advance in January.
In preparation for the closure of this programme, which took place on 2 April, the repurchase by the Bank of the entire residual portfolio of segregated loans in the Vehicle (1.85 billion euro) was completed in the first quarter of 2024.
Under the covered bond programme guaranteed by ISP CB Ipotecario, the 25th series matured in March for an amount of 1 billion euro and in May the 21st retained series was redeemed early for a residual amount of 1.2 billion euro.
During the year, five Covered Bond issues were made. In March, retained series no. 34 was issued for 1 billion euro, with a floating rate and 5-year maturity; in May, three retained series were issued: the 36th series for 1.4 billion euro, with a floating rate and 4-year maturity; the 37th series for 1.7 billion euro, with a floating rate and 9-year maturity; and the 38th series for 1.7 billion euro, with a floating rate and 11-year maturity. Lastly, in June, a private placement was carried out involving the issuance of the 35th series of 500 million euro, with a floating rate and a 6-year maturity.
Under the covered bond programme guaranteed by ISP OBG, in February the 32nd retained series matured for an amount of 1.65 billion euro; in June the 21st retained series was partially extinguished for an amount of 500 million euro, and the total residual amount of 1.25 billion euro subsequently matured in August; in June, moreover, the 25th retained series was partially extinguished for an amount of 50 million euro, and further partially extinguished in December for an amount of 1.2 billion euro (the residual amount therefore totals 500 million euro).
Within the covered bond programme guaranteed by UBI Finance, the 14th series matured in February for an amount of 1 billion euro and in July the 24th series matured for an amount of 750 million euro.
In March, the subsidiary VUB Banka also carried out an issuance of covered bonds aimed at institutional investors. These are fixed-rate securities for an amount of 500 million euro, with 7-year maturity.

For the management of collateral, Intesa Sanpaolo also uses the A.Ba.Co. (Collateralised Bank Assets) procedure, which allows bank loans disbursed to non-financial companies to be used to secure loan transactions with the Bank of Italy: at 31 December 2024 the amount outstanding, gross of the haircuts applicable to loans lodged as pledge by the Group, amounted to 16.8 billion euro.

In the first quarter of the year, the ECB progressively steered market expectations towards a first interest rate cut at its meeting in June, but the long-term part of the European curves was initially influenced by the dynamics of US rates, pushed up by the strength of the labour market and the lower-than-expected fall in core inflation. The revision of the ECB operational framework did not alter the short-term dynamics of swap spreads, while demand for peripheral debt was still strong, in line with the risk-on tone prevailing in the markets up to June. Subsequently, the unexpected rise in political uncertainty in France caused a sharp increase in volatility. The second half was marked by a sharp but brief episode of volatility in August, after which equity markets reached new highs, supported by rate cuts from both the Fed and the ECB. The market narrative has shifted back to expectations of a soft landing for the US economy, while credit prospects in Europe were impacted by the structural weakness of the German manufacturing sector and the fiscal outlook in France.
In the first half of the year, the credit sensitivity of the portfolio was increased across all the asset classes, including Italian risk. The shift sensitivity, on the other hand, remained virtually unchanged from the end of 2023 levels, net of the portfolio rotation induced by rate volatility. From April, the allocation to Spanish government issuers was trimmed down, and in June, the portfolio of covered bonds was reduced. In the second half of the year, taking advantage of the spread correction, the portion of the portfolio allocated on French government issuers was increased slightly, from a very low weighting. In September, following a sharp decline in rates that brought expectations for the ECB's terminal rate to well below 2%, rate sensitivity was significantly reduced, awaiting more information on the evolution of the European business cycle. Subsequently, the shares of Italian and Spanish government issuers were reduced, while increasing the shift sensitivity in the last few days of December.

In the repo market, Italian government bond volumes were significantly higher than in the previous year, while interest rates were slightly higher than the depo facility rate.
The spread between the rates of the core countries and Italian government bonds gradually tightened over the year, the only exception being the expansion recorded at the changeover at the end of the year.

During the period, Intesa Sanpaolo carried out new operations to collect liquidity, by implementing securities financing transactions with underlying mainly comprised of own retained covered bonds on different maturities, primarily medium/long-term. At the end of the year, the outstanding operations with own issues of bonds as underlyings amounted to around 18 billion euro.

Strategic ALM

With regard to the Group's Asset & Liability Management (ALM), operational management of the financial risks of the Group's banking book is carried out by the Group Treasury & Capital Management area under the supervision of the CRO Area. Interest rate risk is monitored and managed by examining the sensitivity of the market value of the various positions in the banking book to parallel shifts in the interest rate curve and the sensitivity of net interest income to the market views; moreover, specific scenario analysis techniques on rate developments are used, as well as behavioural scenarios for specific positions. The strategic choices on interest rate risk are made by the Group Financial Risk Committee, Asset & Liability Committee - ALCO session, within the limits established by the Board of Directors: Group Treasury & Capital Management performs an active role in the dynamic management of interest rate risk within the limits assigned and supports the Committee's decision-making activity by formulating analyses and proposals. The structural component of liquidity risk is managed, based on the liquidity policies defined at Group level, as part of the funding plan, which is used to monitor the current and future short and long-term liquidity balances, defining the funding plan on the various channels and instruments (domestic/international, retail/corporate, secured/unsecured, preferred/non preferred/subordinate). The funding plan optimises the various forms of funding in compliance with the liquidity indicators (LCR, NSFR and the other indicators of the Risk Appetite Framework), the rating targets, the various regulatory capital buckets and the MREL buffers, in line with the loan-deposit targets of the Business Units. The structural component of foreign exchange risk is managed, based on the related policies established at Group level, by monitoring the Group's overall position, also with a view to optimising the capital ratios.

Data, A.I. and Technology Officer Area

In line with the 2022-2025 Business Plan, the Data, A.I. and Technology Area is continuing the process of digitalisation, technological evolution and omni-channel development.
In 2024, the Area continuously transformed to increase the effectiveness of the digitalisation process through the progressive and comprehensive overhaul of the IT platform, efficiency improvements in the operating model, the transition to the cloud.
Following the commercial launch of the new Digital Bank Isybank in 2023, in partnership with the leading fintech Thought Machine, in 2024 the offering to customers was further expanded due to the enrichment of products offered (for example: prepaid card, credit card, protection products, isyPrestito and isySalvadanaio), always maintaining Isybank's criteria of simplicity, accessibility, inclusivity and security, keeping the option of a direct relationship through the Digital Branch.
The technological upgrading of the IT system also continued, by launching the extension of the isytech platform to the Parent Company Intesa Sanpaolo, in partnership with the leading fintech Thought Machine, thereby continuing the process of evolution for retail customers.
To provide effective support for the IT transformation process, the two programmes launched in the previous years continued: in New Group Technology, the adoption of the new IT operating model was completed, in line with the best practices of the IT structures of digital companies on the market, based on a structure focused on delivery, with roles dedicating to developing IT professions; in Falcon (which aims to re-insource IT skills) 615 people were hired. The training process to support the growth of internal skills also continued, and the use of Generative AI solutions was launched, to increase efficiency on the entire lifecycle of software development.
As part of the agreement signed with TIM and Google for the migration of a significant part of Intesa Sanpaolo's information system onto Google's cloud services, which will meet the higher international standards of security and confidentiality of information, the migration continued of the applications onto the Google Cloud Platform (since the start of the Plan, 643 applications have been migrated and 159 new applications have been created directly on the cloud, 62% of applications are already cloud-based), and the return of the European Regions on Italy's Milan and Turin Regions of all the migrated applications has been completed.
Thanks to Opening Future, the portal dedicated to developing digital skills for SMEs, startups and schools, developed by the Group in partnership with Google Cloud and TIM Enterprise (the cloud company of the TIM Group), additional training and learning initiatives were promoted to increase and disseminate a digital culture and build green IT in Italy. During 2024, 1,435 SMEs, startups and fintechs and over 5,000 people were involved.
With the goal of creating, extending and consolidating the Group's unique data assets, which can be the Golden Source of governance data, to create a data driven organisation and to better know our customers, also through the use of artificial intelligence:

- the activation of the Group's Data Service Hub was completed on Google Big Query, a cloud solution, which will become the reference data architecture for all new Group initiatives; and the AIxeleration programme, launched in 2023, to bring the adoption of artificial intelligence in the Group to scale in a sustainable, responsible and standardised manner on all Divisions, favouring new business opportunities, increasing operating efficiency and further improving risk management, continued. The programme is based on developing an ecosystem whose fundamentals are comprised of: a consistent, shared base, the cloud, strengthening of skills, signing agreements with technological (e.g. Microsoft and Google) and academic partners (e.g. CETIF, London University, Fujitsu and Berkeley University), CENTAI (ISP's artificial intelligence research centre), the Anti-Financial Crime Digital Hub and the dissemination of the culture of AI (Artificial Intelligence) within the Group. Under the programme, the development of an MLOps technological platform enabling the use cases of the AIxeleration programme also continued, specifically facilitating the use of Generative AI techniques. 104 use cases were industrialised, thanks to around 215 dedicated AI Specialists, and the first Generative AI solutions tested in the laboratory were adopted. In the Digital Branch, new conversational IVR uses cases were developed and the roll out of the conversational assistant, which exploits the features of Generative AI to provide IT support to relationship managers during calls to customers, was launched;
- an initiative was launched to steer the requests expressed by the Supervisor in the ECB Guide on Risk Data Aggregation and Risk Reporting (RDARR), update the current Data Governance Model and related tools in compliance with the Supervisor's expectations, and extend/apply the Data Governance Model to in scope Uses provided by the Guide: the

priority scope was identified on which to concentrate the initial actions to improve the framework of governance and the data management process.

Also in 2024, initiatives continued for the constant improvement of interactions with customers, with a specific focus on upgrading the service model for Isybank customers, which involves assigning a dedicated digital relationship manager based on the portfolios assigned, similar to that used for the network of physical branches.

Further upgrades were also released to better integrate the channels of contact and improve the offering and the user experience.

For business customers:

- the NDCE Business platform for legal persons of Fideuram – Intesa Sanpaolo Private Banking and ISPB was released, with the opening of Family&Friends (the roll out phase will start in 2025);
- in relation to the digitalisation of the “Nuova Concessione” processes, the extension to the Retail SME segment was completed for the Short-term types, factoring in the innovative, digital elements already developed for Corporate and Corporate SME customers and introducing automated approval with the integration with the Affordability – Decision-Making Risk Engines;
- the Credit User Journey, a new process that simplifies the process of obtaining credit products for all Business customers (Retail SME and Corporate SME/Corporate) was enhanced with the release of Advances on invoices (Anticipo fatture) and integration of policies for credit lines in current accounts (Apertura di Credito in Conto Corrente - APC), and POS advances (Anticipo Transato POS - ATP);
- regarding payments, to offer increasingly simple, digital solutions, the POS offering of Intesa Sanpaolo and Nexi was expanded with the introduction of the SoftPOS PRO, the new technological solution designed for medium/large Corporate customers. The Visa Business Solutions service was also integrated to manage employees’ company credit cards for SME and Corporate customers;
- in order to completely dematerialise processes, the evolution of the Customer Journey for the business segment continued, with the closing of the paper-based process for managing signatures on the contractual documents generated by the Short-Term Uses Customer Journey and the POS Customer Journey, for all branches of Banca dei Territori;
- In order to offer business customers signed up for Inbiz an increasingly personalised and modern service, the page to access the online platform has transformed into a content-rich platform, enabling customers to obtain all the information on the available offerings and solutions. Moreover, two important features were released: Scambio Documentale and Onboarding Digitale, which allow customers to send company and personal documents, as an additional tool for remote dialogue, which saves time and guarantees data security and confidentiality.

The new Group Payment Hub platform was adopted by the main European branches, to create a centralised Group payment HUB.

The model of optimising and personalising prices was developed using AI, improving support to the relationship manager and the specialist, through chatbot systems in the phase of negotiating with customers.

In the International Banks Division (IBD), the gradual adoption of new digital features and services in Slovakia continued with the release of the remote offer and the gradual activation of customers.

As part of the Global Core HR programme, a long-term initiative aiming to define a new HR operating model and service, and to set up centralised management of the Group’s digital identities, in 2024 the extension to the Group banks and companies in scope was completed, according to the roadmap defined.

As part of the digital transformation of the Legal Affairs – Group General Counsel structure, the LexGO Portal was activated for Local Legal Advisory services (available for the Banca dei Territori branches since February 2024 and for the IMI C&IB structures since June 2024) which the enabled branches and offices can use to manage requests for legal assistance in place of the traditional channels (telephone and e-mail) through: “self-advisory” features that the tool can provide on its own for the most simple cases; an interface between the Local Legal Advisory and the branch/offices to manage requests for opinions; and an advanced archive to fetch the information on previously handled requests.

In relation to the measures envisaged by the developments in the regulatory framework, the multi-year initiative aimed at improving the structure of anti-money laundering safeguards continued, reducing the Bank’s exposure to risks and aligning the Group’s Anti Financial Crime model to international best practices. The new centralised Competence Centre model for AML transactional monitoring was also adopted by the Italian companies of the Private Banking Division, and is being further extended to the international subsidiary banks. The application of new processes and instruments continued, according to a gradual approach, to support due diligence activities in cases of sales of additional types of products and types of customers.

Lastly, the required activities were launched to meet the requirements of the new European Digital Operational Resilience Act (DORA)[29], which was fully implemented in January 2025.

---

[29] European regulation conceived to strengthen the digital operational resilience of all operators in the European financial sector, whose main goal is to guarantee that financial entities can adapt to and withstand unexpected events, maintaining an acceptable service level for the digital services needed by essential or important business functions.

Transformation and Innovation

As part of the 2022-2025 Business Plan, the Group has decided to accelerate the transformation process necessary to capture future opportunities and, to that end it has changed some key elements of its organisation. In 2024 within the Chief Governance, Operating & Transformation Officer Governance Area, it took place the activation of structures of the Chief Transformation & Organisation Officer Governance Area dedicated to governing transformation, organisation and innovation matters.

The measures included the activation of the Transformation structure as an important driver for the Group's evolution process and the extension of Innovation & Business Support Reengineering presidium to the areas of organisational innovation, with a focus on developing the value of customer centricity.

In this context, the Digital Process Transformation Programme continued to identify and activate measures to transform end-to-end processes, taking advantage of the opportunities offered by new technologies. During 2024, many important releases were made on the projects in scope, completing the digital transformations according to plan and confirming the expected efficiency benefits.

In the area of Digital Accessibility – in compliance with the relevant regulations – the remediation actions continued in 2024 (and in some cases were concluded) on several priority digital touchpoints (websites and apps) of the Group's Italy Scope. As part of the project, the remediation was also completed on the architectural components planned for designing digital touchpoints for customers, and a pilot initiative and a POC (Proof of Concept) were conducted to define the best remediation approach on non-web documents (ex. PDFs and other types of documents posted and available on websites and apps). In addition, several important process guides and internal documents were further fine-tuned to guarantee a framework of accessibility by design, and the content for Accessibility training pills was prepared for all personnel in the Group's Italy Scope, also holding various workshops to transfer know-how to specific professionals of several business units of the Group.

Cybersecurity & Business Continuity Management

As part of the goals of the 2022-2025 Business Plan, Intesa Sanpaolo recognises cybersecurity as a strategic priority, essential to protect company and customer information, as well as to consolidate the overall resilience of the national economic system. In this view, in 2024, the Chief Security Officer Governance Area was established. This structure organically integrates corporate & physical security with cybersecurity and business continuity. Through this reorganisation, Intesa Sanpaolo aims to have a single point of reference for managing security solutions, while ensuring clear resource governance, effective organisation of priorities, compliance with regulations and the adherence to the best international security standards.

The Group's cybersecurity model is formed by a Strategy and an Action Plan that includes initiatives targeted to strengthening the controls against cyber threats and fraud, effectively managing vulnerabilities, improving operating resilience, disseminating a culture of cybersecurity and constantly aligning with regulations, to guarantee compliance with the rules in force on cybersecurity and business continuity.

Specific attention was focused on upgrading technologies and cybersecurity processes, such as strengthening secure backup infrastructures, anti-fraud rules and defence systems against cyber attacks. In addition to these initiatives, aimed at protecting the Group's critical systems, contributing to preventing incidents with critical third parties and improving overall risk management, Intesa Sanpaolo further strengthened its partnerships, including strategic partnerships, with the authorities (e.g. National Cybersecurity Agency) and the main European institutions (e.g. European Banking Federation) to actively contribute to raising the levels of cybersecurity of the entire international financial sector.

In 2025, with the completion of the initiatives set out in the 2024 Action Plan, the Bank will continue building on the results achieved, further enhancing its security model in line with the strategic objectives of the 2022-2025 Business Plan. This process forms a key element in building a secure, resilient digital ecosystem, strengthening the confidence of the community and consolidating our competitive advantage.

GEOGRAPHICAL AREAS

(millions of euro)

	Italy	Europe	Rest of the World	Total
Operating income				
2024	20,463	5,485	1,159	27,107
2023	19,288	4,925	1,014	25,227
% change	6.1	11.4	14.3	7.5
Loans to customers				
31.12.2024	328,491	69,808	23,213	421,512

Breakdown by geographical area is carried out with reference to the location of Group entities.

Figures restated, where necessary and material, considering the changes in the scope of consolidation and in business unit constituents and discontinued operations.

With regard to the subdivision by geographical areas of operations, carried out with regard to the location of the entities comprising the Group, activities continued to be concentrated primarily in the Italian market. Italy accounted for 75% of revenues, 78% of loans to customers and 84% of direct deposits from banking business.
With regard to operating performance in 2024, loans to customers decreased in Italy, but grew in Europe and the rest of the world. Direct deposits from banking business, on the other hand, increased in all the geographical areas: Italy, Europe and Rest of the World.
For details on the Group’s presence in Italy and abroad, refer to the graphic representation at the beginning of this document (The Intesa Sanpaolo Group: presence in Italy - international presence).

Consolidated Sustainability Statement

Executive Summary

Recognised internationally, Intesa Sanpaolo Group's commitment to ESG matters is built on the awareness of the major impact its actions have on the environmental and social framework in which it pursues its business. Sustainability is incorporated in all its dimensions into business strategies and in our model for creating sustainable value for all our stakeholders, in which performance and financial outcomes are strictly tied to the welfare of the Group's people, our customers, and the communities and local areas where we operate.

The introduction in the European Union of the new Corporate Sustainability Reporting Directive marks a giant leap forward on previous reporting models, allowing the extent to which the Group's commitments are incorporated into business strategies to be appreciated in terms of real outcomes. This Consolidated Sustainability Statement is our first disclosure based on the new directive. Replacing what was the consolidated non-financial statement, it has been included with the financial statements in the annual report, in a specific section of the Report on operations, to stress how sustainability is a fundamental and inseparable aspect of company performance, on par with our financials. The Statement is organised according to the specific topical standards outlined by the European Sustainability Reporting Standards (ESRS), which cover the three ESG dimensions of sustainability and provide a common, standardised framework to ensure the comparability and quality of disclosures.

The Group's commitment to ESG matters is underpinned by an expanded ESG governance system, which led to the transformation of the Risks Committee into the Risks and Sustainability Committee and the appointment of a Chief Sustainability Officer, with the creation of a relative governance area to steer Group sustainability strategies. In support of ESG efforts, in 2024 the ESG Control Room was expanded and tasked with strategically supporting the Steering Committee.

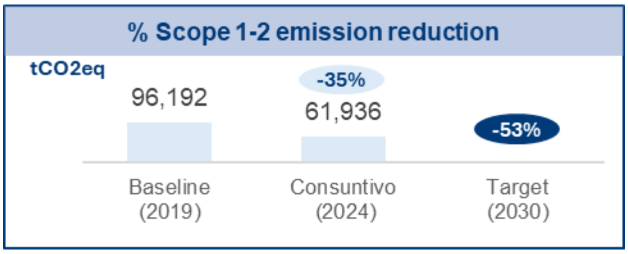
Finally, the Group places central importance on ESG perspectives in the incentive system through a dedicated KPI. Specifically, the ESG component is central in the variable remuneration of the Managing Director and CEO, making up 15% of the annual incentive system. Similarly, the Performance Share Plan (PSP) includes a composite ESG KPI that scales the accrued bonus according to three key components: 40% Environmental, 40% Social and 20% Governance.

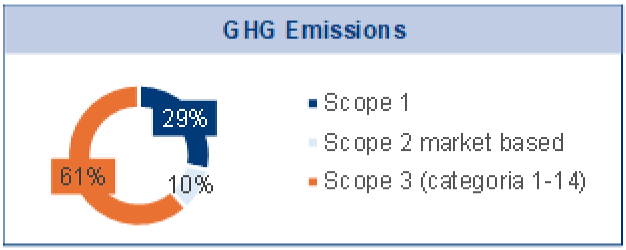
The identification of the sustainability topics most relevant to the Group, which form the framework of the Consolidated Sustainability Statement, was based on a double materiality assessment, which looks at the Group's impacts on the environment and society, on the one hand, and the risks and opportunities tied to sustainability topics that can affect its financial performance, on the other. The impacts, risks and opportunities considered cover the full length of the value chain. The specific policies, actions, targets and metrics adopted for their management and monitoring are outlined below.

E–Environmental

Climate Change

The Group pursues its ongoing commitment to furthering the transition toward a sustainable economy by setting concrete and ambitious emission reduction targets.
Within the scope of its own operations, the Group has set an Own Emissions Plan that aims to reduce scope 1 and 2 emissions by 53% by 2030, with respect to 2019 levels. At the end of 2024, emissions had fallen by as much as 35%. To achieve that target, the Group aims to purchase 100% renewable electricity by 2030. At the end of 2024, the percentage was 93%. Other decarbonisation levers identified include: (i) further actions to reduce both energy consumption and the fossil fuel dependency of Group buildings (such as the installation of heat pumps, photovoltaic panels and energy management and monitoring systems) and (ii) the transition to electric and hybrid vehicles in the company fleet, with the installation of recharging stations.





In relation to financed emissions, the Group is working towards a net-zero goal by 2050, with intermediate portfolio emission targets set for 2030 focusing on the biggest emission sectors (oil & gas, automotive, power generation, residential real estate, commercial real estate, agriculture – primary farming, aluminium, cement, iron & steel and coal mining, with the full phase-out of the latter by 2025). In addition, the Group followed up on the net-zero commitment outlined in the 2022–2025 Business Plan and submitted its targets to the SBTi in 2024, obtaining validation in January 2025.
The Group's "Sectoral Transition Plan" outlines for each sector the strategic actions to be implemented to achieve the targets set. Those actions include:

– the development of dedicated finance for initiatives that help reduce carbon emissions (such as loans for renewable energy, sustainable agriculture, electric mobility, carbon storage technology and green hydrogen);

- the consolidation of the commercial proposition for the Real Estate sector with products (such as Green–Mutuo Domus and Orizzonte Impresa–Transizione Energetica) for the purchase, construction or renovation of properties with a high energy performance or to improve the energy rating of buildings. The Group has set itself the target of providing 12 billion euro of Green Mortgages over the horizon of the business plan, for the development of high energy-efficiency real estate and for energy improvements to existing properties. Since 2022, 9 billion euro of Green Mortgages have been provided, of which 4.1 billion euro in 2024 alone;
- the creation of sustainability-linked loans, offering incentives for the delivery of decarbonisation objectives;
- the promotion of advisory services to assist customers in reducing their emissions and developing tailored decarbonisation strategies.

The Group has also adopted "ESG Risk Governance Guidelines" outlining a risk governance model based on materiality assessments of ESG factors in relation to the various risk categories (credit risk, market risk, operational risk, liquidity risk and reputational risk) and their incorporation into the various risk management areas.
With regard to lending operations, ongoing controls are in place for high emission-intensity sectors, with specific rules for lending to the oil & gas and coal sectors (with a phase-out deadline of 2025 for non-conventional oil & gas resources and coal mining).
The Group has set out an ESG/Climate Credit Framework for lending processes, organised on three levels:
- by sector, with an "ESG Sectoral Strategy – colour coding" scheme that takes into consideration risks and opportunities and creates a sectoral "heatmap" to identify the attractiveness of sectors and relative credit strategy;
- by counterparty, with the introduction of ESG scoring at the counterparty level, incorporated into credit strategies and the credit risk appetite (CRA);
- by transaction, involving an internal framework for classifying sustainable lending transactions and products.

The attention focused on climate change extends throughout the supply chain, with strict screening and monitoring criteria adopted by the Group, based on ESG principles. In 2024, the completion of an ESG questionnaire, aimed at mapping the sustainability profiles of suppliers on the environmental and social dimensions and setting improvement plans, became mandatory for suppliers to bid for contracts through the Group Supplier Portal. The Group's objective is to complete the ESG mapping of all active suppliers by the end of 2025. At the end of 2024, 86% progress had been made in the activity.

Pollution, Biodiversity and the Circular Economy

Alongside climate change, the Group is similarly devoting great effort to other material environmental topics, such as pollution, biodiversity and the circular economy.

In 2024, the Group prepared "Rules on Biodiversity and Nature", which were adopted in January 2025. The rules outline the approach to biodiversity and nature issues in relation to lending activities, wealth management & protection and direct impacts.
Applicable to all the Group, the rules also set out exclusion, heightened assessment and risk monitoring criteria for lending to new projects and counterparties. The exclusion criteria consider the location of projects and counterparties, their industry sector and certain categories of projects with a potentially negative impact on diversity and pollution. The rules additionally set out criteria for new lending, with the aim of promoting and protecting biodiversity and nature.

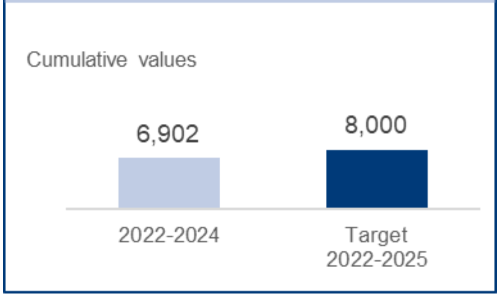
The ESG score incorporated into the credit framework, and used by the Group to assess the ESG profile of corporate customers, similarly considers components relating to biodiversity, natural resources and pollution.
The Group offers various financing solutions to support enterprises in their ecological transition, such as "S-Loan Progetti Green" and loans backed by SACE Green guarantees.

Finally, Intesa Sanpaolo Group continues to promote the circular economy with the Ellen MacArthur Foundation, as Strategic Partner since 2015, and with the contribution of the Intesa Sanpaolo Innovation Center (ISPIC), the Group's innovation pioneer and competence centre for the circular economy. More specifically, the Group has incorporated principles into lending process that promote circular business models, earmarking 8 billion euro in support of the circular economy, in line with the green and circular economy criteria of the internal framework.

S–Social

Own Workforce

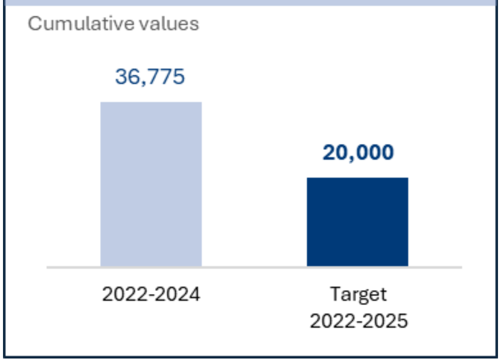
One of the overriding goals of the Group is to invest in its people and ensure their constant growth and satisfaction. That includes promoting their protection and development, respect for human rights and diversity and inclusion, to create a unique pool of skills and abilities able to support the Bank's future growth.
In this respect, the Group strives to promote respect for human rights and foster a corporate culture based on respect for the person and individual dignity by safeguarding the rights of employees, combating any direct or indirect form of forced or child labour and protecting the physical and moral integrity of all Group people.



No. of people involved in upskilling/reskilling programmes

The Group has adopted targeted policies to ensure the protection and development of its human capital. One example is the roll-out of a training plan for the upskilling and reskilling of people to enhance their key contribution to high value-added strategic activities, as envisaged by the 2022–2025 Business Plan. At the end of 2024, 6,902 people had been reached by programmes focused on digital skills, change management and sustainability.

The Group focuses special attention on diversity and inclusion issues, as set out in the Diversity, Equity and Inclusion (DE&I) Principles approved by the Board. One of the targets set by the 2022–2025 Business Plan for the Group is to achieve a gender balance (approx. 50% men and 50% women) in new appointments to senior positions – first and second reports to the CEO, with progress toward that goal monitored by the DE&I Control Room on a quarterly basis. On the basis of the organisational structure in place as at 31 December 2024, over the period 2022–2024 25 appointments were male and 25 appointments were female.
The development of female talent is encouraged through job rotation plans, shadowing programmes, training and female empowerment. Efforts also focus on disabilities, with the accessibility of IT systems guaranteed and awareness-raising promoted through training initiatives.
Finally, cooperation has been stepped up with ISPROUD, the first community bringing together LGBTQ+ people and allies in the Group.



No. of people in "job communities"

Training and people development are a fundamental pillar in which the Group continues to invest, with a view to creating a unique pool of skills and abilities matched to future challenges. In this regard, the Group has further expanded delivery of mandatory training, with methods and user criteria governed by internal rules. All employees are required to complete mandatory training, so as to ensure the proper performance of their tasks, full knowledge of company procedures and processes and compliance with the requirements of supervisory authorities.

To support the development of a comprehensive approach to growing and enhancing the professional contribution people make, job communities have been created, grouping together professionals with like interests, skills and learning paths.
While the target set in the 2022–2025 Business Plan was to involve a total of 20,000 people in the initiative by December 2025, that goal was surpassed in 2024 with 36,775 people reached.

Another initiative through which the Group is working towards its objectives is the "Future Leaders" programme, which aims to develop a new generation of managers and leaders with a broad perspective and international mindset through personalised training paths. With a target of 1,000 people to be engaged in the programme over the horizon of the 2022–2025 Business Plan, to date 975 people have already been reached.

Growing importance continues to be attached to the health, safety and welfare of people. The Group has stepped up its monitoring of workplace safety and runs a health surveillance programme covering around 50,000 people. A counselling service is also available 24/7 for all Group people in Italy and abroad.

Finally, to promote and protect the welfare of Group people, a series of initiatives has been activated to improve the work-life balance of people. Examples include the adoption of a company welfare plan and new working arrangements, such as the "Next Way of Working" project, the short working week, initiatives in support of parenting responsibilities and the "Time Bank".

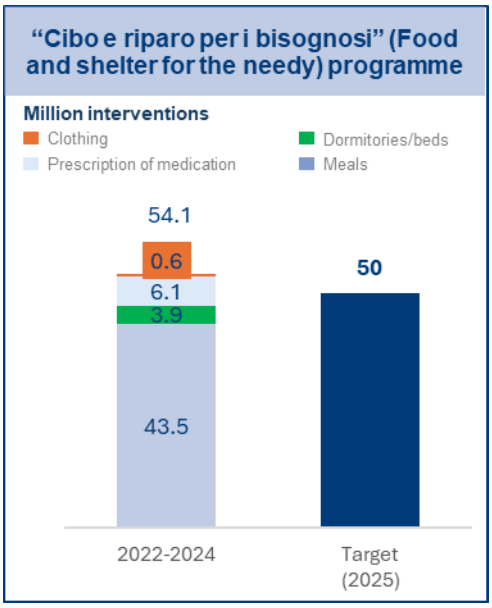
No. of people enrolled in talent management programmes (Leaders of the Future)

Workers in the Value Chain

In line with Group principles, an ESG assessment system has been introduced to check that suppliers respect workers' rights and ensure safe working conditions, as well as their compliance with Group policies. Those policies include the Code of Ethics, the Group's Internal Code of Conduct, Anti-corruption Guidelines, the Diversity, Equity and Inclusion Principles, the Organisational, Management and Control Model in accordance with Legislative Decree 231/2001 and the General Conditions of Supply. Acknowledgement of the policies is an essential requirement for all suppliers registered on the Group Supplier Portal.

The Group additionally considers the ESG risks associated with the businesses of corporate customers, through the incorporation of ESG criteria in the loan approval process. The general exclusion criteria set forth in the ESG Risk Governance Guidelines excludes Group lending to companies and projects that may have an adverse material impact on society (such as companies that make use of forced or child labour).

Affected communities



The Group places great importance on projects that promote growth and social, educational, cultural and civic inclusion in the communities where it operates. The Group has a deep-rooted and active history of support for disadvantaged groups of people, young people, local communities and areas, and the promotion of Italy's artistic and cultural heritage. It is a commitment reflected also in the creation of the governance area of the Chief Social Impact Officer.

One initiative of particular importance adopted under the Social Action Plan is the "Food and shelter for the needy" programme. As the biggest plan ever to be activated by a private entity in Italy, it involves the widespread distribution of food, beds, medicines and clothing to people in need throughout national territory.
To do that, a variety of profit and non-profit partners have been engaged to reach as many beneficiaries as possible.
Overall, since the start of the Business Plan, the Group the Group has carried out 54.1 million interventions, of which 17.3 million interventions in 2024 alone.

A series of additional initiatives are in place to support people living in fragile socio-economic situations and foster greater social cohesion (such as social housing for students and families) and to promote the training and employment of people in vulnerable social or economic circumstances (such Youth & Work).

The Charity Allowance similarly works towards the social objectives set out in the Business Plan, providing support for people in fragile situations. In 2024, it provided around 23 million euro in funding for 814 projects pursued by non-profit organisations.
Finally, with a view to promoting art and culture in the local areas where it operates, the Group runs a "Culture Project" involving initiatives developed with public and private players and institutions for the promotion of artistic heritage.

Consumers and End-Users

The Group places a special focus on customer satisfaction and the promotion of responsible sales practices, adopting a strategy that combines service quality, transparency and continuous listening to consumers. One of the main tools used to gauge customer satisfaction levels is the Net Promoter Score (NPS), which measures the likelihood of customers recommending the Bank's products and services. In 2024, the NPS was based on more than 657,000 surveys.
In line with its goal of delivering a high quality of service, the Group has adopted specific guidelines for the management of customer complaints, ensuring a structured and transparent process that complies with regulations in force.

At the same time, the group has shored up its capacity to prevent and respond to cyber-attacks, reflecting a constant commitment to data protection, customer security and compliance with the General Data Protection Regulation (GDPR). Specifically, advanced machine learning and data analytics solutions have been implemented for the detection and proactive mitigation of threats, with mandatory training provided on data protection awareness.
Another measure to ensure operational security and resilience in 2024 was the creation of the governance area of the Chief Security Officer (CSeO), responsible for cybersecurity, business continuity and physical security. The new area ensures a strategic and integrated vision of protection for the Group by setting advanced operational policies and models to effectively address emerging challenges in the area of cybersecurity and business resilience.

In 2024, 271 data breaches occurred involving the loss or theft of data relating to Group customers. Assessments found no risk to the rights and freedoms of the data subjects in 252 of those cases, for which there was no need to notify data protection authorities. For the remaining 19 cases, notifications were made on a necessary or prudent basis to the Italian Data protection Authority or the relevant country authority.

The protection of consumer health and safety is another fundamental pillar of the sustainability strategy. Accordingly, the Group has joined with the Italian Banking Association and OSSIF under a memorandum of understanding for the prevention of bank crime, to protect banking institutions and their customers from crimes such financial fraud and robbery.

The Group also works extensively to support and further the social inclusion of vulnerable groups in the population, through actions aimed to expand fair access to financial services and support the economic fabric.
In this regard, a wide range of products has been developed, featuring solutions of great social impact. They include:
- Mutuo Giovani;
- Gamma Impact (in particular, "Per Merito" and "mamma@work");
- Business Gemma loans and microcredit;
- Personal loans and anti-usury mortgage loans;
- Credit for Community Development (CRE.S.Co).

Finally, ESG Workshops continued to be organised, providing a physical and virtual space in support of SMEs in their sustainable transition. The total number of workshops organised rose to 16 in 2024, surpassing the original target of 12 workshops by 2025.

G–Governance

Business conduct in the Group is underpinned by a sound governance system built on the principles of integrity, transparency and accountability. These values are formally enshrined in the Code of Ethics, which provides the fundamental framework for steering the strategies and conduct of people in the Group.

In line with the best international standards (such as the UN Global Compact), a cardinal principle of the Group is zero tolerance of corruption, as formalised in the Anti-corruption Guidelines and incorporated into the Organisational, Management and Control Model adopted in accordance with Legislative Decree 231/2001.

Another guarantee of transparency and accountability is the Group's whistleblowing system. Active 24/7, it ensures the confidentiality of reports and the protection of whistleblowers against any form of retaliation. The Chief Audit Officer is responsible for the management of the process. The attention focused on transparency extends throughout the supply chain, with strict screening and monitoring criteria adopted by the Group, based on ESG principles.

The Group also stands out for the transparent management of its dealings with institutions and responsible approach to advocacy. The funding of political parties is prohibited.

General disclosures

ESRS 2 – General disclosures

Basis for preparation and methodology

Reporting standards

This Sustainability Statement (the “Statement”) has been prepared on a consolidated basis by the Intesa Sanpaolo Group (the “Group” or the “ISP Group”) pursuant to Legislative Decree no. 125 of 6 September 2024 which implements Directive 2022/2464/EU on corporate sustainability reporting in national law, and in accordance with the European Sustainability Reporting Standards (the “ESRS”), referred to in Delegated Regulation (EU) 2023/2772. The Manager responsible for preparing the Company’s financial reports, in collaboration with the Managing Director and CEO, certifies, with a specific report, that the Sustainability Statement included in the Report on operations has been prepared:

- in accordance with the above-mentioned reporting standards and Legislative Decree no. 125/2024;
- the specifications adopted pursuant to Article 8 of Regulation (EU) 2020/852 (Taxonomy Regulation).

The 2024 Consolidated Sustainability Statement is subject to a limited assurance engagement by the independent auditors EY S.p.A., which also carry out the statutory audit of the financial statements. In their report, the independent auditors express their conclusion as to the compliance with:

- the reporting standards adopted by the European Commission in accordance with Directive (EU) 2013/34/EU (European Sustainability Reporting Standards, hereinafter also “ESRS”);
- Article 8 of Regulation (EU) No. 852 of 18 June 2020 (hereinafter also referred to as the “Taxonomy Regulation”) of the information contained in the section “Reporting pursuant to the EU Taxonomy (Regulation (EU) 2020/852)” of the Consolidated Sustainability Statement 2024.

Reporting boundary

The consolidated financial statements are the basis of the 2024 Sustainability Statement. In the first year of application of the above-mentioned regulatory framework, the Group adopted an approach which assesses the significance of each subsidiary for the purposes of complete and representative disclosure, also based on the effort to retrieve information and the significance of the impact in terms of disclosure resulting from its inclusion.

Therefore, an analysis was conducted in order to identify the significance of the social and environmental impacts and risks of each entity, considering, in particular, the following variables:

- the type of business carried out by the companies;
- the number of full-time equivalent employees (FTE).

The analysis showed that 62 companies account for 99% of total assets and full-time equivalent employees of the ISP Group.

Given the limited significance of the subsidiaries not included in the 2024 Sustainability Statement, the reporting boundary is deemed adequate to ensure the provision of the information necessary to understand the Group's impact on sustainability matters, as well as how it affects the Group's performance, results and financial position.
The possible extension of the reporting boundary to other subsidiaries will be assessed annually in line with the evolution of the business and the profile of the risks to which the Group is exposed.

The subsidiaries making up the reporting boundary of the Consolidated Sustainability Statement are listed below.

Reporting boundary of the Consolidated Sustainability Statement at 31 December 2024	
Acantus S.p.A.	Intesa Sanpaolo Harbourmaster III S.A.
Banca Comerciala Eximbank S.A.	Intesa Sanpaolo House Luxembourg S.A.
Banca Intesa AD Beograd	Intesa Sanpaolo IMI Securities Corporation
Bank of Alexandria S.A.E.	Intesa Sanpaolo Innovation Center S.c.p.a.
Banka Intesa Sanpaolo D.D.	Intesa Sanpaolo Insurance Agency S.p.A.
CIB Bank Ltd.	Intesa Sanpaolo International Value Services D.O.O.
CIB Insurance Broker Ltd.	Intesa Sanpaolo Private Banking S.p.A.
CIB Leasing Group Ltd.	Intesa Sanpaolo Protezione S.p.A.
Epsilon SGR S.p.A.	Intesa Sanpaolo Rent Foryou S.p.A.
Eurizon Asset Management Croatia D.O.O.	Intesa Sanpaolo Romania S.A. Commercial Bank
Eurizon Asset Management Hungary Ltd.	Intesa Sanpaolo S.p.A.
Eurizon Asset Management Slovakia, správ.spol. A.S.	Intesa Sanpaolo Servitia S.A.
Eurizon Capital Real Asset SGR S.p.A.	Intesa Sanpaolo Wealth Management S.A.
Eurizon Capital S.A.	Isybank S.p.A.
Eurizon Capital SGR S.p.A.	Joint-Stock Company Banca Intesa
Exetra S.p.A.	Joint-Stock Company Intesa Leasing
Fideuram - Intesa Sanpaolo Private Banking S.p.A.	Pbz Card D.O.O.
Fideuram Asset Management (Ireland) DAC	Pbz Leasing D.O.O.
Fideuram Asset Management SGR S.p.A.	Porta Nuova Gioia
Fideuram Vita S.p.A.	Pravex Bank Joint-Stock Company
First Bank S.A.	Prestitalia S.p.A.
IMMIT - Immobili Italiani S.r.l.	Private Equity International S.A.
Immobiliare Cascina Rubina S.r.l.	Privredna Banka Zagreb D.D.
Insalute Servizi S.p.A.	REYL & Cie S.A.
Intesa Leasing D.O.O. Beograd	Reyl Finance (MEA) Ltd.
Intesa Sanpaolo Albania SH.A.	Risanamento S.p.A.
Intesa Sanpaolo Assicurazioni S.p.A.	SIREF Fiduciaria S.p.A.
Intesa Sanpaolo Bank Ireland Plc.	Eurizon Slj Capital Ltd.
Intesa Sanpaolo Bank Luxembourg S.A.	Vseobecna Uverova Banka A.S.
Intesa Sanpaolo Banka D.D. Bosna I Hercegovina	VUB Generali Dochodkova Spravcovska Spolocnost A.S.
Intesa Sanpaolo Brasil S.A. - Banco Multiplo	VUB Operating Leasing

Pursuant to Article 7 of Legislative Decree no. 125/2024, governing the rules of exemption form the preparation of individual sustainability statements, it is noted that the subsidiaries Intesa Sanpaolo Assicurazioni S.p.A. and Vseobecna Uverova Banka A.S. (both issuers of publicly traded securities) are required to prepare sub-consolidated sustainability statement as they do not meet the exemption criteria.

Reporting boundary

The Consolidated Sustainability Statement covers the following three macro-areas:
- Own operations;
- Upstream value chain, i.e. all Group's operating processes relating to the supply chain and the adopted procurement practices. The disclosure about the upstream value chain focuses, in particular, on risk management methods, including the reputational risks related to suppliers without control tools over sustainability matters[30];
- Downstream value chain, i.e. all the Group's business processes and their supporting processes, including business relationships. The disclosure about the downstream value chain focuses, in particular, on impact management methods and the risks associated with undertakings including financing and investment portfolios which may contribute negatively to sustainability matters due to their business sector or country[31].

Reporting on own operations includes policies, actions, goals and metrics related to sustainability matters which are deemed relevant to the outcomes of the Group's double materiality assessment, including organisation-specific disclosures.
In addition to the disclosure requirements of the ESRS for each topic, the ISP Group has identified entity-specific information, i.e. areas that are not comprehensively covered by the ESRS, but that need specific reporting in order to complete the description of the Group's sustainability impacts, risks and opportunities provided to all stakeholders. Entity-specific disclosure was identified and prepared in accordance with the principles set out in Appendix A to ESRS 1. It is included in the "Content index" section of this statement, in the final part of the Consolidated Sustainability Statement.

[30] For additional information, reference should be made to the "Double materiality assessment" section and the chapters covering specific sustainability matters.
[31] For additional information, reference should be made to the "Double materiality assessment" section and the chapters covering specific sustainability matters.

With respect to the Value chain, the disclosure provided in this Consolidated Sustainability Statement includes both qualitative information about the Group's policies, actions and targets to manage and monitor material sustainability matters for the upstream and downstream value chain, and quantitative information about greenhouse gas emissions ("GHG emissions[32]") and portfolio entity-specific metrics (downstream value chain).
Based on ESRS 1 transitional provisions, the Group opted not to apply the disclosure requirements that are being gradually introduced and that may be omitted in the first year of reporting pursuant to the ESRS.
In accordance with said transitional provisions, the Group disclosed information on the policies, actions and targets of its Value chain, using information already available in-house or publicly available information.

No information on intellectual property, know-how or classified as sensitive was omitted.

Time horizons

The Consolidated Sustainability Statement includes forward-looking information for which the Group decided to adopt a time horizon that is in line with that envisaged by other disclosure requirements, such as Pillar 3 or management disclosure. A five-year time horizon qualifies as medium term[33] and a time horizon ranging between five and 25 years qualifies as long term[34]. The definition of medium-term time horizon is in line with the Business Plan, while that of long-term time horizon matches the commitments arising from the Group's decision to adopt the 2050 Net Zero climate goals.

Use of estimates

Value chain

In preparing the Consolidated Sustainability Statement, the Intesa Sanpaolo Group used estimates and indirect sources to disclose the metrics of ESRS E1 – Climate change relating to:
- Scope 3 indirect greenhouse gas emissions[35] (disclosure requirement E1-6 related to the upstream and downstream Value chain). Scope 3 GHG emissions include the indirect greenhouse gas emissions generated along the undertaking's value chain, arising from indirectly held or controlled activities (e.g., waste disposal by third-party companies);
- the quantification of physical risk on portfolio exposure (disclosure requirement E1-9 on the Downstream value chain)[36].

The Group's ability to obtain the necessary upstream and downstream Value chain information may vary depending on various factors, such as the undertaking's contractual arrangements, the level of control that it exercises on the operations outside the consolidation scope and its buying power. Obtaining Value chain information could also be challenging in the case of counterparties that are not in the scope of the sustainability reporting required from time to time.
In accordance with ESRS 1, the ISP Group made every reasonable effort to collect the quantitative information concerning the Value chain. Where it was not possible to gather information about greenhouse gas emissions directly from actors in the Value chain, the Group's estimations were based on the information arising from sector-average data and other proxies.

The data sources and estimation methods used to calculate proxy values reflect the variety of cases and the counterparties involved. Generally speaking, the preparation of the above estimations is based on two main reference frameworks, i.e.:
- the GHG Protocol to calculate Scope 3 emissions on the upstream and downstream Value chain;
- the PCAF[37] to calculate Scope 3 emissions of the only category relating to financed emissions.

The method for estimating Scope 3 emissions from the Italian Banking Association's Sector guidelines were also considered.
Using nationally and internationally recognised calculation standards, as well as sector-specific approaches, limits the risk of data inaccuracy.

Finally, the Group constantly considers the possibility of increasing data accuracy, by directly engaging counterparties (companies in portfolio and suppliers) and via data providers specialised in the collection of third-party environmental data.
For additional information about calculation methodologies, estimations and the percentage share of Scope 3 emissions calculated on the basis of the official figures directly provided by the counterparty, reference should be made to the Metrics on greenhouse gas emissions section in ESRS E1 – Climate change.

The methodology used to quantify the physical risk on portfolio exposures is currently being developed within the Group and at sector level. Specifically, in order to identify the exposures subject to the climate change physical risk, the Group uses an external tool to map and measure the risks for each individual property by:
- mapping physical risks using long-term climate scenarios and subsequently allocating the climatological forecasts to high granularity grids with the calculation of hazard-specific indicators;
- calculating a high granularity synthetic physical risk indicator (SPRI) for each location based on the geo-localisation of offices and production sites for companies in portfolio, and of the building for properties provided as collateral, identifying and subsequently allocating the associated risk level. Following the assignment of the SPRI, the decision whether or not an exposure is subject to physical risk weather events is based on two criteria: maturity of the exposure and evolution of the severity of the estimated physical risk indicator.

[32] Greenhouse gas emissions.
[33] Section 6.4 of ESRS 1 defines the medium-term time horizon from the end of the reporting period up to five years.
[34] Section 6.4 of ESRS 1 defines the long-term time horizon as more than five years.
[35] For additional information about Scope 3 emissions, reference should be made to the Metrics on greenhouse gas emissions section in E1 – Climate change.
[36] The Group applies the transitional provisions that provide for the gradual implementation of the E1-9 disclosure requirement. In this statement, it only covers equivalent information, also presented in Pillar 3 disclosure.
[37] Partnership for Carbon Accounting Financials.

Own operations

The Intesa Sanpaolo Group used estimations also to calculate other metrics, such as E1-5 (energy consumption), E1-8 (portion of emissions covered by internal carbon pricing) and S1-14 (work-related accidents). For additional information about the calculation methodologies and the estimations made, reference should be made to the Metrics on energy consumption and the Metrics on greenhouse gas emissions section of ESRS E1 – Climate change and to the Metrics related to health and safety section of ESRS S1 – Own workforce.

Finally, no metrics were subject to assurance processes in addition to those carried out by the independent auditors on the Consolidated Sustainability Statement.

Comparative information

The Consolidated Sustainability Statement of the Intesa Sanpaolo Group is the first report drawn up in accordance with the ESRS, instead of the previous Consolidated Non-financial Statement prepared under the Global Reporting Initiative (GRI) standards. Consequently, the quantitative disclosure about metrics covers 2024 only as the Group opted to apply the ESRS transitional provisions (ESRS 1, par. 136).

Incorporation by reference

In 2024, the Group did not avail of the incorporation by reference option.

Statement on due diligence

The Intesa Sanpaolo Group identified due diligence processes that enable the identification and management of the negative impacts arising from own operations or from the upstream and downstream value chain. The due diligence actions carried out by the Group are embedded in the strategy and the current business model. After identifying negative impacts, the Group assesses and takes the actions necessary to manage and contain these impacts, including through its products and business relationships.
The following table shows the core elements of due diligence that are reflected in this Statement:

Core elements of due diligence	Sections of the Consolidated Sustainability Statement
Embedding due diligence in governance, strategy and business model	General disclosures: Strategy, business model and value chain General disclosures: Governance structure General disclosures: Double materiality assessment
Engaging with affected stakeholders in all key steps of the due diligence	General disclosures: Double materiality assessment
Identifying and assessing adverse impacts	General disclosures: Double materiality assessment Materiality process on impacts, risks and opportunities: E1 / E2 / E4 / E5 / S2 / S3 / G1
Taking actions to address those adverse impacts	E1 Climate change: Strategy to combat climate change at portfolio level E2 Pollution: Policies, targets and actions at portfolio level E4 Biodiversity and ecosystems: Policies, targets and actions at portfolio level E5 Resource use and circular economy: Policies, targets and actions at portfolio level S2 Workers in the value chain: Manage sustainability matters related to workers of portfolio companies S3 Affected communities: Affected communities by the undertakings included in the Group's portfolios G1 Business conduct: Policies, targets and actions related to business conduct
Tracking the effectiveness of these efforts and communicating	E1 Climate change: Strategy to combat climate change at portfolio level

With respect to ESRS E1 - Climate change, monitoring the identified negative impacts depends on the definition of specific targets at portfolio level. For the other matters whose impacts were identified and assessed in the downstream Value chain, the Group has not yet adopted measurable quantitative targets. However, through the policies and actions adopted, as described in the following chapters of this Statement, it has control tools that enable it to manage material impacts.

Strategy, business model and value chain

Strategy

The Intesa Sanpaolo Group's business model combines the generation of sustainable revenues focused on increasing fee and commission and revenues from services, high efficiency and a low risk profile. This configures a distinctive and diversified business model, both with respect to the business areas in which the Group operates and internationally. This model shows the Group as a wealth management and protection company, with a leading role in Italy and Europe.

The integration between product factories, covering portfolio management scheme, life and non-life insurance, and the Group's commercial networks, which ensure high synergies in terms of profitability and greater effectiveness and flexibility in defining the commercial offering, is another mainstay of the business model.

Furthermore, the strategy is based on the awareness that People are the Group's main resource and the enabling factor for its future success. At 31 December 2024, the Group's workforce numbered 93,539 people, of whom 71,174 based in Italy and the remaining 22,365 based abroad, with a significant share in Central/Eastern Europe. People's ongoing enhancement, growth and satisfaction are the fundamental objectives to be pursued by investing in talent, in order to create a single ecosystem of competencies that are appropriate to the evolution of the Group, in which employees are its key actors. The collection of ideas and suggestions from approximately 58,000 employees as part of the definition of the 2022-2025 Business Plan confirms the importance of people, as well as the identification of the key value pillars of the corporate mission.

The 2022-2025 Business Plan is based on a series of strategic initiatives grouped into four main action areas (the "pillars" of the Plan), which are pursued in accordance with the principles of integrity in corporate conduct and human rights along the entire value chain:

- structural risk reduction strategy - already launched with success in the previous Business Plan - positioning the Group among the best in Europe in terms of NPL ratios and stock (a Zero-NPL bank) and generating a sharp drop in the cost of risk;
- structural cost reduction, driven by technological innovation and various strategic initiatives aimed at improving operational efficiency, including the creation of the Isybank digital bank;
- increase in fee and commission by strengthening the Group's leadership in Wealth Management, Protection and Advisory through highly customised products and services, leveraging proprietary product factories, the international network, highly qualified specialists and dedicated technology tools and platforms;
- significant ESG commitment, with a worldwide leadership position in social impact and a strong focus on climate, reducing own emissions and supporting the energy transition in order to balance environmental and social needs.

The Intesa Sanpaolo Group's strategy is closely linked to sustainability matters as part of the fourth pillar, which is focused on ESG issues and whose specific objectives are discussed in the chapters covering the various standards. In this respect, the Group focuses on the following key topics:

- support to address social needs: donations and in-kind contributions, promotion of educational inclusion and youth employability, development of locally supported infrastructure and services, development of social housing for youth in Italy, and care facilities for the elderly;
- financial inclusion: contribution and credit access opportunities through the development of products dedicated to the most vulnerable social categories and contributing to the ability of customers to meet their primary needs;
- commitment to culture: promotion and development of culture (e.g. Gallerie d'Italia and Progetto Cultura activities that manage the Bank's art assets and archive collections) to promote the local area and share Italy's artistic and cultural heritage with institutions and citizens;
- promote innovation: target actions taken within the Group and with the support of companies as part of acceleration and innovation projects and the activities promoted by Intesa Sanpaolo Innovation Center (ISPIC)[38];
- accelerate on commitment to Net-Zero: pursue the Group's climate strategy in both own operations and the portfolios held. This strategy translates into the promotion of energy efficiency, the use of renewable energy within the organisation and participation in Net-Zero alliances, concurrently committing to reducing financed emissions for the main critical sectors;
- supporting customers in ESG/climate transition: disbursement of loans and financing for the sustainable transition to individuals and undertakings, enhancement of ESG proposition in Asset management and Insurance and customer assessment based on Intesa Sanpaolo proprietary ESG scoring.

The Group's commitment to sustainability goals is strengthened with its offering of products and services, thanks in part to the participation of all major business lines in their respective Net-Zero initiatives, in order to reduce emissions in the credit, investment and insurance segments.
Therefore, support to the ecological transition covers all types of customers:

- in the Retail customers and SMEs/Corporates sector, by offering sustainable lending;
- in the Asset Management sector, via sustainability-conscious investments;
- in the development of dedicated ESG advisory services for Fideuram;
- in the insurance sector, by offering ESG schemes for both the life and the non-life business.

With respect to Retail customers, mortgages and loans aimed at financing the redevelopment of the existing real estate assets (green mortgages) play a particularly important role in achieving the goals identified in the Business Plan. Again with respect to the disbursement of green loans, the 2022-2025 Plan also focuses on circular economy and supports undertakings with the dissemination and funding of this model, including in collaboration with the Ellen MacArthur Foundation.

Supporting financial inclusion through social lending engages categories of vulnerable undertakings and groups of people who may not have access to credit through traditional financial channels, such as, university students, working mothers, families affected by natural disasters, individuals or small businesses in difficulty and exposed to the risk of usury. To these categories, the Group offers a wide range of financial products and services that are constantly evolving, also thanks to market research and feedback received from customers, adapting the offering to their needs and preferences. The non-profit sector is a particular class of customers which is the target of specific offers, including, inter alia, a programme based on a crowdfunding platform. Services targeting the more disadvantaged customers are also provided by the Group's international subsidiary banks (part of the "International Banks Division" or "IBD"), via specific local initiatives.

Finally, the goals of the 2022-2025 Business Plan related to ESG topics and sustainability matters are closely related to some UN Agenda 2030 Sustainable Development Goals (SDGs). Reference should be made to the relevant report for additional information on the ISP Group's contribution to the SDGs.

[38] ISPIC is the Group company that explores future scenarios and trends, develops multidisciplinary applied research projects, supports start-ups, accelerates the business transformation of companies according to the criteria of open innovation and the circular economy, promotes the development of innovative ecosystems and spreads the culture of innovation, to make the Intesa Sanpaolo Group the driving force of a more aware, inclusive and sustainable economy

Business model

The Group's activities contribute to the creation of value for its customers and include the main processes underlying the provision of banking and financial services:

- management of financial resources: this includes managing the financial resources from external sources, such as customer deposits, funds raised on the financial markets and capital management. As a banking group, the Group manages these resources with the aim of maintaining adequate levels of liquidity and capital;
- provision of financial services: this includes all banking transactions such as, for example, opening and managing current accounts, disbursing loans and mortgages, providing financial advisory activities, private banking services, managing the portfolios of retail and institutional customers and business services;
- manage the distribution of services: this includes managing the distribution channels of financial services which include physical branches, online banking and mobile banking services and automated services, such as ATM branches. The Group is strongly committed to promoting digitalisation in order to increase the efficiency of customer services;
- sales and marketing: these include all promotional, advertising and branding activities that attract new customers and maintain existing relationships. The Group heavily invests in the development of customised offering for several customer categories, promoting products which include, inter alia, credit cards, insurance policies, investment funds and financial advisory services;
- after-sale services: these include management of customer relations and continuous support via several channels, such as call centres, online chat and customised support. The Intesa Sanpaolo Group focuses, in particular, on customer care services and on monitoring customer satisfaction.

The Group operates via six business Divisions:

- Banca dei Territori Division is the lynchpin of Italy's commercial operations targeting individuals, small and medium enterprises and non-profit organisations. Furthermore, it offers products such as industrial loans, leases and factoring arrangements, and includes the Group's digital bank (Isybank);
- IMI Corporate & Investment Banking Division is the global partner for enterprises, financial institutions and the public administration in a medium/long-term perspective, at domestic and international level in 24 countries. It offers commercial banking, transaction banking, investment banking, structured finance and capital markets services. Abroad, it offers corporate banking services via a specialised global network;
- the International Banks Division ensures a strategic international presence by offering commercial banking services in several countries in Central/Eastern Europe, in the Middle East and North Africa. This Division operates with the South-Eastern Europe HUB comprising Privredna Banka Zagreb in Croatia, Intesa Sanpaolo Banka Bosna i Hercegovina in Bosnia-Herzegovina and Intesa Sanpaolo Bank in Slovenia with the Danube HUB, made up of VUB Banka in Slovakia and the Czech Republic, Intesa Sanpaolo Bank Romania and First Bank in Romania, and with other banks: Intesa Sanpaolo Bank Albania, CIB Bank in Hungary, Banca Intesa Beograd in Serbia, Bank of Alexandria in Egypt, Pravex Bank in Ukraine and Eximbank in Moldova;
- the Divisions of the Wealth Management Divisions:
  - the Private Banking Division offers specific products and services for customers in the Private and High Net Worth Individuals segments; it includes Fideuram - Intesa Sanpaolo Private Banking, which is supported by 6,814 private bankers;
  - the Asset Management division operates through Eurizon, offering asset management solutions to Group customers, non-Group distribution networks and institutional customers;
  - the Insurance Division, headed by Intesa Sanpaolo Assicurazioni (and its subsidiaries) and Fideuram Vita, offers insurance and pension products.

The governance areas contribute to the efficiency and quality of business activities, ensuring that the Group has the resources necessary to operate successfully:

- company management: this includes all policy, management and control, strategic planning, risk management and compliance activities. The Group invests in a sound risk control and management structure in accordance with current regulations and to minimise operational risks;
- human resource management: this includes recruiting, training and developing personnel, focusing on digital skills and the ability to handle an increasingly demanding customer base. For the Group, company welfare, continuing education and initiatives dedicated to the well-being of the Group's people play a particularly important role;
- technological development: this includes innovation and the implementation of new technologies, by investing in digital platforms, artificial intelligence, blockchain and sophisticated data analytics tools. The Group is speeding up its digitalisation process in order to improve operating efficiency and customer experience;
- purchases: this covers purchases of goods and services necessary for the operations of the Group, including technologies, software, third-party consultancy and real estate management. Thanks to this support, the Group has the tools and the resources necessary to operate efficiently.

The Group raises the financial resources necessary to provide its products and services via a mix of internal and external sources. Specifically, the main methods used by Intesa Sanpaolo to raise financial resources include:

- customer deposits: these are the main source of liquidity and comprise current accounts and term deposits from Retail and Corporate customers;
- short-term funding: it is mainly comprised of repurchase agreements and CD (certificates of deposit)/CP (commercial paper) funding on wholesale markets;
- medium/long-term funding: it is mainly comprised of own emissions on wholesale markets;
- inter-bank loans: these include loans from other banks in the interbank market;
- European Central Bank (ECB) loans: these are refinancing operations carried out by the ECB which Intesa Sanpaolo can use under certain circumstances. These loans are granted at relatively low interest rates, especially during periods of economic downturn or to boost the economy;

- own equity instruments: these are different from the other forms of funding and are critical to Intesa Sanpaolo's financial strength and financing capacity. Indeed, they protect against any losses and support creditors' and investors' trust in its solvency.

The relationship between sources (financial resources raised) and lending (utilisation of those resources, such as loans and investments) is critical to ensuring the Bank's financial soundness and sustainability and that it can provide services to customers, even in adverse market conditions. Through liquidity management, interest rate risk control, regulatory capital, and the use of risk management tools, Intesa Sanpaolo maintains a sustainable balance between resources raised and lending.

As part of its operations, the Group does not operate directly in the following sectors: fossil fuel, chemicals production, controversial weapons, growing or producing tobacco.

Furthermore, exposures in the Group portfolios are subject to specific internal regulations that implement stringent exclusion criteria for counterparties that operate in ESG-sensitive business sectors, including:

- the coal and Oil&Gas sectors, for which the Intesa Sanpaolo Group formalised its rules for lending operations; for additional information on this topic, reference should be made to the chapter ESRS E1 – Climate change;
- with reference to the arms production and trading sector, the Group adopted "Rules governing transactions with subjects active in the armaments sector" which expressly prohibit to undertake any kind of banking or lending activity related to the production of and/or trade in controversial weapons and/or those banned by international treaties and in particular: nuclear, biological and chemical weapons; cluster and fragmentation bombs; weapons containing depleted uranium; and anti-personnel landmines.

Aware of the need to support national and European defence together with the allied countries in NATO, the Intesa Sanpaolo Group limits its banking and/or lending activity solely to operations that relate to the production and/or trade of military goods in countries belonging to the European Union and/or NATO. Operations in countries that do not belong to the European Union or NATO are also permitted but are submitted to an extraordinary approval process, subject to the existence of intergovernmental programmes with the Italian Republic. The other Group banks and companies are not authorised to undertake operations involving the production and/or trade of military goods, except in cases of specific and prior authorisations granted by the Parent Company to the Group's international subsidiary banks.
All the above documents are available on the Group's website.

Value chain

The Group's value chain consists of a set of activities carried out as part of interconnected processes, as detailed below.

With respect to the upstream value chain, the main expense categories subject to centralised sourcing include:

- information and communication technology: products and services in this category include computer hardware, maintenance thereof, and system licenses;
- real estate: goods and services in this category include lease costs, furniture and furnishings, building maintenance and cleaning contracts;
- advertising and other public relations expenses: products and services include internal and multimedia communication services, entertainment events and sponsorship of sports, religious, or non-profit-making organisations;
- physical safety: products and services include installation of safety systems, purchases of safes, alarm units and of surveillance equipment, security and surveillance services;
- office equipment: products and services include purchases of office equipment and machines, IT consumables, stationery and office supplies and purchases of audiovisual equipment;
- insurance: products and services include employee benefit insurance, property insurance and third-party liability insurance;

With respect to the downstream value chain, Intesa Sanpaolo Group's distribution model relies on a multi-channel approach which combines the physical network of branches with sophisticated digital tools, offering a wide range of banking and financial services and providing customers with a seamless experience. Specifically, the distribution model is structured as follows:

- Italy branch network: Intesa Sanpaolo has an extensive branch network which enables it to reach a wide range of customers. Thanks to its physical presence, the Bank can offer customised services and expert advice on site. Branches can meet the needs of several types of customers, including Retail (private and small undertakings), Businesses, Corporate (large undertakings) and Private (high net worth customers) customers;
- digital branches: these are real branches without a physical location, which are available only by phone and computer;
- internet and Mobile Banking: these tools enable customers to carry out banking transactions, such as transfers, payments, and to monitor current accounts and investments, directly from their phone or PC. These services were designed for customers who want to manage their finances independently. The Bank also offers specific remote services for Corporate and Business customers via an IT infrastructure which enables them to receive and send flows and documents with Group banks or other banks with which the Company has a banking relationship, both in Italy and abroad;
- Isybank: this is Intesa Sanpaolo's digital complementary bank which was set up to meet the needs of young, digital customers. At Isybank, the entire banking process takes place exclusively online, without the need to go to a branch or access traditional physical services. It offers a more streamlined and rapid banking experience, focusing on clarity, immediacy and reduced costs compared to traditional banking services;
- the Group's international network: this is a strategic distribution channel as it offers widespread coverage in several international markets. Through these entities, the Group provides a wide range of services, including traditional and sophisticated banking solutions that meet local needs. This channel assists corporate and retail customers abroad, facilitating international operations and consolidating its leading position in Europe and in other strategic areas around the world;
- product factories: the Group's product factories are entities specialised in the development of specific financial products, such as investment funds, insurance and pension solutions. In certain cases, these entities distribute their products directly to customers outside Intesa Sanpaolo's network, using third-party channels;

- partnerships and service integration: the distribution model includes a series of strategic partnerships that expand Intesa Sanpaolo's offerings. Thanks to these collaborations, the Bank can offer a full range of financial solutions, from the easiest to more complex products for sophisticated customers.

The Group uses these channels to serve several types of customers, including retail customers and households, SMEs, large companies and institutions. The Group offers a wide range of products and services to retail customers and households, which include current accounts and loans, mortgage loans and savings and investment solutions. SMEs can receive specific financial services, such as loans, consultancy and payment instruments. Large companies and institutions can benefit from a comprehensive range of corporate banking, investment and treasury management services as well as international trade solutions, consolidating Intesa Sanpaolo's role as the reference partner in all economic sectors.

The Group's main customer categories are listed below:
- retail customers: individuals and companies with less complex financial requirements which are the main element of the activities of the Banca dei Territori Division (approximately 13.7 million customers) and the International Banks Division (about 7.4 million customers);
- corporate customers: companies, financial institutions and public administration, domestic and international, included in IMI Corporate & Investment Banking Division (19 thousand customers in Italy);
- private customers: high net worth individuals with more complex requirements which are offered customised services. Specifically, the Private Banking Division has approximately 125 thousand private and high net worth individuals;

With respect to the main markets, the Parent Company has a strong presence in Italy with a network made up of approximately 3 thousand branches. Furthermore, the Group has a strategic international presence, with roughly 900 branches and 7.5 million customers, including subsidiary banks operating in commercial banking in 12 countries in Central/Eastern Europe and in the Middle East and North Africa. It also has an international network specialising in providing support to corporate customers in 25 countries, particularly the Middle East and North Africa, and in countries where Italian businesses are especially active.

Performance

Thanks to its strong performance, the Intesa Sanpaolo Group can generate increasing and sustainable value for all its stakeholders. The Group's net income for 2024 amounts to 8.7 billion euro, which generated cash dividends of 6.1 billion euro for the Group's shareholders[39], of which approximately 40% goes directly to Italian households and foundations, and a 2 billion euro share buyback, to be launched in June 2025[40], in addition to the 1.7 billion euro share buyback which was completed in October 2024. Personnel expenses amount to 7.2 billion euro. In 2024, the public sector benefited from direct and indirect taxes equal to 5.3 billion euro, up by 700 million euro on 2023. Households and businesses received medium/long-term loans worth 69.8 billion euro (of which 43.4 in Italy). Around 144,000 businesses have received help to return to performing status since 2014, of which 3,100 in 2024.

With respect to the main results in the ESG area, also considering the goals set out in the 2022-2025 Business Plan, the "Cibo e riparo per i bisognosi" (Food and shelter for the needy) programme continued, confirming Intesa Sanpaolo Group's strong focus on combating poverty. As part of this programme, 54.1 million euro's worth of initiatives have been carried out in the 2022-2024 period, exceeding the Plan's goals. Also this year, the Group confirmed its strong commitment to the green transition by disbursing new green loans to individuals for a total of 9 billion euro over the 2022-2024 period, including 4.1 billion euro in 2024; furthermore, the improvement of ESG asset management and insurance product offerings continued, with a penetration of about 76.4% of total AuM[41]. With respect to the acceleration of the Commitment to Net-Zero, the Group's targets were validated by the Science Based Target Initiative[42]. Finally, the Group obtained the Top Employer Europe 2025[43]award, and once again was confirmed Top Employer Italy[14] for the fourth year running. Furthermore, it holds the first place in the LinkedIn Top Companies 2024 ranking as the best company in Italy in which to develop one's career and grow professionally;

Double materiality assessment

Methodology and rationales

For the purposes of this Consolidated Sustainability Statement, the Group has preliminarily conducted an assessment of the main material sustainability matters (the "double materiality assessment"), considering the impacts (positive and negative, actual or potential) of its operations on the economy, the environment and people. The impact assessment also includes the assessment of the materiality of the effects on matters related to human rights and, more in general, areas where, when material, the disclosure could be functional to stakeholders and their assessments of the Group operations. Furthermore, it covers the risks and opportunities which have, or are expected to have, material financial effects on the Group.
The double materiality assessment carried out in 2024 is based on the regulatory requirements of the ESRS, the guidelines on materiality[44] and the technical details provided by the regulator (e.g. those provided in the Frequently Asked Questions (FAQs) on double materiality assessment. It was conducted in accordance with the Group's business context via an active dialogue with stakeholders.

[39] Of these, 3,022 million euro paid as interim dividend on 20 November 2024 (17 cents per share) and 3,044 million euro to be paid in May 2025 (17.1 cents per share), equal to 34.1 cents per share in 2024.

[40] Subject to shareholder approval.

[41] Eurizon perimeter - Article 8 and Article 9 SFDR 2029/2088 funds and asset management products.

[42] Obtained on 27 January 2025

[43] From Top Employers Institute.

[44] Reference should be made to the guidelines "IG 1: Materiality Assessment Implementation Guidance" issued by EFRAG.

Compared to the 2023 report, which was prepared in accordance with the GRI Standards – Universal Standards (2021), in 2024, the Group's double materiality assessment complied with the ESRS which introduce the concept of materiality and consider the impact of the Group's operations (impact materiality) on internal and external stakeholders and the external risks and opportunities which have or may have material financial implications on the Group (financial materiality). Specifically:

- impact materiality considers impacts connected with the undertaking's own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts (inside-out perspective); The identification and assessment steps of the Group's impacts were conducted in accordance with the approach adopted in 2023;
- financial materiality, which considers, from an outside-in perspective, sustainability matters that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

The Group assessed both aspects and reported on the material aspects for the above perspectives in order to identify and assess material impacts, risks and opportunities (IROs).

The Group conducted the double materiality assessment considering and emphasising the specific characteristics of the business lines and the geographical areas in which it operates and in which the counterparties with which it carries out business relationships operate. The type of suppliers and counterparties is an additional element considered during the analysis and assessment step.

Double materiality aspects provide the basis for sustainability reporting and also play a crucial role as they also contribute to shaping the company's strategy with regard to material topics for the business and its stakeholders.
The double materiality assessment was developed in accordance with the following macro-stages:

- Group's stakeholder mapping;
- context analysis to identify positive and negative, actual and potential impacts on the economy, the environment and people, including human rights, arising from Group operations, and the risks and opportunities generated by the external environment, based on an analysis of different sources, such as national/international documentation in the ESG regulatory context and the documentation of relevance to the sector in which the Group operates at national and international level;
- identification of the impacts, risks and opportunities to be assessed and which are potentially relevant to the Group;
- assessment of the IROs which are potentially relevant to the Group by:
  - conducting an internal analysis based on metrics aligned with the requirements of the ESRS reporting standards. Specifically, the materiality of IROs was assessed based on exceeding a specific materiality threshold defined in accordance and in line with the Group's current risk management process;
  - engaging its stakeholders via the engagement and management activities listed below;
  - identifying the material sustainability matters relevant to the Group based on the aggregation of the materiality results of the IROs arising from internal analysis and stakeholder engagement activities;
- consolidating and sharing the list of sustainability matters material for the Group.

The process will be updated on an annual basis and revised based on any regulatory changes.

The above macro-stages, which identify and assess IROs, were carried out as part of the following operating process.

Group's stakeholder mapping

Stakeholder engagement activities are carried out as part of the double materiality assessment.

PEOPLE
Group people
Employees
Trade unions

CUSTOMERS
Private individuals and households
Private individuals and households in financially vulnerable circumstances
Small and medium enterprises
Corporates
Start-ups
Consumer organisations

SUPPLIERS
Large suppliers
Small suppliers
Business partners
Sub-contractors

ENVIRONMENT
Environmental groups
Future generations
Scientific community

COMMUNITY
Community interest groups
Regulatory authorities
National and international public institutions
Media

In this respect, the stakeholder map represents the Group's network of relations, with which Intesa Sanpaolo exchanges views on a regular basis in order to identify and monitor their needs and prospects in relation to priority impact, risk and opportunities areas.

When performing the double materiality assessment, in line with the applicable EFRAG Guidelines, the Group applied the following stakeholder engagement approach:
- engage the Group's competent internal structures which maintain constant and ongoing dialogue with the stakeholders concerned, in mapping and assessing the materiality of impacts, risks and opportunities (stakeholder management);
- directly engage specific stakeholders via dedicated workshops, interviews and questionnaires (stakeholder engagement).

The categories of stakeholders shown in the above map were engaged in the identification and assessment of the materiality of the IROs linked to the sustainability matters which are closer to their experience, knowledge and sensitivity. This enhanced stakeholders' knowledge of the Group's processes and strategies related to the sustainability matters closest to them.

The listening methods applied to each category of stakeholders and a summary of the sustainability matters explored with each category are shown below:

CATEGORY OF STAKEHOLDER	STAKEHOLDER	LISTENING METHOD	SUMMARY OF THE ISSUES COVERED
CUSTOMERS	Retail customers	Integration of dedicated questions in the retail customer questionnaire and interview with BdT Business Structures	▪ Initiatives for environmental protection and reduction of the environmental footprint of the Group's offices and branches ▪ Responsible, solid and sustainable governance, value creation and distribution for all the Group's stakeholders ▪ Commitment to promoting sustainable economic development, also in light of the international and EU objectives in the Climate Change and sustainability area. More specifically, promotion of an economic model with low carbon emissions based on the circular economy, through the development of a dedicated, customer-centric offering ▪ Pursuit of the banking business in full compliance with the rules and principles of fairness in business ▪ Disbursement of loans to sections of society that would find it difficult to access credit, and provision of products with a high social impact ▪ Attention to service quality, customer care, relationship and satisfaction ▪ Promotion of a growth strategy geared towards digital innovation to anticipate new trends and be competitive on the market ▪ Commitment to asserting its role as a digital company through an advanced multichannel platform aimed at ensuring an innovative, safe and effective offer ▪ Commitment to guaranteeing IT security to its customers ▪ Sustainable investments and integration of sustainability issues in the conduct of the insurance business ▪ Talent development, development of internal skills, evaluation and incentive systems, regular training plans, diversity management ▪ Support to the community and commitment to culture through solidarity initiatives with projects carried out in partnerships, donations and sponsorships, promotion of art and culture in Italy and abroad
	Corporate customers	Integration of dedicated questions in the customer questionnaire and interview with BdT Business Structures	
ENVIRONMENT/ COMMUNITY	Representative figures / reference experts	Virtual one-to-one interviews with representative figures of the Community and the territory and interview with the internal structures	▪ Environmental aspects, in particular in relation to climate change and biodiversity ▪ Evolution of the regulatory environment (e.g. CSDR, ESRS) and the potential impacts on organisations ▪ Ability to promote a systemic approach towards the achievement of the Sustainable Development Goals (SDGs) defined in the context of the United Nations ▪ Leading role of the Intesa Sanpaolo Group on ESG issues ▪ Importance in communicating the results achieved and the objectives set in the sustainability and ESG area ▪ Main challenges and strengths of the Intesa Sanpaolo Group for the implementation of the Business Plan with a focus on the ESG area ▪ Importance of diversity and inclusion within the workplace ▪ Relevance of the concept of Innovation and related satisfaction of customer needs ▪ Customer loyalty ▪ Support for SMEs in the sustainability area ▪ Educating new generations on sustainability issues

CATEGORY OF STAKEHOLDER	STAKEHOLDER	LISTENING METHOD	SUMMARY OF THE ISSUES COVERED
SHAREHOLDERS/ INVESTORS	SRI investors[45]	Analysis of the main questions asked by the ESG Investors of the Intesa Sanpaolo Group	▪ Environmental aspects, in particular relating to climate change adaptation, biodiversity, natural resources and decarbonisation ▪ Aspects relating to finance and sustainable investments ▪ Standard sustainability policies ▪ Inclusion and diversity ▪ Employee well-being ▪ Development and digitalisation ▪ ESG sustainability and integration in business strategies ▪ Gender pay gap ▪ Workers' rights and corporate governance
PEOPLE	Group's people, in Italy and abroad	• Interviews with HR internal structures • Survey aimed at listening to the opinions and needs of the Group's people by providing questionnaires on an internal climate survey and questions relating to sustainability issues to over 72,000 Group's people	▪ Assessment of the perception of the Group's image from the customers' point of view, based on individual professional experiences ▪ Attention and care of employment levels in restructuring processes ▪ Recruitment of young people ▪ Assessment of the variables related to personnel enhancement (e.g. sense of pride and belonging, merit recognition, autonomy and financial recognition) ▪ Talent development and retention ▪ Assessment of the training and professional growth opportunities provided by the Intesa Sanpaolo Group ▪ Employee well-being (flexibility and work-life balance, relationship with colleagues and managers) ▪ Job satisfaction of Intesa Sanpaolo Group people ▪ Evaluation of the transparency and objectivity of the performance assessment systems ▪ Assessment and knowledge of the Policies applied by the Group (e.g. Diversity and Inclusion) ▪ Assessment of customer satisfaction on aspects such as the reliability, transparency and clarity of the Intesa Sanpaolo Group's procedures ▪ Intesa Sanpaolo Group ESG initiatives and products
	Trade unions	Virtual focus group with trade union representatives	▪ Employment protection and future, including in consideration of the service digitalisation trend ▪ Community support ▪ Financial inclusion ▪ Reporting of non-financial information ▪ Environmental issues and biodiversity ▪ Ecological transition, importance of the use of renewable energies and promotion of sustainable mobility for employees ▪ Youth unemployment levels in the South ▪ Gender pay gap
SUPPLIERS	Dedicated internal structure	One-to-one interviews	▪ Environmental topics, biodiversity and circular economy ▪ Job protection, health and safety, diversity & inclusion and well-being of people along the supply chain ▪ Management of relationships with suppliers

Employee representatives pursuant to Legislative Decree no. 125/2024 were engaged in compliance with the relevant regulations and agreements, in particular, in the double materiality assessment. Furthermore, they will be subsequently involved in the approval of the Consolidated Sustainability Statement by the Board of Directors.

Context analysis

In order to map IROs, the Group analysed the context in which it defines and implements its business activities and relationships. Specifically, the following elements were considered:

- external documentary sources, updated to 2024, to analyse reference standards and frameworks, including international indices (DJSI - Dow Jones Sustainability Indices, Morningstar ESG Index, Euronext ESG Indices CDP 2023), reference standards and reports for the reporting of sustainability performance (WEF's Global Risks Report, The OECD Guidelines for Multinational Enterprises, BSR – Business for Social Responsibility, World Business Council for Sustainable Development – WBCSD), documents and reference frameworks in the field of Human Rights (UN Guiding Principles on Business and Human Rights), the Proposal for a Directive of the European Parliament and of the Council on corporate sustainability due diligence which amends EU Directive 2019/1937 (CSDDD, EU Directive 2024/1760 of the European Parliament and of the Council of 13 June 2024 on corporate sustainability due diligence) and further reference regulations referred to by the ESRS (EU Regulation 2019/2088 – SFDR, EU Regulation 575/2013 – "Pillar 3", EU Regulation 2016/1011 – "Benchmark Regulation", EU Regulation 2021/1119 – "EU Climate Law");
- external documentary sources, updated to 2024, for the analysis of current trends in the banking and insurance sector, including the SASB Materiality Map, S&P Global Ratings, Fitch Ratings, The OECD Guidelines in the context of Institutional Investment, Financial Sector - Responsible business conduct for institutional investors - Key considerations for due

[45] Sustainable and Responsible Investment.

diligence under the OECD Guidelines for Multinational Enterprises, MSCI - ESG Industry Materiality Map, GRI – Sector Standards, the Supervisory Expectations of the Bank of Italy and the ECB, the Recommendations of the Task Force on Climate-related Financial Disclosures (in particular, the “Climate-Related Risks, Opportunities, and Financial Impacts” section), Principles for Responsible Banking, accounting standards (IFRS) for sustainability reporting;
- internal document sources, including the 2022-2025 Business Plan, the Code of Ethics, the Consolidated Non-financial Statements of the last three years, the Financial Statements, communications of the top management, the minutes of the Shareholders' Meetings and company policies, also in order to identify how the impacts are linked to the strategy and business model;
- detail benchmark conducted on the banking sector in relation to material aspects and relevant stakeholders (Sustainability Statement/Consolidated Non-financial Statements and additional public documentation of other Italian and international financial groups);
- feedback/input arising from the engagement of the Group's stakeholders.

In accordance with the applicable legislation, the double materiality assessment covered own operations and the upstream and downstream value chain.

Identification of impacts, risks and opportunities

The analyses conducted identified and assessed, for each ESRS, the Group's possible IROs, applied to own operations and the value chain. Impact materiality and financial materiality are interrelated and, from a methodological point of view, were conducted at the same time.

The Group's impacts on people or the environment are identified based on the specific features of the Group's operating and business model, changes in strategy and management decisions made to address those impacts, and based on internal analysis and due diligence processes. The Group's impacts other than sustainability issues in the external context can give rise to risks and opportunities.

Risks and opportunities are identified based on the impacts, dependencies and sustainability issues that have or could have financial effects on the Group. For example:
- financing/investing in sectors/countries with a weak ESG profile could result in credit/market risk arising from high concentration in high-risk territories/areas with respect to the sustainability issue considered;
- development of ESG initiatives, donations, programmes and controls by the Group which could contribute to improving the Group's brand reputation and/or to increasing stakeholder trust;
- definition of specific ESG criteria, investment and/or financing strategies which could contribute to expanding the product range through alignment with sustainability goals.

Assessment of the materiality of IROs

The materiality of IROs was assessed by conducting an internal analysis based on metrics aligned with the ESRS requirements, discussed and consolidated through interviews with the Group's internal operating structures and, as described earlier, through a stakeholder management process.

The methodology used was formalised in internal documents and the related criteria are described in Group's specific internal regulations.

In order to assess and prioritise impacts on people and the environment, an internal analysis was conducted using the following metrics:
- Scale, i.e. how grave the impact is, based on a scale that ranges from “very low” to “very high”;
- Scope, i.e. how widespread the impact is, based on a scale that ranges from “highly localised” to “global”;
- Irremediable character, i.e. the extent to which the impact can be remediated and, for negative impacts, based on a scale that ranges from “very low” to “very high”;
- Likelihood, which measures the likelihood of occurrence of the impact and, for potential impacts, is based on a scale that ranges from “very unlikely” to “extremely likely”, considering different time horizons.

The individual impacts identified by the Group are assigned a score, according to the metrics described earlier, where the maximum score is the greatest benefit generated in the event of positive impacts, or the greatest harm in the event of negative impacts.

Impact assessment activities were carried out considering the specific features of the Group's business. Specifically, for the downstream value chain, the sectors in which the counterparties most exposed to the risk of adverse impact for each sustainability issue operate, were identified.

Impact materiality is represented by exceeding a pre-established materiality threshold, calculated as the average of the score assigned to the scale, scope and irremediable character metrics. Specifically, the materiality:
- of a positive actual impact is the average of the score assigned to the scale and scope metrics;
- of a negative actual impact is the average of the score assigned to the scale, scope and irremediable character metrics;
- of potential impacts is also determined by likelihood. Specifically, the materiality:
  - of a potential positive impact is obtained by multiplying likelihood by the average of the score assigned to scale and scope.
  - of a potential negative impact is obtained by multiplying likelihood by the average of the score assigned to the scale, scope and irremediable character metrics.

For potential negative impacts on human rights, the materiality of the impact (scale, scope and irremediable character) is more important than the likelihood, in line with the requirements of the ESRS; this guideline has been incorporated into the assessment methodology adopted.

Based on the analyses carried out, the Group shows material impacts as described in the chapters covering individual ESRS, both via its direct activities (own operations) and its business relationships (upstream and downstream value chain).

Specifically, with respect to own operations and upstream value chain, the material impacts affect people or the environment as a result of the initiatives implemented or planned (positive impacts) and the negative impacts arising from operations (negative impacts). On the other hand, for the downstream value chain, this impact reflects the exposure of the loan and investment portfolio to sectors or countries that, in turn, may affect people and/or the environment.

Time horizons were considered when assessing scale, irretrievable character and likelihood in accordance with the ESRS' definition of short, medium and long term.

The materiality of each IRO was assessed on the basis of qualitative-quantitative information, also considering the results of the context analysis and the stakeholder engagement process.

When using a quantitative approach, the process involved the identification of data used in well-established internal processes, which determine external or internal reporting (e.g. risk data, projections) and management data derived from well-established processes.
Specifically:

- risks were assessed in accordance and in line with the Group's current risk management process, using, where possible, analyses and metrics already in place within the Group (e.g. materiality assessment of environmental, social and governance risks compared to traditional risks (prudential from a financial perspective));
- opportunities were assessed based on the controls, policies and goals set out in the Group's budget and Business Plan, and the possibility of expanding the target customers through the development of products aligned with sustainability goals.

With respect to the qualitative approach, materiality was assessed based on analyses which promote the initiatives, policies and strategies prepared internally by the Group, including, for example, those formalised in the 2022-2025 Business Plan.

When assessing financial materiality, the actual financial impact of the Group's material risks and opportunities was considered, in line with reference regulations, considering asset exposures and any financial losses and actual or prospective revenues, using approaches that reflect the highest level of granularity available and the estimates and assessments made by the Group as part of ordinary planning and risk analysis activities.
Financial materiality is assessed at the same time as impact materiality, identifying any interaction and interconnection between them.

Specifically, the financial impact of risks is assessed considering the Group's exposure to the counterparties in the portfolio and financial institutions that issue debt securities and other types of financial assets that belong to sectors or countries potentially exposed to ESG risk factors. Furthermore, the impact of operating losses caused by the Group's inadequate operating processes, including assets, resources and relationships that form part of its own operations, or by the threat of penalties or penalties applied in respect of sustainability issues, was also assessed.
In accordance with applicable legislation, the assessments were carried out considering the inherent risk, i.e. without considering the potential risk prevention or mitigation mechanisms adopted by the Group.

With respect to opportunities, the identification and assessment process is also aligned with the indicators set out in the Group's budget and Business Plan concerning the offering of ESG-virtuous products.

In accordance with the Guidelines[46], both qualitative (by involving the Group's various structures) and quantitative aspects were considered, using, where possible: methodologies, controls and metrics already in place within the Group (e.g. as part of risk materiality assessment). Where necessary, these assessments were integrated with additional ones to accurately meet the requirements applicable to the relevant sustainability matter.

Specifically:

- the identified risks were assessed in accordance and in line with the Group's current monitoring framework and regulations. Where applicable, each risk (e.g. credit risk, market risk, liquidity risk, operational risk) typical of supervised financial intermediaries is considered specifically with respect to the sustainability matter examined at the most granular level possible, linking it to cases that have been examined in detail;
- the opportunities were assessed considering the Group's ESG initiatives, polices and strategies. The Group has identified the following types of opportunities: (i) expand the product range and the customer portfolio; (ii) improve brand reputation and increase stakeholder trust; (iii) attract talent.

The internal analysis was carried out based on the assessment metrics set out in the ESRS and listed below:

- magnitude: this is the potential magnitude of the financial effects arising from risks or opportunities and is defined using a scale which ranges from "negligible" to "significant", respectively;
- likelihood of occurrence: this indicates how likely a financial risk or opportunity is to occur. It was defined using a scale which ranges from "very low" to "very high";
- time horizons of the analysis: the materiality assessment of the mapped risks and opportunities covers several time horizons in line with the prospective estimates and evolutions already produced within the Group (e.g. materiality

46 "EFRAG IG 1: Materiality Assessment Implementation Guidance".

assessment, ICAAP, budget planning/strategic plan) and scenarios derived from external sources. It is carried out using a cautious approach. In particular, the following time horizons were considered:

- short-term scenario: the reference time horizon is 1 year (reference linked to budget/RAF);
- medium-term scenario: the reference time horizon is up to 5 years (reference linked to simulation/stress scenarios and business plan);
- long-term scenario: the reference time horizon is longer than 5 years (reference linked to medium to long-term planning, multi-year action lines).

Consolidating and sharing the list of sustainability matters material for the Group

The Group has a structured decision-making process designed to consolidate and verify material impacts, risks and opportunities.

A summary of the mapping of the identified IROs and the main evidence and outcomes obtained after performing the double materiality assessment, was prepared based on the analyses conducted.

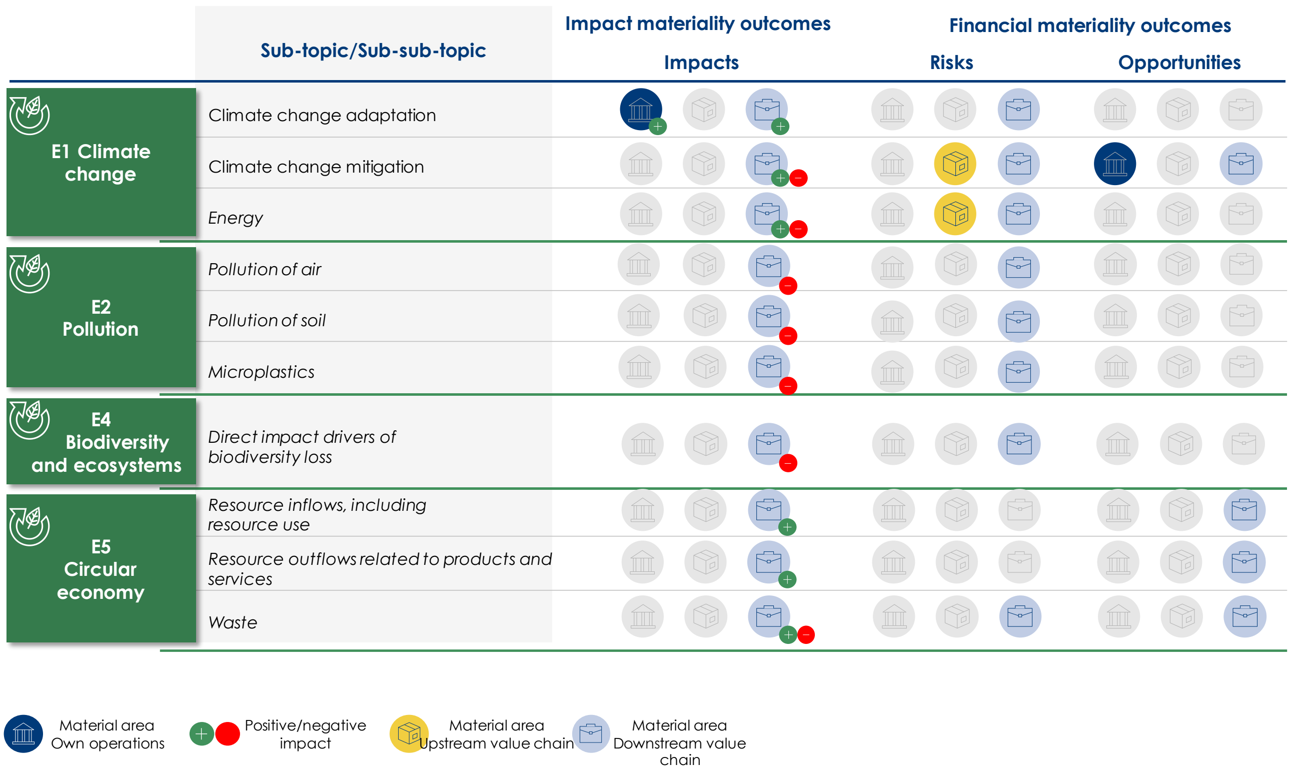
The IRO map was reviewed, shared and consolidated by the Group's internal offices and operating structures. Each of them reviewed the map to the extent of their remit as part of the above-mentioned stakeholder management process.

Finally, after completing the impact and financial materiality assessments which identify the environmental sustainability, social and governance aspects that are relevant to the Group, the list of material topics was discussed with the Steering Committee and the Risks and Sustainability Committee which assists the Board of Directors in its subsequent approval.

The CSRD directive defines the sustainability matters to be assessed (e.g. own workforce) and provides a granular degree of detail by defining sub-topics (e.g., working conditions), which delve into a specific aspect of it, and, where available, sub-sub-topics (e.g. adequate wages) that further detail an element of the sub-topic.

Based on the above assessments, all macro-topics (the "topics") proposed by the ESRS were identified as material, except for the "Water and Marine Resources" one.
However, as discussed later on, not all sub-topics and sub-sub-topics were material.

The outcomes of the double materiality assessments are shown below, indicating the relevant boundaries.



S1 Own workforce	Secure employment	Material area (+)	n.a.	n.a.		n.a.	n.a.	Material area	n.a.	n.a.
	Working time	Material area (+)	n.a.	n.a.		n.a.	n.a.	Material area	n.a.	n.a.

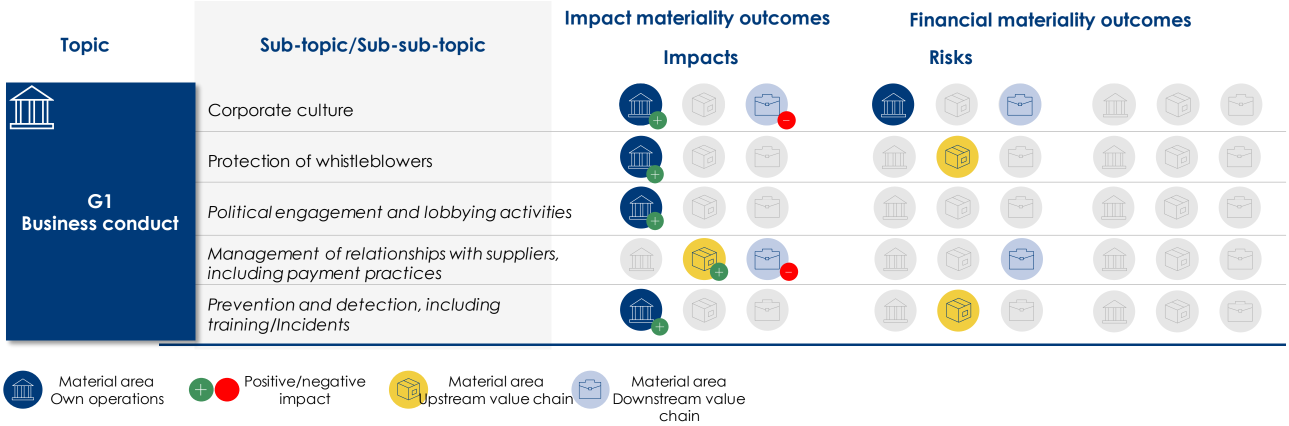
	Access to products and services			Material area (+)						Material area
	Responsible marketing practices			Material area (+)						

Material area Own operations
Positive/negative impact
Material area Upstream value chain
Material area Downstream value chain



In the subsequent chapters, the impacts, risks and opportunities that were identified and analysed and that led to the materiality assessment of the above topics and sub-topics are described for each topic. In brief, the analyses conducted confirmed the resilience of the Group's strategy and business model, also considering that the potential expected negative impacts associated with ESG risk factors are managed through appropriate actions (developed and/or planned) which are aimed at mitigating risks, capitalising on opportunities and supporting the Group's sustainability with a long-term perspective.

Governance structure

Role and composition of the administration, management and control bodies and of sustainability governance

The Parent Company Intesa Sanpaolo has adopted the “one-tier” management and control model, whereby management and control duties are performed, respectively, by the Board of Directors and the Management Control Committee set up within it, both appointed by the Shareholders’ Meeting.

Detailed information on the corporate governance system and remuneration – including references to diversity in the Board of Directors – is provided in the "Report on Corporate Governance and Ownership Structures" and in the "Report on remuneration policy and compensation paid" available on the Bank’s website.

Board of Directors: role and main characteristics

The Board of Directors is responsible for exercising the Company’s guidance and strategic supervision duties and for resolving on all the most important corporate actions, with the power to undertake all transactions considered necessary, useful or appropriate in achieving the corporate purpose, of both an ordinary and extraordinary nature, and to adopt all decisions reserved to it by law, by the Articles of Association and by the regulations. In specific cases and in the manner provided for by law and the Articles of Association, the most significant management decisions are submitted to the Shareholders’ Meeting for approval.

The Chair of the Board of Directors oversees the work of the Board, organises and directs the activity and performs all the tasks envisaged by the supervisory legislation and the Articles of Association. He/She has a non-executive role and does not carry out, not even de facto, management functions.

The Managing Director and CEO is also the General Manager and supervises the company’s management to the extent of his/her assigned powers, in compliance with the general planning and strategic guidelines set forth by the Board.

The Management Control Committee, appointed by the Shareholders' Meeting, is part of the Board of Directors and is made up of five independent Directors pursuant to the Articles of Association and exercises the control functions also as an internal control and audit committee (pursuant to Legislative Decree no. 39/2010).

The Board of Directors has established four internal committees, whose members are appointed by the Board itself from among its members, with assessment, advisory and propositional tasks:
- Nomination Committee;
- Remuneration Committee;
- Risks and Sustainability Committee;
- Committee for Transactions with Related Parties.

Composition of the Board of Directors

The Ordinary Shareholders' Meeting of 29 April 2022 set the number of members of the Board of Directors at 19, appointing directors for the three-year term of office on the basis of the lists submitted by shareholders.

All directors are non-executive, with the exception of the Managing Director and CEO (18 non-executive members and 1 executive member).

The Directors meet the suitability requirements required by the applicable legislation and the provisions of the Articles of Association. Specifically, all Directors meet the independence of mind requirement, as defined by banking legislation, and at

least two thirds of the directors meet the qualified independence requirement defined by the special legislation for banks and listed companies and Intesa Sanpaolo's Articles of Association (in this term of office, there are 14 independent directors, i.e. 74% of all members of the Board).
All Board Committees are composed of five non-executive Directors, the majority of whom are independent, with the exception of the Committee for Transactions with Related Parties, which is entirely composed of independent Directors. All the Committees are chaired by independent Directors.

Minority shareholders are adequately represented in the Board of Directors (5 members, representing 26% of the total, were appointed from the slate submitted by minority shareholders) and, in the current Board structure, they are present in all Board Committees. The Management Control Committee and the Committee for Transactions with Related Parties are also chaired by minority shareholders. No employees' representatives were appointed in the Board as permitted by the law and the Articles of Association.

Without prejudice to the legislation on public incompatibilities, no Director has held a position in the public administration similar to that held in administrative, management and control bodies in the two years prior to taking on the current mandate.

Competences and diversity

According to Intesa Sanpaolo's Articles of Association, the Board shall adopt the necessary measures to ensure that each Director, and the Board as a whole, have a continually adequate level of diversification, including in terms of experience, age, gender and international orientation, in addition to competence, reputation and fairness, independence of mind, and time commitment.

In the document on the qualitative and quantitative composition of the Board of Directors published on the Bank's website in March 2022, in view of the renewal of the Corporate Bodies which took place with the ordinary Shareholders' Meeting of 29 April 2022, the shareholders were asked to ensure that the Board of Directors had the broadest gender diversity with adequate professional skills, as well as a diversity of age brackets amongst Directors, in addition to a comprehensive level of knowledge and experience.

The less-represented gender in the Board of Directors must be reserved a share of at least two fifths of the total members, as established by currently applicable laws on the matter of equal access to the management and control bodies of listed companies. Furthermore, in the current structure of the Board, there are 8 women (accounting from 42% of Directors), i.e. the female ratio is 0.73[47]; furthermore, the female gender represented within all the Board Committees makes up 80% of the members of the Committee for Transactions with Related Parties and has the chairmanship of the Risks and Sustainability Committee and the Nomination Committee.
The Board of Directors assessed its composition as adequate, including in terms of diversity, and suitable for a properly balanced composition of the Board Committees.

Senior officers of the subsidiaries are nominated by the Board of Directors, which operates according to uniform policies and principles at Group level and in compliance with the regulations and best practices applicable to each subsidiary, with specific importance given to the level of diversity, including in terms of age, gender, seniority of service, geographical origin and international orientation. In establishing the composition of the Bodies, the most adequate and effective mix of personal and professional profiles is sought for each subsidiary in terms of its nature, the structure of its activities and the risks taken. To this end, any indications made by the Management Body of each subsidiary during the annual self-assessment process are taken into account.

With reference to the appropriateness and diversity of the professional profiles required, in accordance with the Articles of Association, at least four members shall be enrolled with the Register of Statutory Auditors and shall have practised as auditors or acted as members of a limited company control body for at least three years. In the current composition of the Board of Directors, 9 Directors (or 47%), including all members of the Management Control Committee, meet this requirement. In accordance with the Articles of Association, they shall also meet a professional qualification requirement which reflects the special relevance of the experience gained.

Furthermore, in the document on the quali/quantitative composition, the set of very good or distinctive expertise, knowledge and skills – with a very wide, medium-wide or limited distribution – considered appropriate to achieve the optimal overall qualitative composition of Intesa Sanpaolo's Board of Directors, was outlined in a "Skills Directory" for the 2022-2024 term of office.

Without prejudice to the general expertise required for all areas envisaged by the applicable legislation, the information provided refers to the very good/distinctive expertise declared by the individual Directors at the time they accepted the nomination:
- ability to read and interpret the financial statements data of a complex financial institution and financial and non-financial reports (95%);
- guidance and strategic planning (95%);
- knowledge of banking and financial products (89%);
- experience of governance and corporate governance structures and mechanisms (95%);
- knowledge of financial markets (100%);
- knowledge of banking and financial regulations (84%);
- knowledge of internal controls (74%);
- risk management skills (79%);
- knowledge of information & digital technology issues (16%);

[47] Number of women sitting on the BoD compared to the number of men.

- overall knowledge of the banking business and typical sector strategies and techniques for assessing and managing the risks associated with banking activities, appropriate to the complexity and significance of Intesa Sanpaolo (95%);
- knowledge of the socio-economic realities and market mechanisms of the countries in which the Bank operates and/or strategic goals (74%).

In particular, with respect to sustainability (ESG) knowledge, upon accepting their candidature, 84% of the Directors declared they had very good/distinctive expertise in sustainability matters and their integration into the Bank's strategies.

Several Directors also hold positions on the Boards of Directors of leading Italian universities as well as on the Boards of foundations and non-profit sector bodies active in the fields of art and culture, health, environment, support for poverty and the circular economy and support for nutrition policies. Furthermore, a Director, as well as Chair of the Risks and Sustainability Committee, holds the same position in another listed company.

Following the renewal of the Bodies in 2022, the characteristics declared by the Directors were assessed by the new Board as appropriately diversified and suitable to ensure adequate Board composition and a well-balanced composition of the Board Committees.

In view of the upcoming renewal of the Corporate Bodies in April 2025, the guidelines on the qualitative-quantitative composition of the Board deemed optimal, as approved by the Board in accordance with applicable legislation, are available on the Group website.

Board induction

The skills and expertise were subsequently strengthened and supplemented on the basis of training programmes as well as of intensive induction activities for both the new directors (onboarding) and the entire Board.

With the support of the Nomination Committee, the Board of Directors shall ensure the implementation of induction and training programmes for its members. In this context, following the Chair's indications, Board Members' participation in initiatives is promoted to enhance the degree of knowledge of the operating sectors of the Bank and of the Group companies, company dynamics and their development, the principles of sound risk management and the regulatory and self-regulatory environment of reference, and in formal and informal meetings, aimed at further review of strategic matters.

The induction plans are drawn up periodically following (i) the first assessment carried out after appointment and (ii) the self-assessment carried out annually by the Board of Directors. In any event, Directors are given the opportunity to make individual requests for training in a specific area, whenever they consider it necessary.

During the annual self-assessment, the Board, with the support of the Nomination Committee, expresses its opinion on the implementation and quality of the induction plan implemented, also to help refine the process and strengthen the quality of training.

In 2024, 11 induction sessions were held for Directors. The training sessions covered, inter alia, the following topics: ESG-related topics, risk data aggregation and risk reporting, the main changes introduced by Basel IV, the new EBA Guidelines on AML, Digital Finance – Regulation on markets in crypto-assets.

As a result of the self-assessment process carried out in 2024, the Board of Directors expressed extremely positive evaluations of the induction activities carried out during the year in terms of the size, level of detail and relevance of the topics covered.

To promote better understanding of the applicable corporate and regulatory framework and its development, a collection of governance documents, regulatory references, key correspondence with the Supervisory Authorities, accounting positions and any additional documentation conducive to the performance of their duties is also available to Board Members – and regularly updated – through a dedicated electronic platform.

The Board of Directors receives periodic reports from the corporate control functions on their activities, which illustrate the checks carried out, the results achieved, the weaknesses found and the proposals for action to be taken to eliminate them within the various company areas. These reports shall also cover anti-corruption and AML issues.

Sustainability governance

The main ESG responsibilities of Intesa Sanpaolo Bodies and Structures are specified below in line with the Articles of Association, the Bodies' regulations and the Group's internal regulations.

Board of Directors	The Board of Directors, with the support of the Risks and Sustainability Committee: • defines and approves sustainability (ESG) strategies and policies, including the social and cultural responsibility model and combating climate change - taking into account the objectives of sound and sustainable value creation and distribution for all stakeholders; • defines and approves the risk objectives, incorporating sustainability-related risks (ESG) – in particular climate and environmental risks – in its risk appetite framework; • approves the results of the impact and financial materiality analysis that identifies those environmental sustainability, social and governance aspects that are material with regard to the impacts, risks and opportunities considered, consistent with applicable regulations; • approves the Consolidated Sustainability Statement, ensuring that it is prepared and published in accordance with the applicable regulations, after review by the Management Control Committee as well as any other significant report in this area; • examines the annual report submitted by the Manager responsible for preparing the company's financial reports on sustainability risk monitoring and the periodic reports submitted by the corporate control functions; • approves the updates to the Code of Ethics and the policy setting out Diversity, Equity & Inclusion principles. The Board of Directors' Regulations state that Directors have a duty to contribute to creating value for shareholders with the aim of delivering medium- and long-term sustainability, also taking into account the interests of other stakeholders relevant for the Company, in accordance with the principles of sound and prudent management and with the reference principles and values adopted by the Bank. In 2024, the Board of Directors met 21 times. Of these, 16 meetings also covered ESG matters.
Risks and Sustainability Committee	It supports the Board of Directors in the performance of all the above tasks, focusing, in particular, on: • the assessment and investigation of sustainability (ESG) matters related to the Bank's business operations; • the approval of the list of ESG-sensitive sectors relevant to the Group's financing activities; • the assessments and resolutions to be made in respect of the sustainability impact and financial materiality assessment, including for the purposes of approving the Consolidated Sustainability Statement. This analysis identifies the environmental sustainability, social and governance aspects that could be potentially relevant given the impacts, risks and opportunities considered, consistently with applicable regulations, as well as the related methodology. • checking the Group's positioning with respect to national and international sustainability best practices, specifically with respect to Intesa Sanpaolo's participation in the main sustainability indices. In 2024, the Risks and Sustainability Committee met 47 times. Of these, 23 meetings also covered ESG matters. The support that the Committee provided to the Board in exercising its strategic supervision functions on sustainability, as well as in setting and monitoring climate and environmental risk objectives, is cross-sectoral and was also ensured when examining the areas of governance and risk management, business model and strategic guidelines and the most significant transactions for risk management procedures. Specifically, the Committee monitored the progress of the activities necessary to prepare the Consolidated Sustainability Statement in accordance with applicable legislation, shared the ESG KPIs for the 2024 Budget and the sector-specific Targets under the Net Zero Banking Alliance, as well as the streamlining of the process to identify and monitor climate and environmental risks. The members of the Risks and Sustainability Committee must have the knowledge, skills and experience necessary to be able to fully understand and monitor the Bank's risk strategies and guidelines, including with respect to sustainability.
Management Control Committee	The Management Control Committee, • in liaison with the corporate functions responsible for the sustainability issues (ESG) and the Internal Auditing function, supervises the compliance with the principles and values contained in the Code of Ethics; • with respect to the Consolidated Sustainability Statement, supervises compliance with the provisions of Legislative Decree no. 125/2024 and reports on this in its annual report to the Shareholders' Meeting, and examines the Consolidated Sustainability Statement in exercising its supervisory functions, in advance of the Board of Directors' meeting; • examines the annual report submitted by the Manager responsible for preparing the company's financial reports on sustainability risk monitoring and the periodic reports submitted by the corporate control functions. Furthermore, the Committee carries out the duties covered by Legislative Decree no. 30/2019, acting as the Control and Audit Committee.
Managing Director and CEO	The Managing Director and CEO • governs sustainability performance; • exercises the power to submit proposals to the Board of Directors for the adoption of resolutions within its remit; • ensures the consistency of the risk management process with the risk appetite and the relevant risk governance policies; • is informed by the Manager responsible for preparing the Company's financial reports on an annual basis about the controls over the risk of sustainability reporting; • provides, jointly with the Manager responsible for preparing the Company's financial reports, the legally-required certifications about financial and sustainability information required by law.

The Internal governance structures involved in the management and control of ESG risks are shown below. They ensure the application of controls in compliance with regulatory requirements and in line with the Group's business operations and the context in which it operates.

<table>
<tr><td>Steering Committee</td><td>The Steering Committee, which plays a central role, assists the Managing Director and CEO and is a Group management body with a decision-making, reporting and consulting role, composed of the Managing Director and CEO, who chairs the committee, and the top management, including the heads of Governance Areas and Divisions.

In the context of the Business Plan and Sustainability (ESG) Session, the Committee:
• collaborates, taking into account the objectives of solid and sustainable creation and distribution of value for all stakeholders, in the definition of strategic guidelines and sustainability policies (ESG), including the model of social and cultural responsibility and the fight against climate change, which the Managing Director and CEO submits to the relevant Board Committees and the Board of Directors;
• collaborates in identifying and updating potentially relevant environmental sustainability, social and governance matters in relation to the impacts, risks and opportunities considered, consistent with applicable regulations, as part of the impact and financial materiality assessment;
• examines the Consolidated Sustainability Statement and any other significant report on sustainability matters, prior to its submission to the Board of Directors;
• guides the consistency of technological development with the Group's ethical principles, particularly with specific reference to artificial intelligence/machine learning.
The Committee meets at least on a quarterly basis in the context of the Business Plan and Sustainability (ESG) Session.

In 2024, the Steering Committee met 26 times in the context of the Business Plan and Sustainability (ESG) Session, covering issues with ESG impacts. Specifically, these sessions provide quarterly monitoring of strategic initiatives related to the 2022-2025 Business Plan.</td></tr>
<tr><td>Group Control Coordination and Non-Financial Risks Committee</td><td>In the Operational and Reputational Risk session, the Group Control Coordination and Non-Financial Risks Committee examines the main ESG risk profiles, which are or could be reflected in the operational and reputational risk exposure. This session, chaired by the Chief Risk Officer, is attended by the heads of the Group's corporate control functions, the relevant Governance Areas and the Manager responsible for preparing the Company's financial reports.</td></tr>
</table>

Every quarter, the Steering Committee and the Group Control Coordination and Non-Financial Risks Committee report to the Board of Directors on their activities, enabling the Board to play an oversight role on the main issues covered.

The Governance Area of the Chief Financial Officer includes the responsibility for preparing the Consolidated Sustainability Statement, as well as monitoring and interpreting the development of relevant European and national legislation, as well as defining and subsequently updating the resulting methodological rules.
Set up in April 2024, the Governance Area of the Chief Sustainability Officer (the "CSO") reports to the Managing Director and CEO and its mission is to drive the Group's development strategies on sustainability.

The Governance Area of the CSO has the following main functions:
- guide the development and implementation of the Group's ESG strategy, also helping to identify specific actions and initiatives, and new business opportunities; collaborating on ESG reporting and promoting the dissemination of a culture of sustainability and innovation;
- play an active role in the development and promotion of the local areas and communities in which the Group operates, supporting non-profit organisations and promoting social inclusion initiatives and educational interventions;
- promote the innovation of businesses and territories as a key factor for sustainable development through applied research and support for start-ups, open innovation, the transition to the circular economy and the development of innovation ecosystems;
- promote the Group's historical, artistic, architectural, and archive assets to contribute to the civil and cultural growth of the local areas and communities it serves, ensuring their protection and appreciation.

The Governance Area of the CSO also includes that of the Chief Social Impact Officer (the "CSIO"), which directs, governs and implements social impact initiatives and projects, promotes the well-being and inclusion of people and the Community, and directs, coordinates and oversees initiatives to mitigate the direct environmental impacts generated by the Group.

The ESG Control Room (the "Control Room") was strengthened and reorganised in 2024 to support the performance of ESG-related activities by the Steering Committee. The Control Room is a collegiate managerial body with advisory, analysis and assessment powers. It provides the Steering Committee with specific support in the strategic proposition of ESG guidelines, policies and initiatives, the monitoring of goal achievement as well as the consideration of any actions that may be appropriate or necessary in order to achieve results.

The main functions of the ESG Control Room are listed below:
- support the Steering Committee in the Business Plan and Budget processes, in reviewing and assessing proposals about relevant ESG directions and initiatives at Group level, while assessing priorities, metrics and targets (KPIs);
- analyse policies, including the Group's social and cultural responsibility model to combat climate change;
- make assessments on proposals for the Group's ESG commitments and key business implications;
- make assessments and provide indications about proposals to join the main voluntary initiatives and the related plan of activities necessary to achieve the resulting objectives, monitoring the progress of activities and results. Furthermore, assess the main social initiatives at Group level;

- analyse the main ESG reports, including monitoring of initiatives, key ESG targets/goals (Plan and Budget KPIs), and identification of key elements prior to the preparation of ESG disclosure;
- analyse and comment, where necessary, on the integration of ESG criteria into equity investments and credit strategies;
- analyse the external context, sharing the results of ESG regulation monitoring activities and the analyses on the potential impacts of ESG trends, also with reference to other players;
- receive information on relevant requests received from Regulators or Authorities in the ESG area reported by the reference functions (Divisions and Governance Areas) and the related feedback if these involve the submission to the Bank's Bodies.

The heads of some of the Governance Areas/Divisions and, if necessary, depending on the matters addressed, the heads of other Government Areas/Divisions and/or those of other Group structures are permanent participants in the Control Room.
The Chair of the ESG Control Room reports whenever necessary and at least once a year, directly or through their delegates, to the Steering Committee on the assessments and activities carried out by the Control Room.

The ESG Control Room operates and discusses initiatives and relevant topics with the assistance of the following Panels:
- ESG Coordination Panel, launched in 2020 and formerly known as the ESG Control Room. Its main purpose is to share, update and monitor ESG activities and goals, with the collective participation of all Governance Areas and Business Divisions through Sustainability Managers;
- Sustainable Investments and Insurance Panel, launched in 2022. Its mission is to ensure comprehensive oversight of the ESG initiatives of the Wealth Management Divisions;
- Social Impact Panel, which will be launched in 2025. This panel will coordinate and steer the Social Impact area, in addition to examining, monitoring and discussing specifically related initiatives and topics.

The ESG Panels meet whenever necessary, with a minimum frequency ranging from every quarter to every six months. The Sustainability Managers and the representatives of the company structures involved in the topics addressed participate in the Panels.

The Control Room and the Panels operate with the assistance of the Sustainability Managers. They are appointed by the head of each Governance Area/Division usually from among their first reporting line, and, to the extent of their remit, monitor ESG matters with respect to the relevant Governance Area/Division, including any Group company that belongs to it.

The head of the CSO Governance Area chairs the ESG Control Room and the related Panels, except for the Social Impact Panel which is chaired by the head of the Chief Social Impact Officer Governance Area. The delegates of the CSO Governance Area coordinate the related activities with the ESG Control Room and the Panels.

The Chief Risk Officer (CRO) Governance Area defines, develops and updates the ESG risk management and assessment system. As part of the Risk Appetite Framework, and in view of the subsequent submission to the Corporate Bodies, a level of ESG (including climate change) and reputational risk tolerance is proposed, defining specific exposure limits, risk indicators, and actions to be monitored and updated. The Board of Directors approves the updates to the Risk Appetite Framework.

The CRO Governance Area also heads climate risk identification, assessment and management processes.
Finally, the CRO Governance Area includes a specific function which periodically reports on the overall status of the ISP Group's risks via a "Tableau de Bord of Risks". The latter document includes a section about reputational and ESG risks in order to monitor compliance with the risk appetite limits and informs top management and the competent department structures about its performance.

As shown by the ESG responsibilities of administrative bodies described earlier, sustainability IROs are taken into account both when defining and monitoring the corporate strategy and in the context of risk management processes. With respect to strategic assessment elements, in 2024, the Board of Directors approved the definition of new sector targets[48], confirming the Group's commitment to climate transition, and promoted the definition of new operational tools to support communities in order to strengthen the Intesa Sanpaolo Group's positioning in terms of social responsibility. With respect to compliance and risk management, the Board of Directors examined and approved the most relevant internal legislation on:
- Risk Appetite Framework;
- governance of reputational risks;
- principles of corporate conduct;
- principles of diversity, equity and inclusion.

Material sustainability IROs are regularly discussed by the Board of Directors and the Risks and Sustainability Committee during the year and are brought to the Bodies' attention by various reporting structures (and any assisting structures, where necessary) according to the relevant topic. In particular, in 2024, the following structures reported on sustainability issues:
- the Chief Sustainability Officer (CSO) Governance Area;
- the Chief Financial Officer (CFO) Governance Area;
- the Chief Risk Officer (CRO) Governance Area;
- the Chief Institutional Affairs and External Communication Officer (CIAECO) Governance Area.

The main sustainability IROs discussed during the meetings held in 2024 by the Board of Directors and the Committees in charge of ESG issues are as follows:
- governance of reputational risks;
- climate-related and environmental risks;

[48] For additional information on the Group's additional sector targets, reference should be made to the Sectoral Plan section in ESRS E1 – Climate Change.

- definition of targets for the progressive reduction of indirect greenhouse gas emissions in line with the commitments made as a result of joining private initiatives (e.g. the Net Zero Banking Alliance);
- promotion of an appropriate corporate culture and of the principles of social and environmental responsibility;
- diversity, equity and inclusion;
- health and safety of workers;
- support to communities and enhancement of local areas.

This includes control activities over the Group's ESG performance, by monitoring the results of the main sustainability KPIs and the achievement of the ESG targets set out in the Business Plan. This information was submitted to the Risks and Sustainability Committee for assessment in the first quarter of the year.

Incentive systems linked to sustainability factors

The Managing Director and CEO is the only executive member of the Board of Directors and, therefore, is the only beneficiary of an annual Incentive System and a long-term Incentive Plan for the role of General Manager. These systems also include sustainability-related metrics.

Structure of the annual incentive system

The annual Incentive System[49] is formalised through a Performance Scorecard with both financial and non-financial KPIs. Specifically, quantitative KPIs (financial and non-financial) are clustered within 4 drivers (Growth, Profitability, Productivity and Cost of Risk/Sustainability), while the (non-financial) qualitative KPIs are divided into strategic actions or projects that represent the enabling factors for the achievement of the financial KPIs or contribute to the achievement of the Plan objectives. The latter objectives are usually reported by identifying ex-ante drivers that guide the subsequent assessment. With respect to non-financial quantitative KPIs, similarly to the previous years, the Group's Environmental, Social and Governance transversal KPI was assigned in 2024.
Each KPI is assigned a weight equal to at least 10% to ensure the significance of the objective, and no more than 30% to guarantee appropriate weighting of the numerous objectives. The accrual period is annual.
The total bonus due to the Managing Director and CEO is allocated based on the assessment of the results of the individual performance scorecard, according to a deterministic calculation.
In any case, it is subject to verification of the gateway conditions and the absence of individual compliance breaches, as well as subject to corrective mechanisms.
The premium is paid partly in cash and partly in Intesa Sanpaolo shares and is disbursed over a five-year deferral horizon.
Each deferred portion is subject to a mechanism of ex-post correction (malus conditions).
Furthermore, in the five years following the payment of the individual instalment (up-front or deferred) of variable remuneration, the company reserves the right to activate claw-back mechanisms.

Structure of the Long-Term Incentive Plan

The CEO is also a beneficiary of the Long-Term Incentive Plan (PSP), which is also awarded to the remaining Management (around 3,100 beneficiaries). The Plan is based on shares awarded upon the achievement of specific performance targets that are consistent with the Business Plan (i.e. PON/RWA, Cost/Income, NPL ratio and relative TSR) and whose levels correspond to those set in the Plan itself.
There are also two bonus de-multipliers:
- Composite ESG KPI, consisting of a sub-KPI for each of the three ESG factors (Environmental, Social and Governance) whose target level is defined in the 2022-2025 Business Plan. This acts as a de-multiplier by reducing the number of possible shares accrued by 10%-20% depending on the degree of any failure to achieve the 2022-2025 Business Plan targets;
- Capital target: measures the maintenance of CET 1 levels above the target defined in the Group's RAF over the Plan's time horizon. It acts as a de-multiplier by reducing the number of shares vesting at the end of the Plan by 10% for each year of breach (up to a maximum reduction of 40% over the entire Accrual Period).

The Plan is subject to verification of the gateway conditions and the absence of individual compliance breaches. 60% of any bonus earned is deferred over a five-year horizon and, depending on the impact on fixed remuneration, 60%-55% is allocated in shares subject to a retention period (the remainder is allocated in shares not subject to a retention period). Malus and clawback conditions also apply.

The ESG Component in CEO Incentive Plans (Annual and Long-Term)

With regard to the variable remuneration of the Managing Director and CEO, the ESG component is of central importance and is included both in the annual Incentive Plan through the provision of a specific KPI, and in the long-term Performance Share Plan in which an ESG composite KPI is envisaged that acts as a de-multiplier of any bonus earned.
Within the annual Incentive System, the ESG KPI – present since 2021 and representing an evolution from the previous cross-cutting "Diversity & Inclusion" KPI – has been assigned to the CEO's Performance Scorecard, consistent with the Bank's growing commitment to social, cultural and environmental sustainability and the goal of creating long-term value for its people, customers, community and environment as well as in line with the increasing focus on these issues by Regulators, Proxy Advisors, Shareholders and Group Stakeholders. Moreover, a cross-Group ESG KPI is also assigned to about 3,000 Group managers in Italy abroad with a weight of 10% or 15%.

[49] For additional information about incentive systems, reference should be made to the Report on remuneration policy and compensation paid, available on the Group's website.

The ESG KPI of the CEO (with weight of 15%) is assessed on the basis of specific drivers:
- presence of Intesa Sanpaolo in the sustainability indices of specialist companies (no. of presences);
- promotion of an inclusive work environment through the identification and implementation of targeted management actions, with a particular focus on meeting the commitments in terms of gender equity assigned to each Division/Governance Area: i) in annual hires; and ii) in the pool of candidates for first appointment to managerial roles;
- group ESG initiatives:
  - support for the green economy and circular economy: i) development of ESG commitments; ii) setting of targets for reducing financed emissions in additional priority sectors; iii) reduction of exposures in ESG risk sectors; iv) and completion of the ESG Credit Framework;
  - growth in Sustainable Investments through the impact of ESG investments on total AuM (%);
  - youth orientation and employability initiatives.

In the PSP long-term incentive plan there is a composite KPI that, in an effort to promote the pursuit of sustainability, acts as a de-multiplier as mentioned in the previous section. The KPI consists of a sub-KPI identified in the Business Plan for each of the 3 factors comprising ESG, namely:
- Environmental: new loans for the green/circular economy and the ecological transition with a special focus on supporting the Corporate/SME transition (weight 40%);
- Social: number of people who successfully completed the re-skilling and up-skilling programmes with reallocation in new job roles in the case of the former (weight 40%);
- Governance: percentage of women in new appointments to senior positions, i.e. -1 and -2 organisational levels below the CEO (weight 20%).

Moreover, note that the same ESG composite KPI is included in the LECOIP 3.0 Plan, the long-term incentive plan dedicated to Professionals in Italy, which 45,629 people have signed on to (about 63% of those entitled) and which is based on Certificates having Intesa Sanpaolo shares as the underlying asset. Specifically, in this case, the KPI recognises a minimum return (of 4%) on the capital initially allocated upon the Group's achievement of that KPI. If the indicator is not achieved, the amount that would have been paid to employees will be invested by the Bank in ESG projects that contribute to the achievement of the ESG objectives concerned.

The annual Incentive System and the long-term Performance Share Plan are approved by the Shareholders' Meeting, upon proposal of the Board of Directors supported by the Remuneration Committee. Moreover, the Risks and Sustainability Committee, without prejudice to the prerogatives of the Remuneration Committee, supports the Board of Directors and examines them in order to check their connection with current and prospective risks.

Risk management and internal controls of sustainability reporting

The Intesa Sanpaolo Group adopts an internal control system based on three levels, in line with the legal and regulatory provisions in force. The model has the following types of control:
- Level I: line controls which are aimed at ensuring proper performance of operations (for example, hierarchical, systematic and sample-based controls) and which, to the extent possible, are incorporated in the IT procedures. They are carried out by the same operating and business structures, including through units dedicated exclusively to control duties reporting to the heads of the same structures or performed as part of the back office.
- Level II: consists of risk and compliance controls to ensure, inter alia: (i) the correct implementation of the risk management process, (ii) observance of the operating limits assigned to the various functions and (iii) compliance of company operations with the rules, including self-governance rules. The functions assigned to such controls are separate from the ones in charge of production and contribute to the definition of the risk governance policies and the risk management process. In the Intesa Sanpaolo Group, Level II includes the following Parent Company structures and the equivalent local units of the Group companies, where established:
  - Chief Compliance Officer Governance Area, which is assigned the tasks and responsibilities of the “regulatory compliance function (compliance)”;
  - Chief Risk Officer Governance Area, which is assigned the tasks and responsibilities of the “risk control function (risk management)”.
- Level III: internal audit controls to identify breaches of procedures and regulations, as well as to periodically assess the completeness, adequacy, functionality (in terms of efficiency and effectiveness) and reliability of the internal control system and the IT system at Group level, at scheduled deadlines in relation to the nature and intensity of the risks.

The Group has therefore put in place a structured system of controls and responsibilities to ensure the compliance of the Consolidated Sustainability Statement with the applicable legislation from a risk-based perspective, aimed at managing the risks associated with reporting sustainability information to third parties.
The structures involved in the control system perform specific activities, which are detailed in internal Group documents and aimed at ensuring the quality and compliance of the Consolidated Sustainability Statement throughout all stages of the process. These control activities are directly related to the main types of risks identified and represent forms of risk mitigation. Specifically:
- when defining the work plan and the structure of the Statement, the controls focus on the analysis and interpretation of the relevant legislation, the correct definition of the scope of consolidation and the verification that the double materiality analysis is complete and accurate, with a clear identification of its results;
- during the collection of information and the preparation of contributions, control activities include the verification of data sources and the loading of information through formal systems and procedures aimed at verifying the completeness, accuracy, consistency and comprehensiveness of such information by the respective contributors and validators;
- finally, in the aggregation and finalisation phase of the Consolidated Sustainability Statement, the outcomes of the contribution and validation process are verified, the correctness of the metrics is checked and the information on policies, actions and targets is harmonised, ensuring that the final document meets regulatory and quality requirements.

Moreover, the Manager responsible for preparing the Company's financial reports performs the verification and monitoring, through the structures reporting to him/her, designed to ensure that the Consolidated Sustainability Statement included in the report on operations has been prepared in compliance with the reporting standards adopted in accordance with the CSRD.

This integrated system ensures an effective, transparent management of Consolidated Sustainability Statement that is aligned with regulatory requirements and quality standards defined by the Group.
Risk assessment and internal controls relating to sustainability reporting have therefore been integrated within the functions identified by the new internal regulatory framework defined by the ISP Group.

The results of the control and risk assessment activities will subsequently be communicated to the administrative, management and control bodies, as envisaged in the aforementioned framework.

Indeed, the Manager responsible for preparing the Company's financial reports brings to the Board of Directors' attention an annual report on the activities to monitor the sustainability statement risk, which is included in the "Report on the internal control system for the financial reporting process", while the corporate control functions submit their own periodic reports.

Environmental information

ESRS E1 – Climate change

Materiality assessment of impacts, risks and opportunities

As explained in the chapter “ESRS2 – General disclosures: Double materiality assessment”, the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which takes into account the Group's impacts with respect to external and internal stakeholders (people and the environment) in the short, medium or long term from an inside-out perspective;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within the scope of ESRS E1 – Climate Change were identified taking into consideration the specific features of the Group. Specifically, the impacts, risks and opportunities were mapped on the basis of the framework in which the Group sets out and carries on its business activities and dealings in relation to climate change (for instance, “Rules for the Environmental and Energy Policy” and “Group Guidelines on ESG Risk Governance”, 2022-2025 Business Plan, internal documents such as the "Business Environment Scan" and materiality analysis of climate risks), the controls defined and put in place by the Group to combat climate change, as well as an assessment of the transitional and physical risks the Group could be exposed to.

The analyses were conducted by assessing the materiality of the impacts, risks and opportunities identified for each of the three sub-topics of ESRS E1, namely: "Climate change mitigation", "Climate change adaptation" and "Energy", with reference to all types of energy production and consumption[50]. The standard also requires the identification of climate-related issues within these sub-topics that may generate physical climate risks for the undertaking, and transition risks resulting from the implementation of climate change adaptation measures.

For the purposes of impact materiality, the assessment of the impacts identified involved interviews with internal units affected and external stakeholders (e.g. experts on communities or the environment) and an in-depth qualitative and quantitative analysis based on the criteria envisaged by relevant legislation (namely, scale, scope, irremediable character of the impact and likelihood). Specifically, with reference to:

- own operations: impacts were assessed on the basis of qualitative drivers connected with, among other things, the adoption of internal policies and the promotion of initiatives able to guarantee the achievement of the objectives of climate neutrality and energy efficiency defined;
- upstream value chain: the impact assessment involved ESG questionnaires administered to suppliers and an analysis of their feedback;
- downstream value chain: an analysis was conducted on the indirect impacts conveyed through exposures on the Group's portfolios to counterparties belonging to sectors that generate high greenhouse gas emissions and are considered to be highly exposed to physical and transitional risks related to climate change. Furthermore, in order to assess the impacts associated with the downstream value chain, dedicated initiatives that the Group has signed on to (e.g. UN Global Compact, Net Zero Banking Alliance - NZBA) were analysed, as well as internal financing and investment policies that provide for the selection of undertakings that have defined and implemented climate change actions (e.g. transition plan).

The analysis revealed the following impact materiality outcomes with respect to the above scopes:

- own operations: as a result of the adoption of internal policies and corporate strategies aimed at reducing the impact of climate change by the Group's operations, material positive impacts were identified with respect to climate change adaptation;
- upstream value chain: considering the Group's operations and type of business, which focuses mainly on financial activities and services, no material impacts of the Group conveyed through the supply chain emerged;
- downstream value chain: considering the definition of criteria and strategies that positively contribute to the mitigation of and adaptation to climate change of counterparts, as well as to the reduction of energy consumption and indirect emissions thereof, material positive impacts on all sub-topics were identified. At the same time, given the presence within the Group's portfolios of exposures to counterparties belonging to sectors that may be negatively impacted by this issue, material negative impacts were identified.

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the scopes previously identified.

With regard to physical climate-related risks, the Group has adopted a structured process for identification and assessment, following the operational steps described below:

- identification of material climate hazards, which involves the analysis of potential climate-related physical risks, distinguishing between acute physical risks (e.g. heat waves, storms, floods, forest fires) and chronic risks (e.g. sea level

[50] "ESRS E1 Delegated Act 2023 5303 - Annex 1": "climate change mitigation" refers to the undertaking's efforts for the overall process of limiting the global average temperature increase to 1.5°C above pre-industrial levels, as laid down in the Paris Agreement. “Climate change adaptation” refers to the process of adapting an undertaking to actual and expected climate change.

rise, changes in mean temperatures, changes in precipitation patterns), and the use of high-emission climate scenarios (e.g. IPCC SSP5-8.5) and regional projections to identify and predict material climate events;
- identification of supporting tools and climate data, which consists of the application of geospatial analysis tools and climate models to ensure that risk identification is based on reliable data and recognised methods as further described below;
- for own operations: exposure and sensitivity assessment, which involves analysing assets and operations to assess the degree of exposure and sensitivity to identified climate hazards. This analysis takes into account the likelihood, potential magnitude and duration of risk events, as well as the specific geographical coordinates of the Group's operating sites;
- value chain analysis, which includes the main suppliers and counterparties the Group is exposed to and invests in, assessing the vulnerability of critical assets and logistics infrastructure in order to map physical risks throughout the supply chain;
- integration of climate and environmental risk assessments into risk management systems to enable the identification of priorities and the development of mitigation and adaptation strategies to reduce overall vulnerability.

Various methods of analysis were used to evaluate the portfolios, specifically:
- scenario-based climate projections of the Network for Greening the Financial System (NGFS) were used;
- for sovereign bond exposures only, on the other hand, the estimation methods are based on the projection of interest rates under different climate scenarios from which potential shocks to sovereign bond yield curves are derived. The analyses were conducted with the aim of assessing the effects of climate change and the decarbonisation of economies on sovereign bond yields in various scenarios.

In view of the aforementioned process, the following analyses were carried out with respect to physical risk on the three perimeters identified in the materiality analysis, specifically with reference to:
- own operations: the operational risk and the reputational risk the Group would be exposed to in the event of an interruption of operations due to the occurrence of extreme weather events were assessed;
- upstream value chain: the assessment focused primarily on potential exposures to reputational risk in the case of Group suppliers that adopt a less structured approach to the matter in question (such as a policy to protect company assets, updates to the Business Continuity and Disaster Recovery plans);
- downstream value chain: the assessment focused on credit risk, market risk, liquidity risk and strategic risk connected with the matter in question. This would also give rise to reputational risk.

Note that the analyses conducted involved multiple time horizons (i.e. short, medium and long term[51]) and that, based on the time period under review, internal documentation (e.g. the Group's Risk Appetite Framework), business plan projections and simulations and projections used for the purposes of analysing the risks the Group is subject to were considered.

Based on the analyses conducted, for the purposes of financial materiality, with reference to the downstream value chain, credit risk and reputational risk emerged as material risks over the medium to long-term time horizons due to exposure to sectors associated with counterparties potentially subject to a high risk of being impacted by physical risk events.

With reference to transition risk, the following assessments were made for the different scopes of reference identified:
- own operations: an assessment was made of operational risk and reputational risk due to possible initiatives that might not adequately mitigate climate change with respect to the communicated statements and objectives;
- upstream value chain: the operational risk and the associated reputational risk the Group is potentially exposed to were assessed in the event that it uses suppliers that adopt less structured controls with respect to the sustainability issue under investigation (e.g. with reference to the management of its own greenhouse gas emissions);
- downstream value chain: credit risk, market risk and liquidity risk potentially arising from exposure to transition risk factors were assessed. This would also give rise to reputational risk.

With regard to the loan portfolio, the identification of transition risks and the assessment of exposure to these risks takes into account climate projections based on the NGFS climate scenarios consistent with the Paris Agreement. On the other hand, with regard to sovereign bond exposures, the Group conducted analyses to assess the impact of climate change and the decarbonisation of economies on sovereign bond yields. The estimation methodology is based on the NGFS framework and in particular on the projection of interest rates under different climate scenarios from which potential shocks to sovereign bond yield curves are derived.

Following the analysis carried out, for the purpose of financial materiality, with reference to the downstream value chain perimeter, credit risk, market risk and reputational risk emerged as material in the medium to long term due to exposure to sectors associated with counterparties potentially subject to high transition risk. Reputational risk is also material as far as the upstream value chain is concerned, given the existence of counterparties with a less evolved approach to transition risk management.

Finally, with regard to the sub-topic of energy, the risk analyses focused on:
- upstream value chain: the assessment focused on potential exposures to reputational risk in the case of Group suppliers that adopt less structured controls with respect to the issue of sustainability studied (e.g. energy efficiency improvements);
- downstream value chain: mainly credit risk, market risk and liquidity risk potentially arising from impacts on the value of the production assets of the financed counterparties due to inefficiencies in the management of energy supplies were considered. This would also give rise to reputational risk.

As a result of the analysis carried out with respect to the topic of energy, for the purpose of financial materiality reputational risk emerged as material for the upstream value chain, while for the downstream value chain, considering the exposure to sectors associated with counterparties that are potentially risky in this respect, credit risk and reputational risk emerged as material.

[51] As already outlined in chapter "ESRS 2 - General disclosures, Drafting criteria and methodology, Time horizons".

Finally, for the purposes of assessing financial materiality, opportunities were analysed that have or can be expected to have a material financial influence on the Group.
With regard to climate change adaptation, opportunities were identified exclusively on the downstream value chain, which were found to be immaterial based on the analysis of internal documentation and discussions with the relevant internal structures.

With regard to opportunities related to transition risk factors in the context of climate change mitigation, the following analyses were conducted with respect to the following perimeters:

- own operations: on the basis of interviews with the competent organisational units, the assessment looked at current and/or planned Group initiatives in support of climate change mitigation;
- downstream value chain: opportunities were assessed in relation to the possibility of expanding the product range aligned with environmental sustainability objectives. This analysis was also carried out taking into account the possible presence of indicators related to disbursed or planned funding aimed at climate change mitigation.

Downstream of the analyses conducted, from a financial materiality perspective, the aforementioned opportunities are material considering the numerous initiatives already undertaken by the Group to combat climate change with respect to the perimeter of its own operations (e.g. actions aimed at reducing its own emissions as part of the Group's Own Emissions Plan) and the downstream value chain (e.g. the Group's strong commitment to aligning with the criteria defined by the European Taxonomy Regulation) and the objectives defined by the Group in this regard from a commercial perspective, in addition to the strategic priority that the Group has long since fully integrated into its overall business approach.

As far as opportunities in the energy sector are concerned, the analyses focused on the scope of own operations with a view to improving brand reputation/positioning resulting from the definition of energy efficiency targets. Based on the analysis of internal documentation and discussions with relevant internal structures, the opportunity identified, net of those related in a broader sense to climate change mitigation (represented above), is not relevant to financial materiality.

Resilience Assessment

Using an in-depth analysis of external factors such as global sustainability trends, changes in public policy and evolving stakeholder expectations, banks can accurately identify risks and opportunities that influence their operations and long-term strategy. In this context, the Group used the “Business Environment Scan” (BES), an essential tool to strengthen the capacity of financial institutions to adapt to a changing environment characterised by regulatory, economic and environmental changes.

This approach allows economic, social and environmental considerations to be integrated into strategic planning, ensuring a greater ability to adapt to unforeseen events such as market downturns or regulatory pressures. In the banking context, the BES is particularly relevant for assessing interactions with the credit market, climate risk and the transparency requirements of the Group's stakeholders.

For this reason, the Intesa Sanpaolo Group has identified a number of variables considered within the “Business Environment Scan” to analyse climate risk issues (transitional and physical):

- macroeconomic variables: identification of the most material variables impacting each business area, description of the reasons for their materiality, and assessment of the expected impacts based on the deltas between the projections of the variables (based on the Oxford Economics and Central Banks and Supervisors Network for Greening the Financial System databases) under the three climate scenarios considered: i) Hot House World, ii) Orderly Transition, iii) Disorderly Transition[52];
- competitive landscape: description of the commercial offers and initiatives related to climate and environment announced by the Intesa Sanpaolo Group's Italian and international peers, and assessment of the expected impacts based on peer positioning;
- regulatory trends: presentation of the main climate and environmental regulatory trends affecting each business area, both in terms of existing regulations and future legislation currently under discussion, and assessment of the expected impact of regulation also with respect to the implications for both banks and bank customers;
- technology trends: identification of key climate and environmental technology trends affecting each business area and assessment of their expected impact based on the potential of the trend to revolutionise business area operations to support customers' green transition;
- social/demographic trends: presentation of the main social and demographic trends influencing each business area and assessment of the expected impact based on an understanding of the changing needs, preferences and behaviour of the population;
- transition risk: assessment of the quantitative impact of the process of upgrading to a low-carbon and more environmentally sustainable economy on the Intesa Sanpaolo Group's exposures;
- physical risk: assessment of the quantitative impact of climate change on the Group's exposures, including more frequent extreme weather events and gradual changes in climate.

For each variable analysed, the potential impact was assessed and the time horizon in which these effects could materialise is noted. The combined impacts of all dimensions provide an explicit judgement of how climate and environment-related risks and opportunities might affect the Intesa Sanpaolo Group's business model in the short, medium and long term.

[52] Hot House World: assumes implementation of only current climate policies, resulting in high physical risks due to significant global warming; Orderly Transition: envisages the early and gradual adoption of stringent climate policies to limit warming to 1.5°C and achieve zero net CO_2 by 2050; Disorderly Transition: characterised by delayed or divergent policies across sectors and countries, with emissions peaking in 2030 and more drastic measures to limit warming below 2°C.

The analysis covered 14 company areas:
1. Banca dei Territori (BdT) – Italy – Residential Real Estate (RRE);
2. Banca dei Territori (BdT) – Italy – SMEs (Small and medium-sized enterprises);
3. IMI Corporate & Investment Banking (IMI C&IB) – Large corporate – Manufacturing;
4. IMI Corporate & Investment Banking (IMI C&IB) – Large corporate – Wholesale & Retail Trade;
5. IMI Corporate & Investment Banking (IMI C&IB) – Large corporate – Construction;
6. IMI Corporate & Investment Banking (IMI C&IB) – Large corporate – Real Estate Activities;
7. IMI Corporate & Investment Banking (IMI C&IB) – Large corporate – Oil & Gas;
8. IMI Corporate & Investment Banking (IMI C&IB) – Large corporate – Power Generation
9. IMI Corporate & Investment Banking (IMI C&IB) – Large corporate – Automotive;
10. International Banks Division (IBD);
11. Private Banking;
12. Asset Management;
13. Insurance;
14. Corporate Centre.[53]

In the case of the Corporate Centre, the area was integrated to also consider its own operations. In this context, the activities of the business area responsible for Treasury and Asset Liabilities Management (ALM) were analysed.

The exercise was conducted in 2024 as part of the "Business Environment Scan".

The initial phase of the resilience analysis involved the definition of the BES framework, which considers short, medium and long-term time horizons, outlining the business landscape the Group operates in from a climate and environmental perspective.

In this context, time horizons of a managerial and strategic nature aligned with the time horizon of the Business Plan were used for the "Business Environment Scan". Specifically:
- short term (ends in 2027): a time interval that includes the following three years and aligns with the Group's internal adequacy processes, such as the Internal Capital Adequacy Assessment Process (ICAAP) and the Internal Liquidity Adequacy Assessment Process (ILAAP);
- medium term (ends in 2030): time interval extending from year 4 to year 6 from the time of the analysis. It considers evolving factors that complement the Business Plan and establishes guidelines for the development of the next plan. By analysing the medium term, the Group can adapt its strategies and initiatives to address emerging trends, market dynamics and stakeholder expectations;
- long term (ends in 2050): time span from year 7 to year 26. This interval is particularly important considering the Group's commitment to achieving Net Zero emissions targets by 2050. Considering the long term, the Group can develop sustainable strategies and initiatives that contribute to a low-carbon future and align with global sustainability goals.

The results of the analysis are shown in terms of expected qualitative impacts (classified as "low", "medium", "high") for each variable, within each business area and over the three time horizons defined.

Overall, out of the 14 business areas indicated above, six relevant areas have all variables rated as "medium" or "high" impact, and at least one variable rated as "high" impact. Specifically:
- BdT – Italy – Residential Real Estate;
- BdT – Italy – SMEs;
- IMI C&IB – Large corporate – Oil & Gas;
- IMI C&IB – Large corporate – Power Generation;
- IMI C&IB – Large corporate – Automotive;
- International Banks Division.

The impact analysis carried out on the variables identified had the following outcome: 30% of the "medium" or "high" impacts are expected to occur in the short term, 60% in the medium term and 10% in the long term.

More details are given below for each of the dimensions analysed:
- macroeconomic variables: impacts are expected in the medium term (with the exception of energy prices, which affect the Oil&Gas and Power Generation sectors in both the short and long term);
- competitive landscape: impacts are expected in the short to medium term, also driven by the development of the market with regard to products and services dedicated to climate;
- regulatory trends: significant impacts were identified for almost all the company areas under analysis (for 13 of the 14 areas analysed and mentioned above, this trend was assessed as having a "high" impact in the short to medium term). These present both opportunities and potential risks;
- technology trends: impacts are expected mainly in the medium term, highlighting opportunities to support the green transition of bank customers;
- social/demographic trends: in general, more limited impacts are expected, with different time horizons depending on the area, e.g. increasing customer demand for sustainable products and investments and greater awareness of the consequences of climate risks.

[53] In addition to credit risk, the "Corporate Centre", with functions of direction, coordination and oversight of the entire Group, is attributed with the risks typical of this Business Unit (namely those arising from equity investments), the risks pertaining to the exposures in default, the Banking Book interest rate and exchange rate risk, as well as the risks arising from the management of the Parent Company's FVOCI (Fair Value through Other Comprehensive Income) portfolio.

In addition to the analysis focusing on qualitative assessment, an analysis of transition risk and physical risk drivers was performed, quantifying the impact of these drivers on the Group's portfolios, considering their composition and specific characteristics. This analysis shows that:

- in terms of transition risk, the Intesa Sanpaolo Group's portfolios, although not significantly exposed in the short term, have an increasing exposure over longer time horizons. Small or medium-sized enterprises (SMEs) and large companies are increasingly exposed to transition risk, particularly in the Power Generation and Oil & Gas sectors, while residential real estate is exposed to medium- and long-term impacts due to emission reduction regulations;
- in terms of physical risk, flood events are expected to become a significant problem for residential properties in the long term. For SMEs, the exposure to physical risk is moderate, with drought and forest fire events as the main risk drivers, while drought, forest fire and flood events pose a significant risk for large companies in various sectors over the long term.

Furthermore, in order to effectively address the evolution of impacts in the different time horizons and dimensions analysed, the Group has defined a set of follow-up actions, some of which have already been implemented, taking into account the results of the BES. These actions aim to mitigate risks, exploit opportunities and ensure the long-term sustainability of the Group in the face of climate and environmental challenges. Key initiatives include, for example:

- active and constant monitoring of national and international ESG legislation;
- participation in working groups and initiatives related to climate change;
- assessment of climate and ESG-related risks during credit processes and integration of ESG risks into creditworthiness assessments;
- ESG sector mapping, to trace ESG issues back to the NACE/ATECO sectors used by the Group;
- sectoral target setting initiatives (in the context of the NZBA) to reduce the CO2 emissions financed, implementing and monitoring a transition plan related to the sectors considered;
- implementation and monitoring of the “Own Emissions Plan”;
- adoption of the business continuity plan and actions to prevent/mitigate physical damage to the Group's physical facilities;
- actions to increase energy efficiency.

In this context, by recognising the impacts, implementing the actions defined above and constantly monitoring the company’s context, the Intesa Sanpaolo Group can continue to manage climate and environmental risks while pursuing opportunities for sustainable growth.

Integration of sustainability performance into incentive systems

The Intesa Sanpaolo Group is aware that it also has a significant social and environmental impact in the settings in which it conducts its business, choosing to act not only in the pursuit of profit, but also with the aim of creating long-term value for the Group, our people, customers, the community and the environment.

With particular regard to climate aspects, these contribute to the determination of the variable remuneration of the Managing Director and CEO and the rest of the company workforce in the framework of both the Annual Incentive System and the Long-Term Incentive Plans.

With regard to the Managing Director and CEO, the 2024 Performance Scorecard of the Annual Incentive System includes a specific, detailed ESG KPI with a weight of 15%, while the "Performance Share Plan" (PSP) long-term incentive, based on shares awarded in the future against the achievement of specific performance targets, includes a composite KPI that, in an effort to promote the pursuit of sustainability, acts as a de-multiplier, reducing the number of shares that may be vested by 10%-20% depending on the degree of achievement. The composite KPI consists of a sub-KPI identified in the Business Plan for each of the three environmental, social and governance factors.

Failure to achieve the ESG composite KPI envisaged in the long-term Performance Share Plan entails the curtailment of any bonus that may have vested by 10%-20%.

For the Managing Director and CEO, the ESG KPI resulted in the vesting of 16% of the bonus for the 2024 annual Incentive System.

With regard to the Annual Incentive System, the driver of the ESG KPI assigned to the CEO and connected to the climate is the support for the green economy and circular economy assessed in terms of: i) development of ESG commitments; ii) setting of targets for reducing financed emissions in additional priority sectors; iii) reduction of exposures in ESG risk sectors; iv) and completion of the ESG Credit Framework. Also assessed is the development of sustainable investments in terms of ESG investments as a percentage of total AuM (%).

With regard to the PSP Long-Term Incentive Plan, the environmental component of the ESG composite KPI (which acts as a de-multiplier as mentioned in the previous paragraph) relates to the new credit for the green/circular economy and ecological transition with a particular focus on supporting the transition of corporate undertakings/SMEs (the latter having a weight of 40%).

For more details on the ESG KPI of the Annual Incentive System and the PSP see the section "The ESG Component in CEO Incentive Plans (Annual and Long-Term)" of the ESRS 2 Standard.

Strategies to counter climate change in own operations

Policies to mitigate and adapt to climate change

The Intesa Sanpaolo Group has developed and adopted a series of policies to monitor and address issues related to climate change and energy efficiency.

First, a Code of Ethics was adopted that promotes an efficient and conscious use of all resources, avoiding waste and always prioritising sustainable choices over time. Moreover, the document contains guidelines aimed at combating climate change, protecting nature and biodiversity and supporting the transition to a sustainable, green and circular economy.

Within the Group, the adoption of the principles of the “Code of Ethics” has enabled the development of several policies aimed at mitigating climate change impacts within the Group's own operations.

In this context, of note is the “Environmental and Energy Policy” (hereinafter referred to as the Policy), which applies the values of the “Code of Ethics” and which aims to minimise environmental impacts and ensure legislation compliance, in line with the Environmental Code (Legislative Decree 152/06) and in accordance with the Organisational, management and control model pursuant to Legislative Decree 231/01. The main objectives include combating climate change, managing ESG risks, preventing environmental impacts, efficient and responsible use of resources, and careful selection of suppliers with ethical, social and environmental requirements. In this context, this Policy enables the Group to comply with initiatives that promote principles of sustainability and social responsibility (e.g. UN Global Compact).

The most senior level accountable for the implementation of the policy is the Environmental Manager, in charge of the Intesa Sanpaolo Environment and Energy structure, whose mission is to direct, coordinate and oversee initiatives aimed at mitigating the direct environmental impacts generated by the Group's own operations, ensuring the monitoring of regulatory compliance for environmental protection and energy efficiency. The Environmental Manager delegates the specialised operational structures to monitor compliance risks, such as Real Estate Management and Group Technology.

Furthermore, there are environmental and energy functions that carefully monitor operations, coordinate regulatory compliance audits, and perform periodic checks, inspections and audits at the Group's sites with a focus on waste management, energy consumption measured compared with the consumption expected, taking into account the characteristics of the building (climate zone, size, facilities, number of employees). The Intesa Sanpaolo Group has implemented management systems for the environment (ISO 14001 Certification) and energy (ISO 50001 Certification) certified by an international third party and subject to periodic audits, thus ensuring a systematic approach to sustainability that is aligned with international best practices.

Similarly, resource procurement aspects are managed on the basis of the “Green Banking Procurement Rules”, which provide procurement guidelines in areas such as energy, office materials, sustainable renovations and event organisation. Key objectives include optimising resources, promoting sustainable practices in the procurement of goods and services, reducing CO2 emissions, promoting efficiency and the circular economy. The most senior level responsible for the “Green Banking Procurement Rules” document is the head of the Intesa Sanpaolo Environment and Energy structure.

In this context, the Intesa Sanpaolo Group makes the aforementioned policies available to all stakeholders that are potentially involved and to those who contribute to their implementation through internal and external channels, using the Intranet for Group employees and the official website for all external stakeholders, applying them to all Group companies, including the Parent Company and subsidiaries.

Own Emissions Plan

In accordance with the "2022-2025 Business Plan", in 2022 the Intesa Sanpaolo Group implemented a plan to reduce its own emissions, called "Own Emissions Plan", following the Science Based Target Initiative (SBTi) protocol that calls for keeping the global temperature increase below 1.5°C compared to pre-industrial levels, as envisaged by the Paris Agreement.

The plan establishes a 53% reduction in Scope 1 and Scope 2 [54]emissions by 2030 (-51.427 thousand tonnes of CO_2eq) compared to the 2019 baseline (96.192 thousand tonnes of CO_2eq), and also sets the goal of becoming carbon neutral at the same time, offsetting residual emissions through the purchase of carbon credits.[55] In this context, the Group aims to achieve 100% electricity from renewable sources purchased for its operations. The definition of the target is based on 2019 data and the assessment of the market for green certificates to 2030, as well as other contractual options such as Power Purchase Agreements (PPAs).

It is confirmed that the calculation of emissions for the activities covered by the plan considers the entire scope of the Group, and this has remained unchanged since its definition. Moreover, the 2019 baseline, selected as representative of the Group's consumption and not affected by the exceptional events that characterised the following years such as 2020 and 2021, has never been changed, despite the inclusion of additional subsidiaries in the new Consolidated Sustainability Statement boundary, which in any case have a residual impact in terms of CO_2eq (less than 1% of the total).

To define the pathway for reducing its own emissions, the Group adopted an integrated approach, combining two methods:
- "bottom-up”, involving various internal stakeholders including Real Estate Management, People Management & Development, Workers Benefits, branches and foreign companies to identify the main decarbonisation levers;

[54] See the section "Gross Greenhouse Gas Emissions – Scope 1, 2, 3 and Total" of this standard for a description of Scope 1, 2 and 3 emissions.

[55] Note that as at 31 December 2024 the Group does not directly invest in GHG capture and storage, but holds intangible amounts of CO_2 emission rights (related to the European Union Emissions Trading System - EU ETS) deriving from proprietary trading operations carried out by the IMI Corporate & Investment Banking Division.

– "top-down", selecting the projects with the greatest potential for emission reductions relative to implementation costs, and defining the investments required to enact them.

With regard to the achievement of the declared decarbonisation targets, three levers have been adopted for both the Italian and foreign boundaries (branches, banks and companies) identified for 2024 and beyond:
a) repositioning of the electricity supply towards renewable sources;
b) implementation of measures aimed at reducing both energy consumption and dependence on fossil fuels for the Group's buildings through, for example, the gradual elimination of heating/air conditioning systems powered by gas and diesel oil and the renovation of inefficient systems with the use of heat pumps, the installation of photovoltaic panels and the activation of energy management/monitoring systems;
c) electrification of the company car fleet, both through hybrid and electric vehicles, and the installation of charging stations.

Specifically:
- the first lever is applied to the entire boundary of the Group;
- the second and third levers impact the Italy boundary and the foreign subsidiary banks located in Albania, Bosnia-Herzegovina, Croatia, Ukraine, Serbia, Slovenia, Moldova, Slovakia and the Czech Republic, Egypt, Romania, Hungary.

During 2024, the main initiatives implemented were:
- with regard to the first lever, the supply of energy from renewable sources is constantly monitored, which has proven to be in line with the target. One example is the Egyptian subsidiary Bank of Alexandria, which, in view of the restrictions in the local market, purchased i-RECs, and entered into a contract with NREA (New and Renewable Energy Authority) for the procurement of electricity from renewable energy sources for its sites in the Cairo region, covering about 91% of its electricity purchases;
- under the second lever, the following was done:
  - replacement of existing boilers with heat pump systems in some branches and buildings and extension of the smart building platform for monitoring consumption, with regard to the Italy boundary;
  - replacement of existing boilers with heat pump systems and replacement of obsolete air conditioning systems at some sites of the Hungarian subsidiary CIB Bank;
  - installation of a photovoltaic system at the Croatian subsidiary PBZ;
  - replacement of lighting fixtures with LED technology, obsolete air conditioning and electrical systems at some sites of the Slovak subsidiary VUB;
- with regard to the third lever:
  - increase in the number of electrified cars (full electric, plug-in hybrid and full hybrid) and simultaneous decrease in cars with internal combustion engines. In order to facilitate the adoption of plug-in rechargeable vehicles, a project was launched to install recharging stations at parking spaces of the Group's main buildings.

The implementation of the planned actions takes place in cooperation with the relevant corporate functions, ensuring an effective sharing of the necessary costs and resources. The availability of human and financial resources (the latter made available through the annual capital budget cycle), employed through an integrated, systemic approach that combines strategic allocation with the presence of specific skills, access to appropriate technologies and the support of an adequate regulatory framework, contributes to the implementation of the actions envisaged in the "Own Emissions Plan".

With reference to OPEX (administrative expenses) and CAPEX (property and equipment), we note their limited significance given the Group's sector of operations.

Finally, note that the update of the "Own Emissions Plan" is periodically shared during the meetings of the ESG Control Room and the ESG Coordination Committee.

Greenhouse gas emission reduction targets

Climate change mitigation and adaptation objectives in own operations

Target: Scope 1 and 2 - % of actual reduction in own emissions from implemented measures		
	Date	**Value**
Baseline	31.12.2019	96.192 tCO_2eq
Final balance	31.12.2024	-35%
Target	2030	-53%

Target: % Purchase of electricity from renewable resources		
	Date	**Value**
Baseline	31.12.2019	87.7%
Final balance	31.12.2024	92.8%
Target	2030	100%

In this context, as at 31 December 2024 the Group had already achieved a 35% reduction in emissions compared to the 2019 baseline (96.192 thousand tCO_2eq). This reduction corresponds to 34.256 thousand tonnes of CO2eq, and the Group remains in line with its target for 2030.

Moreover, as required by Regulation EU 2023/2772, the Group has identified “entity specific” disclosures in addition to the mandatory disclosures, to enable users to understand the impacts, risks or opportunities related to sustainability with reference to specific climate change issues, consistent with the Group's strategy to address climate change in its own operations as described in the preceding paragraphs, to which reference should be made for further details. Specifically, the metric identified for this purpose relates to the percentage of electricity purchased from renewable resources, which stands at 92.8% as at 31 December 2024.

Finally, note that like all financial institutions, the Intesa Sanpaolo Group does not currently fall into any of the categories listed in the European legislation on exclusion from the EU-Paris aligned Benchmark (EU PAB).

Strategy to combat climate change at portfolio level

Policies to mitigate and adapt to climate change

The Group adopts a series of policies to safeguard decarbonisation objectives at the portfolio level and to monitor climate adaptation issues, starting with the “Code of Ethics”, which, among its principles, envisages responsible management of indirect environmental impacts, for example committing to promoting services and products to foster the development of a low-emission economy.

In order to ensure an effective and efficient management and control system, strategic decisions on risk management at the Group level are referred to the Board of Directors of Intesa Sanpaolo, in its capacity as Parent Company. Thus, the Board plays this role not only with reference to the Parent Company, but also assessing the Group’s overall operations and the risks to which it is exposed. In fact, Intesa Sanpaolo's Board of Directors, with the support of the Risks and Sustainability Committee, approves policies on climate change, including the “Group Guidelines for the Governance of Environmental, Social and Governance (ESG) risks” (hereinafter “Guidelines for the Governance of ESG Risks”) in line with the Group's strategic and sustainability objectives. The Chief Risk Officer Governance Area (CRO Area) is responsible for, develops and maintains, in conjunction with other relevant structures, the aforesaid guidelines and the related implementing rules and is responsible for the design, development and maintenance of the internal system for the management and assessment of the Group's reputational and ESG risks.

As part of the overall ESG risk management framework, the "Guidelines for the Governance of ESG Risks" document devotes special attention to the monitoring and mitigation of climate risks and climate change adaptation. The containment of exposure to such risks passes first and foremost through preventive efforts centred on the development of a regulatory framework that also provides for the preparation and implementation of sector-specific rules that limit credit operations in specific sectors and that are able to identify and guard against risks arising from adaptation to climate change (e.g. physical risks).

The guidelines apply to Group banks and companies, which adapt them to their own context, and, in the case of the International Banks Division, to the specifics of local regulations.

In formulating the “Guidelines for the Governance of ESG Risks”, the Group referred to the principles defined by international best practices and to developments promoted and expressed by the regulator and supervisor at the European and international levels. Specifically, at the EU level, reference was made to the legislation that followed the Action Plan for Sustainable Finance and Growth published in 2018 by the European Commission, while at the international level inspiration was drawn from the initiatives aimed at promoting best sustainability practices in the banking sector that the Group has adopted, including the UN Global Compact, UN Environment Programme Finance Initiative (UNEP FI), Principles for Responsible Banking, Principles for Responsible Investment, Principles for Sustainable Insurance, Equator Principles and Net-Zero Banking Alliance (NZBA).

These guidelines play an essential role in applying the principles of reference and the definition of the roles and responsibilities of corporate bodies, internal governance structures and the main corporate functions involved in monitoring these risks.

ESG risk governance process

The “Guidelines for the Governance of ESG Risks” outline the Group's ESG risk governance process (including on climate change adaptation issues), which consists of five steps:

- identification: identification and description of ESG risk factors, including in terms of transmission channels, with particular reference to climate and environmental risks (e.g. ESG risk scenarios in stress testing processes);
- assessment and measurement: determination of exposure to ESG risks (e.g. the ESG & Reputational Risk Clearing process);
- monitoring and control: continuous monitoring of the evolution of ESG risk exposure (e.g. monitoring of ESG KPIs established in the Risk Appetite Framework);
- mitigation: the containment of ESG risks through appropriate actions and strategies, including preventive initiatives, aimed at reducing the severity of the impact of such risks (e.g. the definition of remedial actions in the event of breaches of ESG limits in the RAF);
- communication: provision of appropriate information flows to allow adequate transparency and knowledge of ESG risk exposure (e.g. ESG risk reporting and ESG risk disclosures, including indicators factoring in physical climate risks).

Specifically, with reference to the aforementioned assessment and measurement phase, consistent with the strategic guidelines on the subject, ESG risk management is also implemented through the ESG & Reputational Risk Clearing process, which has the objective of identifying and assessing beforehand potential ESG and reputational risks (including climate and environmental risks) connected to credit proposals, the selection of suppliers/third parties connected to commercial agreements, equity investments and extraordinary transactions.

The ESG & Reputational Risk Clearing process thus seeks to represent the potential ESG and reputational risk profiles associated with a specific transaction/counterparty or initiative, enabling informed assumption of risk in the related decision-making processes. A first level of clearing, performed by the line functions, is aimed at an analysis of the main ESG and reputational risk factors and performed by the structure that manages the relationship with the counterparty. In this context, credit proposals are subject to first-level clearing in a manner differentiated according to sector-specific assessments and the characteristics of the individual counterparty and transaction. A second level of clearing, activated based on the outcome of the first level, is aimed at examining and assessing any critical concerns that may have emerged from the first level, and also involving an expert analysis of these risk profiles. Generally, the outcome of the assessment is an advisory opinion that includes an assessment of the main critical concerns identified, the related mitigators and the level of risk assigned based on proprietary metrics. Escalation mechanisms are triggered when there are risk classes that are not consistent with the Group's risk appetite.

Also within the broader framework of ESG risk assessment and management is the implementation of the Equator Principles (EPs), which define a framework for environmental and social risk management in the financing of large projects, thus reinforcing the commitment to managing the impacts associated with the activities of corporate customers. EPs are international guidelines that the Intesa Sanpaolo Group has adopted on a voluntary basis since 2007, using their latest updated version (EP IV) applicable to the financing of infrastructure and industrial projects that may have adverse effects on people and the environment (e.g. energy plants, petrochemicals, mining, transport and telecommunications infrastructure). These principles are based on the criteria of the World Bank's International Finance Corporation (IFC) and cover environmental issues: the prevention of pollution and the promotion of energy efficiency; the preservation of biodiversity; and the sustainable management of natural resources.

The internal regulations on Equator Principles are applied by the Parent Company and by the subsidiaries that offer financing falling within the scope of application of the EPs, and are valid in all countries where the Group operates and for all countries where the Group offers financing. Regardless of the customer's industry, the EPs apply to the financial products listed below when they are used to support the development of new projects and meet specific criteria:
- project finance advisory services;
- project finance;
- project-related corporate loans;
- bridge loans;
- project-related refinancing and acquisition operations.

The project assessment process starts with the assignment of a three-level risk category by the Group, which involves the integrated consideration of several factors.[56] Proportional to the risk level assigned, requirements are defined in terms of both the documentation to be produced and the activities to be performed by the customer. In this context, the Group incorporates environmental and social clauses into the loan documentation and verifies the proper implementation of the agreed clauses.

Management of sustainability issues in sensitive sectors

At the portfolio level and with respect to the objectives of decarbonisation, the "ESG Risk Governance Guidelines" also outline an ESG risk governance model based on materiality assessments of ESG risk factors in relation to the various risk categories (credit risk, market risk, operational risk, liquidity risk and reputational risk) and their incorporation into the various risk management areas. The materiality analysis (Climate/ESG Materiality Assessment) is the process of assessing the potential impacts of ESG and climate risks for the Group. This analysis is based on an organic and structured approach to risk assessment which involves a granular definition of the risk drivers and the integration of forward-looking elements. The aggregate analysis of the materiality of ESG risk factors at the sector level leads to the definition of an enhanced risk control for the sectors most exposed to ESG risks, the definition of sector-specific strategies in this regard, and the implementation of specific safeguards within the Risk Appetite Framework (i.e. the RAF).
In this context, the Guidelines define, among others: i) a list of "sensitive sectors" with regard to ESG and/or reputational risks; ii) general criteria to limit and exclude lending; iii) detailed criteria applicable to individual sensitive sectors through the application of sector-specific rules.

Specifically, with reference to the general exclusion criteria, the Group undertakes not to finance companies and projects that are characterised by their negative impact on:
- UNESCO World Heritage Sites;
- wetlands according to the Ramsar Convention;
- International Union for Conservation of Nature (IUCN) protected areas I to VI.

As far as sector-specific regulations are concerned, the Group has decided to regulate its Oil & Gas operations to support the energy transition through the "Rules for Oil & Gas Operations", a summary of which is available on the Group's institutional website.

These internal regulations apply to the entire Intesa Sanpaolo Group with reference to the financing and investment activities described within the document. Specifically, these rules refer to the sector as a whole and thus to all segments of operations:
- upstream (oil and gas exploration and production);
- midstream (transport, storage and wholesale distribution);
- downstream (oil refining and distribution of finished products);
- trading (buying and selling oil, gas and refined products).

[56] For more information about this topic, see the "Climate Report".

In this context, the Group is committed to not financing projects involving new oil extraction sites or with negative environmental impacts in “critical areas” of the planet, such as the Arctic region and the Amazon Sacred Headwaters,[57] and has identified specific exclusion policies for the extraction of unconventional resources, providing for the phase-out of exposures related to such unconventional resources[58] by 2025. Currently, these exposures are in line with the stated phase-out target.

In this context, the exclusion policy is applied through:

- the ESG & Reputational risk clearing process described earlier;
- the analysis of transition plans to assess the counterparty's progress in achieving its climate targets;
- the periodic measurement of the emission intensity of the financed counterparties in the Oil & Gas sector to ensure the progressive alignment of the portfolio to climate neutrality targets.

Furthermore, with the aim of targeting exposures in line with the commitments made for this sector, the Group directs its operations towards the most virtuous counterparties committed to a transition towards more sustainable businesses (with a focus on the level of CO_2 emissions).

With regard to the coal sector, as indicated in the "Rules for operating in the coal sector", a summary of which may be found on the Group's institutional website, Intesa Sanpaolo is committed to supporting customers in the sector in the gradual reduction of the use of coal for power generation and in projects adopting energy-efficient and low greenhouse gas emission technologies, through targeted financing, a rigorous assessment of ESG risks in the Risk Clearing process and a limit on overall exposure to this area.

Moreover, the Group has undertaken not to increase its exposure in respect of non-financial products and services to companies with at least one of the following characteristics:

- operating in the production of electricity from coal and which do not have a documented plan/strategy for the progressive reduction of greenhouse gas emissions;
- failure to document a planned limit of no more than 35% of installed capacity from coal by 2030;
- having plans to expand installed coal-fired capacity or engaged in the construction of new coal-fired thermal power plants.

The Group will manage its outstanding exposures to the above companies with a view to phasing them out and is committed to phasing out its exposure to counterparties active in coal mining by 2025. Currently, these exposures are in line with the stated phase-out target.

These rules apply to the entire Intesa Sanpaolo Group, and specifically to the following sectors:

- coal mining;
- coal-fired power generation (coal-fired power plants - CFPPs).

Internal classification of sustainable lending products and transactions

The Intesa Sanpaolo Group also has internal regulations for the classification of sustainable lending products and transactions, under the responsibility of the Chief Risk Office Governance Area. This legislation applies to Group companies and defines environmentally sustainable activities among several categories, with internal criteria different from the European Taxonomy, to promote both climate change mitigation and adaptation. Indeed, these latter activities are those aimed at reducing or eliminating physical risk, including through the use of enabling activities such as data collection and early warning systems. For example, included in this scope are activities with the following objectives:

- reduce or avoid damage/disruptions due to risks related to adverse temperatures (e.g. heat and cold waves, fires, temperature variability, thawing permafrost, increased thermal stress);
- reduce or avoid damage/disruptions due to risks related to adverse winds (e.g. typhoons and hurricanes, dust, storms, sandstorms);
- reduce or avoid damage/disruptions due to risks related to adverse water phenomena (e.g. flooding, heavy rainfall, drought, glacial flooding, sea level rise, increased water stress and hydrological variability to increase water availability);
- reduce or avoid damage/disruption due to risks related to adverse soil phenomena (e.g. landslides, avalanches, subsidence, erosion and soil degradation).

The classification categories of sustainable lending products and transactions were defined in line with the internationally recognised guidelines of the Loan Market Association (LMA) on Green Loan, Social Loan and Sustainability-linked Loan Principles. These principles provide a globally shared framework, promoting standardisation and transparency of practices in the sustainable financial sector.

The macro-processes for the classification of sustainable products (and also for the classification of sustainable lending transactions), which also assess any applicable conventions/covenants/KPIs, if relevant, are differentiated for each business division and envisage that the attribution of the sustainability classification (sustainability attribute), based on internal regulations, is assessed by the Chief Risk Officer Governance Area in terms of consistency with the ESG risk management framework.

In general, the main guidelines and rules mentioned in this section are available to all stakeholders potentially involved and those contributing to its implementation through internal and external channels, via the Intranet for Group employees and on the institutional website for all external stakeholders.

[57] Area understood as the drainage basin of the Amazon River, and of the Napo, Pastaza and Marañon rivers.
[58] Shale/tight oil, shale/tight gas, tar sands/oil sands, coal bed methane/coal seam gas.

Sectoral Plan

Aware of the challenge posed by climate change, the Intesa Sanpaolo Group is committed to contributing to the achievement of global climate goals by supporting the transition to a low-carbon economy. To this end, the Group has chosen to pursue the Net-Zero target by 2050, also setting intermediate targets to 2030, also included in the "2022-2025 Business Plan", for its emissions and main business lines.

Besides being a member of the Net-Zero Banking Alliance (NZBA), the Group joined the Net-Zero Asset Managers Initiative (NZAMI)[59] through Eurizon Capital, Fideuram Intesa Sanpaolo Private Banking Asset Management SGR S.p.a. and Fideuram Asset Management Ireland, and through Intesa Sanpaolo Assicurazioni the Net-Zero Asset Owner Alliance (NZAOA) and the Forum for Insurance Transition to Net-Zero (FIT).

In 2022, Intesa Sanpaolo drew up its first High-Level Transition Plan for lending and investment activities, outlining its overall architecture. This architecture was then subject to a progressive refinement that led in 2023 to the definition of the "Sectoral Transition Plan", which incorporates the strategic actions to be implemented to achieve the objectives set for each sector.

In line with the commitments of the Net-Zero Banking Alliance and the goal of limiting global warming to 1.5°C, in recent years the Intesa Sanpaolo Group defined a series of sector-specific targets to 2030.

The first four targets for the Oil & Gas, Power Generation, Automotive and Coal Mining sectors were published in the "2022-2025 Business Plan".

In 2023, emission reduction targets were also set for the Iron & Steel and Commercial Real Estate sectors, and lastly in 2024 targets were introduced for the Cement, Aluminium, Residential Real Estate and Agriculture - Primary Farming sectors.[60] The Group decided not to set targets for the Shipping and Aviation segments, as they are immaterial for the amount of emissions financed or for portfolio exposure.

In terms of the target setting process, the CSO Governance Area, in consultation with the CRO and CFO Governance Areas and the Bank's Business Divisions, as part of a dedicated project formulate baselines and projections of the emissions generated by each sector, identify a possible target and design the relevant transition strategy. These targets are reviewed by the ESG Control Room and the Steering Committee and then approved by the Board of Directors with the support of the Risks and Sustainability Committee.

The targets and related transition plan, which are reported in this Consolidated Sustainability Statement, are included in more detail in the "Climate Report", a document published annually by the Group and dedicated to climate topics and the transition to a low-emission economy, in line with the requirements of the Group's climate commitments. This document is reviewed by the Steering Committee and approved by the Board of Directors, with the support of the Risks and Sustainability Committee.

With reference to OPEX (administrative expenses) and CAPEX (property and equipment), we note their limited significance given the Group's sector of operations.

The Group followed up on the net-zero commitment outlined in the 2022-2025 Business Plan and submitted its targets to the SBTi in 2024, obtaining validation in January 2025.

In order to achieve sector-specific emission reduction targets and accompany customers on their path towards decarbonisation, the Intesa Sanpaolo Group has identified several levers that enable and support the sustainable transition:

- dedicated products and incentives, including:
  - access to a credit facility dedicated to the circular economy, designed for customers adopting an innovative circular business model, offering them advantageous credit access conditions61;
  - green financing aimed at financing projects with a significant environmental impact;
  - sustainability-linked financing with a discount/bonus mechanism as an incentive for customers who meet predefined sustainability targets;
  - Green, Social and Sustainability Bonds whose proceeds are used to finance/refinance green and/or social projects, in line with the ICMA (International Capital Market Association) Guidelines;
  - advisory services to support customers' decarbonisation and accompany them in the development of customised ESG tools linked to their strategies and transition plans.
- Furthermore, consistent with the ESG commitments and objectives of the "Business Plan" and in line with the requirements of the European Taxonomy, several strategic initiatives were developed in 2024. Specifically, with regard to the IMI Corporate & Investment Banking Division, the initiatives include the development of green products and a framework for financing aligned with and/or dedicated to the European Taxonomy.

In order to ensure constant, comprehensive monitoring of the achievement of the targets defined, a structured process for monitoring results was implemented in five annual iterations. The purpose of these reviews is to monitor the progress of performance against the target set, while at the same time making it possible to prepare year-end reporting and final accounting.

[59] On 13 January 2025, NZAMI launched a review of the initiative to ensure its appropriateness for the new global context. As the initiative undergoes the review, activities to track signatory implementation and reporting have been suspended.

[60] In the same year, the Commercial Real Estate target was also revised to a level consistent with the trajectory to keep the temperature increase well below 2 degrees.

[61] The facility does not follow the technical screening criteria of the European Taxonomy, having been developed in close partnership with the Ellen MacArthur Foundation before the Taxonomy's entry into force.

During monitoring, a comparison is made between the performance reported and the baseline, target and benchmark curve in relation to each sector with the aim of quantifying any deviations. Where necessary, meetings are convened to share any proposals for actions and initiatives to be addressed by the business divisions to ensure the achievement of the targets set. For more details on the progress achieved against the targets set, see the section "Greenhouse gas emission reduction targets" below.

Overview of Sector-Specific Transition Plans[62]

This section provides an overview of the sectors for which emission reduction targets have been set, for each providing the market context, the enabling factors and finally the Intesa Sanpaolo Group's decarbonisation strategy and levers.
For the targets relating to the Sector-Specific Transition Plans, see: "Climate change mitigation and adaptation objectives at the portfolio level" of this chapter.

1. Agriculture – Primary farming

Market context[63]

- The agricultural sector is commonly defined as difficult to decarbonise in view of the emissions generated by its physical, chemical and biological processes, contributing to more than 10% of the EU's greenhouse gas emissions. In order to meet EU targets, agriculture and the transport, civil, waste and industrial sectors in Italy will have to reduce emissions by 43.7% by 2030 compared to 2005.

Enabling factors

- In order to reduce emissions from the agricultural sector, several decarbonisation technologies are being adopted, including: sustainable crop practices (e.g. low-emission fertilisers, cover and bioenergy crops), efficient livestock management, promotion of sustainable food systems (e.g. plant proteins, waste reduction, responsible sourcing) and virtuous forest management to increase carbon removal, produce renewable energy and support the local economy.

Intesa Sanpaolo Group decarbonisation strategy and levers

- The Intesa Sanpaolo Group has identified several levers aimed at decarbonising the sector, for instance by providing financing to low-emission customers that have defined transition plans, or by supporting the development of innovative green solutions. Among the products promoted by Intesa Sanpaolo dedicated to undertakings in the agri-food sector are:
  - Crescita Agri for financial support to farms through the provision of funding for investment programmes;
  - S-Loan Green projects for investments in sustainable agriculture and livestock, forestry and environmental restoration.

  In addition, in 2024 the Group implemented initiatives with ACEA to develop innovative solutions for the efficient use of water and signed an agreement with Coldiretti and Consorzio Italiano Biogas (CIB) to finance agricultural biomethane plants.

2. Aluminium

Market context[64]

- Aluminium is a crucial element in the transition to a low-carbon economy as it plays a key role in reducing emissions in various sectors, such as transport, construction and food and beverage packaging. However, its production requires the emission of a significant amount of CO_2, with almost 270 million tonnes generated in 2022 globally. Despite the pandemic, global aluminium production grew by more than 3% from 2020 to 2022, driven by demand in high value-added sectors. The sector's decarbonisation rate, defined as "hard to abate", is less than 2% per year, well below the 4% predicted by the International Energy Agency's Net-Zero Emissions by 2050 Scenario (NZE). To ensure alignment with these targets, near-zero-emission technologies need to be developed and adopted and recycling actions need to be boosted.

Enabling factors

- Promising technological innovations, such as the industrial-scale production of primary aluminium using inert anodes and alternative energy sources such as hydrogen or near-zero-emission electricity can be relied upon to achieve significant emission reductions.

Intesa Sanpaolo Group decarbonisation strategy and levers

- Intesa Sanpaolo is committed to supporting the sustainable transition of the aluminium sector towards Net-Zero, contributing to the reduction of industrial emissions and ensuring the resilience of its portfolio. Indeed, the Group has identified the following key levers to promote the sustainable transition of its aluminium customers, focusing on:
  - increased financing to companies with transition plans aligned with Net-Zero targets, offering performance-based financial products to reward undertakings that achieve decarbonisation targets. Particular attention is paid to supporting customers investing in innovative technologies, with a specific focus on secondary production activities (i.e., production of recycled aluminium through the recovery and remelting of aluminium scrap);
  - support the transition to sustainable solutions by financing companies that produce "green aluminium" or are engaged in the transition to renewable energy sources (e.g. hydro, solar and wind power) and business models related to the circular economy, and by financing projects aimed at building the infrastructure necessary for the sector's transition.

---

[62] For more details on sector-specific transition plans, see the "Climate Report".

3. Automotive

Market context[65]

– The automotive sector is one of the largest contributors to CO_2 emissions: cars and vans respectively account for around 16% and 3% of EU emissions. The sector is undergoing significant changes, partly as a result of European regulations that aim to reduce CO2 emissions by 55% by 2030 and achieve zero emissions for new vehicles by 2035. To meet these regulatory requirements, vehicle manufacturers are investing in electrification technologies, leading to a growth in the share of electric cars in Europe, which has already almost tripled from 2020 to 2023. Between 2019 and 2022, emissions were reduced by 27% for new passenger cars and 10% for new vans. In 2024 the industry went through and is still going through a phase of uncertainty and readjustment to the new competitive environment, partly related to exogenous factors that industry players have little control over.

Enabling factors

– Government strategies and increased investment in the electrification of the automotive industry are two key enabling factors supporting the transition. For example, the United States and the European Union are investing in public charging infrastructure to reduce consumer concerns about vehicle range and to promote the adoption of electric vehicles.

Intesa Sanpaolo Group decarbonisation strategy and levers

– The Intesa Sanpaolo Group promotes investments in advanced technologies that enable low-emission mobility solutions, such as electric vehicles, hydrogen power technologies, advanced hybrid systems and battery procurement. Specifically, the Group commits to:
  - support customers along the entire value chain, including the support of manufacturers and suppliers, by offering dedicated financial products, advisory services and strategic partnerships that enable innovation, optimise operations and reduce environmental impact;
  - support customers for the investments needed for the transition to the electric mobility model, working with them to define and implement the most suitable financial strategy.

4. Cement

Market context[66]

– Cement is a “hard to abate” sector due to the use of carbon-intensive materials and the high temperatures required for production, and is characterised by still underdeveloped decarbonisation technologies. Direct CO_2 emissions have remained constant since 2018, and represent an even greater challenge in the face of growing global demand. Based on the Net-Zero Emissions Scenario, to achieve the goal of limiting the temperature increase to 1.5°C, the sector would have to reduce its carbon intensity by 4% each year until 2030.

Enabling factors

– The main enablers for the sector’s decarbonisation include some solutions that can be implemented in the short term, such as improving material efficiency, adopting low-carbon fuels in furnaces and increasing the energy efficiency of existing plants. Furthermore, carbon capture, utilisation and storage (CCUS) solutions, whose adoption is increasing, are a complementary option for achieving decarbonisation targets.

Intesa Sanpaolo Group decarbonisation strategy and levers

– Intesa Sanpaolo has defined a strategic approach in line with decarbonisation commitments related to investments in the cement sector, deploying the following levers:
  - financing of customers aligned with the transition, evaluating customers based on their published decarbonisation commitments, supporting customers with ambitious Net-Zero targets and that are investing in and implementing innovative technologies;
  - support for the development of specific transition solutions, through the development of innovative technologies such as Green Cement, the promotion of renewable energy integration and investment in carbon capture, utilisation and storage (CCUS) solutions.

5. Coal mining

– The Intesa Sanpaolo Group's "Rules for lending operations in the coal sector" (for more information on the subject, see the section on policies on climate change mitigation and adaptation) define the limits and exclusion criteria for the lending operations in the segments of coal extraction and coal-fired power plants, supporting customers in their efforts to reduce their use of coal for the production of energy and encouraging the transition towards low carbon-intensity alternatives, such as renewable sources and gas. The Group also undertakes to phase out its exposure to counterparties belonging to the coal mining sector by 2025.

[66] Source: IEA, "The Net Zero Emissions by 2050 (NZE) Scenario", https://www.iea.org/reports/global-energy-and-climate-model/net-zero-emissions-by-2050-scenario-nze.

6. Iron & Steel

Market context[67]

- The steel sector, responsible for about 25% of global CO_2 emissions, plays a crucial role in climate change mitigation. Although emissions have stabilised in recent years, significant reductions are needed to ensure alignment with the Net-Zero Emission Scenario, which envisages a drop of about a quarter in emissions intensity by 2030. The downward trend in emissions from steel production is mainly driven by stricter regulations and the increase of sustainable investments, supported by decarbonisation technologies.

Enabling factors

- Key enablers to support the sustainable transition and decarbonisation of the steel sector include international regulatory frameworks, global collaborations, corporate commitment and advanced technologies. For example, major steel producers are publishing their emission reduction targets, demonstrating a strong commitment to decarbonisation. As far as international collaborations are concerned, several initiatives involving both public institutions and private and non-governmental sector actors (e.g. First Movers Coalition) have been launched with the aim of coordinating and optimising joint efforts on a global level. Finally, technological innovations currently under development and set to play a crucial role in the decarbonisation of the sector include steel production using hydrogen, electric arc furnaces, the increasingly advanced use of renewable energy, and, as a complementary decarbonisation option, carbon capture and storage (CCS) technologies.

Intesa Sanpaolo Group decarbonisation strategy and levers

- The Intesa Sanpaolo Group is committed to supporting the transition of the Iron & Steel industry by prioritising the following initiatives, with the aim of promoting sustainable practices:
  - support counterparties that have already set targets to reduce emissions in line with Net-Zero targets;
  - finance decarbonisation projects with dedicated funding, e.g. in relation to investments in innovative technologies such as steel production from hydrogen, among others;
  - engage customers in the definition and implementation of Net-Zero strategies by providing customised financing solutions to support the adoption of innovative enablers of sustainable transition (e.g. increased energy efficiency, integration of renewable energy and green innovation).

7. Oil & Gas

Market context[68]

- Oil & Gas operations contribute almost 15% of global energy-related emissions. A significant share of these emissions is methane, the reduction of which is essential in the sector, along with other strategic initiatives such as the electrification of plants and the use of low-emission hydrogen. To achieve the emission reduction targets in this sector, investments of 600 billion dollars by 2030 are needed globally. Global demand for oil is also expected to stabilise at around 106 million barrels per day by the end of the decade due to increased sales of electric vehicles, improved energy efficiency and the transition to renewable energy sources, thus reducing the use of oil in transport and power generation.

Enabling factors

- Governments and policy makers have announced their commitment to support developing countries in reducing emissions, while oil and gas companies are pledging to cut emissions (especially methane emissions) and promote the transition to renewable energies. New technologies such as carbon capture, utilisation and storage and biorefineries are instrumental for the decarbonisation of heavy industries and the aviation sector, especially for the production of Sustainable Aviation Fuel (SAF).

Intesa Sanpaolo Group decarbonisation strategy and levers

- the Intesa Sanpaolo Group promotes financial solutions (e.g. sustainability-linked, green and transition loans, green bonds and transition project financing) and advisory services related to sustainable activities to support customers' transition through investments in low-carbon technologies and solutions to increase the energy efficiency of operations;
- the Intesa Sanpaolo Group has defined policies and rules introducing specific limits and exclusions for financing activities, reducing the services provided to companies operating in the oil and gas sector. In fact, with regard to the sector of unconventional oil & gas resources[69], the Group has brought forward the phase-out of exposures related to these resources to 2025 instead of 2030, as stated in the "Rules for Oil & Gas Operations", updated in June 2024.

8. Power Generation

Market context[70]

- Power generation is a sector at the heart of the transition to Net-Zero emissions and is driven by significant growth in renewables. The sector also plays a crucial role in meeting the electrification needs of the market and will have to grow rapidly to reach 50% of global energy consumption by 2050. Key technologies such as solar, wind, nuclear, electric vehicles, heat pumps and hydrogen are essential for achieving these decarbonisation goals.

Enabling factors

- Global renewable energy capacity is expected to grow to 2.7 times 2022 levels by 2030, supported by Net-Zero targets and energy security policies aimed at making renewables cost-competitive. Furthermore, the use of electricity from renewable sources is expected to account for almost 20% of global energy consumption in the transport, industry and building sectors by 2030 compared to 13% in 2023, reducing dependence on imported fossil fuels. In the European context, the Renewable Energy Directive aims to raise the target for the share of renewable energy to at least 42.5% of the Union's total energy consumption by 2030, supporting growth in demand from the private sector and households.

Intesa Sanpaolo Group decarbonisation strategy and levers

- Power Generation was among the first sectors for which the Intesa Sanpaolo Group set decarbonisation targets. The Group defined its approach through two strategic elements:
  - active financial support, making available credit lines and financial solutions designed to promote renewable energy, through solar photovoltaics, onshore and offshore wind energy and battery energy storage systems, as well as innovative solutions such as green hydrogen and carbon capture, utilisation and storage (CCUS);
  - multistakeholder engagement and partnerships, facilitating and enabling the creation of collaborations, e.g. through advisory services for mergers and acquisitions (M&A), collaborations with Multilateral Development Banks (MDBs) and support for Public-Private Partnerships to align public sector objectives with private sector innovation, investment and expertise.

9. Real Estate (Commercial and Residential)

Market context[71]

- The building sector accounts for a significant share of global energy consumption and emissions. At the European level, it is responsible for 36% of carbon emissions and 40% of energy consumption. The existing building stock in Europe has limited energy efficiency, with an annual renovation rate of 1%. The European Union has introduced specific initiatives to address this scenario, such as the EU Energy Performance of Buildings Directive, which aims to reduce emissions from the EU building sector by 60% by 2030 and achieve zero emissions from the building stock by 2050. Although emissions from buildings in the EU decreased by 34% between 2005 and 2022 thanks to decarbonisation strategies and milder winters, the decarbonisation of the sector is lagging behind the target.

Enabling factors

- The reduction of emissions from buildings is possible through the implementation of solutions such as electrification, the use of renewable energy, and the use of energy-efficient materials and designs (e.g. aerogel, optimisation for daylight and ventilation), facilitated by the development of a favourable regulatory framework and targeted incentives such as the implementation of government policies for the decarbonisation of the energy grid.

Intesa Sanpaolo Group's decarbonisation strategy and levers for the Commercial Real Estate sector

- The Intesa Sanpaolo Group actively supports companies in their sustainable transition through strategic initiatives (e.g. the "Orizzonte Impresa - Transizione Energetica" programme) that offer dedicated products and services:
  - loans to support the transition, with favourable conditions linked to increased energy efficiency standards and the implementation of sustainable building solutions. For example, the Group offers financial products such as S-Loan Green Projects related to buildings certified with the highest level of environmental standards (e.g. LEED gold level, energy class A or B);
  - strategic consulting services to support customers in relation to sustainability issues through various initiatives (e.g. collaboration with Enel X, Regalgrid and Deloitte in relation to Renewable Energy Communities and the implementation of "Incent Now", a platform for consulting public tenders);
  - additional financial instruments to support renovations, energy efficiency upgrades or the earthquake-proofing of buildings, for example providing the possibility of assigning a tax deduction to the bank[72], obtaining immediate payment of the amount. Furthermore, through Intesa Sanpaolo Rent Foryou the Group offers medium and long-term rental solutions for the optimisation and management of consumption (e.g. IoT sensors, software and Artificial Intelligence for the control of electrical systems) and for the transition to sustainable energy (e.g. solar panels).

Intesa Sanpaolo Group's decarbonisation strategy and levers for the Residential Real Estate sector

- To support the energy transition of residential buildings in Italy, Intesa Sanpaolo offers dedicated financing for the purchase, construction or redevelopment (including the replacement of windows, boilers and the installation of photovoltaic panels) of energy-efficient buildings (minimum class B) that meet certain criteria (e.g. energy class, year of construction, geographical location), also through incentive mechanisms and customer advisory services.

For the Residential Real Estate sector, as for the Commercial Real Estate sector, the achievement of the target is highly dependent on the implementation of government policies for the decarbonisation of the energy network.
For more details, see the section "Climate Change Actions and Resources at the Portfolio Level".

[72] With regard to the works set out in Articles 119-121 of Decree-Law no. 34/2020, converted into Law no. 77/2020 ("Rilancio Decree"), as amended.

Greenhouse gas emission reduction targets

Description of the objective

The aforementioned sectors for which 2030 emission reduction targets have been set, approved by the Bank's Board of Directors, were identified based on a materiality criterion from among the most emission-intensive sectors envisaged by NZBA.

The period of application of the targets set by Intesa Sanpaolo runs from 2021 for the Oil & Gas and Coal mining sectors (the latter with a phase-out target to 2025) and from 2022 for the others.

The methodological choices adopted by the Intesa Sanpaolo Group relating to baselines, metrics and target setting were defined taking into consideration i) "Guidelines for Climate Target Setting for Banks", issued by UNEP-FI (April 2021) and ii) Financial Sector Science-Based Targets Guidance - version 1.1, issued by SBTi (August 2022). Therefore, the climate targets set by the Group pursue the temperature targets of the Paris Agreement[73] and support the transition to a net-zero economy by 2050. Furthermore, the choices regarding the selection of the value chain segment, the emissions considered and the proxies used are in line with PCAF (Partnership for Carbon Accounting Financials) methodologies. The Group applies science-based scenarios, such as the IEA Net-Zero 2050, whose curves are aligned with the temperature targets of the Paris Agreement.

The Bank's lending and investment activities considered in the perimeter are as follows:
- Medium- to long-term financing (with the exception of the Oil & Gas sector, for which short-term financing is also considered);
- Hold-To-Collect (HTC) bonds for the Oil & Gas sector;
- Banking book equity, if material.

Small or medium-sized enterprises (SMEs), defined as specified in Article 501, paragraph 2, letter b), of the CRR, which refers to Commission Recommendation 2003/361/EC, are excluded only if they are unaffiliated sole proprietorships. The reason for the exclusion of SMEs lies in the limited availability of data for smaller, unlisted companies, which would imply extensive use of sector-specific proxies for estimating emissions and production data and could lead to a strong convergence of the portfolio figure towards the sectoral average.

For the Agriculture – Primary Farming sector, SME Corporate counterparties with a turnover of more than 10 million euro are included in order to define a boundary that is representative of the typical size of counterparties financed in this sector.

SMEs[74] (but not retail SME customers) are included in the Commercial Real Estate segment in accordance with SBTi Guidance, while the Residential Real Estate segment only includes exposures to Private Retail counterparties.

In order to avoid double counting of emission data, only certain segments of the value chain are considered for each sector. The sectors and related segments considered are defined according to the internal classification based on NACE codes at the Group level.

Below are the segments of the value chain considered for each sector:
- Agriculture – Primary Farming: focus on operational counterparts in the primary farming sub-sector;
- Aluminium: focus on aluminium producers;
- Automotive: focus on light vehicle production (passenger cars and light trucks). Component manufacturers are excluded;
- Cement: focus on cement and clinker producers;
- Iron & Steel: focus on companies producing crude steel and using iron (or scrap) as input. Mining, steel finishing and downstream activities are excluded;
- Oil & Gas: focus on upstream operators and those operating along the entire value chain in order to stimulate operational efficiency in extraction and to foster the transition of companies from high-emission fossil fuels to low-emission and renewable fuels. Refineries, pipelines and downstream activities are excluded;
- Power Generation: focus on power generation and integrated operators to encourage the use of low-emission energy sources. Electricity transport and distribution are excluded;
- Commercial Real Estate and Residential Real Estate: focus on emissions related to the use of buildings in Italy.

For each sector, the emission categories considered are:
- Agriculture – Primary Farming: Scope 1 and 2;
- Aluminium: Scope 1 and 2;
- Automotive: Scope 3 WTW (Well-to-Wheel);
- Cement: Scope 1 and 2;
- Iron & Steel: Scope 1 and 2;
- Oil & Gas: Scope 1, 2 and 3;
- Power Generation: Scope 1 and 2;
- Commercial and Residential Real Estate: Scope 1, 2 and 3.

[73] Except for the target set for the Residential Real Estate sector.

[74] The Commercial Real Estate boundary includes corporate SME but not retail SME customers. Corporate SMEs are defined as undertakings with an individual/group size indicator between 2.5 and 50 million or with an individual/group size indicator below 2.5 million if the individual/group exposure is greater than or equal to 1 million.

For all sectors, the Bank uses the Sectoral Decarbonisation Approach (SDA) methodology to measure and reduce an emission intensity metric for each sector defined as the ratio of financed emissions to financed output (financed surface area for Commercial and Residential Real Estate). For Agriculture – Primary Farming, the Bank adopted a “'revenue intensity” metric that measures emissions relative to total counterpart revenue.

Specifically, the emission intensity metrics for the different sectors are as follows:
- Agriculture – Primary Farming: tCO2eq/€MM;
- Aluminium: tCO2eq/t Aluminium;
- Automotive: gCO2eq/vkm;
- Cement: tCO2eq/t Cement;
- Iron & Steel: tCO2/t Steel;
- Oil & Gas: gCO2eq/MJ;
- Power Generation: kgCO2eq/MWh;
- Commercial Real Estate and Residential Real Estate: kgCO2eq/m2.

Note that for coal mining Intesa Sanpaolo has not defined a target based on emission intensity, but rather has adopted a policy of phase-out by 2025, consistent with the provisions of the “Rules for lending operations in the coal sector”. For the Oil & Gas sector, the progressive alignment of the portfolio with climate neutrality objectives is also governed by the “Rules for Operations in the Oil & Gas Sector”.

The method described here made it possible for each target defined and reported to identify a number of levers conducive to achieving the decarbonisation objectives. The main levers were made explicit and emphasised in the section on the “Sectoral Plan”.

In this context, the Group monitors progress towards the achievement of its targets, reporting on the level of progress at the end of each year of monitoring, reporting on physical intensity, economic intensity and absolute emissions, the latter published in the “Climate Report”. The Group did not define any upper limit for GHG emissions (in absolute value) in 2024.

Finally, for the Power Generation and Automotive sectors, the methodology and reference area were updated in 2023 in line with SBTi requirements. This revision led to a change in the target defined for the Automotive sector, while it was not necessary to revise the target defined for the Power Generation sector.

Climate change mitigation and adaptation objectives at the portfolio level

Target: Agriculture – Primary farming - emissions financed in terms of tCO_2eq/€MM		
	Date	**Value**
Baseline	31.12.2022	721
Final balance	31.12.2024	675
Target	2030	641

Target: Aluminium - emissions financed in terms of tCO_2eq/t Aluminium		
	Date	**Value**
Baseline	31.12.2022	4.79
Final balance	31.12.2024	4.38
Target	2030	4.31

Target: Automotive - emissions financed in terms of gCO_2eq/vkm		
	Date	**Value**
Baseline	31.12.2022	192
Final balance	31.12.2024	192
Target	2030	100

Target: Cement - emissions financed in terms of tCO_2eq/t Cement		
	Date	**Value**
Baseline	31.12.2022	0.65
Final balance	31.12.2024	0.64
Target	2030	0.5

Target: Coal Mining - exposure in €/billion		
	Date	**Value**
Baseline	30.06.2021	0.2
Final balance	31.12.2024	0.01
Target	2025	0

Target: Iron & Steel - emissions financed in terms of tCO_2/t steel		
	Date	**Value**
Baseline	31.12.2022	1.05
Final balance	31.12.2024	0.82
Target	2030	0.81

Target: Oil & Gas - emissions financed in terms of gCO_2eq/MJ		
	Date	**Value**
Baseline	30.06.2021	64
Final balance	31.12.2024	64
Target	2030	55[75] (52-58)

Target: Power Generation - emissions financed in terms of $kgCO_2eq$/MWh		
	Date	**Value**
Baseline	31.12.2022	202
Final balance	31.12.2024	123
Target	2030	110

Target: Commercial Real Estate - emissions financed in terms of $kgCO_2eq/m^2$		
	Date	**Value**
Baseline	31.12.2022	43.16
Final balance	31.12.2024	38.94
Target[76]	2030	22.11

Target: Residential Real Estate - emissions financed in terms of $kgCO_2eq/m^2$		
	Date	**Value**
Baseline	31.12.2022	30.13
Final balance	31.12.2024	28.77
Target[76]	2030	19.26

Metrics and data may be updated over time based on developments in emission calculation methods, updates to the NZBA and SBTi Guidelines, as well as updated data sources and established market practices. Moreover, metrics and data are based on projections and estimates that rely on sector-specific assumptions and strategic plans of the underlying entities, some of which may depend heavily on external factors, such as but not limited to technological improvements and/or implementation of government policies. Metrics are calculated using data whose quality and availability is subject to change over time.

Objectives and metrics relative to Green Mortgages

The Group's objective relating to the provision of Green Mortgages was included in the "2022-2025 Business Plan" through the involvement of the business divisions that, starting from the analysis of the economic and commercial context of reference and through the definition of specific actions and initiatives to support customers, propose and coordinate the offer of dedicated product solutions and services in order to promote evolution in the realm of environmental sustainability.

[75] Central value of the target range identified.

[76] The achievement of the target is highly dependent on the implementation of government policies to decarbonise the energy grid.

The Intesa Sanpaolo Group contributes to the reduction of carbon emissions and promotes access to sustainable housing solutions through the provision of loans for energy-efficient real estate projects and the improvement of existing energy performance.

The scope of the target includes loans to private individuals disbursed throughout Italy and in the countries where the banks of the International Banks Division (IBD) have branches. Originally focused on the Italian market, it was possible to extend the Group's internal ESG classification rules to the foreign boundary as well. Intermediate targets have also been set within the plan to ensure that the final goal is achieved. These include an increase in the proportion of Green Mortgages with respect to the total number of mortgage loans disbursed each year and the progressive improvement in the energy performance of the financed properties. In this regard, to date the targets are in line with what was budgeted.

As reported in the "Climate Change Actions and Resources at the Portfolio Level" section below, the Group supports the green projects of retail customers, including the Green Mortgage, a mortgage loan with favourable terms to finance the purchase/construction of energy-efficient buildings or the upgrading of existing buildings, improving their performance. In accordance with the objective set out in the "2022-2025 Business Plan", the Group contributes to facilitating the renovation of Italy's real estate assets and the diffusion of energy-efficient homes in synergy with the EeMAP criteria (a European initiative – that the Group has signed on to – that aims to create a standardised energy efficiency mortgage loan at the European level).

Target: Green Mortgages Disbursed – cumulative disbursement in €/billion		
	Date	**Value**
Baseline[77]	31.12.2021	-
Final balance	31.12.2024	9
Target	31.12.2025	12

Specifically, note that the cumulative disbursement for Green Mortgages represented in the "Final" field of the table above refers to 4.1 billion euro in 2024.

In this regard, note that the process of calculating the disbursement figure for 2024 involved extracting data from accounting records for the Parent Company component and management software records for the IBD component. With regard to the value reported in the "Final" field, the figures for 2022 and 2023 were extracted from the management software.

Climate change actions and resources at the portfolio level

In line with the regulatory evolution on sustainability, the Group has adopted a medium- to long-term strategy and a cross-cutting and holistic approach to ESG issues, which is based on:

a) the definition of a Group ESG strategy;
b) the integration of ESG factors into the general risk management framework, and in particular into the Risk Appetite Framework in which there is a specific section devoted to ESG and climate change risks;
c) the integration of ESG factors in lending processes and in the definition of lending strategies;
d) careful consideration of ESG factors in the development of policies, products and services;
e) the dissemination of an ESG risk culture throughout the company.

The Chief Risk Officer, Chief Financial Officer and Chief Sustainability Officer, with the support of the various Governance Areas and Divisions, work together to identify and analyse ESG risks and opportunities with particular reference to climate change. The same areas are responsible for defining objectives and guidelines to implement processes for assessing, monitoring and mitigating risks and for defining lending strategies.

With regard to climate change mitigation, the integration of ESG risks into the risk management framework takes place through several actions. Specifically, the RAF integrates and translates into specific controls what is defined in terms of strategic guidelines, ESG/Climate Materiality Assessment and ESG Sectoral Color Coding, identifying year after year, limits, Key Risk Indicators and specific actions aimed at mitigating ESG risks, particularly with reference to the sectors most exposed to these risks. This also includes specific actions related, for example, to the Group's strategic choices, such as subscribing to the Net-Zero targets. The ESG Climate Change and Reputational Risk section of the Group RAF includes:

- specific limits in relation to the exposure to the Coal Mining and Oil & Gas sectors; for Coal Mining in particular the limit is reviewed annually in line with the target of phasing out lending by 2025;
- specific early warning thresholds/KRIs relating to the emission intensity (CO_2eq) in terms of financed production of the counterparties belonging to the Oil & Gas, Power Generation, Automotive and Iron & Steel sectors, with the aim of meeting the commitments made within the Net-Zero Banking Alliance and the Science Based Target initiative;
- monitoring of new disbursements broken down by energy performance class (EPC) to improve the quality of the residential properties taken as collateral and consequently reduce the transition risk associated with mortgage loans;
- specific warning thresholds for new disbursements in the Residential Real Estate (RRE) portfolio to improve the quality of the residential properties taken as collateral, and consequently reduce the transition and physical risk associated with mortgage loans. In particular, with regard to the lower energy performance classes (EPC certifications) and in areas with very high physical risk;
- a warning threshold in relation to the exposure to debt securities of government issuers in the Group's banking book that, based on certain internal ESG-related criteria, are defined as "high risk".

Moreover, the Climate Scenario Analysis is used, within the more general framework of the materiality assessment, in order to explore potential portfolio vulnerabilities, particularly the loan portfolio, in the context of regulatory stress tests or of the Internal Capital Assessment Adequacy Process (ICAAP) and the Internal Liquidity Assessment Adequacy Process (ILAAP). In conducting this activity, the Intesa Sanpaolo Group adopts an approach that incorporates different solutions dedicated to the

[77] Plan target that represents the planning of a new activity that does not have a base value.

verification of the impacts of transition and physical risk on the Non-Financial Corporate (NFC) portfolio and on the real estate collateral portfolio. With regard to transition risk, the impact is assessed by means of shocks applied to the balance sheets of the individual counterparties and to the energy efficiency level of the residential and commercial immovable property provided as collateral.

The monitoring of climate change adaptation risks in the risk management framework is done through several actions, including:
- within the Credit Risk Appetite, physical risks arising from catastrophic events that may impact the deterioration of the Probability of Default (PD) are taken into account (at the counterparty level);
- as part of the Risk Appetite Framework, through the integration of indicators to guard against physical risks based on Residential Real Estate (RRE) in locations subject to high acute physical risks with corresponding remedial actions in the event of exceeding these limits;
- as part of the ESG & Reputational Risk Clearing process, where the counterparty ESG profile and score is used, which also includes considerations of the impacts that physical climate risk drivers may have.

Moreover, the Group highlights and monitors physical risks, recognised as drivers that can cause material damage or a drop in productivity, or have indirect impacts such as the interruption of production chains, directing the Group's financing and investment choices.

The reported actions are implemented as an essential part of the Group's climate risk management strategy and do not require specific resources dedicated exclusively to such actions, as they are part of the overall context of the Group's ESG strategy.

With regard to the credit framework, the Group has currently developed a holistic approach for the integration of ESG/Climate factors within it. The ESG/Climate Credit Framework, which includes ESG/Climate criteria to guide the strategic management of the loan portfolio among others, operates on three levels:
- by sector, with the definition of the “ESG Sector Strategy - Color Coding”, which considers risks and opportunities and defines the attractiveness of sectors in credit strategies; as an integral part of the ESG strategy, a heatmap assigns ESG priorities to each business area;
- by counterparty, with the introduction of an ESG score defined at the counterparty level, in order to guide new disbursements within the risk framework defined by the Credit Risk Appetite (CRA);
- by transaction, with the definition of the internal framework of sustainable lending products and transactions described in the section “Policies to mitigate and adapt to climate change”.

Specifically, the ESG counterparty score, which the Intesa Sanpaolo Group has adopted for non-financial companies, first implemented on the Bank's IT systems in 2022 with respect to the portfolio of the Banca dei Territori and IMI Corporate & Investment Banking Divisions, then subsequently extended to banks belonging to the International Banks Division operating in the European Union, and to the Project Finance operations of the IMI Corporate & Investment Banking Division, also includes components relating to climate risk (with reference to the level of preparedness of corporate customers to manage transition and physical risk). The purpose is to assess the ESG profile of corporate customers, adopting the same approach across the entire portfolio, from large listed customers to small and medium-sized enterprises. The score leverages on data from external and internal sources and covers the most important indicators of risks and opportunities in the three ESG dimensions, including (but not limited to) the carbon footprint for the Environmental part.[78] Furthermore, in 2024 the scope of the ESG Scoring model was expanded to include counterparties from the financial sector, banks and to assess states, provinces and regions.

A precise quantification of the emission reduction with respect to each action at the portfolio level is not possible due to the complex connection between actions taken and emission trends in the counterparties' sectors.

Moreover, the “2022-2025 Business Plan” aims to support the ecological transition through: (i) sustainable lending initiatives for retail customers, (ii) support to SMEs/Corporates in their journey towards sustainability, including through ESG Workshops, in collaboration with specialised partners (for more detail, see the “Targets and metrics” section of the ESRS S4 Standard), and the Skills4ESG Platform for training and customer engagement.

The Group continued to provide loans and mortgages for environmental purposes to retail customers in 2024. The provisions of the European Energy Performance of Buildings Directive (EPBD) provide for the gradual upgrading of the building stock in EU countries. With this in mind, the banking system is urged to play a transformative role in directing financial investments towards activities that can help reduce the EU's dependence on fossil fuels, thereby supporting the achievement of the EU's climate targets for net-zero emissions by 2050. The financing solutions proposed by the Intesa Sanpaolo Group are not only available to support the purchase or construction of an energy-efficient property, but also to those who want to improve energy efficiency through, for example, the replacement of windows and doors and high-performance boilers, the purchase of environmentally-friendly vehicles and installation of solar and photovoltaic panels.

In this context, the Group proposes “Green - Mutuo Domus”: a subsidised mortgage (reduction of the Annual Percentage Rate (APR) and free energy certification for renovation purposes) which makes it possible to purchase and build a residential property in Italy with a high energy efficiency class (equal to or higher than B) or to renovate a residential property in Italy improving its energy performance rating by at least one class. For more information on Green Mortgages, see the section “Targets and metrics related to Green Mortgages”.

[78] For more information about the ESG score, see the “Climate Report”.

The range of green solutions has been enriched with a series of dedicated services, some of which are provided by partner companies. These additional and optional services help to assess the possible savings that can be made through energy redevelopment measures, for example. Consistent with the regulatory framework defined by Regulation EU 2020/852 on the European Taxonomy, the Intesa Sanpaolo Group has implemented a series of activities aimed at providing information on the energy performance of buildings as collateral for loan applications.
In this regard, the Intesa Sanpaolo Group participates in the European Energy Efficiency Financing Coalition and the "Energy efficient Mortgages Action Plan" (EeMAP) project. As part of "EeMAP", Intesa Sanpaolo has also joined the "Energy Efficient Mortgage Label" (EEML), a project that aims to maximise the regulatory alignment of the portfolio with key legal developments such as the European Union taxonomy, the Mortgage Credit Directive (MCD), the Capital Requirements Regulation (CRR), or international equivalents. As part of the EEML project, starting in 2021, each quarter the Intesa Sanpaolo Group reports aggregate figures on the green portfolio and the standard portfolio.

Moreover, the main products proposed to SME customers include the sustainability-linked "S-Loan" to support small- and medium-sized enterprises that aim to improve their sustainability profile to assist them on a path of structural change, associating their economic and financial decisions also with their environmental impacts, through precise commitments undertaken with the Group using specific ESG indicators (KPIs) subject to annual monitoring.

In 2024 the "S-Loan Progetti Green" product was introduced, a loan supporting all types of business investments capable of generating a positive environmental impact on processes, infrastructure, technologies, services, and products. The Group's objective is to stimulate investments by corporate customers to finance their environmental sustainability projects. Specifically, with regard to climate change mitigation and adaptation, eligible investments concern:

- renewable energies;
- energy efficiency;
- sustainable transport;
- climate change adaptation;
- green buildings.

In addition, Intesa Sanpaolo provides S-Loan CER financing for companies that decide to invest in renewable energy. The mechanism provides an incentive in terms of an interest rate subsidy, with an additional bonus if the undertaking allocates part of the energy produced and not self-consumed to the Renewable Energy Community[79] (CER).

Among the products that support professionals and undertakings in the realisation of investment programmes in the energy sector is the "Energia Impresa" loan, which has several lines of action:

- plants for generating electricity from renewable sources (RES projects);
- photovoltaics, electricity generation from photovoltaic solar energy;
- wind power, electricity production from wind power only onshore;
- hydroelectricity, production of electricity from hydraulic sources classified as "small derivation";
- residual gases from purification processes;
- small-scale biogas plants for the production of electricity from biogas;
- biomethane plants, for the production of biomethane for transport or other uses;
- energy efficiency measures, for investments in the energy efficiency of buildings, thermal and electrical consumption, and energy production plants.

In addition, "NOVA+" is the specific medium- to long-term financing line designed to support undertakings for research, development and innovation projects. The Nova+ Research line includes specific products:

- "Nova+ Green": intended to support product or process innovation projects aimed at achieving climate neutrality or the integration of circular economy processes;
- "Nova+ Mobility": intended to support innovative projects of undertakings aimed at the transition of mobility towards a new paradigm of sustainability, digitisation and connectivity;
- "Nova+ Agritech": intended to support innovative projects of undertakings aimed at the transition of agriculture towards a new paradigm based on principles of sustainability, resilience and productivity.

The aforementioned initiatives are addressed to all undertakings/groups of any sector and size in Italy.

In this context, the Medium/Long-Term Loan with SACE Green guarantee is also the medium/long-term financing line intended to support the achievement of environmental objectives, as defined by the Green Convention signed by the Ministry of the Economy and Finance with SACE, including those related to climate change mitigation and adaptation.

This initiative is aimed at corporations, including cooperative companies with registered office (or secondary office) in Italy and a turnover equal to or less than 500 million euro, as reported in the latest approved financial statements prior to the date of application for the SACE Green guarantee.

In the same vein, the InvestEU – Sustainability Guarantee can be granted on financing operations designed to support the achievement of climate change mitigation and adaptation objectives, and is targeted at customers falling within the SME and Small Mid Cap company size for operations that meet certain eligibility criteria.

[79] An Energy Community is an association that produces and shares renewable energy, in order to generate and manage cost-effective green energy on its own, while significantly reducing CO_2 emissions and energy waste. Participants can include citizens, businesses, public authorities, small and medium-sized enterprises.

Also of note is the development of the Think Forestry programme (launched in November 2023) to accompany customer companies on the path of environmental transition, with the dual objective of accelerating climate change mitigation by acting on the management and reduction of CO_2 emissions of customer companies and to safeguard and promote nature.

The programme provides access to a network of leading national forestry initiatives through an agreement with the Climate Network non-profit organisation. An extensive planting programme was initiated with the aim of contributing to the “reforestation” of the Italian territory. The Bank actively participates in the programme by carrying out tree planting in several Italian cities and encouraging the participation of its corporate customers. The development of the initiative was further expanded through the involvement of consumers through a specific initiative of For Funding, Intesa Sanpaolo's crowdfunding platform aimed at supporting social and environmental initiatives with the greatest impact through both private contributions and Group resources. Indeed, the Bank has also decided to allocate a portion of the commissions from credit card transactions to this project. Furthermore, through an evolution of the programme, the Bank will be able to offer innovative tools to support the efforts of corporate customers in measuring and reducing their CO_2 emissions and in the management of residual emissions.

With particular regard to the topic of adapting to climate change, the Intesa Sanpaolo Group confirmed its concrete commitment to support the populations affected by natural disasters affecting the Italian territory by activating dedicated credit lines, providing new subsidised loans intended for the restoration of damaged properties (houses, shops, offices, artisan workshops, companies), suspensions on existing loans, actions in the area of protection and preferential, simplified and expedited procedures.

In this context, with regard to insurance products for the Business world, the “Tutela Business Manifattura” and “Tutela Business Commercio” products include the possibility of extending coverage for fire and other material events through the purchase of catastrophic event coverage, which includes earthquake and additional flood coverage.

With respect to the International Banks Division, a strong commitment to the green transition of its customers is emphasised both through a commercial offer dedicated to the financing of projects aimed at increased energy efficiency, the growth of the circular economy and the containment of climate impact, and through awareness initiatives for the dissemination of knowledge and understanding of ESG issues.

In the retail and micro-business sector, dedicated solutions such as loans and Green Mortgages for the purchase, construction and increased energy efficiency of real estate are available in the catalogue.

In the third quarter of 2024, the “Green dedicated S-loan” product was introduced in three banks of the Division: Všeobecná úverová banka (VUB), CIB Bank (CIB) and Banca Intesa Beograd (BIB).

The financial products of the IMI Corporate & Investment Banking Division focuses on ESG solutions with special attention to environmental aspects. It includes sustainability-linked instruments that encourage the customer to improve its sustainability performance, and loans with proceeds tied to dedicated projects, which can also benefit from the circular economy credit facility, promoting decarbonisation and reuse of resources. In particular, in terms of Sustainability-linked solutions, in 2024 the Group supported its customers with loans, bonds, guarantees, securitisations and hedging activities, while the transactions with earmarked income include Green loans, Green, Social and Sustainable bonds, Green Convertible bonds, as well as Project Finance dedicated to the world of renewable energy (wind, photovoltaic, biomass, hydroelectric).

Moreover, the Division offers a wide range of advisory services focused on the sustainable transition. Specifically, an ESG Advisory Team was established in 2023 to assist customers served by IMI Corporate & Investment Banking in the development of customised ESG tools linked to their strategies and transition plans.

For more details on Sustainable Finance, with reference to climate/environmental topics, see the "Sustainable finance metrics" section of ESRS S4.

Lastly, with regard to asset management, in 2024 Fideuram Intesa Sanpaolo Private Banking Asset Management SGR S.p.a., Fideuram Asset Management (Ireland) and Eurizon Capital SGR signed the Global Investor Statement to Governments on the Climate Crisis, an initiative urging governments to strengthen their climate policies in order to contain the rise in temperatures within 1.5 degrees Celsius.[80]

Strategy for managing climate risks in the supply chain

Policies to mitigate and adapt to climate change in the supply chain

With respect to strategies and actions that control and mitigate the climate risks which may affect its supply chain, as per its Code of Ethics, the Group is committed to promoting forms of behaviour consistent with the highest ethical standards, both nationally and internationally. This document governs the relations with suppliers aimed at safeguarding the principles of ethical, social and environmental responsibility and favours long-term business relationships based on trust and transparency.

Furthermore, internal guidelines are in place to define the roles and responsibilities of the Corporate Bodies and the structures of the Parent Company and the Group companies with respect to management of Group purchases, in addition to principles and macro-processes to be complied with during all stages of the process underlying the management of purchases of goods and services, in compliance with the Code of Ethics, in particular in relation to:

[80] For more details on sustainability issues (with specific reference to environmental matters) for the Wealth Management divisions, see the Climate Report.

- transparency and equity in suppliers' selection and qualification and in the application of the compliance process with current guidelines on environmental, social and governance sustainability to ensure respect for the environment, human rights, working conditions and business ethics throughout the supply chain, also by evaluating specific local features;
- the adoption of measures and tools that minimise negative impacts and foster awareness of ESG risks and opportunities.

These guidelines apply to all Group companies. Responsibility for their approval rests with the Board of Directors of Intesa Sanpaolo S.p.A. as the Parent Company and the competent Bodies of the Intesa Sanpaolo subsidiaries subject to management and coordination activities to the extent of their implementation, while the Chief Cost Management Officer Governance Area is the structure responsible for the document. In line with these values, the Group adopted "Green Procurement rules" which form part of environmental protection activities. The procurement policy promotes a responsible approach to the sourcing and use of goods and services, prioritising those that meet specific environmental criteria at all stages of the procurement process. The aim is to identify the best solutions in term of design, products or services with the lowest possible environmental impact throughout their life cycle, taking into account market availability. These rules are the Group's main commitment in terms of value chain sustainability. Indeed, the main environmental aspects considered include the reduction of energy consumption and the related carbon dioxide emissions, sustainable waste management, optimised consumption of materials such as paper, toner and stationery, and the purchase of environmentally-friendly office equipment[81]. Thanks to these initiatives, the Group consolidates its commitment to environmental sustainability, integrating it as a core element of its corporate strategy and covering energy efficiency, in addition to climate change issues. For additional information about the "Green Procurement rules", reference should be made to the "Policies to mitigate and adapt to climate change in the portfolio" section. In this respect, the Rules must be applied to the procurement process by the Procurement bodies. The guiding principles behind a sourcing strategy include, inter alia:

- transparency and tracking of the entire procurement process;
- formalisation of the agreement in compliance with the Group's standard regulatory conditions;
- attention in relations with third parties to controls over operational risks, compliance with the Group's general guidelines on reputation and governance of environmental and social risks (ESG), as well as the overall sustainability of the choices adopted.

Supplier selection must take into due consideration, in addition to the specialisation in the required product area and the economic/financial solidity, also its reputational and sustainability profile (ESG), verifying the possible existence of external prejudices (such as judicial and insolvency proceedings). In this respect, the "Environmental and energy policy" sets Intesa Sanpaolo Group's approach to prevent, manage and, where possible, mitigate environmental impacts (which include those related to energy consumption), which are also generated along its value chain. With respect to own operations, reference should be made to the specific guidelines provided in the "Environmental and energy policy" in the section covering the "Policies to mitigate and adapt to climate change".

These regulations are part of a broader context in which the Group confirms its commitment to the principles of sustainable development. By participating in international initiatives such as the UN Global Compact, the UN Environment Programme Finance Initiative (UNEP FI), the UN Principles for Responsible Investment etc., the Group promotes the dialogue between companies, institutions and civil society, also to respect the environment, and supports the dissemination of a culture of sustainability.

Actions and resources in relation to climate change in the supply chain

During 2023, a new application platform was implemented which interfaces with Supplier Gate[82], for the management of the qualification process and for the monitoring of the counterparties of interest, with the aim of automating the collection of all the information required for their assessment, determining a qualification score (global score) and focusing the control activities on the most critical aspects. The assessment of suppliers that registered on the Supplier Gate portal takes into account not only the economic-financial and technical-organisational characteristics of each of them, but also the aspects pertaining to business ethics, respect for human rights, workers' rights, and the environment, based on the statements made through the compilation of specific questionnaires and/or the possession of certain certifications (including ISO 50001 and 14001 and the adoption of an ISO 50001-compliant energy management system). The ESG score obtained is included in the Global Score and is also made available through internal applications and resources and specific management dashboards that generate aggregated information, by number of suppliers and by expenditure, among those with a high, medium or low score.

Suppliers with a medium or high ESG score receive an increasing percentage improvement in their Global Score (which indicates the supplier's possibility of being selected and used by the Group). This approach rewards the best ESG-performing suppliers by giving them a better ranking than competitors with similar performance in other areas.

In 2024, completion of the ESG questionnaire became mandatory and is now a prerequisite for participation in tenders issued by the Group via the Group Supplier Portal. The aim of this initiative is to map the ESG profile of the suppliers used, in order to, particularly with respect to green and social categories, determine the average positioning, assess any critical issues and define an improvement plan to bring all the most strategic partners to a medium/high level of maturity.

In this respect, the Group has set the goal of completing the ESG mapping of all active and managed suppliers by 2025. At the end of 2024, mapping was completed by 86%.

Furthermore, as of 2025, for tenders relating to "green" product categories (as defined in the "Green Banking Procurement Rules") and without any distinction in terms of geographical area or size of the suppliers, the internal delegates in charge of the technical assessment will also receive the ESG Score at counterparty level (if already included in the Group's systems) as well as the ESG score as per the completion of the questionnaire with the corresponding answers, in order to share the strengths and weaknesses of the suppliers participating in the tender as important elements to be assessed prior to the awarding stage.

[81] For additional information about this topic, reference should be made to the "Climate Report".

[82] Application used to interact with suppliers, hence registration processes, updating documents and tender management.

Finally, for suppliers with low ESG scores and included in “green” categories, the Group plans to launch actions that encourage their improvement/awareness by 2030 (e.g., training initiatives, support for obtaining certain certifications).

Energy consumption metrics

The Group measures and reports the effectiveness of its climate change mitigation and adaptation policies using the following metrics: “Energy consumption and mix” and “Energy intensity based on net revenue associated with activities in high climate impact sectors”.

Energy consumption and mix

This section covers the energy consumption metrics applicable to the Group’s own operations.

In particular, the table below shows the Group’s energy consumption in 2024 with the aim of providing a detailed and exhaustive picture of the energy consumed by the processes owned or controlled by the Group. Specifically, total energy consumption is broken down by fossil, nuclear and renewable energy sources. Furthermore, self-production of renewable and non-renewable energy is also shown.

The figures shown below are in megawatt-hours (MWh).

Table 5[83] – Energy consumption and mix (in MWh)

	2024
Total energy consumption	**565,284**
Total fossil energy consumption	*233,889*
Fuel consumption from coal and coal products	-
Fuel consumption from crude oil and petroleum products	36,475
Fuel consumption from natural gas	136,694
Fuel consumption from other fossil sources	-
Consumption of purchased or acquired electricity, heat, steam, and cooling from fossil sources	60,719
Share of fossil sources in total energy consumption	41.4%
Consumption from nuclear sources	*4,661*
Share of consumption from nuclear sources in total energy consumption	0.8%
Total renewable energy consumption	*326,735*
Fuel consumption from renewable sources	-
Consumption of purchased or acquired electricity, heat, steam, and cooling from renewable sources	325,382
Consumption of self-generated non-fuel renewable energy	1,353
Share of renewable sources in total energy consumption	57.8%
Non-renewable energy production	23,539
Renewable energy production	1,353
Total energy consumption from activities in high climate impact sectors	1,081
Total energy consumption from activities in high climate impact sectors per net revenue from activities in high climate impact sectors	0.00002

The Group also operates in high climate impact sectors. Consequently, it reports its energy consumption from fossil fuels disaggregated by sources. Furthermore, only to the extent of high climate impact sectors, it provides information on energy consumption and energy intensity (total energy consumption per net revenue) associated with activities in these sectors.

In this respect, it is noted that high climate impact sectors are those listed in sections from A to H and in section L of the Statistical classification of economic activities (NACE), as per Commission Delegated Regulation (EU) 2022/1288: a small number of Group companies operate in sectors covered by sections F-Construction, G-Wholesale and Retail Trade and L-Real Estate Activities. Consequently, “total energy consumption from activities in high climate impact sectors” shows total energy consumption gross of energy from fossil fuel, nuclear sources and renewable sources related to own operations in these sectors. “Total energy consumption from activities in high climate impact sectors per net revenue from activities in high climate impact sectors” is calculated as follows: “total energy consumption from activities in high climate impact sectors (MWh)/net revenue from activities in high climate impact sectors (euro), with the above figure as the numerator and the net revenue attributable to the above activities (high climate impact) as the denominator.

83 Numbering refers to the XBRL tables published by EFRAG.

Energy intensity based on net revenue in high climate impact sectors

The table below provides useful information for understanding the denominator of the energy intensity ratio. Specifically, it shows the net revenue from activities in high climate impact sectors (as defined earlier) in which the Group operates, which is used to calculate the above energy intensity, in addition to the net revenue[84] broken down by the component not attributable to activities in high climate impact sectors.

Figures are shown in million euro and refer to the Group as a whole.

(millions of euro)

	2024
Net revenue from activities in high climate impact sectors	65
Net revenue from activities other than in high climate impact sectors	51,893
Net revenue	51,958

The above table shows that net revenue from activities in high climate impact sectors used to calculate energy intensity amounts to 65 million, while net revenue from activities not attributable to high climate impact sectors amounts to 51,893 million compared to total net revenue as per the consolidated financial statements (51,958 million).

Greenhouse gas emissions metrics

As part of its strategy to combat climate change in its own operations and at portfolio level, the Group measures and reports the effectiveness of its climate change mitigation and adaptation policies using the metrics below, which contribute to the achievement of its greenhouse gas emission reduction targets.

The Intesa Sanpaolo Group's greenhouse gas emissions are reported in accordance with the GHG Protocol Corporate Standard (Greenhouse Gas Protocol) and relate to:
- Scope 1 direct emissions, which include direct emissions from sources owned or controlled by the undertaking including, inter alia, the emissions generated by heating owned buildings and the fuel used for its car fleet;
- Scope 2 indirect emissions, which include indirect greenhouse gas emissions from purchased or acquired energy, such as electricity, steam, heat or cooling, generated off-site and consumed by the undertaking;
- Scope 3 indirect emissions (classified in the categories from 1 to 15 which are deemed significant; for additional information on these categories, reference should be made to the next paragraph on "Gross GHG emissions – Scope 1, 2, 3 and total"), which include all the other indirect emissions that are a consequence of the activities of the undertaking, but which do not fall under Scope 1 and Scope 2 emissions, such as, for example, those generated by investments ("financed emissions"), production of paper or office equipment, management of waste generated.

Gross GHG emissions – Scope 1, 2, 3 and total

This section covers, in particular, the metrics applicable to greenhouse gas (GHG) emissions which apply to both own operations and the upstream and downstream value chain.

To this end, the table below shows GHG emissions in tonnes of CO_2 (tCO_{2eq}) as a total and by scope, i.e., Scope 1, Scope 2 (location-based[85] and market-based[86]) and Scope 3. Specifically, for Scope 3, it shows the significant categories for the Group with respect to the 15 categories envisaged by the GHG Protocol Corporate Standard. With respect to category 15 ("Investments" attributable to financed emissions), it is noted that this figure is consistent with Pillar 3 reporting.

[84] The Group has adopted the definition of "net revenue" as set out in the Directive on the annual accounts and consolidated accounts of banks and other financial institutions. Specifically, it considered the following income statement items: 262:10, 40, 70, 80, 90, 100, 110, 230 (positive components only), 250 (positive components only), 280 (positive components only)

[85] The location-based method quantifies the GHG emissions associated with energy consumption based on the national average energy generation emission factors of the countries where energy is purchased.

[86] The market-based method considers the specific emission factors provided by heat and electricity providers, which reflect the effective composition of the energy mix purchased. When electricity is sourced from certified renewable sources, a zero emission factor is assigned for Scope 2, as these sources do not generate direct emissions.

Table 6 – GHG emissions (in tCO_2eq)[87]

	2024
Scope 1 GHG emissions	
Gross Scope 1 greenhouse gas emissions	45,280
Percentage of Scope 1 GHG emissions from regulated emission trading schemes	-
Scope 2 GHG emissions	
Gross location-based Scope 2 greenhouse gas emissions	115,789
Gross market-based Scope 2 greenhouse gas emissions	16,656
Scope 3 GHG emissions	
Gross Scope 3 greenhouse gas emissions	**59,892,681**
Percentage of GHG Scope 3 calculated using primary data	*26.4%*
Purchased goods and services	7,179
2. Capital goods	6,432
3. Fuel and energy-related Activities	25,645
4. Upstream transportation and distribution	13,161
5. Waste generated in operations	254
6. Business traveling	5,959
7. Employee commuting	33,441
8. Upstream leased assets	2,419
9. Downstream transportation	-
10. Processing of sold products	-
11. Use of sold products	239
12. End-of-life treatment of sold products	-
13. Downstream leased assets	3,489
14. Franchises	-
15. Investments	59,794,462
Total GHG emissions	
Total GHG emissions (location- based)	60,053,750
Total GHG emissions (market- based)	59,954,617

(metric ton of CO2 eq)

	2024
Gross Scope 1 greenhouse gas emission	45,280
Gross location-based Scope 2 greenhouse gas emission	115,789
Gross market-based Scope 2 greenhouse gas emission	16,656
Gross Scope 3 greenhouse gas emissions	59,892,681

(metric ton of CO2 eq)

	Italy	Foreign
Total GHG Emission	35,128,121	24,925,629

87 This table does not include the columns pertaining to the reference targets. In this respect, reference should be made to the “Greenhouse gas emission reduction targets” and the “Climate change mitigation and adaptation targets in own operations” sections.

With respect to Scope 3, category 15 only includes exposures to non-financial corporations: these emissions are estimated based on information about the counterparty and the average intensity of emissions by sector.
With respect to the Residential Real Estate (RRE) sector, for which the Group has set an emissions reduction target to 2030 described in the "Greenhouse gas emission reduction targets" section, estimated emissions amount to 2 million tCO_2 (this figure is derived from the management accounts). For additional information, reference should be made to the Climate Report.

In addition to the above, it is noted that category 15 - Scope 3 emissions refer to the Group's scope of prudential consolidation and includes financial assets in associates, subsidiaries and joint ventures which are not consolidated.
In preparing the disclosure for Scope 1, 2 and 3 (excluding category 15), the Intesa Sanpaolo Group calculated the emission factors on a country-by-country basis in order to obtain a picture as realistic as possible with respect to the actual emissions generated directly by the Group, in particular for Scope 1 and 2. Each emission factor, multiplied by the respective consumption, generates CO_2eq emissions.
Furthermore, the Group decided to disaggregate and report GHG emissions by country/geographical location (Italy/abroad), disaggregating total emissions and considering Scope 2 emissions calculated in accordance with the location-based method.

The reporting methodologies envisaged by the Italian Banking Association (ABI) Guidelines are usually applied[88].

Specifically, with respect to electricity:
- in terms of "residual mix" (to be used when calculating market-based emissions), the Association of Issuing Bodies (AIB) is the source of emission factors. Where this is not available, the "national mix" is considered;
- in terms of "national mix" (to be used when calculating location based emissions):
  - for Italy, the Italian Institute for Environmental Protection and Research (ISPRA, Istituto Superiore per la Protezione e la Ricerca Ambientale) is the source of emission factors;
  - for the rest of the countries, excluding the US, the International Energy Agency (IEA) is the source of emission factors;
  - for the US, the Environmental Protection Agency (EPA) is the source of emission factors.

With respect to fossil fuel (natural gas, gas oil and LPG):
- for Italy, ISPRA is the source of emission factors;
- for the rest of the countries, excluding the US, the emission factors are calculated using the data collected by the UNFCCC – United Nations Framework Convention on Climate Change. Where these are not available, the average value of the countries considered is assigned;
- for the US, the EPA is the source of emission factors.

With respect to district heating, a more prudent approach was used given the methodology introduced by the new reporting standard. Specifically:
- for Italy, where available, the emission factors reported by the various suppliers were considered, collecting the necessary evidence;
- for the US, the EPA is the source of emission factors;
- for the UK, the Department for Environment Food and Rural Affairs (DEFRA) is the source of emission factors;
- for the rest of the countries, excluding the US and the UK, an average value between that of ISPRA (Italian average factor), EPA and DEFRA was considered.

With respect to the car fleet, reference was made to ISPRA.

Finally, with respect to the Global Warning Potential (GWP) values, the Intergovernmental Panel on Climate Change (IPCC) (Assessment Report) was the reference source.

Scope 3 data collection and calculation methodologies for the significant categories from 1 to 14 included in Table 6 – GHG emissions (in tCO_2eq) are described below.
- Scope 3 - category 1 Purchases of goods and services include:
  - the paper used in office activities. The processes considered are those from production to delivery to the Group. Emissions from production are an average sector scenario, derived from the UK government's greenhouse gas reporting conversion factors. For all processes included in the system boundaries, GHG emission factors have been sourced from Ecoinvent 3.5. The IPCC 2013 equivalence factors have been applied;
  - the use of cloud-based data centre services. Scope 1, 2, 3 annual emissions reported by suppliers, in relation to the services offered to the Group, are considered.
- Scope 3 – category 2. Capital goods include the most significant IT and electronic equipment purchased by the Group during the reporting year: PCs and laptops, monitors, printers, smartphones, tablets, ATMs, etc. The system boundaries include cradle-to-gate operations, i.e. the entire product supply chain. In accordance with the GHG Scope 3 Emission Standard (WBCSD/WRI) protocol, emissions generated by the production of capital goods are entirely recognised when purchased, regardless of the lifetime of the product. Emission factors were sourced, where possible, from publicly available primary data, such as Life Cycle Assessment (LCA) reports, Environmental Product Declarations (EPDs), manufacturers' sustainability statements or, alternatively, for the remaining products, emission factors from the Ecoinvent 3.5 datasets with satisfactory representativeness were applied. Transport distances from production countries, mainly China and other East Asian countries, were considered. ATM machines were modelled based on the percentages of the materials they are composed of and the use of the corresponding Ecoinvent datasets. The IPCC 2013 equivalence factors have been applied.
- Scope 3 – category 3. The energy vector indicator of the Group's energy consumption includes emissions related to the fuel supply chain, construction and operation of infrastructure, distribution and transmission losses.

[88] Reference is made to the Guidelines on the bank-wide application of ESRS in environmental matters, ABI Lab, 2024 (ABI Lab Guidelines).

- In order to characterise impacts, where possible, regional data were used or average European/world-wide scenarios. With respect to electricity consumption, country-specific “residual mixes” were used, where available, or “national mixes”. Ecoinvent 3.5 emission and IPCC 2013 equivalence factors were used and applied, respectively.
- Scope 3 – category 4. With respect to upstream transport and distribution, the emissions generated by the transport of money to replenish ATMs by third-party companies on behalf of the Group were considered.
- The system was modelled assuming a van transport scheme. Emissions cover all stages of the life cycle: fuel supply chain, combustion emissions and vehicle manufacture. Ecoinvent 3.5 emission factors were used.
- Scope 3 – category 5. Waste-related emissions include the end-of-life treatment of special waste generated for the Group's operations. The stages considered include the transport of waste to treatment facilities and the end-of-life treatment. Information on the effective end-of-life was sourced from the Waste Identification Forms completed in accordance with the applicable Italian legislation and from specific questionnaires provided for foreign companies. With respect to the remaining waste streams sent to landfill, incineration or other treatment processes, Ecoinvent 3.5 emission factors were used. The IPCC 2013 equivalence factors have been applied.
- Scope 3 – category 6. Emissions related to business travel include journeys made by aircraft, trains and personal cars by employees. The methodology used to calculate emissions, in accordance with the ABI Guidelines, is based on data obtained by applying appropriate ratios derived from the ICAO's Carbon Emission Calculator, the EcoPassenger application and ISPRA's National Information System.
- Scope 3 – category 7. Emissions due to employees’ commuting are calculated, for Italy, using the data obtained from specific questionnaires sent to employees that operate in cities covered by Commuting Plans and subsequently remeasured against the total number of Group employees. Using the primary data, specific emission factors are applied, as extracted from the ISPRA database. Public transport and shuttles, motorbikes, private cars and trains were considered.
- Scope 3 – category 8. The Intesa Sanpaolo Group has buildings leased by third parties which are used as guest houses. It is assumed that these assets have unit emissions similar to assets with operational control[89]. For reporting purposes, intensity factors (location-based Scope 1+2 CO2eq/m2) were calculated for buildings with operational control and applied to guest houses leased by third parties.
- Scope 3 – category 11. With respect to the banking/financial services/products used by customers, the main transactions were considered, broken down by channel used (internet banking/mobile banking), type (payment/transfer) for Group banks. The following information was considered for assessment purposes: average time and average electricity consumption for each operation broken down by type of device used. The operating time was estimated, while the average electricity consumption for mobile devices and PCs was based on sector studies. The emission factors for electricity consumption are those used for Scope 2 calculation purposes.
- Scope 3 – category 13. The Intesa Sanpaolo Group has owned assets which are leased to third parties (properties classified in accordance with IAS 40). No operational control exists for these properties: the reporting approach is based on this principle. Specifically, IAS 40 includes properties leased to third parties which are not part of the Group’s core business. For reporting purposes, where available, precise consumption data were used, applying the relevant emission ratios and, in other cases, intensity factors (location-based Scope 1+2 CO2eq/m2) for buildings with operational control and applied to those leased to third parties, assuming that these assets have unit emissions similar to those of assets with operational control. Consequently, assets held for investment purposes in “Commercial Real Estate” and assets under finance leases to third parties are not included in this category, as they are linked to strictly related banking transactions.

Prudently, all properties that were not classified under IFRS 5 at the beginning of 2024, despite being classified as assets held for sale during the year (e.g. the property in Via Clerici in Milan), were considered when reporting the related GHG emissions.

Compared to that disclosed in the Group's “2023 Consolidated Non-financial Statement”, it is noted that Scope 3 reporting also included emissions:
- from the use of cloud-based data centre services under category 1 - Purchased goods and services;
- under category 7 – Employee commuting;
- under category 8 – Upstream leased assets;
- under category 13 – Downstream leased assets.

Overall, the percentage of GHG Scope 3 emissions calculated using primary data, sourced from suppliers or other partners along the value chain, was 26.4% for all significant categories reported.

Based also on “Table 6 – GHG emissions (in t CO_2eq)”, it is noted that Scope 3 emissions related to the following categories were excluded:
- Scope 3 – category 9 “Downstream transportation”, as the Intesa Sanpaolo Group does not produce goods that require transport and distribution;
- Scope 3 – category 10 “Processing of sold products”, as there are no intermediate products that require further processing, transformation or inclusion in another product before use;
- Scope 3 – category 12 “End-of-life treatment of sold products”, as the Intesa Sanpaolo Group does not produce goods that require end-of-life treatment;
- Scope 3 – category 14 “Franchises”, as the Group does not grant third party companies licences to sell or distribute its services.

Furthermore, at 31 December 2024, the Group has biogenic emissions of CO_2 from the combustion or bio-degradation of biomass equal to 0 for Scope 1 areas. With respect to Scope 2 and 3, no national methodologies are in place for the timely identification of such indirect emissions.

[89] Based on that set out in the Italian Banking Association (ABI) Guidelines, the emissions generated by owned assets leased to third parties are reported in accordance with the principle of operational control.

In 2024, the percentage of contractual instruments used by the Group to purchase and sell energy with respect to GHG Scope 2 emissions is 81.3%; that of bundled contractual instruments is 76.5%, while the percentage of unbundled instruments is 4.8%.

The Intesa Sanpaolo Group focuses, in particular, on reporting the electricity purchased from renewable sources. At present, the contractual instruments used to certify the use of this type of energy are as follows:
- Guarantee of Origin (GO) certificates;
- specific "green" supplies identified in supply contracts;
- Power Purchase Agreements (PPA);
- International Renewable Energy Certificates (i-REC).

At present, the bundled contractual instruments that certify the use of electricity from renewable sources are those listed above, while the unbundled ones are only the i-RECs, purchased for Egypt.

Finally, there are no significant changes to report about the effects of any significant events and changes in the circumstances (affecting GHG emissions) that occurred between the reporting date of this document and the reporting dates of the entities included in the Group's value chain.

Financed emissions

As part of Scope 3 - category 15, in line with the methodology developed by the Partnership for Carbon Accounting Financials (PCAF), the following priority of emission data sources has been established:
- reported emissions: collected directly by the counterparty or by infoproviders (they account for 26.5% of the financed emissions reported at 31 December 2024);
- physical activity-based emissions: estimation based on the production data of the counterparty multiplied by specific emission factors;
- economic activity-based emissions: sectoral proxy calculated based on sectoral emission intensity, and country/geographical area and counterparty size if the estimation sample is deemed sufficient. With respect to the counterparty, the emission figure is obtained by multiplying the counterparty's revenue by specific emission factors derived from a clustering model.

Financed emissions are calculated by considering the exposure (loans and advances, debt securities, and equity investments) to the counterparties in relation to the total liabilities (financial liabilities and equity) of the counterparties. Specifically, the reference period for emissions figures is updated to 2022. Consequently, the delay between the Group's exposure data and emissions data is two years.

Finally, there are no significant changes to report about the effects of any significant events and changes in the circumstances (affecting GHG emissions) that occurred between the reporting date of this document and the reporting dates of the entities included in the Group's value chain.

GHG emission intensity

This section covers the intensity of GHG emissions, i.e. total GHG emissions in metric tonnes of CO_2eq compared to net revenue.

The Group calculates this intensity using the following formula: total GHG tCO_2eq emissions/net revenue.

In this respect, the net revenue used for calculation purposes amounts to 44,798 million, compared to total revenue of 51,958 million as per the financial statements at 31 December 2024. The table below provides useful information for understanding the above denominator and, in particular, the reconciliation of the net revenue used to calculate GHG emission intensity with net revenue as per the financial statements. Figures are expressed in million euro.

(millions of euro)

	2024
Net revenue used to calculate GHG intensity	44,798
Net revenue other than used to calculate GHG intensity	7,160
Net revenue	51,958

On the other hand, the numerator of GHG emission intensity is equal to the total emissions, indicated above.

Based on the above, the intensity of GHG emissions is as follows:
- 0.001338 tCO2eq/euro under the market–based method;
- 0.001341 tCO2eq/euro under the location–based method.

The Group has adopted the definition of "net revenue" as set out in the Directive on the annual accounts and consolidated accounts of banks and other financial institutions. Specifically, it considered the following income statement items: 262: 10, 40, 70, 80, 90,100,110, 230 (positive components only), 250 (positive components only), 280 (positive components only). In line with the prudential scope, to which the Scope 3 - category 15 emissions represented by the numerator refer, it is noted that the denominator does not include items 160 and 170 which pertain to the "revenue" of the insurance segment. Furthermore, since category 15 is the most significant addend in the numerator of GHG emission intensity, even considering only the revenue items consistent with category 15 alone, the figure would be less than 0.003.

Internal carbon pricing

Internal Carbon Pricing (ICP) is a scheme through which undertakings assign a monetary value to GHG emissions and integrate it (the "price") into investment decisions and business operations. Specifically, an Internal Carbon Pricing scheme uses market mechanisms and transfers the cost of GHG emissions to the issuer by assigning a price on carbon dioxide emissions.
The adoption of an internal carbon pricing scheme by the Group is a strategic decision aimed at managing climate-related business risks and promoting a transition to a zero-emission business model.

The scheme used by the Group to set its internal carbon price (the "ICP scheme"), is the shadow price and refers to Green Banking Procurement, in particular purchases of IT equipment. Indeed, the ICP is applied to all procurement activities that go through information and communication technologies (ICT) purchases, which are carried out centrally, in line with the Group's procurement policy. In residual cases (e.g. specific geographical areas) for specific purchases that do not go through centralised procurement, the ICP does not apply.

In this respect, the GHG emissions generated by the electricity consumed through IT equipment are subject to internal carbon pricing, based on product certifications (e.g. Energy Star) and/or supplier declarations. The resulting cost is added to the purchase and usage cost (energy), contributing to the lifecycle cost of the machines. This assessment supports Intesa Sanpaolo Group in selecting the most convenient supply from a lifecycle perspective. The main categories of tools subject to ICP include laptops 99%, mini-desktops 100%, desktops 100%, cash in-cash out 100%, ATMs/MTAs 100%, monitors 35% and printers 81%.

Pricing is applicable to the environmental impact analysis via a technical assessment of the equipment and an assessment phase of energy consumption and environmental characteristics. In 2019, the internal carbon price was set at €57/tCO_2eq, as indicated by the Life Cycle Impact Assessment Environmental Prices method in its 2018 EU28 version, which calculates the carbon footprint over the entire life cycle of the product in line with market practice. In 2023, the ICP rose to €100/tCO_2eq, up considerably on the €64/tonCO_2eq indicated by the NGFS, in line with the call to increase domestic prices in view of the 1.5°C target and within the range of €50-160/tonCO_2eq as proposed by the LCIA Environmental Prices. Pricing is applicable for the environmental impact analysis via a technical assessment of the equipment and an assessment phase of energy consumption and environmental characteristics.
The ICP is calculated based on a third-party study.

ICP emissions include Scope 2 location-based emissions related to electricity consumption (emissions linked to the use of IT devices in scope), equal to 3,487 tCO_2eq in 2024, while the share percentage of GHG Scope 2 emissions covered by the ICP scheme in relation to total GHG Scope 2 location-based emissions is equal to 3.02%.

Table 11 – Application of shadow price

	Volume at stake (tCO_2eq)	Prices applied (€/tCO_2eq)	GHG Scope 1 [%]	GHG Scope 2 [%]	GHG Scope 3 [%]	Perimeter description
CapEx shadow price	3,487	100		3.0 %		
Research and Development (R&D) investment shadow price						
Internal carbon fee or fund						
Carbon prices for impairment testing						

Anticipated financial effects from material physical and transition risks and potential climate-related opportunities

This section covers the anticipated financial effects from material physical risks. Specifically, the Group decided to disclose only the information already available as part of Pillar 3 reporting, availing of the phase-in provisions for the other information covered by the current disclosure requirement.

The following table, which complies with Pillar 3 disclosure, provides information on exposures in the banking book, including loans and advances, debt securities and equity instruments not held for trading and not held for sale, towards non-financial companies, on loans collateralised by immovable property and on repossessed real estate collateral, exposed to chronic and acute climate-related risks, with a breakdown by sector of economic activity (NACE classification) and by geography of location of the activity of the counterparty or of the collateral, for those sectors and geographical areas subject to climate change acute and chronic events.
Sensitive exposures are shown separately:

- for the impact from chronic events only, including risks relating to gradual changes in weather and climate and having a possible impact on economic output and productivity;
- for the impact from acute events only, including risks that may cause sudden damage to properties, disruption of supply chains, and depreciation of assets;
- for both the impacts described above.

The assets exposed to significant physical risk are located in Italy and in the areas where the Group's main European investees operate (i.e. Croatia, Romania, Slovakia, Slovenia, Serbia and Hungary).

For the identification of exposures subject to climate change physical risk, the Intesa Sanpaolo Group has used an external provider that has provided mapping and measurement of the risks at individual property level (understood as a collateral asset or registered office/production site where available, for exposures to Non Financial Corporations). The Group has prudently chosen to use the "Current Policies" scenario provided by the NGFS (equivalent to a Representative Concentration Pathways (RCP) 6.0 scenario[90]) as the baseline scenario, as it assumes that current policies are not subject to any changes by regulators, resulting in very high physical risks. The physical risk events considered differ according to the business sectors of the companies and the loans collateralised by immovable property based on the specific characteristics of each type of exposure.

[90] Climate change pathways based on different concentrations of greenhouse gases. The RCP 6.0 scenario is the pathway leading to a radiative forcing of 6.0 W/m^2 by 2100, with CO_2 levels reaching 670 ppm and global temperatures rising by +3-4°C.

The following table shows the exposures collateralised by commercial and residential immovable property and repossessed real estate collateral, including information on the energy efficiency level of the collateral measured in terms of kWh/m² energy consumption and label of the energy performance certificate (EPC).

The presentation is broken down according to the geographical area in which the collateralised property is located (EU and non-EU area). Where the energy efficiency level in terms of kWh/m²/year is an estimated figure, this is stated in the row concerned. The estimation is only calculated for the types of immovable property provided as collateral subject to mandatory energy performance certificate (e.g. residential properties, buildings used for production).

ESRS E2 – Pollution

Materiality assessment of impacts, risks and opportunities

As explained in the chapter “ESRS2 – General disclosures: Double materiality assessment”, the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within the scope of ESRS E2 – Pollution were identified taking into consideration the specific features of the group. Specifically, such impacts, risks and opportunities were mapped on the basis of the framework in which the Group sets out and carries on its business activities and dealings in relation to pollution (for instance, “Rules for the Environmental and Energy Policy and Group Guidelines on ESG Risk Governance”) and the governance measures in place to minimise the negative impacts connected with pollution in own operations and in the upstream and downstream value chain, along with an assessment of the risks tied to aspects of pollution to which the Group may be exposed. For the purposes of the double materiality assessment, experts in environmental matters were engaged.

For the purposes of impact materiality, the assessment of the impacts identified involved interviews with internal units and external stakeholders (such as interviews with experts in the sector) and an in-depth qualitative and quantitative analysis based on the criteria envisaged by relevant legislation (namely, scale, scope, irremediable character of the impact and likelihood). Specifically, with reference to:

- own operations: impacts were assessed on the basis of qualitative drivers connected with, among other things, the adoption of internal policies and the promotion of initiatives able to guarantee delivery of pollution reduction targets;
- upstream value chain: the impact assessment involved ESG questionnaires administered to Group suppliers and an analysis of their feedback;
- downstream value chain: the assessment focused on indirect impacts arising through exposures in the Group’s portfolios, in order to take into consideration exposures to counterparties belonging to high-impact industries from a pollution point of view. In addition, investment/lending criteria and strategies were taken into account in assessing the counterparties.

The impact materiality outcomes found by the assessments identified negative indirect material impacts in the downstream value chain. The materiality of the impacts was specifically tied to exposures in Group portfolios toward counterparties belonging to industries that potentially have a negative impact on the matter in question.

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the perimeters identified.

With reference to risks, the following assessments were made:

- own operations: in consideration of the specific features of the Group’s core business and following interviews with the competent organisational units, no risks in relation to pollution were found;
- upstream value chain: the assessment focused primarily on potential exposures to reputational risk in the case of Group suppliers that adopt a less structured approach to the matter in question (such as pollution-related events and the use of polluting substances, or lack of action taken to reduce pollution);
- downstream value chain: the assessment focused on credit risk and market risk connected with the matter in question, This would also give rise to reputational risk.

In terms of financial materiality, the assessment of the downstream value chain found that credit risk and reputational risk were material. The materiality of the impacts was specifically tied to exposures in Group portfolios toward counterparties belonging to industries that potentially have a negative impact on the matter in question, especially in terms of air pollution, soil pollution and microplastics.

In relation to opportunities, the financial materiality assessment was conducted with reference to the following perimeters:

- own operations: on the basis of interviews with the competent organisational units, the assessment looked at current and/or planned Group initiatives for reducing pollution, with reference to the Group’s own operations;
- upstream value chain: no potentially material opportunities were identified in terms of financial materiality;
- downstream value chain: opportunities were assessed in relation to the possibility of expanding the product range to include new products aligned with environmental sustainability objectives. The assessment took into consideration the performance targets and indicators in the budget and business plan for loans provided or planned with environmental objectives.

The financial materiality assessment did not identify any material opportunities among those mapped, as none were found to target or significantly further the management and reduction of pollution on the part of customer counterparties, nor were any initiatives found to be material for own operations, given the specific nature of the Group’s operations.

Policies, targets and actions at portfolio level

Pollution policies

In line with the principles of its Code of Ethics, Intesa Sanpaolo Group has joined major international initiatives such as the UN Global Compact and the Principles for Responsible Banking (PRB), making it one of the premiere European financial groups to have joined all of the leading sustainability initiatives sponsored by the United Nations for the financial sector, within the framework for achieving the United Nations Sustainable Development Goals.

Accordingly, the Group acknowledges the problem of pollution, the benefits that can come from preserving and restoring nature, and the key role that financial institutions can play in this regard.

Underlining its commitment and in accordance with the "Group Guidelines for ESG Risk Governance", in 2024 Intesa Sanpaolo Group prepared new "Rules on Biodiversity and Nature", which were adopted in January 2025. The rules take up the requirements of the E4 standard to support own operations relating to these topics, also through sustainable loans to customers for projects that have a positive impact in this area.

Applicable to all the Group, the rules identify a list of sensitive economic sectors that have a potentially negative impact on biodiversity and/or pollution. The sectors include the mining industry and the extraction of resources, which is known to be a potential cause of soil and water pollution, and the transport industry, where vehicle emissions are polluting (besides CO_2, nitrogen oxides and particulate matter, for example). Under the rules, lending is prohibited to counterparties engaged in, and projects connected with, such activities and located in critical geographical areas, such as protected areas and countries that have not ratified the main accords and protocols on the environment, such as the Montreal Protocol on Substances that Deplete the Ozone Layer.

Where there is evidence of potential impact, special attention is to be focused in ESG and reputational risk assessments on sensitive activities located in countries that have not ratified one or more international conventions. The list of conventions includes those addressing the matter of pollution, such as the Rotterdam Convention on chemical products and pesticides, the Basel Convention on hazardous waste and the Stockholm Convention on Persistent Organic Pollutants.

The rules are part of the general framework of Group ESG risk management, risk appetite and relevant strategic guidelines. An overview of the rules is available to the public for all stakeholders to access on the Group's website. Responsibility for the updating of the Rules on Biodiversity and nature is tasked to the governance areas of the Chief Risk Officer (CRO) and Chief Sustainability Officer (CSO) to ensure their alignment with applicable national and international regulations, standards and best practices.

Pollution targets

In relation to environmental risks, including pollution, the aim of the Group is to incorporate measures into the risk management framework and related decision-making processes to ensure their governance. Nevertheless, it should be stressed that the materiality assessment performed, for the standard in question, on the loan portfolio is based on current models and metrics that are still under development, in terms of their methods and standardisation, and factored in a medium/long-term time horizon. The development of methodological standards of reference and the availability of more detailed and reliable data will enable the materiality assessment to be fine-tuned and additional, more specific governance measures to be introduced.
As mentioned in the previous section, risk governance measures introduced include the "Rules on Biodiversity and Nature", which focus specifically on matters relating to pollution. In addition, as reported below, the Group has initiatives and actions in place to help minimise pollution, although no specific quantitative targets have been set.

Pollution actions

While the public information of a quantitative and verifiable nature required for the measurement of this risk and for targeted action to be taken is lacking, the Group has adopted a number of initiatives and actions for the management and governance of ESG matters, and specifically environmental matters, in the loan portfolio, which cover the direct or indirect impacts of pollution. Those initiatives and actions include "S-Loan Progetti Green" loans and loans backed by SACE Green guarantees, which also support investments aimed at preventing, controlling and reducing pollution, as well as a third-party environmental insurance policy, which covers damage to the environment or imminent pollution threats and emergency services for the conservation and restoration of the affected area.

In addition, the proprietary ESG scoring model utilised by the Group to assess the ESG profile of corporate customers takes into consideration components connected with pollution. The scoring model considers information sourced from external providers on environmental certifications and, for counterparties assessed by the main international info-providers, information on waste and pollution.

The resulting ESG score is incorporated into group processes to give an ESG perspective in the application of the credit framework and credit strategies, showing how the pollution considerations making up the score are included in frameworks and strategies relevant to the Group.

Furthermore, the Group recognises the importance of widespread stakeholder engagement in fostering the development of mindset focused on reducing pollution and protecting nature. Accordingly, Intesa Sanpaolo contributes to the creation of engagement opportunities that promote a culture of sustainable change, involving engagement initiatives, partnerships, training, research projects, participation in working tables and awareness-raising campaigns. In this regard, Intesa Sanpaolo Group is a signatory of the Finance Leadership Statement on Plastic Pollution, in acknowledgement of the role the financial sector can play in addressing the material risks of pollution and promoting the ecological transition.

ESRS E3 – Water and marine resources

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS2 – General disclosures: Double materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within the scope of ESRS E3 – Water and Marine Resources were identified taking into consideration the specific features of the group. Specifically, such impacts, risks and opportunities were mapped on the basis of the framework in which the Group sets out and carries on its business activities and dealings in relation to the topic (for instance, the Rules for the Environmental and Energy Policy and Group Guidelines on ESG Risk Governance) and risk governance measures activated by the Group, also considering the agreements/partnerships in place with associations (such as One Ocean Foundation, which engages in research activities for marine conservation) and partnerships with universities to develop initiatives on the matter (such as the development of a blue economy study centre), as well as an assessment of the risks tied to water management and use to which the Group may be exposed. For the purposes of the double materiality assessment, experts in environmental matters were engaged.

For the purposes of impact materiality, the assessment of the impacts identified involved interviews with competent internal units and an in-depth qualitative and quantitative analysis based on the criteria envisaged by relevant legislation (namely, scale, scope, irremediable character of the impact and likelihood). Specifically, with reference to:

- own operations: impacts were assessed on the basis of qualitative information such as internal policies, company strategies and initiatives for the responsible use of water;
- upstream value chain: the impact assessment involved ESG questionnaires administered to Group suppliers and an analysis of their feedback;
- downstream value chain: the assessment focused on indirect impacts arising through exposures in the Group's portfolios, in order to take into consideration exposures to counterparties/undertakings belonging to high-impact industries from a water and marine resources point of view. In addition, relevant investment/lending criteria and strategies were taken into account in assessing the counterparties.

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the perimeters identified.

With reference to risks, the following assessments were made:

- own operations: in consideration of the specific features of the Group's core business and following interviews with the competent organisational units, no risks connected with the topic were found;
- upstream value chain: the assessment focused primarily on potential exposures to reputational risk in the case of Group suppliers that adopt a less structured approach to water and marine resources;
- downstream value chain: the assessment focused on credit risk and market risk connected with the matter in question, This would also give rise to reputational risk.

In relation to opportunities, the financial materiality assessment focused on the downstream value chain, given the specific features of the Group's business and the finance business in general. In terms of business development opportunities, the assessment specifically looked for targets and performance indicators linked to the sustainability matters in question in the budget and business plan.

The double materiality assessment performed found that the topics addressed by standard ESRS E3 – Water and Marine Resources were not material at Group level, both in terms of impact materiality and financial materiality. In relation to own operations, the Group was not found to have a material impact on water consumption and management, while in relation to the upstream and downstream value chain, the concentration of exposures and suppliers that could have an impact on the matter was not found to be significant.

The Group is engaged in business areas focused on customer lending for the specific purposes of improving the management and efficiency of water use; however, such initiatives, at present, make up only a marginal part of overall business and are not, therefore, material for the purposes of disclosure in this statement.

ESRS E4 – Biodiversity and ecosystems

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS2 – General disclosures: Double materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within the scope of ESRS E4 – Biodiversity and Ecosystems were identified taking into consideration the specific features of the group. Specifically, such impacts, risks and opportunities were mapped on the basis of the framework in which the Group sets out and carries on its business activities and dealings and risk governance measures activated by the Group to promote and protect biodiversity and ecosystems, also through initiatives and projects dedicated, for instance, to reforestation and natural capital preservation such as "Think Forestry" (for more information see the section "Strategy to combat climate change at portfolio level" in Standard ESRS E1), as well as an assessment of the risks tied to biodiversity issues to which the Group may be exposed.

Specific analyses were carried out to assess the Group's dependencies and impacts in relation to biodiversity, ecosystems and related services. For the purposes of impact materiality, the assessment of the impacts identified involved interviews with internal units and external stakeholders, including experts in environmental matters, and an in-depth qualitative and quantitative analysis based on the criteria envisaged by relevant legislation (namely, scale, scope, irremediable character of the impact and likelihood). Specifically, with reference to:

- own operations: impacts were assessed on the basis of qualitative drivers, such as internal Group policies and companies strategies relating to the matter (for example, combating climate change, the overexploitation of land, etc.);
- upstream value chain: the impact assessment involved ESG questionnaires administered to Group suppliers and an analysis of their feedback;
- downstream value chain: the assessment focused on indirect impacts arising through exposures in the Group's portfolios, in order to take into consideration exposures to counterparties/undertakings belonging to high-impact industries from the point of view of biodiversity, the state of species and the extent and condition of ecosystems. In addition, investment/lending criteria and strategies were taken into account in assessing the counterparties.

The impact materiality outcomes found by the assessments identified negative indirect material impacts in the downstream value chain. The materiality of the impacts was specifically tied to exposures in Group portfolios toward counterparties belonging to industries that potentially have a negative impact on specific issues, such as climate change, the intensive use of natural resources, pollution and other aspects that together affect biodiversity loss. With reference to the downstream value chain, no actual or potential negative material impacts were found on affected communities, as regards commodity production or procurement, given the specific nature of the Group's business.

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the perimeters identified.

With reference to risks, the following assessments were made:

- own operations: considering the specific features of the Group's core business, the fact that its offices are not located in protected or high-biodiverse areas and the feedback from interviews with competent organisational units, no risks were identified regarding any direct impact on the loss of biodiversity and the extent and condition of ecosystems;
- upstream value chain: the assessment focused on potential exposures to reputational risk in the case of Group suppliers that adopt a less structured approach to sustainability matters (such as the adoption of measures to mitigate the risk of environmental pollution and an environmental policy);
- downstream value chain: the assessment focused primarily on the potential credit risk and market risk arising from threats to biodiversity and the equilibrium of the relative ecosystems, This would also give rise to reputational risk.

The financial materiality assessment of the downstream value chain identified a material credit risk in the Group's credit exposures to counterparties belonging to sectors that depend on ecosystem services and to industries that have a potentially negative impact on specific issues, such as climate change, the intensive use of natural resources, pollution and other aspects that together affect biodiversity loss. As a result, the reputational risk arising from the negative impact of such credit risk on the Group's image was found to be material.

In relation to opportunities, the financial materiality assessment was conducted and identified opportunities with reference to the following perimeters:

- own operations: on the basis of interviews with the competent organisational units, the assessment looked at current and/or planned Group initiatives in support of biodiversity and ecosystems, which could contribute to improving the Group's reputation;
- downstream value chain: the possibility of expanding the range of products aligned with biodiversity objectives. The assessment also took into consideration any targets and performance indicators in the budget and business plan and indicators on loans planned or provided aimed at improving impacts on and the preservation of biodiversity and ecosystems.

The financial materiality assessment did not identify any material opportunities among those mapped, as none were found to target or significantly further the management and reduction of elements directly tied to biodiversity loss on the part of customer counterparties, nor were initiatives found to be material for own operations, given the specific nature of the Group's operations.

Resilience Assessment

In 2024, the governance area of the Chief Risk Officer (CRO) carried out a risk assessment of the natural capital of Intesa Sanpaolo Group. That "resilience assessment" was the starting point for a pilot exercise to assess the impacts on biodiversity and the dependencies on ecosystem services of the Group's corporate customer portfolio.

The pilot exercise was run on a sample portfolio of undertakings representing the core business of Intesa Sanpaolo Group, and hence the loan portfolio. Undertakings were chosen for the sample considering, by order: (i) industries listed as "priority sectors" by international standards and initiatives such as the "Taskforce on Nature-related Financial Disclosures" (TNFD); and (ii) undertakings with the greatest exposures in each of the portfolio sectors of the IMI Corporate & Investment Banking (IMI C&IB) and Banca dei Territori (BdT) divisions.

In the absence of a specific standard for climate macro-scenarios, currently being developed by the Network for Greening the Financial System (NGFS), the assessment focused on actual impacts and dependencies, drawing from updated sector-specific estimates and maps on the state of ecosystems available at the end of 2023.

Expanding its sights, the materiality exercise in 2024 introduced medium-to-long-term considerations (2030–2050) by using ecosystem scenarios based on the Mean Species Abundance (MSA) metric. This enabled forward-looking assessments to be incorporated into the analysis, enriching the understanding of local area risks for corporate customers.

Finally, the pilot exercise was based exclusively on information in the public domain, such as sector-specific estimates and area maps, without the direct engagement of the counterparties or local experts.

For each dimension considered, various risk levels were set and the Group's exposure measured at each level, in terms of gross carrying value. The resilience assessment looked at (i) the single dimension (impact and dependency) of risk (both transaction and physical risk) and (ii) the aggregate level.

Specifically, the assessment focused on impacts on nature and the relative impact and natural capital dependency indicators:

- impacts on nature (such as changes in nature caused by business operations, which can lead to potential impacts on social and economic matters) and dependencies on nature, such as aspects of ecosystem services on which an organisation or other actors depend for their operations (such as water availability, etc.);
- seven impact indicators (which can be categorised as "pressure" factors on biodiversity) affecting the transaction risk of corporate customers, and three indicators of natural capital dependency (which can be categorised as risk factors tied to the degradation of ecosystem services) affecting the physical risk of corporate customers.

The approach adopted by the Group was aligned to best practices and the guidelines provided by the Taskforce on Nature-related Financial Disclosures (TNFD), as well as the "Locate, Evaluate, Assess and Prepare" (LEAP) process recommended by the TNFD. In particular, the loan portfolio's exposure to vulnerability in relation to environmental risks was assessed. This process enabled a top-down, sector-based view of materiality and a bottom-up view of local area materiality to be integrated into the exercise. The main drivers of impacts and dependencies were analysed for 1,000 non-financial counterparties of greatest materiality in terms of exposure and priority sectors, as identified by the TNFD.

a) The "Locate" step involved locating head offices and local production facilities to lay the groundwork for analysing interactions between industries and surrounding nature (direct operations). Access to external information sources for mapping ecosystems was instead the starting point for identifying ecosystem services and biodiversity pressures.
b) The "Evaluate" step involved the specific impact/dependency scoring of each sector using sector-level materiality (top-down approach). Impacts and dependencies (for direct operations) were assessed using a bottom-up approach, taking into account the relevance of the state of specific natural resources for the assessment area and the materiality of the sector-specific dependency or impact.

The relevance and materiality of the direct operations of counterparties were then adjusted using input-output matrices for the analysis of risk in the upstream value chain. For each company (at the local unit level), the different sector-specific and local area scores were estimated and normalised, so as to enable comparison between sectors and geographical areas.

c) In the "Assess" step, the environmental risk exposure of the loan portfolio was quantified by combining the sector-specific and local area vulnerability scores and taking into account the associated exposure of each counterparty.
d) In the "Prepare" step, the pilot exercise described laid the groundwork for a broader assessment of nature-related risks covering the entire loan portfolio of the parent company.

The resulting assessment outcomes are shown in terms of expected qualitative impacts at aggregate level, considering the median of the single impact and dependency indicators in the perimeter, classified as: very low, low, medium, high and very high.

Overall, in quantifying the environmental risk exposure of the loan portfolio (considering the top 1,000 undertakings within "priority" sectors), by combining the sector-specific and local area vulnerability scores, the pilot exercise found only a small portion of the portfolio analysed to be exposed to medium/high sector-specific and local area risks.

Finally, a series of follow-up actions (including some already pursued by the Group) were identified to adapt strategy to the outcomes of the resilience assessment in relation to changes in biodiversity.

These actions aim to mitigate risks, capitalize on opportunities and pave the way for the long-term sustainability of the Group in the face of environmental challenges. The actions include, for example, the development of the assessment framework to expand the perimeter of counterparties assessed and incorporate forward-looking metrics; the setting of rules on biodiversity (see the relevant section for a detailed description); the constant, pro-active monitoring of the relative statutory framework; participation in climate change working groups and initiatives; risk assessments linked to ESG matters in the lending process; the incorporation of ESG risks into creditworthiness assessments; and ESG sector mapping.

Policies, targets and actions at portfolio level

Policies related to biodiversity and ecosystems

Intesa Sanpaolo Group acknowledges the risks arising from biodiversity loss and pollution, the benefits that can come from preserving and restoring nature, and the key role that financial institutions can play in this regard. Accordingly, the “Group Code of Ethics” takes biodiversity and nature conservation into consideration in terms of the direct and indirect environmental impacts that Group operations can generate.

A specific Group policy governs own operations in relation to risks affecting biodiversity and ecosystems. The policy sets out specific limitation and exclusion criteria, fine-tunes risk assessment procedures and encourages sustainable lending aimed at promoting the conservation or improvement of biodiversity or ecosystem services, also with the welfare of local communities in mind.

Within this framework, in 2024 the Group prepared new “Rules on Biodiversity and Nature”, which were adopted in January 2025, as explained in the section “Pollution policies”. The rules outline the approach adopted by Intesa Sanpaolo Group to biodiversity and nature issues in relation to lending activities, wealth management & protection, direct impacts and initiatives to further the ecological transition.

Applicable to all the Group, the rules also set out exclusion, heightened assessment and risk monitoring criteria for lending to new projects and counterparties. The exclusion criteria identify the new projects and counterparties that the Group declines to finance, based on their location, their economic sector (including intensive farming and sectors that have an impact in terms of deforestation and the indiscriminate use of marine resources), and the classification of certain types of projects as “controversial” due to their impacts or dependencies on aspects of biodiversity and nature. In particular, lending to new projects and counterparties is considered at risk where they are located in countries that have not ratified the main conventions on biodiversity and nature or in protected geographical areas under the main international conventions.

In line with the Group’s strategic guidelines and ESG risk governance framework, Intesa Sanpaolo Group focuses special attention in its own operations on new projects in sectors and/or geographical areas of high exposure to ESG risks, especially in terms of biodiversity and nature, which are assessed through an “ESG & Reputational Risk Clearing” process. Accordingly, the “Rules on Biodiversity and Nature” refer to a series of international biodiversity conservation and environmental protection conventions, including the Convention on Biological Diversity (CBD), the Cartagena Protocol and the Rotterdam Convention, which together provide a regulatory framework for promoting sustainable practices, guaranteeing biosafety and restricting the use of hazardous chemicals. The conventions additionally support the traceability of products, components and raw materials throughout the value chain, improving the sustainability of production chains in the countries that have implemented the conventions.
The implementation of the Equator Principles is also relevant here, providing a framework that contemplates the protection of biodiversity and the sustainable management of natural resources. For more details, see the section “ESG Risk Governance Process” in standard ESRS E1.

In addition, the Group sets criteria to support undertakings working in practice towards, or wishing to pursue, ecological transition, also as regards biodiversity topics. In this regard, the group promotes and always permits loans that are EU taxonomy-aligned and sustainable from an “environmental” point of view, in accordance with internal classification rules as specifically concerns biodiversity and ecosystem conservation and restoration objectives.

The rules are part of the general framework of Group ESG risk management, risk appetite and relevant strategic guidelines. An overview of the rules is available to the public for all stakeholders to access on the Group’s website. Responsibility for the updating of the rules is tasked to the governance areas of the CSO and CRO to ensure their alignment with changing regulations, standards and national and international best practices on the matter.

With specific reference to asset management, Fideuram Intesa Sanpaolo Private Banking Asset Management SGR S.p.A., Fideuram Asset Management (Ireland) and Eurizon Capital SGR all take into consideration the principal adverse impacts (PAI) of their investment decisions on sustainability factors and regularly disclose the outcomes in the relative reports.

Eurizon had adopted its own “Commitment Policy” in which the company has outlined an internal screening framework based on the principles set out in the Kunming-Montreal “Global Biodiversity Framework” (GBF). Named Eurizon Naturewatch, it is designed to identify issuers that can give rise to negative impacts on biodiversity as a result of (i) their production sites being located near sensitive areas and fragile ecosystems, or (ii) their own operations. The aim of the framework is to provide an assessment of the exposure of investee companies to issues connected with the exploitation of ecosystems and the potential value losses associated with such exposure, so as to prioritise engagement initiatives with investees with the greatest such exposure.

Fideuram Intesa Sanpaolo Private Banking Asset Management SGR S.p.A. and Fideuram Asset Management (Ireland) have similarly published commitment policies and sustainability policies. Specifically, the commitment policies identify the mitigation of biodiversity loss as one of the four “macro-themes” cutting across all industry sectors, namely: (i) reduction of GHG emissions; (ii) mitigation of biodiversity loss; (iii) respect for human rights and combating the manufacture of non-conventional weapons; and (iv) good corporate governance practices.

Targets related to biodiversity and ecosystems

In relation to environmental risks, including biodiversity and ecosystems, the aim of the Group is to incorporate measures into the risk management framework and related decision-making processes to ensure their governance. Nevertheless, it should be stressed that the materiality assessment performed, for the standard in question, on the loan portfolio is based on current models and metrics that are still under development, in terms of their methods and standardisation, and factored in a medium/long-term time horizon. The development of methodological standards of reference and the availability of more detailed and reliable data will enable the materiality assessment to be fine-tuned and additional, more specific governance measures to be introduced.
As mentioned in the section “Policies related to biodiversity and ecosystems”, the Group has adopted “Rules on Biodiversity and Nature” to govern these matters. Finally, as reported below, the Group has initiatives and actions in place in support of biodiversity and the protection of ecosystems, although no specific quantitative targets have been set.

Actions related to biodiversity and ecosystems

While the public information of a quantitative and verifiable nature required for the measurement of this risk and for targeted action to be taken is lacking, the Group has nevertheless started up a number of initiatives and actions to support undertakings in their ecological transition. They include medium/long-term financing through “S-Loan Progetti Green” loans and specific green guarantees, such as loans backed by SACE Green guarantees, which can also be used to fund projects and initiatives concerning biodiversity and ecosystems.

In this respect, Intesa Sanpaolo has developed a “Green, Social and Sustainability Bond Framework” for issuing bonds to finance eligible loans under the environmental categories of the framework, including projects for the management of living natural resources, land and biodiversity.

Moreover, the ESG score used by Intesa Sanpaolo Group to assess the ESG profiles of corporate customers also considers components concerning biodiversity and natural resources. The scoring model takes into account information sourced from external providers on environmental certifications and, for counterparties assessed by the main international info-providers, information on initiatives pursued by the undertaking for the restoration, rehabilitation and clean-up of local areas, and an assessment of the impacts of the undertaking’s own operations on biodiversity and water resources.

The resulting ESG score is incorporated into group processes to give an ESG perspective in the application of the credit framework and credit strategies, showing how the biodiversity considerations making up the score are included in frameworks and strategies relevant to the Group.

In 2023, Eurizon Capital SGR, Fideuram Intesa Sanpaolo Private Banking Asset Management SGR S.P.A. and Fideuram Asset Management (Ireland) joined the Nature Action 100 initiative, which promotes the adoption by institutional investors of best practices to combat biodiversity loss and deforestation.

Intesa Sanpaolo Group supports sustainable growth and development also through partnerships, training initiatives and applied research projects. Examples include the applied research projects developed with the Intesa Sanpaolo Innovation Center to study environmental attitudes and correlated behaviour using a neuroscientific approach, with the aim of identifying effective ways of raising awareness and promoting virtuous action in the community in relation to climate change and biodiversity, and the planning of new applied research to measure biodiversity levels in urban areas, using robots equipped with various sensors and a camera.

ESRS E5 – Resource use and circular economy

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS2 – General disclosures: Double materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within the scope of ESRS E5 – Resource use and circular economy were identified taking into consideration the specific features of the Group. Specifically, such impacts, risks and opportunities were mapped on the basis of the framework in which the Group sets out and carries on its business activities and dealings (for instance, the Rules for the Environmental and Energy Policy and Group Guidelines on ESG Risk Governance), the controls/actions put in place by the Group to contribute to the implementation of recycling systems and the use of recycled/recyclable materials, the renewal of partnerships related to this issue (e.g. Ellen MacArthur Foundation, with Cariplo Factory for the Circular Economy Lab), as well as an assessment of the risks related to circular economy aspects the Group could be exposed to.

For the purposes of impact materiality, the assessment of the impacts identified involved interviews with internal Group units and external stakeholders, including experts in environmental matters, and an in-depth qualitative and quantitative analysis based on the criteria envisaged by relevant legislation (namely, scale, scope, irremediable nature of the impact and likelihood). Specifically, with reference to:

- own operations: impacts were assessed on the basis of qualitative drivers, such as internal Group policies and company strategies relating to the matter (for example, recycling systems and the use of recyclable/biodegradable materials);
- upstream value chain: the impact assessment involved "ESG questionnaires" administered to Group suppliers and an analysis of their feedback;
- downstream value chain: the assessment focused on indirect impacts arising through exposures in the Group's portfolios, in order to take into consideration exposures to counterparties/undertakings belonging to high-impact industries with respect to the circular economy and resource use. In addition, investment/lending criteria and strategies were taken into account in assessing the counterparties.

As a result of the analysis performed, the following impact materiality outcomes emerged: with regard to the downstream value chain, positive material impacts were identified through the adoption of lending/investment strategies and the offer of products related to these sustainability issues, and negative indirect impacts related to exposures to counterparties operating in sectors considered to have a potential impact on waste.

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the scopes identified.

With reference to risks, the following assessments were made:

- own operations: in consideration of the specific features of the Group's core business and following interviews with the competent organisational units, no risks in relation to the issue of circular economy and use of resources were found;
- upstream value chain: the assessment focused primarily on potential exposures to reputational risk in the case of Group suppliers that adopt a less structured approach to the issue in question (such as lack of definition of an environmental policy);
- downstream value chain: the assessment focused primarily on the potential credit risk and market risk arising from threats to the circular economy and resource use. This would also give rise to reputational risk.

With regard to financial materiality, the analyses conducted identified significant credit and reputational risks related to waste management in the production process exclusively for the downstream value chain.

With regard to the financial materiality of opportunities, analyses were conducted mainly on the downstream value chain, in view of the Group's type of business and the special nature of financial activities. Analyses and assessments were made of commercial opportunities in terms of financing counterparts with the aim of improving their circular economy profiles and improving the efficiency of production processes, as well as the possible presence of Budget and Business Plan performance targets and indicators.

As a result of the financial materiality analysis performed, material opportunities emerged, especially with respect to the Group's dedicated lending facilities for specific projects to improve the circular economy in customers' production processes on specifically identified business initiatives.

Policies, targets and actions at portfolio level

Policies on resource use and circular economy

In line with the Intesa Sanpaolo Group's strategic approach, the circular economy policies adopted set out the principles, rules and processes for pursuing the Group's objectives in the transition towards a circular economy model, focused on resource efficiency, waste reduction and especially the creation of value throughout the entire product life cycle. The primary objective is to guide the transition of undertakings and communities towards an inclusive circular economy, an economic approach capable of accelerating climate change mitigation policies, restoring biodiversity and reducing pollution, not only by reducing greenhouse gas emissions but also by optimising the availability and use of commodities, the regeneration of natural resources and technological innovation, contributing to the creation of a more sustainable, equitable and resilient economic system. This commitment is consistent with global trends towards sustainability and environmental regulations and helps reduce the risks associated with volatile resource prices. The scope of circular economy policies encompasses all Group activities, with a focus on internal resource management (e.g. procurement practices) and financial support for projects and undertakings that promote circular business models. As indicated in ESRS 2, in the section "Role and composition of the Administrative, Management and Supervisory Bodies and Sustainability Governance", the Chief Sustainability Officer Governance Area is responsible for overseeing and implementing sustainability policies. In this context, a specific competence centre represented by the Intesa Sanpaolo Innovation Center (ISPIC[91]) was identified to oversee circular economy policies.

The Intesa Sanpaolo Group's "Code of Ethics" incorporates circular economy principles through environmental protection, support for the country's development through ecological transition and the adoption of circular economy models, as well as through the responsible management of indirect environmental impacts.

Moreover, the Group ensures transparency with respect to stakeholders by making available the main circular economy policies in a variety of areas through the company's communication channels:
- with specific regard to the European Taxonomy, internal rules and the macro-process adopted by the Group for the identification and reporting of exposures aligned with this legislation have been put in place, including those related to the fourth of the six environmental objectives, i.e. “Transition to a Circular Economy”;
- with regard to the internal framework of sustainable lending products and transactions, a specific category is the area of environmental sustainability called “Ecological efficiency and circular economy”, assigned on the basis of the consistency of the lending transaction with the five Circular Economy criteria detailed later in the text and defined in cooperation with the Ellen MacArthur Foundation (EMF). Note that this framework is currently not fully aligned with the criteria of the European Taxonomy relating to the environmental objective (Transition to a Circular Economy);
- with regard to the "Green, Social and Sustainability Bond Framework", published on the Group's institutional website, i.e. the internal rules the Group has adopted to issue Green, Social and Sustainability debt securities in various formats and currencies (secured, unsecured, subordinated) to finance new and current loans/assets with environmental and/or social benefits, including those related to the support of the circular economy, the proceeds of any bonds issued by the Group under this framework are allocated exclusively to loans falling under a limited set of green categories, including the macro-category dedicated to the circular economy, in which five to eight sub-categories are defined (equivalent to the five green criteria listed further down in the text). The framework is aligned with the “Green Bond Principles 2021”, the “Social Bond Principles 2021” and the “Sustainability Bond Guidelines 2021” of the International Capital Market Association (ICMA), as well as with the European Taxonomy (on a best-effort basis);
- with regard to the Intesa Sanpaolo Group's internal ESG Scoring rules, which represent a company-wide (counterparty) assessment of the ESG profile of corporate customers, there are certain aspects related to the circular economy;
- the “Green Procurement Rules”, which can be consulted on the Group's website, among other things set out the Group's objective of promoting circular procurement models for stationery, toner, gadgets and free gifts in order to pursue sustainability goals.

The Group incorporates circular economy principles into its policies within the lending process based on both specific circular economy criteria defined together with the Ellen MacArthur Foundation (relating to the circular framework) and specific green economy criteria (relating to the green framework[92]). In this context, the Intesa Sanpaolo Innovation Center is responsible for making a technical assessment of the level of circularity and eligibility for funding of initiatives proposed by corporate customers.

Specifically, the eligibility criteria for the internal circular framework are:
- solutions that extend the product life or cycles of use of goods and materials (circular design; application of modular design; implementation of reverse logistics programmes; repair and regeneration or reconditioning of products; use of product-as-service models, pay-per-use and/or sharing economy);
- procurement of secondary or sustainably sourced renewable resources and/or recycled material (including the use of renewable energy for self-consumption);
- solutions that significantly increase the efficiency of resource consumption, either within the company or along its value chain (application of industrial symbiosis principles and implementation of an integrated value chain that transforms waste into production inputs; implementation of cycle closure models and/or application of eco-design and systemic design principles; implementation of processes based on natural principles for CO2 capture and storage and/or CO2 capture and utilisation, to support the achievement of decarbonisation and net-zero impact targets);
- fully reusable, recyclable or compostable products, placed in an efficient context of collection, separation and reuse after use;

[91] ISPIC is the Group company that explores future scenarios and trends, develops multidisciplinary applied research projects, supports start-ups, accelerates the business transformation of undertakings according to the criteria of open innovation and the circular economy, promotes the development of innovative ecosystems and spreads the culture of innovation, to make the Intesa Sanpaolo Group the driving force of a more aware, inclusive and sustainable economy.

[92] Green, Social & Sustainability Bond Framework of the Intesa Sanpaolo Group.

- innovative technologies and activities that enable circular economy models (e.g. Internet of Things solutions for implementing tracking systems, reverse logistics and/or predictive maintenance; Big Data, Artificial Intelligence and Cloud Computing in order to dematerialise services and develop markets for commodities and/or secondary materials; regenerative agriculture practices and/or hydroponic/aeroponic/precision farming technologies to improve soil health, increase biodiversity, produce food close to the place of consumption and cultivate in unfavourable areas).

For the green framework, the eligibility criteria used are:
- renewable energies not for self-consumption and in particular investments in production, transmission, infrastructure and associated assets, such as solar, wind, bioenergy/biomass and hydroelectric energy;
- energy efficiency (storage of energy from renewable energy; smart grid technology and/or infrastructure; energy-efficient equipment for buildings);
- sustainable mobility (financing of low-carbon passenger cars and light commercial vehicles and urban and suburban road/rail passenger transport with zero specific CO2 exhaust emissions; infrastructure enabling low-carbon road and public transport);
- green buildings (new, existing and renovated buildings that meet certain criteria, e.g. Class A Energy Performance Certificate (EPC), LEED/BREEAM high-level certification);
- environmentally sustainable management of living natural resources, land use and biodiversity (projects and activities aimed at the development and use of sustainable agricultural practices, conservation, preservation and/or restoration of nature and biodiversity and of natural habitats and ecosystems).

Note that at present the internal framework does not completely overlap with the criteria of the European Taxonomy on the Circular Economy and therefore loans granted with this framework are not considered "aligned" with the criteria of the taxonomy for the purpose of calculating the Green Asset Ratio.

Objectives for resource use and circular economy

The Intesa Sanpaolo Group has confirmed its commitment to the circular economy by promoting the dissemination of this model, also drawing on the support of the Ellen MacArthur Foundation, the main advocate of the transition to the circular economy and a Strategic Partner of the Group since 2015 as part of a multi-year collaboration. The transition to a circular economy is also pursued thanks to the contribution of the Intesa Sanpaolo Innovation Center (ISPIC), a Group company dedicated to frontier innovation and a centre of expertise in the circular economy, although no precise quantitative targets have been defined.
However, as detailed in the next section, the Group has shown a strong commitment to promoting circular economy practices, which are considered an integral part of its sustainability strategy.

Actions related to resource use and the circular economy

One of the main initiatives implemented by the Group with regard to the circular economy is the provision of an 8 billion euro credit facility for undertakings (for more details see the document “2022-2025 Business Plan” available on the Group's website), consistent with the green and circular criteria of the internal framework and widely used. This commitment has been renewed and increased from that of the “2018-2021 Business Plan”, underscoring the enduring and ongoing commitment to these issues.

Moreover, in order to help accelerate the transition to the circular economy paradigm, several initiatives continued and new projects were launched during the year, which can be grouped into four macro-areas: finance, innovation, corporate centre and advocacy, and research.

FINANCE

With a view to concretely supporting undertakings in the circular economy transition process, the Group offers customers of the Banca dei Territori, IMI Corporate & Investment Banking and International Banks Divisions (IBD) the opportunity to access financing dedicated to the circular economy and which may include specific incentives. This opportunity is aimed at both Italian and foreign undertakings that adopt circular solutions in innovative ways, granting them the best conditions for access to credit.

In general, support has been provided for numerous company projects for activities such as the replacement of critical and fossil fuel materials with recycled or organic materials, the reuse of urban organic waste for the production of biomethane and compost and the recovery of CO_2, the revamping of renewable energy plants with the extension of their lifetimes and the increase in their production capacity, and the recovery of industrial waste for its reuse in new product lines.

Furthermore, in 2024 the Group executed its second synthetic securitisation transaction in the area of ESG and Circular Economy with the aim of optimising the capital allocated to a portfolio of loans to undertakings with a high ESG Score and/or engaged in the circular economy. With a portfolio of around 2.5 billion euro, the transaction freed up additional resources to support a circular and sustainable economy, also thanks to the possibility of including new loans during its life.

In the area of sustainable bonds, in 2019 Intesa Sanpaolo was the first Italian bank to issue a Green Bond worth 750 million euro focused on the circular economy and intended to support the loans granted by the Bank as part of dedicated credit supply.

Finally, the Group's commitment to support the circular economy also continued within the Wealth Management Division. Eurizon Capital SGR has positioned itself as a leader in the circular transition, continuing to present its strategy both in Italy, in collaboration with the Group's Private Banking division, and abroad, where Eurizon organised an event in collaboration with the Italian Chamber of Commerce in Zurich. Eurizon promotes awareness of the circular economy in the investment world, also via the creation of digital training materials, which were updated in 2024.

INNOVATION

In addition to the financial sphere, the Group also implements its circular economy strategy through specialised support for initiatives and innovation projects that foster the transition of undertakings. A central role in this area is played by the Circular Economy Lab, a multi-stakeholder innovation initiative set up in 2018 in Milan thanks to the collaboration between Intesa Sanpaolo, ISPIC, Fondazione Cariplo and Cariplo Factory. The Circular Economy Lab offers non-financial services to foster innovation, with the aim of supporting and accompanying the transformation of the Italian economic system and disseminating new models of value creation in the collective interest, accelerating the transition to the circular economy. The activities of the Circular Economy Lab, which developed projects during the course of the year related to the circular economy that also dealt with issues of increasing the circularity of products and materials, fall into three lines:

- training, employing methods of disseminating the circular economy culture aimed at companies and the academic world, through dedicated workshops and lectures. In 2024, 18 lectures were delivered to both national and international universities or specialised courses;
- connection activities, through initiatives geared towards creating an open dialogue on the topic, involving an extensive national and international network of companies, institutions, universities, research centres and other partners. In this context, 18 Circular Economy dissemination events on sector-specific verticals were organised during 2024, six of them within the “ESG Workshops” of the Group's BdT Division;
- innovation activities, through innovative consulting services aimed at accelerating the transformation of SMEs and corporate entities towards circular business models. Specifically, seven projects were carried out in 2024 with Intesa Sanpaolo corporate customers.

CORPORATE CENTRE AND ADVOCACY

With the goal of contributing to the dissemination and consolidation of the circular economy, the Group continued its advocacy on the topic at the international and national levels in 2024.

Notable international initiatives included a collaboration with the United Nations Environment and Finance Programme (UNEP FI) to promote circular economy best practices in the global banking sector.

Specifically, in 2024 UNEP FI cited the Circular Economy Lab as a case study within its guidance document for banks called “Circular Economy as an Enabler for Responsible Banking: Leveraging the Nexus between Circularity and Sustainability Impact”, recognising the Group's commitment to supporting corporate customers in adopting circular business models.

Within the same document, the Green Bond was also mentioned as an example of sustainable bond products focused on the circular economy, recognising the significant results in terms of environmental impacts generated by this initiative, and more generally the Group's commitment to spreading the values of the circular economy.

The Group's activity in the task force coordinated by UNEP FI and called “Circular Economy as an enabler to operationalise the nexus between climate, nature, pollution and healthy & inclusive economies” continued in 2024. This task force aims to orient the Principles for Responsible Banking (PRB) towards the circular economy, recognising how the latter can be the strategic lever for the financial sector to achieve the objectives of decarbonisation, restoration of biodiversity, reduction of pollution and support for local economies. The publication of the first non-binding guidelines for banks, the drafting of which the Group actively contributed to, took place on 18 July 2024 through the two documents “Circular Economy as an Enabler for Responsible Banking: Leveraging the Nexus between Circularity and Sustainability Impact”, of a general nature, and “Circular Solutions to Achieve Climate Targets”, which also includes insights into the interconnections between the circular economy and climate change for the construction and textile sectors, as well as a cross-sectoral (sector-agnostic) introduction.

Again in the international sphere, thanks to the coordination of the Chief Institutional Affairs and External Communication Officer Governance Area, a new collaboration between Intesa Sanpaolo and ISPIC with the International Finance Corporation (IFC, World Bank Group) was also launched in 2024 to develop and disseminate new circular economy guidelines and practices in the international banking sector, with a particular focus on multilateral development banks. As a first concrete action, through ISPIC, the Bank organised a webinar dedicated to the topic entitled “Circular Finance: Practical Experience from Intesa Sanpaolo”, which was attended by about 50 people mainly from the IFC, as well as other multilateral banks.

Initiatives of national importance include the Group's participation through the Circular Economy Lab in the activities of the Italian Alliance for the Circular Economy, of which it is a promoter, the partnership with the Freight Leaders Council (FLC) and the renewal of sponsorship of the Water Value Community promoted by The European House Ambrosetti. Indeed, activities were organised in 2024 to strengthen the role and positioning of the Alliance for the Circular Economy, in addition to the scenario analysis aimed at identifying the prospects and potential of the circular economy. With the FLC, networking continued via dedicated events, one of which focused on the presentation of the activities that ISPIC can make available to members, in addition to having contributed to the drafting of the "Topical Notebook" published annually by FLC. Finally, with regard to the "Water Value Community", in the 2024/2025 edition it aims to expand the contribution of the various sectors of the extended water supply chain to the transition from a linear to a circular development model.

In an effort to promote the adoption of circular economy practices internally, the Group continued its experimentation on the application of innovative and circular asset management models in the ICT area. The fifth pilot project for the sale of decommissioned IT hardware by the Group was completed in 2024, with the goal of boosting the value of these assets from a circular perspective (e.g. reconditioning, reuse), of reducing the costs associated with storage in warehouses and contributing to the reduction of CO_2 emissions associated with the related disposal and decommissioning operations, in keeping with the objectives of Intesa Sanpaolo's "Own Emissions Plan". Specifically, the sale involved 600 notebooks, for a total of about 101 kg of CO_2 saved.

In order to promote and disseminate the circular economy paradigm, a number of initiatives continued during the year and new projects were launched, both inside and outside the company. For example, with regard to the International Banks Division, in 2024 four online sessions were organised for the relationship managers of the Group's international subsidiary banks, with the aim of supporting customers in their transitions towards a sustainable and circular economy, also through the sharing of best practices at the Group level. Moreover, during the year the Turin museum branch of Gallerie d'Italia promoted two cultural initiatives on the circular economy and addressed to the external public, which continued the photographic exhibition “Luca Locatelli: The Circle” in Milan, previously exhibited in Gallerie d'Italia - Turin from 21 September 2023 to 18 February 2024 and organised in collaboration with the Fondazione Cariplo and the Fondazione Compagnia di San Paolo, with the specialised support of EMF and ISPIC.

Finally, as part of the initiatives carried out through the Circular Economy Lab, in 2024 the collaboration with the Italian Circular Economy Stakeholder Platform (ICESP) continued for the dissemination of good circular economy practices. Lastly, the Circular Economy Lab is a technical partner of Tech4Planet, the National Technology Transfer Centre for Environmental Sustainability, an initiative promoted by Cassa Depositi e Prestiti and co-invested by Neva SGR among others, with the aim of identifying and accelerating research projects by facilitating the path to entrepreneurial initiatives.

RESEARCH

On the research front, the Group's collaboration with Bocconi University in the Circular Economy & Finance area continued in 2024, involving the university's independent research centre GREEN[93] in order to further expand the relationship between circular economy and sustainability, improve the metric for measuring the degree of circularity of undertakings (called Circularity Score - CS) and assess the opportunities offered to the financial sector by the circular transformation of economic sectors, starting for example from the theory of de-risking financial portfolios. Another activity in the research area was ISPIC's collaboration through the Circular Economy Lab with the Energy & Strategy Observatory of Milan Polytechnic for the development of the “Annual Report on the State of the Circular Economy in Italy”, which is also available on the Group's website for those wanting more information.

[93] Centre for Research on Geography, Resources, Environment, Energy & Networks

Reporting pursuant to the EU Taxonomy (Regulation (EU) 2020/852)

Introduced within the framework of the EU Action Plan on Financing Sustainable Growth, Regulation (EU) 2020/852 (the "Taxonomy Regulation") establishes that activities can be defined as "environmentally sustainable" if they contribute to at least one of the following environmental objectives, without significantly harming the other objectives, and are carried out in compliance with minimum safeguards[94]:

- climate change mitigation;
- climate change adaptation;
- sustainable use and protection of water and marine resources;
- transition to a circular economy;
- pollution prevention and control;
- protection and restoration of biodiversity and ecosystems.

Various delegated acts have been adopted under the regulation over the years. For each of the six environmental objectives, the acts identify the "Taxonomy eligible" economic activities that can potentially contribute to the objectives and set out the screening criteria to assess whether they are "Taxonomy-aligned" by making a substantial contribution to at least one of the objectives. Commission Delegated Regulations (EU) 2021/2178 and (EU) 2022/1214 set out the key performance indicators for measuring the Taxonomy performance of undertakings and the relative methodologies, approaches and disclosure obligations for non-financial undertakings, credit institutions, asset managers, insurance and reinsurance undertakings and investment firms.

In accordance with the regulatory framework in force and in light of the guidance provided by the European Commission[95], for the year ended 31 December 2024, Intesa Sanpaolo Group measured the following KPIs, presented in tabular form where required:

- Green Asset Ratio (GAR)[96];
- key performance indicator for financial guarantees (FinGuar KPI);
- key performance indicator for assets under management (AuM KPI);
- key performance indicator for asset managers.
- key performance indicators for insurance and reinsurance undertakings (Investment KPI and Underwriting KPI);
- disclosure about economic activities in the fossil gas and nuclear energy sectors;
- weighted average key performance indicator for the Group (Weighted Average KPI)[97];
- KPIs of subsidiaries exempted from reporting sustainability information;
- share of exposures to taxonomy-eligible and taxonomy-non-eligible economic activities with reference to the further four environmental objectives and the new economic activities introduced for the first two environmental objectives.

For more information on the presentation of the KPIs in tabular form, see Annex I – Taxonomy Template of this Consolidated Sustainability Statement.

[94] The minimum safeguards are procedures implemented by an undertaking that is carrying out an economic activity to ensure alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the International Labour Organisation's Declaration on Fundamental Principles and Rights at Work and the International Bill of Human Rights.

[95] In 2024, on the basis of the guidance set out in the Commission Notice of 8 November 2024 published in the OJEU and the additional set of guidance provided in the draft notice of 29 November 2024, the Group identified the best efforts needed to comply with the guidance, considering the time-frame and data available. It should be noted that the clarifications responding to FAQs contained in the draft notice are not binding.

[96] As required by FAQ No. 8 (Commission Notice of 8 November 2024), we report the KPIs of the subsidiaries that have made use of the exemption from reporting sustainability information contemplated in Article 7 of Legislative Decree 125/2024 and in the legislative acts of other countries implementing Directive (EU) 2022/2464 ("CSRD"): Privredna Banka Zagreb: 3.61% GAR Turnover-based stock; 3.64% GAR CapEx-based stock; 5.54% GAR Turnover-based flow; 6.30% GAR CapEx-based flow; Intesa Sanpaolo Bank (Slovenia): 1.87% Turnover-based stock; 1.93% CapEx-based stock; 5.51% GAR Turnover-based flow; 6.06% GAR CapEx-based flow; Fideuram-Intesa Sanpaolo Private Banking: 2.08% Turnover-based stock; 2.58% CapEx-based stock; 2.70% GAR Turnover-based flow; 3.39% GAR CapEx-based flow; CIB Bank: 0.97% Turnover-based stock; 2.56% CapEx-based stock; 2.00% GAR Turnover-based flow; 7.29% GAR CapEx-based flow.

[97] As envisaged by FAQ No. 7 (Commission Notice of 8 November 2024).

TEMPLATE 0: SUMMARY OF KPIs TO BE DISCLOSED BY CREDIT INSTITUTIONS UNDER ARTICLE 8 TAXONOMY REGULATION

		Total environmentally sustainable assets[98]	KPI (Turnover based)	KPI (CapEx based)	% coverage (over total assets)[99]	% of assets excluded from the numerator of the GAR (Article 7(2) and (3) and Section 1.1.2. of Annex V)[100]	% of assets excluded from the denominator of the GAR (Article 7(1) and Section 1.2.4 of Annex V)[101]
Main KPI	**Green asset ratio (GAR) stock**	20,516	3.63%	4.36%	73.80%	44.02%	26.20%

		Total environmentally sustainable assets	KPI (Turnover based)	KPI (CapEx based)	% coverage (over total assets)	% of assets excluded from the numerator of the GAR (Article 7(2) and (3) and Section 1.1.2. of Annex V)	% of assets excluded from the denominator of the GAR (Article 7(1) and Section 1.2.4 of Annex V)
Additional KPIs	GAR (flow)	5,859	8.11%	11.32%	9.43%	44.02%	26.20%
	Trading book[102]	-	-	-			
	Financial guarantees	161	2.72%	4.65%			
	Assets under management	4,417	1.97%	3.20%			
	Fees and commissions income[103]	-	-	-			

Intesa Sanpaolo Group's Turnover-based GAR stock of 3.63% consists of the following exposures:

- loans to households collateralised by residential immovable property that have been assessed as being Taxonomy-aligned for the environmental objective of climate change mitigation on the basis of compliance with the relevant technical screening requirements for buildings contained in Delegated Regulation (EU) 2021/2139 (2.41%)[104];
- Taxonomy-aligned exposures to financial and non-financial counterparties subject to NFRD/CSRD requirements (1.22%).

The KPI shows an increase compared to the year ended 31 December 2023 of approximately 37%, attributable primarily to loans to households collateralised by residential immovable property. Note that the alignment of exposures to financial counterparties has been included in the numerator of the GAR for the first time as of the current year.

The KPI for financial guarantees considered financial guarantees securing loans, advances and debt securities financing economic activities pursued by financial and non-financial undertakings. The KPI was largely in line with the figure for the year ended 31 December 2023.

[98] Amounts are stated in millions of euro.

[99] Percentage calculated as the ratio of KPI-covered assets to the Bank's total assets.

[100] Percentage calculated as the ratio of assets excluded from the numerator of the KPI (in particular: derivatives, exposures to undertakings that are not obliged to publish non-financial information pursuant to Article 19a or 29a of Directive 2013/34/EU, on-demand inter-bank loans, cash assets and equivalents, other asset classes and the trading book) to total covered assets. The % was found to be the same at flow level.

[101] Percentage calculated as the ratio of assets excluded from the denominator of the KPI (specifically: exposures to central governments and supranational issuers, exposures to central banks and the trading book) to the Bank's total assets. The % was found to be the same at flow level.

[102] The Trading Book KPI applies commencing as of 2025 (publication in 2026).

[103] The Fee & Commission KPI applies commencing as of 2025 (publication in 2026).

[104] The alignment checks also covered compliance with the DNSH criterion for the environmental objective of climate change adaptation (i.e. assessment of physical risk).

The KPI for assets under management considered investments at the consolidated level held by Eurizon Capital SGR,[105] Fideuram Intesa Sanpaolo Private Banking Asset Management SGR S.p.a[106]. and VUB[107], including any assets delegated to third parties for management and excluding assets managed under delegation on behalf of third-party financial undertakings[108]. This KPI should be judged considering that assets managed largely consist of exposures to derivatives and investments in European and non-European undertakings not subject to NFRD/CSRD requirements, which have been excluded from the numerator.

In general, with reference to the calculation of the key performance indicators reported:

- exposures to non-financial counterparties where "use of proceeds is not known" have been weighted according to Turnover and Capital Expenditure (CapEx) that is Taxonomy-eligible for all the environmental objectives and Taxonomy-aligned in relation to the first two environmental objectives, on the basis of the targets published by those counterparties in their non-financial statements (actual data)[109] and obtained by the Bank through a specialist infoprovider;
- exposures to financial counterparties where "use of proceeds is not known" have been weighted according to Turnover and Capital Expenditure (CapEx) that is Taxonomy-eligible and Taxonomy-aligned in relation to the first two environmental objectives, on the basis of the targets published by those counterparties in their non-financial statements (actual data)[110] and obtained by the Bank through a specialist infoprovider;
- exposures to financial and non-financial counterparties where "use of proceeds is known" have been considered to the extent that the assets financed are economic activities which are taxonomy-aligned with respect to the environmental objectives of climate change mitigation and climate change adaptation.

Finally, the Turnover-based and CapEx-based KPIs for the Group, showing the weighted average of the EU Taxonomy KPIs of the individual business segments in proportion to the revenues generated by each in the consolidated financial statements (with prevalence shown by the banking business segment, followed by the insurance business), were measured at 3.14% and 4.00% respectively. Compared to last year, the KPIs show an increase of +0.84% and +0.90% respectively, reflecting the higher EU Taxonomy KPIs of the individual business segments.

Taxonomy in the business and financial strategy and in product design

Through the 2022-2025 Business Plan, the Intesa Sanpaolo Group aims to continue to generate increasing and sustainable value, further strengthening its leading position in ESG issues with a world-class position in terms of social impact and a strong focus on climate.
The Group is specifically playing its part in fast-tracking the transition to a sustainable economy through its target of net-zero emissions by 2050 for the loan and investment portfolios, asset management and insurance business, confirming the commitment made by the Group in joining the relative initiatives sponsored by the United Nations (NZBA, NZAMI[111], NZAOA, e FIT). Specifically in relation to lending activities, intermediate targets have been set for all priority sectors (for more information see the Climate Report).

Intesa Sanpaolo Group appreciates that the Taxonomy was designed with a view to assigning the European banking system a crucial role in boosting the real economy to pursue the European Union's ambitious strategy for sustainable development and the transition towards a low-carbon economy (reduction in emissions by at least 55% by 2030 and carbon neutrality by 2050), increasing the level of transparency and comparability of markets. In this context, since 2022 the Group has been working on its "EU Taxonomy Green Enhancement" project to respond to the regulatory requirements of the EU Taxonomy, assess the level of regulatory alignment of its loans, and actively steer the loan portfolio, in particular for new disbursements, by identifying new business opportunities, also through new products, and reviewing the pricing incentive system.

Social information

ESRS S1 – Own Workforce

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS2 – General disclosures: Double materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
    - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
    - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within the scope of ESRS S1 – Own Workforce were identified taking into consideration the specific features of the Group. Specifically, such impacts, risks and opportunities were mapped on the basis of the framework in which the Group sets out and carries on its business activities and dealings (for instance, the 2022–2025 Business Plan and policies adopted in the various segments, etc.) and the governance measures in place to minimise the negative impacts connected with the topic in its own operations, along with an assessment of the risks tied to aspects of its own workforce to which the Group may be exposed.

For the purposes of the double materiality assessment, the Group considered all own workers (employees and contractors) in relation to which it generates actual or potential material impacts, risks and opportunities. Workers making up the Group's own workforce include employees engaged on permanent, temporary or apprenticeship contracts and contractors engaged on temping or project-based contracts.

For the purposes of impact materiality, the assessment of the impacts identified involved interviews with internal units and external stakeholders (such as interviews with trade union representatives and with worker safety representatives) and an in-depth qualitative and quantitative analysis based on the criteria envisaged by relevant legislation (namely, scale, scope, irremediable character of the impact and likelihood) within the perimeter of own operations.
The impact assessment was performed on the basis of drivers such as the identification and implementation by the Group of governance measures to ensure working conditions, equal treatment and opportunities for all and the privacy of workers (such as recruitment plans, talent development programmes, occupational health and safety measures, measures to promote diversity and inclusion).

The impact materiality outcomes found by the assessments identified positive material impacts in own operations. Specifically, the materiality of the impacts was connected with the effective contribution made by the Group to protecting its own workforce, through internal policies and company strategies in place. They relate to the matters contemplated by the standard in terms of working conditions (secure employment, working time, adequate wages, social dialogue, freedom of association, including the existence of work councils, information, consultation and participation rights of workers, collective bargaining, work-life balance and health and safety), equal treatment and opportunities for all (gender equality and equal pay for work of equal value, training and skills development, employment and inclusion of persons with disabilities, measures against violence and harassment in the workplace and diversity) and privacy.

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the perimeter of own operations. The process of mapping and assessing the risks and opportunities that have or may have financial effects considered the connections of the Group's impacts and dependencies with the risks and opportunities that may arise from those impacts and dependencies. For example, the positive impacts arising from the adoption of policies to guarantee adequate working conditions, such as secure employment and adequate wages, and equal treatment, such as gender equality and inclusion, flexible working arrangements and work-life balance, can contribute to the creation of opportunities to improve brand reputation, enhance stakeholder trust and attract new talent.

The risks assessed included operational risk and compliance risk arising from deficiencies in the setting and implementation of policies to protect workers' rights. This would also give rise to reputational risk.

The Group appreciates how the ever-greater complexity and dynamism of the context, together with the growing materiality of compliance risk, business continuity, reputational risk and the "emerging" risks connected to the Next Way of Working[112] programme and climate change, make it necessary to upgrade the health, safety and environment (HSE) risk assessment model to 4.0 standards. It is similarly important to raise awareness of the impacts of new digital technologies on work and workplaces and the challenges and opportunities they bring for occupational health and safety, with a view to raising the efficiency of governance measures in place and mitigation actions. In particular, to guarantee protection of health and safety in the workplace, the Group runs in-depth assessments on groups of similar workers, with different groups identified each time,

[112] The "Next Way of Working" programme promotes and fosters inclusive behaviours. Leveraging new technological tools, it supports people in the organised use, in a balanced and voluntary way, of a hybrid working mode, based on a mix of work in the office and at home, ensuring maximum flexibility in organising time and activities in individual work and teamwork.
"Emerging risks" mean personal, environmental and organisational vulnerabilities in terms of both new risks and those arising from the transformation of conventional risks, connected with the digital transformation of work practices.

who may be exposed to "work-related stress", especially in connection with the introduction of new models (such as new-concept branches, longer branch hours, digital bank branches, etc.). As such, the Group took into account the risks to which workers in its own workforce may be exposed.

The financial materiality assessment of the risks identified and analysed under the rationale described, involving engagement with internal units and stakeholders, found that they were not material in relation to the standard in question.

Finally, the financial materiality assessment of opportunities looked at the initiatives, governance measures, policies and processes in place or planned by the Group that could give rise to opportunities for attracting external talent and enhancing the Group's reputation and the trust of stakeholders with regard to the protection of workers' rights in the Group's own workforce.
The financial materiality assessment found material opportunities connected with:

- talent attraction, in relation to the topics of secure employment, work hours, work-life balance, training and skills development and diversity;
- improved brand reputation, in relation to the topics of secure employment, work hours and adequate wages;
- greater trust of stakeholders in the Group, in relation to the topics of social dialogue, freedom of association, including the existence of work councils, information, consultation and participation rights of workers, collective bargaining, work-life balance, health and safety, gender equality and equal pay for work of equal value, measures against violence and harassment in the workplace and diversity.

Characteristics of Group employees and breakdown

Below we report key information on the breakdown of the Group's own workforce.
The headcount shown is in line with the figures reported in the consolidated financial statements, limited to the companies scoped into this Statement and excluding contractors engaged on project-based and temping contracts (and not on employment contracts)[113]. The figure shows the headcount of all employees in service at the end of the reporting period.

At 31 December 2024, the Group headcount within the scope of the Consolidated Sustainability Statement amounted to 93,539 employees. The following table shows the breakdown of the total number of employees by gender.

Table 2 – Number of employees by gender

	2024
Female	50,725
Male	42,814
Other	-
Not reported	-
Total	**93,539**

The following table shows the breakdown of the total number of Intesa Sanpaolo Group employees at 31 December 2024 by gender (women and men) and contract type. As shown in the table, almost all Group employees are employed on a permanent basis.

Table 4 – Number of employees by gender and contract type

	2024				
	Female	**Male**	**Other**	**Not reported**	**TOTAL**
Permanent employees	49,225	41,692	-	-	90,917
Temporary employees	1,500	1,122	-	-	2,622
Non-guaranteed hours employees	-	-	-	-	-

In 2024, the total number of employees that left the Group amounted to 5,511, with a turnover rate for the period of 5.89%. The turnover rate was measured as the ratio of total employee terminations to total headcount at year end, where terminations included all employment contracts terminated for any reason during the year (voluntary resignations, dismissals, retirement, exit incentives, death, etc.).

Finally, we report that Italy is the only country where the Group's workforce is significant (meaning 50 or more employees making up at least 10% of the total), with a total of 71,174 employees, accounting for 76% of total headcount.

The Group's commitment to human rights

Intesa Sanpaolo Group strives to promote respect for human rights and foster a corporate culture based on respect for the person and individual dignity by safeguarding the rights of all employees, combating any direct or indirect form of forced or child labour and protecting the physical and moral integrity of all Group people, through management based on respect for the personality and professionalism of each individual, within a framework of loyalty and mutual trust. The protection of workers'

[113] The total headcount of 94,736 employees stated in the section "Key performance indicators and other indicators" in the Report on Operations refers to the total number of employees in service at the reporting date within the scope of the consolidated financial statements.

rights and human rights is guaranteed by compliance with the general principles set out in the Code of Ethics and with the Principles on Human Rights. Moreover, the Group has joined the UN Global Compact.

The Code of Ethics draws on leading national and international initiatives for the protection of human rights (such as the Universal Declaration of Human Rights proclaimed by the United Nations, the UN Covenant on Civil and Political Rights, the ILO Declaration on Fundamental Principles and Rights at Work and the OECD Guidelines for Multinational Enterprises), setting out the values of the Group in an effort to steer individual conduct towards them. All Group banks and companies have adopted the Code of Ethics in their governance systems to incorporate social and environmental considerations into processes, practices and decision-making, alongside the obligations of Legislative Decree 231/2001. The Code of Ethics is updated regularly to reflect changes in the Bank's operational framework, ensuring the full transparency and consistency that is fundamental for building a relationship of trust with stakeholders.

The cardinal principles of the Group, as set out in the Code of Ethics and with which all Group policies are aligned, are:
- listening and dialogue: the Group leverages listening and dialogue to continuously improve its relationships and build trust, by promoting internal communication and inclusion and developing tools for engagement and discussion between the various company entities. It also encourages management staff to listen to the needs of people and build on their suggestions for improving and growing together.
- transparency: the Group aims to continuously further a culture of transparency on which to build relationships between people. Transparency underpins all its actions, allowing people to make informed, aware and independent decisions;
- equity and inclusion: for the group, respect for individuality and the dignity of people is fundamental for creating an inclusive workplace committed to preventing all forms of discrimination in conduct and to respecting difference (in terms of gender, gender identity and/or expression, emotional and sexual orientation, marital and family status, age, ethnic origin, religious belief, political and trade union affiliation, socio-economic status, nationality, language, cultural background, physical and mental conditions or any other individual traits of a person, also in relation to the expression of opinion);
- respect for people: the Group strives to prevent any conduct that is harmful to human dignity, guaranteeing assistance and confidentiality, and to promote an inclusive workplace that is respectful of privacy, sustainable and conducive to achieving a work-life balance;
- protection of health and safety: the Group works to ensure the health and safety of its people and promote an experience of work that is respectful of their physical and mental health, by identifying and governing occupational health and safety risks and adopting preventive and protective measures, with residual risks managed through emergency and intervention plans for improving the well-being of people;
- appreciation and motivation: the Group recognises the strategic importance of the relational, intellectual, organisational and technical skills of every individual, and considers them fundamental in valuing and motivating people in relations;
- cohesion: the Group works to strengthen the spirit of belonging in people by spreading its values, sharing strategies and objectives, supporting leaders, creating ways of participating in success and promoting solidarity initiatives;
- management and staff remuneration policies: the Group's remuneration policies are based on the principles of equity, merit and the sustainability of outcomes.

To ensure its maximum reach, the Code of Ethics is published on both the institutional website of the Group and on the company Intranet. It has been produced to be accessible for the blind and visually impaired, following the accessibility rules certified by the LIA Foundation (for accessible Italian books). In addition, a copy of the Code of Ethics is given to every director, employee and contractor upon their appointment, employment or engagement.

Finally, to give concrete expression to the commitments and values set out in the Code of Ethics and to ensure the rights of every worker are respected, the Group applies Principles on Human Rights, as approved by the Board of Directors, which take up and develop the values set out in the Group Code of Ethics. Alongside the commitment to complying with relevant legislation in all the countries where it operates, the Principles on Human Rights are the Group's pledge to identifying, mitigating and, where possible, preventing potential adverse human rights impacts connected with its operations, s recommended by the UN Guiding Principles on Business and Human Rights. Specifically, the Principles on Human Rights protect freedom of association and the right to join trade unions and workers' councils and combat any form of child labour and forced labour. The document is provided to all employees and is published on the institutional website of the Group.

The Group has additionally adopted Diversity, Equity & Inclusion Principles to give concrete expression to its commitment to implementing policies promoting the inclusion of all forms of diversity both inside and outside the Group.
Finally, in keeping with its firm commitment to human rights, Intesa Sanpaolo Group issues an annual Modern Slavery Statement, disclosing the actions taken to combat any risk of modern slavery in its own operations and in the value chain. For more information, see the Intesa Sanpaolo Modern Slavery Statement on the institutional website of the Group.

Metrics on human rights in the own workforce

The following table presents a series of metrics for monitoring incidents and complaints concerning social matters and human rights in relation to Group employees. Specifically:
- "Total number of incidents of discrimination" shows the number of criminal litigations or labour law suits brought by employees against the group and internally-verified cases of non-compliance, all in relation, on a primary or secondary basis, to discrimination, including harassment;
- "Number of complaints filed through channels for employees" measures the number of reports filed by Group people through the relevant channels provided (such as the Code of Ethics inbox, the whistleblowing system and the channel for reporting sexual harassment) raising concerns on various issues connected with social matters, such as working conditions, equal treatment and the fundamental rights of workers;
- "Number of complaints filed with National Contact Points for OECD Multinational Enterprises" shows complaints sent to National Contact Points for OECD multinational enterprises related to the same matters addressed by the previous metric;

- "Total amount of fines, penalties and compensation for damages as a result of incidents and complaints" discloses the overall amount of fines, penalties and compensation imposed on the Group as a result of the incidents or complaints reported above;
- "Number of severe human rights incidents" shows the number of severe human rights incidents connected to the Group's workforce. The severity of the incidents is assessed on the basis of the scope, scale and irremediable character of the incident;
- "Number of severe human rights incidents constituting non-respect of the UN Guiding Principles on Business and Human Rights, ILO Declaration on Fundamental Principles and Rights at Work or OECD Guidelines for Multinational Enterprises" discloses how many of the severe human rights incidents reported breached the UN Guiding Principles on Business and Human Rights, ILO Declaration on Fundamental Principles and Rights at Work or OECD Guidelines for Multinational Enterprises;
- "Total amount of fines, penalties and compensation for damages as a result of human rights incidents" reports the overall amount of fines, penalties and compensation imposed on the Group for serious human rights incidents reported.

Table 18 – Human rights incidents and violations

	2024
Number of incidents of discrimination	9
Number of complaints filed through channels for own workers to raise concerns	39
Number of complaints filed to National Contact Points for OECD Multinational Enterprises	-
Amount of material fines, penalties, and compensation for damages as result of violations regarding social and human rights factors	43,742
Number of severe human rights issues and incidents connected to own workforce	-
Number of severe human rights issues and incidents connected to own workforce that are violations of UN Global Compact Principles and OECD Guidelines for Multinational Enterprises	-
Amount of material fines, penalties, and compensation for severe human rights issues and incidents connected to own workforce	-

Below we provide contextual information on the data presented in the foregoing table:
- the 9 incidents of discrimination included 6 verified cases of sexual harassment, reported through the channels provided, for which the Group consequently activated disciplinary measures, and 3 litigation cases over alleged discrimination;
- the 39 complaints filed by Group people through the channels provided, in Italy and abroad, primarily concerned the matter of work-life balance, potential cases of sexual harassment and improper or discriminatory conduct by other employees;
- the amount of 43,000 euro reported refers to an appeal ruling imposing compensation for damages on the Bank (challenged by the Bank in an appeal lodged with the Court of Cassation), in relation to a law suit brought in 2018[114].

Job protection and labour relations

Job protection and labour relations policies

Workers' rights in the Group are protected by the general principles of the Code of Ethics, the Principles on Human Rights, the Principles on Diversity, Equity and Inclusion and by the collective bargaining system, which operates fully on two distinct and complementary levels, the national level and the Group level.

The Group makes every effort to guarantee freedom of association in trade unions and workers' councils, adopt complementary protection measures and give all its people the chance to express their individuality and creativity in their jobs, valuing the diversity and bringing out the best in each of them, as a driving force for innovation and an essential contribution to the Group's growth.

In keeping with the commitments enshrined in the Code of Ethics, the people management model is based on collective bargaining agreements made at both the national level and enterprise level. Compliance with their provisions and with statutory rules is instrumental to improving the working environment, with a view to continued growth in the quality of relations between the Group and its personnel.

The tasks and powers delegated by law and industry regulations for enterprise-level bargaining are exercised by the Group Trade Union Delegation, in relation to: performance bonuses or the broad-based short-term plan, supplementary retirement schemes, healthcare, job positions and career development plans.
Engagement with trade unions is also pursued through a number of bilateral bodies. They include the Welfare, Safety and Sustainable Development Committee, which adequately represents both the company and the trade unions, to which technical experts are invited as required to provide specific expertise on matters addressed. The committee is tasked with finding solutions to improve the well-being of the Group's people and make a positive contribution to productivity with advanced and innovative responses in the area of pensions, welfare and services for families, education and an improved work-life balance.
The Consultation Committee is instead called to address work initiatives of general interest to the Group, in particular as concerns the application methods and interpretation of agreements in place, and, where necessary, receives reports on progress made on the business plan.

[114] The amount was fully expensed drawing on Provisions for Risks and Charges.

The protocol also provides for local level meetings on a more or less quarterly basis, providing additional opportunities for engagement with trade unions. Under the trade union agreement made on 23 October 2024, a new bilateral body was created, tasked with monitoring the impacts arising from technological innovation and the new digitalisation measures introduced by the Group, specifically as regards impacts on bank branches, with findings presented at the negotiating table with the Group.

The development of labour policies is managed by a specific unit in the Governance Area of the Chief People & Culture Officer, which is tasked with drawing up trade union agreements and monitoring their implementation. The Head of Relations with Workers' Representatives and Welfare is responsible at the operational level.

Remuneration policies

At the national level, Intesa Sanpaolo is a member of the Italian Banking Association and applies the National Collective Bargaining Agreement for the credit sector. The bank actively participated in the last renegotiation of the agreement, signed on 23 November 2023. For relevant delegated matters, direct employment relationships are also governed by enterprise-level collective bargaining.

The enterprise-level agreement addresses remuneration matters in relation to pay structure and pay levels for the employment grades envisaged under the national collective bargaining agreement. Enterprise-level bargaining also sets out specific provisions for career development paths and additional employee benefits, such as meal vouchers. The development of remuneration policies is tasked to the Governance Area of the Chief People & Culture Officer.

In relation to employees outside of Italy, the Group complies with collective bargaining agreements where they exist, or the provisions of local labour law. The Group undertakes to apply standard conditions across the countries where it operates, apart from improved conditions for top management.

In 2015, under collective bargaining provisions and specific trade union agreements, the Group and trade unions agreed to the introduction of a broad-based short-term plan (PVR), which incorporates a productivity bonus for the workforce as a whole into the incentive system designed to reward outstanding performance by awarding a growing bonus for the delivery of set objectives.

For all Group people, with the exception of Risk Takers and Middle Management, for whom specific incentive systems are envisaged, a trade union agreement was signed on 9 May 2024 for the payment of the 2024 PVR, both on a distributive-participative basis, to reward the collective contribution made toward year-end earnings and delivery of the targets set by the 2022–2025 Business Plan, and on an incentive basis, to reward team effort and performance.

The 2024 PVR is made up of two components:
- Base Bonus, awarded on the basis of the professional profile, consisting of a fixed amount for all employees and an additional quota for incomes up to 39,000 euro.
- Excellence Bonus, awarded on the basis of outstanding individual performance and team objectives, consisting of two quotas, one of which is reserved exclusively to network personnel involved in the sale of insurance products.

The amount of the Base Bonus awarded ranged from a minimum of 1,150 euro to a maximum of 2,950 euro, on top of which the Excellence Bonus will be paid.

As in other years, in 2024 employees absent for long periods of time were still able to participate in the PVR, with special attention paid to protecting employees away on parental leave.
In addition, confirming the importance that the issues of assistance and services for families and work-life balance have in the Group's policies, employees had the option of requesting that all or part of their PVR bonus be paid in the form of welfare services, taking advantage of the opportunities that the tax regulations in the area of workplace productivity remuneration offer employees year by year.
The application of collective bargaining agreements to Group employees ensures an adequate salary at national level, in line with the requirements of legislation. The 23 November 2023 agreement signed jointly by Intesa Sanpaolo, the Italian Banking Association and national trade union representatives provided for an average pay rise of 435 euro per month, applicable in tranches: 250 euro as from 1 July 2023, 100 euro as from 1 September 2024, 50 euro payable as from 1 June 2025, and 35 euro as from 1 March 2026.

In addition, in line with remuneration policies and the incentive systems of the Group, where a revision process is activated for the pay levels of personnel in positions covered by enterprise-level agreements, the guidelines applicable were set out. The guidelines highlight the need for comprehensive consistency in pay initiatives and for special focus to be placed on gender equality, outlining a priority scale that takes into consideration market benchmarks for the remuneration of positions covered and the performance of people. The approach respects the principle of "equal pay for equal work" and seeks to help make the Group an "employer of choice" able to attract, motivate and retain the best talent.

In particular, the Group ensures that its remuneration and incentive systems and all decisions concerning pay are based on merit and professional skills, regardless of the gender or other diversity of the person, and that they uphold the principles of equity. For more information on this topic, see the sections "Equal Pay Policies" and "Diversity, Equity and Inclusion". See also the Report on Remuneration Policy and Compensation Paid, published on the institutional website of the Group.

Metrics on collective bargaining coverage and social dialogue

As at 31 December 2024, a total 89% of Group employees were covered by applicable national collective bargaining agreements, with 100% of Italian employees covered. In countries where coverage by collective agreements is not envisaged, the Group handles labour relations with employees in compliance with the provisions of local labour law.
With reference to Italian operations, 76% of the workforce is covered by a trade union.

The following tables shows the coverage rate of employees covered by collective bargaining agreements and workers' representatives for countries where the Group's workforce is significant. As specified in the section "Characteristics of Group Employees and Breakdown", Italy is the only country where the Group's workforce is significant.

Table 8 – Coverage rate of employees that are covered by collective bargaining agreements and workers' representatives

Coverage Rate	Collective Bargaining Coverage		Social dialogue
	Employees – EEA	**Employees – Non-EEA**	**Workplace representation (EEA only)**
0-19%			
20-39%			
40-59%			
60-79%			Italy (76%)
80-100%	Italy (100%)		

Finally, we report that no agreements exist for the representation of employees by a European Works Council (EWC), a Societas Europaea (SE) Works Council or a Societas Cooperativa Europaea (SCE) Works Council.

Metrics on adequate wages

The Group is committed to guaranteeing an adequate wage for all its employees. In this regard, in each of the countries where the Group operates, all employees are paid an adequate minimum wage.
Here, "adequate minimum wage" means the minimum set by law at the national level or determined on the basis of collective bargaining agreements.[115]

Processes for engaging with own workers and their representatives

The labour relations model, adopted and developed by the Group together with trade unions, has always promoted dialogue between the parties on a continuous basis. The model is a way of identifying the most suitable solutions and tools for addressing and managing the various growth and reorganisation phases. As mentioned, trade union relations are organised and developed also through the work of bilateral company/trade union bodies, formed with the aim of analysing, identifying and proposing positive actions, solutions and tools in the areas of equal opportunities, welfare, safety and sustainable development. Operational responsibility for ensuring dialogue with workers' representatives is tasked to the Relations with Workers' Representative and Welfare unit in the Governance Area of the Chief People & Culture Officer.

Relations with trade unions are regulated within an industry framework and by the "Labour Relations Protocol", which has made it possible to implement a specific trade union relations model within the Group.
Meetings with trade union representatives are held at the Group Delegation level and/or through the Welfare, Safety and Sustainable Development Committee, generally on a weekly basis. The Consultation Committee is convened whenever the need arises for joint efforts to identify possible solutions to disputes and for meetings to discuss labour matters of general interest to the Group. The Joint Business Policy and Corporate Climate Committee generally meets on a quarterly basis. Meetings are also held on the local level, generally on a quarterly basis, as an additional opportunity to engage with workers' representatives.

Dialogue with trade unions regarding company projects is ongoing, prompt and aimed at identifying shared solutions to the various requirements that come to the attention of the Parties. This also takes place in accordance with trade union coverage in Italy, as disclosed above, which is in line with national coverage in the sector.
More than 30 agreements were made in 2024.

Remediation processes for employees and their representatives and reporting channels

The Group provides various company channels for reporting grievances, needs and concerns, such as the Code of Ethics inbox and the whistleblowing channel. The Code of Ethics inbox allows any breaches to be reported via e-mail, guaranteeing maximum confidentiality and protection from any form of retaliation, discrimination or penalisation. The whistleblowing channel allows any authorised user (employees, contractors, supplier, consultants, etc.) to report suspected infringements, both actual or potential, via the specific mechanisms activated 24/7. For further information on the Code of Ethics reporting channel and the whistleblowing procedure, see, respectively, the sections "Whistleblowing Policies, Objectives and Actions" and "Policies, Targets and Actions related to Corporate Culture" in the ESRS G1 – Business Conduct chapter.
Collective bargaining processes additionally envisage occasions for assessing any infringements and specific mechanisms that are activated in the event of a dispute. Where a breach is found to infringe the law, the process is no longer handled at the company level, but through national/international legal process. The "Labour Relations Protocol" similarly envisages bodies and processes to check application methods and the interpretation of agreements in place. One such body is the Consultation Committee, in which the Group and trade union representatives work together to identify possible solutions for disputes arising at the local level.

[115] For countries in the European Economic Area, reference is made to Directive (EU) 2022/2041 on adequate minimum wages; whereas for countries outside the European Economic Area, wage levels are set in accordance with international, national or subnational standards or with collective bargaining agreements, providing they guarantee dignified living standards.

The Joint Business Policy and Corporate Climate Committee adopts uniform criteria for assessing reports of business conduct in breach of the Group's values and the provisions of collective bargaining agreements concerning business policy. The objective is to guarantee constant monitoring and the formalisation of positive action proposals for preventing critical situations. Such reports can be made directly by Group people and/or trade unions to the dedicated inbox, with guarantees in place for the protection of personal data and the constant monitoring of reports, with a view to formulating positive action proposals for preventing critical situations.

Where necessary, agreements contemplate occasions for discussion and checks on their implementation in cases such as changes in company organisation, with specific and timely meetings held with the Group Delegation, Welfare, Safety and Sustainable Development Committee and/or the Consultation Committee.

Job protection targets and metrics

In line with 2022–2025 Business Plan targets, Intesa Sanpaolo aims to reallocate and reskill/upskill its people capacity towards new priority initiatives, focusing on the most strategic professional roles and skills for the Group.

Target: Reskilled/upskilled people (2022–2025) – Number of people acquiring new skills and reskilled for new profiles

	Date	Value
Baseline[116]	31.12.2021	-
Final balance	31.12.2024	6,902
Target	2025	8,000

With reference to the 2022–2025 Plan target, since the start of the plan a total of 6,902 people have been involved in upskilling and reskilling programmes. Organised by the Group, these programmes aim to improve skills and retrain workers and employees to enhance their contribution to strategic and high value-added activities in Group operations.

Actions related to job protection and labour relations

For Intesa Sanpaolo Group, job protection is a key element of the 2022–2025 Business Plan. Accordingly, with a view to fast-tracking generational changeover within the framework of technological transformation, with a resilient and sustainable business model for a scenario of digitalisation and artificial intelligence, on 23 October 2024 Intesa Sanpaolo sealed an agreement enabling the roll-out of service and business models designed to be simpler and more effective for customers, but also to free up time for professional development activities, involving a major upskilling/reskilling plan to tackle the need to spread new digital skills and cover new job roles.
The agreement envisages the cutback of the workforce by 4,000 employees by the end of 2027, exclusively on a voluntary basis for retirement or access to the industry solidarity fund. Concurrently, again under the trade union agreements in place, including the 23 October 2024 agreement, 4,600 new permanent hires are planned by 31 December 2025, plus another 3,500 permanent new hires by 30 June 2028, for the balanced management of the effects arising from the cutback and in order to support the Bank's growth.

In this framework, in 2024 approximately 1,550 employees left and an equivalent number of new hires joined the Bank. The Bank's employment policies also envisage mixed contracts for new hires, involving a working method whereby individuals are engaged on two contracts, one on a permanent part-time employment basis and one as a self-employed financial advisor for out-of-branch activities. At the end of 2024, 1,200 people were in service on such a contract.

In keeping with the strategy adopted and in view of the plan target to reallocate and reskill/upskill 8,000 people by 2025 for new priority initiatives, in 2024 more than 3,000 people (approx. 6,900 since the start of the plan in 2022) were involved in reskilling and upskilling plans primarily targeted at business development (such as Digital Branch), controlling functions (Enabling Integrated anti Financial Crime – ENIF/Know your customer – KYC), technological projects (Application Digitalisation, Data & Analytics) and training on data, AI and technology (MATRIX project).[117]

From a geographical point of view, the people involved in the various programmes are located throughout the entire country, leveraging a "delocalisation" concept implemented on an increasingly wider basis, also thanks to the growing reach of new working methods as part of the "Next Way of Working" project.

In the Governance Area of the Chief People & Culture Officer, the Group Internal Mobility & Reskilling Center oversaw mobility tools and processes in 2024, assessing the availability of internal people and their relative skill sets, on the basis of needs identified and ensuring the adequate staffing of new areas.

Since the start of the Business Plan in 2022, activities have been monitored and reported on a quarterly basis, with a view to delivering all the plan's targets by its conclusion in 2025. People involved in change programmes are sent regular anonymous surveys to check their level of satisfaction, motivation and engagement in the activities of their new jobs. To date, the feedback shows high levels in all the areas.

[116] Plan target that represents the planning of a new activity that does not have a base value.

[117] For more information on the project, see the section Actions Related to Training and Employee Development.

Diversity, equity and inclusion

Diversity, equity and inclusion policies

The Group has adopted Principles on Diversity, Equity & Inclusion ("DE&I Principles") to give concrete force to its commitment to promoting and spreading, both internally and externally, an inclusive policy that values all forms of diversity. Intesa Sanpaolo Group's DE&I Principles lay out the framework of its inclusive approach to all forms of diversity, based on respect for all individuals, the enhancement of talent, meritocracy and equal opportunity. It also sets out concrete commitments for the promotion of an inclusive environment and identifies the conduct expected of all Group people. A specific section is dedicated to commitments on gender equity, aimed at guaranteeing fair opportunities in hiring processes, promotion to senior roles, appointments to management positions and in the succession plan for top management roles. The policy stresses the principle of zero tolerance of any form of discrimination and envisages a specific channel for reporting breaches. The regular monitoring of the commitments undertaken by the Group is tasked to the DE&I Control Room.

The DE&I Principles aim to build a pluralistic and respectful workplace where all forms of diversity are protected, be it in terms of gender, gender identity and/or expression, emotional and sexual orientation, marital and family status, age, ethnic origin, religious belief, political and trade union affiliation, socio-economic status, nationality, language, cultural background, physical and mental conditions or any other individual traits of a person, also in relation to the expression of opinion. This objective is pursued as an ethical duty towards all Group people and towards all stakeholders. At the same time, it is a priority for business and sustainability, as bringing together diverse ideas and skills promotes innovative solutions and more effective decision-making. It also enhances the reputation of the corporate brand, improving the ability to retain, motivate and attract the best talent. Finally, it maximises value creation for stakeholders, building on the improvement suggestions from certifying bodies, international benchmarks and stakeholders in general, contributing to the identification of best practices for inclusion.

In relation to the commitment to guaranteeing gender equity, the following principles are taken into consideration:
- gender balance in annual hires;
- gender balance, on an annual basis, in the pool of candidates for first appointment to managerial positions;
- gender balance in the pool of candidates for senior management positions in the annual total;
- at least one candidate of the less-represented gender for each position in the pool of candidates for top management positions (chief and executive directors).

Specific commitments and affirmative actions are also envisaged to promote inclusion, such as:
- promoting the accessibility of premises, communication, information and training, including the availability of equipment/applications and considering any conditions of disability;
- guarantees in company regulations affording the same benefits for people in same-sex relationships and in mixed-sex relationships;
- fostering the value of inclusion through training, awareness-raising and the use of inclusive language;
- creating of an inclusive workplace based on trust, respect and the valuing of cultural and personal diversity;
- combating any form of discrimination or harassment;
- promoting inclusion in the local areas and socioeconomic contexts in which the company operates.

The DE&I Principles apply to all Group people in their dealings with internal and external stakeholders and to the members of the management and control corporate bodies. In relation to people working with the Group as contractors and not as employees (such as agents, freelance financial advisors, suppliers and subcontractors), they are required to respect the values and principles set out by acknowledging a specific policy statement addressed to them. The Group also strives to support and promote the adoption of the values and principles of diversity, equity and inclusion by customers – in particular Business & Corporate customers – within the framework of their ESG policies.
Finally, in line with the DE&I Principles, the Group is committed to stepping up engagement with stakeholders representing specific interests (such as employee resource groups – ERGs) and that present improvement proposals, with a view to openness and constructive dialogue, including the planning and roll-out of joint actions.

The DE&I Principles were reviewed and updated in 2024, with the new version approved by the Board of Directors. The amendments concerned the inclusion of reporting on pay gap matters to the Board of Directors and the analysis of the gender coverage of merit-based initiatives.
The Chief People & Culture Officer is tasked with identifying objectives and the relative strategy for achieving them and with ensuring that the effort of all Group units is adequate and consistent with the terms of the DE&I Principles. The officer also reports annually to the Board of Directors of the Parent Company and to the Risks and Sustainability Committee on outcomes delivered.

The "Rules for Combating Sexual Harassment" outline the Group's firm commitment to preventing and combating any form of sexual harassment and ensuring full respect and maximum protection for the dignity of the individual. Under the rules, zero tolerance is shown of harassment of any kind. The objective is to create the conditions for episodes of sexual harassment to be reported, ensuring an effective and strict process for managing reports that guarantees maximum rigour and maximum protection of confidentiality for the people involved.
The rules apply to: all employees of Intesa Sanpaolo Group in carrying on their duties both inside and outside the group; agents and freelance financial advisors/contractors in carrying out their duties with internal and external people; temping staff; people on internship/work experience programmes; and business partners of the Group in their contact with the Group for any reason.

The rules similarly apply during social events, business travel, training and occasions outside normal working hours but connected with work activities, as well as outside the workplace in cases where the sexual harassment offender and the victim both belong to the categories covered by the rules. Under the rules, the process for managing reports is guaranteed by the head of the Diversity, Equity & Inclusion unit.

All Group banks and companies are required to adopt the rules, adapting them as necessary to their own contexts with the approval of the Parent Company's Diversity, Equity & Inclusion unit. Where the rules are more restrictive than local law, Intesa Sanpaolo nevertheless requires their application, regardless of whether conduct is prohibited or not by local law.

For more information, see the DE&I Principles and the Rules for Combating Sexual Harassment, published on the institutional website of the Group.

Finally, in relation to matters concerning disability and chronic disease, an inter-functional working group is in place in Italy, set up under the inclusion agreement made in August 2018 and in line with the Principles on Diversity, Equity and Inclusion adopted subsequently in October 2020.
Working in synergy with the Diversity, Equity and Inclusion unit, the inter-functional working group meets on a regular basis with the trade unions through the Welfare, Safety and Sustainable Development Committee to identify the initiatives to be undertaken.
Overall, the policy is coordinated by the Workers' Benefits office, and involves the active participation of around 80 people, representing many of the organisational units.
The objective is to unite different professionals in supporting and promoting the contribution of all Group people and foster a climate conducive to well-being and support in company life, while expanding the welfare options available.

Metrics on diversity by gender and age

The table below shows the age distribution of the own workforce by number and percentage of total Group employees at 31 December 2024.

Table 10 – Number and percentage of employees by age group

Number and percentage of employees	2024
Under 30 years old	6,339
Between 30 and 50 years old	45,024
Over 50 years old	42,176
% under 30 years old	6.8%
% between 30 and 50 years old	48.1%
% overo 50 years old	45.1%

In terms of the gender distribution of employees at top management (executive) level at 31 December 2024, of the total number of 26 employees, 76.9% were male and 23.1% were female. The following table specifically shows the gender distribution of employees in top management positions, by number and percentage of total employees at 31 December 2024.

For this purpose, top management includes the Managing Director and CEO of Intesa Sanpaolo and direct reports, the Chief Audit Officer, the Deputy Heads of the Divisions and Governance Areas (at the reporting date, the Deputy Head of the IMI Corporate & Investment Banking Division and the Deputy Chief Financial Officer), and the manager responsible for preparing the company's financial reports.

Table 11 – Number and percentage of employees by gender at top management level

Number of employees top management level	2024
Female	6
% of total at top management level	23.1%
Male	20
% of total at top management level	76.9%
Other gender	-
% of total at top management level	-
No data	-
% of total at top management level	-
Total	26

The 2022–2025 Business Plan requires new appointments to senior positions – including both top management and first and second-level reports to the CEO – show a gender balance (approx. 50% men and 50% women) so as to meet the target of women holding around 30% of senior leadership positions by 2025. Considering the organisational structure in place at 31 December 2024, senior positions (including first and second-level reports to the CEO) showed a gender distribution of 71.7% men and 28.3% women.

Equal pay policies

Intesa Sanpaolo Group adopts gender-neutral remuneration and incentive policies, which contribute in the pursuit of equality for all employees. The policies ensure that Group people are paid equal remuneration for work of equal value, also in terms of the conditions for its awarding and payment.

Specifically, the Group guarantees that its remuneration and incentive systems and all decisions concerning pay are gender neutral (and neutral with respect to all forms of diversity, such as emotional and sexual orientation, marital and family status, age, ethnic origin, religious belief, political and trade union affiliation, socio-economic status, nationality, language, cultural background, physical and mental conditions or any other individual traits of a person, also in relation to the expression of opinion) and based on merit, professional skills and the principles of equity.

To enable the application of gender-neutral policies and assess their effectiveness, the Group adopts:

- systems for measuring organisational positions, taking into account the responsibilities and complexity handled by the different roles. Specifically for the management cluster, the Group has adopted a Global Banding System based on the uniform grouping of managerial positions that are similar by levels of complexity/responsibility managed, measured using the International Position Evaluation (IPE) methodology. The professional cluster is instead segmented by career title attributed on the basis of specific criteria (seniority, autonomy and complexity, as well as skills, economics, impact and exposure), so as to give a granular reflection of the level of professional contribution provided in one's work and the progressive specialisation of skills, or by professional group, also considering the system of roles set out in enterprise-level collective bargaining agreements;
- for the management cluster, market benchmarks are associated to each Global Band and differentiated by professional category and geographical area. For professional positions, career titles are associated to market trends differentiated by professional category and geographical area;
- incentive systems tied to objective parameters that allow merit and performance to be rewarded.

The Board of Directors of Intesa Sanpaolo, with the support of the Remuneration Committee, assesses the gender-neutrality of policies on an annual basis and measures the gender pay gap, and its change over time, using an internal methodology set in accordance with industry regulations. For the purpose, the gender pay gap has so far been measured for positions of equal value and on a country by country basis distinctly for: (i) Risk Takers, excluding members of the Board of Directors; (ii) members of the Board of Directors considering its management function; (iii) members of the Board of Directors considering its supervisory function; and (iv) all remaining personnel. The reasons for any pay gaps found are duly documented and, where necessary, corrective action is taken.

Group remuneration and incentive policies are submitted annually to the binding vote of the shareholders' meeting, by proposal of the Board of Directors. For additional information on this topic, see the Report on Remuneration Policy and Compensation Paid, available on the institutional website of the Group.

Metrics on equal pay

The value stated below shows the gender pay gap between male and female employees, expressed as the percentage gap in average pay levels between female and male employees, as required by the ESRS standards applied for the purposes of this Statement.

In 2024, the pay gap amounted to 25.8%.

The pay gap was measured on the basis of the average gross hourly pay level of Group employees, calculated considering all supplementary and variable components of the salary package, including wages and other compensation paid in cash or as benefits to employees for their work on an annualised basis, without considering their different duties, organisational role or seniority level.

Variable components tied to long-term incentive systems were recognised on an accrual basis.

The measure covers all employees in service at the companies scoped into the Consolidated Sustainability Statement at 31 December 2024, with the exception of the companies Risanamento S.p.A. and Banca Intesa Russia.

Amounts stated in different currencies were converted into euro at the average exchange rate for the year.

The total remuneration rate of the Group for 2024 was 135.2. The rate is measured as the ratio of total annual remuneration of the highest-paid individual to the median annual total remuneration for all employees, excluding the highest-paid individual. The highest-paid individual was the CEO of Intesa Sanpaolo Group, whose remuneration includes both a fixed component and variable components. The median was calculated using the same criteria and covering the same scope described for the gender pay gap metric.

For both metrics disclosed in this section, no corrective factors were applied to remuneration paid to take into account the cost of living in the country of reference.

Processes for engaging with own workers and their representatives

The engagement process with the own workforce is carried on under the responsibility of the head of Diversity, Equity & Inclusion. Such engagement involves: (i) trade union representatives; (ii) constant dialogue with communities (employee resource groups or affinity groups); and (iii) surveys and listening initiatives, also at the individual level.

For DE&I initiatives, people are engaged individually (through surveys and listening initiatives), through trade union representatives, and through ERG communities (employee resource groups or affinity groups).

Surveys are conducted on a biennial basis through questions added to the Climate Analysis and other surveys, with no set frequency, on topics specifically linked to DE&I issues. In 2024, a questionnaire was administered to survey "Stereotypes, harassment and gender violence – What do you think?". Additional one-time listening initiatives are promoted with the company

population, such as specific post-event surveys. Other questionnaires instead survey people belonging to a specific area or division on relevant topics or areas of action, to steer targeted projects. Group people can instead request contact or send in suggestions by e-mail to the DE&I unit. Trade union representatives are engaged in advance of the roll-out of initiatives and, where relevant, after their close to report on outcomes. The DE&I unit is at the disposal of ERG communities to listen to their concerns and, when matters of specific interest to a community are addressed, engagement is arranged before any initiative is pursued.
Inclusion is a material topic of priority for the Group also in the framework of trade union negotiations, with an Inclusion & Equal Opportunity Framework Protocol made in 2014 that was the basis for a specific agreement and which is incorporated into Group's enterprise-level collective bargaining agreement. As regards sexual orientation and gender identity, specific company policies were introduced back in 2014 to define the framework for the extension of company benefits to same-sex unions. Alongside the promotion of the specific inter-functional working group for issues connected to disability and disease, the Inclusion Agreement envisaged the roll-out of experimental projects, with the support of the Welfare, Safety and Sustainable Development Committee, aimed at promoting the employability of people with autistic spectrum disorders. These projects are partly funded by the Arrotonda Solidale ("Round-down Solidarity") initiative, which involves the contribution, on a voluntary basis among all the Group's people, of the residual amount collected from rounding down net monthly salaries to the nearest euro. In turn, the Company contributes the remaining cents to make a total of one euro for each Group person taking part in the initiative.

Engagement with trade union representatives is organised with no set frequency. The representatives are engaged on matters within the scope of collective bargaining agreements, but also on matters not covered by contract.
The various engagement initiatives with the own workforce provide the input for reports on the response and appreciation rates of specific initiatives, projects or events. The aggregate outcomes are anonymous and contribute to steering future initiatives. Where trade union representatives have been engaged, outcomes are reported after the close of the initiative. Where ERG communities have been engaged, a meeting is held directly with the people making up the community.

ERG communities are bodies that by their nature represent the interests and perspectives of affinity groups. Examples include ISPROUD, the Intesa Sanpaolo LGBTQ+ and Allies community, and "ARTICOLO19 – Disability & Citizenship", a community formed with the objective of developing content and ideas to improve the lives of people with disabilities and their families, with the prospect of providing an additional contribution to disability and inclusion issues. Diversity and inclusion are promoted through internal and external communication channels, with information provided on the company Intranet for accessing available services and opportunities.

Remediation processes for employees and their representatives and reporting channels

Two types of channels (the Code of Ethics inbox and the Whistleblowing system) are available to Group people to report needs/concerns/alleged breaches of their rights, facilitating the Group in remedying the negative impacts they may suffer. For further information on the Code of Ethics reporting channel and the whistleblowing procedure, see, respectively, the sections "Whistleblowing Policies, Objectives and Actions" and "Policies, Targets and Actions Related to Corporate Culture" in the ESRS G1 – Business Conduct chapter.

In addition, the DE&I unit provides an inbox to which people can write to express their needs or concerns on matters of competence. The inbox is monitored by a member of the office and replies are given to all requests or messages received, also with the involvement of any other competent functions in relation to the matter raised. Reports are followed-up as envisaged for each specific channel. In addition, the "Rules for Combating Sexual Harassment" provide for a specific reporting channel for the matter, setting out the roles of all the organisational units involved.
Working tables to address reports of sexual harassment are activated by the DE&I unit, in its capacity as guarantor of the process. Working tables bring together various functions, which work together to guarantee that reports of sexual harassment are handled appropriately, confidentially and in accordance with company policies, ensuring victims receive all the support they need and that corrective measures are adopted. The areas and professional profiles involved include:
- Diversity, Equity & Inclusion;
- Human Resources Management;
- Audit;
- Chief Equity, Legal & M&A Officer Governance Area;
- Health & Safety.

Reports are duly investigated and, where sexual harassment or any breach of other Bank regulations is found, the resulting disciplinary action is decided by the competent Labour Proceedings function. Additional remedies, such as to protect the victim, for instance, may be adopted on the basis of the specific situation. A psychological counselling and legal advisory service is always available to people involved in a sexual harassment case, even where the harassment took place outside the workplace (in the private sphere, for instance). For further information of a quantitative nature on such cases, see the section "Metrics on Human Rights in the Own Workforce".
These reporting channels are guaranteed by the Bank through its specific DE&I polices and Rules for Combating Sexual Harassment, which each envisage specific reporting channels (such as the "segnalazioni_molestie@intesasanpaolo.com" inbox for reporting sexual harassment). Mandatory training on the topic of sexual harassment is delivered every year to raise awareness in people of the meaning of harassment and its consequences. The relative reporting channel is indicated during the course.

Information on the number of times a working table is activated during the year for the management of sexual harassment reports and on the outcomes of the relative investigations are recorded in a special register. Under the Rules for Combating Sexual Harassment, the effectiveness of the reporting channel is ensured via the constant monitoring of the e-mail inbox and by confirmation of receipt of reports, which is communicated to the person making the report within one working day from receipt.

The rules are published on the company Intranet and all Group people, in accordance with the Group's Internal Code of Conduct, are required to acknowledge them, contacting the competent units if they have any doubts as to their interpretation. The matter of reporting sexual harassment was the topic of a specific survey in 2024, which looked at various aspects, including trust in the channel used.
The questionnaires reiterated the commitment to respecting and protecting the victim and/or person making the report; in fact, both for reports concerning breaches of the Principles on Diversity, Equity and Inclusion and reports of sexual harassment, measures are in place to protect people from any retaliatory action.

In relation to disability-related matters, Group people can turn for help to their Human Resources Management office, specifically tasked with disability management. A dedicated inbox is provided for the purpose (disability.management@intesasanpaolo.com), with a specific section on the Intranet. Disability issues are regularly discussed with trade unions within the framework of the Welfare, Safety and Sustainable Development Committee.

The work of the inter-functional working group in practice involves the management of individual reports, as well as a range of other activities, such as the governance of IT accessibility matters, the delivery of dedicated training to all Human Resources Management offices, managers in charge of people with sensory disabilities and top management, and awareness-raising initiatives engaging all Group people.

Diversity, equity and inclusion targets

The 2022–2025 Business Plan requires a gender balance (approx. 50% male and 50% female) in new appointments to senior management positions (first and second-level reports to the CEO). The progressive delivery of that target is monitored by the DE&I Control Room on a quarterly basis. The setting and monitoring of the target and measurement of progress does not involve engagement with the workforce or trade union representatives.
Appointments are considered "to senior positions" when they:

- open "access" to first or second-level reporting positions to people in lower levels of the organisational ladder or who are external to the Group;
- promote people from second-level to first-level positions reporting to the Managing Director and CEO.

Where a person is appointed to more than one senior position, each appointment is considered separately. For the purposes of the target set, "horizontal appointments", which do not involve a step up in the organisational ladder, are not considered, both where a person changes role and where a person is assigned a new role in addition to their existing area of responsibility. In the case of transition periods, where a person temporarily steps down from a senior position (first or second-level report) but will later return to their level (for example, pending the creation of new positions that have been planned), such appointments are not considered if the person "steps back up" the same level previously held. In practice, such appointments are treated as being equivalent to "horizontal appointments" and the step down/step up of the person to a senior position is considered purely a temporary measure for the creation or preparation of the new organisational role. Appointments that instead lead a person to step up the organisational ladder to a higher position than the previously held are considered. Only the organisational levels effectively included in the organisational chart are considered.

On the basis of the organisational structure in place as at 31 December 2024, we report that over the period 2022–2024, 25 appointments were male (50%) and 25 appointments were female (50%).

Diversity, equity and inclusion actions

DE&I actions and initiatives cover all Group people, with each initiative targeted at specific clusters. Some initiatives are also run outside the Group, reaching out to groups such high school pupils and university students. While some actions are stand-alone events (such as awareness-raising or training sessions), others are organised on a repeat basis to cover the entire cluster targeted, lasting several months or more than one year.

During 2024, the Diversity & Inclusion (D&I) unit, reporting directly to the Chief People & Culture Officer, continued its work promoting an inclusive work environment, capable of welcoming and giving value to all forms of diversity. The Group's inclusion strategy forms the groundwork for effectively governing the coordination of initiatives and is backed by the ongoing measurement and assessment of outcomes delivered. The DE&I Working Group, made up of representatives from each division, governance area and other key units involved in the planning and roll-out of initiatives, continued its alignment, coordination and discussion work, enabling continuous exchange between the DE&I unit and all Group entities.
The Diversity, Equity & Inclusion Control Room worked throughout the year on its task of continuously monitoring compliance with the commitments set out in the Diversity, Equity & Inclusion Principles, specifically in relation to gender equity.
The DE&I Control Room has been renamed the Diversity, Equity & Inclusion table and its participating functions and responsibilities updated.

One project carried on over the course of the year was "Words of Respect", focused on promoting inclusive communication. The project builds on cooperation between the Diversity, Equity & Inclusion unit and Internal Communications units, with the support of an inter-functional working group. The main objective of the project is to draw up an internal document suggesting good practices to adopt, to help Group people be more inclusive and accessible in their language. The project also involves awareness-raising initiatives and training, targeted at all Group people on the importance of using language that respects all forms of diversity.

Intesa Sanpaolo's very first "Inclusion Week" was held in May to promote thinking and raise awareness of the value of diversity. The five days of the initiative each covered a different macro-theme, with ten on-line events featuring Group people and external guests as speakers.

To promote female talent and encourage the creation of fair and inclusive working environments, initiatives for the development of female professionals and managers continued, including initiatives aimed at the empowerment and growth of women included in development plans, which involve job rotation programmes, shadowing, training and empowerment.
A new programme was started up, entitled “The Art of Leadership | Mastering the Future”, to spread a leadership mindset able to rise to the technological, economic and social challenges shaping the context of continuous change in which the Group operates, with the aim of generating “virtuous” connections that can grow over the years. The initiative targeted the management cluster and around 750 professionals (Masters) from all the different corporate areas.
The group coaching programme continued for women taking up a role of responsibility for the first time, with a view to improving inclusive leadership skills.
The programme for the Group's long-term absentees also continued its activity, involving more than 500 long-term absentees in a voluntary orientation programme, with the aim of establishing a close relationship with the employees during their absence and promoting their successful return to work.
Parenting support initiatives in place targeted both mums and dads. Alongside training to promote awareness of the value of being a working parent, an awareness-raising campaign continued to reach out to dads in the various Group areas and engage them in a rethink of the gender stereotypes tied to parenting.

On the topic of sexual orientation and gender identity, Intesa Sanpaolo continued its partnership with Parks – Liberi e Uguali, running joint communication and awareness-raising campaigns to encourage the full inclusion of LGBTQ+ people.
Efforts continued to ensure support, within the Group, to people desiring assistance in the workplace during their gender affirmation process.

The year witnessed the continuing growth of ISPROUD, the ERG community (employee resource group or affinity group) of LGBTQ+ people and allies, established spontaneously in 2021. In 2024, the community grew to more than 1,742 members in Italy and abroad, who meet periodically to discuss and share ideas and experiences to be translated into tangible project ideas to propose to the company. ISPROUD worked with the Diversity, Equity & Inclusion unit and with the rest of the Group on a number of initiatives, providing its contribution for the planning of internal and external contents, the organisation of events and the launch of new projects.

Intesa Sanpaolo Group was the best-ranking bank in the world on the international FTSE Diversity and Inclusion Index—Top 100 (by FTSE Russell, formerly Refinitiv), which ranks the top 100 companies with the most diverse and inclusive workplaces. Ranked seventh worldwide, the Group was the top-ranking banking group globally and the only Italian bank to be ranked.
Compiled by FTSE Russel, the index ranks over 15,500 publicly-traded companies globally on the basis of 24 separate metrics across four key pillars: gender diversity, inclusion, people development and news & controversies. FTSE Russel is a leading global provider of benchmarks, analytics and data solutions with multi-asset capabilities.

Intesa Sanpaolo is the first bank in Italy, and one of the first in Europe, to have obtained Gender Equality European & International Standard (GEEIS-Diversity) certification. The international GEEIS-Diversity label by Arborus measures and assesses the effort invested by companies in diversity and inclusion as strategic elements of an organisation. Intesa Sanpaolo is the first major Italian banking group to have obtained the gender equality certification envisaged by the national recovery and resilience plan (NRRP), thanks to its efforts to promote diversity and inclusion. In 2024, the second follow-up audit was carried out. The audit specifically assessed the implementation of a gender equality management system in Group companies in Italy.

The value of inclusion was the subject of various training contents designed and proposed during the year, which were customised and aimed at different Group populations. In 2024, inter-cultural training initiatives were started up, focused specifically on the effectiveness and importance of inclusive and respectful communication between cultures.
After having reached all people in manager roles in Italy, the managerial discussion initiative on inclusive leadership topics was extended to all Group people in manager roles outside of Italy. People covering roles of responsibility were involved in a training course focused on building an inclusive leadership mindset, with sessions dedicated to the issue of disability and mental health (more than 6,500 people involved). A pilot version of the initiative is set to be run with a group of people representing banks in the International Banks Division, to assess the opportunity of involving all people covering roles of responsibility, adapting the course to the specific features of the local context. A dialogue has been started up with banks in the International Banks Division on DE&I matters, focusing in particular on disability, with a view to creating a common approach to projects.

Again in relation to the International Banks Division, the “women4Future” initiative continued to run within the framework of the “People First” programme. The initiative involves a committee of women in top management roles in the division, united by the objective of working together and sharing their perspectives in a dedicated framework, to help guide innovation and bring positive change to the division.

Finally, in 2024 the Group rolled out a series of training initiatives to foster inter-generational dialogue and promote constructive cooperation between people of different ages in work teams.

Actions for the inclusion of people with disabilities

The inter-functional working group handles and assesses with maximum care individual requests made for arrangement measures. The process involves identifying, and adopting when necessary, the adjustments and arrangements needed to guarantee that people with disabilities enjoy and exercise all their human rights and fundamental freedoms on par with others. The inter-functional working group works on projects in a number of areas, including accessibility, communication, development of an inclusive culture, training and joint projects directly involving Intesa Sanpaolo people.

Together with trade union representatives, all the members of the group took part in the advanced training course “Disability Managers and the Working World”, organised by the Catholic University of the Sacred Heart in Milan to lay the groundwork for adopting a common language, an important work tool.

In 2024, “ARTICOLO 19 – Disability & Citizenship” affirmed its identity as an affinity group championing disability issues. What started out as a small group of people has progressively grown, with the objective of developing ideas and content to improve the lives of people with disabilities and their families, with the prospect of providing an additional contribution to disability and inclusion issues.

In this field, at the initiative of the philanthropic Intesa Sanpaolo Foundation, a non-profit mutual society has been set up with the mission of pursuing initiatives to benefit the disabled children reliant on care of Group people.

A similarly strong commitment is shown to the outside world, as seen in Intesa Sanpaolo’s participation in several conferences on the topic, such as the joint-company round table “Abilitiamo la Disabilità” (Let's Enable Disability), an initiative to discuss the experiences gained, with the aim of investigating, consolidating and spreading a profound culture on disability management issues.

Other initiatives included “Visite d’altri sensi” (Visits in Other Senses, after the pilot project run in November 2022) and “Oltre le barriere” (Beyond the Barriers, launched in 2024). The first initiative, organised in partnership with “Gallerie d’Italia”, involves Group people with visual disabilities in the role of sensory tour guides at the museums. The aim is to unlock an appreciation of art from a different perspective and, above all, foster empathy by putting oneself in another person’s shoes. The second initiative, organised in partnership with the Innovation Center, saw the production of an urban mobility accessibility project that was a finalist in the internal “#RealizzAbile” competition. The project was run as a pilot project with the involvement of the Turin City Council and a number of start-ups. The initiatives respectively attracted the participation of around 70 people for the museum sensory tours and 44 teams in the competition.

In addition, since 2018, Intesa Sanpaolo has been a certified Dyslexia-friendly company, confirming its commitment to raising awareness of specific learning disorders (SLDs). This commitment is given practical expression through the delivery of specific webinars targeted at all Group people and the availability on the Intranet of guides, video clips, infographics and a self-assessment questionnaire for parents and families, all exploring the many different aspects of dyslexia and helpful for living with the disorder, making a positive impact on well-being and quality of life in all contexts.

In 2024, the International Banks Division worked together with the Group Diversity, Equity & Inclusion unit to share experiences and plan joint projects to further inclusion, with specific focus on disabilities. The three face-to-face meetings organised involved all the banks in the division.

Training and development

Policies relating to the training and development of Group people

Training and communication are two fundamental levers for the involvement of all the Group's people in a process of continuous growth and enhancement with the aim of guaranteeing the best professional experience. In line with the 2022-2025 Business Plan, the Intesa Sanpaolo Group continues to invest in its people, creating a unique ecosystem of skills that is suited to both the current context and its future evolution.

In the belief that the constant updating and training of its people represent an important distinctive factor and increase its overall added value, the Group is committed to further strengthening its control over mandatory training, thus also responding to the requests of the Supervisory Authorities.
The criteria for the participation in mandatory training are detailed in the Group's specific internal regulations according to which all Group employees with subordinate employment contracts are required to attend such training sessions in order to guarantee the correct performance of the tasks and duties of the recipients, ensuring knowledge of the regulations and company processes. Furthermore, training is also under the scrutiny of the Supervisory Authorities, which, in certain circumstances, can adopt disciplinary measures. The internal regulations are applied at Group level; to this end, all the Governance functions involved work, each within their respective areas of competence, to ensure a standardised application of the methodology at Group level.
Knowledge of the published training obligations which the employee has signed up to is acquired through periodic access to the company's training platforms. Each employee is required to access the company's platforms to view their obligations, and to support this they receive periodic summary notifications on the training obligations still to be fulfilled and the related deadlines.

For the benefit of employees who do not meet the technical conditions for participation in the courses according to the methods defined above (for example, visually impaired persons), specific provisions are put in place which determine the methods and timeframes for the completion of the mandatory courses intended for them.
In consideration of the impacts, risks and opportunities related to the Group's scope of operations, the management of training requests is guaranteed by the preparation of the Parent Company's training plan, which includes differentiated training initiatives based on the role, the areas covered and the associated responsibilities.

The training plan is defined annually, implemented and monitored through the involvement of the competent corporate structures. This illustrates the training provisions planned for the Parent Company, it specifies which ones will also be extended to the subsidiaries, and is broken down into:
- compliance talks, intended for Chiefs, division heads and executive directors, aimed at training on strategic and innovative topics through content that is consistent with the responsibilities and areas of action of these roles;
- training plans for all other managers and professional profiles, divided into cross-cutting and/or specific initiatives based on the role performed, the activities supervised or specific regulatory provisions;
- initiatives set out in the Parent Company's training plan contemplated by the subsidiaries in their own training plan, indicated as being applicable to the entire Group and integrated with the initiatives defined and implemented independently on the basis of local and/or sector regulations as well as the related business requirements.

Training requirements are identified on an annual basis by the reference structures based on current and/or newly issued regulations. Specifically, the Chief People & Culture Officer Governance Area, with the support of the competent human resources functions, starts collecting training requirements from the reference structures, which identify them based on:

- specific job requirements;
- legal provisions relating to issues that require training initiatives, including those enabling the provision of services and the marketing of products;
- topics of particular relevance for the Group;
- findings/reports from the Supervisory Authorities, which require dedicated training provisions;
- periodic review, during the year, of the training requirements indicated by the reference structures to incorporate any changes and additions.

Within the Group's guidelines, the structure responsible for training activities contributes to compliance with all regulations regarding anti-money laundering, counter-terrorist financing, embargoes, antitrust, fairness in customer relations, and integrity in the management of tax issues. Training also contributes to combating corruption, applying the “zero tolerance” principle and promoting corporate behaviour based on the utmost consistency and transparency, and preventing, where possible, potential situations of conflict of interest.

The training activities are also intended to support the dissemination of the sustainability culture, not only by conveying ESG notions and knowledge, but also by ensuring that for the Group's people these are transformed into the skills needed to act as "agents of change", contributing to the implementation of corporate strategies geared towards generating economic, social and environmental value together.

Indeed, the Intesa Sanpaolo Group aims to have all Group’s employees trained in ESG by 2025, through a training provision structured on two levels:

- a basic level, cutting across the various topics and provided to all employees, above all through online remote training modules;
- an in-depth specialist level, on individual topics, managed by the Divisions and Governance Areas concerned, including in-person training.

The topics covered cut across all three ESG areas.
In line with its commitments to the ecological transition, the fight against climate change and the protection of nature and biodiversity, the Group is committed to spreading environmental values, promoting the involvement of all its people in the implementation of responsible environmental practices. Specific courses are mandatory for personnel directly involved in the implementation of the environmental and energy management system, but are also available to all employees.

Great attention is also paid to social issues, with particular reference to Diversity, Equity and Inclusion, the fight against sexual harassment, and human rights. In order to promote and encourage the creation of fair and inclusive work environments, the company organised courses on unconscious bias, which is important to recognise in order not to fall prey to it in one's daily work. The topic of gender differences was addressed, for example, both with a mandatory refresher course on combating sexual harassment, as a lever for the effective implementation of the Group Rules on the matter, and with a course on Female Empowerment, with the aim of reflecting on how some elements, including the culture on gender roles and differences, can influence the ability of each person to best express their potential and to transfer skills that can be used to free up unexpressed resources, working on the deconstruction of stereotypes and self-limiting prejudices.

Processes for the involvement of employees and their representatives

The needs and training delivery model analysis process is guaranteed by the Learning Business Partner function which interfaces with the Human Resources functions and the Group structures for the identification and analysis of training requirements.

The process develops through the following phases:

- collection of training requirements;
- analysis and development of training requirements;
- coordination of the implementation of training initiatives;
- monitoring activities.

“Collection of training needs” means the activity carried out in conjunction with the human resources functions to identify the professional, mandatory and managerial training needs identified by the Governance Areas/Divisions, within the scope of annual and periodic planning activities and in compliance with sustainability criteria. "Training needs analysis" means the assessment carried out by the Learning Business Partner function, in conjunction with the human resources structures, of all the elements necessary for a detailed examination of the training needs collected, to define the feasibility of the training initiative and the possible cross-cutting aggregations, giving special priority to the implementation of mandatory initiatives.
Once the training needs have been collected from each structure contact, the Chief People & Culture Officer Governance Area defines, with the support of the dedicated supplier, the method of delivery of the training provisions, distinguishing between in-person or remote initiatives based on the chosen channel.

The activities described are also included among the funding opportunities planned for the development of continuous professional training and for upskilling and reskilling activities for professional profiles of specific interest.
In this context, the training plan is shared with the Welfare, Safety and Sustainable Development Committee/Joint Training Body (COWESS), a bilateral body composed of company and union representatives, provided for by the current Group Labour Relations Protocol and in line with the provisions laid down by the National Collective Bargaining Agreement. COWESS is tasked with studying, analysing and researching training matters, including the examination of material relating to financing projects promoted by entities operating in the vocational training sector.

Furthermore, in 2024 Intesa Sanpaolo entered into an agreement with all the trade unions aimed at strengthening the role of training as a pillar of the bank of the future and a priority tool to ensure engagement and the responsibility pact with the Group's people in order to increase their satisfaction, promoting the development of skills, employability and professional growth.

Thanks to continuous, personalised and innovative upskilling and reskilling processes, tailored to the new organisational processes and with high added value contents on transformative issues and strategic areas such as artificial intelligence (AI), data analytics, ESG, and internationalisation, training will allow to guide the Group's people through the change with the acquisition of the required professional skills but also towards new professions.

In line with the process described above, the Group's people have the opportunity to interface directly with their managers and their human resources manager to express their training needs.

Objectives and metrics relating to the development of the Group's people and talent management

The Intesa Sanpaolo Group pursues the objective of providing its employees with growth paths based on training as a driver for the development of the talents present within the Group, as well as the ability to attract people from the outside. Consequently, it has set itself qualitative and quantitative objectives linked both to the provision of hours of cross-disciplinary training to all its people and to specific learning and collaboration methods.

In order to support the definition within the Group of a consistent model for the development and enhancement of the professional contribution provided, groups of professionals with homogeneous skills, learning paths and qualifications have been identified. These groups, which bring together people from the Italian Group perimeter and are referred to as job communities, can be formed according to two different logics. In particular, job communities are set up:
- by profession, “natural communities”, made up of professional profiles with homogeneous skills (Professions) and titles (Titles);
- by interest, which include those who, regardless of skills and titles, are driven by a specific or project-related interest in strategic themes for the Group (for example, AI, Art and Culture, etc.).

In the 2022-2025 Business Plan, a target was defined in relation to the job communities with the aim of reaching an overall value of 20,000 people involved by December 2025.

Target: Number of people in "job communities"	**Date**	**Value**
Baseline[118]	31.12.2021	-
Final balance	31.12.2024	36,775
Target	2025	20,000

Intermediate end-of-year milestones were also set along the same time horizon, and were always achieved and exceeded. The target is monitored on a quarterly basis through an indicator defined by the following components:
- number of people with homogeneous Titles and Professions;
- number of people in Profession job communities without Titles and therefore gathered with respect to the same professional profile;
- number of people in interest job communities.

The target was defined by the competent functions within the Chief People & Culture Officer Governance Area.

As of 31 December 2024, the number of people in job communities was 36,775, of which 22,176 people with homogeneous Professions and Titles.

The Talent Management strategy also includes the “Leader of the Future” programme, aimed at all Intesa Sanpaolo Group people, both in Italy and abroad, and which is also one of the objectives set out in the 2022-2025 Business Plan.

The programme consists of two project initiatives:
- International Talent Programme: it is one of the most important initiatives for the enhancement of talents at Group level, which aims to develop a new generation of managers and professional roles with a cross-cutting and international culture through personalised paths with an indicative duration of three years. A mentorship and tutorship programme is dedicated to the talents, which involves the Senior Managers and the Heads of the structures to which those same talents belong;
- Key People: it is the second pillar of the Group's innovative talent strategy, which aims to identify and develop the Leaders of the Future. It represents a path of excellence for selected members of the Group's middle management, with the aim of enhancing professional and managerial growth, as well as guiding them towards future leadership roles in more complex managerial contexts.

The key objectives of the “Leaders of the Future” programme are:
- human capital enhancement: recognising and promoting existing talents within the organisation, encouraging their professional growth and development;
- strategic management of internal professional growth: ensuring that the Group has constant access to the best resources, thus reducing the need for external recruiting to fill critical roles;
- generational renewal: ensuring the constant rejuvenation of the talent pool, enabling the Group to maintain a balance between experience and new perspectives.

[118] Plan target that represents the planning of a new activity that does not have a base value.

The expected results of the “Leaders of the Future” programme are:
- continuity and stability: establishing a talent pipeline ready to transition into key roles, ensuring business continuity and organisational stability;
- competitiveness: increasing the Group's competitiveness through the acquisition and retention of high-level skills;
- organisational culture: strengthening a corporate culture focused on excellence, innovation, and continuous growth.

The target value of people involved in the Leader of the Future programme is approximately 1,000 colleagues over the 2022-2025 Business Plan period, selected both in Italy and abroad. The indicator includes both programme populations: International Talent Programme and Key People.

Target: Number of people enrolled in talent programmes		
	Date	**Value**
Baseline[119]	31.12.2021	-
Final balance	31.12.2024	975
Target	2025	1,000

For the International Talent Programme, the number reported represents the people belonging to the talent community at the reporting date, and includes both talents who are undergoing the development path and those who have completed it.

As regards the Key People programme, however, the population boundary has been defined for the entire 2022-2025 Business Plan, and is therefore stable.

From the launch of the “Leader of the Future” Programme to the end of 2024, a total of 975 people have been involved in talent management and development activities, through participation in the two “Talent Programme” and “Key People” programmes mentioned above.

Actions relating to the training and development of Group people

Training activities at Group level and across departments

The training activities are provided thanks to the intervention of the Chief People & Culture Officer Governance Area, which is tasked with:
- promoting the dissemination of a Group culture that supports change and contributes to creating an inclusive and high-quality working environment for all people;
- defining training proposals and implementing the relevant training programmes to enable the continuous updating of skills, fulfilment of regulatory obligations and professional retraining, in line with the company’s needs and strategies, individual motivation and enhancement of all Group people;
- preparing the Training Plan, coordinating the collection of training needs.

The People Attraction, Skills & Learning Strategy Structure reports to the Chief People & Culture Officer Governance Area and oversees, with the support of a dedicated supplier, where necessary and with the competent Group structures involved, all activities relating to needs analysis, the identification of the delivery model and the planning and delivery of training provisions.

All training, including mandatory training, is carried out with the support of a dedicated supplier in order to guarantee high quality standards and constantly updated content based on the Group's specific needs. The collaboration between Intesa Sanpaolo and Digit'Ed S.p.A. (Intesa Sanpaolo's partner in the implementation of training initiatives), a company established in 2022 following the transfer of the training business line, continued throughout 2024. Digit'Ed, leveraging Intesa Sanpaolo's innovative learning infrastructures, was able to position itself on the market as an aggregator of the best Italian operators in the sector.
The main channel for the provision of training, especially mandatory training, is the digital one which enables:
- to quickly make training content and any subsequent updates available to very large audiences;
- to access training content at any time from the company's platforms;
- to independently manage learning times.

Alternatively, if required by specific regulatory provisions or for other organisational reasons, training can be provided through Live classrooms (physical or remote).

The People Attraction, Skills & Learning Strategy structure, during 2024, continued to implement innovative training models and methodologies, geared towards the Group's people and conducive to promoting multi-channel training that maximises simplicity and flexibility of learning through the use of the various corporate training platforms (for example, Apprendo, Myla, Scuola dei Capi (Management School) and LEA, the latter dedicated to people belonging to international subsidiary banks coordinated by the International Banks Division).

In 2024, in continuity with what was done the year before, corrective mechanisms concerning non-completion of mandatory training within the required timescales were introduced in the incentive system in order to further strengthen its monitoring.

On a thematic level, the training provision has been expanded and updated with the publication of new digital content to incorporate regulatory updates regarding Legislative Decree 231, Anti-Money Laundering and Anti-Corruption. During 2024, a specific training plan on “ICT and Security Risks” was prepared which, in the current context characterised by a strong push towards the digitalisation of processes and tools, technological development and the complex international political situation, included training and awareness initiatives, aimed at increasing people's awareness and know-how on the main ICT risks. A digital training guide on the Code of Conduct was also published.

[119] Plan target that represents the planning of a new activity that does not have a base value.

The training initiatives are aimed at all Group's people (for example, threats deriving from phishing, cyberfraud and new trends) as well as at clusters that monitor specific business risks. This area also includes the MATRIX Project, designed with the aim of creating an ecosystem of models and tools for human resources, aimed at supporting the technological development of the Group with adequate resources which, in continuity with 2023, planned a significant investment in training in order to respond to the needs arising from the evolution of the company's workforce and promote the acquisition and enhancement of key knowledge in the IT sector. The training programme is aimed at both newly hired colleagues, with a specific onboarding process including digital and live content designed ad hoc, and at professional profiles already included in the role with specific technical/specialist initiatives and certification paths.

In order to promote prudent risk-taking when it comes to current and prospective risks across all levels of the organisation, with particular focus on those connected to climate change and technological innovation, information, awareness and training initiatives were provided in the context of risk culture and management.

The topics covered through ESG training, with a particular focus on environmental and social issues, in 2024, covered topics such as the EU Taxonomy and included the publication of a new collection of mandatory training modules on the Corporate Sustainability Reporting Directive (CSRD). Furthermore, the Group organised a mandatory training course for all employees to strengthen knowledge and implementation of the principles and values enshrined in the Code of Ethics, a key governance tool.
With particular reference to the protection and respect of human rights, a series of mandatory training modules on Modern Slavery were developed, with the aim of disseminating knowledge regarding companies' responsibility in preventing modern slavery within their operations and supply chains, also responding to external regulatory requirements (for example, UK Modern Slavery Act, Australian Commonwealth Modern Slavery Act). A compliance talk on “Code of Ethics, combating Modern Slavery and sexual harassment: Intesa Sanpaolo’s approach” was held for the benefit of Chief and Executive Directors.

Diversity, Equity & Inclusion initiatives were once again provided in continuity with the work carried out in previous years, such as initiatives dedicated to female empowerment, parenting and the dissemination of the aging culture. Other initiatives were added dedicated to the issues of interculturality, inclusive leadership, disability and inclusive language.

During 2024, 31 Digital Talks were delivered with testimonials from subject matter experts on various topics, including the circular economy and organisational well-being.

With reference to the actions taken in order to support people in job communities, several initiatives were carried out in 2024:

- New job communities: with the aim of increasing the number of people who can be hired and participate in the communities, 4 new communities were activated:
  - 3 in the first six months, 2 of which were by profession and 1 was by interest;
  - 1 by interest in the fourth quarter.

  With these actions, as of 31 December 2024, 12 job communities were active (7 by profession and 5 by interest) dedicated to the Group's colleagues in the domestic perimeter.
- App Activation: in order to be able to use the technological platform dedicated to job communities even on the move, a customised company app dedicated to business communities was activated in June 2024.
- Professional titling: the dissemination activity of the Titling model dedicated to Professionals continued. In particular, a new model dedicated to the Chief Data, AI, Innovation and Technology Officer (CDAITO) Governance Area was adopted and a comprehensive title updating activity was carried out for the remaining Governance Areas and for division personnel.

On the other hand, as regards the “Leaders of the Future” programme, for the entire duration of the 2022-2025 Business Plan, participants will follow a personalised development path, financed through an ad hoc budget: specialist and managerial training in English in collaboration with the best Business Schools, premium coaching and individual empowerment initiatives, international workshops focused on innovation, project work initiatives strongly connected to the Group's businesses.
The development paths for talents participating in the “Leaders of the Future” programme are, among others, one of the qualitative factors taken into consideration to assess the impacts of the Intesa Sanpaolo Group strategy on its employees' well-being.

Initiatives at the division level

The IMI Corporate & Investment Banking Division has promoted initiatives aimed at recognising the role and effects of stereotypes that hinder the effectiveness of intercultural and generational relationships in order to provide tools to overcome them and create bridges for collaboration, thereby enhancing everyone's differences and contribution.
In 2024, the Division also continued to organise updating and awareness-raising initiatives on the Bank's ESG positioning in favour of the international "SHAPE" community, dedicated to young people under 36. Particular attention also continued to be paid to ESG issues in the curriculum of the new Higher Education Course "IMI CIB Next Generation Education Program", promoted by the Division in collaboration with Digit’Ed and Scuola di Direzione Aziendale Bocconi.

In 2024, the Insurance Division launched an ESG initiative to provide an overview of the main ESG issues impacting the market and share the latest regulatory and strategic sustainability news, with a particular focus on ESG risks, illustrating challenges, opportunities, related impacts and management insights. Furthermore, the Division participated in initiatives aimed at promoting intercultural relations to enable people belonging to the Insurance Group to acquire useful tools to create bridges for collaboration, thereby enhancing everyone's differences and contribution.

The Asset Management Division also maintained the "Eurizon Higher Education" course for 2024, aimed at a selection of young people under 35 from the Italian companies of the Division, confirming the path with two ESG training modules: "Eurizon's Governance", "Ethics and behaviours", and "The ESG wave", the latter two relating to the ESG impact on finance, the economy and society and on the Division's sustainability policy. In 2024, the Asset Management Division also participated in cross-cutting initiatives aimed at promoting intercultural relations to enable people to acquire useful tools to create bridges for collaboration, thereby enhancing everyone's differences and contribution.
The Chief Audit Officer developed, in collaboration with the Group's Learning Strategy and Digit'Ed, an in-depth course on ESG issues, delivered in collaboration with AIIA (Italian Internal Audit Association) and dedicated to a selected group of employees, with a focus on aspects related to the auditors' activities.

At the international level, the Digital Talks dedicated to the Managers of international subsidiary banks belonging to the International Banks Division (IBD) continued, with three editions on the topics of macroeconomic trends, leadership and new ways of working and inclusive leadership.

The International Banks Division (IBD), in continuity with previous years, guaranteed ESG training across all in-scope banks, both across all personnel with high-level online initiatives, and across more targeted professional profiles with more specialised live initiatives.
In particular, the Group continued the online provision of the mandatory course on the Code of Ethics, as well as the non-mandatory provision, with initiatives such as "ISP4ESG, our contribution to the future", "Circular Economy Plafond" and "EU Taxonomy".
The live course "ESG: Disclosing Sustainability" was provided to the professionals of all banks and the Division. Finally, the managers of international subsidiary banks were also involved in two specific digital talks held in English: "ESG: Human traces in the environmental evolution" and "Urban Re-generation New purpose for urban spaces through sustainable architecture". Furthermore, the "People First" programme was set up with the aim of educating and raising awareness among the Division's people on ESG issues.
During the year, many activities were organised that involved the entire scope of the Division:
- three online webinars were organised for colleagues in the Division's head office structures but also for the Banks,
- "Climate Change", "The art & science of fair trade - chocolate" and "The Story of Patagonia" with the involvement of over 300 people;
- the "ESG Gamification Experience" initiative continued, with the progressive involvement of all the banks in the Division. After VUB, CIB, and PBZ, a new edition took place in BIB, Intesa Sanpaolo Albania and Intesa Sanpaolo Slovenia, as well as one involving the head office structures;
- a contest was launched that involved the use of the Aworld application to involve and motivate people on sustainability issues, encouraging the adoption of sustainable behaviours in everyday life. The final event was a Sustainability Journey held at some Italian companies with a strong ESG impact;
- the Digital Talks dedicated to the Managers of international subsidiary banks continued to be held on a monthly basis on various topics, such as leadership and innovation.

Health and safety

Health and safety policies

The Health & Safety structure ensures the monitoring of compliance risk with reference to the areas of occupational health and safety protection, pursuant to Legislative Decree 81/08, fulfilling the role of specialist function provided for by the Group Compliance Guidelines.

The principles and procedures to be adhered to and implemented to ensure a safe working environment are governed within Intesa Sanpaolo by three documents:
- the Occupational Health, Safety and Welfare Policy;
- the Health and Safety, Environment and Energy Management Policies and Systems (both applied at Group level);
- the corporate rules on occupational health and safety involving the Italian perimeter.

These documents complement the declarations set out in the Group's Code of Ethics, which places its employees' health and safety among its fundamental principles and to which reference is made for the discussion of the commitments regarding human rights.

The corporate rules on occupational health and safety summarise the "System of Tasks and Responsibilities" which involves a number of entities, each in relation to specific professional skills and certain functions. Furthermore, they identify the main activities related to the management of accident prevention in the workplace. According to these rules, the employer is responsible for implementing these policies.
The above documents define the principles and procedures to be adhered to and implemented in order to ensure a safe working environment.
The above policies comply with national and international standards for respecting human rights in the occupational health and safety sector. As evidence of this, the organisation obtained the ISO 9001, ISO 45001 and ISO 45003 certifications. The documents are made available both through the intranet portal for Group people and through the institutional website for external customers or stakeholders.

Processes for the involvement of employees and their representatives

The Group's commitment to involving people is expressed in the Code of Ethics, promoting listening and dialogue at all levels. Employee hiring is also ensured through trade union representatives. As well as by the industry outlook, relations with the Trade Unions are also regulated by the Labour/Management Relations Protocol, which has made it possible to implement a specific union relations model within the Group.

With reference to the involvement of employees in health and safety matters, the role of Worker Safety Representatives (WSRs) comes into play. These are generally assigned the task of communicating and engaging with employees in order to take their perspectives into consideration. There are 96 such representatives and they cover 100% of Italy's workers, 40 of these are part of the delegation that meets periodically with the Safety and Protection Department and with the employer's delegate. On that occasion, all the activities carried out by the Prevention and Protection Service are summarised using a reporting system set forth by the legislation which includes activities carried out and programmes for the following years. Information on these topics is made available through the intranet portal and mandatory training (Apprendo platform), subject to assessment and monitoring.

The Process Guides define the role and responsibility of the Safety Officer, which also includes hiring of and communicating with employees.

Remediation processes for employees and their representatives and reporting channels

The management of material impacts on the Group's people in the health and safety area is governed by a specific Process Guide (Compliance Management Process Guide - Management of Occupational Safety Regulations) which sets out the approach to managing the anomalies identified through control activities and any corrective actions to be implemented.
This Guide also defines the communication channels made available to employees to receive information and communicate with the reference functions in health and safety matters. This process is managed by the Safety Officer, who undertakes responsibility for it.
In addition to Code of Ethics and whistleblowing reports, the channel for reporting risks and incidents is available to some company roles, such as branch managers and WSRs, who have the right to access all workplaces and submit reports that are subject to checks by the head office structure in order to determine whether or not to open the risk factors.

Furthermore, it is worth highlighting the presence of direct channels dedicated to branch managers to report risks and incidents. This option is also available for the Occupational Medicine department, which has a direct channel available to request additional medical examinations. In addition, the Group employees can benefit from psychological support following a traumatic event.

The risk monitoring and assessment activities for workers in the health and safety sector are set out in the Process Guide, which also identifies the various structures in charge of these processes (the employer is responsible for risk assessment, the Prevention and Protection Service must plan and carry out inspections and audits for the integrated risk assessment and record the results). In addition, in the event of risk factors being opened, these are recorded in the systems and a tracking process verifies their acceptance and the subsequent completion of the intervention.

Corporate roles specifically identified for this purpose (for example, supervisors) are provided with dedicated training on the correct use of reporting channels, available on the company intranet with the related access instructions, thus guaranteeing the privacy of the person who makes the report.

Health and safety objectives

The Group put in place a series of policies and actions to protect its employees on health and safety matters that enable it to monitor and address these issues on an ongoing basis, allowing the achievement of the standards set to protect the Group's people, even without a precise definition of quantitative and measurable targets.

Actions related to health and safety issues

In relation to health and safety issues, the Intesa Sanpaolo Group proposes various initiatives aimed at its employees, which go beyond the provisions set forth by the law, with a holistic and integrated approach, including, for example, the provision by the Occupational Health Doctor of tools aimed at investigating emerging risks such as new forms of stress and, as of the current year 2024, subjective vulnerabilities deriving from specific individual conditions. Furthermore, the activation of neuroscientific research projects aimed at identifying intervention strategies on the subject of cognitive load, technostress, and the aging effect is also encouraged (for which the industrialisation of the related training was completed during the current year). Other topics covered include Human Computer Interaction or Acoustic Well-being, which are added to traditional prevention activities and continuous training on new relevant issues.
The Process Guides detail the activities aimed at identifying risks and the operational controls carried out, as well as any corrective actions to be implemented (for example, prevention and protection measures implemented and personal protective equipment).
In particular, the method used to assess workplaces and the related Risk Contexts involves conducting a technical analysis and a field analysis, through inspections of all workplaces. Where deemed necessary, checks and measurements are also carried out on site using specific equipment by qualified and specially trained technical personnel. The Risk Assessment Document (DVR) takes into account all the measures implemented and the assessments of how effective these measures are. In terms of mitigation measures, it should be noted that in the area of psychosocial risks, the Group obtained the ISO 45003 certification of conformity for the “Management of health and safety at work - Psychological health and safety at work - Guidelines for the management of psychosocial risks” for the second consecutive year.

For each of the identified mitigation measures, the areas and significance of the risk to which they refer are also identified, in addition to the level of intervention in terms of primary, secondary and/or tertiary prevention.

Mandatory health surveillance by law currently involves approximately 50 thousand Group people. The results of these examinations, in anonymous and aggregate form, are the basis of the epidemiological survey that provides a general picture of the Group's people's health.
The Group also launched the project "Subjective Vulnerabilities", which aims to

- support workers with "subjective vulnerabilities", both during the initial induction phase and subsequently, if there are any changes in their health condition;
- monitor over time the effectiveness of the measures intended to support these employees, including in relation to job changes;
- provide a data matrix for epidemiological analysis purposes;
- promote an integrated management strategy, targeted at the individual employee, aimed at:
  - identifying the need in relation to one's limitations and functionality;
  - providing specific training to the employee and the work team;
  - detecting any need for further assistance in an emergency;
  - identifying reasonable mitigation/arrangement measures.

Health and safety metrics

As of 31 December 2024, 100% of employees are covered by an Occupational Health and Safety Management System. In particular, as regards the Parent Company and the companies belonging to the Italian scope of the Insurance Division, this Management System is certified according to the ISO 45001 standard. For all other companies, however, there is an Occupational Health and Safety Management System that is defined internally within the Group.

The following table shows the main indicators regarding work-related injuries and deaths that occurred in the Group during the year.

Table 13 – Performance of health and safety indicators for the Group's collaborators

	2024
Percentage of people in its own workforce who are covered by health and safety management system based on legal requirements and (or) recognised standards or guidelines	100%
Number of fatalities in own workforce as result of work-related injuries and work-related ill health	-
Number of fatalities as result of work-related injuries and work-related ill health of other workers working on undertaking's sites	-
Number of recordable work-related accidents for own workforce	537
Rate of recordable work-related accidents for own workforce	3.39

The number of recordable injuries is indicated by taking into account both injuries that occurred to employees at work and those that occurred while commuting, based on the accident reports submitted.
The injury rate is calculated as the number of injuries in the year out of the total hours worked, multiplied by a coefficient equal to 1,000,000. The estimate of hours worked is based on normal or standard working hours, taking into account the right to periods of paid leave. As regards the Italian scope, this estimate follows the calculation criteria defined by INAIL methodologies.

Well-being of the Group’s people

Work-life balance policies

In order to ensure a good work-life balance for its employees, the Group has laid down rules and policies that are also useful for managing impacts, risks and opportunities relating to this issue, governed through the Code of Ethics and the Rules on flexible work, both aligned with national and international standards for the respect of human rights related to work-life balance (for example, ILO Declaration on Fundamental Principles and Rights at Work).

Within the Intesa Sanpaolo Group, the National Collective Bargaining Agreement, the Code of Ethics and the second-level bargaining agreement identify solutions aimed at ensuring a good work-life balance. All relevant legislation is aligned with national and international standards for respecting human rights (e.g. Declaration on Fundamental Principles and Rights at Work). The National Collective Labour Agreement, which represents the regulatory source through which the workers' trade unions and the employers' Associations jointly define the rules governing employment contracts, provides highly innovative and dynamic tools, capable of balancing people's personal and professional lives, in a context of profound and continuous transformation. Furthermore, as part of the renewal of the Group's second-level collective bargaining agreement, the Group's commitment to the full enhancement and well-being of the Group's people was confirmed through initiatives and tools targeted at them and their families. In an integrated Welfare context, the second level collective bargaining agreement contains agreements on “work-life balance” and work organisation (flexible work and training, 4-day working week and flexible hours).

As previously described, in the paragraph "The Group's commitment to human rights", among the various principles set forth by the Code of Ethics, "respect for people" is emphasised with the aim of promoting policies that facilitate work-life balance, encouraging forms of flexibility and implementing initiatives to reconcile work and private commitments, in the awareness that such balance is fundamental in the pursuit of people's well-being. The Flexible Working Rules, which fall under the responsibility of the Relations With Workers' Representatives And Welfare and Labour Affairs & Policies structures, are available on the company's Intranet, within the HR regulatory section of the internal company platform (#People) and apply to all Group employees in the Italian scope. The Rules summarise all the current provisions relating to flexible working and in line with the principles of the Code of Ethics, with the aim of facilitating the balance between people's private and professional lives.

Policies relating to working hours

The Group places its people at the centre of the policies implemented, within which the protection of the rights of each individual takes on a predominant role. This person-centred approach is reflected in all the company's regulations issued from time to time, in which working hours are of particular importance, pursuing the objective of protecting workers' rights, promoting their professional development and growth and at the same time guaranteeing a healthy work-life balance.

The Bank operates within the regulatory and contractual framework defined by the relevant laws and by first-level national collective bargaining: the main reference legislation is represented by Legislative Decree No. 66 of 8 April 2003, as amended, as well as by Legislative Decree No. 81 of 15 June 2015, as amended.

The legal provisions are incorporated by the National Collective Bargaining Agreement (CCNL) for Executives and for the Professional Areas reporting to Credit, Financial and Instrumental companies, which governs issues such as working hours, intervening for example in the following areas: part-time working hours, disconnection, weekly rest, holidays and leave, Time Bank, student workers, methods of implementing extra-standard working hours in cases of social hardship, weekly hours, daily hours, shifts. The topic is also subject to further agreements at national level which constitute appendices to the afore-mentioned CCNL, including the Agreement Minutes on the subject of work-life balance, equal opportunities and corporate social responsibility.

Finally, it should be remembered that recently, on the matter in question, the agreement signed on 23 November 2023 for the renewal of the CCNL of 19 December 2019, amending Article 104, introduced the 37-hour working week, implemented with effective date as of 1 July 2024.

In addition to making reference to the National Bargaining Agreement, the Group has also adopted its own second-level collective bargaining agreement which governs, among other things, the legislation on the provision of professional services and working hours, including the regulation of part-time employment, flexible work and other work-life balance tools.

At an operational level, for the Group companies belonging to the Italian scope with employment contracts in the Credit sector, the matter relating to working hours is governed by three separate Policies: the "Rules on working hours, holidays and leave", the "Rules on Flexible Work" and the "Rules on Part-time Work", which are based on the provisions of the law, first and second level bargaining contracts and on the consequent company resolutions. The three Policies, like the entire regulatory framework of the Intesa Sanpaolo Group, are inspired by the principles set out in the fundamental documents that guide the Group's action, namely the afore-mentioned Code of Ethics, the Principles on Human Rights and the Principles on Diversity, Equity and Inclusion.
The three Policies represent a single set of regulations and govern the aspects of the employment contract relating to working hours as a whole and are constantly monitored and updated with the aim of ensuring timely alignment with national and supranational legislation, as well as with sector and company collective bargaining agreements.
All internal regulations are monitored within the scope of the Compliance processes in order to ensure their conformity also from the point of view of their application.

The "Rules on working hours, holidays and leave" apply to Group personnel with employment contracts in the credit sector (Italy) and cover general provisions concerning personnel classified in the categories of middle managers and professional areas such as:
- working hours (including weekly and daily working hours, service provision hours, including work activity divided into 4 days per week, and rest periods);
- holidays and former public holidays;
- paid and unpaid leave for family and personal reasons, or for studies;
- leave of absence due to studies, family and personal reasons or illness;
- parental protection;
- Time Bank;
- the voluntary suspension of the work activity;
- the right to disconnect (which means that outside of working hours and in cases of legitimate absence, personnel are not required to access and/or connect to the company's IT systems or activate the company's communication devices).

All these measures, in compliance with the law, are always inspired by the aim of avoiding any active or passive discrimination towards the Group's people.

Similarly, the "Rules on Part-Time Work" and the "Rules on Flexible Work" cover two particular work-life balance tools, respectively defining part-time work and the so-called agile working (i.e. the provision of the service for certain days a year at locations other than the assignment location, such as: home, "company hub" or "customer").

The "Rules on working hours", as well as all those concerning the regulation of the contracts with the Group's people, fall under the responsibility of the Chief People & Culture Officer - Legal and Labour Advisory.

The "Rules on working hours" are made available to all Group personnel via the company intranet portal and in particular on the internal company platform (in the #Regulations section), in order to allow everyone to constantly align with the evolution of the company regulatory framework. In the event of significant amendments, for example as a result of their adaptation to relevant regulatory or contractual changes, the publication of the updated versions of the Rules is announced through specific news on the company portal (for example, the recent changes made following the introduction of the 37-hour weekly working hours within the scope of the Renewal Agreement of the National Collective Labour Agreement). Furthermore, once again for information purposes, the internal company platform (#People) contains explanatory regulatory information sheets of the main employment law provisions, including those relating to working hours. These information sheets also contain the information required to activate the request process for the regulated measures (for example, time off or a leave of absence) by explaining the role of the various players involved (for example, the applicant, hierarchical manager and Human Resources structure). The application of the provisions contained in the policies regarding working hours, as well as other policies regarding the management of the Group's Human Resources, is also facilitated by the presence of a dedicated section in the internal company platform (#People), as well as by an additional section of the company portal (#Support) through which it is possible to submit questions relating to Human Resources Services.

Processes relating to the involvement of its employees and their representatives

As set out in the section "Employment protection and industrial relations", the Group, in agreement with the trade unions, constantly promotes dialogue between the parties. The dialogue with these organisations regarding the Group's projects is aimed at identifying shared solutions with respect to the different needs that arise for the parties.

Remediation processes for employees and their representatives and channels to submit complaints

Even with regard to aspects relating to working hours, the Group's people can first contact their reference human resources manager and make use of a specific support section within the intranet portal to receive technical support regarding the application of the relevant regulations. This is in addition to the option to make independent use of the various reporting channels made available to employees, i.e. the so-called active listening systems, which include:

- formal reporting to one's manager, to the Human Resources Department or to the reference company contact responsible for personal matters;
- the so-called "Whistleblowing"[120], governed by the Group rules on the internal reporting system of alleged violations;
- other procedures (including IT ones) dedicated to reporting to the relevant structures, including specialist ones, any non-application or incorrect or discriminatory application of the legislation relating to employment contracts (including in relation to working hours) with reference to particular thematic areas such as: the Code of Ethics, DE&I, sexual harassment, business policies, violations of the 231 Organisational Model.

Each Group company protects whistleblowers from any form of retaliation, discrimination or penalisation and ensures the utmost confidentiality, without prejudice to legal obligations.

The handling of complaints/reports by Group personnel is set out in the relevant company regulations, including those dedicated to specific channels (see for example the Rules on Whistleblowing) as well as in the Group's Internal Code of Conduct, which specifies the various ways in which it is possible to report even alleged violations, non-applications or discriminatory applications of the regulations concerning employment contracts, including working hours. Periodically, both voluntary and anonymous climate analyses are introduced to collect and analyse any impacts, also in order to implement the consequent improvement actions.

Objectives relating to work-life balance and working hours

The Group has defined a series of policies and actions to protect its employees in relation to work-life balance issues in order to support them in pursuing their psychological and physical well-being and in fulfilling their needs. To this end, specific initiatives are conducted and monitored, which make it possible to assess the effectiveness of the welfare solutions intended for the Group's people, even in the absence of a precise definition of quantitative and measurable targets in a limited time horizon.

Work-life balance actions

The Credit National Collective Bargaining Agreement provides for various forms of part-time work, with different ways of distributing working hours: vertical, horizontal, mixed, cyclical, both for fixed-term and permanent contracts, with weekly hours ranging from a minimum of 15 hours to a maximum of 32 and a half hours. Since 2015, flexible working has been the remote working model of the Intesa Sanpaolo Group. From the experimental phase to date, an ever-increasing number of people have been gradually involved, until it was decided to establish the availability of an annual ceiling of 120 days of flexible working from home. Starting in 2023, thanks to an agreement signed with the trade unions, the option to use the so-called short working week (4x9) was introduced in Intesa Sanpaolo, which allows its employees to work between Monday and Friday over 4 9-hour days with equal pay, and on a voluntary basis, in line with the company's organisation and technical and production requirements.

In addition to the provisions laid down by law and the collective bargaining agreement for the sector, the Group's second-level bargaining agreement has over time defined priority criteria for the acceptance of requests related to personal and/or family needs with a view to sustainability. The 2021 Group second-level collective bargaining agreement provides additional tools to

[120] For further information, reference is made to the paragraph "Whistleblowing policies, objectives and actions" in the ESRS G1 – Business Conduct chapter.

support parenting that complement the provisions already set forth at a regulatory level. For example, the following measures are worthy of note: paid leave for participation in childbirth preparation courses, for the settling of children in nursery schools or kindergartens, for attending the Emergency Room and additional unpaid days aimed at assisting minor children, additional leave/welfare initiatives to support parenting and caregiving. For fathers, specific additional paid leave is available following the birth of their children, as well as the entitlement to an allowance of 10% of the sum granted by law for parental leave, and the possibility of taking 10 additional days of parental leave.
The second-level collective bargaining agreement has strengthened inclusion and equal opportunities, extending parenting protection provisions to same-sex civil unions, de facto relationships and in favour of the spouse's children. In this context, a specific extraordinary paid leave was introduced on the occasion of birth or arrival into the family and an optional extraordinary leave for the care needs of the children of the spouse, civil partner or cohabitant, which can be taken up to the age of twelve with an economic treatment equal to that provided for parental leave for fathers and entirely paid by the Group (40% or 90% of the salary).

One of the work-life balance tools is the so-called "voluntary suspension", which allows to use up to 20 days a year of suspension of the work activity, which can be taken advantage of without having to justify its use, guaranteeing a salary equal to 35%, with payment of the corresponding social security contributions. It is also permitted to exceed the limit of 20 days per year for caregiving needs.

Another innovative tool provided by national and second-level collective bargaining agreements is the Time Bank, a reserve of time made available by the company and Group's people so they can provide greater support for employees in difficulty, even for brief periods, and give them more time. The Time Bank is set up annually with an initial ceiling of 65,000 hours and each person has the opportunity to donate some of their own paid leave or holidays, which the company implements with an equal amount of time, up to a maximum of 100,000 hours in total. As part of the Time Bank initiative, multiple corporate volunteering activities were launched in 2024, which led over 400 people to carry out volunteer work, on working days for external associations and bodies chosen by the Group across the national territory. A total of around 150,000 hours of leave were granted.
In 2024, over 40,000 hours were donated by the Group's people, in addition to the hours made available by the company, for a total of approximately 155,000 hours, also taking into account the hours made available for unused holidays by personnel who left the company pursuant to voluntary redundancy company agreements.

In 2024, the "People Care" initiatives were strengthened to promote and spread awareness of the importance of well-being in line with the 2022-2025 Business Plan and the Group's human resources strategy, with an increasingly broader vision, according to which not only personal but also organisational well-being is an integral part of the corporate culture, which is therefore "shaped" by it, and can significantly impact the Group's ability to attract new talent and consolidate stakeholder trust. By listening to people's needs, identified at multiple levels within the organisation and in different contexts and contact methods, diversified initiatives were therefore developed to promote people's well-being and improve their work-life balance, in synergy with support for diversity and inclusion, with corporate welfare and with new ways of working (Next Way of Working).

The Group continued to revisit office spaces in Italy, in synergy with the Next Way of Working project, as well as the food offering available in the company to promote habits geared towards individual well-being and to foster relationships. New "Energy corners" (lounges equipped with meeting spaces, food and beverage) were set up, which amount to 69 to date across 30 company locations. In addition, the company's restaurants were renovated and innovative and sustainable services were introduced, such as lockers for the purchase of high-quality fresh products. In order to promote psycho-physical well-being, the development of company gyms continued; as such, the locations in Brescia and Milan in via Gioia 22 saw the addition of Torino NCD, thus doubling the total number of users registered for the service, with further openings planned for 2025. Intesa Sanpaolo was awarded, for its headquarters in Piazza Ferrari in Milan, among the "Workplaces that promote health", as part of the Rete WHP - Workspace Health Promotion – Lombardia programme, promoted by the Health Protection Agencies (ATS) of the Lombardy Region.

The modular use of the new spaces described above made it possible to hold in-person wellness activities across various company locations: morning yoga sessions, meetings with wellbeing experts, as well as cultural and social initiatives such as film clubs and theatre. The first day dedicated to employees' family members and friends was also organised at the new headquarters in Milan in via Gioia 22.

The Group continued to engage in the organisation of in-person and streaming initiatives across the Italian territory, to be even closer to its people and spread awareness on well-being with a view to shaping the corporate culture and putting people increasingly at the centre:
- "Wellbeing Stories", a series of meetings with special guests to encourage reflection on balance, building, courage and kindness aimed at organisational wellbeing;
- "Respira. Coltiva il tuo equilibrio (Breathe. Cultivate your balance)", a five-stage journey scheduled every 21 days to practise mindfulness and promote well-being and balance in times of personal and work-related stress;
- "Food wellness workshop", four meetings to explore current topics such as detox nutrition, DNA and lifestyles, fake news, prevention;
- "Dialogue between experts", such as the one dedicated to Alzheimer's, bullying and cyberbullying, alcohol and smoking addictions;
- In-person "relational experiences" dedicated to individual structures or homogeneous clusters, to promote engagement through relational well-being, with dynamic formats and in locations that are disruptive to the work context.

Overall, over the course of the year, over 60 initiatives were organised in 17 locations across the country, involving a catchment area of approximately 22 thousand people. The initiatives were also made available in streaming.

Another important aspect is the Group's attention to people's health and mental well-being. In this context, the Group continued to provide its "Consultation and Support" activity, the psychological support service, available 24/7, 365 days a year, for the entire Group in Italy and abroad. In 2024, the service was enriched in Italy with the Social Care tool: in the psychological counselling area, a Social Care Manager can intervene to provide practical help to the Group's people in the search for local services in the caregiving sector (for example, child care, care for the elderly and/or people with disabilities). During 2024, the "Consultation and Support" service recorded a total of approximately 3 thousand accesses (Italy and abroad).

As regards CareLab, a workshop for the promotion of well-being that is divided into a structured offer of contents, tools and initiatives, both in digital form and in person, it implements new services or enriches itself with new opportunities:
- "Tecnogym app", a tool with innovative services to encourage a healthier lifestyle, through training in all disciplines and personalised paths;
- "LianeCare", a platform to source caring specialists - babysitters, carers, housekeepers and pet sitters - with the aim of supporting people in their search for qualified personnel;
- "Académia.tv", the online platform featuring cooking courses created with renowned Italian and international chefs, but also nutritionists, biologists and dieticians;
- "4Fooding", a web app for healthy eating, with daily and weekly menus, recipes and a team of nutritionists available for questions or personalised consultations;
- "21days", a web app that encourages the adoption of virtuous behaviours for emotional well-being, was enriched with two new training courses on how to manage technostress and aging. It currently provides multiple training courses (10 in total) to also alleviate cognitive load, increase energy, promote positivity, boost concentration, manage time, enhance emotional intelligence or self-esteem, and cultivate quality relationships. In particular, three intensive courses, dedicated to cognitive load, technostress and aging were set up following the 2022 applied research project dedicated to the well-being of the Group's people and quality of life at work, an initiative born from the collaboration between People Care, Health and Safety and the Neuroscience Lab of Intesa Sanpaolo Innovation Center, with the support of the scientific partner Scuola IMT Alti Studi Lucca;
- "#Stepbystep", an app that rewards an active lifestyle through steps, sports and challenges between colleagues, hosted "special initiatives in steps" that involve groups of people in achieving ESG goals: by transforming the steps taken into tangible actions, everyone was able to combine attention to well-being with support for environmentally-friendly initiatives or support for the most vulnerable people;
- "MasterClass CareLab", a digital initiative entirely dedicated to a Regional Governance Centre (Veneto and Trentino-Alto Adige), to create engagement and involvement on wellness topics thanks to the gradual use of the platform's contents through specific wellness courses (anti-stress, energy, etc.).

As of 31 December 2024, there are 56 thousand people making use of CareLab services on platforms, apps and web apps.
CareLab continues to host initiatives of openness and attention to the issue of disability, in collaboration with Disability Management and Health and Safety, for example the first meeting of the series dedicated to the so-called "Invisible Diseases".
Within the International Banks Division (IBD), the process of extending the CareLab platform to all the Group's people was completed, according to the release plan established for the provision of the HR #People portal.

By leveraging on the experience gained in the emergency period and with the contribution of internal surveys, the banks within the scope of the International Subsidiary Banks Division (IBD) launched new flexible working projects and models, in line with the provisions laid down by local laws. The common threads of these initiatives are the identification of a number of days for flexible work, the redesign of the layout of company office spaces on the basis of the new needs and the extension of flexible working to a greater number of people. The situation in 2024 sees the application by all banks within the scope of the International Subsidiary Banks Division of a flexible working method for the head office departments, with extension also to the network for some of them.

With a view to improving employees' work-life balance, the Group designed the "Life grafted into work" course, involving 280 people from the Division's head office departments, with the aim of generating ideas followed by commitments to improve well-being. The banks within the scope of the International Subsidiary Banks Division also developed several activities aimed at improving the quality of working life, including: the institution of the sabbatical month, available at VUB for 3 months a year and at CIB for 1 month, the launch in VUB of the pilot project for the experimentation of the short working week in specific head office structures, with the option to request the use of the working week over four 9-hour days, for a maximum of 36 weeks a year. Also at VUB, a pilot project was carried out on 6 branches as part of the "Smart Working 2.0" project, allowing colleagues in the network to work more flexibly as well. A gradual extension to other VUB branches is planned starting from January 2025. Pravex also implemented the new Smart Working procedure on its head office structures since April.

As part of the "People First" programme designed in the Human Resources area, which puts people at the centre and guides them towards change, specific aggregation and reflection initiatives were created for the people of the Division's head office departments and for the entire scope of the International Subsidiary Banks Division.
With reference to the "People Make Places" initiative, cross-country well-being activities were carried out to extend well-being objectives to the Division with a view to social sustainability: in continuity with previous years, the "Emotionology" programme was launched across all IBDs, within "BeWell", a project dedicated to the full well-being of company employees. The so-called Emotional Talks, monthly webinars dedicated to exploring emotional intelligence in its various components, are part of this programme. At the end of the course, participants, both from head office departments and banks, had the opportunity to represent their emotions in a creative artifact, a work of art to testify their emotional discoveries, taking the opportunity for a mutually beneficial cultural exchange. The colleagues' works were exhibited at the first IBD Art Exhibition at Gallerie d'Italia. In addition, in synergy with the Parent Company's People Care team, webinars dedicated to health were organised, with a focus on mental health, also thanks to the "Care Connect" service, equivalent to the Consultation and Support Service for international subsidiary banks.

Privacy of the Group's people

Policies relating to the privacy of the Group's people

The Intesa Sanpaolo Group has always maintained a high and constant commitment to protecting the personal data of the people with whom the Group interacts, ensuring the collection and processing of data in compliance with current legislative provisions.
The regulatory framework for personal data protection is represented by Regulation (EU) 2016/679 (so-called General Data Protection Regulation (GDPR) which came into force on 25 May 2018, whose new rules have been incorporated by the Group and formalised in the main internal governance documents consisting of the Code of Ethics, which outlines the principles and values on which the Group bases its choices and activities, and the Internal Code of Conduct, which defines the conduct that the Group's employees and collaborators are required to adhere to in order to ensure the correct processing of data.
Upon entering into an employment contract, employees and collaborators are provided with a privacy policy that clearly and transparently details which data is processed, the methods of collection, the legal bases and purposes of processing, the retention periods, the rights recognised by the GDPR and the contact details of the Data Protection Officer (DPO) in order to communicate to the data subjects all the necessary information to ensure the correct processing of their data.

Furthermore, its suppliers are required to comply with the policies, regulations and standards relating to personal data protection, defining their subjective role in the processing activities, assessing the existence of the necessary safeguards, formalising the contractual terms and conditions, and implementing compliance and adequacy assessments.
More specifically, the GDPR has introduced the accountability principle which requires the data controller to implement regulatory, organisational and technological measures aimed at ensuring that the processing of personal data takes place in compliance and in the light of the criteria laid down in the Regulation such as privacy by design, privacy by default, the appointment of the Data Protection Officer, privacy impact assessment, the record of processing activities, the subjective role of third parties and data breach management[121].

The Group, having companies located in various EU and non-EU countries, complies with the provisions expressly set forth by local regulations on the protection of personal data. The Group has issued specific governance documents which provide clear instructions on the conduct that employees and collaborators must maintain to ensure the correct collection, use and protection of personal data in compliance with current national and international legislation and the principles that guide the Group, formalised in the Code of Ethics and the Internal Code of Conduct. These provisions are set out in the Guidelines on the protection of personal data of natural persons and in the Corporate Rules for the processing and protection of personal data of natural persons.

The Guidelines define the model for managing the compliance risk in terms of personal data protection of all natural persons with whom the Group interacts, including employees and collaborators, laying down the general principles and setting out the roles and responsibilities of the corporate bodies and structures involved, the macro-processes for monitoring and controlling the risk, as well as the Group's guidance and coordination model. Furthermore, they lay down the obligations required for the purposes of personal data processing and protection and establish the application of sanctions in the event of non-compliance with the provisions.
They are issued in compliance with external regulations, internal governance documents and in compliance with the provisions of the European Data Protection Board (EDPB), made up of representatives of the national supervisory authorities for personal data protection of the various European Member States. They apply to the Parent Company, its international branches and companies established in the European Union. The principles contained therein constitute a reference for the Group companies located outside the European Union. The Guidelines are generally reviewed on an annual basis and, before being approved by the Board of Directors, are subject to a concordance process involving the relevant corporate functions.

Pursuant to Art. 37 GDPR, the Board of Directors also appoints the Data Protection Officer who, in the fulfilment of his/her duties, is supported by the privacy function reporting to the Chief Compliance Officer Governance Area.

The following tasks are entrusted to the Data Protection Officer and the privacy function:
- monitoring and overseeing compliance with the GDPR;
- preliminary compliance check on new products, initiatives and services involving the processing of personal data;
- assessment of risks to the rights and freedoms of individuals when starting or changing any personal data processing activities (Privacy Impact Assessment) in accordance with Article 35 of the GDPR;
- assessment of the subjective privacy role played by Suppliers/Third Parties and preparation of the letter of appointment;
- management of customer requests regarding the exercise of the rights of the data subjects;
- management of replies to the Data Protection Authority and data subjects following reports or complaints lodged with the same Authority;
- guidance, coordination and control of the Group companies located in Italy and abroad (EU and non-EU);
- keeping and updating the Record of Processing Activities, as required by Article 30 of the GDPR, wherein all the personal data processing activities carried out are recorded. The Register shows the purposes of each processing, the data storage methods, the security measures applied and other information on the processing activities carried out;
- assessment of non-compliance events and personal data breaches;
- update of the list of third parties that process employee personal data;
- monitoring training courses on Privacy.

In line with the principles set forth by the Guidelines, the Corporate Rules for the processing and protection of personal data of natural persons detail the topics and provisions relating to the activities carried out by all authorised data processors, providing

[121] Data Breach refers to a 'breach of security leading to the accidental or unlawful destruction, loss, alteration, unauthorised disclosure of, or access to, personal data transmitted, stored or otherwise processed' (Art. 4, paragraph 12 GDPR)

precise operating instructions in order to comply with GDPR provisions. The Rules apply to the Parent Company, its international branches and the Group companies operating in Italy according to the centralised privacy governance model at the Parent Company.

The internal regulatory documents, including Guidelines and Rules, are published on a dedicated internal Group portal to which all employees and collaborators have access.

The privacy policy for employees has recently been restyled to ensure greater clarity and transparency, including through the use of specific graphics that facilitate its usability and ease of understanding. The document has been made available to all employees in a special reserved area. The document specifies that Intesa Sanpaolo processes personal data only for the purposes described and explicitly indicated in the same policy, made available to the data subjects, and that no processing is carried out for secondary purposes not explicitly indicated therein. When the contents of the privacy policy are updated, the document is sent to all employees and collaborators for their consultation.

Processes relating to the involvement of its employees and their representatives

The Code of Ethics defines the mechanisms for the adoption and governance aimed at integrating ethical principles and values into the corporate strategies, policies and procedures by sharing and disseminating the contents of the Code as widely as possible, and monitoring the related knowledge and awareness. Typically, employee involvement occurs indirectly and is guaranteed through trade union representation and governed by sector provisions and the industrial relations protocol.
In the privacy area, direct employee involvement is expected when entering into the employment contract, through the provision of the privacy policy by human resources and made available on the Group's internal portal. As required by the legislation and the Guidelines, the policy is drafted in a concise, transparent, intelligible, easily accessible form and with simple and clear language to communicate to the data subjects the necessary information to ensure correct and transparent data processing. When the contents of the privacy policy are updated, the document is sent to all employees and collaborators for their consultation and made available in the Group's internal portal.

Remediation processes for employees and their representatives and channels to submit complaints

In order to reduce risks and ensure full knowledge of the policies, the Group has issued specific Governance documents that provide clear instructions on the conduct that employees and collaborators must maintain to ensure the correct collection, use and protection of personal data, in compliance with current national and international legislation and the principles that guide the Group, formalised in the Code of Ethics and the Group's Internal Code of Conduct.
The Group has adopted a model for the management of critical events that defines the activities aimed at efficient incident management, requiring the involvement of different Functions depending on the nature of the specific case. In this scenario, the Data Protection Officer manages non-compliance events by providing assistance and collaboration to ensure the identification and implementation of actions to eliminate or mitigate the effects of the event. If the event constitutes a personal data breach, the Data Protection Officer is required to assess its impacts in terms of tangible risk for the rights and freedoms of natural persons, implementing the corporate processes defined by the Data Controller: if the risk is high, he/she notifies the Authority and, in the case of a particularly high risk, he/she also notifies the data subjects.

In 2023, the Guidelines on the protection of personal data of natural persons and the Corporate Rules for the processing and protection of personal data of natural persons were updated, outlining the management model for the compliance risk in the context of personal data protection, laying down the general principles and defining the roles and responsibilities of the Bodies and corporate structures involved. Furthermore, they lay down the obligations required for the purposes of personal data processing and protection and establish the application of sanctions in the event of non-compliance with the provisions.
Failure to comply with external or internal regulations on privacy protection by a data controller will result in the activation of a procedure aimed at verifying the actual unlawful conduct. In the event of ascertained and unjustified violations, the relevant Functions are always informed for the initiation of disciplinary proceedings which normally end with the imposition of one of the measures provided for by the Disciplinary Code against the defaulting individual.

In case of reports concerning privacy issues or requests to exercise rights, employees can contact the DPO, whose contact details are included both in the policy provided to all employees, and on the Group's institutional website, Privacy section, and in the specific internal process guides published on the internal portal.
Requests can be sent electronically (e-mail, certified e-mail) or in hard copy, and are treated with an adequate level of confidentiality and protection of the data of the data subjects who use them. The monitoring of the receipt of requests falls under the responsibility of the privacy function, which manages the reports and requests received and guarantees their timely processing according to the terms laid down by the legislation.

As part of the integrated internal control system, the Control Functions carry out checks with diversified depth and frequency, relating to the compliance of the activities with the regulatory requirements on personal data protection and the correct implementation of the measures issued by the Data Protection Authority on these issues. The outcomes are reported to the Board of Directors.
In this context, the Chief Audit Officer carries out periodic control activities defined not only on the basis of specific regulatory obligations in the matter (audits conducted annually), but also from a risk-based perspective, also taking into account the findings reported by other corporate control functions.
Generally speaking, the independent checks of the Internal Audit are aimed at ascertaining the completeness, adequacy and functionality of the management model for the compliance risk in terms of data protection, reporting any irregularities relating to personal data processing to the competent corporate structures, to the DPO and reporting to the Board of Directors. The DPO, in compliance with the GDPR and the Guidelines, is tasked with preparing a report, at least annually, to report to the Board of Directors any data protection issues of particular importance. This commitment allows, through the adoption of appropriate measures, for the mitigation of reputational and non-compliance risks in the processing of personal data, also with respect to the

lawfulness and fairness of the processing, the purpose of the processing and its relevance, and the completeness and non-excessive nature of the data collected.

Objectives relating to the privacy of the Group's people

As mentioned in the previous sections, in addition to reporting targets on employment protection and industrial relations, diversity, equity and inclusion and training and development, the Group highlights a series of policies and actions to protect its own employees on issues relating to the Privacy of the Group's people (for example, Code of Ethics, Internal Code of Conduct, GDPR, awareness-raising activities, etc.).
In this context, the measures put in place by the Bank make it possible to monitor and address these issues on an ongoing basis, allowing the objectives set to be achieved even without a precise definition of quantitative and measurable targets in a limited time horizon.

Actions relating to the privacy of the Group’s people

As already mentioned, the Data Protection Officer monitors the compliance risk according to a risk-based approach by ensuring the application of the principles of Privacy by Design aimed at determining from the outset the personal data protection rationale through the identification of potential risks for the rights and freedoms of the data subjects and the technical and suitable organisational measures for mitigating such risks, and the performance of a privacy impact assessment for the evaluation of the impact on data protection before proceeding with one or more processing activities that may present a high risk for the rights and freedoms of natural persons.

In 2024, awareness-raising activities targeted at the Group's employees and relating to data protection issues continued. This awareness is achieved through the provision of mandatory training e-learning courses which include a final test and the provision of new modules to allow personnel to learn the legislation in practice and to continuously update their knowledge. The Group, through specific tools, monitors course participation and pass rates of the related tests. For further information on mandatory training, see the “Training and Development” section.

ESRS S2 – Workers in the value chain

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS2 – General disclosures: Double materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within the scope of ESRS S2 – Workers in the value chain were identified taking into consideration the specific features of the Group. In particular, the mapping of such impacts, risks and opportunities was carried out on the basis of the context in which the Group defines and implements its business activities and relations (for example, internal Guidelines on environmental and energy policy, Group Guidelines for the Governance of Environmental, Social and Governance (ESG) risks), of the measures/actions implemented by the Group to contribute to the protection of workers' rights in the upstream and downstream value chain.

The types of value chain workers considered to be subject to material impacts, risks and opportunities include employees of the company being financed or in which the Group invests, workers employed in the supply chain, temporary or flexible staff and outsourced resources. These groups of people can be significantly affected by direct business operations and decisions made.

For the purposes of impact materiality, the assessment of the impacts identified involved interviews with competent internal units and an in-depth qualitative and quantitative analysis based on the criteria envisaged by relevant legislation (namely, scale, scope, irremediable character of the impact and likelihood). Specifically, with reference to:

- upstream value chain: the impact assessment involved ESG questionnaires administered to Group suppliers and an analysis of their feedback;
- downstream value chain: an analysis was carried out on the indirect impacts conveyed through the exposures on the Group's portfolios and concerning in particular the workforce of counterparties/companies belonging to sectors/countries with a high impact from the point of view of the recognition/protection of workers' rights. In addition, relevant investment/lending criteria and strategies were taken into account by Intesa Sanpaolo in assessing the counterparties.

Following the impact materiality analysis, the following outcomes emerged: negative indirect material impacts were identified with reference to the downstream value chain. Specifically, the materiality is linked to exposures, within the Intesa Sanpaolo Group portfolio, towards counterparties belonging to sectors that may contribute negatively to the issue of working conditions (adequate wages, social dialogue, freedom of association, existence of works councils and rights to information, consultation and participation of workers, collective bargaining, work-life balance, health and safety).

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the scopes identified. In identifying risks and opportunities that have or could have financial impacts, the Group also considers all dependencies thereof on the identified impacts. For example, a negative impact related to lending/investment in sectors/countries that are potentially more exposed to risks related to the protection of their employees' rights could lead to a credit/market risk arising from the portfolios to which the Group is exposed given the high concentration in these sectors/countries.

With reference to risks, the following assessments were made for the different scopes of reference identified:

- upstream value chain: the reputational risk to which the Group is potentially exposed was primarily assessed, in the event whereby it retains suppliers who adopt less structured measures with respect to this issue (for example, limitations on the renewal of employees' fixed-term contracts, inadequate preparation of company welfare/benefit systems);
- downstream value chain: credit risk and market risk related to detailed issues (for example: adequate wages, collective bargaining) were assessed. This would also give rise to reputational risk.

Following the analyses conducted for the purposes of financial materiality, the associated credit and reputational risks were identified as material, with reference to workers in the downstream value chain, specifically with regard to the adequacy of wages, social dialogue, freedom of association, including trade unions, work-life balance, health and safety. Reputational risks are also material with reference to the upstream value chain, with regard to salary adequacy and social dialogue, and freedom of association, including trade unions.

Based on the financial materiality analyses carried out and in consideration of the Group's business, no specific opportunities were identified with reference to the standard in question.

Management of sustainability matters related to workers in the supply chain

The Group's commitment to supply chain workers' rights

In line with its corporate strategies and objectives, the ISP Group establishes relations with suppliers aimed at safeguarding the principles of ethical, social and environmental responsibility and favours business relationships based on trust and transparency.
The Group's commitment is formalised in the Code of Ethics, which incorporates the Human Rights Principles that inspire the Group. This commitment is in line with the UN Universal Declaration of Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work, other fundamental labour conventions, the UN Guiding Principles on Business and Human Rights, the OECD Guidelines for Multinational Enterprises. Furthermore, the Group is a member of the UN Global Compact.
With reference to the Code of Ethics, the following principles were identified, which must be observed during the processes applied to govern the Group's procurement activities, with a view to transparency and fairness in the selection of suppliers and in the performance of the sourcing process:
- non-discrimination on the basis of gender, gender identity and/or expression, emotional-sexual orientation, marital status and family situation, age, ethnicity, religious belief, political and trade union affiliation, socio-economic status, nationality, language, cultural background, physical and mental condition or any other characteristic of a person, including those related to the expression of their thoughts;
- right to health and safety by avoiding business relations with suppliers involved in violations of applicable regulations;
- combating forms of child and forced labour, avoiding business relationships with suppliers involved in violations of this principle.

The Group, operating in line with the UN Guiding Principles on Business and Human Rights, is committed to ensuring respect for human rights also with reference to workers along the supply chain, as well as to identifying, reducing and, where possible, avoiding any negative repercussions of its activities on them.
The Group's Human Rights Principles therefore recognise the responsibility to verify, during the selection phase, that suppliers and sub-suppliers:
- base their activities on social and environmental sustainability;
- adopt the necessary measures and tools to minimise the possible negative impacts caused by their activity;
- guide their policies towards respect for human and workers' rights and environmental protection.

Policies relating to workers in the supply chain

The Group defined internal procurement guidelines that apply to all companies, with the aim of defining the roles and responsibilities of the Corporate Bodies and structures of the Bank and the Group companies in the procurement management process, as well as the principles and macro-processes to be observed during all management phases for the purchases of goods and services, in compliance with:
- the principles of the Code of Ethics referred to above and the provisions of the “Group Internal Code of Conduct”;
- compliance with current guidelines on environmental, social and governance sustainability to ensure respect for the environment, human rights, working conditions and business ethics throughout the supply chain, also by evaluating specific local features;
- compliance with the regulations on health and safety in the workplace, including in relation to the risks to which service providers and suppliers in general who operate in premises available to a Group company are exposed.

Responsibility for approving these guidelines lies with the Board of Directors of Intesa Sanpaolo in its capacity as parent company. The structure responsible for their implementation is the Chief Cost Management Officer Governance Area.

The internal procurement regulations also describe the operating rules that must be applied to the procurement process for centralised classified purchases[122]. The main criteria underlying the procurement strategy concern first and foremost:
- transparency and tracking of the entire procurement process;
- formalisation of the agreement in compliance with the Group's standard regulatory conditions;
- attention in relations with third parties to the monitoring of operational risks, compliance with the Group's general guidelines on reputation and governance of environmental and social risks, as well as the overall sustainability of the choices adopted.

With reference to this last point, the supplier's choice must take into due consideration, in addition to its specialisation in the required product area and its economic/financial solidity, also its reputational and sustainability profile (ESG).

For the autonomous spending categories, the structures of the Parent Company and the Group companies are required to adhere to the general principles listed above and to adopt similar methodologies and operating standards to those provided for by the Group procurement guidelines; they are also required to operate in compliance with the guidelines in force within the Group on social and environmental sustainability.

In order to be included in the Group's Suppliers List, suppliers are subject to an initial due diligence that evaluates their economic/financial and reputational solidity and their propensity for social responsibility matters, through the compilation of specific questionnaires, determining the attribution of an overall score and a consequent qualification status. The overall score is therefore also influenced by sustainability matters. In particular, the ESG questionnaire is mandatory for all new suppliers; from the time of the supplier's qualification, the monitoring phase begins which, through a daily interface of a series of Group internal

[122] The Group's procurement model is divided into two models: (i) in the "centralised procurement" model, the designated head office structure carries out procurement activities directly for the Group entities or provides them with assistance, and (ii) in the "autonomous procurement" model, the Group entities carry out procurement activities independently, according to their own processes, in relation to the product categories not covered by the "centralised procurement" model. The principles and rules defined in the internal procurement regulations apply to both models.

and external input sources, detects any variations for better or worse of the qualification indicators, thereby updating the overall score and the qualification status.
The main policies that each supplier listed in the Group Register must adopt regarding workers' rights and human rights are disclosed within the Supplier Portal. The general approach to respecting these rights is based on the recognition of fundamental values from the very beginning of the contractual relationship. Suppliers listed in the Supplier Portal operating with the Intesa Sanpaolo Group must therefore declare that they have read the Code of Ethics, the Group's Internal Code of Conduct, the Anti-Corruption Guidelines, the Disclosure on the Diversity, Equity and Inclusion Principles, the Organisational, Management and Control Model and the General Supply Terms and Conditions. In the latter, particular attention is paid to compliance with labour law, immigration laws, adequate economic, salary, regulatory, social security and insurance treatment and workplace safety regulations, both with respect to its own workers and the personnel of any subcontractors. At the start of the relationship and upon each subsequent appointment, the General Supply Terms and Conditions are resubmitted for signature purposes. Violation of the above principles constitutes grounds for termination of the contract.
The disclosure of these principles to the entire supply chain falls under the responsibility of the suppliers in charge of the contract who, by signing the General Supply Terms and Conditions, take responsibility for ensuring that their employees and any subcontractors comply with the regulations and any reference principles.

As of 2025, a Procurement Code of Conduct will also be adopted, to be disclosed to all suppliers listed in the Group's Supplier Register, with a commitment to disclosing it in turn to all workers and ensure acceptance of the code by all suppliers with an impact on “green” and “social” categories by 2028.

Involvement and remediation processes

Given the type of goods and services purchased by the Intesa Sanpaolo Group, direct contact with individual workers is sporadic. Consequently, their involvement occurs indirectly through representatives, selected from time to time based on the type of service purchased and the complexity and size of the supplier company.
The contractual clauses establish that each party must appoint its own Operational Representative, who will be the only authorised interlocutor for the management of relations pertaining to the fulfilment of the contract.

With regard to the services purchased by the Bank, the assessment of the correct application of contracts regarding respect for workers' rights is provided for in specific contractual clauses, which entail the possibility of carrying out spot checks on the regular payment of wages, contributions and taxes, including, for example, the verification of the payment of wages and mandatory contributions by the supplier. For suppliers with registered offices in Italy and qualified in the Group Supplier Portal, the document certifying the regular payment of workers' social security and welfare contributions is constantly monitored.
Attention is paid to all workers in the supply chain, including the most vulnerable categories. The contractual clauses therefore provide for the appointment of a supplier health and safety representative, who is responsible for ensuring compliance with health and safety regulations, coordination with the Group and informing the personnel involved of any risks existing in the environment in which they will operate and of the procedures and regulations in force therein. The Standard Supply General Terms and Conditions also require the supplier to guarantee that the contractual activities are carried out in compliance with the accessibility requirements for websites and mobile applications laid down by the applicable regulations. Accessibility refers to the ability of information systems to provide services and information that can be used, without discrimination, even by those who, due to disabilities, require assistive technologies or special configurations.

In light of the monitoring activities of the qualification indicators of the suppliers listed in the Group Supplier Register, negative events may be detected which are associated with a risk level that may influence the supplier's final score to the point of making it no longer usable. Based on the severity of the cases, the remedial actions to be adopted are defined, which may lead to the termination of the contract. Where the information collected is deemed to be an obstacle to the start of a collaboration relationship, new engagements and/or the maintenance of existing relationships, the supplier will be placed on a blacklist, making it no longer eligible for engagement.

The Group provides its suppliers, including their workers, with various channels and internal procedures that can be used to collect, analyse and address reports of alleged incidents of non-compliance in relation to workers' rights, including those laid down by the Human Rights Principles adopted by the Group, as described in the above paragraphs. No cases of serious human rights incidents were identified in relation to these channels and procedures.

The afore-mentioned reporting channels, including the Code of Ethics inbox and the whistleblowing channel guarantee confidentiality and absence of retaliation to the whistleblower. As previously reported, suppliers listed in the Supplier Portal are required to read the Group's Code of Ethics and disseminate its principles to the entire supply chain, including their own workers.
For further information on the Code of Ethics reporting channel and the whistleblowing procedure, reference is made to the paragraphs “Corporate Culture” and “Protection of Whistleblowers” in the ESRS G1 – Business Conduct chapter .

Objectives and actions relating to the workers in the supply chain

During the year, the mapping of social, environmental and governance sustainability continued with the aim of strengthening the assessment and selection criteria of the best suppliers.
The actions put in place by the Group within its supply chain are aimed, for example, at preventing the negative impact generated by the potential exposure to suppliers who are more exposed to risks pertaining to the protection of their employees' rights.
Starting from 2023, an internal company platform (Qualification Portal 2.0) was set up for managing the qualification process and monitoring of suppliers listed in the Group's Supplier Register. This application allows to automate the collection of all the necessary information for the initial due diligence and subsequent monitoring of the counterparty, focusing the control activities on the most critical aspects. It also allows to evaluate suppliers on aspects concerning business ethics, respect for human rights, workers' rights and the environment, based on the declarations submitted when filling out specific questionnaires and/or on the possession of certain certifications.

Based on the information collected, an ESG score is assigned that expresses the supplier's quality on sustainability issues and can influence the choice of the best suppliers in relation to specific procurement requirements, including from a risk-based perspective. It follows that, in relation to specific product categories with a greater environmental or social impact, suppliers who fail to comply with the minimum requirements can be excluded from tenders.

In 2024, a total of over 2,400 criticality reports were analysed (attributable to approximately 13% of the suppliers qualified in the Register), in order to prevent the selection of suppliers not in line with the company's principles. Of these, approximately 240 were assessed as high risk and approximately 50 as medium risk, resulting in a reduction in the overall score. Following the critical issues identified, over 30 suppliers were blacklisted; this also includes counterparties who failed to provide the requested documents and/or who did not fill out the requested questionnaires.
In addition, approximately 23,800 compliance checks were conducted on documents uploaded to the Supplier Portal, including the document certifying the regular payment of tax and social security contributions. Suppliers showing irregular profiles are subject to a 30% reduction in their overall score for the entire duration of this condition and may consequently suffer limitations in the assignment of new contracts. The Group also launched a specific check on the regularity and correct updating of the ESG certifications uploaded to the Supplier Portal.
In line with the objective of achieving a complete measurement of the environmental and social sustainability of all active suppliers listed in the Group's Supplier Register by 2025, direct actions were launched during 2024 to encourage as many suppliers as possible to complete the ESG questionnaire. At the end of 2024, the ESG mapping coverage was overall 86% of the number of qualified and engaged suppliers.

As regards the commitment of the Chief Cost Management Officer Governance Area to pursue economic development through sustainable procurement, it is standard practice to launch competitive tenders through the Supplier Portal to assign new contracts with a high workforce impact; this allows to identify the target reference price, excluding the application of unfair rates, to offer each participant the same opportunities to participate and to ensure the traceability of the entire process. In certain contexts, the service specifications being tendered may refer to the rates of the relevant collective bargaining agreement.
The Chief Cost Management Officer Governance Area contributes to the input of the Risk Appetite Framework (RAF) for risks on supply relations: for example, supplies assigned to suppliers with a high-risk credit rating or at risk of default and suppliers for which the share of procurement is greater than 60% are identified. These indicators are constantly monitored and reported quarterly to the Risks and Sustainability Committee. With regard to the Group's exposure with reference to the social dimension, the RAF highlights an early warning threshold in relation to the Group’s exposure towards sectors characterised by significant issues, especially with regard to the social dimension, in line with the ESG sectoral strategy of associated credit disincentives.

At the end of 2024, a new element was gradually introduced into supply chain assessment practices: for all suppliers who are also Intesa Sanpaolo Group customers and who have been assigned a counterparty ESG score, the sustainability assessment carried out as part of the qualification processes was replaced in order to enhance the outcomes of this score during the selection phase. For further information on the counterparty's ESG score, reference is made to the following paragraph on Management of sustainability matters relating to employees of portfolio companies, as well as to the paragraph Strategy to combat climate change at portfolio level in the ESRS E1 – Climate Change Chapter.

In order to implement the Group's commitment within the scope of its supply chain and the workers involved in it, and to achieve the set objectives, the following main actions are planned for 2025:
- provision to suppliers of specific webinars related to supply chain employees;
- adoption of a Procurement Code of Conduct to be disclosed to all suppliers listed in the Group Supplier Register, with a commitment to disclosing it in turn to all workers;
- completion of mapping of all suppliers from an ESG perspective, identifying any suppliers that deviate from the model or that present critical aspects;
- definition of mitigation and support actions for the most critical categories from a social perspective.

Management of sustainability matters related to workers of portfolio companies

Policies and processes related to workers of portfolio companies

The Group takes into account the ESG risks associated with the activities of corporate customers and pays particular attention to the in-depth analysis of sustainability matters connected to the credit granting process. To this end, general exclusion criteria have been established in order to prevent the financing of activities and/or projects with particularly significant social impacts. Specifically, the Group undertakes not to finance companies and projects if, at the time of the assessment of the transaction, they are located in areas of active armed conflict, or if evidence emerges, such as penalties, legal proceedings and judgements, relating to human rights violations and forced or child labour practices. In formulating the internal guidelines on ESG risks, reference is made to the principles defined by international best practices and to the developments promoted and expressed by regulators and supervisory authorities at European and international level. In particular, inspiration is drawn from initiatives aimed at promoting the best sustainability practices in the banking sector which the Group has adhered to, including UN Global Compact, UN Environment Programme Finance Initiative (UNEP FI), UN Principles for Responsible Banking, UN Principles for Responsible Investment, UNEP FI Principles for Sustainable Insurance, and Equator Principles (EPs).

The Chief Risk Officer (CRO) Governance Area develops and maintains, in conjunction with other relevant structures, the Guidelines for the Governance of Environmental, Social and Governance (ESG) Risks and the related implementing rules and is responsible for the design, development and maintenance of the internal system for the management and assessment of the Group's reputational and ESG risks. For further information on these Guidelines, reference is made to the section Strategy to combat climate change at portfolio level in the ESRS E1 – Climate Change chapter.

The Group recognises the risk associated with investment, financing and lending services to customers in sectors that present higher social risks in their operations and/or supply chains and accordingly promotes thematic and impact investments through which it can play an active role in helping to mitigate social issues such as economic and social inequalities. Therefore, as emerged from the double materiality analysis, a negative impact linked to financing/investment in potentially less virtuous sectors/countries with regard to the protection of their employees' rights could entail a credit/market risk given the high concentration towards such sectors/countries. In addition to issuing the Group's internal regulations for the governance of environmental, social and governance (ESG) risks, an ESG score was introduced which also aims to evaluate the social profile of corporate customers[123] (including labour management and standards, health and safety at work, policies for the inclusion and enhancement of diversity and human capital development) and a dedicated ESG & Reputational Risk Clearing process was set up to assess these risks. For further information on the Risk Clearing process, reference is made to the ESRS E1 – Climate Change chapter.

Given the context, positioning and operations of the Intesa Sanpaolo Group as one of the leading Italian and European financial institutions, it is currently difficult to structure and apply a dedicated process for the direct involvement of workers employed at the companies in the Group's portfolios, or to provide them with specific reporting channels through which they can communicate to the Intesa Sanpaolo Group their concerns and any negative impacts suffered, as required by ESRS standards.

Currently, the engagement and remediation methods on sustainability matters related to the workers of such companies can be conducted by the Group through dialogue with the counterparty included in the portfolio. In particular, the risk measurement and monitoring activities conducted by the CRO Governance Area can be considered forms of remediation of negative impacts suffered by workers in the downstream value chain.

Objectives and actions related to the workers of portfolio companies

The Group conducts activities and initiatives to support and monitor ESG issues, particularly social ones, which may include (with direct or indirect impacts) also the employees of its portfolio companies, paying particular attention to sustainability matters related to sectors that are sensitive to ESG and/or reputational risks. These projects are also conducted without the definition of quantitative objectives relating to the management of impacts and risks inherent to the workers of the portfolio companies, mainly due to the limited availability of quantitative information that allows to measure the effectiveness of one's actions. Likewise, it is complex to establish specific actions to support workers in the portfolio companies, with relative detailed indication of (i) qualitative and quantitative monitoring of the effectiveness of such actions and (ii) the quantification of specific resources dedicated to these issues.

[123] At the end of December 2024, the ESG score covers approximately 249 thousand Intesa Sanpaolo corporate customers.

ESRS S3 – Affected communities

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS2 – General disclosures: Double materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

The impacts, risks and opportunities within ESRS S3 – Affected communities were identified taking into consideration the specific features of the Group. In particular, the mapping of such impacts, risks and opportunities was carried out on the basis of a process of analysis of the initiatives implemented by the Group to support, protect and enhance the local Community of the territory in which it resides and of the programmes and safeguards put in place in order to minimise the negative impacts connected to the issue in question, with reference to its own operations and to the upstream and downstream value chain, in addition to an assessment of the risks linked to the aspects of the local Community of the territory to which the Group could be exposed.
The communities analysed mainly include companies in the social fabric in which the Group conducts its business activities, as well as the communities of people affected by the Group's main activities.

For the purposes of impact materiality, the assessment of the impacts identified involved interviews with internal units and external stakeholders and an in-depth qualitative and quantitative analysis based on the criteria envisaged by relevant legislation (namely, scale, scope, irremediable character of the impact and likelihood). Specifically, with reference to:

- own operations: the impact assessment was carried out on the basis of qualitative drivers linked, among others, to the presence of initiatives intended to support communities through the protection/enhancement of the territory in which they reside;
- upstream value chain: an analysis of the Group's business context and the categories of suppliers used by the Group was carried out;
- downstream value chain: the assessment focused on indirect impacts arising through exposures in the Group's portfolios, in order to take into consideration exposures to counterparties belonging to high-impact industries on the local communities.

The impact materiality analysis revealed the following outcomes with respect to the above scopes:

- own operations: significant positive impacts were identified linked to the presence of initiatives intended to support communities (in particular, in the area of adequate housing and adequate food), through the protection and enhancement of the territory in which they reside (so-called impacts linked to the territory, for example: initiatives relating to educational inclusion, youth employability, protection of cultural rights, social inclusion and cohesion, fundraising initiatives also through crowdfunding, initiatives to promote the country's cultural heritage, etc.).
- upstream value chain: considering the Group's operations and type of business, which focuses mainly on financial activities and services, no material impacts of the Group conveyed through the supply chain emerged;
- downstream value chain: significant negative impacts emerged (impacts related to security and in the area of indigenous peoples' rights) attributable to exposures, within the Group's portfolio, to counterparties belonging to sectors that may have a negative impact on the reference topic.

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the scopes identified.
With reference to risks, the following assessments were made for the different scopes of reference identified with regards to:

- own operations: in consideration of the specific features of the Group's core business and following interviews with the competent organisational units, no risks in relation to the topic in question were found;
- upstream value chain: in view of the specific features of the Group suppliers' business and following in-depth discussions with the dedicated structures, no risks were identified in relation to this issue;
- downstream value chain: credit risk and market risk with respect to indigenous peoples' rights and community safety impacts were assessed. This would also give rise to reputational risk.

From the analyses conducted, for the purposes of financial materiality, with reference to the downstream value chain, the credit risk was found to be material due to the Group's credit exposure to counterparties belonging to sectors that may contribute negatively on specific aspects such as impacts related to community safety and indigenous peoples' rights. As a result, the reputational risk arising from the negative impact of such credit risk on the Group's image was found to be material.

Finally, for the purposes of assessing the financial materiality of the opportunities, with reference to the scope of own operations, in-depth analyses were carried out with the dedicated structures and the presence of initiatives and KPIs in the Group's Business Plan relating to activities intended to support the community and the local territory was verified.

Following the analysis carried out, from a financial materiality perspective, with reference to the scope of own operations, material opportunities emerged linked to the improvement of brand reputation for initiatives connected to the topic of adequate housing and to the increase in stakeholder trust with regard to the topics of adequate food and impacts linked to the local territory (for example: initiatives to support young people, minors and vulnerable people to combat educational poverty and support social mobility, promotion of youth employability, female entrepreneurship, social inclusion projects, support for people in difficulty through facilitated access to public/private healthcare).
The Group's attention to community interests is reflected in the importance given to community social needs within the corporate strategy and the 2022-2025 Business Plan. In this sense, the Group defined objectives to support communities, to address their social needs, combat inequalities and promote their social, educational and cultural inclusion. The essential rights of every citizen, such as the availability of food and housing, access to care and medicines, and educational opportunities, including financial ones, are supported by the Group through an extensive policy of investments in the community. The local initiatives have the dual objective of generating a positive impact, responding to the needs of stakeholders, and pursuing material opportunities with a view to positioning itself among the leading global companies in terms of social impact, including through collaborations with non-profit sector entities.

Communities affected by own operations

Policies and processes relating to the communities affected by own operations

The Group's commitment to community rights

The Group places great importance on projects that promote growth and social, educational, cultural and civic inclusion in the communities where it operates, thereby contributing to the development of more innovative and inclusive societies. Support for groups of disadvantaged people, young people, the community and the territory, together with the promotion of Italy's artistic, cultural and natural heritage, are fundamental elements deeply rooted in the Group's history and operating practices.
The latter extends its commitment to human rights also within the communities, in particular with respect to the selection of beneficiary entities and the contributions that it intends to disburse and by promoting listening and dialogue with civil society. The formalisation of its commitment is contained within the Code of Ethics, which also integrates the Principles on human rights that inspire the Group, in alignment with the UN Universal Declaration of Human Rights, UN Guiding Principles on Business and Human Rights, OECD Guidelines for Multinational Enterprises, ILO Declaration on Fundamental Principles and Rights at Work and other fundamental Conventions on labour matters. The Group is also a member of the UN Global Compact.

In this sense, the Code of Ethics is the reference regulatory instrument with reference to relations with the local communities. In particular, the Code of Ethics and its principles are connected to the impacts and opportunities considered material for the Group, and more precisely to the issues of "Adequate Housing", "Adequate Food" and "Impacts on the territory". The principles recalled therein refer to the fulfilment of the material and cultural needs of the community and guide the Group's relations with local communities with respect to the following macro-areas:

- support to the non-profit sector for a fair and cohesive development of society, committing to supporting social enterprises and non-profit organisations through partnerships, promoting networks of social enterprises and creating replicable intervention models to promote inclusion and service to communities;
- support to communities and their material and cultural needs through donations, sponsorships and partnerships, ensuring consistency with the reference values and corporate strategies, and enhancing the historical, artistic, cultural and natural heritage;
- promotion of local economies and strong roots in Italy and abroad, effectively supporting the territory, combining economic results and respect for local values, supporting small and medium-sized enterprises and promoting initiatives with high social and environmental value.

The principles of the Code of Ethics apply to the activities of the Intesa Sanpaolo Group and concern all interventions dedicated to local communities, disadvantaged people, young people, the community and the territory as well as relations with social enterprises and non-profit organisations (NPOs) - such as Volunteer Associations, Social Promotion Associations (APS), Foundations and Consortia - through co-planning and partnership activities aimed at activating projects and initiatives in favour of the territories and the community. For further information on the application of the Code of Ethics and its alignment with the main existing national and international guidelines on corporate social responsibility, reference is made to the paragraph “Policies, objectives and actions relating to corporate culture” in the ESRS G1 – Business Conduct chapter.

Social impact on the community

In implementing the general principles and values described above, the Intesa Sanpaolo Group plays an active role in supporting the local territories and communities in which it operates, through multiple tools, initiatives and programmes.

The Articles of Association of the Parent Company Intesa Sanpaolo provide for the option to allocate a portion of distributable profits to charity, through the establishment of a special fund, called the "Allowance for charitable, social and cultural contributions" (hereinafter, "Charity Allowance"), which is headed by the Bank's Presidency.

Furthermore, the Articles of Association grant to the Board of Directors of Intesa Sanpaolo, among other things, the power to intervene with donations within the framework of an annual plan of interventions to support worthy initiatives, in the event of emergency events or to support specific situations in the local territory. In accordance with the relevant clauses of the Articles of Association, the Board of Directors ensures the coordination of such disbursements, approving the general regulation thereof, also in accordance with the Group's attention and responsibility towards environmental, social and governance issues. The Board of Directors, with the support of the Risks and Sustainability Committee, also defines the general criteria and lines of intervention for charitable donations and performs all strategic supervision duties.

The disbursements in support of these initiatives extend both to the Italian territory and to the foreign countries in which the Group operates. Donations are intended for non-profit organisations, including religious and non-commercial public entities.

Intesa Sanpaolo, with the aim of positioning itself among the world leaders in terms of social impact, implemented its organisational structure to strengthen its intervention strategy in favour of the country, local territories and communities and set up new Governance Areas to consolidate ESG activities and strengthen the ESG strategic direction. Within the new Chief Sustainability Officer Area, the Chief Social Impact Officer Governance Area, set up in April 2024, oversees, through Intesa Sanpaolo for Social Impact, the direction, governance and implementation of the Social Impact initiatives and projects carried out by the Group, ensuring the relationship with the main stakeholders and social players in coordination with the competent Group functions.
In this context, the Social Action Plan was developed, which, starting from the social ambition, identifies the lines of action conducive to the achievement of the Group's social objectives. Its definition is based on the analysis of the social context, current and latent needs, risks and emerging trends, and a set of social challenges identified also through ongoing dialogue and mutual exchange with the relevant social stakeholders. Intesa Sanpaolo for Social Impact, in line with the Group's objectives, defined the following 4 lines of action, called "Social Routes":
- combating material, financial and educational poverty and promoting access to employment;
- supporting access to health, care and treatment;
- promoting social integration, local development, the enhancement of unused assets and spaces and social housing;
- developing new social projects with public institutions and social players, transferring replicable and scalable skills.

The Social Action Plan, thanks to the 4 lines of action mentioned above, represents a plan of interventions in response to the impacts and opportunities considered material for the Group, with particular reference to the issues of "adequate housing", "adequate food" and "impacts on the territory". The Plan's action areas concern multiple stakeholders and beneficiaries, including young people and minors, women, people in poverty, seniors, vulnerable people, communities, immigrants and refugees, and involve public institutions and various social players, including non-profit organisations. The responsibility for defining the Social Action Plan is entrusted to Intesa Sanpaolo for Social Impact, the structure responsible for the strategic supervision of the Group's social activities, which promotes initiatives in favour of the territories and local communities with particular attention to combating poverty and inequalities and defining strategies to support inclusive education and the employability of young people and individuals. Intesa Sanpaolo for Social Impact also pursues the aim of spreading the social culture, ensuring the supervision and general direction of the impact finance governance process, coordinating the Group's commitment in the area of social housing, managing institutional relations with the players involved and implementing specific projects aimed at strengthening the Group's leadership position in terms of social responsibility. In support of the implementation of the Social Action Plan, the Group set up the Intesa Sanpaolo for Social Impact Observatory, whose task is to analyse and monitor the main current and emerging social scenarios, trends and needs, also in order to guide the Bank's social action. The Social Action Plan and the resulting initiatives are subject to a dedicated enhancement and communication strategy through a multi-channel dissemination of the social culture inside and outside the Group, through a dedicated section of the website, social media, events and communication platforms of the partner network.

Charity Allowance

The Charity Allowance aims to contribute to the achievement of the social objectives of the Intesa Sanpaolo Business Plan, providing support to the most vulnerable people also with a view to contributing to the achievement of the UN Sustainable Development Goals (SDGs) set by the UN 2030 Agenda for Sustainable Development.

The Charity Allowance operates on the basis of a Regulation and Guidelines. The Regulation, approved and issued in 2016 by the Board of Directors of Intesa Sanpaolo, governs the management of the Charity Allowance and defines the mechanisms for the selection of entities and projects, according to the principle of separating charitable initiatives from the pursuit of business interests. Only non-profit organisations, not involved in known legal disputes, in matters concerning organised crime and the failure to respect human rights, peaceful coexistence and environmental protection and whose reference values are consistent with those set forth in the Group's Code of Ethics, may access the resources of the Charity Allowance. The Regulation also excludes the following from the category of beneficiaries: private citizens; political parties, political movements and their organisational branches; trade unions and employers' organisations; regions, provinces and municipalities, except for specific initiatives of particular social, cultural or scientific significance.

With regard to the requests, only projects with a clear social impact are evaluated and the ability to achieve the declared objectives is reviewed through the analysis of the proposing entity's track record. Priority is given to requests with the best project structure, with the most significant results and social impact and with a more careful and effective use of resources.
Donations can be of different amounts and, depending on their purpose, are divided into two types:
- local donations, up to a maximum of 5 thousand euro, managed in a decentralised manner by the Banca dei Territori Division and provided to support small projects with a direct local impact, expressions of the community to which they belong;
- central donations, of an amount greater than 5 thousand euro, managed centrally by the Chair's Technical Secretariat and granted to medium-large projects, with a significant social impact.

The Guidelines identify the high-level strategic objectives and priorities that are intended to be pursued and define the thematic directions. They also identify some issues considered to be of particular importance and urgency with respect to current socio-economic problems, which are allocated a significant share (equal to at least 25%) of the resources that can be disbursed annually. The Guidelines are renewed every two years and are submitted to the Board of Directors for approval.
The Guidelines for the two-year period 2023-2024 were drafted after a careful analysis of the national and international context and the consultation of numerous information sources produced by the World Bank, FAO, ILO, Eurostat, OECD, ISTAT, Censis, Miur and specialist publications of accredited non-profit sector entities. Furthermore, a stakeholder engagement activity was

carried out, which gave rise to three round tables with specialised non-profit sector entities. These meetings made it possible to refine the drafting of the document.

The Board of Directors periodically checks the use of the allocated resources and the convergence of the planned initiatives with the objectives undertaken. The selection of projects falls under the responsibility of the Chair of the Board of Directors (upon the proposal of the Chair's Technical Secretariat), following consultation with the Managing Director, for all initiatives exceeding 5 thousand euro and up to 300 thousand euro, while the Board of Directors approves initiatives exceeding 300 thousand euro. Finally, the Chair of the Board of Directors is responsible for monitoring all supported initiatives. Each year, the Annual Plan of usable resources is also submitted to the Board of Directors, which is subsequently approved by the Shareholders' Meeting. Part of the Plan's resources is allocated to the Banca dei Territori to support initiatives that are the expression of local communities and for an amount not exceeding 5 thousand euro each.
The share of resources allocated to the Banca dei Territori, following the approval of the Plan by the Board of Directors and ratification by the Shareholders' Meeting, is assigned for direct management to the Head of the Banca dei Territori who subsequently delegates the Regional Governance Centres concerned. The extract of the Regulations and the Guidelines of the Charity Allowance can be consulted on the Group's institutional website. On the same pages it is possible to find comprehensive information on the use of the Charity Allowance broken down by name and amount disbursed, with reference to the previous year.

Traditionally, the Charity Allowance concentrates most of its resources in Italy, supporting the communities where Intesa Sanpaolo operates through its branch network. The resources are distributed across all regions and, in particular, in the areas of greatest need: suburbs, internal areas and contexts characterised by degradation and marginalisation. The Charity Allowance also intervenes at an international level, supporting medium-large projects and giving priority to interventions aimed at the development of the communities and territories in which the Intesa Sanpaolo Group operates with its companies, including through collaborations activated by the International Banks Division (IBD). The Chair's Technical Secretariat also carries out coordination activities with the competent charity Functions and the autonomous Foundations of the IBD division to ensure the standardisation of principles, rules and reporting methods.

Commitment to culture

In order to regulate the protection, conservation and enhancement of the historical-artistic assets and archival assets owned by the Group, as well as those belonging to third parties, to ensure their public use and sharing with the communities of reference with the ultimate goal of enhancing the cultural heritage of the country and its territories, the Intesa Sanpaolo Group has adopted internal regulatory tools. In particular, the following were defined:
- internal rules to be adopted for the management of both movable and immovable artistic assets (for example, archaeological finds, paintings, sculptures, drawings, ancient books, frescoes, artistic stained glass windows, etc.), as well as for the management of assets of the same nature belonging to third parties in the event of loans and loans for use;
- internal rules for the definition of principles and directives to be adopted for the management of the company's archive assets (paper or digital documentation, photographic collections, etc.);
- internal rules for the management of events and sponsorships;
- internal rules for the management of cultural patronage.

The documents are drawn up in accordance with the current Italian legislation relating to Cultural Heritage and in particular with Legislative Decree 22 January 2004, no. 42 (Code of Cultural Heritage and Landscape); for companies within the scope of the international subsidiary banks division, reference is made to the specific national legislation. The principles and guidelines set out in the documents apply to historical-artistic and archival assets owned by the Group as well as to assets of the same nature owned by third parties in the event of loans, loans for use and restoration, while their implementation falls under the responsibility of the Art, Culture and Heritage structure within the Chief Sustainability Officer Governance Area.

Engagement processes and reporting channels

The Intesa Sanpaolo Group shapes its relationship with the community through opportunities for listening and dialogue with the various spheres of civil society. The Group therefore promotes constant dialogue with organisations representing communities, recognising their strategic importance for the sustainable development of its activities. To this end, it is committed to:
- maintaining a constant channel of communication with organisations representing the interests of stakeholders and promoting structured dialogue with the aim of cooperating in relation to mutual interests;
- listening to and taking account of the expectations and proposals made by the various components of civil society;
- analysing needs and identifying areas of action with high social, cultural and civic impact for communities;
- developing actions consistent with the listening and dialogue activities carried out.

The Group carefully considers the point of view of the communities involved, promoting a structured and continuous dialogue and discussion with stakeholders and community representatives, including civil economy entities operating in the territories of reference. All this in order to identify areas of intervention and initiatives with a high social, cultural and civil impact, with which to act in order to combat inequalities, to support young people and employability and, in general, to promote inclusive and sustainable development.

The Group's involvement of the communities is achieved directly through meetings, organisation of events and through the activation of collaborations, partnerships, listening campaigns and exchange of information with the main local stakeholders. The implementation of the initiatives takes place in co-planning with non-profit organisations, thanks also to their ability to intercept the current and latent needs of the local communities involved, to structure inclusive and sustainable solutions and intervention models. The Group supports these organisations by making available resources, skills and its network of relationships which give rise to collaborations and real solidarity ecosystems.

To this end, Intesa Sanpaolo for Social Impact set up an "Observatory" aimed at intercepting the main social trends, also promoting the contents produced by the reference stakeholders (i.e. academic and scientific partners and foundations), and consequently guiding the Group's action in the social sphere. This is also thanks to the activity of the Observatory's Advisory Committee, also made up of authoritative external members with significant experience in the social field. The responsibility for the engagement process of the communities involved, including through public, private and private social entities, falls under the responsibility of the individual Group structures that activate the initiatives.

For the benefit of stakeholders, the ISP Group has activated various channels and internal procedures for collecting, analysing and addressing reports on cases of possible non-compliance in relation to community rights, including those enshrined in the Human Rights Principles adopted by the Group, as described in the paragraphs above. No cases of serious human rights incidents were identified in relation to these channels and procedures.

Among these channels, the Code of Ethics inbox is available for reporting cases of possible non-compliance. For further information on the Code of Ethics reporting channel, please refer to the section on "Policies, objectives and actions related to corporate culture" in chapter ESRS G1 – Business Conduct.

Objectives and metrics related to the communities affected by own operations

The Group's support to local territories and communities occurs through multiple methods, in terms of tools and initiatives. One initiative of particular importance is the "Cibo e Riparo per le persone in difficoltà" (Food and Shelter for the needy) programme. As the biggest plan ever to be activated by a private entity in Italy, it involves the widespread distribution of food, beds, medicines and clothing to people in need throughout national territory. In the four-year period of the 2022-2025 Business Plan, the programme consolidated its support action for the most vulnerable people, defining a new dimension of social intervention with multi-project and multi-stakeholder characteristics, and setting the target of implementing 50 million interventions. To this end, a variety of profit and non-profit partners were engaged to reach as many beneficiaries as possible.

Target: Food and shelter for disadvantaged people programme – Meals, Beds, Medicines, Clothing (number of initiatives in millions)		
	Date	**Value**
Baseline[124]	31.12.2021	-
Final balance	31.12.2024	54.1
Target	2025	50

The target of implementing 50 million initiatives was set by the Board of Directors of Intesa Sanpaolo in the preparation of the 2022-2025 Business Plan, and represented an evolution compared to the social intervention targets already set in the previous 2018-2021 Business Plan. The implementation of the Programme takes place through partnerships with non-profit sector entities of national standing and capable of reaching every area of the country. These entities are selected from time to time on the basis of the social needs identified by the Intesa Sanpaolo for Social Impact structures through scenario studies; a joint project aimed at developing targeted actions is subsequently defined with them. Generally speaking, the Group defines specific objectives in advance together with the entities involved at the level of each individual initiative and monitors their progress through periodic reporting formats agreed with each partner. During the target monitoring phase, non-profit sector entities are involved in the implementation of the initiatives and in reporting the impacts generated. Approximately 17.3 million interventions were carried out in 2024. Overall, since the start of the Business Plan (2022-2024), the Group has completed a total of 54.1 million interventions, including 43.5 million meals, 3.9 million dormitories/beds, 6.1 million drug prescriptions and approximately 560 thousand items of clothing. The interventions conducted also involved activities in support of the humanitarian emergency in Ukraine resulting from the ongoing conflict.

The final figure highlights the achievement of the objective ahead of the Plan deadline and demonstrates the effectiveness of the initiatives implemented by the Group to support people in difficulty throughout the country.

Actions relating to the communities affected by own operations

The purpose of the collaboration between Intesa Sanpaolo for Social Impact and non-profit organisations and non-profit sector entities is to promote community well-being, inclusion and social cohesion through initiatives aimed at generating a positive impact. The Group thus demonstrates its commitment to inclusiveness by supporting projects that aim to combat poverty in its various dimensions, reduce inequalities and encourage youth employability and in general to promote sustainable and inclusive development, also through institutional initiatives. In this way, tangible support is provided to the communities involved, while contributing to strengthening the Group's reputation. The actions undertaken by the Group, described in the following sections, are divided into the following main areas:

- combating poverty;
- social cohesion and inclusion;
- youth education and employability;
- health and healthcare;
- crowdfunding platforms;
- Charity Allowance;
- education and spread of financial culture;
- commitment to culture;
- institutional initiatives in support of the community.

[124] Plan target that represents the planning of a new activity that does not have a base value.

Combating poverty

As part of the actions intended to combat poverty, the “Food and shelter programme for people in need” includes initiatives, developed according to the various areas of intervention throughout the Italian territory, targeted at communities and, in particular, children, the elderly, people staying in rehab community centres and individuals linked to the prison system.

Meals

Food poverty is one of the most dramatic aspects for people in fragile and destitute conditions. Intesa Sanpaolo has taken action to combat it with a widespread network of initiatives aimed at supporting communities with socio-economic difficulties, providing food and basic necessities to combat food poverty. To this end, Intesa Sanpaolo has entered into a partnership with Fondazione Banco Alimentare with the aim of strengthening and enhancing local networks in their ability to retrieve and distribute food products for local charities. The collaboration includes the “Ri-pescato” initiative, which involves the recovery and processing of illegal fish seized in Sicily by the Coast Guard, allocating it for distribution to charitable organisations. Furthermore, in support of the Business Plan objectives for the Programme, Intesa Sanpaolo collaborates with Fondazione San Patrignano by implementing the "Support and Prevent" project, which aims to guarantee the distribution of meals to people hosted in the community. In addition, to offer support to children with disabilities and serious illnesses, an active collaboration is in place between the Bank and Fondazione Dynamo Camp**,** aimed at ensuring free meals and beds for the children hosted at the Camp in the Tuscan territory who are offered recreational therapy courses, as well as a collaboration with Vidas ODV, aimed at offering free daily meals to the young patients and their families hosted at the Casa Sollievo Bimbi hospice in Milan. With reference to the provision of meals to people in need, an active collaboration is in place with the Semi di Vita cooperative, engaged in the free distribution of part of the harvest resulting from its partner's social and organic farming activities to charitable organisations in the Bari area, to minors and young people detained at the Fornelli Juvenile Detention Centre in Bari and young people subject to alternative detention measures in communities in the area, as well as a collaboration with Fondazione Cometa, for the implementation of the project "A tavola per Crescere Insieme (At the dinner table to grow together)”, in order to guarantee meals and snacks to children from families in difficulty who attend after-school care at the day centre of Società Cooperativa Sociale “Il Manto”. Thanks to the implementation of the initiatives supported by Intesa Sanpaolo's collaborations for line of action dedicated to food security, in the 2022-2024 period these agreements enabled the distribution of 43.5 million meals. The Charity Allowance also contributes to the implementation of the Programme through its own resources, made available by the Intesa Sanpaolo Chairmanship; overall, 2.4 million euro was disbursed for the distribution of approximately 1.4 million meals in a year, equivalent to approximately 3,800 meals per day. The Charity Allowance activities in this area are not limited to the distribution of meals, but also include the implementation of a series of additional activities aimed at helping the beneficiaries achieve their final goal of lifting them out of poverty.

Beds

The initiatives aimed at providing beds developed and implemented by Intesa Sanpaolo aim to enable a structured intervention that provides dignified shelter, but is also able to guarantee better access to healthcare and support for caregivers. This area includes the afore-mentioned collaborations with Fondazione San Patrignano, for which Intesa Sanpaolo supports the provision of beds to people hosted by the community, as well as with the collaborations with Fondazione Dynamo Camp and Vidas ODV, aimed at further supporting the facilities thanks to initiatives intended to increase the reception capacity for children and young people hosted there and for their families. Furthermore, in order to contribute to the development of support structures for people in difficulty, an active collaboration is in place with the association Di.Re – Donne in Rete contro la violenza (Women in Network against Violence), which supports women through their journey out of violence and promotes coordinated prevention and awareness-raising actions. For this initiative, the Group contributes to the reception and hospitality of women in the “Shelter Homes” of the Di.Re network by supporting the initial expenses for utilities and rent, as well as babysitting services during the search for a job or for the purchase of goods that can be used to start up work activities. These agreements ensured that 3.9 million beds were made available in 2022-2024.

Medicines

Access to healthcare is a right to which every citizen is entitled, and this also forms the basis for Intesa Sanpaolo's coordination action with Banco Farmaceutico for the extension of a national network for the collection and distribution of medicines. To this end, the “Pharma Links” project, born from the collaboration between Intesa Sanpaolo and Fondazione Banco Farmaceutico, aims to create and strengthen drug collection and distribution networks throughout Italy by strengthening the “Recupero Farmaci Validi” (Recovery of Valid Medicines) intervention model, aimed at collecting unused drugs and medicines to donate them to local charities. Another objective achieved through the collaboration with Banco Farmaceutico was the strengthening of the “BFOnline” platform, the foundation's management tool that underpins the drug collection and distribution process. These collaborations enabled the prescription of 6.1 million drugs in the 2022-2024 period.

Clothing

The distribution of items of clothing has become an opportunity to design a complex circular redistribution initiative to confirm the combination of sustainability and social issues. In this sense, Intesa Sanpaolo collaborates with Caritas Italiana and some of the Bank's corporate customers for the "Golden Links" project, an initiative aimed at the recovery and distribution of items of clothing, consisting of unsold items, returns, second choices, defective but usable products, to families suffering from financial hardship. The total amount of clothing items and other goods distributed in the 2022-2024 three-year period stands at approximately 560 thousand.

The effectiveness of the initiatives that make up the Programme is monitored on a quarterly basis through the reports received from the entities with which the partnerships are set up.

Social cohesion and inclusion

The Group values its support to the communities, including through initiatives aimed at developing local territories in favour of people in conditions of socio-economic fragility, with the aim of ensuring social cohesion and inclusion. The initiatives are concretely supported by Intesa Sanpaolo thanks to the financial support to non-profit sector entities and thanks to the co-planning and dissemination of know-how, in favour of needy people who are struggling to reach that minimum threshold of well-being and dignity that constitutes a right of all people. The effectiveness of the initiatives is periodically monitored by the Bank in synergy with the entities involved in the projects.

Numerous social cohesion and inclusion projects are being developed throughout the Italian territory, following the guidelines of the 2022-2025 Business Plan. In particular, several initiatives were implemented to combat the socio-economic poverty of the most vulnerable subjects. In this sense Intesa Sanpaolo, in collaboration with Caritas Italiana, supports the "Aiutare chi Aiuta (Helping the helpers)" programme aimed at supporting dioceses in promoting the social inclusion of the elderly and combating youth poverty by distributing meals, health kits and clothing**.** In 2024, Intesa Sanpaolo and Caritas Italiana strengthened their commitment to supporting young people and adults in prison and their families, distributing basic necessities, providing professional training to acquire skills that can be put to use in the labour market, and supporting job placement programmes to improve employability. During the year the programme implemented 31 projects in addition to those started in previous editions, for a total of 54 ongoing projects.

This also frames the context of the “QuBì initiative - La ricetta contro la povertà (The recipe against poverty)”, a project promoted by Fondazione Cariplo with the support of the Vismara, Invernizzi, Fiera Milano and Snam foundations that includes four lines of action: identification of families with children in poverty through the joint action of non-profit sector networks and public administration; provision of measures aimed at increasing access to shopping for families going through financial hardship; support for neighbourhood networks that promote shared responses to children's needs; implementation of specific and innovative actions to combat food poverty in Milan. As part of the initiative, support continued throughout the year for 3 Emporiums and 6 Solidarity Shops of Caritas Ambrosiana. For 2024, it is estimated that food support was provided to at least approximately 7,400 beneficiaries (of which approximately 2,700 minors), or approximately 2,400 families in economic difficulty.
Still in the area of social inclusion, Intesa Sanpaolo is strongly committed to supporting children aged 0 to 36 months hospitalised in the oncohematology departments of the main hospital centres in Italy. In this context, in collaboration with the Social Cooperatives partnering with Consorzio PAN, the Bank developed and continues to support the “Intesa Sanpaolo educational programme for children who are long-term patients” by providing young patients with a nursery service, the first of its kind, aimed at helping children overcome the social and psychological isolation resulting from illness, heavy treatments and long-term hospitalisation, promoting their cognitive and emotional development through appropriate programmes followed by qualified educators, providing educational materials and initiatives to furnish the spaces. Overall, since the beginning of the Programme to 2024, over 785 children – 100% of the age group for nursery school – attended nursery school in the hospital facilities involved.

The Bank promotes the growth of inclusive communities by supporting the “Comunità Amiche della Disabilità (Disability-Friendly Communities)” Project with the aim of defining the characteristics that make a territory inclusive for people with disabilities. The partnership includes support for the local extension of the project and support for the co-programming and strategic planning processes regarding the disability issue.

Concurrently, Intesa Sanpaolo is also committed on the national territory to combating energy poverty, that is, the situation in which a family unit is unable to pay for their primary energy services required to guarantee a dignified standard of living. In this context, in the Rione Sanità and in peripheral neighbourhoods of the city of Naples, the project “Sharing Energy - Rinnoviamo l’energia: produzione e distribuzione di Comunità” (Sharing Energy - Let's renew energy: production and distribution of communities) is active, which promotes the growth of a new model of energy sustenance, from renewable sources, with zero impact and low costs. The Project also involves the creation of Solidarity Renewable Energy Communities (CERS) and the distribution of energy produced for free or at a highly regulated price to vulnerable people. Similarly, the partnership between Intesa Sanpaolo and the philanthropic entity Fondazione della Comunità del Mediterraneo Sostenibile e Solidale per l’Inclusione e l’Accoglienza focuses on experiments in the area of solidarity energy communities, through the redevelopment of Fondo Saccà, a former shantytown transformed thanks to an innovative capacity building model. The activities aim to combat energy poverty through energy storage and sharing processes, managed through social algorithms. In terms of urban redevelopment, the Bank developed the initiative “La Bella Piazza”, aimed at combating social and urban abandonment and degradation through the activation of a process of regeneration, enhancement and care of public spaces in Piazza Garibaldi in Naples.

To intervene in contexts of social, financial and family hardship affecting young people and promote their inclusion in the job market, the Group plays an active role with “In Action ESG NEET”, an initiative that since 2022, thanks to the provision of dedicated training courses, aims to respond to the increase in demand for operators active in the context of quality assistance, social assistance and educational services. The initiative involved around 150 people so far, each of whom completed a curricular internship in social-healthcare or educational facilities. Based on the first available data, it is noted that 67% of people involved, i.e. NEET (Not in Education, Employment or Training, i.e. those who do not study, do not attend training courses and do not work) or, in a broader sense, people in conditions of social fragility, after a few months from the end of the course are able to find a job and/or resume a course of study. In response to the emerging critical issues regarding juvenile hardship and to promote the inclusion and development of positive behaviours in the area of civic education, the Group has activated “WeBecome”, the training programme targeted at primary school children that develops educational paths on various themes aimed at educational inclusion. The project involved over 3,460 schools and was proposed as an important teaching support, reaching over 4,000 users on the platform, including over 2,400 teachers.

In light of the persistence of a macroeconomic scenario of strong uncertainty and instability that further aggravated the fragile condition of a significant portion of Italian households, and the housing emergency for students living away from home, Intesa Sanpaolo implemented an action plan to strengthen social housing that entails, over the 2022-2025 Business Plan, the promotion of new homes and beds in student halls of residence. The initiative undertaken by the Bank is one of the most

extensive social housing programmes in Italy and is one of the tangible initiatives for inclusion and the reduction of inequalities. Its effectiveness is monitored throughout the implementation phase through an assessment of the underlying economic commitment and managerial effort in terms of attracting investors and project development. For this purpose, new partnerships were launched with Coima and Redo, leading operators in the sector, which gave new impetus to the "MilanoSesto" project, the largest urban regeneration project in Italy, which involves the implementation of programmes for subsidised, unrestricted social construction work (for approximately 27,000 sqm), in synergy with the creation of the "Città della Salute e della Ricerca" (City of Health and Research) under the leadership of the Lombardy Region, as well as commercial businesses, offices and an urban park. Intesa Sanpaolo also provided significant financial and advisory support to the Coima, Covivio and Prada consortium for the project of the former Porta Romana railway station in Milan where the Olympic Village is currently being built, which will later become one of the largest social housing projects in Europe, with 1,700 subsidised beds.
Furthermore, in 2024 Intesa Sanpaolo further strengthened its support for student housing development initiatives with investments in the iGeneration and Pitagora funds, managed by InvestiRe SGR and Finint Investimenti SGR respectively, and in the urban regeneration initiative managed by Redo SGR on the Montelungo-Colleoni military barracks in Bergamo, which will allow the development of over 4,800 beds.

Youth education and employability

Intesa Sanpaolo is also committed to supporting the community through initiatives dedicated to the training and job placement of people in situations of social or economic vulnerability. These initiatives are aimed in particular at young people from low-income families who have difficulties accessing quality education and employment, and who are therefore more exposed to the risk of social exclusion and poverty.
The aim is to support and relaunch the school system, promoting inclusive education, guidance for school-age children and the prevention of school dropouts. This approach intends to ensure equal learning and job placement opportunities for all new generations, regardless of their socioeconomic background, gender and abilities, and to promote a culture of respect and enhancement of diversity.

During the year, the Bank developed several initiatives and projects in this direction throughout Italy, in accordance with the objectives and principles of the 2022-2025 Business Plan. Intesa Sanpaolo directly supports these initiatives by providing both resources and its own know-how and expertise. In particular, such support is ensured by promoting collaboration between the profit and non-profit sectors, as well as by making available educational materials, skills, contents and tools to implement new educational and training approaches, aimed at the social and professional integration of young people and vulnerable people in general.

In this context, to combat the youth unemployment phenomenon and train the profiles that are most sought after by the job market, "Giovani e Lavoro" comes into play. The programme, born from the partnership between Intesa Sanpaolo and Fondazione Generation Italy ETS, a McKinsey & Company non-profit foundation, is aimed at matching job supply and demand in the most sought-after sectors (Hi-Tech, Precision Mechanical Industry, Sales, Hotel and Catering) and providing training courses nationwide, entirely supported by Intesa Sanpaolo, to young people aged between 18 and 29 who are neither studying nor working to develop their technical, attitudinal and behavioural skills, guaranteeing companies, including corporate customers, a pool of trained people to fill the positions that are most needed. Since 2019, the year the programme began, the following results have been achieved (figures at the end of 2024): over 4,850 students trained/in training, over 2,480 companies involved and a placement rate of young people above 80% after completing the course.

To promote the professional reskilling and repositioning on the job market for unemployed professionals over 40, the Bank is implementing the "Digital Re-start" programme, an initiative created in collaboration with Fideuram and organised by Talent Garden. The programme provides training and re-entry into the job market of unemployed people over 40, domiciled or resident in Lombardy, through scholarships for the master's degree dedicated to the development of new digital skills. In 2024, the 5th edition was launched, involving 50 beneficiaries in Rome and Milan.
In 2024, Intesa Sanpaolo launched new collaborations with key social players to promote the inclusion of people with physical and intellectual disabilities in the workplace. It offered programmes to enhance their skills and supported projects aimed at migrants and refugees, promoting their integration through training and work.

To further support talented young university students whose career potential is limited by external factors other than their own abilities, the "Generation4Universities" project, developed by Fondazione Generation Italy and McKinsey & Company with the support of Intesa Sanpaolo, offers talented university students a training programme focused on cross-cutting, behavioural, attitudinal skills and individual mentorship, as well as a two-week bootcamp with targeted sessions on employability and professional vocation seminars held by Managers and Executives of leading companies. In 2024, 90 students, 50 universities and 19 partner companies were involved.

With the "Zeta Lab" and "Offerta Modulare" training projects, the Bank's employees act as tutors to directly deliver courses dedicated to secondary school students in schools. These programmes can also be part of the cross-skills development and orientation activities and include modular training courses designed entirely within the organisation. The design is based on the analysis of the training needs collected, integrated with an experiential teaching methodology that aims to boost interaction and collaboration between participants. Over the course of 2024, a total of approximately 2,400 students were involved in over 40 Italian schools.

In order to combat female educational poverty and educational failure or early school leaving, the FUTURA Programme promoted by Save the Children, Forum Disuguaglianze e Diversità and Yolk, with the collaboration of Intesa Sanpaolo, continued to be implemented. The project intervenes in socially and economically disadvantaged areas of the territory and promotes growth and autonomy with personalised training courses for 300 girls and young women between the ages of 13 and 24, including 50 young mothers, through the achievement of a qualification and/or reintegration into the workplace. Approximately 320 educational plans have already been activated. Thanks to the contribution of a Scientific Committee composed of experts in the project's areas of action, "FUTURA" puts in place a specific plan for the evaluation of the tangible

impact of the interventions on the educational and emancipation path of the girls and young women involved, with respect to the skills acquired in a formal and informal context with the aim of making the methodology tested over the first two years replicable and scalable at a national level.
The project "Ecosistema Educativo per i giovani e le famiglie di Napoli Nord (Educational Ecosystem for Youth and Families of Northern Naples)" is an initiative launched and implemented by Istituto Mater Dei dell'Ordine delle Figlie della Carità di San Vincenzo de' Paoli of Naples in co-planning with the Campania Region. The project aims to reduce educational poverty and promote the social inclusion of young people between the ages of 13 and 25 who live in the areas of the municipalities of Caivano, Casoria and Salicelle, areas of the province of Naples where youth hardship is characterised by high school dropout and youth unemployment rates, as well as high levels of juvenile crime. The aim is therefore to promote the social recovery and job placement of young people who abandoned their studies prematurely. The project, which was inaugurated in September 2024 at the start of the new school year, entailed the creation of an educational hub with an integrated ecosystem of training, orientation and active labour policy services in the aforementioned territories of the province of Naples. The Group in particular contributed to supporting the extraordinary renovation works and the setting up of classrooms and laboratories inside the building belonging to the religious Institute. Students are offered three-year education and professional training courses and the local economic and production system is also involved. The offer is then completed with an information desk for the provision of guidance services on access to the job market and an experimental space for psychological support for young people and their families. The project, in addition to providing concrete support to the communities involved, is consistent with the Group's commitment to sustainable and inclusive growth in the territories in which it operates, through the fight against educational poverty and youth unemployment. The effectiveness of the action is measurable by the fact that, thanks to the Group's support, for the 2024/2025 school year, approximately 250 students were involved in the new training courses, as confirmed by the monitoring activity carried out by Istituto Mater Dei.

In addition, an Executive Master for non-profit sector operators was designed with 24ore Business School, offering 30 scholarships to address challenges such as digitalisation and new technologies. These initiatives aim to create social networks and structural alliances in the local territories.

Health and healthcare

It is estimated that in Italy approximately 30,000 boys and girls under the age of 18 suffer from chronic kidney disease (CKD), a disease that involves the progressive and irreversible loss of kidney function, which is unable to perform its vital functions properly. In children, CKD can be caused by congenital diseases, infections, trauma or blood diseases and often requires dialysis treatment with a high impact on the daily lives of the children affected and their families. In order to enable better care capacity and improve the quality of life of young patients undergoing this treatment, in 2024 the Group decided to support the construction of the new paediatric hemodialysis department at the Bambino Gesù Children's Hospital, the largest paediatric hospital and research centre in Europe. The project, which lasted 5 months and came to an end at the beginning of December 2024, included structural renovation works and improvements to the services provided for young patients and their families/carers. The project is consistent with the Group's commitment to institutions operating in the care, rehabilitation and assistance sectors, in order to guarantee continuity and efficiency of social and health services for vulnerable people. The effectiveness of the action is measurable by the fact that, thanks to the Group's support, the Bambino Gesù Children's Hospital will be able to continue to guarantee an improved paediatric dialysis service to approximately 100 patients (on an annual basis).

Crowdfunding platforms

To offer a direct contribution to the implementation of social initiatives of non-profit sector organisations, the Group promotes various fundraising tools.
In this sense, Intesa Sanpaolo's "For Funding" platform confirms, also in 2024, its leading role in Italy's crowdfunding sector, promoting the collection of donations for non-profit organisations across the country. The projects supported on For Funding cover different areas of intervention, including emergency and poverty, healthcare, social inclusion and community welfare, as well as environmental and cultural heritage protection. The use of the platform takes place at the request of non-profit organisations. The applicant NPOs follow a well-defined and structured selection process by the Bank. This process requires the involvement of the reference Branch and the relevant Credit and Risk Management structures which carry out in-depth due diligence before publishing the initiatives on the platform. Customers and donors can easily contribute via the Group's institutional website and the Intesa Sanpaolo app, and are periodically made aware of the possibility of donating via the Bank's communication channels (e.g. Direct e-mail marketing, Push notifications, etc.). Intesa Sanpaolo covers 100% of the operating costs, thereby guaranteeing free donations. The duration of the fundraising initiatives on For Funding can be customised, based on the specific needs of each supported project.

The For Funding activity is supported by the "Formula" programme, also accessible via the platform, which offers direct support for specific needs in favour of local Italian communities and stand-out projects at a national level. Every four months, with the involvement of Intesa Sanpaolo Regional Governance Centres and with the technical support of Fondazione CESVI ETS, 13 non-profit organisations that carry out significant initiatives in their territory are selected. These organisations, together with CESVI, develop a targeted project and, thanks to fundraising on the platform, also backed by Intesa Sanpaolo, receive the necessary support to achieve tangible objectives at a local level. Participation in the Formula programme is also an opportunity for participating NPOs to increase their capacity for planning and reporting initiatives, also thanks to the technical support provided by CESVI. In 2024, For Funding raised a total of approximately 8.7 million euro in donations. Of these funds, approximately 6.1 million euro was allocated to the Formula programme. To ensure the success of the campaigns, non-profit organisations are required to provide detailed reporting on the progress of their initiatives, while an impact tracking process is in place to evaluate the results achieved. The initiatives contribute directly to the needs of the communities, increasing the Group's support in the local territories where it operates.

Charity Allowance

The Chair's Technical Secretariat assists the Chair in the planning, implementation and monitoring of the Charity Allowance's initiatives through a dedicated office (Charity Allowance Office) made up of 8 resources. Furthermore, within the Banca dei Territori Division, Charity Representatives (23 people) have been identified who assist the Heads of the Regional Governance Centres in the evaluation and selection of initiatives up to 5 thousand euro. In terms of time commitment, the donations provide support for a period of one year and can be renewed - even non-consecutively - for a maximum of three years. Save for exceptional circumstances (e.g. pandemic), the duration of the project cannot exceed 18 months from the start date communicated to the Charity Allowance. In 2024, Intesa Sanpaolo's Charity Allowance disbursed approximately 23 million euro to support 814 projects carried out by non-profit organisations. Overall, about 934,000 direct beneficiaries were reached (net of medical research projects).
There are three main lines of action for 2024, closely linked to issues aggravated by the health, economic and social crisis of recent years, to which approximately 40% of the total disbursements have been allocated:

- combating educational poverty and the digital divide;
- support for the Not in Education, Employment or Training (NEET) and Early Leaving from Education and Training (ELET) population segment;
- support for women and children who are victims of violence and those who are victims of appalling discrimination.

Projects to combat educational poverty and the digital divide involve the entire school cycle; special attention is paid to students who have migrated from other countries and who have special educational needs. There are numerous digital education courses, with the aim of making minors responsible in their use of web platforms, guiding them in the recognition of any risks. Equally important are the workshops and courses focused on STEAM (Science, Technology, Engineering, Art and Mathematics). A key factor for the success of the initiatives is psychological support, to allow young people to deal with their emotional fragilities and the most delicate problems with the support of specialists. The methodologies adopted include the recovery of spaces to be used as places for personal development and training; they offer personalised support and help to improve learning skills, develop soft skills and to meet some of the youngsters' priority needs, involving families, educators and school staff, with a view to strengthening the support from the educational community in the long term. The expansion of the network of collaborations on the territory is key, as it sees the consolidation of Public-Private partnerships. At a geographical level, the actions focus on suburban areas and urban zones where there are clear examples of socio-economic marginalisation.
As regards NEETs and ELETs, there are numerous supported projects for identifying and engaging beneficiaries with the aim of helping them in reactivating and defining their life path, through renewed careers guidance, training and work tutoring. The personalisation of the actions and the offer of individual support are key to the success of the initiatives. The projects made it possible to address the recovery of young people through training courses and on-the-job training in social agriculture, communication professions and emerging professions. Particular attention was paid to NEET mothers with free initiatives to promote work-life balance.
The last focus is on combating violence and discrimination in all its forms. The beneficiaries of the projects are women victims of violence and their children, prisoners, first or second generation migrants, individuals with physical or cognitive disabilities and psychosocial fragilities, as well as people discriminated against because of their sexual orientation. The aim of the initiatives is to enable beneficiaries to free themselves from violence, gain or regain self-esteem, be included in their communities and achieve social and financial autonomy. Also important are awareness-raising and educational initiatives on the topic, particularly towards the new generations in schools, and training dedicated to front-line workers to prevent discriminatory phenomena.

The Charity Allowance supported projects covering other social issues, such as healthcare poverty and the fight against disease, disability, inclusive amateur sport and cultural projects that feature a range of positive social outcomes.
As regards medical research, 14 projects were supported (total donations of 1.6 million euro) by leading national institutions. The initiatives in this area were selected with the help of external experts who draw up detailed assessment sheets on qualitative and quantitative elements such as objectives and methodology, impact, research team and budget. As regards Social research, donations totalling 416 thousand euro were made to support 4 studies on: gender violence against foreign women in Italy; discrimination, harassment and violence against women and gender and sexual minorities; cardiovascular impact of domestic violence and the effects of chronic stress caused by it on the brain and heart; the effect of gambling on young people.

Collaboration with the International Banks Division continued with approximately 1.2 million euro disbursed (approximately half of the international donations) in the countries included in the Division's scope. The new Guidelines that will define the priorities for the two-year 2025-2026 period are currently being developed. The resources allocated to the initiatives planned during 2025 will be submitted to the Board of Directors with the 2024 Consolidated Financial Statements and subsequently approved by the Shareholders' Meeting. The checks carried out on the completed projects returned an overall very positive picture: most of the entities achieved and, in some cases, exceeded the objectives set, actively involving the reference communities in the development of the initiatives and expanding the local networks. The beneficiaries of the initiatives are in line with or, very often, higher than those expected at the project submission stage. Numerous collaboration networks between private social, institutions and other key players (schools, social services, etc.) were started or consolidated, evidence of the acquisition by the local territory of the experiences activated and guarantee of the sustainability of the initiatives over time. An example of this is Piazza dei Mestieri, which has had an active memorandum of understanding with the MIUR (Ministry of Education, University and Research) for years to implement initiatives aimed at containing school dropouts and youth hardship.

The impact of the supported projects is significant, in terms of employment generated, social inclusion, influence on public policies and regeneration of the territories in which they are located. Below are some examples:

- GOEL Cooperativa Sociale incubated several social economy activities in Siderno, Calabria, with a particular focus on the ethical fashion and organic fresh fruit sectors, offering an alternative to the deep-rooted control of the territory by the Calabrian Mafia ('ndrangheta). This work had a strong symbolic value of alternative and reappropriation in one of the poorest regions of our country and for the redemption of local communities, allowing the employment of approximately 40 young people and adults who were previously unemployed and/or in fragile situations;

- Cooperativa Sociale Il Mandorlo in Lecce reached out to 14 unemployed women selected through the proximity help desk and invited to participate in training courses in tailoring, ceramics and carpentry. At the end of the course, the young women started self-entrepreneurship initiatives, found a job or decided to go to university. The project was supported for three years starting from 2020;
- FOQUS Fondazione Quartieri Spagnoli developed the activities of Centro Argo in Naples, a non-medical centre for children, teenagers, young people and adults with cognitive disabilities. Approximately 60 beneficiaries reported an improvement in their social and personal skills and competences. Two of the older students started internships. Furthermore, a memorandum of understanding was signed with middle schools to activate therapeutic paths within the classes. The project, in its second year, came to an end in April 2024; it was then renewed for the third and final year;
- Fondazione Pangea welcomed 15 women victims of violence and their children into an emergency home in Rome, using an apartment seized from the Mafia. Of the women hosted, three have now left and are no longer at risk of violence, two are working and one returned home. The Foundation also launched a help desk for migrant women victims of violence that provided support to over 120 beneficiaries. The project made it possible to build and strengthen local networks and make Pangea's work known to institutions and public bodies. The ongoing relationship with local authorities and private social entities highlighted the need to give continuity to the actions started, representing a unique case in the reference territory. The project, in its first year, came to an end in June 2024; it was then renewed for a second year.

The project deadlines were mostly met, with the exception of physiological delays in the launch of the initiatives in the first year of operation and in the case of medical research, for which extensions are often requested to allow the publication of the results achieved.

Some additional difficulties were encountered in the implementation of international cooperation interventions in difficult socio-political contexts, which were overcome thanks to the ability of the institutions to reorganise themselves by leveraging a long-standing presence on site and a solid network of relationships woven in the reference territories. The allocated resources were used correctly. (Minor) budget adjustments during the implementation of the activities have always been agreed with the Charity Allowance.

Education and spread of financial culture

Museo del Risparmio (Savings Museum) is an innovative space where it is possible to become familiar with the concepts of saving and investing with a clear and simple language, in order to improve the level of financial literacy of the people to whom it is addressed. This is not a traditional museum, but rather an Edutainment project that facilitates learning through play. Founded in 2012 in Turin, thanks to the financial support of the Intesa Sanpaolo Group, of which it is part, it was a pioneer in the spread of financial education in Italy, so much so that it was the first museum in the world dedicated to this topic. Its mission is to help people consciously manage their personal finances and consequently improve their overall well-being level, counteracting situations of poor financial literacy that often contribute to a much wider phenomenon of social exclusion. During 2024, the Museum's educational initiatives reached 100,548 users.
The Savings Museum promotes social inclusion through the dissemination of financial skills and educational inclusion through a rich programme of educational initiatives, designed for both children and adults, who can join either on an individual basis or in groups through schools or non-profit sector associations.
Two programmes were added for schools following the mandatory inclusion of financial education in school curricula:
- “EduFin&Fun for primary and secondary schools”, consisting of three meetings during which to explore the history and functions of money, elements of personal budget management and safe use of the Internet and the first online purchases;
- “Percorso per le Competenze Trasversali e l’Orientamento del Risparmio (Path for Transversal Skills and Savings Orientation)” (PCTO), modules reserved for secondary schools, and consisting of a total of six basic financial education modules with a total duration of 60 hours that classes can choose and combine based on specific needs. In addition to the basic modules, special PCTO courses were made available, including ad hoc versions for Fashion and Design Schools and Sports-focused High Schools. In addition, digital educational content was made available to teachers on the Savings Museum website, such as educational video games.

Overall, a total of 286 classes, amounting to 5,640 students, joined the “Path for Transversal Skills and Savings Orientation” (PCTO) proposal in 2024.

Since 2017, the Savings Museum has set itself the goal of designing pilot initiatives specifically aimed at segments of the population which, for various reasons, can be considered socially vulnerable, such as women, migrants, prisoners, students from disadvantaged backgrounds, and people with mild cognitive disabilities. The main activities to support the development of financial education among the most socially vulnerable categories included:
- “Welcom-ed”: dedicated to migrants and foreign students from the Provincial Centres for Adult Education (CPIA) and to the youngest people of the Communities to raise their awareness of basic financial terminology, simple budgeting and planning techniques and the operation of the most widespread financial instruments;
- “Prometti di prenderti cura di te (Promise to take care of yourself)”: designed to provide women victims of violence with the basic economic knowledge and skills needed to achieve personal emancipation and economic independence;
- “LEI” and “Logos”: a programme for female inmates at the end of their sentence and ex-inmates designed to enhance their opportunities in the job market in the perspective of leaving prison and to prevent the phenomenon of recidivism.

Additional financial education activities and collaborations were conducted for individuals with cognitive or physical disabilities and for people with drug or gambling addictions. Overall, in 2024, the training activities of the Savings Museum aimed at vulnerable people reached approximately 730 individuals.
In addition to guided tours and structured itineraries, the Savings Museum is involved in various projects aimed at the school world through storytelling based on edutainment, contaminations and play. The following main actions were implemented:

- educational workshops, such as the ECO-quiz initiative during the International Economics Festival in Turin, where 1,650 secondary school students challenged one another in an exciting eduquiz on the topics of the correct evaluation of economic information;
- dedicated insight events, including: various workshops on the occasion of the Safer Internet Day and Cybersecurity Month for over 12 thousand students; “Cosa farò da grande (What will I do when I grow up)” and “Il mio posto nel mondo (My place in the world)” to raise awareness among younger kids on the importance of investing in their future, which involved over 8 thousand students from lower and upper secondary schools.

A total of approximately 8,550 children and young people participated in in-person activities and 80,184 were involved in remote learning activities, always accompanied by a tutor, for a total of over 1,070 hours of training provided.

Furthermore, in collaboration with the “Financial Literacy International Network” (FLITIN), a network of Financial Education Ambassadors belonging to the 11 international subsidiary banks of the Intesa Sanpaolo Group promoted by the Museum, educational workshops were organised that involved over 6,250 students with the aim of raising awareness of basic financial culture using a playful and engaging method. The Museum is active in the exchange of good practices and in discussions in specialised national and international fora such as the National Committee for Financial Education and the International Federation of Finance Museums (IFFM). At the same time, the outreach activity for the adult audience continued with a schedule of 56 digital and blended events which reached about 3,735 people and 2,900 on-demand views during the period considered. Among the new projects, it is worth noting the start of a collaboration between the Savings Museum and the Department for Youth Policies and the Universal Civil Service, with the aim of spreading financial education among young people between the ages of 18 and 35, holders of the Carta Giovani. Within the framework of the collaboration, the Savings Museum provided two cycles of the online training course “Riscalda i muscoli (Warm up your muscles)” for a total of 20 dates and 4,591 participants. In terms of accessibility, the Savings Museum worked to prepare content and guided tours accessible to users with hearing and visual disabilities, in collaboration with Ente Nazionale Sordi (“Italian National Agency for the Deaf”) and Unione Italiana Cechi ("Italian Union for the Visually-impaired). There are several active collaborations in place with universities and research centres, with which activities are carried out to evaluate the effectiveness of the initiatives introduced. Market analysis companies are involved in the periodic sample survey activity designed by the Museum of Savings to analyse specific themes related to financial education. The main actions put in place consist of the preparation of contents and initiatives for the dissemination of financial culture, implemented through thematic guided tours, educational workshops, modular and structured training courses, and dissemination events held at the physical headquarters of the Savings Museum in Turin and online.
The actions have mainly national geographical coverage. Some specific educational initiatives (“Money Master Challenge”; “SAVE Ambassador”; “Cybersecurity Labs") are also proposed in other European and non-European countries through the Financial Literacy International Network (FLITIN). The initiatives are aimed at the entire community, but modulated according to the specific needs of the different groups of beneficiaries: children, young people, adults, schools, families, socially vulnerable groups (for example, migrants, women victims of violence, prisoners and ex-prisoners, young people at risk of dropping out of school, people with cognitive disabilities, etc.). The actions are planned on an annual basis and following the calendar of the reference school year.

In addition to training and information initiatives, the Museum regularly prepares new content and formats hosted at its physical location, or transmitted via its website and social networks. The aim is to reach all segments of the public in the most widespread way possible, conveying financial education concepts with a simple and engaging language.
In 2024, in particular, the following initiatives were developed:

- new interactive exhibit “Ammirare (Admiring)”, a physical and virtual space that conveys economic concepts through some famous works of art with the aid of virtual reality;
- escape room “La Scalata (The Climb)”, which simulates the climb of a team of mountaineers committed to solving a number of puzzles in the shortest time possible, thus conveying the basic concepts of financial planning;
- “Love station” video series for social networks, created in collaboration with Bank Station;
- book entitled “Un pizzico di economia (A pinch of economy)”, by Giovanna Paladino, director and curator of the Savings Museum, and Luciano Canova, economist and populariser, with the collaboration of chefs Davide Caranchini and Barbara Girardi.

The actions developed by the Savings Museum are based on scientific surveys aimed at exploring the needs in terms of financial literacy of the different population targets. Every year the Savings Museum develops surveys in collaboration with public and private research centres, the results of which guide the design and provision methods of the training activities. The latest survey, which was released in November 2024, explores how optimism (or hope), happiness, and planning skills influence peace of mind when dealing with personal money issues.
In the pilot phase, the Museum's training projects are in many cases subject to an assessment of their effectiveness by specifically appointed third-party entities (for example, Universities or Research Centres).

Intesa Sanpaolo is committed to promoting a series of initiatives that support widespread access to art and culture, recognising the value that these elements bring not only to the individual, but to society as a whole. Through active collaboration with cultural institutions and organisations, the company aims to enrich the social context and promote the well-being of the reference community, creating opportunities for dialogue, learning and collective growth.

Commitment to culture

Intesa Sanpaolo supports the communities and territories in which it operates through a series of initiatives aimed at protecting and enhancing the historical, artistic and cultural heritage of both the country and the Group, primarily for the purpose of its public enjoyment for the benefit of the communities. In this perspective, the Bank has created the “Progetto Cultura (Culture Project)”, a programme of initiatives conceived and implemented in dialogue with public and private, national and international entities and institutions, with which Intesa Sanpaolo expresses its direct and tangible commitment to promoting art and culture in the territories in which it operates, in the awareness of the strategic role of culture in promoting more innovative, sustainable and inclusive societies. The Project is made up of different initiatives, starting from “Gallerie d'Italia”, considered one of the most important private museums in Europe. Furthermore, following a particular attention to sharing assets with the public, with “Progetto Cultura” the Group manages the art collections owned by the Bank and the materials that form part of the Historical Archives. The "Restituzioni" programme is also active, which contributes to the protection and enhancement of the country's artistic and architectural assets in collaboration with the Ministry of Culture. Finally, with “Progetto Cultura”, the Group supports partnerships, sponsorships and grants with the aim of creating a network of collaboration with public and private, national and international players, with a view to promoting the country's cultural heritage. “Progetto Cultura”, in addition to bringing positive effects to the local communities in which the Group is present in terms of enhancing the history, traditions and cultural identity, also represents a tangible opportunity for the Bank by increasing the trust of its stakeholders in the Group and contributing to the achievement of the objectives of the 2022-2025 Business Plan. Indeed, the initiatives of "Progetto Cultura" are developed according to a multi-year programme in accordance with the 2022-2025 Business Plan.

Gallerie d’Italia

One of the main components of “Progetto Cultura” is “ Gallerie d'Italia”, the Intesa Sanpaolo museum hub resulting from the transformation of historic buildings owned by the Bank into museums open to cities to share the corporate collection, exhibitions and initiatives of cultural and social value, linked to the territory and communities. The project involves 4 locations: Milan, Naples, Turin and Vicenza, for which the Bank has made its buildings available, transforming them from workplaces into museums open to the community. Overall, in 2024, Gallerie d'Italia proposed 12 major exhibitions with national and international partners (aimed in particular at enhancing seasons and authors of the artistic history of the territories in which the Galleries are located, or, for the photography exhibitions in Turin, created on commission to explore ESG-related themes). Around 4,300 free educational visits and workshops were organised, with almost 100 thousand children and young people participating from local schools of all levels and age groups: the broad and structured educational proposal offers interactive and engaging experiences, with the aim of bringing the youngest audiences closer to art, making them acquire greater awareness of the artistic and cultural heritage value and of belonging to a common history. The Gallerie also play an active role in the inclusion and attention to people exposed to situations of vulnerability, from the promotion of the rights of people with disabilities (physical, mental, cognitive and linguistic), to the inclusion of refugees and citizens from other countries and cultures, to attention to the issues of mental health and diseases with a strong personal and social impact such as Alzheimer's and Parkinson's: in the year, 690 courses were designed for people with disabilities or exposed to situations of vulnerability, with 8,300 participants. Among the numerous cultural initiatives, over 60 free meetings were held as part of the public programme #Inside, to delve deeper into the themes of the hosted exhibitions. Furthermore, the Gallerie d'Italia App was extended to the four locations, an innovative digital guide thanks to which users are able to access an "advanced" visit experience, with free audio and video content.

Art assets

Intesa Sanpaolo demonstrates a strong commitment to the care and enhancement of the Group's art collections, made up of 35 thousand works, which represent one of the most important corporate collections in Europe in terms of size and quality. The works are subject to constant protection, conservation, research and enhancement activities. In 2024, sharing took place not only in the Gallerie d'Italia, but also through the loan of 297 works to 72 exhibitions in Italian and international museums (from Scuderie del Quirinale in Rome to the National Gallery in London). 10 loans were signed for a total of 126 works entrusted to local entities (such as museums and foundations) and 253 maintenance and restoration interventions were carried out. Finally, enhancement initiatives were carried out in Italian territories of strategic importance for the Group, with particular attention to significant collections in terms of identity for the communities, in collaboration with local authorities, first and foremost the banking Foundations (in Pistoia with Fondazione Caript, in Arezzo with Fondazione Bruschi, in Jesi with Fondazione CR Jesi, in Mirandola with Fondazione CR Mirandola).

Restituzioni

Again within the scope of “Progetto Cultura”, Intesa Sanpaolo, in dialogue with the Ministry of Culture and the bodies responsible for artistic heritage protection, has supported and managed the “Restituzioni” programme since 1989, dedicated to the restoration and enhancement of the national heritage. In 2024, the Group continued to organise the 20th edition of the programme, which involves the restoration of 122 works of art from the 20 Italian regions (in addition to a case of international collaboration between Italy and Belgium), belonging to 63 entities, including museums, churches, places of worship and archaeological areas; the restorations are carried out in collaboration with 51 protection entities of the Ministry of Culture and involve 57 restoration laboratories and hundreds of art historians and conservation scientists. For 35 years the Project has promoted two Italian excellences, art and restoration, and has as its objective the “restitution” to the communities of artistic assets – over 2,200 to date – that belong to history and collective identity.

Historical archive

“Progetto Cultura” also manages the Group's Historical Archive, one of the first and most important bank archives in Europe, a valuable heritage for reconstructing not only the history of the Bank, but also the history of the entire country. The archival activity involves over 20 linear kms of historical documentation and includes, among the photographic funds, the Publifoto Archive, which is subject to extensive activities for its protection, conservation, digitalisation, inventory, cataloguing and promotion, with the main objective of improving public access to the sources, also through the most advanced digital technologies (such as the innovative open format LinkedOpenData). The Archive also offers a portal dedicated to the consultation of digitalised documents. The results achieved in 2024 include the digitisation of a further 470 thousand pages of paper documentation (to date there are over one million pages available online) and the creation of 11 thousand new record cards as part of inventory projects (to date there are tens of thousands of record cards published); research and enhancement projects continued, also in collaboration with other institutions (such as the "Egeli Project" dedicated to the papers on the seizure of Jewish assets in 1939-1945 with Fondazione 1563); educational activities also play an important role to encourage university students and other students to become familiar with the Archive and its documents. As regards the Publifoto Archive, over 5 thousand new photos were digitised (to date there are approximately 60 thousand digitised photos, of which approximately 33 thousand are available online) and approximately 24 thousand new records cards were catalogued.

In addition, initiatives are carried out around the art collections and archival assets owned by the Bank in collaboration with other Bank structures that directly involve the Group's people, with particular reference to the issues of accessibility, inclusion, diversity enhancement, multiculturalism (Art & People project).
The production of original content on the websites and social media of Gallerie d'Italia and the Group also continued to enhance access, promotion and sharing of the assets owned, exhibitions and initiatives of Progetto Cultura.

Partnerships, sponsorships, donations

The Bank supports artistic-cultural, social and training initiatives through forms of collaboration with public and private entities, where its contribution often takes the form of sharing and co-designing contents, spaces and relationships. Among the synergies developed in 2024, the following are worthy of note: projects with banking foundations (for example, Compagnia di San Paolo, Cariplo, Cariparo, CR Firenze, CR Forlì); main partnerships of international fairs and exhibitions (for example, Miart in Milan, Artissima in Turin, Holy See Pavilion at the Venice Art Biennale, Salone Internazionale del Libro in Turin) as well as festivals for the promotion of art, archival assets, photography, music (for example, International Photography Festival in Cortona, Archivissima in Turin, Milano Musica Festival); synergies with museums in the country (including the Egyptian Museum in Turin, Poldi Pezzoli Museum in Milan, Palazzo Strozzi in Florence); support for the Christmas exhibitions of the Municipality of Milan and the Municipality of Vicenza; co-organisation of exhibitions in Cuneo with Fondazione CR Cuneo and in Merate with Fondazione Costruiamo il Futuro; Art bonus projects to support public cultural heritage (from the construction of the new venue for the GaMec museum in Bergamo, to the reconstruction of the church in Amatrice damaged by the earthquake, to the renovation of the internal courtyard of the Egyptian Museum, to the restoration of the Church of Sant'Aspreno ai Crociferi in the Rione Sanità of Naples, to the enhancement of the Historical Fund of the Municipality of Mondovì).

In 2024, Intesa Sanpaolo also promoted numerous institutional initiatives in collaboration with leading cultural entities and institutions, to bring new generations closer to opera, music, art and culture. These include collaborations with important Italian theatres such as Teatro alla Scala (for example, the project “La Scala UNDER 30”), projects and photographic exhibitions. It also supported cultural events, science dissemination festivals and film festivals (for example, the Turin Film Festival and BergamoScienza).

Higher education and enhancement of cultural professions

Intesa Sanpaolo promotes training and skill development projects in the arts and culture, with a particular focus on young people, in recognition of the potential of cultural heritage, also as a driver of economic and employment growth. The 4th edition of the Gallerie d'Italia Academy Executive course was held in 2024 “Management of artistic-cultural heritage and corporate collections ” in collaboration with Fondazione Compagnia di San Paolo, Fondazione Cariplo, the Ministry of Culture-Fondazione Scuola dei beni e delle attività culturali, and Fondazione 1563 per l’Arte e la Cultura: it involved 29 students and approximately 60 teachers including academics from Italian universities, professionals, culture and business managers, museum directors and officials, thanks to the granting of 8 scholarships and 162 hours of lessons in person and in webinar mode. The Bank makes available its museum venues (Milan and Turin) that host students for in-person lessons; the expertise and know-how of professionals, of the Bank and of the museum institutions with which it collaborates; for teaching purposes during the course. Furthermore, the Bank, through the “Alumny” community, provides ongoing training and networking opportunities among cultural operators. 2024 also marked the end of the “Euploos Project”, an interdisciplinary research programme of an educational nature, supported for three three-year periods, aimed at creating a digital catalogue of the drawings preserved in the Cabinet of Drawings and Prints of the Uffizi, curated by a group of young art historians, computer scientists and photographers (in 2024, 2,252 scientific record cards and 3,250 images were created; overall, since the beginning of the project, the catalogue has made over 73,500 works available for consultation, of which over 9,600 with scientific record cards). Other projects were developed with students from design schools (IED-Istituto Europeo di Design, IAAD-Istituto d’Arte Applicata e di Design). Finally, it is worth remembering that over 120 young art historians work at the Gallerie d'Italia under the collaboration with Civita Mostre e Musei.

Institutional initiatives in support of the community

Intesa Sanpaolo also strives to respect its own ethical, cultural and social values in its partnership and sponsorship initiatives, by selecting projects capable of conveying messages in line with the image and reputation of the Bank and the entire Group, not only in economic terms but also in civil, cultural and social terms.
The main areas of intervention in 2024 concerned culture, environment and sustainability, dialogue with the production fabric, social inclusion, sport and health promotion.

Social solidarity

Intesa Sanpaolo, in addition to being the driver of the country's economy, is an institution that sets out to make a real social contribution to the community in terms of inclusion. Some of the main initiatives include the Group's support to the “Costruiamo il Futuro (Let's Build the Future)” Award, which supports small non-profit sector organisations in Lombardy, engaged on a daily

basis in the inclusion and training of young people through sports and social life. In its 20 years of activity, the Award has supported more than 1,000 non-profit sector associations and entities. Another important initiative is the "Ponti" project, which promotes active citizenship through culture and theatre. The Bank also supports Fondazione Rava N.P.H. Italia Onlus to raise funds for the NPH Saint Damien paediatric hospital in Haiti, and is a member of Fondazione Severino and Fondazione Tender To Nave, which fight against inequalities and prejudices.
The "META INSIEME" project offers opportunities for redemption to juvenile detainees through sport. Intesa Sanpaolo also promotes the dialogue cycle "About Women", a series of dialogues on the role of women in society and in the workplace within the context of the International Film Festival, on issues relating to the salary gap and gender discrimination in the professional sector and the "Women Value Company" award, promoted by the Bank with Fondazione Marisa Bellisario, dedicated to small and medium-sized enterprises that have stood out in the application of gender equality policies. The Bank participates in the "#Tuttomeritomio" Project, promoted by Fondazione CR Firenze and Intesa Sanpaolo with the University of Florence, the Regional Education Department and the Fondazione Golinelli with the aim of promoting the merit of students in socially and economically disadvantaged situations. Furthermore, it supports Concerto per il Giorno della Memoria (Holocaust Remembrance Day Concert), an annual event organised by the Giuseppe Verdi Conservatory of Milan, and the "Metamorfosi" project by Fondazione Casa dello Spirito e delle Arti, which crafts musical instruments made of wood from boats used by migrants and worked by the inmates of some Italian prisons with the help of expert luthiers. Intesa Sanpaolo supports the travelling exhibition of the "Progetto Genesi" Art Collection, the Special Olympics activities in Italy and the Campioni di Vita initiative, a 5-stage tour of events dedicated to high schools on the themes of inclusion and courage.

Environment

Intesa Sanpaolo is committed to building a sustainable future for the environment, young generations and an inclusive society, promoting initiatives such as: the collaboration with Fondo per l'Ambiente Italiano (Italian Environment Fund (FAI)) for the "I Luoghi del Cuore" project, the restoration of the vegetable garden of Convento del Redentore with the Venice Gardens Foundation, and the support to the "Sustainable Economy Forum" promoted by Fondazione San Patrignano. Furthermore, it supports the One Ocean Foundation for the protection of the oceans and the Daje de Alberi Association for the reforestation and urban regeneration of the city of Rome.

Health

Intesa Sanpaolo collaborates with organisations, foundations and healthcare institutions to promote healthy lifestyles and provide free medical prevention services to the community. Among the main initiatives, the Bank supports Friends for Health Onlus and other Italian healthcare excellences involved in the implementation of "Tennis & Friends", an event that combines health, sport and solidarity, offering free health check-ups. Intesa Sanpaolo also participates in "Tour della Salute (Health Tour)", a national roadshow aimed at raising awareness among citizens on the importance of a healthy lifestyle, prevention and health monitoring. Finally, it supports the European Epilepsy Conference to promote new information and research content regarding education and treatment of this disease.
Among other initiatives, sport is taking on an increasingly important role as a common good and collective heritage to be protected and shared. A significant example is the partnership with "CORRI LA VITA" (LIFE RUN), a sporting event created to help women affected by breast cancer and to finance projects for the prevention, early diagnosis and treatment of this disease.

Education and research

Intesa Sanpaolo places great attention on young people and their right to education, training and access to the job market, investing in education and research. Among the main initiatives, it is worth mentioning the support for 42Firenze, an innovative, inclusive and free programming school designed to develop technical and relational skills that respond concretely to the expectations of the job market, and the "Young Factor" project, promoted by the Osservatorio Permanente Giovani-Editori to promote financial education in schools and introduce young people to current economic issues. These projects aim to develop talent, combat school dropout rates and expand employment opportunities for young people.

Finally, with the aim of further supporting local communities, through partnerships and systemic actions with consolidated social players, Intesa Sanpaolo implemented a series of initiatives aimed at adopting a sustainable development model based on the circular economy throughout the country. In particular, through the "Donare per non sprecare" (Donate so as not to waste) initiative, the Bank continuously makes available furniture and hardware that is being decommissioned but is still in working order, to non-profit organisations in the non-profit sector to improve the efficiency of their organisation and customer support. The project results are aimed at implementing actions with social, environmental, institutional and economic value. In 2024, the project distributed 1,092 IT assets to 133 beneficiary entities and 3,170 pieces of furniture to 70 beneficiary entities.
The same area includes "Immobili che si muovono per il bene" (Properties that move for the good), the Bank's initiative that provides, for the purpose of developing new projects, the concession of properties by Intesa Sanpaolo to non-profit organisations, with facilitated formulas - such as rent at a regulated rate, free loan for use - that support the development of activities capable of self-sustaining in the medium to long term, the creation of new jobs, also by promoting the employment of people in vulnerable situations and, finally, the infrastructure of the organisations involved.
The two programmes are ongoing and are regulated by the Bank's process guides.

IBD Division initiatives

In order to address emerging needs in the local contexts where the Group operates, which affect the most vulnerable people in particular, the International Banks Division (IBD) is actively committed to supporting local communities, focusing on combating educational poverty among young people, promoting social inclusion and supporting the healthcare sector, thanks above all to important initiatives carried out by Nadacia VUB, VUB Banka Foundations in Slovakia and Intesa Foundation, Banca Intesa Beograd Foundation in Serbia.
IBD, through Nadacia VUB, financed projects in Slovakia totalling over 450 thousand euro, including the programme “Every child has a chance”, in support of 5 organisations active in assisting disabled children and their families, and numerous initiatives of the NGO “People in need”, aimed at assisting people and municipalities hit by the floods in Slovakia.
In Serbia, through Intesa Foundation established in March 2024, over 800 thousand euro was allocated for initiatives aimed at improving healthcare, facilitating learning for children with disabilities or in vulnerable situations and promoting support and social inclusion programmes for disadvantaged families, in collaboration with NGOs such as UNICEF and SOS Children's Villages.
Project monitoring, aimed at verifying effective implementation and achievement of the pre-established impact objectives, is developed within the context of ongoing dialogue with the entities and structures involved. The initiatives promoted not only respond concretely to the needs of communities in the health, education and social inclusion sectors but also represent a tangible opportunity at a reputational level for the Group towards the assisted territories.

Affected communities by the undertakings included in the Group’s portfolios

The Equator Principles (EPs) are international guidelines that the Intesa Sanpaolo Group voluntarily adhered to since 2007, applicable to the financing of infrastructure and industrial projects that could have negative impacts on the environment and people, and which pay special attention to the consultation of local communities, the protection of the rights of indigenous peoples and the preservation of the local cultural heritage. These principles are based on the Performance Standards (PS) on environmental and social sustainability of the International Finance Corporation of the World Bank, and on its dedicated guidelines on Environment, Health and Safety (EHS Guidelines).
The Equator Principles Guidelines apply to financial products[125] in support of the development of new projects issued by Intesa Sanpaolo and its subsidiaries that carry out financing activities falling within the scope of application of the Equator Principles, and are valid in all countries in which the Group operates and for all countries where the Group carries out financing activities. The function in charge of overseeing the implementation of the Equator Principles, responsible for reviewing and monitoring their application, is located within the Risk Chief Officer Governance Area. The implementation process of the Rules concerning the Equator Principles can be found on the Group's website.
In addition to what is set forth by the Equator Principles, the Group also regulates these issues through internal policies such as Guidelines for ESG risk management and the ESG & Reputational Risk Clearing process. For further details on the above Guidelines and process, reference is made to standard E1 – Climate Change.
The application of the Equator Principles includes the assessment of social risks, including respect for the rights of local communities and indigenous peoples within the scope of the financed projects. During the project review phase, Intesa Sanpaolo assigns a risk rating that takes into account the impacts on human rights and potential critical issues related to the aspects considered by the afore-mentioned Performance Standards of the International Finance Corporation (so-called sensitive issues), which make specific reference to respect for indigenous communities. Based on the assigned risk, in addition to providing the necessary documentation, customers are required to engage the community, indigenous peoples, workers and stakeholders through an ongoing, structured and culturally appropriate process. Furthermore, customers are required to report the assessments of the potential negative impacts and human rights risks identified, in compliance with the UN Guiding Principles. In the case of a project that affects indigenous peoples, the process of application of the Equator Principles by Intesa Sanpaolo towards the customer requires that the involvement conducted by the latter is aimed at ensuring that the development of the project promotes full respect for the human rights, dignity, aspirations, culture and livelihoods based on the natural resources of indigenous peoples. Furthermore, if mitigation and compensation measures are implemented, they should take into account the laws, institutions and customs of these communities.
As described above, it is therefore the customer, or the financed entity, who maintains direct relationships with the communities involved or their representatives and carries out constant engagement, the methods of which are defined in line with the risk level determined for the transaction. The Bank receives specific documentation to support the performance of such engagement activities and monitors the correctness of the customer's operations with respect to the obligations connected to the application of the Equator Principles. In the event that the communities impacted by the financed project need to report serious issues or negative impacts on them, the Bank interfaces directly with its customer to verify that the implementation and effectiveness of the necessary remedial measures are ensured.

Furthermore, Intesa Sanpaolo is committed to monitoring, analysing and appropriately addressing reports that come through sharing reports or direct communications from non-governmental organisations or other entities acting as representatives of the communities concerned.

Since quantitative information on the actions towards communities impacted by the undertakings included in the portfolio is not yet available or obtainable, the Group has not set specific objectives in relation to this topic. However, monitoring the effectiveness of the actions undertaken is closely linked to the application of the Equator Principles as described above.

[125] Regardless of the customer’s industry, the EPs apply to the financial products listed below when they are used to support the development of new projects and meet specific criteria: Project Finance Advisory Services, Project Finance, Project-Related Corporate Loans, Bridge Loans and Project-related Refinancing and Acquisition transactions.

ESRS S4 – Consumers and end-users

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS2 – General disclosures: Double materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within ESRS S4 – Consumers and end-users were identified taking into consideration the specific features of the Group. In particular, the mapping of these impacts, risks and opportunities was carried by analysing the controls, internal policies and protection measures aimed at safeguarding/protecting and ensuring the confidentiality of customer data, also with a view to minimising the negative impacts related to the issue in question. This analysis was conducted with reference to the Group's own operations and the upstream and downstream value chain, as well as including an assessment of risks and opportunities related to consumer and end-user aspects to which the Group might be exposed.

As part of the dual materiality analysis, the Group has taken into consideration all categories of customers and end consumers that are or could be impacted in a material way by the Group and its products.

Customers and end consumers, who may be impacted in various ways, include institutional, corporate and retail customers, including private individuals.

For the purposes of impact materiality, the assessment of the identified impacts was conducted through interviews with internal structures and external stakeholders (e.g. interviews with experts in the sector), as well as through a detailed qualitative-quantitative analysis, carried out on the basis of the criteria required by the relevant legislation (i.e. scale, scope, irremediable character of the impact and likelihood). Specifically, with reference to:

- own operations: the assessment of impacts was carried out on the basis of qualitative drivers related, among others, to the Group's definition of internal policies and protection measures aimed at safeguarding/protecting and ensuring the confidentiality of customer data as well as safeguarding the health and physical safety of customers;
- upstream value chain: in view of the specific features of the issue and following in-depth discussions with the dedicated structures, no impacts were identified in relation to this issue;
- downstream value chain: the assessment was conducted taking into consideration the protection and safeguarding of consumers and customers in the context of the Group's offering of products and services (e.g. accessibility of the Group's official website, fair treatment of customers, promotion of ethical and transparent business practices). In addition, relevant investment/lending criteria and strategies were taken into account in assessing the counterparties.

The analysis revealed the following impact materiality outcomes with respect to the above scopes:

- own operations: material positive impacts were identified with regard to privacy protection, freedom of expression, health and safety of consumers and end-users, and security of a person.
- downstream value chain: material positive impacts relating to access to quality information, non-discrimination, access to products and services and to responsible business practices.

For the purposes of the financial materiality assessment, the materiality of risks and opportunities was assessed using a dual, quantitative and qualitative approach applied to the scopes identified.
With reference to risks, the following assessments were made for the different scopes of reference identified:

- own operations: the operational risk and compliance risk related to this issue were assessed. Which would also give rise to reputational risk;
- upstream value chain: in view of the specific features of the issue under analysis and following in-depth discussions with the dedicated structures, no risks were identified in relation to this issue;
- downstream value chain: the strategic risk related to this issue was assessed. This would also give rise to reputational risk.

Within the scope of the analyses conducted, with regard to financial materiality, the operational risk related to the issue of privacy was found to be material. As a result, the reputational risk arising from the negative impact of such operational risk on the Group's image was found to be material.

Lastly, for the purposes of assessing the financial materiality of opportunities, their connection with the impacts described above was taken into consideration, given that the presence of positive impacts, e.g. in terms of communication channels, may provide financial opportunities.
With regard to opportunities, analyses were conducted with reference to the following scopes:

- own operations: in-depth analyses were carried out together with the dedicated structures, in order to assess the Group's existing or planned initiatives and safeguards towards customers that could lead to an increase in the trust of the Group's stakeholders;
- downstream value chain: following in-depth analyses carried out together with the dedicated structures, the opportunity arising from the possibility of expanding the product range by guaranteeing access to all social groups, including the most vulnerable, was assessed.

The financial materiality analysis carried out, with reference to own operations, revealed material opportunities in connection with the adoption of internal policies and corporate strategies aimed at protecting the Group's customers and their freedom of expression; with reference to the downstream value chain, it revealed material opportunities relating to the offering and access of products/services dedicated to the Group's customers.

The Group also considers it essential to make the most of feedback, including complaints from customers, in order to make its commercial offer more effective for different types of customers, developing products and services that meet their actual needs. Listening and monitoring the quality of the service offered play a crucial role in this respect.

The Group's commitment to human rights

The Group believes that proper customer relations must be based on shared corporate values and respect for human rights in all products and services provided to customers.

As enshrined in its Code of Ethics, the Group considers it essential to maintain a continuous dialogue with customers, so as to better understand their real expectations, protecting the security of those customers, their assets and their information. The Group bases its relationship with its customers on the principles of fairness and transparency, placing them at the centre of its consideration through constant dialogue in order to understand their real expectations, with particular attention to the financial inclusion of the most vulnerable social groups.

To this end, in compliance with its Code of Ethics, the Group undertakes to:
- implement systematic dialogue tools, to gather suggestions from customers, consumer associations and associations representing specific categories of customers;
- ensure timely feedback on queries and complaints;
- protect people, valuables and assets, and information resources, including their digital identity, and adopt internal organisational measures designed to ensure the provision of a service meeting the highest standards of reliability, continuity and confidentiality;
- consistently observe transparency criteria in informing customers about their privacy rights and how their personal information is processed;
- not discriminate against customers on the basis of gender, gender identity and/or expression, emotional-sexual orientation, marital status and family situation, age, ethnicity, religious belief, political and trade union affiliation, socio-economic status, nationality, language, cultural background, physical and mental condition or any other characteristic of a person, including those related to the expression of their thoughts;
- carefully identify customer needs and risk profiles as a fundamental starting point for offering advice, services and products, in the knowledge that they play a key role in investment assistance, prudent management of savings, and responsible lending, in addition to offering insurance protection.

With regard to human rights, the Intesa Sanpaolo Group prevents human rights violations linked to its activities and promotes the protection of fundamental rights, setting out its responsibilities to customers.

For the benefit of stakeholders, the Intesa Sanpaolo Group has activated various channels and internal procedures for collecting, analysing and addressing reports on cases of possible non-compliance in relation to consumer and end-user rights, including those enshrined in the Human Rights Principles adopted by the Group. Among these channels, the Code of Ethics inbox is available for reporting cases of possible non-compliance. For more information on the Code of Ethics reporting channel, please see the section on Business Conduct in chapter ESRS G1 – Business Conduct. With reference to the aforementioned channels and procedures, no cases of serious incidents involving human rights, or constituting instances of non-compliance with the UN Guiding Principles on Business and Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work or the OECD Guidelines for Multinational Enterprises were detected.

Service Quality – Customer satisfaction and responsible sales

Policies on customer satisfaction and responsible sales

In a context of correct and transparent relationships between intermediaries and customers, the Intesa Sanpaolo Group makes the information it provides to its customers clear and comprehensible in all stages of their relationship through the simplicity of its language, transparent policy statements, and consistent terms and conditions among the various documents relating to the same products/services. The main offer documents, drawn up in line with the clarity and intelligibility requirements, can be found in branches and also on the Group's official website, under the "Banking Transparency" section. These include product and service information sheets, specific guides and information documents on the conditions offered to all type of customers. Respect for customers' rights at all stages of the contractual relationship is also ensured through organisational measures and checks on compliance with customer protection regulations and through behaviours based on transparency and fairness both in the placement phase and during the performance of the relationship.
In the area of investments, the Group offers customers the highest level of protection with its advisory service. As regards transactions relating to financial products or investment services, personalised recommendations are made in line with the customer's financial profile. In this sense, Group personnel are bound by a specific set of rules relating, in particular, to the provision of the advisory service and other investment services, which identify the conduct to be maintained and the safeguards applied in the provision of the advisory service to clients and other investment services. These rules are applied to Intesa Sanpaolo and transposed, to the extent of their application, by the other Group companies within Italy. They are issued by the Board of Directors upon the proposal of the responsible compliance area, through a process of concordance with all major Group structures.

Furthermore, these rules were drafted to be consistent and in line with the European Directives and the Italian laws transposing them. Lastly, these rules are available for consultation by employees and key stakeholders on the "#Legislation" portal, which can be accessed via the Group's intranet.
After the entry into force of the MiFID II Directive and European regulations in the area of investor protection, the regulatory infrastructure was strengthened in order to provide investors with higher levels of protection and increased transparency in negotiations on the financial instruments markets. On the basis of the provisions of the main Italian and European regulations on this topic, the Intesa Sanpaolo Group provides for obligations in terms of the governance of financial instruments, knowledge and expertise requirements for the Group's personnel responsible for providing investment services and ex ante and ex post information on the costs, charges and incentives of the products and services available. The model was further refined to introduce a new survey profile on sustainability preferences aimed at verifying the consistency of the percentage of ESG financial products/investment services with respect to the sustainability preferences expressed by customers during the profiling phase, which include, in addition to the minimum percentage of the portfolio to be allocated to investments aimed at meeting these preferences, the possibility of further implementing them in compliance with the provisions of ESMA's "Guidelines on certain aspects of the MiFID suitability requirements". In addition, the Group's processes have been supplemented in order to make available to staff and customers specific information relating to the sustainability of the investment instruments and, consequently, the reports periodically sent to customers have been supplemented with information regarding the preferences expressed and regarding the composition of the portfolio in terms of sustainable products.
With regard to advisory services, "Valore Insieme" continues to be a global consultancy solution provided by branch managers through an innovative relations platform that provides an advanced and personalised advisory service in all phases of the construction, protection and transfer of investment portfolios, also through dedicated investment products. It is a service aimed at those looking for an exclusive relationship that combines an innovative platform and ongoing professional support from a dedicated manager.

New products and services and their subsequent variations are subject to the Product Governance process, with the involvement of all Group structures entitled to express their compliance opinion through the assessment of product characteristics, also to clearly identify the target audience for which it is intended, with a view to protecting the end customer. This process is constantly subject to verification by the responsible compliance function to ensure substantial and formal compliance with internal and external regulations and the underlying assessments. The Product Governance process makes it possible to accurately manage and oversee the individual phases represented by the concept, feasibility analysis, clearing, approval and monitoring of products or services submitted for validation.
Each activity involves the participation of several structures in order to assess and validate the products and services, also from an ESG perspective, produced by both the Group and third-party manufacturers, as required by the legislation[126]. Periodic post-marketing monitoring of products and services allows consistency with target market parameters and predefined characteristics to be verified over time.

The compliance assessments of the Product Governance processes are carried out in accordance with the principles of fairness and protection of the interests of customers, and also relate to the quality of the information provided, the consistency of the services, products or transactions with the needs of the target customers.
The entire process is governed within the Group by a well-structured regulatory framework, represented by guidelines, regulations and specific process guides, through which activities, methods and parties involved are identified in detail.

The management of customers' requests, regulated by specific Group guidelines for Managing complaints, Protests to the Supervisory Authority and Appeals to alternative dispute resolution Bodies, is inspired by principles of transparency and fairness and is based on the verification of the circumstances reported by the customer and of the conduct of the personnel involved, aiming for the effective resolution of disputes, within the time limits prescribed by law. The guidelines, which are available in the #Legislation section of the corporate intranet, are issued by the Parent Company's Board of Directors and then implemented by the Group Banks and Companies, which adopt the necessary regulations to implement them, taking into account applicable local and sector-specific regulations. The Group's official website provides information on how a customer can lodge a complaint and the maximum timeframe in which the Group undertakes to provide feedback to the customer. The resulting assessments and determinations are based on the applicable external and internal rules and regulations and on the principles expressed in the Group's Code of Ethics.

The regulations issued by the Bank of Italy, Consob and IVASS provide for specific reporting obligations on the part of the responsible compliance function within the Group, with the aim of reporting to the corporate bodies and the authorities themselves - at least once a year - on the overall situation of complaints and other requests received, as well as on the adequacy of the procedures and organisational solutions adopted.

Customer engagement processes

The Group has adopted a service model structured by business area, with an organisational structure that ensures coverage in Italy and in the other countries in which it operates, with the task of developing the best service quality through various channels, in order to make the commercial offer more effective across the different types of customers. Customer satisfaction and service quality are monitored and overseen by the structures that deal with customer satisfaction and customer experience in the various business Divisions.

---

[126] Bank of Italy - supplement in 2019 to the Supervisory Instructions on "Transparency of the banking and financial transactions and services" with specific provisions on product governance; IVASS - Letter "Directive (EU) 2016/97 on insurance distribution and EIOPA preparatory guidelines on product governance and control by insurance companies and distributors of insurance products" dated 4 September 2017 and Regulation 45 laying down provisions on the governance and control requirements for insurance products in force since 31 March 2021; Consob - Intermediaries Regulation, amended by Resolution 21466 in force since 31 March 2021.

In this regard, to ensure a high level of customer satisfaction, the Banca dei Territori Division has developed a comprehensive feedback collection system, able to identify areas of improvement at an early stage and take concrete action. This system is based on key tools such as:

- NPS (Net Promoter Score): an effective synthetic measure of a customer's propensity to recommend the bank through a survey targeting specific segments. For more information, see the section "Metrics - Net Promoter Score";
- NSI (Net Satisfaction Index): measures the level of customer satisfaction at the key stages of interaction with the Bank;
- SEIok Programme: contributes to determining the Broad-based Short-Term Plan for the Network and concretely supports the continuous improvement of the level of customer service.

In addition, customers can also contact the Group through the complaint channels provided in the specific "Complaints and Dispute Resolution" sections of the Group's app and official website, as well as in the information sheets provided to customers and in the written agreements (e-mail address, certified e-mail, ordinary mail, fax).
The handling of complaints, the drafting and updating of these documents and the website contents are governed by specific internal regulations.

Remediation processes and channels to submit complaints

Complaints are handled by means of a dedicated IT procedure, which records the complaints and generates a "Complaint Register". This procedure tracks all the steps in the complaint handling process and monitors compliance with the applicable legislation on response times.

The procedures and solutions deployed to handle customer complaints are structured and governed by specific internal regulations, also in line with the guidance issued by the Bank of Italy, in particular in its communication of 18 March 2016 "Organisation and functioning of complaints offices: good practices and issues found through control activity".
Each complaint is duly examined, considering the various grounds for the customer's dissatisfaction. The answer must be drafted in simple, clear and comprehensible language and sent in a timely manner, and in any case by the time limits laid down in the legislation in force. When the complaint is received, the customer is notified that the matter is under examination. Where in-depth examination of complaint makes it impossible to issue a reply by the statutory time limit, the customer must be promptly informed by means of an ad hoc communication.

Once the case has been examined, the function responsible shall send the complainant a written response, drafted in accordance with the principles set out in internal Group guidelines on the handling of complaints, protests to supervisory authorities and appeals submitted to alternative dispute resolution bodies. The response must include:

- if the complaint is considered unfounded: a clear and comprehensive explanation of the reasons for rejecting it;
- if the complaint is considered to be wholly or partly well-founded: a description of the measures taken in the customer's favour, with details of the manner and timeframe for granting any reimbursement or compensation.

Targets related to customer satisfaction and responsible sales

One of the fundamental drivers of a service quality culture is the continuous process of improving the customer experience. The Intesa Sanpaolo Group has therefore designed a series of actions, in addition to its policies, to monitor the quality of the services provided. Thus, service quality is subject to constant monitoring and guidance. This makes it possible to achieve high standards of service quality, even without precisely defining measurable quantitative targets. Furthermore, the Group uses key tools such as the NPS in its customer engagement processes, as depicted in the "Customer Engagement Processes" and "Metrics - Net Promoter Score" sections, to monitor the effectiveness of its actions.

Actions on customer satisfaction and responsible sales

The Group monitors customer complaints and reiterations. In this regard, in order to promptly address any emerging phenomena, the responsible structure sends each month to the identified business owners a detailed list of the complaints pertaining to them, asking them to report on the actions taken or to be taken to mitigate the issues experienced by customers.
To ensure the continuous improvement of the customer experience, a "close the loop" system has been strengthened over time, i.e. closing the quality loop by selecting and implementing concrete actions.
The actions implemented include customer re-contact initiatives, which strengthen the relationship, put to good use the NPS data collected and reduce the risk of dissatisfaction and complaints through active listening. For example, customers who respond to surveys may expressly ask to be contacted back. The phone call is an opportunity to establish a relationship based on customer care and attention, as well as an opportunity to examine situations where expectations were not met.

The Banca dei Territori Division has further strengthened its monitoring of service quality, confirming the importance of the synergy between quality management and control. The aim is to support branches in raising awareness and disseminating the culture of quality as a value of the service offered to customers. The Division has also broadened the target audience of the "Customer Experience in Branch" portal, which provides an overview of the quality perceived by customers and supports operators in continuously improving their services. The portal, first released in 2023 for the Retail and Exclusive Business Areas, was also extended in 2024 to the Enterprise Business Area and to the Agribusiness and Impact Departments. In November 2024, the testing phase for the Digital Branch Department began, with release planned for early 2025.

With regard to the handling of complaints, regular alignment and training activities are carried out for the staff at the responsible structure; the applicable regulations are also available to staff on the company intranet.
The Group's annual report on the overall situation of complaints, disclaimers, protests to the Supervisory Authorities and appeals to Alternative Dispute Resolution Bodies describes the organisational set-up and examines its adequacy. In addition, the trend of customer complaints at Group level during the year is reported, including complaints and their possible reiteration ("customer appeals"), appeals to out-of-court dispute resolution bodies ("ADR appeals") and requests for clarifications made by

supervisory authorities in response to customer reports ("reports"). The Group's Complaints Report is sent to the supervisory authorities and an extract entitled "Complaints Management Report" is published on the Group's official website, as required by the relevant regulations.
The trends in complaints are also monitored on a quarterly basis, to verify compliance with the early warning thresholds, defined each year at Group level.
Complaint handling times are constantly monitored by the function responsible for overseeing compliance with the relevant regulations and are reported in the above-mentioned report, as well as in the subsequent section "Metrics - Response to customer complaints".

Metrics on customer satisfaction and responsible sales

Number of branches

To promote the quality of its service, the Intesa Sanpaolo Group is the largest banking group in Italy, with approximately 3,000 branches and a strategic international presence with over 900 branches, including subsidiary banks operating in commercial banking and an international network specialising in supporting corporate customers. The following table shows the number of branches broken down by geographical area covered by the Group, as well as the related Representative Offices.

	Number of Branches
Italy	2971 Branches
Other European countries	770 Branches + 1 Representative Office
America	2 Branches + 1 Representative Office
Asia	7 Branches + 6 Representative Offices
Africa	174 Branches + 1 Representative Office
Australia/Oceania	1 Branch

Net Promoter Score

The Net Promoter Score (NPS) is an indicator that expresses the likelihood of customers to recommend a product, service or company, calculated in index points (between -100 and +100) subtracting the percentage of detractors (dissatisfied customers) from the percentage of promoters (loyal customers) obtained. Overall, in 2024, at the level of the Banca dei Territori Division, the survey results, shown in the table below, can be attributed to approximately 657,000 total interviews carried out via telephone, e-mail, app or Internet Banking with Retail, Exclusive, Enterprise, Non-Profit Sector and Agribusiness customers.

Categories	Customer satisfaction index
NPS Retail	38
NPS Exclusive	34
NPS Enterprises	24
NPS Non-Profit Sector	33
NPS Agribusiness	24

Responding to customer complaints

As concerns the average complaint processing and response time, at the level of the Banca dei Territori Division, four types of complaints are shown below: Banking Services (ORD), Investment Services (SIM), Insurance Services and Products (ASS) and Payment Services (PAG). The average response time compared to the applicable legislation (NR) is calculated as the average number of days between the closing of the complaint and the day it was lodged. This time is calculated in terms of calendar days (note that the time limit under the relevant legislation is in calendar days, except for PAG, for which the time limit is in business days).

Type of complaint	Average processing times (calendar days)	Regulatory time limit (calendar days, business days for PAG)
Banking Services (ORD)	16	60
Investment Services (SIM)	35	60
Insurance Services and Products (ASS)	18	45
Payment Systems (PAG)	14	15

Service quality - Customer data protection

Policies on customer data protection

The Intesa Sanpaolo Group has always maintained a high and constant commitment to protecting its customers' personal data, ensuring that such data is collected and processed in compliance with current legislative provisions. The regulatory framework for personal data protection is represented by Regulation (EU) 2016/679 (General Data Protection Regulation (GDPR) which came into force on 25 May 2018, whose new rules have been implemented by the Group and formalised in the main internal governance documents consisting of the Group's Code of Ethics, which outlines the principles and values on which the Group bases its choices and activities, and the Internal Code of Conduct, which defines the conduct that the Group's employees and collaborators must adhered to in order to ensure the correct processing of data.
More specifically, the GDPR has introduced the accountability principle, which requires the data controller to implement regulatory, organisational and technological measures aimed at ensuring that the processing of personal data takes place in compliance with and in the light of the criteria laid down in the Regulation, such as privacy by design, privacy by default, the appointment of the Data Protection Officer, privacy impact assessment, the record of processing activities, the subjective role of Third Parties and data breach management. The Group protects the data of the persons with whom it interacts by implementing

the "privacy by design" principle, whereby the personal data protection logic is established from the outset by identifying the potential risks for the rights and freedoms of data subjects and the technical and organisational measures suitable for mitigating such risks. A further safeguard is the privacy impact assessment conducted before carrying out one or more data processing activities that may involve a high risk for the rights and freedoms of natural persons.
The privacy policy has been revised so as to make it clearer and more transparent, also by adding charts that make it easier to use and understand. The privacy policy, published on the official website, specifies that the Intesa Sanpaolo Group processes personal data only for the purposes described and expressly indicated in the policy itself, which is made available to data subjects. No processing is carried out for any secondary purposes not expressly stated. With regard to the processing of personal data for marketing purposes, the free, explicit and unambiguous consent of the data subject is required. If the data subject denies consent or does not make any choice, the data collected will not be processed and used for marketing purposes.
Failure by a data processor to comply with external or internal data protection regulations triggers a procedure to verify the actual unlawful conduct. In the case of ascertained and unjustified breaches, the relevant departments are always informed in order to start disciplinary proceedings, which normally result in one of the penalties under the disciplinary code being imposed on the author of the breach.

The Group, having companies located in various EU and non-EU countries, complies with the express personal data protection provisions of their domestic legislation. The Group has issued specific governance documents which provide detailed instructions on the conduct that employees and collaborators must adopt to ensure the correct collection, use and protection of personal data, in compliance with current national and international legislation and the principles that guide the Group, formalised in the Group's Code of Ethics and Internal Code of Conduct (for further details, see the Group's Internal Code of Conduct available on the Group's official website). These requirements are also set out in the Guidelines on the protection of personal data of natural persons and in the Corporate Rules for the processing and protection of personal data of natural persons.
The Guidelines establish the model for managing compliance risk with the data protection rules for all the natural persons with whom the Group interacts, including employees and collaborators. They lay down the general principles and set out the roles and responsibilities of the corporate bodies and structures involved, the macro-processes for monitoring and controlling risk, and the Group's guidance and coordination model. Furthermore, they lay down the requirements for personal data processing and protection, and penalties in the event of non-compliance with the provisions. The Guidelines are issued in compliance with external regulations, internal governance documents the provisions of the European Data Protection Board (EDPB), which is composed of representatives of the national data protection authorities of the EU Member States. The Guidelines apply to the Parent Company, its international branches and companies established in the European Union. The principles set out in the Guidelines therein serve as a reference for the Group companies located outside the European Union. The Guidelines are generally reviewed once a year. Before being approved by the Board of Directors, they undergo a concordance process with the relevant corporate functions.

In line with the principles of the Guidelines, the Corporate Rules on personal data processing and protection detail the topics and provisions on the activities carried out by all authorised data processors, providing precise operating instructions for ensuring compliance with GDPR provisions. The Rules apply to the Parent Company, its international branches and the Group companies operating in Italy according to the centralised privacy governance model at the Parent Company.

Pursuant to Article 37 GDPR, the Board of Directors also appoints the Data Protection Officer who, in performing his/her activities, is supported by the privacy function, which is located in the Chief Compliance Officer's Governance Area and comprises three offices, dealing respectively with privacy advisory, relations with the data protection authority and data subjects, and privacy governance.

The following tasks are entrusted to the Data Protection Officer and the privacy function:
- monitoring and overseeing compliance with the GDPR;
- preliminary compliance check on new products, initiatives and services involving the processing of personal data;
- assessment of risks to the rights and freedoms of individuals when starting or changing any personal data processing activities (Privacy Impact Assessment) in accordance with Article 35 of the GDPR;
- assessment of the subjective privacy role played by Suppliers/Third Parties and preparation of the letter of appointment;
- management of customer requests regarding the exercise of the rights of the data subjects;
- management of replies to the Data Protection Authority and data subjects following reports or complaints lodged with the same Authority;
- role of guidance, coordination and control of the Group companies located in Italy and abroad (EU and non-EU);
- keeping and updating the Record of Processing Activities, as required by Article 30 of the GDPR, wherein all the personal data processing activities carried out are recorded. The Register shows the purposes of each processing, the data storage methods, the security measures applied and other information on the processing activities carried out;
- assessment of non-compliance events and personal data breaches;
- updating the list of third parties that process customers' personal data;
- monitoring training courses on privacy.

As explained above, the Group is committed to ensuring maximum protection of customers' information and assets in order to strengthen their digital trust and provide a secure service. To this end, a cybersecurity process guide was drawn up, an internal regulatory tool that describes all processes for monitoring and managing customer issues. For each specific issue, the guide identifies the structures involved and the steps to be performed.
The scope of application of the policy is the Intesa Sanpaolo Group; responsibility for the guide and its updating is entrusted to the cybersecurity & business continuity management structure. The guide complies with the Organisational, Management and Control Model required by Legislative Decree 231/01, since it includes rules and processes specifically designed to manage sensitive areas, and identifies the activities potentially at risk of the offences set out in the Decree.
To ensure its principles are known by all the Group's people, the guide is made available on the corporate intranet.

In addition, the Chief Security Officer (CSeO) Governance Area was established in 2024. This Area is responsible for controlling cybersecurity, business continuity and physical security. Its mission is to define the Groupwide cybersecurity, business continuity (including business resilience), corporate security and physical security strategy, policies and models.

Customer engagement processes

The Group makes the privacy policy available to all the persons with whom it interacts. In particular, the Group publishes the customer data protection policy on its official website, providing all the necessary information on how it ensures correct data processing. The information provided includes the type of data processed, the purposes and legal basis of the processing, retention periods, the recipients of the data, the rights of the data subjects and how to exercise them, as well as the contact details of the DPO.

The privacy policy also specifies that the Group only processes personal data for the purposes described and expressly indicated in the privacy policy itself, which is made available to those concerned. No processing is carried out for any secondary purposes not expressly stated.
With regard to the processing of personal data for marketing purposes, the free, explicit and unambiguous consent of the data subject is required. If the data subject denies consent or does not make any choice, the data collected will not be processed and used for marketing purposes.

In 2023, the customer privacy policy was revised to make it clearer and more transparent, also by adding charts, taking on board customer feedback collected through dedicated focus groups.

Any data subjects wishing to submit data protection complaints or to exercise their rights, can contact the Data Protection Officer, using the channels described in the section “Remediation processes and channels to submit complaints”.

Remediation processes and channels to submit complaints

The Intesa Sanpaolo Group has adopted a critical event management model that sets out the steps for the efficient management of incidents. The model specifies the functions involved according to the type of event. It contributes to mitigating the reputational risks associated with personal data processing, also with respect to the lawfulness, fairness and purpose of the processing, as well as the relevance, completeness and non-excessive nature of the data collected.
In this scenario, the Data Protection Officer manages non-compliance events by providing assistance and collaboration to ensure the identification and implementation of actions to eliminate or mitigate the effects of the event. If the event constitutes a personal data breach, the Data Protection Officer is required to assess its impacts in terms of tangible risk for the rights and freedoms of natural persons; if the risk is high, the DPO notifies the Authority and, in case of particularly high risk, he/she also notifies the data subjects. For more details on this topic, please see the section “Customer privacy metrics”.

In 2023, the guidelines on the protection of personal data of natural persons and the corporate rules for the processing and protection of personal data of natural persons were updated. These documents lay down the model for managing personal data protection compliance risk, setting out the general principles and the roles and responsibilities of the Bodies and corporate structures involved. Furthermore, they lay down the obligations required for the purposes of personal data processing and protection and establish the application of sanctions in the event of non-compliance with the provisions. To submit complaints on personal data protection issues or requests to exercise their rights, data subjects can contact the Data Protection Officer, using the contact details contained in the privacy policy provided to all data subjects and on the Group’s official website. Requests can be sent electronically (e-mail, certified e-mail) or in hard copy; in both cases, they are treated with an appropriate level of confidentiality and protection of the data of the data subjects who use them. The monitoring of the receipt of requests falls under the responsibility of the privacy function, which manages the reports and requests received and guarantees their timely processing according to the terms laid down by the legislation. The careful and timely handling of requests to exercise the data subjects’ rights is of crucial importance in consolidating the trust relationship and addressing critical situations. The Group has equipped itself to respond promptly to customers’ requests as required by Article 12 GDPR, under which the data controller must take appropriate measures to provide the data subject with all information concerning the processing, without undue delay and, in any case, within one month of receiving the request, or within two months in the cases provided for, informing the data subject.
As part of the integrated internal control system, the Control Functions carry out checks, of different depth and frequency, on the compliance of activities with personal data protection regulatory requirements and on the correct implementation of the measures issued by the Data Protection Authority on these matters. The results of the checks are reported to the Board of Directors in the manner defined by the control system.

In this context, the Chief Audit Officer carries out periodic control activities defined not only on the basis of the specific regulatory obligations on the subject (audits carried out annually), but also from a risk-based perspective, taking into account the evidence reported by the other corporate control functions. Generally speaking, the independent checks by the Internal Audit function are aimed at ascertaining the completeness, adequacy and effectiveness of the data protection compliance risk management model, reporting any irregularities in personal data processing to the competent corporate structures and the Data Protection Officer, and reporting on the matter to the Board of Directors.
In compliance with the GDPR and the guidelines, the Data Protection Officer must at least annually submit a report to the Board of Directors on the most significant data protection issues. This requirement makes it possible, through the adoption of appropriate measures, to mitigate reputational and compliance risks relating to personal data processing.

Targets related to customer data protection

The Intesa Sanpaolo Group has put in place a set of policies and actions to safeguard customer data, which ensure data protection is subject to constant monitoring and guidance. This makes it possible to achieve high standards of service quality, even without precisely defining measurable quantitative targets.
In addition, the Group has adopted a critical event management model that sets out the steps for efficient incident management and solutions that provide for the continuous analysis of incidents and threats, using metrics to assess the performance and effectiveness of its actions (described in the sections “Customer Privacy Metrics” and “Customer Protection Against Fraudulent Transactions Metrics”).

Customer privacy actions

Using a risk-based approach, the Data Protection Officer controls compliance risk by applying the principles of privacy by design, and privacy by default, to control of the risk of non-compliance with data protection legislation both at the stage when personal data processing is designed or significantly modified and during the data processing by adopting, as a default setting, the appropriate technical and organisational measures to ensure an appropriate level of security.
In 2024, awareness-raising activities targeted at the Group's employees and relating to data protection issues continued. This awareness is achieved through the provision of mandatory training e-learning courses which include a final test and the provision of new modules to allow personnel to learn the legislation in practice and to continuously update their knowledge. The Group, through specific tools, monitors course participation and pass rates of the related tests.

Third-party privacy monitoring continued in 2024, through the administration of privacy self-assessment questionnaires to 106 suppliers and on-site visits to 10 suppliers. Overall, both activities were successful, with most suppliers achieving a medium/high level of data protection controls. In 2025, higher priority and attention was focused on the suppliers that had failed to complete the privacy questionnaire and on those that had revealed a low level of data protection control in the self-assessment and on-site visits.
In terms of planning, the birth of the new Isybank entailed the fulfilment of data protection regulatory requirements and the concurrent definition of data protection processes and controls, which will continue in 2025.

Development work continued on the new integrated platform that will enhance controls on the Record of Processing Activities and the main corporate privacy processes. The development, testing and fine-tuning will continue until 2025. In relation to the activities carried out in the international scope, the guidance, coordination and control activity continued in relation to the EU companies with special meetings being held for the presentation of privacy processes, discussion about relevant issues, transmission and analysis of periodic information flows. In the non-EU context, controls on the international branches with a higher volume of personal data processing activities were tightened, to reduce compliance risk and strengthen risk governance.

Actions to protect customers against fraudulent transactions

The trend of fraudulent transactions in 2024 shows the use by fraudsters of increasingly advanced and complex techniques, which mainly include:
- fraud involving the use of mixed Phishing and Social Engineering techniques, aimed at stealing customer data in order to carry out fraudulent transactions, mainly affecting Retail customers;
- fraud perpetrated through the use of malicious software (malware), which mainly impacts corporate customers;
- swindles, i.e. manipulations carried out by the fraudsters against payers to induce them to make a payment to a payee whom they believe to be legitimate but who turns out to be fraudulent;
- Money Muling, whereby the perpetrator convinces the victim to make transfers of money received from a third party, in exchange for a commission.

To combat these frauds and swindles, the Intesa Sanpaolo Group uses specific solutions which, in brief, involve continuous analysis of events and threats to understand the risks and types of fraud in order to increase the ability to detect and prevent the phenomena; and initiatives and limitations to protect the customers most at risk. The main activities carried out during the year include:
- performance of Behavioural Customer Monitoring (BCM) to assess the riskiness of the customer's transaction based on their financial habits. This activity will continue in 2025;
- implementation of the Customer Security Enforcement (CSE) programme, which certifies the devices used by customers and phases out the use of SMS in favour of the dynamic logo, not transferable to fraudsters;
- analysis of fraudulent phenomena with monitoring and insertion of ad-hoc rules to prevent the malicious action of fraudsters (Rule Optimisation);
- implementation of data analytics logics and use of machine learning tools. These actions were started in 2022, have continued with periodic additions, and will continue until 2025.

Initiatives to combat Money Muling have been expanded in a structured manner since 2023. In particular, the current activities, which will continue until 2025, aim to raise customer awareness and to detect and prevent cases of Money Muling. Finally, since 2024 the Group has been engaged in initiatives at system level or with other industry players to strengthen anti-fraud supervision and prevent fraud at international level (e.g. active participation in the Fraud Pattern and Anomaly Detection project - FPAD).

Customer privacy metrics

In 2024, 186 cases (78 of which related to Intesa Sanpaolo) of loss or theft of Group customers' data (Data Breaches) were assessed in Italy, 171 of which (65 related to Intesa Sanpaolo) were not found to pose a risk to the rights and freedoms of the data subjects and therefore did not need to be notified to the Italian Data Protection Authority. For the remaining 15 cases (13 of which related to Intesa Sanpaolo), it was instead considered necessary or prudential to notify the Data Protection Authority; of these, 4 cases (all related to Intesa Sanpaolo, and 3 of which also related to Group employees) were also communicated to the data subjects.
Foreign companies based in the European Union reported a total of 85 incidents/events of alleged personal data breaches, 4 of which were reported to the local authorities; of these, 2 were also communicated to the data subjects. For the remaining 81 cases, the local Data Protection Officers did not detect a risk to the rights and freedoms of the data subjects. Consequently, no notification to the respective Data Protection Authority was necessary.

Metrics on the protection of customers against fraudulent transactions

During 2024, in response to attempted attacks involving the financial system, the Intesa Sanpaolo Group blocked fraudulent transactions[127] amounting to approximately 76.4 million euro for private customers and approximately 20.2 million euro for corporate customers. In this regard, it should be noted that starting in 2024, the Group calculates this figure on the basis of a monitoring system that makes it possible to distinguish between cases of fraud and swindles: in particular, blocked frauds amount to about 8.4 million euro for private customers and about 4.2 euro million for corporate customers, while swindles amount to about 68 million euro for private customers and about 16 million euro for corporate customers.

Customer health and safety

Policies on customer health and safety

Safeguarding the safety of customers and the security of their assets and information is not only a primary duty of the Group, but is also the foundation of developing a long-term trust-based relationship.

In particular, the Intesa Sanpaolo Group protects the health and safety of people, including customers and suppliers, by acting on two distinct but complementary levels.
At institutional level, the Group has joined the "Memorandum of Understanding for the Prevention of Crime against Banks and Customers", promoted by OSSIF (ABI's Anti-Crime Research Centre), endorsed by the Ministry of the Interior and signed in the Prefectures of the main Italian provinces.
The MoU defines the best practices for the prevention of both major threats against staff and assets held by banks, and fraud against customers, with a focus on senior citizens and less financially literate customers. The MoU identifies appropriate levels for preventing these threats, based on the best experience in the field: the Group is above the minimum adequacy thresholds, setting a benchmark on the national and international scene. In particular, in 2024, the Intesa Sanpaolo Group launched a wide-ranging training and information campaign for the prevention of fraud against weaker customer groups, which will continue in 2025 on various channels.

At Group governance level, corporate and physical security guidelines have been implemented. Their current version has been in force since November 2022, having been approved by the Board of Directors.
The guidelines set out clear principles, processes and responsibilities, to ensure the protection of personnel and assets, both at home and abroad. This generates significant positive externalities, inter alia, by helping to create a comfortable and safe place for customers. The guidelines complement the operational rules and the advanced technological measures to strengthen existing controls and measures that contribute to the physical integrity and safety of people. This framework is supported by Group initiatives and information tools for the dissemination of a safety culture.
The abovementioned internal regulations are inspired by constitutional and legal principles that emphasise the value and dignity of work and the individual.

Customer engagement and remediation and channels to submit complaints

One the key principles of the Code of Ethics is the value of the person: the Group takes care of people's health and safety to ensure their professional experience respects their physical and mental well-being.
In particular, the Intesa Sanpaolo Group protects the health and safety of all the people who work there and visit its premises by implementing operational rules and technological safety measures, supported by information materials promoting a health and safety culture. As the protection of people is an essential priority, corporate and physical security matters play a key role. They are governed by specific guidelines and internal rules that also protect customers, enabling everyone to operate effectively, efficiently and safely.

To this end, the Code of Ethics allows customers to file reports of possible non-compliance with its provisions through a specific e-mail inbox, guaranteeing a timely response to queries and complaints and aiming for an effective and not merely formal resolution of disputes.

[127] It should be noted that "fraudulent transactions" include both frauds and swindles.

Targets related to customer health and safety

The Intesa Sanpaolo Group has put in place a series of policies and actions to safeguard customer health and safety, which ensure the continuous monitoring and guidance of this issue, even without a precise definition of quantitative and measurable targets.

Actions relating to customer health and safety

With reference to the actions aimed at promoting customer safety, the Intesa Sanpaolo Group has launched widespread information activity to prevent fraud against weaker customers, such as seniors and those with limited financial education. In particular, the Group has joined a national campaign promoted by the Italian Banking Association (ABI) together with the Carabinieri Corps, which is one of many initiatives deployed by the Authorities to prevent fraud against vulnerable groups, which affects significant numbers and has devastating impacts on customers, often worsening their existing vulnerabilities, at times with irreversible outcomes.
In particular, at the end of 2024, the Group disseminated information material, produced by the Carabinieri, using all channels to reach retail customers: printed leaflets by post, for customers still preferring this medium, apps and the Group's official website. The campaign was extended to all retail customers and not just to the target groups, to emphasise and highlight the social relevance of fraud, the eradication of which requires the active involvement of the entire population and not only of the affected groups.
The Intesa Sanpaolo Group's action will continue in 2025 with a training project for branch staff to detect and prevent fraud against vulnerable customers.

As to actions to strengthen the security of personnel and assets, but which also have a potential indirect effect on customer protection, the Group designs its actions on the basis of risk analysis conducted by the corporate and physical security function, based on the ISO 31000 Guidelines.
These analyses provide input for designing appropriate prevention strategies and measures, ranging from training and organisational actions to the use of advanced technological solutions.

The remit of the corporate and physical security function covers the entire perimeter of the Group, partly under a centralised model and partly via decentralised support.
In particular, emergency security plans for personnel abroad were implemented in 2024, in cooperation with the competent functions.

Assessing the effectiveness of actions is an integral part of the process. The Group tracks data on all actual and attempted offences detected in Italy. The data for the current year show little or no change in the number of these events compared to previous years, which proves the positive impact of the measures taken.

Another key area for physical security is aggressions other than robberies, typically against Group staff. In this area, detection, analysis and containment actions have been in place for quite some time, also with a view to reducing the level of possible jeopardising of customers in financial activities involving contact with them.

Social inclusion and supporting production

Policies on social inclusion and supporting production

The Intesa Sanpaolo Group is committed to building relationships with its customers based on trust and meeting their expectations, offering high quality products and services, with an approach based on constant listening and dialogue. The Group champions inclusion and accessibility, avoiding all forms of discrimination and promoting solutions suitable for all social groups.
Access to credit and financial inclusion are fundamental tools for social progress. The Group is committed to supporting vulnerable customers and facilitating the launch of new business activities, promoting economic and social growth in the countries where it operates, supporting innovation, the ecological and digital transition, and the development of sustainable projects.
By launching specific initiatives, the Group also aims to promote gender equality and inclusion, recognising the social and production value of the role women play in the economy. Such initiatives, aimed at reducing inequality and supporting equality, contribute to strengthening the Group's role as a benchmark in social sustainability for Europe.
Furthermore, the ISP Group is committed to ensuring an inclusive and personalised customer experience, promoting the use of digital channels and providing a transparent and proactive advisory service.

In line with the above, the Intesa Sanpaolo Group, in its 2022-2025 Business Plan, reaffirmed its commitment to creating sustainable and inclusive economic value, allocating significant funds to social lending to facilitate access to credit for vulnerable groups.

Based on specific internal Group regulations on credit products and lending transactions classified as "sustainable", this section sets out sustainability-related products and offers, which include, for example, loans to support socio-economic advancement and empowerment. These internal regulations concern all companies belonging to the Group.
The definition of customer-facing products and services stems from a collaborative process between various relevant regulatory functions, with the aim of ensuring respect for rights, transparency and privacy. These functions are called upon to assess and validate product/service owner proposals, ensuring that they comply with internal regulations and processes.
Credit products and lending transactions are defined according to specific classification processes, which include assessing the purpose of the underlying investment, as well as any applicable agreements, covenants and KPIs, separate for each Business Division. These credit products and lending transactions are carried out in accordance with the ESG framework, classified into

specific categories, including: "environmental sustainability", "social sustainability" and "other sustainability". In particular, credit products are classified as sustainable when they are recognised as such by internal working groups, while lending transactions can be classified as sustainable if one of the following conditions is met:

- the loan is intended for investment in a specific economic activity falling within the classification categories;
- the loan is targeted at zero-emission sectors and economic activities;
- the loan will lead to the achievement of sustainability targets, linked to specific KPIs, which are in line with the company's sustainability strategies.

The sustainability classification is made during the loan application phase. Following the disbursement of the loan, if relevant, the stability of the sustainability classification will be verified and monitored by the operational and business functions for the entire duration of the loan.

Customer engagement processes

The Group is committed to ensuring clear and transparent access to its channels, encouraging customer awareness in economic and financial management. Through organisational structures and in collaboration with industry associations, it develops products and services in response to evolving customer needs, while adhering to sector initiatives. For example, in the area of certificates, it participates in the annual surveys organised by ACEPI (Italian Association of Certificates and Investment Products), to ensure that the complexity of instruments is clearly classified and improve its advisory services.
In order to best respond to customers' needs, advanced listening tools have been adopted to better understand emerging needs and assess the level of satisfaction with existing products and services. In this way, the Group can continue to offer products in line with both companies' and individuals' expectations. When designing agreements, loans and other customer initiatives, direct discussions are organised with the beneficiaries, incorporating feedback and suggestions for continuous improvement. As an example, the Social Impact Roadshow 2024 involved customers and partner foundations in in-person and remote sessions, with the aim of discussing and better representing the non-economic effects of the Group's activities.

In particular, the Banca dei Territori Division's commitment to creating socially oriented credit solutions is manifested through an inclusive approach, aimed at bridging some of the country's social gaps, such as the low number of young people with university degrees. End customers' needs are analysed based on market surveys (e.g. Istat, Eurostat) and the support of research institutes, with specific focus groups. Gamma Impact products, such as those aimed at students or the unemployed, are designed with favourable terms and extended repayment periods to facilitate access to credit even for those who do not meet the traditional requirements.
Right from the product design phase, customer behaviour and market benchmarks are analysed to identify latent needs. Annual customer satisfaction surveys and continuous customer experience surveys following interactions on physical and digital channels highlight areas of satisfaction and dissatisfaction, allowing prompt action to be taken to optimise the Group's products and services.
As well as listening to customers, the staff in the Banca dei Territori Division also contribute by providing feedback on processes and services, suggesting improvements for more immediate usability and a more transparent relationship.

Remediation processes and channels to submit complaints

The Intesa Sanpaolo Group maintains a constant dialogue with its customers to ensure top-tier service. Customers have several possible options available for submitting complaints, such as online on the Group's official website or through an application, by mail (also hand-delivered to operating points) or e-mail. Timely and careful handling of complaints is crucial to consolidate trust and resolve any critical issues. Current regulations require the responsible compliance function to provide regular disclosures, at least annually, on the overall handling of complaints and the effectiveness of the procedures adopted.
In addition, the Code of Ethics allows customers to file reports of possible non-compliance with its provisions through a dedicated e-mail inbox, guaranteeing a timely response to queries and complaints and aiming for an effective and not merely formal resolution of disputes.

Targets and metrics related to social inclusion and supporting production

The Group has set itself the objective of promoting ESG practices, included as a priority in the 2022-2025 Business Plan, by raising awareness among companies and their supply chains and helping them to understand their own level of sustainability, as well as in establishing a transition plan geared towards more responsible and innovative models, in line with the ecological transition of the NRRP. To this end, the ESG Workshop initiative continued in 2024. These are physical and virtual meeting spaces that offer workshops and advice from qualified partners on ESG (environmental, social and governance) issues.

The target of creating at least one workshop per Regional Centre has been far exceeded, with multiple workshops in some areas. Each workshop establishes common objectives and operating methods in order to propose a path designed to help companies identify their strengths and areas for improvement, stimulating change that generates value not only for the company, but also for the community and the environment.

The activities of the workshops are constantly promoted through the Group's traditional channels, such as press releases, the official website and social media channels, but also through the communication initiatives of the founding partners (e.g. chambers of commerce, local authorities, institutions, universities, etc.). The initiative continues to expand, supported by institutions and technical partners, with the aim of making ESG practices a priority in business decisions and development strategies, making the ecological transition not only a necessity, but also an opportunity for innovation and growth.

Since 2021, when the first workshop was launched in Brescia, several workshops have been set up throughout Italy, from Padua to Genoa, including cities such as Milan, Turin, Bari and Palermo. As of 31 December 2024, there were 16 ESG workshops, as shown in the table below.

Target: Number of ESG Workshops	**Date**	**Value**
Baseline[128]	31.12.2021	-
Final number	31.12.2024	16
Target	2025	12

Actions related to social inclusion and supporting production

The Intesa Sanpaolo Group provides its customers with a wide range of medium- to long-term products with the aim of helping to find ESG solutions and supports the most vulnerable groups by promoting access to credit through specific projects and local partnerships. Among its various solutions, the Gamma Impact, powered by the Fund for Impact, offers financial solutions that respond to the country's social needs and are continuously updated on the basis of analyses and customer feedback.

In relation to social inclusion issues, the BdT Division has developed dedicated credit lines:

- S-Loan, to support small and medium-sized enterprises aiming to improve their sustainability profile. In particular, the S-Loan Diversity line, to support SMEs' investments and reward their efforts towards empowering women, such as promoting female participation in their company, recruiting new female staff, gender equality policies and welfare for female employees, in line with European gender equality goals. The S-Loan line, aimed specifically at corporations, including non-profit social enterprises and cooperatives, also includes the S-Loan ESG line, for companies that want to improve their all-round sustainable performance;
- "Finanziamento Microcredito Imprenditoriale" (Business Microcredit Financing), to support start-up and development projects by undertakings, freelancers and unrecognised associations struggling to access credit, using the special Microcredit section of the SME Guarantee Fund;
- the Business Gemma loan, aimed at supporting any type of investment or liquidity need related to the professional economic activity of female-led businesses and self-employed women;
- anti-usury loans, disbursed in accordance with the terms established by agreements with Foundations and Associations registered in a special list of the Italian Ministry for the Treasury. These institutions, responsible for managing the resources provided for by Law 108/96 on behalf of the State, offer guarantees to banks to facilitate access to credit for individuals who are considered worthy of financial support but who, however, would not be able to access finance according to the traditional criteria for assessing creditworthiness. The guarantees financed by the Fund for the Prevention of Usury, established by the above-mentioned law, facilitate the disbursement of loans to combat the financial exclusion of vulnerable individuals, reducing the risk of them turning to illegal credit channels. Since this funding is intended for people in serious economic hardship, the impact on the lives of the beneficiaries and their families is considerable. The number of anti-usury loans granted during the year is monitored by a dedicated structure, which each month reports on the number of exposures covered by guarantees. This data serves to estimate the benefit generated in the various regions in which the organisations affiliated with the Group operate. Personal loans and anti-usury mortgage loans are intended for consumers, professionals and sole proprietors operating for personal or family purposes, outside their business or professional activities, and residing in the areas covered by the foundations and associations affiliated with the Intesa Sanpaolo Group;
- Credit for Community Development (Cre.S.Co.), an initiative developed through individual calls for proposals or other forms of collaboration with specific partners, which establish a guarantee fund to facilitate access to credit for Non-Profit Organisations (NPOs). This instrument aims to support the development of socially beneficial projects in the areas in which the partners pursue their statutory objectives. The mechanism allows the partners, such as foundations, to enter into an agreement with the ISP Group and issue a call to select the projects to be funded. In this context, the partners provide a guarantee fund and/or a fund to cover all or part of the borrowing costs associated with the selected projects. Both secular and religious NPOs, including those set up in aggregative forms such as Temporary Special-Purpose Associations (Associazioni Temporanee di Scopo - ATS), which have their legal and operational headquarters in Italy, may participate in the calls for proposals. Both organisations already active at the time of the call and NPOs newly established as a result of mergers or integrations between pre-existing bodies are eligible, provided that they fall within the sectors, types of intervention or areas defined by the partner. Cre.S.Co. is an instrument offering subsidised loans for new investments or liquidity needs, aimed in particular at non-profit organisations with the objective of supporting the growth of small organisations, which often lack their own equity;
- Gamma Impact, through the Fund for Impact, a credit line dedicated to social impact activities set up in 2019 and confirmed in the 2022-2025 Business Plan, enables the development of credit initiatives aimed at categories of people who have difficulty accessing traditional credit, despite having high potential. The Fund for Impact credit products provide subsidised rates and extended repayment periods of up to 30 years; around 110 million euro was disbursed in 2024. The main programmes include:
  - "Per Merito", an unsecured loan for university students with a disbursement of approximately 107 million euro in 2024;
  - "mamma@work", a loan for new working mothers, with about 2 million euro disbursed.

  Other more recently introduced products include "Obiettivo Pensione", which supports unemployed persons in their voluntary pension contributions, "Per Crescere", a loan for low-income families to access education, "Per avere Cura", to support the care expenses of disabled or dependent persons, and "Per Esempio", aimed at young people who have participated in the Universal Civil Service and are entering the world of work for the first time.

These products, developed under the Gamma Impact range, are characterised by social and inclusive features, allowing people to access credit who would normally struggle to obtain it, such as students and the unemployed. The aim is to generate a positive impact, helping these groups to succeed through financial support. In addition, the Division has introduced a system for

[128] Plan target that represents the planning of a new activity that does not have a base value.

measuring social impact through the "impact detector" (RIM) questionnaire, which is mandatory for all Fund for Impact products, and which allows the impact generated both qualitatively and monetarily to be calculated.

The BdT Division pays special attention to retail customers and their needs, offering dedicated mortgage lines for specific requirements, including:

- "Mutuo Giovani": an offer that facilitates young people (under 36) with a house purchase by accepting requests of up to 100% of the property value, providing for subsidised rates and application fees, elimination of instalment collection costs and elimination of expenses for flexibility and suspension options that can be used to handle contingent hardship situations. Workers with non-standard and increasing protection employment contracts can also apply for it. The "Mutuo Giovani" has thus gained a positioning on the market which sees the Group as the main lender of this target customer group.
- Guarantee Fund for Main Home Purchases: the Intesa Sanpaolo Group participates in the Guarantee Fund for Main Home Purchases, established by the 2014 Italian Stability Law. The "Sostegni-bis" Decree published in May 2021 refinanced the Fund for the years 2021 and 2022, also extending the benefits for 2023 with Decree Law 132/2023. The BdT Division therefore offered mortgages to individuals identified as being priority borrowers (for example young people under 36 years old or single-parent households with children) on favourable terms ranging from exemption/elimination of the substitute tax, to the possibility of accessing high Loan To Value (LTV) features also with State guarantees and the benefit of highly competitive rates.

In order to safeguard its customers, the Intesa Sanpaolo Group scrupulously follows the Consumer Credit Rules, with the aim of protecting the final borrower. Automated mechanisms and control systems, such as usury rate monitoring and debt-to-income ratio monitoring, have been implemented to ensure compliance with the regulations and prevent over-indebtedness. In addition, the Group has developed a strong capability to handle customer complaints, responding promptly to potential negative impacts on products and processes. Thanks to a structured process for developing new products, the ISP Group minimises risks by ensuring access to credit for specific categories. This process is supplemented by automated tools and procedures to ensure that the data provided is reliable and transparent, measuring the impact of products and processes on end customers.
The BdT Division's initiatives to promote financial inclusion include "Finanza Insieme", an online platform launched in September 2023, which is free and open to everyone, customers and non-customers alike. With this initiative, the ISP Group wants to support people in improving their level of financial awareness and their relationship with money. Through simple language and an interactive/edutainment approach, Finanza Insieme offers a customised learning and training path with more than 350 topics and exercises. The topic modules cover seven main areas of bancassurance: Savings, Investment, Risk, Insurance, Pensions, Credit, Inheritance.
The seven topic modules are also organised into different sections:

- "Understanding": main socio-demographic trends, useful to decode context;
- "Getting to know others": main strategies to recognise and prevent major biases;
- "Training": experiential and logical exercises to train the development of more conscious decision-making;
- "Going into depth": topical economic and financial content to understand the market and how it changes over time.

Alongside the commercial offering of products and services, outlined above, the Division promotes a number of initiatives aimed at fostering economic development and the dissemination of a culture of sustainability and social rights:

- the Women Value Company programme, implemented in collaboration with the Marisa Bellisario Foundation, dedicated to SMEs that implement concrete and innovative policies and strategies to guarantee men and women equal opportunities and equal recognition in their careers;
- the Resto al Sud initiative, to support the establishment and development of new entrepreneurial and freelance activities in southern Italy;
- Crescibusiness, aimed at micro, small enterprises and freelancers, which provides a pathway to ESG growth;
- Imprese Vincenti, the initiative that highlights the paths of growth, digital transformation and business models developed by companies also with regard to ESG;
- Programma Sviluppo Filiere (Supply Chain Development Programme), to facilitate access to credit and a better understanding of companies' needs as part of a supply chain. It supports not only the individual, but the entire team with a unified vision of all supply chain players, and has been supplemented with the introduction of the Programma Sviluppo Filiere – Filiere sostenibili (Supply Chain Development Programme – Sustainable supply chains) with the specific objective of promoting virtuous approaches to ESG for supply chain companies.

In addition, the following initiatives are made available to corporate customers to raise awareness of ESG topics:

- Group training programmes with a focus on ESG topics;
- ESG workshops, in-person and remote venues offering workshops and consultancy on environmental, social and governance issues.

Initiatives to support individuals, non-profit and third sector organisations, with a focus on positive social impacts, include:

- Negative EVA impact ceiling: introduced in 2023, this is an innovative governance tool designed to support lending transactions having significant social impact, even in the absence of an immediate economic return for the Group. This tool, which is reviewed each year by the Steering Committee, makes it possible to offer short-, medium- and long-term loans on favourable terms to vulnerable individuals and third sector organisations, often having no access to traditional lending channels;
- Impact Assessment (RIM): the results of loans granted are assessed by means of an impact measurement process, covering:
  - "impact products", i.e. loans granted to disadvantaged individuals;
  - loans to the non-profit sector, where the Group's impact is indirect, and is applied to new loans of no less than EUR 50,000 with maturities of no less than six months.
- The RIM questionnaire is used to collect from managers and customers useful information for measuring benefits. The data thus collected are then analysed to calculate the benefits on people (outcome) as well as the effects of the initiatives on the lives of individuals and their communities (social impact). Finally, an SROI - Social Return On Investment - is calculated, i.e. a measure of the change effected in ways relevant to the people and organisations experiencing or contributing to it.

Concretely, appropriate monetary values are applied to the measured social, environmental and economic outcomes. This makes it possible to calculate a benefit-cost ratio.

For “impact products”, ex-ante questionnaires are currently administered to customers, to assess the expected improvement compared to possible alternatives, if any. In the future, ex-post questionnaires will also be introduced, to measure actual results against expected results.
For loans to the non-profit sector, the assessment is conducted at the time of the loan application. Ex-ante questionnaires are currently being used to collect customers’ expectations about the social impacts of the financed initiatives. In this case, an ex-post assessment is already planned to measure concrete results against initial expectations. At the end of the process, the customers concerned receive a copy of the statements made in the respective questionnaires.
In addition, with regard to loans to the non-profit sector, both physical and virtual presentations have been organised for individual customers or selected client groups, describing the results of the assessments. These meetings take place as part of the normal relationship activity between manager and customer, or during special road shows that include group and individual discussions.

The ISP Group participates in the Agreement for Women Victims of Violence, which the Italian Banking Association (ABI) and the main trade unions have signed in favour of women included in certified protection schemes for victims of abuse, enabling these women to request the suspension of mortgage and personal loan instalment payments for 18 months. To provide even more support, the Group also grants suspension of the entire instalment in addition to the principal amount covered by the agreement. The agreement has already been extended and is valid until 25 November 2025.
The Banca dei Territori Division pays special attention to young people and their needs, offering them a wide range of dedicated solutions. Below are the main initiatives and solutions offered to them:

- XME Conto UP! (reserved for minors) offers a zero-fee current account, plus free debit card, bank transfers and ATM withdrawals, and with stamp duty paid by the Group;
- The pre-paid “Flash Up Studio” card for students attending the partner Universities. This account can be requested free of charge directly via the App: it can be used to make payments, receive scholarships and any remuneration. Where applicable, it also allows the holder to use university services and access University premises.

In addition, the Division is planning other ad hoc initiatives to respond to specific social needs, such as the management of remittances. In continuity with the past, the Group continues to provide the option to send money abroad to meet the specific needs of the ISP Group’s migrant customers, through the Money Transfer service, in partnership with Western Union.

With regard to the IMI Corporate & Investment Banking Division, the financial offer available to the Division's customers includes the main ESG solutions: Sustainability-linked, i.e. general purpose solutions, with conditions linked to the policyholder's sustainability performance, and solutions with income linked to specific investments.
In particular, in terms of sustainability-linked solutions, in 2024 the Group supported its customers with loans, bonds, guarantees, securitisations and hedging activities, while the operations with earmarked income include Green loans, Green, Social and Sustainable bonds, Green Convertible Bonds as well as Project Finance dedicated to renewable energy (wind, photovoltaic, biomass, hydroelectric). In addition, the IMI Corporate & Investment Banking Division offers a wide range of advisory services focused on the sustainable transition: an ESG Advisory Team was established in 2023 to assist the customers served by IMI Corporate & Investment Banking in developing customised ESG tools that are often linked to their transition strategies and plans.

The International Banks Division (IBD) supports individuals in vulnerable conditions through a dedicated offer. In particular, Bank of Alexandria (Egypt) places microfinance at the centre of its strategy as a driver for poverty reduction and the country’s social and economic development. Bank of Alexandria positions itself as a reference for financial inclusion in Egypt, economic empowerment and income support for small businesses and customers with no access to banking, with a greater focus on small farmers, livestock farmers and craft workers. in 2024 the Bank, which offers a diversified catalogue of products (in particular in the field of Agribusiness), also developed in line with the guidelines of the Central Bank of Egypt, granted loans for an overall amount of approximately 34 million euro, also providing customers with training services, in collaboration with the World Food Programme (WFP) and entering into partnerships and collaborations with NGOs, Ministries and private entities.
Within the IBD perimeter there is furthermore a targeted offer for young people for purchasing their first home, also making use of State support programmes for the young. This offer is active in six entities: CIB Bank, Eximbank, ISP Slovenia, ISP Albania, BiH and VÚB Banka; in 2024, a total of approximately 263 million euro was disbursed.

In addition, there are products to support women and young people in business, also developed in cooperation with multinational banks, such as the Women in Business programme of the European Bank for Reconstruction and Development (EBRD), active in 2024 in Serbia. The aim is to support micro, small and medium-sized enterprises run by women or young people in the Western Balkans by providing favourable financial terms, technical advice and know-how. In 2024, around 22 million euro were disbursed. In five geographic areas of the Division (Serbia, Bosnia, Moldova, Croatia and Egypt), products dedicated to pensioners are distributed; the amount disbursed during 2024 was approximately 113 million euro.
With regard to training activities for the sales network and customers, four webinar sessions on “Circular economy/Green and S-Loan financing” and a further in-person session were organised, with Group colleagues from eight banks of the International Banks Division participating. In addition, workshops were held on analysis to align transactions to the European Taxonomy and the impact of sustainability in the E-mobility and food and beverage sectors.

Moreover, as explained above, in the current context it is essential to support the production sector as well as the economic and social growth of the communities in which the Group operates, by offering products and services in the field of environmental, social and other sustainability (see the section “Sustainable finance metrics” for details). For a comprehensive description of the products and services offered for this purpose, with particular reference to climate/environmental topics, see also the section on “Climate Change Actions and Resources at the Portfolio Level” of ESRS E1.

Sustainable finance metrics

For the purpose of greater internal and external transparency with respect to products and transactions deemed sustainable, the Group has decided to draw up specific rules for the classification of sustainable credit products and lending transactions, approved at the end of 2022. From 2023, reporting complies with these rules, including loans in the categories of environmental sustainability, social sustainability, and other sustainability.

Specifically:
- environmental sustainability: this category includes targeted lending products and transactions considered sustainable according to the "environmental" classification, and includes loans to Individuals, Businesses and the Non-Profit Sector, and Corporate & Project Finance;
- social sustainability: this category includes targeted lending products and transactions considered sustainable according to the "social" category, and includes anti-usury loans, products for vulnerable social groups, loans to the Non-Profit Sector and other social loans;
- other forms of sustainability: this category includes non-targeted transactions associated with sustainable covenants/KPIs towards Businesses and the Non-Profit Sector, as well as Corporate & Project Finance.

The total amount disbursed during the financial year 2024 is summarised below, broken down by type of loan.

Type of loan	Loans disbursed in 2024	€/billion
Loans in the environmental sustainability field		7.6
Loans in the social sustainability field[129]		4.5
Loans falling under "other sustainability"		7.0

A breakdown at stock level is given below.

Type of loan	Stock 2024	€/billion
Loans in the environmental sustainability field		20.3
Loans in the social sustainability field		20.1
Loans falling under "other sustainability"		15.8

The stock and disbursement figures of loans in the area of environmental sustainability were calculated using accounting balances for the Parent Company component (including the IMI C&IB Division) and operational balances for the IBD component. The stock and disbursement figures for loans in the social sustainability area and included in the other sustainability category were calculated entirely using operational balances.

Sustainability-conscious investment products and sustainable insurance

The Group considers it essential to maintain an ongoing dialogue with customers, as a fundamental starting point for offering advice, services and products, in the knowledge that it plays a key role in investment assistance, prudent management of savings, and responsible lending, in addition to offering insurance protection. To this end, the following paragraphs outline policies, objectives, actions and metrics in asset management, private banking and insurance.

Sustainability-conscious investment products

Policies on sustainability-conscious investment products - Asset Management

As part of its fiduciary commitment to the Group's customers and investors, the Asset Management Division (hereinafter, also "AM Division"), being a financial market participant, also has a fiduciary commitment to its clients and investors and, more generally, to stakeholders. This requires the AM Division to effectively address sustainability issues, with particular reference to the performance of its financial products and to the issuers in which it invests on behalf of its managed assets, based on the assumption that issuers that implement high environmental, social and corporate governance standards can generate sustainable performance in the long term.

In this regard, in line with the requirements of the EU laws on sustainability-related disclosures in the financial services sector, in particular Regulation (EU) 2019/2088 (hereinafter also referred to as the "SFDR Regulation"), the AM Division has defined within its Sustainability Policy specific methodologies for selecting and monitoring financial instruments, aimed at integrating sustainability risk analysis and management within the investment process for collective asset management and portfolio management services, in addition to the recommendations made as part of the investment advice service. The AM Division also takes into account the main negative effects of investment decisions on sustainability factors, pursuant to Articles 4 and 7 of the SFDR Regulation, and integrates sustainability risks into its remuneration policies pursuant to Article 5 of the SFDR Regulation.

The Sustainability Policy addresses all types of assets ("asset classes") held by the products managed - mutual funds and portfolio management - that in the respective pre-contractual disclosure:
- integrate sustainability risks into investment decisions, in accordance with the transparency requirements of Article 6 of the SFDR Regulation; or
- promote, inter alia, environmental and/or social characteristics, provided that the investee companies comply with good governance practices, in accordance with Article 8 of the SFDR Regulation; or
- have sustainable investment objectives, in accordance with Article 9 of the SFDR Regulation.

[129] Please note that this figure does not include loans disbursed to support natural disasters and for urban regeneration purposes.

Portfolio management mandates characterised by the presence of specific indications within the respective investment policies do not fall within the scope of application, in light of the lower degree of discretion in the selection of financial instruments.

With regard to shareholder engagement, the reference documents are the following:
- the "Commitment Policy", which describes the conduct adopted to foster dialogue with the issuers in which Eurizon Capital SGR S.p.A. invests, the methods and topics of discussion; and
- the "Strategy for the exercise of intervention and voting rights regarding the financial instruments pertaining to assets under management", which governs participation in the investee issuers' shareholders' meetings.

In order to promote the proper implementation of its sustainability policies, Eurizon Capital SGR S.p.A. has defined and adopted a specific internal governance model that envisages the involvement of the corporate bodies and structures having specific roles and responsibilities in the monitoring and management of sustainability risks. Specifically:
- the Board of Directors (BoD): among other tasks, acting on proposals from the CEO and General Manager, it defines the Sustainability Policy and regularly checks its correct implementation;
- the CEO and the General Manager: with the support of the ESG Committee, they make proposals to the Board of Directors on (i) how to integrate sustainability risks into the investment process of Eurizon Capital SGR S.p.A. and into the remuneration and incentive policies, and (ii) identifying the main negative effects of investment decisions on sustainability factors. In addition, the ESG Committee regularly monitors the implementation of the Sustainability Policy;
- the ESG Committee supports the CEO in (i) defining proposals to be submitted to the Board of Directors on sustainability policies, (ii) monitoring the implementation of strategies involving the negative screening of issuers, the positive screening of ESG factors, the analysis, selection and composition of the managed portfolios, and monitoring external corporate governance activities;
- the Financial, Credit and Operational Risk Committee is a collegial body tasked with monitoring the risk exposure of managed products, including sustainability risks;
- the Sustainability Committee's main task is to ensure that management decisions comply with the ethical principles set out in the regulations of the funds;
- the Compliance & AML Function monitors compliance with the Sustainability Policy, overseeing the correct application of the controls governed by external and internal regulations.
- the Risk Management function monitors the sustainability risk of managed products.

Moreover, in order to pursue its customers and investors' best interests and to support the implementation of its Sustainability Policy, the Asset Management Division, also through its parent company Eurizon Capital SGR S.p.A., actively participates in:
- national and international initiatives that promote the development of best practices in the ESG area, the integration of sustainability principles in the financial sector and the adoption of responsible investment principles;
- training events and conferences, aimed at sharing experiences and spreading the culture of sustainability.

Through Eurizon Capital SGR S.p.a, the Asset Management Division participates in numerous international initiatives and working groups: for example, it is a signatory of CDP (since 2004), of the Italian Stewardship Principles promoted by Assogestioni (since 2014) and of the UN Principles for Responsible Investment - UN PRI (since 2015). In addition, it is a member of the International Corporate Governance Network - ICGN (since 2016), the Institutional Investors Group on Climate Change - IIGCC (since 2021), the Net Zero Engagement Initiative (NZEI), promoted by IIGCC and the Net Zero Asset Managers Initiative - NZAMI (since 2021)[130].

For further information on the initiatives joined, see the "Sustainability" section of Eurizon Capital SGR S.p.A.'s official website, where you can also access the Sustainability Policy Summary document.

The sustainability policies are reviewed each year by the ESG & Strategic Activism structure of Eurizon Capital SGR S.p.A., in coordination with the Compliance & AML function, to assess the consistency of the methodologies adopted by Eurizon Capital SGR S.p.A. with the evolution of best practices at national and international level.

Policies on sustainability-conscious investment products - Private Banking

Fideuram Intesa Sanpaolo Private Banking, in line with the Intesa Sanpaolo Group's commitment to sustainable economic development, in accordance with the principles outlined in the Group's Code of Ethics and aware of the importance of allocating resources according to social and environmental sustainability criteria for long-term value creation, has adopted policies on the integration of sustainability risks and information on the main adverse impacts on sustainability factors when selecting issuers, creating the financial product catalogue and providing investment advice and insurance distribution services (hereafter, these services are jointly referred to as "Advice").
These policies are made available to all Division employees via the company intranet in the internal regulations section; they are also published on the Division's website and can be viewed by customers. The contents of the policies are described below.
With regard to the decision-making process for selecting product companies, Fideuram Intesa Sanpaolo Private Banking analyses counterparties with respect to sustainability risk, consideration of PAIs (Principal Adverse Impacts) and compliance with the applicable legislation. Accordingly, it analyses the degree of compliance and implementation of sustainability issues by the companies whose products may be included in its product catalogue, investigating the controls adopted by Asset Managers and Insurance undertakings in relation to the following topics:
- ESG principles/codes: adherence to ESG principles and/or codes at national and global level (such as, for example, the Net Zero2 initiative, Stewardship Principles, Climate Action 100+ and Nature Action 100, which Fideuram Intesa Sanpaolo Private Banking has joined through its subsidiaries FAM and FAMI);

[130] On 13 January 2025, NZAMI launched a review of the initiative to ensure its appropriateness for the new global context. As the initiative undergoes the review, activities to track signatory implementation and reporting have been suspended.

- corporate governance and organisation: implementation of an ad hoc internal regulatory framework and definition of internal bodies or structures focused on sustainability;
- adoption of policies to integrate sustainability risks into investment and remuneration processes;
- range of sustainable products pursuant to the SFDR Regulation (as amended by Regulation (EU) 2020/852, the "Taxonomy Regulation"): complete product documentation complying with the reference legislation, description of any processes for updating and adapting products with respect to sustainability, how information on the products' sustainability characteristics is made available (e.g. by compiling the European ESG Template - EET file);
- use of environmental, social and governance or sustainability-related terms: adoption of an internal regulatory framework to ensure that fund documentation and marketing communications comply with the "Guidelines on funds' names using ESG or sustainability-related terms" issued by ESMA on 14 May 2024;
- consideration of PAIs, as defined in the regulatory technical standards for the SFDR Regulation.

The analysis, carried out on all existing counterparties is performed during the onboarding of the product company with which a new distribution or brokerage agreement is to be signed, and is formalised within the Product Governance processes. This analysis is also regularly updated.

In connection with the above, as part of the procedures adopted to provide the Advisory service, Fideuram Intesa Sanpaolo Private Banking handles the following:
- collecting information from customers during profiling about any interest they might have in investment solutions that value environmental, social and good governance factors;
- defining internal rules for the selection of products that can be considered consistent with the sustainability preferences expressed by customers.

Fideuram Intesa Sanpaolo Private Banking has adopted a classification model for the financial products included in its range of offers, applied across primary and secondary market operations differentiated according to the type of financial instrument.
The service model provides for a check to verify the consistency between the preferences indicated by customers during profiling and the financial products included in its range of offers or traded on the secondary market. If the transaction is not consistent, the reasons for the inconsistency are explained to the customers so that they can assess whether to adjust their sustainability preferences in relation to the specific transaction and conclude it.

Fideuram - Intesa Sanpaolo Private Banking, through a Sustainability Governance system based on important organisational controls, builds and pursues an integrated corporate strategy that focuses on business results but also on human, social, relational and environmental capital. Specifically:
- the Sustainability Manager has a role of integrated and comprehensive oversight of the ESG initiatives, also in liaison with the Intesa Sanpaolo Group initiatives;
- the "Sustainability (ESG)" session, within the Fideuram's Steering Committee, identifies sustainability issues at least once a quarter and defines strategic initiatives, assessing their financial feasibility and impact;
- the ESG & Strategic Activism team ensures proper management of ESG issues in the Group's asset management companies.

The Chief Compliance Officer of Intesa Sanpaolo is ultimately responsible for implementing policies on the integration of sustainability risks and information on the main adverse impacts on sustainability factors in the provision of investment advice services and insurance distribution. Fideuram adopts the centralised model as set out in the Integrated Internal Control System Regulation.
Policy monitoring is embedded within Product Oversight Governance processes with specific metrics related to both product scope and consistency of investment proposals with sustainability preferences.

Targets and metrics on sustainability-conscious investment products - Asset Management

As part of the definition of the Intesa Sanpaolo Group's 2022-2025 Business Plan, Eurizon contributed to the Group's expressed commitment to achieving global climate objectives, by committing to foster the transition to a low-carbon economy, starting with the evolution of its product range. To this end, Eurizon has declared it intends to strengthen and broaden its offer of sustainability-conscious products by increasing the share of products pursuant to Article 8 and 9 of the SFDR Regulation with respect to the total Assets under Management (AuM), as shown in the tables below.

Target: AuM UCIs pursuant to Article 8 and 9 SFDR out of total AuM UCIs (Eurizon) - absolute	**Date**	**Value**
Baseline	31.12.2021	110 billion euro
Final number	31.12.2024	156.6 billion euro
Target	2025	156 billion euro

Target: % AuM UCIs pursuant to Article 8 and 9 SFDR out of total AuM UCIs (Eurizon)	**Date**	**Value**
Baseline	31.12.2021	46%
Final number	31.12.2024	76%
Target	2025	60%

Targets and metrics on sustainability-conscious investment products - Private Banking

In order to measure the percentage penetration of sustainability-focused assets under management, it was decided to monitor the percentage incidence of (AUM) products classified as Article 8 and 9 SFDR in the total AUM held by customers, as shown below.

Target: % incidence of products classified under Articles 8 and 9 on total assets under management	**Date**	**Value**
Baseline	31.12.2021	19%
Final number	31.12.2024	78%
Target	2025	70%

Actions on sustainability-conscious investment products - Asset Management

As part of its Sustainability Policy[131], the Asset Management Division has defined special methodologies for selecting and monitoring financial instruments aimed at integrating sustainability risks into the AUM Investment Process. These methodologies provide for the adoption of specific financial instrument selection processes, duly calibrated according to the characteristics of the individual products managed, briefly summarised below:

- Negative screening - it involves the application of restrictions on issuers most exposed to sustainability risks, with the aim of avoiding investment in financial instruments most exposed to the risk of loss of value due to the occurrence of an environmental, social or corporate governance event or condition. For corporate issuers, these restrictions are defined according to the issuer's sector of operation ("SRI Binding screening"), the company's conduct in terms of adverse impacts on the environment and society itself ("PAI Binding screening"), and the greater exposure to ESG risks, identified on the basis of the issuer's sustainability rating ("ESG Binding screening"); for government issuers, these restrictions are established according to the country's carbon intensity, in relation to GDP, and whether the country is included in the black list of the Financial Action Task Force (FATF);
- Positive screening - it involves, subject to compliance with good governance practices: (i) the integration of ESG factors into the analysis, selection and composition of the assets under management ("ESG Integration") or (ii) the pursuit of sustainable investment objectives;
- Stewardship or Active Ownership - Engagement - proactive interaction with issuing companies through the exercise of participation and voting rights and discussion, fostering effective communication with the relevant corporate bodies and/or senior management and their representatives.

Compliance with these ESG/SRI strategies is monitored by the Risk Management function with the support of the Compliance & AML function.
At the end of 2024, the Asset Management Division has a broad and diversified range of sustainability-conscious funds with assets of approximately 156.56 billion euro in products that, in accordance with good governance practices, promote environmental and/or social characteristics in accordance with Article 8, or have sustainable investment objectives in accordance with Article 9 of the SFDR Regulation.
In particular, in 2024, most of the UCIs launched by Eurizon Capital SGR S.p.A., Eurizon Capital SA and Epsilon SGR S.p.A. integrated ESG factors into the investment analysis, selection and monitoring process; the main strategies adopted concerned (i) products with different time horizons that provide for the protection of invested capital, (ii) flexible "step-in" strategies, with different levels of target equity exposure, to gradually invest in equity markets, and (iii) "buy&watch" funds to manage bond portfolios with decreasing duration.

Also with reference to institutional mandates, the investment process takes into account the integration of ESG criteria in its investment choices in accordance with the provisions of the SFDR Regulation. In particular, all mandates comply with the negative screening criteria. A specific ESG report is regularly produced on a large number of mandates (50 mandates with a value of 12.5 billion euro managed), indicating the positioning of the portfolio with respect to the reference benchmark. In addition, and at the customers' request, a report is regularly offered showing the engagements made during the period with the issuers included in the managed portfolios. The AM Division manages a total of 37 mandates relating to 22 non-captive customers for approximately 9.5 billion euro (of which 7 belong to the scope of the subsidiary Eurizon Capital Real Assets SGR S.p.A. and 1 to Epsilon SGR S.p.A.) on which specific investment restrictions are implemented and/or support is provided to customers within the engagement and corporate governance activities. At the level of insurance mandates and captive open pension funds, the AM Division manages a total of 82 mandates for approximately 48 billion euro in assets under management, on which specific ESG integrations under Article 8 are implemented.

Actions on sustainability-conscious investment products - Private Banking

Regulatory developments envisaged by regulators and the civil society's continued attention to the transition to a more sustainable economy have led the Group to further intensify its commitment, initiatives and improved approach to sustainability, confirming the focus and strategic importance of the ESG Programme launched in June 2021. The project is ambitious and transversally involves all company functions, aiming to integrate sustainability into all aspects of business management and operations.
In line with the objective stated in the 2022-2025 Business Plan relating to the development of ESG advisory services, in 2023 Fideuram supplemented its service model based on customised advice to manage the sustainability preferences of its customers, which since2021 have been collected by using the MiFID profiling questionnaire. Since the end of 2024, a new questionnaire has been adopted where sustainability preferences are further detailed, as required by the policies.

[131] Last updated November 2024

In order to ensure the dissemination of ESG products among customers, the Division has set progressively more challenging goals for the period 2022-2025, both with respect to the number of asset management products on the market classified as Articles 8 and 9 in relation to the total number of products being placed, and with respect to the number of new asset management products classified as Articles 8 and 9 on the total number of new products being placed. Also in 2024, the new offer was strongly directed to solutions that reflected the criteria adopted by the Division in terms of ESG with an incidence of over 85% of the products pursuant to Articles 8 and 9 SFDR on the total of new products.

As part of the Company's products and services already offered, in 2024 too from Fideuram Intesa Sanpaolo Private Banking Asset Management SGR S.p.A. carried out significant activity, bringing 44 portfolio management lines in line with Article 8 SFDR (2 Fogli Fideuram, 17 Fideuram Omnia and 25 Wealth Collections). Within the scope of Portfolio Management Schemes, the investment universe of "Il Mio Foglio ESG" (Article 8 SFDR) has also been enriched; the latter allows the customer to build their own portfolio starting from a specific list of strategies that have strong ESG characteristics (all classified under Articles 8 or 9 SFDR) or to use predefined model portfolios ("guided pathways") broken down by level of risk and built according to a "High Conviction" approach, linked to the tactical selection of specific ESG topics.

Lastly, Fideuram Asset Management Ireland dac expanded its range of funds classified as Article 9 SFDR, launching in June the Fonditalia Clean Energy Solutions fund, and introduced the ETF D-X platform featuring 6 equity and bond solutions (7 ISINs) classified as Article 8 SFDR.
As an addition to the Group's product offering according to the Guided Open Architecture approach to meet even the most sophisticated needs, customers can also find third-party ESG products on offer in the catalogue in collaboration with leading international investment houses.
The ESG investment approach is a distinctive and quality factor in the asset management industry. Similarly, an understanding of the ESG investment logic is crucial in financial advisory service provision so that its value points can be shared with customers. During the year, the Group, also with a view to supporting the expansion of the ESG product offering, launched a number of educational and training activities.
In the area of training/information, the role of "ESG Ambassador" was created: consultants called upon to promote, in their respective territories, the culture of sustainability with a twofold purpose: disseminate ESG matters and sustainable behaviour, and listening to the needs of customers and other Private Bankers. The pilot phase was completed in 2024 with full implementation in 2025.

In particular, a new event of the pilot phase took place in mid-2024 to give voice to the ESG Ambassadors who - divided into working groups - drew up and presented their proposal for the evolution of the ESG role, sales support and marketing, and training materials. The Parent Company and Private Banking Division structures have also started to be involved in the launch of the "Fideuram for the Environment" initiative. At the end of the year, the proposal for the evolution of the role of the fully operational phase was drawn up and presented to top management.

Sustainable insurance

Policies on sustainability-conscious insurance products - Insurance

In line with the Intesa Sanpaolo Group's strategic objectives and the materiality that the integration of ESG factors has assumed for the financial and insurance sector, the Intesa Sanpaolo Assicurazioni Group (hereinafter also referred to as the "Insurance Group") has continued its development of environmental and social matters over the years, implementing concrete actions and initiatives aimed at increasingly consolidating internal governance and at the same time generating a concrete and material impact on its customers. In this regard, the Insurance Group has prepared tools for the monitoring of Governance and risk management in the field of ESG through the attribution of roles and responsibilities, the definition of policies, processes and dedicated initiatives, also in line with the evolution of national and international legislation. The Insurance Group has long had a "Sustainability Policy" that defines specific sustainability guidelines to ensure the integration of Environmental, Social and Governance (ESG) factors into business processes, identifying strategies for the pursuit of sustainable development goals. The policy not only outlines the overall governance, management, control and disclosure framework on sustainability, but also describes the pillars of sustainability by translating them into concrete environmental, social and governance commitments, with the aim of strengthening the integration of sustainability principles within the insurance strategy. This policy is subject to review and possible update by the relevant corporate functions and structures whenever regulatory update requirements, interventions by the Supervisory Authority, business strategies or changes in the context (significant changes in corporate processes, significant structural reorganisations, significant changes to the IT platforms used) so require. In addition, it is submitted to the Intesa Sanpaolo Assicurazioni Board of Directors for approval and is adopted by the Boards of Directors of all the Insurance Group companies. For more details, please refer to the document "Sustainability Policy of the Intesa Sanpaolo Assicurazioni Group", which can be viewed on the Insurance Group's official website.

In the investment field, the Intesa Sanpaolo Assicurazioni Group has adopted the "Policy for the integration of ESG sustainability factors in the investment process", which defines the sustainability principles and standards that guide the responsible management of investments and a monitoring of the impacts (in terms of the presence in the portfolio of counterparties that do not adopt safeguards on: climate adaptation, GHG emissions and the use of non-renewable energy sources) and opportunities (in terms of increasing the number of ESG investment options under management) generated by its activities, linked to the investment sphere. This policy envisages both engagement activities with issuing companies aimed at verifying the adoption of environmental objectives and policies, with a focus on long-term transition plans to reduce emissions, and exclusion strategies for issuers operating in sectors considered "not socially responsible" and/or "critical". In addition, the policy is subject to continuous monitoring in order to integrate any new initiatives that allow for an ever greater integration of sustainability standards into the investment process; the principles contained therein are defined by the Insurance Group and more specifically by the Board of Directors and apply to all Intesa Sanpaolo Assicurazioni Group companies.

In the non-life sector, the Intesa Sanpaolo Assicurazioni Group has adopted an "Underwriting Policy" that applies to the Intesa Sanpaolo Protezione company with the aim of establishing the principles and macro-processes that guide the identification, assessment, management, monitoring and reporting activities related to underwriting risks. The goal of the policy is to set out the criteria for guiding underwriting activity having regard to technical ESG risks. Top Management is responsible for the overall implementation, maintenance and monitoring of the corporate governance system, in accordance with the directives of the Board of Directors and in compliance with the roles and tasks assigned to it.

Lastly, the Intesa Sanpaolo Assicurazioni Group expresses its commitment to ESG, taking into consideration the UN Sustainable Development Goals (SDGs) and the Principles for Sustainable Insurance (PSI), signed in 2019, as well as initiatives such as UN Global Compact, UNEP FI, Equator Principles. In addition, again as evidence of this commitment, at the end of 2021 the Intesa Sanpaolo Assicurazioni Group joined the Net Zero Asset Owner Alliance (NZAOA) through the Last Italian Parent Company - USCI Intesa Sanpaolo Assicurazioni, and in April 2024 joined the Forum for Insurance Transition to Net Zero (FIT).

Actions on sustainability-conscious products - Insurance

The Intesa Sanpaolo Assicurazioni Group is committed to supporting the transition to a net-zero-emission future, strictly complying with the IPCC's scientific indications and the objectives of the Paris Agreement and the NZAOA Protocol. In this context, a target was set for a 50% reduction in EVIC-weighted carbon intensity by 2030 (compared to 2021 levels) with the aim of achieving climate neutrality by 2050 and limiting the global temperature increase to 1.5°C. This commitment is based on scientific pathways that ensure a concrete contribution to achieving global climate goals, while promoting an equitable and inclusive transition.
The Insurance Group has defined emission reduction strategies through the following decarbonisation levers and initiatives formalised within the "Policy for integrating ESG sustainability factors into the investment process":

- exclusion strategies of corporate issuers based on environmental criteria that provide for criteria aimed at excluding from its investment scope issuers operating in sectors deemed "not socially responsible" (hereinafter also "Not SRI") and/or "critical" with particular reference to companies that:
  - have obvious direct involvement in the manufacture of unconventional weapons (Not SRI);
  - derive at least 18% of their turnover from mining or power generation activities related to thermal coal (Not SRI);
  - present new thermal coal-related projects (Not SRI);
  - derive at least 10% of their turnover from unconventional oil&gas extraction activities (Not SRI);
  - have a lower ESG sustainability rating on the infoprovider scale (critical);
- active engagement strategies aimed at analysing companies operating in sectors with a high environmental impact. The Intesa Sanpaolo Group promotes proactive engagement with issuers by exercising participatory and voting rights, including through Delegated Managers and by engaging with investees, encouraging effective communication with the Management of the companies i.e. "active ownership – engagement". To this end, the Insurance Group has planned bilateral discussions with the 20 most polluting issuers in its investment portfolio. These engagements consist of a series of meetings during which both qualitative and quantitative requests are made to verify the counterparties' commitment to reducing greenhouse gas emissions. At the same time, the Intesa Sanpaolo Assicurazioni Group is committed to engaging in dialogue with oil & gas companies and third-party operators to promote a sustainable transition, encouraging companies to set emissions reduction targets based on scientific research, publish detailed transition plans, align corporate strategy and investments with decarbonisation goals, combat fugitive methane emissions, avoid dependence on unconventional, carbon-intensive oil and gas, and forego new investments in drilling in sensitive areas such as the Arctic;
- measurement and monitoring indicators: the Insurance Group uses a series of indicators to measure/assess the company's selection of all investments.

Actions relating to exclusions, investment options classified as Articles 8 and 9 under Regulation (EU) 2019/2088 (SFDR) and the use of specific indicators are applied on an ongoing basis.

In the non-life sector, the Insurance Group monitors the emissions of its portfolio companies where there is data available to calculate them. Furthermore, the Intesa Sanpaolo Assicurazioni Group is actively committed, including through participation in major national and international initiatives, to promoting greater awareness of ESG issues and disseminating best practices that encourage a culture of sustainability and the adoption of tools to support the transition. In particular, these initiatives are geared towards developing new solutions and strengthening the relevant processes.

Furthermore, it should be noted that the Intesa Sanpaolo Assicurazioni Group offers both non-life and life insurance policies.

Life business products can be subscribed mainly by natural persons and, for specific products, also by legal persons. The Insurance Group aims to offer products that promote environmental or social characteristics within the meaning of the SFDR. The Insurance Group offers insurance, pension and financial products aimed primarily at Intesa Sanpaolo Group customers. In particular, the company's business model includes the two aforementioned non-life and life business lines. The life business is based on insurance investment, pension and protection products while the non-life business is based solely on protection products. In the life business sector, the Insurance Group operates through Intesa Sanpaolo Vita (renamed "Intesa Sanpaolo Assicurazioni" on 1 December) and Fideuram Vita, offering a wide range of products with a focus on sustainability (classified as Article 8 SFDR), integrating ESG criteria and targeted solutions for specific customers such as family members of disabled people, minors and incapacitated persons who need a Guardianship Judge and "non-profit sector" entities. In the non-life business, the Insurance Group operates through the company Intesa Sanpaolo Protezione, offering a wide range of products dedicated to protecting people (illness and accident) with a particular focus on the most fragile categories, homes (theft, fire, etc.), vehicles and the needs of SMEs and the Corporate segment. Among the proposed solutions are those designed to promote sustainable and environmentally friendly mobility, such as specific breakdown services for electric vehicles or policies that reward reduced vehicle use, based on distance driven. In addition, the non-life business products already include cover against catastrophic risks and natural events, aimed at retail customers as well as small and medium-sized enterprises, with a specific focus on climate damage and products dedicated to safeguarding renewable energy plants. Through its product offering, the Insurance Group also supports companies in their digitalisation and ecological transition.

Governance information

ESRS G1 - Business Conduct

Materiality assessment of impacts, risks and opportunities

As explained in the chapter "ESRS 2 – General disclosures: Materiality assessment", the Group carried out a double materiality assessment of the main material sustainability matters, from the dual perspective of:

- impact materiality, which considers, from an inside-out perspective, the Group's impacts connected with own operations and with the upstream and downstream value chain that are relevant to the Group, including both actual and potential positive and negative impacts;
- financial materiality, which considers, from an outside-in perspective, sustainability topics that give rise to:
  - risks affecting, or potentially affecting, the development of the undertaking, its financial position, performance and cash flows, access to finance or cost of capital in the short, medium or long term;
  - opportunities that have, or may predictably have, a material financial impact on the Group in the short, medium or long term.

Impacts, risks and opportunities within the scope of ESRS G1 – Business Conduct were identified taking into consideration the specific features of the group. Specifically, such impacts, risks and opportunities were mapped on the basis of the framework in which the Group sets out and implements its business activities and dealings and the internal controls concerned, in place to minimise the negative impacts connected with the topic under consideration in own operations and in the upstream and downstream value chain, along with an assessment of the risks to which the Intesa Sanpaolo Group may be exposed.

For the purposes of impact materiality, the assessment of the impacts identified involved interviews with internal structures and external stakeholders (such as interviews with experts in the sector) and an in-depth qualitative and quantitative analysis based on the metrics envisaged by relevant legislation (namely scale, scope, irremediable character of the impact and likelihood). Specifically, with reference to:

- own operations: the impacts were assessed on the basis of qualitative drivers relating to the Intesa Sanpaolo Group's establishment of internal controls such as the dissemination of a conscious and adequate corporate culture (e.g. promotion of ethical and responsible practices);
- upstream value chain: the impact assessment involved the ESG questionnaire provided by the Group and administered to suppliers, along with an analysis of their feedback;
- downstream value chain: an analysis was carried out on the indirect impacts arising through exposures in the Group's portfolios, in order to take into consideration the Group's exposure to counterparties/undertakings belonging to high-impact industries in terms of business ethics (e.g. respect for human rights and compliance with external and internal regulations, fight against tax evasion, money laundering and anti-competitive behaviour). In addition, relevant investment/lending criteria and strategies were taken into account in assessing the counterparties.

The analysis revealed the following impact materiality outcomes:

- own operations: a number of material positive impacts have been identified with regard to the adoption of internal policies and corporate strategies aimed at spreading a corporate culture within the Group inspired by the principles of integrity, whistleblower protection, political engagement and lobbying activities, and the fight against corruption and bribery;
- upstream value chain: material positive impacts have emerged from the adoption of ethical policies and practices in managing relationships and dialogue with suppliers, including responsible management of payment practices;
- downstream value chain: material indirect negative impacts have emerged from exposures in sectors having the highest impact with respect to corporate culture and supplier relationship management.

To assess financial materiality, the materiality of risks and opportunities was assessed using a dual quantitative and qualitative approach, applied to the scopes identified.

Specifically, with regard to risks, the following analyses were conducted:

- own operations: operational risk, non-compliance risk and reputational risk were assessed, mainly related to cybersecurity aspects and potential sanctions linked to the Group's operations;
- upstream value chain: the assessment focused primarily on potential exposures to reputational risk in the case of Group suppliers that adopt a less structured approach to the topic in question (e.g. publication of the "Code of Ethics", definition of anti-corruption policy, etc.);
- downstream value chain: the assessment focused on credit risk, market risk and strategic risk connected with the topic in question. This would also give rise to reputational risk.

It should be noted that, specifically in the process of identifying and assessing risks related to business conduct, the Intesa Sanpaolo Group has adopted an integrated approach that considers specific criteria relating to location, type of business, sector and structure of the operations performed. In particular, in relation to own operations, potential penalties arising from violations of regulations and procedures are monitored; in relation to the upstream value chain, suppliers are monitored and selected according to criteria that promote corporate soundness and compliance with ethical standards; and in relation to the downstream value chain, counterparties' legal compliance is checked before providing them with products and services. These analyses also take into consideration the countries and activity areas in which the Group, its suppliers and the counterparties it finances and in which it invests mainly operate.

The analyses conducted have identified the following risks as having financial materiality:
- with regard to own operations: operational risk and the associated reputational risk related to corporate culture;
- with regard to the upstream value chain: the reputational risk related to the topics of protection of whistleblowers (Whistleblowing) and corruption and bribery;
- with regard to the downstream value chain: credit risk and reputational risk arising from business relationships with counterparties that have elements of potential risk related to corporate culture and management of relationships with (their) suppliers.

With regard to the financial materiality of opportunities, the analyses have focused on the company's own operations relating to business conduct. The financial materiality analysis found that none of the mapped opportunities was material.

Policies, targets and actions related to corporate culture

Policies related to corporate culture

Corporate culture is the foundation of the Intesa Sanpaolo Group's identity and strategies. Guided by principles of integrity, sustainability and social responsibility, corporate culture informs business decisions and daily behaviour, creating value for customers, employees, shareholders and communities.
Tools such as the "Code of Ethics" and the "Internal Code of Conduct" ensure compliance with international standards and promote an ethical and inclusive environment. Investing in corporate culture enables the Group to meet global challenges, strengthening its leadership role in the banking sector also on sustainability topics.

The "Code of Ethics" (hereinafter also referred to as the Code) is a voluntary self-regulatory instrument adopted by all the Group's
companies and is an integral part of the sustainability management model. The Code sets out the Group's mission, corporate values and principles governing relations with stakeholders. For some particularly important areas (e.g. human rights, employment protection, environmental protection and fight against corruption) it lays down rules and principles in line with the main international standards.

The Code and any updates thereto are approved, with the support of the Risks and Sustainability Committee (SRC), by the Board of Directors (BoD) of Intesa Sanpaolo S.p.A., in its capacity as Parent Company, and brought to the attention of the competent bodies of the subsidiaries for their implementation. Compliance with the principles and values of the "Code of Ethics" is monitored by the Chief Sustainability Officer Area and the Chief Audit Officer's structures, the latter on the basis of the annual risk-based audit programme. Finally, an independent third party may be tasked with analysing implementation of the principles of the "Code of Ethics", in line with the requirements of UNI EN ISO 26000:2020. In this context, it should be noted that the BoD, the Risks and Sustainability Committee (RSC), the Management Control Committee (MCC) and the Surveillance Body receive a report on the implementation of the Code and the principles of social and environmental responsibility (for more details, see ESRS 2, "Sustainability governance" section).

The "Code of Ethics" is also inspired by the main national and international guidelines on corporate social responsibility (in addition to those mentioned in the section "The Group's commitment to human rights" in the ESRS S1 standard) including:
- OECD Due Diligence Guidance for Responsible Business Conduct;
- OECD Guidelines for Multinational Enterprises on Responsible Business Conduct and The Ten Principles of the UN Global Compact (ten fundamental principles, including anti-corruption);
- Council of Europe Convention on Preventing and Combating Violence Against Women and Domestic Violence (also known as the Istanbul Convention);
- Charter of Fundamental Rights of the European Union.

In cases of non-compliance with this Code, reported by any stakeholder, the Group reserves the right to take the appropriate measures, based (in cases other than fraudulent conduct or acts infringing specific laws, contracts or regulations) on a constructive approach, including via training programmes, to reinforce the Group people's awareness of and compliance with the values and principles laid down in this Code.

To promote the dissemination of its principles, the "Code of Ethics" is published on the Group's intranet and official website so as to be accessible to all stakeholders. In addition, the Code is provided to each Director, employee or external collaborator upon appointment, hiring or start of the collaboration. On receiving the Code, the persons concerned sign a document declaring that they have received and read it, and pledge to comply with its principles. In this regard, as an additional guarantee for all stakeholders, a Code of Ethics email address (codice.etico@intesasanpaolo.com) is available to anyone wishing to report any non-compliance, with a guarantee of confidentiality and non-retaliation.

The Chief Sustainability Officer (CSO) area actively contributes to awareness-raising initiatives aimed at disseminating the culture and values of the "Code of Ethics", both within the Group and to the various stakeholders. The values, principles and commitments contained in the Code are shared within the Group through specific compulsory training activities that translate ethical principles into consistent strategic choices and practical conduct during daily operations. In particular, training courses are created with content suitable to the role of each person and developed according to a process that will complete their professional training and foster personal growth. In addition, training contents were revised during 2024, maintaining a general part and three levels of in-depth analysis of the requirements for compliance with all corporate rules. For more details, see the document "Code of Ethics" available on the Group's official website.

The Group has also adopted an "Internal Code of Conduct" (hereinafter also referred to as the Internal Code), which is supervised and monitored by the competent governance and control functions. The "Internal Code" is the document that, drawing inspiration from the values expressed in the "Code of Ethics", indicates the conduct to be maintained or avoided in order to pursue with professionalism, diligence, honesty and fairness the interests of the company, customers, shareholders and society as a whole, as it defines the essential rules of conduct to be followed by all Group personnel. The Internal Code is also addressed to management and supervisory bodies, non-employee financial advisors, agents, external collaborators and interns. In this context, the Chief People & Culture Officer Area is responsible for updating the Internal Code of Conduct and obtaining its approval by the Risks and Sustainability Committee (SRC) and the Board of Directors (for further details, see ESRS 2, "Sustainability Governance" section).

In light of the above, the subsidiaries must adopt the "Internal Code" by resolution of their competent Corporate Bodies. At that time, they may make additions and amendments, to add stricter solutions or take into account the specific features of the subsidiaries. Any such changes must be submitted to the Parent Company for prior approval. As regards branches and offices of the Intesa Sanpaolo Group located in foreign countries, the "Internal Code", without prejudice to its principles, may undergo adaptations to align it with local regulatory requirements. For more details, see the document "Group Internal Code of Conduct", available on the Group's official website.

With reference to cybersecurity aspects, considered for the purposes of carrying out the financial materiality analysis for the own operations perimeter, see ESRS Standard S4 - Consumers and End-Users, the section on Customer Data Protection.

Targets related to corporate culture

As illustrated in the section "Policies on Corporate Culture", the Group closely monitors corporate culture issues through a series of policies and actions. Although the Group has not yet defined specific quantitative targets for corporate culture, to ensure the effective implementation of the provisions of the Code of Ethics and the Internal Code of Conduct, specific and detailed training is provided to Group employees on the values enshrined in the two codes, as well as safeguards to protect against any breach of those values.

Actions related to enterprise culture

The "Code of Ethics" has been drawn up on the basis of a context analysis and external benchmarking and involving the Parent Company's Sustainability Managers, all the Governance Functions and Business Divisions.

To ensure compliance with the values and principles set out in the "Code of Ethics", the Group delivers compulsory digital and classroom-based training courses to its people on an ongoing basis. Courses are permanently available on the company's internal platforms to all Group personnel (in Italian, English and local languages), including the banks of the International Banks Division (IBD).

In addition, to further strengthen the supervision of training, there are mechanisms linked to the incentive system for people who do not complete their compulsory training within the required timeframe, as set out in the Group's rules on participation in compulsory training. For more details, see the "Training and Development" section of ESRS S1. In particular, training courses on the "Code of Ethics", "Internal Code of Conduct", "Corruption Risk" and "Whistleblowing" are systematically updated, strengthening the message on the values that characterise the Group and inspire all its processes, initiatives and corporate culture.

Policies, targets and actions related to the prevention of corruption

Policies related to the prevention of corruption

The Group carries out its activities with the aim of providing banking and financial services to its customers in compliance with the value of integrity, which in turn is embodied in the principles of professionalism, diligence, honesty, fairness and responsibility, and in accordance with the values and restrictions contained in the "Code of Ethics", the "Group Internal Code of Conduct" and the "Organisational, Management and Control Model" adopted pursuant to Legislative Decree 231/2001.
In this context, the "Group Anti-Corruption Guidelines" (hereinafter referred to as the "Anti-Corruption Guidelines") identify principles and sensitive areas, establish the roles, responsibilities and macro-processes for managing the risk of corruption, and define the commitment to comply with regulatory provisions aimed at combating corruption in all its forms (the "zero tolerance" principle). In this sense, the policy impacts on active cooperation in the fight against corruption and the mitigation of its risks. In particular, these activities concern the areas at highest risk identified by the "Anti-Corruption Guidelines" and establish management and organisational safeguards in the respective areas of activity. With reference to international standards, the Group has identified the following areas exposed to the highest risk of corruption, or which may be exploited to engage in corruption

- gifts and entertainment expenses;
- charitable donations and sponsorships;
- relations with third parties (suppliers and other parties that provide their services to the Group);
- purchase, management and disposal of equity investments and other assets;
- staff hiring;
- purchase, management and disposal of real estate.

In addition, the Guidelines enable the Group to know better the parties with which it deals in the performance of its activities and to maintain its credibility and trust with all stakeholders.
The process of monitoring the principles of the "Anticorruption Guidelines" comprises the following activities:

- analysis of the evolution of the legal framework;
- risk assessment;
- definition of first- and second-level controls;
- verification of implementation of the Guidelines;
- quality assurance.

These activities allow the Group to also monitor the transactions in which it acts as a mere executor of customer instructions, using the money laundering risk and terrorist financing risk control system, set up to comply with the requirements of Legislative Decree 231/2007.

To emphasise the materiality of this topic, the "Anti-Corruption Guidelines" must be complied with by corporate officers and all Group personnel, and apply to all Group companies and all the countries in which the Group operates, with the exception of entities that perform only ancillary services and research activities. The "Anti-Corruption Guidelines" are also addressed to external parties (suppliers, agents, consultants, professionals, business partners, self-employed or para-subordinate workers, etc.) who cooperate with the Group in the performance of its activities (i.e. "third parties"). For this reason, they are made available to all stakeholders through the Group's official website and to counterparties who are beneficiaries of charitable or sponsorship initiatives, as well as to third parties that collaborate with the Group, when formalising the relevant relationships.

With respect to the functions involved, the "Anti-Corruption Guidelines" are approved by the Corporate Bodies. The topic falls under the supervision of the Chief Compliance Officer Governance Area.

At the operational level, Group personnel must immediately report any violations of the provisions of the "Anti-Corruption Guidelines" to their supervisor, who in turn must forward the report received to the Company's Anti-Corruption Officer and to the internal audit function for assessment. This is without prejudice to the possibility of using the reporting systems established under the rules on internal whistleblowing. For more information, see the following section "Whistleblowing Policies".

In this context, it should be noted that the Group's approach to fighting corruption is inspired by the fundamental principles contained in the relevant conventions by international best practices (OECD, Convention on Combating Bribery of Foreign Public Officials in International Business Transactions; UN, Convention Against Corruption, Global Compact; Council of Europe, Criminal Law Convention on Corruption and Civil Law Convention on Corruption). The Group is also certified by an external company under UNI ISO 37001:2016 Anti-corruption management systems, which is the international standard in this field (valid until 2025).

Targets related to the prevention of corruption

As reported in the paragraphs in this section, the Intesa Sanpaolo Group has implemented a number of policies and actions to monitor corruption topics, including an anti-corruption policy and dedicated assessments in the ESG & Reputational Risk Clearing processes, carried out on the portfolio, for social and governance topics, although it has not yet established specific quantitative targets in this governance area.

In this context, the Group has put in place effective controls to continuously monitor and govern these topics, thereby pursuing the goal of preventing corruption and achieving the Group's objectives with honesty, fairness and responsibility, in full and effective compliance with the rules, professional ethics and the spirit of the agreements signed, even without a precise definition of quantitative and measurable targets within a limited time horizon.

Actions related to the prevention of corruption

The main actions implemented in the area of corruption prevention consist of the constant revision of the "Group Anti-Corruption Guidelines" (last update approved by the Board of Directors in 2024), the updating of the rules on the management of gifts and entertainment expenses, and the planning of compliance with the recommendations of the certification body for ISO 37001:2016. It should be noted that the Group will renew the above certification in 2025.

The "Anti-Corruption Guidelines" are reviewed annually, usually by December of each year.

To prevent any instance of corruption, the Group adopts a risk assessment model that takes into account the operational and business features of each company, based on a qualitative-quantitative methodology derived from an assessment of the residual risk in relation to the risk inherent in the vulnerability of the organisational and control system:

- the assessment of inherent risk is based on seven risk factors consistent with the areas identified by the Guidelines, plus the geographic factor, assessed on the basis of a set of quantitative indicators (e.g. value of orders to third parties);
- the assessment of the vulnerability of the organisational and control systems is based on thirteen vulnerability categories developed on the basis of a qualitative questionnaire that refers to the macro-processes defined in the "Anticorruption Guidelines" and a set of quantitative indicators developed by correlating the risk mitigation elements (e.g. number of employees who completed training courses).

For the purposes of obtaining the ISO 37001:2016 certification, six-monthly audits on the areas of greatest risk of corruption are conducted by the Chief Compliance Officer Area. These audits include both level one checks (including enhanced due diligence) and level two checks.

The Group monitors the transactions in which it acts as an executor of customer instructions, using the money laundering risk and terrorist financing risk control system.

At the same time, the internal reporting systems, the person responsible for them, the processes for analysing the reports, the structures involved and the methods for reporting to the corporate bodies are governed by specific Group company rules on internal systems for reporting violations, as well as by the "Organisational, Management and Control Model" adopted by each Group company pursuant to Legislative Decree No. 231/2001, which ensure the confidentiality of the reporter, excluding the risk of retaliatory, unfair or discriminatory behaviour.

If the Chief Audit Officer, who is separate and autonomous from the audited structures, receives reports of any unlawful conduct or indicating a strong suspicion of a breach of anti-corruption principles or legislation, he/she shall promptly inform the Corporate Anti-Corruption Officer and take the action deemed most appropriate.

In this context, reporting to corporate bodies on anti-corruption matters is an integral part of the reports prepared by the Chief Compliance Officer Area on the basis of the information flows established under the "Regulation on Integrated Internal Control Systems and other communications". These include, on an annual basis, the identification, risk assessment and planning of management actions, as well as, on a six-monthly basis, the description of the activities carried out, the issues detected and the remedies identified.

Finally, the Group arranges for specific training initiatives on the subject, for the benefit of corporate officers and staff. The planned training initiatives are compulsory and traceable; specifically, they aim to strengthen understanding of the key concepts of the anti-corruption legal framework and application of the Guidelines in order to promote conduct consistent with the provisions they contain.

In support of this theme, training is also provided whenever the "Anti-Corruption Guidelines" undergo a significant revision. This is done by providing specific updating training, which is preferably delivered in digital mode, to ensure that the perimeters and functions/resources of the entire Group are reached, in the form of compulsory training and with an impact on the Broad-based Short-Term Plan (PVR) in the event of failure to attend the training.

The content of the training incorporates the rules in force at a general level ("Anticorruption Guidelines") and in response to the operations of the Business Units (rules and processes); in the event of updates during the year, the necessary additions are made available. In this context, the Group provides training to 100% of the structures involved in the sensitive areas identified as having a higher risk of corruption (identified above).

In addition, specific training to top management, called "Tone from the Top" is delivered annually. The objectives are similar to those defined for all anti-corruption training: in particular, the aim is to disseminate a corporate culture based on the values of honesty and integrity and the principle of lawfulness. The training is delivered via online sessions (virtual classroom with remote connection). This training consists of:
- induction for members of the parent company's Board of Directors;
- "board members programme", for members of the corporate bodies and top management of the Italian and international subsidiaries as well as top management of the foreign perimeter.

Metrics related to the prevention of corruption

There have been no convictions and/or penalties for violations of anti-corruption and anti-extortion laws; consequently no fines or sanctions have been imposed on the Intesa Sanpaolo Group.

Whistleblowing policies, targets and actions

Whistleblowing policies

The Group has an internal whistleblowing system relating to both national and European regulations which harm the public interest or the integrity of Intesa Sanpaolo and the Group Companies (for example: administrative, accounting, civil or criminal offences; unlawful conduct pursuant to Legislative Decree no. 231/01; rules governing banking activities; conduct giving rise to conflicts of interest) or relating to internal company policies and/or procedures, which the whistleblower has discovered in the work context.

The reference internal rules on the matter, which are the responsibility of the Chief Audit Officer Area, are set out in a specific Group rules document on internal whistleblowing systems and are available for consultation by all persons working for the Intesa Sanpaolo Group on the company intranet. In addition, a summary description is also available on the Group's official website.

In this context, the system is reserved for: employees and self-employed workers who work or have worked for the Group; persons who have a professional collaboration relationship with the Group; workers or collaborators who provide goods or services or perform work for third parties and work or have worked for the Group; freelancers and consultants who work or have worked for the Group; volunteers and trainees; shareholders (natural persons); and persons with administrative, control, supervisory or representative functions.

These individuals may report a violation via channels available 24 hours a day (e-mail or voice messaging) available on the Group's official website and on the Group's intranet portal, in Italian or English (international language of reference), or in the language of their country.

In addition, the Group puts in place appropriate controls to protect all those involved. In particular, it protects the confidentiality of the information received and the identity of the whistleblower, which is known only to those authorised to access the dedicated channels and can be disclosed only with the whistleblower's consent, and protects the whistleblower from retaliatory or discriminatory conduct, including attempts or threats of such conduct, as a result of the whistleblower's report.

With respect to the perimeter and the main figures involved, the head of the whistleblowing systems for the Parent Company and the Service Companies is the Chief Audit Officer. Said Officer is appointed by the Board of Directors of Intesa Sanpaolo S.p.A. and is assisted by a Delegated Manager who supports him/her in process supervision and reporting and by a specific team.

Targets related to Whistleblowing

The Group has adopted rules, procedures and conduct regarding whistleblowing systems and, in addition, provides mandatory training on whistleblowing. In addition, the Group handles the examination of reports and provides a response within set deadlines, while ensuring the whistleblower is protected from possible retaliation. Finally, despite the lack of a precise definition of quantitative targets within a specific time horizon, the set of policies and actions adopted by the Group is effective and appropriate to protect whistleblowers and manage their reports efficiently.

Actions related to Whistleblowing

Mandatory training courses (one for the Italy perimeter, one for the Insurance business and one for a first portion of the international branches) were prepared and delivered during 2024. The course syllabi covered the characteristics, channels and safeguards related to whistleblowing, as well as the steps to manage the whistleblowing process.

In 2024, a specific training initiative was also carried out, in line with the provisions of Legislative Decree 24/2023, for the staff members who receive whistleblowing reports. The training, delivered by an external lawyer specialised in the subject, examined in depth the different areas of the whistleblowing process, from multiple perspectives.

A total of about 73,000 employees attended training courses on the subject.

Supply chain management policies, targets and actions

Supply chain management policies

With respect to supply chain management strategy and actions, the Group has several policies and rules that it applies in a timely manner.

Through the “Code of Ethics”, the Group aims to promote conduct consistent with the highest international and national ethical standards in the performance of its activities and in the management of its business. The Code also includes sustainability principles, acknowledging them as fundamental to guiding the corporate strategy and ensuring a positive impact on the future of the planet and society, in the knowledge that considering social concerns also contributes to minimising exposure to risks and strengthening the Group’s reputation, in line with the sustainable development principles and adhering to important international initiatives (e.g. UN Global Compact).

In this context, the “Organisational, Management and Control Model” is a valid tool for raising the awareness of all those who work on the Group’s behalf, leading them to operate with integrity and transparency, and is also more effective in preventing the risk of the offences and the administrative breaches covered by the reference legislation being committed.

The objective is to make all those who work on behalf of the Intesa Sanpaolo Group on activities susceptible to the offences referred to in Legislative Decree 231/01 aware that infringing the provision may result in disciplinary/contractual consequences and to reiterate that such forms of unlawful behaviour are strongly condemned by the Group.

The “Internal Code of Conduct” recalls the set of values and principles set out in the “Code of Ethics” on appropriate conduct, as well as the ways in which the Group intends to pursue its mission in compliance with legal and social obligations. It sets out the rules of conduct to be observed both in the workplace and externally, i.e. pursuing the Group’s interests with professionalism, diligence, honesty and fairness, and acting in any case with transparency and full respect for people’s dignity and integrity. The exercise of decision-making powers and activities must therefore always be guided by the aforementioned values and principles, following traceability criteria.

In addition, the section on “Policies and processes related to supply chain workers” in ESRS S2 refers to the Internal Guidelines on Group Procurement, which aim to define the roles and responsibilities of the corporate bodies and structures of the Parent Company and Group Companies in the process of managing Group purchases, as well as the principles and macro-processes to be observed during all management phases of the procurement of goods and services.

Supply chain management targets

As explained in this section, through continuous monitoring and targeting of these topics, the Group has a number of policies in place to oversee supply chain management topics such as the adoption of a supplier portal and ESG assessments of suppliers, although it has not yet established specific quantitative targets in this governance area.

Supply chain management actions

Suppliers registered in the “Group Supplier List” are also assessed with regard to their ESG propensity. This is done through a specific ESG questionnaire in use since 2022. During 2024, supplier mapping with regard to social, environmental and governance sustainability continued, with the aim of strengthening the assessment and selection criteria of the best suppliers. All new suppliers are required to complete the questionnaire. The ESG score, calculated on the basis of the aforementioned questionnaire and the possession of certain certificates in line with the Group’s criteria, expresses the supplier’s quality with regard to ESG issues and can influence the selection of the best suppliers in relation to specific procurement needs. It follows that, in relation to specific product categories with a greater environmental or social impact, suppliers who fail to comply with the minimum requirements can be excluded from tenders.

For further information, please refer to the ESRS E1 section on “Strategy to combat climate change at supply chain level”.

With regard to measuring the ESG propensity of suppliers, the aim is to achieve an overall assessment of active suppliers by 2025. In this context, specific webinars will be promoted on the subject of "workers in the value chain" for all the suppliers that have access to the Group Supplier Portal.

In addition, the Group plans to adopt, starting in 2025, a "Procurement Code of Conduct" to be provided to all the suppliers registered on the Group Supplier Portal and engaged by Group Procurement. The suppliers will be required to disseminate the Code among all their workers. The aim is to achieve acceptance of the Code by all suppliers impacting the "green" and "social" categories by 2028.

Lastly, the "Procurement Code of Conduct" will be published on the Group Supplier Portal, among the documents the supplier must declare to have read when registering.

Supply chain management metrics

During the 2024 financial year, the Intesa Sanpaolo Group had an average time of 10 business days to pay invoices received. This figure represents the average number of days elapsed from the start of the contractual or legal payment term until actual payment.

In this regard, it should be noted that there is no single payment standard: in particular, for Intesa Sanpaolo and Isybank, the practice is for payments to be negotiated contractually and, unless otherwise specified, the payment term is 60 days.

It should also be noted that the Intesa Sanpaolo Group was not involved in any legal proceedings concerning the late payment of invoices due by it.

It was deemed appropriate to consider, as a representative sample of the Group, the suppliers present on the procurement cycle platform, which is managed by the Parent Company. This sample consists of the companies Intesa Sanpaolo S.p.A. and Isybank S.p.A., whose invoices are administered through the above-mentioned system, and which account for most of the volumes in terms of number of value of invoices at Group level.

Policies, targets and actions related to political engagement and lobbying activities

Policies on political engagement and lobbying activities

The Intesa Sanpaolo Group's internal policies provide that political parties and movements may not be recipients of donations and sponsorships, as set out in the Group's "Anticorruption Guidelines" in the section "Policies related to the prevention of corruption". In particular, specific Group rules state that the only form of new loan granted to political parties, connected associations and individual candidates, which can be authorised only by the Board of Directors, consists of the advance on an annual basis of the "2x1000 contribution" against the assignment to the Group, to be reported in accordance with the law, of said contribution when received by the political parties. In this regard, it should be noted that the Intesa Sanpaolo Group did not grant any loans of this kind in 2024.

In addition, the Intesa Sanpaolo Group adopts a structured system of internal regulations to govern the management of relations with institutions in the legislative, regulatory and operational fields. These rules support the coordination and consistency of the Group's activities, ensuring compliance with legal provisions, the protection of corporate interests and the promotion of transparent and effective practices in relations with institutions, regulatory authorities, market partners and relevant stakeholders. This approach helps to strengthen the Group's strategic positioning in a constantly evolving regulatory environment.

Specifically, the Group has put in place rules governing its interactions with the Supervisory, Resolution and Regulatory Authorities, to ensure regulatory compliance and protect the Group's strategic positioning. These rules cover the entire scope of the Group's activities, with a small number of exceptions relating to specific operational interactions, the criteria for which are detailed in specific internal Group regulations.

There are two main actors that are competent and responsible for interactions with the regulatory and supervisory authorities:

- firstly, the internal regulations identify "pivot structures", i.e. structures belonging to the Parent Company that are tasked with coordinating communications with each supervisory and regulatory authority and the consistency of such communications across the Group. A single structure is identified to avoid risks of inconsistency in communications with the authority and is optimal for effectively managing communications, ensuring a single point of contact and a comprehensive response. By way of example, the Institutional Affairs Head Office Department is responsible for managing official correspondence with Italian and international antitrust authorities, for all matters concerning competition and market protection legislation;
- the second actors are the "functional owners", i.e. Group structures engaged and identified by the pivot structure on the basis of the subject or scope of the individual contact or topic addressed, according to the competence identified from time to time. The functional owners, among other things, identify potential initiatives to mitigate negative impacts or to seize opportunities.

The regulatory framework adopted by the Group adheres to the standards and initiatives of the European Central Bank (ECB), the European Commission and the Financial Stability Board.

The needs of key stakeholders, including consumers, regulatory authorities and market partners, are all taken into consideration when establishing internal regulations.

Targets related to political engagement and lobbying activities

As explained in this section, the Intesa Sanpaolo Group has implemented a number of policies and actions to monitor lobbying issues (e.g. policies on relations with political parties, advocacy activities). However, the Group has not yet established specific quantitative targets in this governance area.

Actions related to political engagement and lobbying activities

The Group plays a proactive role in regulatory processes, monitoring regulatory proposals (and, where appropriate, actively participating in related discussions through advocacy) for topics that may have a direct and indirect impact on the Group, particularly with regard to banking, financial and insurance legislation and the European ESG regulatory framework. In particular, advocacy work was carried out with regard to the initiatives reported in the metrics section on ESG issues (e.g., at the European level, some legislative initiatives related to the EU Green Deal strategy) and financial issues.

For all issues, including sustainable finance and direct environmental impacts, Intesa Sanpaolo cooperates with the relevant trade associations at all levels (national, European or international). For example, for sustainability aspects, there is ongoing collaboration with the Italian Banking Association (ABI) within specific working groups, to raise awareness in the financial and non-financial sectors on environmental sustainability topics and the forthcoming impact of regulatory developments, especially those on ESG disclosures.

At the European level, the Intesa Sanpaolo Group has interacted with lawmakers, the main trade associations and other stakeholders to promote and represent the various environmental sustainability initiatives of the Group. The Group, through its European Regulatory and Public Affairs structure, which is part of the Institutional Affairs Head Office Department, brings its best practices to the attention of policymakers, informs European officials about any technical aspects of the financial topics supporting sustainability, and describes the specific features of its context so that they can be taken into account during the legislative process.

Metrics related to political engagement and lobbying activities

In the context of transparency on the activities and commitments related to the Group's exercising of its political influence, it should be noted that as of 31 December 2024, no Director had held a position in the public administration comparable to a position in administrative, management and supervisory bodies in the two years prior to assuming their current mandate.

Furthermore, as at 31 December 2024, the Group was registered in the EU Transparency Register, with registration code 24037141789-48.

Below is a non-exhaustive list of some of the Group's main lobbying activities during 2024, divided into ESG legislation and legislation not strictly related to ESG issues.

ESG legislation

Directive (EU) 2024/1275 of the European Parliament and of the Council of 24 April 2024 on the energy performance of buildings, published in the OJEU on 8 May 2024
The directive provides for the decarbonisation of residential and non-residential buildings in Member States territories by 2050 and updates the existing regulatory framework to reflect a higher climate ambition combined with social actions. The Intesa Sanpaolo Group believes that the Energy Performance of Buildings Directive supports improvements in the energy efficiency of new and existing buildings, positively influencing their value and the achievement of environmental objectives. The Group, together with trade associations, suggested some regulatory adjustments to ensure the banking sector's ability to support the financing of EU building stock improvements in favour of the climate transition.

Directive (EU) 2024/1760 of the European Parliament and of the Council of 13 June 2024 on corporate sustainability due diligence and amending Directive (EU) 2019/1937 and Regulation (EU) 2023/2859, published in the OJEU on 5 July 2024
The directive requires companies and their partners to prevent, mitigate or bring to an end the adverse effects of their activities on the environment and human rights. The Intesa Sanpaolo Group welcomed this directive as it promotes sustainable and responsible corporate conduct along value chains, with respect to human rights and the environment. Together with the financial sector, the Group contributed to the drafting of a document with trade associations to identify potential critical issues and proposed pragmatic solutions.

Regulation (EU) 2024/3005 of the European Parliament and of the Council of 27 November 2024 on the transparency and integrity of Environmental, Social and Governance (ESG) rating activities, and amending Regulations (EU) 2019/2088 and (EU) 2023/2859, published in the OJEU on 12 December 2024
This regulation introduced a common regulatory approach to strengthen the integrity, transparency, comparability where possible, accountability, good governance and independence of ESG rating activities. Given the importance of ESG ratings in investment decisions, the Intesa Sanpaolo Group views this regulation positively, as it contributes to promoting a culture of transparency on companies' impact on people and the environment, while reducing greenwashing and promoting sustainable investments. The Group collaborated with industry associations by responding to consultations and submitting written contributions to promote a clearer framework of transparency and supervision for ESG rating providers.

Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector, published in the OJEU on 9 December 2019 ("SFDR")

In view of the SFDR revision scheduled for 2025, in 2024 the ISP Group contributed to drafting a letter from the trade associations requesting the European Commission to postpone the adoption of amendments to the Regulatory Technical Standards (RTS) in order to avoid a potential misalignment between the RTS and the future revised text of the regulation.

Commission Delegated Regulation (EU) 2023/2486 of 27 June 2023 supplementing Regulation (EU) 2020/852 of the European Parliament and of the Council by establishing the technical screening criteria for determining the conditions under which an economic activity qualifies as contributing substantially to the sustainable use and protection of water and marine resources, to the transition to a circular economy, to pollution prevention and control, or to the protection and restoration of biodiversity and ecosystems and for determining whether that economic activity causes no significant harm to any of the other environmental objectives and amending Commission Delegated Regulation (EU) 2021/2178 as regards specific public disclosures for those economic activities, published in the OJEU on 21 November 2023
The “Environmental Delegated Act” incorporates revisions of the “Disclosure Delegated Act (EU 2021/2178)” and includes mandatory reporting templates in the corresponding annexes. The Intesa Sanpaolo Group generally supported the adoption of the Delegated Act, but identified some critical issues, specifically related to the calculation of the Green Asset Ratio. The Group, together with the financial sector and trade associations, contributed to drafting a document on this topic to encourage, among other things, a more symmetrical structure of the ratio between numerator and denominator and the inclusion of exposures to special purpose vehicles (SPVs) in the calculation of the ratio.

Regulations not strictly related to ESG issues

Regulation (EU) 2024/1623 of the European Parliament and of the Council of 31 May 2024 amending Regulation (EU) No 575/2013 as regards requirements for credit risk, credit valuation adjustment risk, operational risk, market risk and the output floor, published in the OJEU on 19 June 2024 (“CRR III”)
CRR III introduced changes regarding requirements for credit risk, credit valuation adjustment risk, operational risk, market risk and the output floor. Together with the banking sector and trade associations, the Intesa Sanpaolo Group encouraged, among other things, the one-year postponement of the application of the Fundamental Review of Trading Book (FRTB) rules in order to ensure a level playing field with banks operating in non-EU jurisdictions.

Proposal for a Regulation of the European Parliament and of the Council amending Regulation (EU) 2016/1011 as regards the scope of the rules for benchmarks, the use in the Union of benchmarks provided by an administrator located in a third country, and certain reporting requirements, COM/2023/660 final (“Benchmark Regulation”)
The Benchmark Regulation regulates the indices used as benchmarks in financial instruments and financial contracts, and provides rules on the use of non-EU benchmarks. The Group welcomed the objectives of the reform proposal to ensure continued access to benchmarks while maintaining a sufficient level of investor protection. Together with industry and trade associations, the ISP Group followed the legislative phase of the measure during 2024, taking a special interest in developments in the parliamentary work.

Proposal for a Directive of the European Parliament and of the Council amending Directives (EU) 2009/65/EC, 2009/138/EC, 2011/61/EU, 2014/65/EU and (EU) 2016/97 as regards the Union retail investor protection rules, COM/2023/279 final; Proposal for a Regulation of the European Parliament and of the Council amending Regulation (EU) No 1286/2014 as regards the modernisation of the key information document, COM/2023/278 final (“Retail Investment Strategy”)
The “Retail Investment Strategy” regulatory package includes a proposal for an omnibus directive amending the Markets in Financial Instruments Directive (MiFID), the Insurance Distribution Directive (IDD), the Solvency II Directive, the Directive on undertakings for collective investment in transferable securities (UCITS) and the Alternative Investment Fund Managers Directive (AIFMD), and (ii) a proposal for a regulation amending the PRIIPs (packaged retail and insurance-based investment products) regulation. The Intesa Sanpaolo Group considers the absence of a total ban on inducements to be positive and has carried out advocacy activities, engaging in talks, where deemed necessary and/or appropriate, with relevant stakeholders.

Proposal for a Regulation of the European Parliament and of the Council amending Regulation (EU) No 806/2014 as regards early intervention measures, conditions for resolution and funding of resolution action, COM/2023/226 final; Proposal for a Directive of the European Parliament and of the Council amending Directive 2014/59/EU as regards early intervention measures, conditions for resolution and financing of resolution action, COM/2023/227 final; Proposal for a Directive of the European Parliament and of the Council amending Directive 2014/49/EU as regards the scope of deposit protection, use of deposit guarantee schemes funds, cross-border cooperation, and transparency, COM/2023/228 final (“Crisis management and deposit insurance framework - CMDI”)
The proposed reform of the current regulatory framework for bank crisis management and deposit guarantee schemes consists of three texts: the Single Resolution Mechanism Regulation (SRMR) (Regulation (EU) No 806/2014), the Bank Recovery and Resolution Directive (BRRD) (Directive 2014/59/EU), and the Deposit Guarantee Schemes Directive (DGSD) (Directive 2014/49/EU). The Group welcomed the objectives of the reform to preserve financial stability and protect taxpayers’ money, protect the real economy from the impact of bank failures, and improve protection for depositors. Advocacy work was carried out both with trade associations and through direct dialogue with representatives of institutions. The main focus of the advocacy was the provisions of the legislation with respect to the establishment of irrevocable payment commitments.

Regulation (EU) 2017/2402 of the European Parliament and of the Council of 12 December 2017 laying down a general framework for securitisation and creating a specific framework for simple, transparent and standardised securitisation, and amending Directives 2009/65/EC, 2009/138/EC and 2011/61/EU and Regulations (EC) No 1060/2009 and (EU) No 648/2012, published in the OJEU on 28 December 2017
In view of the announced publication of a legislative proposal to reform the European securitisation framework scheduled for 2025, in 2024 the ISP Group responded - directly and via trade associations - to the consultation published by the European Commission on this topic.

Proposal for a Regulation of the European Parliament and of the Council on the establishment of the digital euro, COM/2023/369 final
On 28 June 2023, the European Commission published a regulatory proposal establishing the legal framework for a possible digital euro to supplement euro banknotes and coins. However, it will be up to the European Central Bank (ECB) to decide whether and when to issue it. The objective of this proposal, according to the European Commission, is to ensure that central bank money with the status of legal tender remains available to the general public, while offering a state-of-the-art and cost-efficient means of payment, ensuring a high level of privacy in digital payments, maintaining financial stability and promoting accessibility and financial inclusion The proposal is currently being examined by the European Parliament and the EU Council. The Intesa Sanpaolo Group is following the proposed regulation, which, if adopted, will have significant impacts on the payments world, and taking part in the legislative debate, both directly and through trade associations.

Proposal for a Regulation of the European Parliament and of the Council on a framework for Financial Data Access and amending Regulations (EU) No 1093/2010, (EU) No 1094/2010, (EU) No 1095/2010 and (EU) 2022/2554 COM/2023/360 final
On 28 June 2023, the European Commission published a regulatory proposal on a framework for financial data access (open finance) that establishes rights and obligations for managing the sharing of certain financial data of customers, with their permission, beyond payment accounts. The Group is monitoring the ongoing legislative process and participating in the legislative debate, in particular through trade associations. The concerns raised by the proposal relate to the competitiveness of European banks, the level playing field and data security and protection.

On the other hand, as regards the international scope (Non-EU), as of 31 December 2024, the Group monitors lobbying activities in the various countries by dialoguing with national and supranational institutions. In particular, the non-EU countries include Algeria, Australia and Kenya.

Corporate governance and remuneration policies

Corporate Governance and remuneration policies

Corporate Governance

Intesa Sanpaolo has adopted the “one-tier” governance system, with regulatory provisions, including supervisory provisions, in line with the principles laid down in the Corporate Governance Code and, in general, in line with national and international best practices, ensuring the effective and transparent allocation of roles and responsibilities to its Corporate Bodies and the correct balance between the strategic supervision, management and control functions.
For a more detailed description of the corporate governance system, reference should be made to the “Report on Corporate Governance and Ownership Structures” – available in the “Governance” section of the Company’s website – prepared in accordance with Article 123-bis of the Consolidated Law on Finance, which requires issuers to provide the market yearly with detailed information on their ownership structures, their compliance with a corporate governance code, their corporate bodies structure and operation as well as their corporate governance practices.

Shareholder base

According to the entries in the Shareholders’ Register and the available information, shareholders with stakes represented by shares with voting rights exceeding 3% of capital as at 31 December 2024 – a threshold that, if exceeded, requires disclosure to both the company and Consob[140], pursuant to current Italian legislation (Article 120 of the Consolidated Law on Finance) – are shown in the table below[141].

Shareholder	Ordinary shares	% held
Fondazione Compagnia di San Paolo	1,153,947,304	6.482%
Fondazione Cariplo	961,333,900	5.400%

One-tier governance system

Intesa Sanpaolo adopts the one-tier governance system and therefore operates through a Board of Directors, within which guidance and strategic supervision powers converge; the control functions are carried out by the Management Control Committee, established within the Board of Directors, made up entirely of Independent Directors appointed by the Shareholders’ Meeting; the Managing Director and CEO supervises the company’s management to the extent of his assigned powers, in compliance with the general planning and strategic guidelines set forth by the Board.
The governance model adopted by the Bank is characterised by a clear allocation of roles and responsibilities among the Bodies:

- the Board of the Company is assigned the guidance and strategic supervision duties and the duty to resolve on all the relevant corporate deeds;
- the Committees appointed by the Board support it in carrying out its own functions in order to facilitate the taking of fully informed decisions;
- the Management Control Committee exercises the powers and functions conferred by the current regulations upon the body with the control function and upon the internal control and audit committee, pursuant to Legislative Decree 39/2010;
- the Managing Director and CEO performs the day-to-day management function, within the scope of the powers delegated by the Board;
- the Managers support the Managing Director and CEO in day-to-day management within Managerial Committees, performing the tasks and powers assigned to them by the Board and detailed in specific Regulations which govern the functioning thereof.

[140] Pursuant to Article 119-bis, paragraph 7 of the Issuers’ Regulation, companies and licensed parties holding shares as assets under management may use the exemption from the disclosure obligations if the managed shares are more than 3% and less than 5%.
[141] See also what was reported in the 2023 Financial Statements:
- in December 2020, BlackRock Inc. had disclosed a 5.005% holding in the share capital of Intesa Sanpaolo (notified in Form 120 A dated 9 December 2020) as well as a 5.066% aggregate holding (notified in Form 120 B dated 4 December 2020) and has not provided any update of these holdings following the changes made subsequently in the number of shares into which the share capital of Intesa Sanpaolo is divided;
- JP Morgan Chase & Co. had disclosed on 21 December 2021 a 4.571% aggregate holding (notified in Form 120 B), of which only 0.963% was represented by voting rights attached to shares.

The Shareholders' Meeting

In the one-tier system adopted by the Bank, the ordinary Shareholders' Meeting resolves, amongst other things, on:
- the approval of the financial statements and distribution of net income;
- the appointment, removal and determination of remuneration with respect to the positions of Board Member, Chair and Deputy Chair of the Board of Directors and Chair and members of the Management Control Committee;
- the approval of the Board Members' and personnel's remuneration policies, as well as the plans based on financial instruments;
- the appointment of the independent auditors and the determination of the relative fees, upon the reasoned proposal of the Management Control Committee and, where the conditions are met, the revocation or amendment of said engagement, in consultation with the same Committee;
- the other matters assigned to it by the applicable regulations and the Articles of Association.

The Board of Directors, the Managing Director and the Board Committees

The Board of Directors is composed of a minimum of 15 up to a maximum of 19 members, including non-shareholders, appointed by the Shareholders' Meeting on the basis of slates of candidates submitted by shareholders in line with the legislation for listed companies. Board Members remain in office for three financial years until the date of the next Shareholders' Meeting called to approve the financial statements and the proposal for allocation of net income in accordance with Article 2364 of the Italian Civil Code and may be re-elected.
The Shareholders' Meeting, held on 29 April 2022, determined the number of members of the Board as 19 and appointed the Board of Directors for the 2022/2023/2024 financial years, electing as its Chair Gian Maria Gros-Pietro and as Deputy Chair Paolo Andrea Colombo. The election took place on the basis of slates of candidates who meet the requirements envisaged by law and by the Articles of Association.

The Board of Directors is responsible for exercising the Company's guidance and strategic supervision duties and for resolving on all the most important corporate actions, with the power to undertake all transactions considered necessary, useful or appropriate in achieving the corporate purpose, of both an ordinary and extraordinary nature, and to adopt all decisions reserved to it by law, by the Articles of Association and by the regulations. With regard to its corporate management duties, the Board, without prejudice to the powers reserved for it, delegates to the Managing Director the necessary and appropriate powers to ensure consistency in day-to-day management, in implementation of the guidelines decided by the same Board. The Board determines the content, limits and methods of exercise of the powers granted to the Managing Director and establishes how he/she must report back quarterly to the Board on the delegated activities.
At the meeting held on 29 April 2022, the Board of Directors, in continuity with the previous mandate, unanimously confirmed the appointment of Carlo Messina as Managing Director and CEO, who was granted the necessary and appropriate powers to ensure consistency in day-to-day management, in implementation of the guidelines issued by the Board.
The Managing Director is the Chief Executive Officer and General Manager and supervises the company's management to the extent of his assigned powers, in compliance with the general planning and strategic guidelines set forth by the Board. He determines and issues operational directives and is responsible for personnel management.
The Board of Directors has established four internal committees, the prerogatives and duties of which comply with the provisions of the Articles of Association and the Supervisory regulations in force:
- Nomination Committee: it performs inquiry and advisory duties to support the Board in the process of appointment or co-optation of the Board Members to ensure that the composition of the Body, in terms of size and professionalism, makes it possible to fulfil its duties efficiently, as part of the process for the appointment of members of the Bodies of the main subsidiaries; the Committee also performs the other duties assigned to it pursuant to the law or by the Board of Directors.
- Remuneration Committee: it inquires, proposes and advises on remuneration and incentive matters, thereby supporting the Board, and performs the other duties assigned to it pursuant to the law or by the Board of Directors.
- Risks and Sustainability Committee: it supports the Board in the performance of strategic supervision functions regarding risks, the internal control system and sustainability, and performs the other duties assigned to it pursuant to the law or by the Board of Directors.
- Committee for Transactions with Related Parties: it carries out the tasks assigned to it by the rules on transactions with related parties and associated entities; in particular, it issues its opinion on the transactions that fall within the scope of application of the rules and of the internal regulations.

The Management Control Committee

The Management Control Committee, appointed by the Shareholders' Meeting as part of the Board of Directors, consists of 5 members of the Board of Directors elected by the Shareholders' Meeting of 29 April 2022, who appointed as its Chair Alberto Maria Pisani. All Committee members meet the independence requirements laid down in the Articles of Association.
The Management Control Committee performs the duties assigned by current legislation to the control body of a parent company of a banking group heading a financial conglomerate and issuing listed shares and also operates as the Internal Control and Audit Committee pursuant to Article 19, paragraph 2, letter c) of Legislative Decree no. 39/2010.

Among other activities, the Committee supervises:
- compliance with the regulations, the principles of correct management and the actual implementation of the corporate governance rules set forth in the Corporate Governance Code,
- the adequacy of the Company's organisational, administrative and accounting structure,
- the statutory audit process and accounting and financial disclosures,
- the adequacy, efficiency and functionality of the internal control system,
- the adequacy, efficiency and functionality of the risk governance and management process and the business continuity plan.

The Committee may, after notifying the Chair of the Board of Directors, convene the Shareholders' Meeting whenever it deems it necessary for the performance of its duties or if, during its activities, it detects objectionable facts of significant severity and requiring urgent measures.

The operating structure

Divisions, Governance Areas and Head Office Departments reporting directly to the Managing Director and CEO

The Parent Company is divided into Divisions – comprising business line aggregations with similar characteristics in terms of products and services provided and in terms of regulatory framework – and into Head Office Structures grouped into Governance Areas in a direct reporting line to the Managing Director and CEO, which exercise guidance, coordination, control, support and service functions at Group level, as detailed below.
- Divisions
  - Banca dei Territori Division;
  - IMI Corporate & Investment Banking Division;
  - International Banks Division;
  - Wealth Management Division, which consists of the following Divisions: Private Banking Division, Asset Management Division and Insurance Division;
- Governance Areas
  - Chief Governance, Operating & Transformation Officer Governance Area, which includes the Chief Equity, Legal & M&A Officer Governance Area, the Chief Transformation & Organisation Officer Governance Area and the Chief People & Culture Officer Governance Area;
  - Chief Sustainability Officer Governance Area, which includes the Chief Social Impact Officer Governance Area;
  - Chief Security Officer Governance Area;
  - Chief Data, A.I. and Technology Officer Governance Area;
  - Chief Cost Management Officer Governance Area;
  - Chief Lending Officer Governance Area;
  - Chief Financial Officer Governance Area;
  - Chief Risk Officer Governance Area;
  - Chief Compliance Officer Governance Area;
  - Chief Institutional Affairs and External Communication Officer Governance Area.

In addition to the aforesaid structures, the Chief Audit Officer reports directly to the Board of Directors to ensure his/her necessary autonomy and independence.

The functions assigned to the Governance Areas are as follows:

Chief Governance, Operating & Transformation Officer (C-GOTO) Governance Area

The Chief Governance, Operating & Transformation Officer (C-GOTO) Governance Area is responsible for:
- overseeing the definition of transformation, innovation and organisational evolution strategies for the Group, to support the development of business and governance structures, in line with corporate objectives, promoting and accelerating the implementation of transformation initiatives;
- overseeing the definition of the Group's human resources and industrial relations policies, also promoting the development of the Group's values and culture, in compliance with the applicable regulations and in line with corporate strategies and objectives, to be proposed to the Managing Director and CEO and to the Corporate Bodies for matters within their competence;
- overseeing the definition of the evolutionary strategy for the Group's organisational model, in line with the corporate strategies and objectives, to be proposed to the Managing Director and CEO and to the Corporate Bodies for matters within their competence;
- supporting the Corporate Bodies in defining strategies on extraordinary finance transactions and governance of the investment portfolio for the Group, in line with corporate objectives;
- overseeing the definition of proposals for extraordinary finance transactions, to be submitted to the competent decision-making Bodies for assessment and approval as to matters within their competence;
- ensuring the monitoring of legal risk at Group level and providing legal advice by defining the relevant guidelines;
- ensuring, for the Group, the monitoring of compliance risk with reference to the areas of Protection of Health and Safety in the workplace, pursuant to Italian Legislative Decree No. 81/2008;
- assisting the Managing Director and CEO in his internal and external activities, supporting the examination of major strategic issues and the monitoring of relevant initiatives;
- assisting and advising the Parent Company's Corporate Bodies in the performance of their functions.

The Chief Governance, Operating & Transformation Officer Governance Area is reported to by the Chief of CEO Staff and Corporate Bodies and Corporate Affairs structures, in addition to the three Governance Areas whose functions are described below:

- ***Chief Equity, Legal & M&A Officer Governance Area***
  - ensuring the analysis of the evolutionary trends of the domestic and international markets of relevance to the Group, in close cooperation with the Business Divisions, to identify potential targets and/or partnerships and/or extraordinary corporate transactions in line with the Group's growth and/or rationalisation strategies as defined in the Business Plan;
  - defining proposals for extraordinary finance transactions for the Group, in line with corporate strategies and objectives, to be submitted to the competent decision-making Bodies for assessment and approval, by the Head of the Chief Governance, Operating & Transformation Officer Governance Area;
  - ensuring compliance with the guidelines and policies regarding the governance of the investment portfolio and the achievement of results in line with the Business Plan;
  - overseeing the legal risk at Group level, managing litigation and the related operational risk and defining, in these areas, the guidelines through directives and instructions;
  - providing legal advice and assistance to the Group's structures, following regulatory and case law literature, including at European and international level, ensuring the correct regulatory framework of all new initiatives and supporting the compliance function in the identification and interpretation for the purposes of managing the risk of non-compliance.

- ***Chief Transformation & Organisation Officer Governance Area***
  - defining, for the Group, the guidelines on transformation, innovation and organisational evolution (Transformation Plan), based on market trends and international best practices, as well as on an integrated and cross-cutting vision of customer satisfaction and the Group's reputation, in coordination with the Head of the Chief Governance, Operating & Transformation Officer Governance Area;
  - driving the Group's transformation and innovation process, in line with the above-mentioned guidelines, supporting the evolution of the business and governance structures, promoting and accelerating the implementation of the transformation initiatives and projects envisaged in the Business Plan;
  - managing the dissemination of innovation within the Group in a synergetic and structural manner, with a user-centred and sustainable approach, in line with business needs;
  - ensuring the definition and evolution of the Group's organisational model in line with corporate strategies and objectives, developing, in coordination with the Head of the Chief Governance, Operating & Transformation Officer Governance Area, the proposals to be submitted to the Managing Director and CEO and to the Corporate Bodies, for matters within their competence;
  - driving the implementation and transformation of the Group's organisational model with a view to effectiveness and efficiency, defining solutions consistent with regulatory and business requirements and pursuing the digital transformation of processes.

- ***Chief People & Culture Officer Governance Area***
  - defining people management and development policies for the Group, in compliance with the applicable regulations and in line with corporate strategies and objectives, in coordination with the Head of the Chief Governance, Operating & Transformation Officer Governance Area, to be proposed to the Managing Director and CEO and to the Corporate Bodies, for matters within their competence;
  - ensuring the implementation of the above policies through the promotion of innovative programmes and initiatives aimed at the growth and enhancement of human resources;
  - defining the employee remuneration and incentive policies, as provided for in the Guidelines on Remuneration, Incentives and Identification of Risk Takers, in coordination with the Head of the Chief Governance, Operating & Transformation Officer Governance Area, to be proposed to the Managing Director and CEO and to the Corporate Bodies, for matters within their competence;
  - ensuring the governance of labour costs, in line with corporate strategies and objectives;
  - defining training proposals and implementing the relevant training programmes to enable the continuous updating of skills, fulfilment of regulatory obligations and professional retraining, in line with the company's needs and strategies, individual motivation and enhancement of all Group people;
  - promoting the dissemination of a Group culture that supports change and contributes to creating an inclusive and high-quality working environment for all people;
  - ensuring, for the Group, the definition of guidelines and policies on the Protection of Health and Safety in the workplace, as well as their implementation.

Chief Sustainability Officer (CSO) Governance Area

The Chief Sustainability Officer (CSO) Governance Area is responsible for:

- ensuring the definition and implementation of the Group's ESG strategy in line with the Group's leadership position in the market and taking into consideration the relationship with stakeholders (customers, shareholders, Group people and all those who work with it, suppliers, the community and the environment – the latter also with regard to responsibility towards present and future generations);
- overseeing the setting and monitoring of qualitative-quantitative ESG targets and the identification of specific actions and initiatives in line with the Group's strategic objectives, with the support of the Group's competent structures, and contributing to the Consolidated Sustainability Statement;
- supporting the business units in the transition of the customer segments towards a sustainable economy, helping them to keep up with the new ESG regulations and to identify new business opportunities, in line with the Group's sustainability objectives;

- playing an active role in the development and promotion of the local areas and communities where the Group operates, supporting non-profit organisations, promoting social inclusion initiatives, and educational activities;
- promoting the Group's historical, artistic, architectural, and archival assets to contribute to the civil and cultural growth of the local areas and communities it serves, ensuring their protection and appreciation;
- promoting innovation in businesses and local areas as a key factor for sustainable development and competitive advantage, through applied research and support for startups, open innovation, the transition to a circular economy, and the development of innovation ecosystems;
- promoting the dissemination of a social, sustainability and innovation culture, also engaging in dialogue with external public and private institutions in collaboration with the Group's competent structures.

The Chief Sustainability Officer Governance Area is reported to by the Chief Social Impact Officer Governance Area, which is responsible for:

- ***Chief Social Impact Officer Governance Area***
  - contributing to the definition of strategic guidelines, overseeing the direction, governance and implementation of initiatives and projects in the Social Impact field carried out by the Group, ensuring relations with the main stakeholders and social parties in coordination with the competent Group functions;
  - identifying intervention models that facilitate the scalability of social initiatives and the activation of system-wide actions potentially generating potential multiplier effects and structural change;
  - promoting the well-being and inclusion of people and their communities through the enhancement of both external and internal best practices, in collaboration with the relevant Group structures;
  - ensuring the direction, coordination and monitoring of initiatives aimed at mitigating the direct environmental impacts generated by the Group's activities;
  - ensuring, for the Group, the monitoring of compliance risk with reference to Environmental Protection, pursuant to Italian Legislative Decree No. 152/2006, performing in this regard the role of Specialist Function envisaged by the Group Compliance Guidelines.

Chief Security Officer (CSeO) Governance Area

The Chief Security Officer (CSeO) Governance Area is responsible for:

- ensuring, for the Group, the definition and implementation of the cybersecurity, business continuity and corporate and physical security strategy, policies and models, in line with corporate objectives and in compliance with the applicable regulations;
- ensuring cybersecurity, corporate and physical security and anti-fraud monitoring, analysing the related risks, defining strategies and mitigating measures;
- coordinating the development and implementation of the guidelines and policies defined within its area of responsibility, promoting their correct application by the Group companies;
- overseeing the development, updating and monitoring of the Group Business Continuity Plan;
- ensuring the information flows to the Corporate Bodies provided for by the Internal Control System and the governance documents within the respective areas of responsibility.

Chief Data, A.I. and Technology Officer (C-DAITO) Governance Area

The Chief Data, A.I. and Technology Officer (C-DAITO) Governance Area is responsible for:

- ensuring, for the Group, the definition and implementation of the strategy, policies and models regarding ICT architectural, methodological and technological standards, data management and data use, and the development and implementation of Artificial Intelligence solutions, in line with corporate objectives and the needs of the Business Owners and in compliance with applicable regulations;
- ensuring, in line with the corporate objectives and the priorities of the Business Owners, the definition and development of innovative IT initiatives, technologies and solutions, implementing the interventions in line with the transformation and innovation guidelines defined by the Chief Governance, Operating & Transformation Officer Governance Area;
- overseeing the evolution of the IT systems, data governance system and operations with a view to the continuous innovation of technological solutions, the operating model and controls, in order to guarantee the Group's constant projection towards a dimension that is evolved and consistent with digitalisation advances, in compliance with the expenditure and investment levels assigned;
- driving the implementation of digital strategies, in line with the above-mentioned guidelines on transformation and innovation, in order to become a data-driven company;
- ensuring the information flows to the Corporate Bodies provided for by the Internal Control System and the governance documents within the respective areas of responsibility;
- ensuring, in agreement and in cooperation with the other competent Governance Areas, the analysis of the impacts of applicable regulations on digitisation, digital innovation and operational resilience relevant to the Area, and defining the related actions.

Chief Cost Management Officer (CCMO) Governance Area

The Chief Cost Management Officer (CCMO) Governance Area is responsible for:

- consistently with corporate strategies and objectives, assisting the Corporate Bodies in defining guidelines and policies on cost management, property, logistics and procurement of the Group;
- coordinating the implementation of guidelines and policies on cost management, property, logistics and procurement by the relevant Group business units, also in the various corporate contexts;
- collaborating with the Chief Financial Officer Governance Area and the Chief Data, A.I. and Technology Officer Governance Area contributing to the definition of the investment initiatives promoted by the same C-DAITO Area, by the Divisions/Business Units and by the other Governance Areas, in line with the objectives of the Business Plan;

- ensuring, through the appropriate control methods, compliance with the guidelines and policies in the aforementioned areas, ensuring, in accordance with the Business Plan, cost management results as well as the service levels offered within the property, logistics and procurement scope.

Chief Lending Officer (CLO) Governance Area

The Chief Lending Officer (CLO) Governance Area is responsible for:

- taking lending decisions, directly or submitting them to responsible corporate Bodies, the relevant lending decisions regarding the assumption and management of the Group's credit risks, directly authorising them as far as it is concerned, including through compliance opinions;
- ensuring the proactive management of credit and guaranteeing the management and the monitoring of the Group's non-performing loans, within the respective area of responsibility;
- ensuring the correct classification and valuation for financial reporting purposes of positions under its responsibility that are classified as non-performing loans;
- managing the stocks and flows of bad loans managed within the Group;
- defining and managing disposals of NPE individual exposures or portfolios and other assets within scope, with the collaboration of other competent functions;
- performing monitoring and control on outsourced activities, including monitoring the performance KPIs of Outsourcers, directly making decisions, or submitting them to the competent Bodies, regarding proposals exceeding the powers delegated to the Outsourcers;
- contributing, within its area of responsibility, to the process of formulating Credit Strategy proposals for the Divisions, with the aim of incentivising new lending, through pricing adjustments, to the economic sectors and customer clusters with the greatest attractiveness in terms of risk-return profile, also taking into account the Group's ESG policies;
- contributing to establishing and evaluating the Group's Sector Framework, coordinating and supporting the Sector Working Group in defining sector performance indicators;
- analysing the evolution of the cost of credit within the Group, also taking into account the application of the aforesaid Credit Strategies;
- assigning and validating the ratings to the positions in scope, also providing support in defining rating allocation processes and tools;
- defining lending relevant regulations and requirements for credit tools development and contribute to the formulation of proposals for the assignment of credit granting and NPL management powers, notwithstanding the responsibility for the final decision belonging to the Chief Risk Officer Governance Area;
- promoting initiatives aimed at disseminating and developing a credit culture;
- ensuring, consistently with the guidelines of the Chief Risk Officer Governance Area, the first level systematic supervision of the relevant credit portfolio, identifying phenomena referring to specific credit aggregates characterised by high levels of anomalies for which to activate the appropriate risk mitigation measures.

Chief Financial Officer (CFO) Governance Area

The Chief Financial Officer (CFO) Governance Area is responsible for:

- assisting the Corporate Bodies in defining, in accordance with the Group corporate strategies and objectives, the guidelines on: administration and tax, planning and management control, treasury and finance, studies and research, balance sheet optimisation from a risk-return perspective, relations with investors and rating agencies;
- coordinating the implementation of said guidelines by the relevant Group business units, and in other corporate areas as appropriate;
- overseeing Asset and Liability Management (ALM) activities, the management of the Treasury securities portfolio, the Funding Plan, the integrated management of liquidity risks as well as financial and regulatory risks, ensuring the satisfaction of funding requirements at Group level;
- defining the Group's future qualitative and quantitative objectives through strategic planning, budgeting, capital management, internal assessment of capital adequacy and liquidity position (ICAAP/ILAAP), monitoring of the Recovery and Resolution Plan and carrying out the continuous analysis of the economic and financial results;
- fulfilling the Parent Company's and the Group's tax obligations and providing assistance and advice on tax matters by strengthening uniformity of conduct at Group level;
- overseeing studies and research on investments, economy and markets;
- overseeing the balance sheet optimisation activities at Group level, supporting the Divisions in the active management of credit risk, with the aim of improving the risk-return profile of balance sheet items in order to create value for shareholders, also through market transactions on performing loan portfolios, together with the other competent corporate functions;
- managing communication and relations with investors, financial analysts, rating agencies and SRI Investors.

The Chief Financial Officer Governance Area also includes the Manager responsible for preparing the Company's financial reports, who ensures the accurate and timely financial reporting of the Bank and of the entire Group, as well as compliance with the relative accounting and supervisory obligations, performing quality control of the processes governing administrative and financial reporting disclosures to the market, pursuant to the appropriate regulations.
The same activity and monitoring are ensured with regard to Consolidated Sustainability Statement.

Chief Risk Officer (CRO) Governance Area

The Chief Risk Officer (CRO) Governance Area is responsible for:

- governing the macro-process of definition, approval, control and implementation of the Group's Risk Appetite Framework (RAF) with the support of the other corporate functions involved;
- consistent with corporate strategies and objectives, assisting the Bodies in defining and implementing guidelines and policies on risk management;
- coordinating the implementation of guidelines and policies on risk management by the relevant Group business units, also in the various corporate contexts;
- designing, developing and maintaining internal risk measurement, management and assessment systems, both for regulatory and – to the extent applicable – management purposes, ensuring they are incorporated into the relevant business processes;
- measuring and controlling the Group's exposure to the various types of risk, also verifying the implementation of the risk management guidelines and policies;
- formulating a prior opinion on the consistency of the Most Significant Transactions with the RAF, ensuring the assessment of all the risk profiles connected with them;
- performing II level monitoring and controls for monitoring ICT and security risk, as well as risks other than credit risks;
- continuously and iteratively validating risk measurement and management systems – used both for the determination of capital requirements and for non-regulatory purposes – in order to assess their compliance with regulatory provisions, operational company and reference market demands and to manage the internal validation process at Group level; in this context, also guaranteeing the monitoring and validation of the Group Data Governance framework and ensuring the definition and oversight of a framework for model risk governance;
- performing II level monitoring and controls on credit quality, the composition and evolution of the various loan portfolios and the proper classification and measurement of single positions ("single name" controls).

Chief Compliance Officer (CCO) Governance Area

The Chief Compliance Officer (CCO) Governance Area is responsible for:

- ensuring at Group level governance of compliance risk, including conduct risk, both in its operational component and in its reputational component, also through the adoption of a graded compliance model for regulations that require specific forms of specialized governance;
- defining, in line with Company strategies and objectives, the guidelines and policies to be adopted to ensure compliance with the Group's regulations, integrating the model of the assessment and management of compliance risk in the Risk Appetite Framework;
- coordinating the implementation of compliance guidelines and policies by the Group's designated units, including companies inside the Group;
- cooperating with the other corporate control functions in order to achieve an efficient integration of the risk management process;
- managing the interactions with Corporate Bodies and Supervisory Authorities as regards compliance issues.

Chief Institutional Affairs and External Communication Officer (CIAECO) Governance Area

The Chief Institutional Affairs and External Communication Officer (CIAECO) Governance Area is responsible for:

- promoting a coordinated, dynamic and result-oriented approach in the management of the Group's institutional relations and external communication in order to support its growth, development and reputation;
- overseeing the Group's institutional relations, promoting and managing relations with institutions, regulators and supervisors – including, by way of example, relations with the European Central Bank and antitrust authorities – schools, universities, think tanks, trade and interest associations at national, European and international level;
- supporting and disseminating knowledge of the Group and Top Management through the management of media relations, in line with the objectives set by the Business Plan;
- promoting and protecting the Group's image and identity – also by means of support initiatives and relations with Stakeholders and reference targets – by disseminating its ethical, social, cultural and educational values, in line with corporate strategies;
- overseeing and developing all the Group's institutional and product advertising and promotional activities, including continuous monitoring and listening and market research;
- overseeing High Impact Value Programmes for the Group and the community on key global transformation trends at national, European and international level;
- overseeing the identification and updating of geopolitical reference scenarios for the contexts in which the Group operates.

Chief Audit Officer (CAO)

The Chief Audit Officer (CAO), who reports directly to the Board of Directors (and therefore it reports to the Chairman), functionally reporting to the Management Control Committee, without prejudice to the appropriate links with the Managing Director and CEO, is responsible for:

- ensuring constant and independent monitoring action on the Bank's and the Group operations and processes to prevent/detect the occurrence of anomalous and risky behaviors or circumstances, by assessing the functionality of the Internal Control System and its suitability as to ensure the effectiveness and efficiency of business processes, the safeguarding of the value of assets and the protection against losses, the reliability and integrity of accounting and management data, the compliance of operations with the policies established by the Corporate Governance Bodies and with internal and external Regulations;
- providing advice to the Group's Corporate Functions, also through participating in projects, in order to create added value and improving the effectiveness of control, risk management, compliance and governance processes;

- ensuring supervision of the Internal Control Systems of the Group's Subsidiaries, also by performing governance and steering activities of the Local Internal Audit Functions;
- supporting corporate governance and ensuring to the Executives, Corporate Bodies and competent Authorities (e.g. European Central Bank, Bank of Italy, Consob, etc.) a prompt and systematic reporting on the effectiveness of the Internal Control System, on the results of the activities carried out and on the progress of related remedial actions;
- supporting the Surveillance Body pursuant to the Legislative Decree 231/2001 in ensuring constant and independent surveillance of the regular performance of operations and processes, in order to prevent or detect occurrence of anomalous and risky actions or situations, and to monitor compliance with - and the adequacy of - the rules set out in the Model 231;
- ensuring the correct execution of the Internal management process for reporting violations (so called "Whistleblowing").

Remuneration and incentive policies

Over the last few years, international bodies and regulators have paid increasing attention to the issue of remuneration across different sectors, including, in particular, that of listed companies, banks and banking groups, as well as insurance, assets under management and investment firms, with the aim of guiding operators towards the adoption of remuneration policies and remuneration systems that are consistent with the principles – intensified following the economic and financial crisis – governing the process for drawing up and approving the remuneration and incentive policies, the compensation structure and their transparency.

The regulatory framework has undergone a significant evolution - which is still ongoing - both at the European level and at the national level, in each of the above-mentioned sectors[142].

With reference to listed companies, Art. 123-ter of the Consolidated Law on Finance (Italian Legislative Decree No. 58 of 24 February 1998, "CLF") provides for the obligation to prepare and make available to the public a report on remuneration policy and compensation paid, divided into two sections (the first illustrating the company's policy in relation to remuneration and the procedures used for the adoption and implementation of this policy, the second providing information on the remuneration paid), to be drawn up including the information set out in the Issuers' Regulation, and to be submitted to the Shareholders' Meeting resolution. The Shareholders' Meeting is called to cast a binding vote on the first section of the report and to resolve in favour or against the second section. The latter resolution is not binding. In the banking sector, remuneration and incentive policies and practices are the subject of specific regulations at European and national level. These regulations have changed significantly over time. More specifically, and among other things, in implementation of the so-called CRD III (Directive 2010/76/EU) and taking into account the guidelines and criteria defined internationally (including the principles and standards of the Financial Stability Board, the methodologies of the Basel Committee on Banking Supervision, and the Guidelines issued at the time by CEBS), the Bank of Italy, with a measure dated 30 March 2011, issued Supervisory Provisions containing a harmonised set of regulations of remuneration policies, systems and practices in banks and banking groups, relating to the processing and control process, the remuneration structure and the disclosure obligations to the public, thereby requiring, among other things, the approval of the remuneration and incentive policies by the Shareholders' Meeting, in order to achieve remuneration systems in line with the long-term corporate strategies and objectives connected with company results, appropriately adjusted to take into account all risks, consistently with the capital and liquidity levels required to fulfil the activities undertaken and, in any case, such as to avoid distorted incentives that could lead to regulatory violations or excessive risk-taking for the bank and the system as a whole.
The Bank of Italy intervened once again in the matter with the two recommendations contained in the communications dated 2 March 2012 and 13 March 2013, highlighting in general the need for banks to establish a strategy that is aligned to the objective of preserving the stability of the business, also from a forward-looking perspective, as well as maintaining the conditions of capital adequacy and prudent management of liquidity risk. Subsequently, in 2014, the Supervisory Provisions on remuneration policies and practices - contained in Bank of Italy Circular no. 285/2013 - were revised to implement the regulations contained in the so-called CRD IV (Directive 2013/36/EU). In implementation of CRD IV, in 2014, the European Commission issued the Regulatory Technical Standards (RTS) relating to qualitative and quantitative criteria for the identification of categories of personnel whose professional activities have a material impact on the institution's risk profile (so-called "Risk Takers"). In December 2015, the EBA, based on the provisions contained in CRD IV, published the update of the "Guidelines on sound remuneration policies", drawn up by its predecessor CEBS, defining in detail the rules relating to the remuneration structure, remuneration policies and the related governance and implementation processes. The indications of these Guidelines were implemented by the Bank of Italy which, in 2018, updated the regulations on remuneration policies and practices referred to in Circular 285/2013. In 2019 CRD V (Directive 2019/878/EU) and Regulation (EU) 2019/876 (CRR II) were issued. Following the adoption of CRD V, the EBA revised (i) the regulatory technical standards that specify the criteria for identifying Risk Takers (RTS), merged into the Delegated Regulation (EU) 2021/923 published on 9 June 2021 and (ii) the Guidelines on Sound Remuneration Policies, publishing a new version in July 2021 and providing for its application starting from 31 December 2021; as a result, on the other hand, of the issuance of CRR II, the European Commission published Regulation (EU) 2021/637 – Implementing Technical Standards – which regulates, among other things, the way in which remuneration disclosures are made. The Bank of Italy implemented CRD V and the essential contents of the new EBA Guidelines as well as the Implementing Technical Standards with the 37th update of Circular 285/2013, published on 24 November 2021.

[142] Please note that the regulatory framework described in this paragraph is up to date as at the date of approval of this document while the following paragraphs refer to the provisions of the 2024 Group Remuneration and Incentive Policies approved by the Intesa Sanpaolo Shareholders' Meeting held on 24 April 2024.

With regard to the insurance sector, ISVAP (now IVASS), with Regulation No. 39 of 9 June 2011, laid down the principles regarding the decision-making processes, structure and disclosure obligations for the remuneration policies of insurance companies. Regulation No. 39/2011 was subsequently replaced by IVASS Regulation No. 38 of 3 July 2018 on the corporate governance of insurance companies and groups, which implements the Solvency II Directive (Directive 2009/138/EC) and the Guidelines issued by the European Insurance and Occupational Pensions Authority (EIOPA) on the corporate governance system, and incorporates the provisions of ISVAP Regulation No. 39/2011 concerning remuneration policies. Furthermore, on 5 July 2018 IVASS sent a Letter to the market regarding the guidelines on the application of the principle of proportionality in the corporate governance system.
With regard to the asset management sector, the provisions on remuneration, initially contained in the Joint Bank of Italy – Consob Regulation (issued pursuant to Article 6, paragraph 2-bis, of the Consolidated Law on Finance) updated on 27 April 2017 to transpose Directive 2014/91/EU (UCITS V Directive) into Italian law and included, from December 2019, in the Bank of Italy Regulation implementing Articles 4-undecies and 6, paragraph 1, sub-paragraphs b) and c-bis) of the Consolidated Law on Finance, also apply to asset management companies belonging to banking groups, differently according to whether or not the asset management company is classed as significant.
The above Regulation was updated on 23 December 2022 in order, primarily and to the extent relevant here, to implement the new rules on remuneration applicable to investment companies introduced by Directive (EU) 2019/2034 and the Remuneration Policy Guidelines (EBA/GL/2021/13) adopted by the EBA in consultation with ESMA. The framework on remuneration applicable to investment companies is accompanied by, among others, Commission Delegated Regulation (EU) 2021/2154, which sets out regulatory technical standards specifying the criteria to identify categories of staff whose professional activities have a material impact on the risk profile of the investment firm (“risk takers”), effective as of 12 December 2021.
Lastly, with reference, inter alia, to the provision of investment services and activities by banks, investment companies and asset management companies, the provisions on remuneration set out in Directive 2014/65/EU (MiFID II) and Delegated Regulation (EU) 2017/565 (MiFID II Delegated Regulation) are also relevant, as well as the “Guidelines on certain aspects of the MiFID II remuneration requirements” issued by ESMA and last updated in April 2023. These provisions aim to strengthen client protection by, among other things, preventing conflicts of interest that may arise in remuneration and incentive matters.
That being said, Intesa Sanpaolo has always extensively focused its attention on remuneration matters, on relative regulation compliance and on maximum transparency to the market.

Procedures for adoption and implementation of the remuneration policies

The role of Corporate Bodies

The Shareholders’ Meeting

The Articles of Association require the Shareholders’ Meeting to approve the Board Members' and personnel's remuneration policies, as well as the plans based on financial instruments.
The Shareholders’ Meeting shall approve the criteria for determining the severance payments to be granted in the event of early termination of the employment agreement or early termination of office, including the limits set for such payments as provided by the regulations currently in force and shall also determine, with the qualified majority threshold defined by the supervisory regulations in force, a ratio between the variable and fixed individual remuneration of the personnel above the ratio of 1:1, but in any case not exceeding the maximum established by the same regulations.
The Shareholders’ Meeting determines the remuneration for the members of the Board of Directors and the Management Control Committee and the remuneration for the offices of Chair and Deputy Chair of the Board of Directors and Chair of the Management Control Committee.
In addition, the Shareholders’ Meeting resolves with a non-binding vote on the annual disclosure of the remuneration paid pursuant to Article 123-ter of the Consolidated Law on Finance.

The Board of Directors

The Board of Directors may determine, in addition to the fixed remuneration determined by the Shareholders' Meeting and in compliance with the remuneration policies approved by the Shareholders' Meeting, the remuneration of the Board Members to whom the Board itself assigns further special duties in compliance with the Articles of Association, including the office of Managing Director and General Manager.
The Board of Directors is responsible for the drafting of the Group remuneration and incentive policy to be submitted to the Shareholders' Meeting and the definition of the remuneration and incentive systems for persons for whom the supervisory regulations require that this task be performed by the body with strategic supervision function, including the identification of parameters used to evaluate performance objectives and the definition of the variable remuneration deriving from the application of said systems.
The Board of Directors is tasked with determining the remuneration due to the Manager responsible for preparing the Company’s financial reports pursuant to Article 154-bis of Legislative Decree 58 of 24 February 1998, as well as to all other Top Risk Takers of the Group and the higher-level Executives of the Corporate Control Functions, in accordance with the provisions of the current legislation.

The Remuneration Committee
The Remuneration Committee was set up by the Board of Directors in order to support with all activities concerning remuneration.
The Committee supports the Board of Directors in preparing proposals to submit to the Shareholders' Meeting.
The Committee is responsible for formulating remuneration proposals for the Managing Director and CEO and for the members of the Board of Directors to whom additional special offices are assigned pursuant to the Articles of Association, as well as with regard to the remuneration systems for the Group Top Risk Takers and the higher-level Executives of the Corporate Control Functions, also taking into account the opinion of the Risks and Sustainability Committee and the Management Control Committee insofar as within its competence.
Lastly, the Committee formulates opinions on the achievement of the performance objectives linked to the Incentive Systems and on the verification of the other requirements laid down for payment of the remuneration.

The Risks and Sustainability Committee
Without prejudice to the responsibilities of the Remuneration Committee, the Risks and Sustainability Committee supports the Board of Directors by analysing the Remuneration and Incentive Policies to verify their link with current and prospective risks and the capital strength and levels of liquidity of the Group, with specific regard to the performance targets (KPIs) assigned by the Incentive System to the Group Top Risk Takers, excluding the Manager responsible for preparing the Company's financial reports and members of the Corporate Control Functions.
In order to strengthen the independence of the Corporate Control Functions, the Risks and Sustainability Committee (also following consideration in joint session with the Management Control Committee) expresses its opinion on the Incentive Systems for the Chief Risk Officer and the Head of the Internal Validation & Controls structure.

The Management Control Committee
In order to strengthen the independence of the Corporate Control Functions, the Management Control Committee expresses its opinion on the Incentive System for the Top Risk Takers belonging to the Corporate Control Functions and the Manager responsible for preparing the Company's financial reports. This opinion is expressed in a joint session with the Risks and Sustainability Committee with regard to the Incentive Systems for the Chief Risk Officer and the Head of the Internal Validation & Controls Structure.

The Chief People & Culture Officer and the Corporate Control Functions
As mentioned above, the Shareholders' Meeting is responsible for approving remuneration policies for employees upon proposal of the Board of Directors and with the involvement of the Remuneration Committee.
The Chief People & Culture Officer is responsible for drawing up the aforementioned remuneration policies, that undergo the relative approval procedure, involving the following, to the extent of their responsibilities, as envisaged by the Regulations:
- the Chief Risk Officer Governance Area, in order to ensure consistency of the remuneration policies and resulting incentive systems with the Group's Risk Appetite Framework (RAF);
- the Planning and Control Function, in order to ensure consistency of the remuneration policies and resultant incentive systems with:
  - the strategic short-and medium-long term objectives of the Companies and of the Group;
  - the level of capitalisation and liquidity of the Companies and of the Group;
- the Chief Compliance Officer Governance Area, in order to verify compliance of the remuneration policies and resulting incentive systems with rules, regulations, codes of ethics and standards of conduct applicable to the Group.

The Chief Audit Officer, in accordance with the guidelines of the Supervisory Authority, verifies compliance of the remuneration implementation procedures with the relevant policies, informing the Board of Directors and the Shareholders' Meeting on the results of the verifications conducted.

Remuneration of the members of the Board of Directors

Remuneration of Board Members
The Bank's Articles of Association envisage that the members of the Board of Directors be entitled, in addition to the reimbursement of expenses incurred due to their office, to a fixed remuneration for the services rendered, which is determined for the entire period of their office by the Shareholders' Meeting at the time of their appointment. Upon appointment, the Shareholders' Meeting also determines the supplementary remuneration of the offices of Chair and Deputy Chair of the Board of Directors.
An insurance policy for administrative liability is signed in favour of the members of the Board of Directors according to the terms resolved on by the Shareholders' Meeting.

Remuneration of the Managing Director and CEO
Pursuant to the Articles of Association, the Managing Director also acts as the General Manager of Intesa Sanpaolo.
The Managing Director and General Manager is entitled to receive a fixed and variable remuneration determined by the Board of Directors in line with the Group remuneration and incentive policies approved by the Shareholders' Meeting.
The Board of Directors, upon the proposal of the Remuneration Committee, determined the remuneration of the Managing Director. This amount is in addition to the amount due as a Board Member. The Managing Director, in his capacity as General Manager, is entitled to receive the gross annual remuneration, the short and long-term incentive system and the supplementary pension scheme, and to receive the additional fringe benefits envisaged for the position determined by the Board of Directors in accordance with the Remuneration and Incentive Policies for employees.

Remuneration of the members of the Management Control Committee

Under the Articles of Association, the Shareholders' Meeting is required, at the time of the appointment of the Management Control Committee and for the entire term of office thereof, to set a specific remuneration for the Board Members of that Committee, consisting exclusively of a fixed amount, which is equal for each Member and higher for the Chair.

Remuneration for participation in the other Board Committees

With regard to the work carried out by Board Members as members of the additional Board Committees, the Board of Directors, pursuant to the Articles of Association and upon proposal by the Remuneration Committee, establishes an additional fixed remuneration for said Board Members, in line with the Remuneration and Incentive Policies approved by the Shareholders' Meeting. In particular, the Board of Directors established, in addition to the remuneration envisaged for the position of Board Member, an attendance fee in relation to the actual participation of the members in the work of the Committees, and a further annual gross fixed remuneration for the Chairs of such Committees.

Remuneration policy for employees and staff not bound by an employment agreement

The remuneration policies of the Intesa Sanpaolo Group are based on the following principles:

- alignment of the conduct held by management and personnel to the interests of all Stakeholders, with a focus on creating value for Shareholders, as well as on the social impact generated on the Communities;
- correlation between remuneration and risks undertaken, through:
  - direction of management and personnel conduct towards the achievement of objectives within a framework of rules aimed at controlling corporate risks;
  - remuneration systems aligned with prudent financial and non-financial risk management policies (including legal and reputational risks), in line with what is defined in the Group's Risk Appetite Framework;
  - the definition of a sufficiently high fixed component to allow the variable portion to decline significantly, even down to zero, upon occurrence of pre-defined conditions;
- orientation towards medium-long term objectives, taking into account the Group Risk Tolerance through the definition of a set of Incentive Systems that allow performance to be oriented over a period of accrual longer than one year and to share the medium-long term results consequent to the implementation of the Business Plan;
- merit, to guarantee better matching with actual performance and the managerial quality identified, through:
  - remuneration flexibility linking the variable component to the results achieved and risks assumed;
  - focus on key staff members with high managerial skills, to whom competitive salary brackets compared with the reference market are reserved;
  - differentiation of the best performances to which variable bonus levels significantly in excess of the average are to be assigned;
- equity, in order to promote proper conduct and standardise treatment in terms of remuneration, through:
  - the correlation between the person's fixed remuneration and the level of responsibility managed, measured through the adoption of a Global Banding system[143], certified by a leading consultancy firm or the career title/professional figure;
  - differentiation of target salaries and the ratio of the variable component to the total remuneration according to the relevant professional category and/or geographical market, with Banding bracket or career title/professional figure being equal;
- gender neutrality, through:
  - ensuring equal pay for equal work, regardless of gender;
  - focus on the gender pay gap and its evolution over time;
- sustainability, to limit expense deriving from application of the policy to values compatible with the available economic and financial means, through:
  - mechanisms to adjust allocations to the overall incentive provisions according to corporate profitability and the Group's results;
  - selective reviews of fixed remuneration based on strict market benchmarks;
  - the determination of appropriate caps on both total incentives and the amount of individual bonuses;
- compliance with legislative and regulatory provisions, with the codes of conduct and other self-regulatory instruments with a focus on the Risk Takers (and, among these, on the so-called Top Risk Takers, including the Key Managers) and on the Corporate Control Functions;
- fairness in customer relations.

[143] The Global Banding System adopted by the Intesa Sanpaolo Group is based on the grouping in homogeneous categories of managerial positions that are similar by levels of complexity/responsibility managed, measured using the international IPE (International Position Evaluation) methodology.

Remuneration of Group employees is broken down into the following:
- fixed and/or recurring component;
- variable and/or non-recurring component.

a.1 Fixed remuneration

The fixed component of remuneration for employees is determined on the basis of pre-established non-discretionary criteria such as contract conditions, role held, responsibilities assigned and the employee's specific experience and skills.
In full compliance with the provisions of law, the fixed component includes:
- the gross annual remuneration reflecting the staff member's professional experience and seniority of service;
- allowances tied to the role held, not connected to any type of performance indicator and assigned in a non-discretionary manner to:
  - the Risk Takers[144] and Middle Management[145] belonging to the Corporate Control Functions and similar roles;
  - heads of commercial roles within the scope of the physical and digital distribution network of the Banca dei Territori Division;
  - specific categories of staff having a commercial role in the Reyl Group operating mainly in the Private Banking segment;
  - expatriate personnel, in order to cover for any differences in cost, quality of life and/or remuneration levels of the target reference market;
- allowances and/or fees deriving from offices held in corporate bodies, provided that these are not reversed to the companies to which they belong;
- any benefits designed to increase employee motivation and loyalty of the resources and assigned on a non-discretionary basis. The benefits paid to Group employees may be of a contractual nature (e.g., supplementary pension, health benefits, etc.) or the result of remuneration policy decisions (e.g., company car) and, therefore, have different treatment with respect to different categories of personnel.

a.2 Recurring remuneration

For Non-employee Financial Advisors (hereinafter also "Financial Advisors") and Financial Agents, the "recurring" component consists of commissions, which make up the stable and ordinary portion of remuneration.

In particular, for Financial Advisors, commissions remunerate their activity of placement, management and assistance to customers, and cover the costs they incur in carrying out their activities. For Financial Advisors given additional responsibilities of commercial coordination and supervision of specific activities and/or teams of Financial Advisors, the "recurring" remuneration consists of supervision commissions, for coordinating and supervising a team of Financial Advisors operating within their area of expertise, and of development commissions, for the development and growth in size of the team of Financial Advisors they supervise.

As for the Financial Agents of Prestitalia, recurring remuneration is differentiated according to product macro-categories, as detailed in the Report on remuneration policy and compensation paid. Specifically, with reference to the products provided by Prestitalia (e.g., salary-backed loans), recurring remuneration is divided into 3 components: ordinary, recurring, and additional commissions, which are constant by production segments. On the other hand, with regard to products offered under the distribution agreement with Intesa Sanpaolo (e.g., banking products and services), recurring remuneration is determined by product type as a share of the consideration paid by Intesa Sanpaolo to Prestitalia for the promotion and placement activities governed by the agreement.

In addition, with reference to Financial Agents with accessory contract (Team Leaders), recurring remuneration is also composed of a fixed monthly coordination fee for carrying out the assignment of supervising the commercial activity as well as the supervision commissions calculated on the basis of the commissions generated by the coordinated agents.

b.1 Variable remuneration

The variable component is linked to employee's performance and aligned to the results actually achieved and the risks prudentially assumed, and consists of:
- short-term variable component, paid through the annual Incentive Systems and the Broad-based Short-Term Plan (PVR);
- long-term variable component, paid through the PSP (Performance Share Plan), targeted at the Intesa Sanpaolo Group Management, including the Top Risk Takers and the remaining Group Risk Takers – in Italy and abroad, the LECOIP 3.0 Plan, targeted at the Intesa Sanpaolo Group Professionals – in Italy – and any other long-term incentive plans (e.g. Long-term incentive plans for staff in the "Investments" chain operating in asset management companies managing AIFs);
- the carried interest, i.e. the share in the profits of the UCITS or AIF received by personnel as compensation for the management of the UCITS or AIF[146];
- any variable short- and long-term components, tied to the duration of employment in the company (stability or non-competition agreements, one-off retention bonus) or extraordinary agreements (entry bonus, buy-out);
- any discretionary benefits.

The assignment of guaranteed bonuses is not envisaged, with the sole exception of limited cases of recently hired employees (signing bonus), without prejudice to thorough assessment and analysis of market practice, solely for the first year.

[144] Italy, Slovakia and Croatia, Hungary and Luxembourg perimeter.
[145] Italy, Switzerland, Serbia, New York, Egypt and China.
[146] Not including the portion of *pro rata* profit assigned to personnel by virtue of any investments made by them in the UCITS or AIF, provided that they are proportional to the actual percentage of participation in the UCITS or AIF and not exceeding the return recognised to the other investors. For a proper implementation of the regulation, managers must therefore be able to clearly identify the portions of profit which exceed the pro rata profit of the investments and that qualify as carried interest.

The distinction of the variable remuneration in a short-term and a long-term component promotes both attraction and retention of resources, allows performance to be oriented over a period of accrual longer than one year and to share the medium-long term results consequent to the implementation of the Business Plan.

b.2 Non-recurring remuneration

For non-employee Financial Advisors, the "non-recurring" component is represented by the commissions paid as annual incentives, with the aim of driving the sales activity to reach specific targets, taking into account both the long-term company strategies and objectives of the Networks they belong to and the correctness of customer relations.
Moreover:
- for around 5,000 Financial Advisors of the Fideuram, Sanpaolo Invest and IW Private Investments Networks, a 2022-2025 Long-Term Incentive Plan has been designed;
- for new Non-employee Financial Advisors of the Fideuram, Sanpaolo Invest, IW Private Investments and Intesa Sanpaolo Private Banking networks, a specific non-recurring component is envisaged as part of the recruitment offer.

The remuneration pay mix

In accordance with the regulatory guidelines, the Intesa Sanpaolo Group traditionally adopts a pay mix that is appropriately "balanced" between the fixed (or recurring) component and the variable (or non-recurring) component, in order to:
- allow flexible management of labour costs, as the variable portion may significantly decline, even down to zero, depending on the performance actually achieved during the year in question or in the event that the Group is unable to maintain or restore a solid capital base;
- discourage behaviour focused on the achievement of short-term results, particularly if these involve taking on greater risk.

In order to achieve the above objectives, it is standard Group practice to establish ex ante limitations in terms of balanced ceilings for variable remuneration, through the definition of specific caps applied to bonuses in relation to any over-performance.

As a general rule of thumb, the aforesaid cap to the variable remuneration was determined:
- at 100% of fixed remuneration for roles not included amongst Corporate Control Functions, save as otherwise specified in the Report on Remuneration;
- at 33% of fixed remuneration for roles belonging to the Corporate Control Functions;
- at 60% of fixed remuneration for roles similar to the Corporate Control Functions and the Heads of the Group Human Resources Function.

The calculation of the variable remuneration takes into account both the short-term component relating to the Incentive System or PVR and the long-term component assigned through the long-term Incentive Plans (PSP Plan and LECOIP 3.0 Plan), any other long-term incentive plans, any variable components linked to seniority or exceptional components, and compensation in the event of termination of employment agreement or early termination of office (severance pay)[147]. In particular, the PSP and LECOIP 3.0 Plans have an impact on the pro-rata variable remuneration for the entire accrual period.

The maximum limit established by the general criteria (1:1) has been raised to 2:1, as provided for by CRD IV, permitted by the Bank of Italy's Supervisory Provisions and approved by the Shareholders' Meeting, for Group Risk Takers[148] not belonging to the Corporate Control Functions and similar roles for specific and limited professional sectors and highly profitable business segments[149], as well as non-employee Financial Advisors who are recipients of the recruitment offer in order to attract new key resources from the market for the growth and development of the Networks, as these have a significant effect on the Group's average annual total net funding.
Furthermore, starting from 2019, using the option granted by the Supervisory Provisions, the maximum limit on the variable remuneration has been raised above 2:1 up to a maximum of 4:1 for personnel in the "Investments" category of the Group's asset management companies, who work exclusively for the same Asset Management Company.

However, in terms of cap compliance between fixed and variable remuneration (1:1), appropriate pay mix differentiations were identified with reference to the various professional or business segments, in line with the results obtained by means of specific benchmark analyses related to the leading European global banks that also ensure compliance with the internal equity principle, given the use of common benchmarks for each cluster.
The adequacy of the amounts is further verified in comparison to market practices, with ongoing participation in national and international remuneration surveys; for management roles and other particular business positions, the comparison is based on specific Peer Groups, in order to evaluate the competitive alignment with the most appropriate reference market.
In relation to market data, the Intesa Sanpaolo Group aims to align the overall remuneration with median values, notwithstanding the possibility to make the appropriate differentiations for particularly critical positions and/or resources with high management skills.

---

[147] With the exclusion of amounts agreed and recognised: (i) under a non-competition agreement, for the portion that, for each year of the plan's duration, does not exceed the last year of fixed remuneration; (ii) as part of an agreement between the Bank and the staff, wherever reached, for the settlement of an actual or potential dispute, if calculated on the basis of a predefined formula.

[148] Excluding the non-executive members of the Board of Directors of Intesa Sanpaolo and the Group Risk Takers operating in Slovakia, Slovenia, Bosnia and Herzegovina, Moldova and Romania.

[149] The Private Banking branches of Investment Banking, Insurance and Private Banking investment managers, Treasury and Finance, the commercial branch of the Asset Management Division dedicated to the non-captive market, the Heads of Product Management and Development of the Insurance Division, the Heads of the Institutional Clients structures, the Corporate Finance & Advisory structure, the Syndication & Risk Sharing structure, the Global Relationship Managers of the Global Institutional Client structures, the Managers of the Corporate and Financial Institutions Desks of certain former Hub branches present in the IMI CIB International Network as well as, within the scope of the Všeobecná Úverová Banka (VUB) Network, the Mortgage Specialists, the Magnifica Relationship Bankers and the Premium Relationship Managers.

The correlation between remuneration, risk and performance is ensured for all employees through:

- the use of a balanced pay mix, as the fixed component is sufficiently high to allow the variable portion, which is never guaranteed, to decline significantly, even down to zero, upon occurrence of the conditions specified below;
- the application of the principle of merit, under which significantly higher-than-average bonuses are awarded for the best performances;
- the adoption, based on the financial sustainability principle, of a structured funding mechanism for the variable component (bonus pool) that:
  - on the one hand, correlates top-down the resources allocated to the majority share of the bonus pool ("Gross Income-based bonus pool") to a specific Group indicator, currently identified in Gross Income; and
  - on the other, provides for the self-funding of a (minority) share of the bonus pool through a percentage from the fee and commission income generated by network employees within the scope of Wealth Management & Protection activities ("commission-based bonus pool")[150];
- within the scope of the Gross income-based bonus pool, the use of a solidarity mechanism between Group and Division results, according to which the amount of total bonuses paid to the employees of each Division depends in part on the Group's overall performance (reflected in the size of the bonus pool) and in part on the performance of the specific Division, measured in terms of the degree of expected contribution to the Group's Gross Income;
- the observance of the access conditions provided for in international and national regulations, namely:
  - at Group level, the achievement of a solid capital strength and adequate liquidity levels and, in any event, compliance with the limits envisaged in the RAF;
  - at individual level, the propriety of conduct (e.g. absence of disciplinary measures resulting in one or more days of suspension);
- the measurement of performance across multiple dimensions, both quantitative (profitability, growth, productivity, cost of risk/sustainability) and qualitative (strategic actions or projects – including, also for 2024, the transversal Group KPI "Environmental, Social and Governance (ESG)" – and managerial qualities), and covering different scopes (Group/Department/Individual). The following are some examples of indicators for performance drivers:
  - Profitability: average Operating Income/Risk Weighted Assets, Income from Insurance Business/Mathematical Reserves;
  - Growth: Net Funding, Medium/Long-Term Disbursements, New purchases of tax assets, Income from the Non-Life Insurance Business;
  - Productivity: Cost/Income, Reduction in operating costs, Full Combined Ratio;
  - Cost of risk/sustainability: Gross NPL Ratio, Gross flows from performing loans to NPE, Operating Losses/Operating Income, Concentration Risk, Maximisation of LCR target levels, Reduction in workplace health and safety risk;
- the use of corrective mechanisms that act as de-multipliers of the bonus accrued according to the risks taken and the relevant cluster.

It is expressly prohibited for individual employees to undertake personal hedging or insurance strategies on the remuneration or other aspects that may alter or undermine the effects of the alignment with company risk inherent in the remuneration mechanisms described.

Remuneration may not be paid in forms, instruments or methods aimed at avoiding provisions of law.

The termination of the employment agreement involving personnel with state pension or seniority pension rights and/or "Assicurazione generale obbligatoria" (AGO) pension treatment does not result in loss of the right to payment of the entitled amounts, even deferred. In all other cases, the Bank has the right to award any amounts, depending on the specific situations, upon termination of the employment agreement, also through consensual retrenchment agreements providing termination payments. Furthermore, individual prior agreements may be entered into for the determination of the remuneration to be granted in the event of early termination of the relationship, provided that these agreements must comply with all the conditions set out in the Remuneration Policies and in the Supervisory Provisions[151]. In recent years, the Bank has signed specific agreements with the trade unions with regard to the "solidarity fund", applied to employees of all levels, including executives, which also govern the treatment of sums payable to personnel upon termination of the employment agreement in the event of extraordinary transactions and/or company reorganisations[152].

According to the Supervisory Provisions on remuneration, any type and/or form of severance payment agreed in view of or upon early termination of the employment agreement or early termination of office for the amount exceeding the provisions of the National Collective Bargaining Agreement concerning payments related to the indemnity for failed notice constitutes the so-called severance, including any compensation paid according to the non-competition agreement limited to the portion exceeding the last year of fixed remuneration.

[150] It should be noted that this principle also applies to Financial Advisors who are not employees since, similar to the methods defined for the commission-based bonus pool at the Group level, the Financial Advisor Incentive Systems are self-funding through a percentage of the gross revenues earned by the Company to which they belong.

[151] In 2022, following a favourable resolution passed by the Board of Directors, on the proposal of the Remuneration Committee and taking into account the Chief Compliance Officer's opinion, in line with the practices commonly used among competitors and the leading Italian listed companies, an agreement containing specific conventional regulations on employment termination was entered into with the Managing Director and CEO. Specifically, in line with the provisions of the Remuneration Policies, this agreement provides, for Good Leavers, for the disbursement, in addition to the indemnity in lieu of the notice period required by law and the collective bargaining agreement, of an amount by way of severance of between 12 and 24 months of fixed remuneration depending on the average of the overall Performance Scorecard score relating to the Group's annual Incentive System for the three years preceding the date of termination of the employment agreement. If this average is less than 80%, no severance payment will be due to the Managing Director and CEO.

[152] In this regard, it should be noted that Section III, paragraph 2.2.3 of the Supervisory Provisions on Remuneration and Incentive Policies and Practices provides for specific exceptions to the applicable rules with reference to amounts agreed upon with a view to or on the occasion of the early termination of employment agreement or termination of office or to exit incentives, as part of extraordinary transactions or corporate restructuring processes, provided that the conditions described therein are met.

In the Intesa Sanpaolo Group, the principles for the definition of these payments - inspired to both the correlation between severance pay and ongoing performance criteria and the control of potential litigations – are:

- ensuring compliance with regulatory capital adequacy requirements;
- no reward for failure;
- unobjectability of individual behaviour (consistency with compliance breaches' criteria).

Pursuant to these criteria and the Supervisory Provisions on remuneration, when negotiating this kind of remunerations, the Group defined that those payments:

- are equal, as a maximum amount, to 24 months of fixed remuneration, and are determined in a different manner for each cluster, in order to take into due consideration the overall evaluation of the work of the person and having particular regard to the Group's capitalisation, liquidity and profitability levels and to the presence or absence of individual sanctions imposed by the Supervisory Authority;
- are paid according to the methods set for short-term variable remuneration, for each cluster;
- are included in the calculation of the ratio between the respective variable remuneration and the fixed remuneration of the last year of employment in the company, not including the sums agreed upon and paid:
  - based on a non-competition agreement, for the portion which, for each year of duration of the agreement, does not exceed the last year of fixed remuneration;
  - within an agreement reached in order to settle a current or potential dispute (wherever reached), if calculated according to a predefined calculation formula approved by the Shareholders' Meeting in advance.

Intesa Sanpaolo shares

Intesa Sanpaolo shares

Share performance

In 2024, the banking segment benefited from the gradual improvement in the economy, from the strong performance of the industry and from capital distribution policies (dividends and buybacks), which led the European banking index to close the year up by 23.4%, outperforming the Euro Stoxx index (+6.6%).
Driven by the positive impact on bank earnings from higher-than-expected market interest rates at the beginning of the year, the absence of clear signs of asset quality deterioration and generous shareholder remuneration policies, the Italian banking index rose by 52.7% over the year, outperforming both the above-mentioned European industry index and the FTSE MIB (+12.6%).

The price of Intesa Sanpaolo ordinary shares in 2024 mirrored that of the banking sector indices, with a marked upward trend until mid-May, a downward trend in the following thirty days and a gradual recovery through to the end of July. The first week of August then saw a sharp decline, followed by a recovery which drove the share price to peak in early November. Fluctuations in the last two months led the share price to close the year up by 46.1% on end-2023.
Intesa Sanpaolo's capitalisation rose to 68.8 billion euro at the end of 2024, from 48.3 billion euro at the end of 2023.

Earnings per share

Intesa Sanpaolo's share capital consists solely of ordinary shares.
Net income attributable to ordinary shares is determined considering the dividends proposed and then allocating the residual portion of net income, in the hypothetical assumption of its total distribution, in equal weight to all outstanding shares.
The Earnings Per Share (EPS) indicator is presented both in the "basic" and in the "diluted" formula: basic EPS is calculated by dividing income theoretically attributable to holders of shares by the weighted average number of outstanding shares (excluding own shares repurchased); diluted EPS also takes into account the effect of any future issues.

	Ordinary shares				
	31.12.2024	**31.12.2023**	**31.12.2022**	**31.12.2021**	**31.12.2020**
Weighted average number of outstanding shares (*)	18,017,340,115	18,370,426,095	19,315,541,610	19,377,549,407	18,240,491,151
Income attributable (millions of euro) (**)	8,666	7,724	4,379	4,185	3,277
Basic EPS (euro)	0.48	0.42	0.23	0.22	0.18
Diluted EPS (euro)	0.48	0.42	0.23	0.22	0.18

(*) The weighted average number of outstanding shares is calculated excluding repurchased own shares.

(**) The attributable income for 2022 differs from that published in the 2022 Annual Report due to the adjustments made to the 2022 comparative information following the retrospective application of the new IFRS 17 Insurance Contracts and the IFRS 9 Financial Instruments by the Group's insurance companies, starting from 1 January 2022.

Price/book value

The indicator reflects the value attributed by the market to the share capital of a listed company, and hence indirectly to the company's overall assets. Although it measures the confidence which financial analysts and the financial community have in the company's income prospects and capital strength, the indicator is significantly affected by the external factors that influence share prices.
Also for the Intesa Sanpaolo Group, the level and performance of the indicator – as at 31 December 2024 calculated on both average figures and year-end figures – were influenced by the dynamics of the market and its industry sector. The comparative figures for the years 2020 to 2023 shown in the table are annual averages.

Payout ratio	**70%**	**70%**	**70%**	**70%**	**75%**

(*) For the purpose of calculating the payout, the consolidated net income for 2020, equal to 3,277 million euro, was adjusted, excluding the items related to the acquisition of UBI Banca consisting of the effects of purchase price allocation, including negative goodwill (+2,062 million euro) and charges for integration (-1,378 million euro), as well as the write-off of goodwill of the Banca dei Territori Division (-912 million euro).

(**) For the years 2024, 2023, 2021 and 2020, the amounts proposed/distributed are partly charged to reserves.
Starting from 2021, the amounts were partly distributed as interim dividends, following specific resolutions of the Board of Directors upon the approval of the results as at 30 September of each year.
The data relating to previous years are shown net of portion not distributed to own shares held at the record date. For 2022, the amount reflects the rounding differences identified when determining the final dividend amount (following the annulment of own shares acquired through the buyback programme).

In compliance with Supervisory Authority instructions and in line with the provisions of the 2022–2025 Business Plan – which envisages a payout of 70% of consolidated net income in each year of the Plan – the following is noted for the year 2024:

– on 20 November 2024 (with coupon presentation on 18 November and record date on 19 November), interim dividends were paid out from 2024 results, as resolved by the Intesa Sanpaolo Board of Directors on 31 October 2024, in compliance with the provisions set out in Article 2433-bis, paragraph 4 of the Italian Civil Code. The interim dividend of 17 euro cents per share was paid on the 17,778,801,839 ordinary shares outstanding at the record date for a total of 3,022,396,312.63 euro (net of an undistributed amount of 4,227,672.54 euro attaching to 24,868,662 own shares held in portfolio at the record date);
– on 4 February 2025 the Board of Intesa Sanpaolo resolved to submit at the Ordinary Shareholders' Meeting of 29 April 2025 a proposal for the distribution of a remaining dividend for 2024 of 17.10 euro cents for each of the 17,803,670,501 ordinary shares making up the share capital, for a total payout of 3,044,427,655.67 euro. Of that total, (i) 2,252,164,318.38 euro, equal to 12.65 euro cents per share, from net income for the year, while the remaining (ii) 792,263,337.29 euro, equal to 4.45 euro cents per share, from the Share premium reserve. If approved by the Shareholders' Meeting, the dividend distribution will take place from 21 May 2025 (with coupon presentation on 19 May and record date on 20 May).

The total dividend proposed for 2024 is therefore equal to 34.10 euro cents per share, for a total payout of 6,066,823,968.30 euro, equal to 70% of the consolidated net income.

With regard to 2023, it is worth recalling that:

– on 22 November 2023 (with coupon presentation on 20 November and record date on 21 November) interim dividends were payed out from 2023 results, as resolved by the Intesa Sanpaolo Board of Directors on 3 November 2023. The interim dividend of 14.40 euro cents per share was paid on the 18,256,842,646 ordinary shares outstanding at the record date for a total of 2,628,985,341.02 euro (net of an undistributed amount of 3,737,713.40 euro attaching to 25,956,343 own shares held in portfolio at the record date);
– at the Shareholders' Meeting of 24 April 2024, Intesa Sanpaolo shareholders approved the payout of a remaining dividend for 2023 of 15.20 euro cents per share on the 18,282,798,989 ordinary shares making up the share capital, for a total payout of 2,778,985,446.33 euro, of which: (i) 2,373,107,308.77 euro, equal to 12.98 euro cents per share, from net income for the year, and the remaining (ii) 405,878,137.56 euro, equal to 2.22 euro cents per share, from the Share premium reserve. The dividend was paid on 22 May 2024 (with coupon presentation on 20 May and record date on 21 May) for a total of 2,776,310,634.08 euro (net of an undistributed amount of 2,674,812.25 euro attaching to 17,597,449 own shares held in portfolio at the record date).

The total dividend paid out for 2023 therefore amounted to 29.60 euro cents per share, for a total payout of 5,405 million euro, equal to a ratio of 70% of consolidated net income.

Whereas with regard to 2022:

– on 23 November 2022 (with coupon presentation on 21 November and record date on 22 November) interim dividends were payed out from 2022 results, as resolved by the Intesa Sanpaolo Board of Directors on 4 November 2022. The interim dividend of 7.38 euro cents per share was paid on the 18,964,880,325 ordinary shares outstanding at the record date for a total of 1,399,608,167.99 euro (net of an undistributed amount of 1,765,505.22 euro attaching to 23,922,835 own shares held in portfolio at the record date);
– at the Shareholders' Meeting of 28 April 2023, Intesa Sanpaolo shareholders approved the payout of a remaining dividend for 2022 of 8.68 euro cents per share, subject to increase due to the annulment of the own shares purchased in execution of the buyback programme. Following the annulment of the shares at the start of May, on 24 May 2023 with coupon presentation on 22 May and record date on 23 May), a remaining dividend of 9.01 euro cents was paid on the 18,282,798,989 ordinary shares making up the share capital.[153]

The total dividend paid out for 2022 therefore amounted to 16.39 euro cents per share, for a total payout of 3,046 million euro, equal to a payout ratio of 70% of consolidated net income.

With regard to 2021:

– on 24 November 2021 (with coupon presentation on 22 November and record date on 23 November) interim dividends were payed out from 2021 results, as resolved by the Intesa Sanpaolo Board of Directors on 3 November 2021. The interim dividend of 7.21 euro cents per share was paid on the 19,399,837,165 ordinary shares outstanding at the record date for a total of 1,398,728,259.60 euro (net of the undistributed amount of 2,208,144.69 euro attaching to 30,626,140 own shares held);
– at the Shareholders' Meeting of 29 April 2022, shareholders approved the payout of a remaining dividend of 1,533,063,554.76 euro (7.89 euro cents per share) on the 19,430,463,305 ordinary shares making up the share capital, of which 1,299,897,995.10 euro as dividends from net income for 2021 (equal to 6.69 euro cents per share) and 233,165,559.66 euro as partial distribution of the free portion of the Share premium reserve (equal to 1.20 euro cents per share). The dividend was paid on 25 May 2022 (with coupon presentation on 23 May and record date on 24 May) for a total of 1,531,897,089.90 euro (net of an undistributed amount of 1,166,464.86 euro attaching to 14,784,092 own shares held in portfolio at the record date).

Based on the above, the dividend for the year 2021 was set at a total of 15.10 euro cents per share, for a total dividend distribution of 2,931 million euro and a payout ratio of 70% of consolidated net income.

Finally, in relation to 2020, at the Shareholders' Meeting of 28 April 2021, shareholders approved a cash dividend of 3.57 euro cents per share on the 19,430,463,305 ordinary shares making up the share capital, for a total payout of 693,667,539.99 euro, equal to the maximum allowed under the European Central Bank Recommendation of

[153] The total amount of the dividend paid was 1,646,462,490.59 euro against 1,765,623.70 euro allocated to the Extraordinary reserve in relation to the portion not distributed to the 9,075,453 own shares held by the Bank at the record date (817,698.32 euro) and the rounding differences arisen during the calculation of the final amount of the dividend (947,925.38 euro).

15 December 2020, within the limit of 20 basis points of the consolidated Common Equity Tier 1 ratio at 31 December 2020. Of the total: (i) 532,394,694.56 euro as dividends from the net income for 2020 (equal to 2.74 euro cents per share) and the remaining (ii) 161,272,845.43 euro as an assignment of reserves drawn on the Share premium reserve (equal to 0.83 euro cents per share).
This allocation was then accompanied by an additional cash distribution, approved by the Shareholders' Meeting of 14 October 2021, for a total of 1,935,274,145.18 euro, corresponding to a unit amount of 9.96 euro cents per share on each of the 19,430,463,305 ordinary shares making up the share capital. The dividend on outstanding ordinary shares was paid on 20 October 2021 (with coupon presentation on 18 October and record date on 19 October) for a total payout of 1,932,155,896.67 euro (net of an undistributed amount of 3,118,248.51 euro attaching to own shares held in portfolio at the record date). The overall dividend paid out on the result for 2020 consequently amounted to 2,626 million euro, or 13.53 euro cents per share, for a payout ratio for 2020 of 75% of 2020 consolidated net income, as adjusted to take into account components relating to the acquisition of UBI Banca and the related impairment of the goodwill of the Banca dei Territori.

Note that the Shareholder return should also be assessed in the light of the buyback operations carried out by Intesa Sanpaolo, by virtue of which Shareholders, without having to further invest, see growth in their share of participation in the Bank's total dividends.

Dividend yield

This indicator measures percentage return on the shares, calculated as the ratio between dividends allocated for the year and market price in the reference year. This return, determined on the basis of average annual share prices, maintained sustainable levels over time, also in view of financial market trends, and, as reiterated above, should be assessed in the light of buyback operations carried out since 2022.

	2024	2023	2022	2021	2020
Dividend per share (euro cents) (*)	34.10	29.60	16.39	15.10	13.53
Average stock price (euro)	3.481	2.438	2.024	2.292	1.799
Dividend yield	9.8%	12.1%	8.1%	6.6%	7.5%

(*) The 2022 remaining dividend per share has undergone an increase compared to the resolution of the Intesa Sanpaolo Shareholders' meeting of 28 April 2023 (from 8.68 euro cents to 9.01 euro cents) following the annulment, on 2 May 2023, of all own shares purchased in execution of the buyback programme which was launched on 13 February 2023 and concluded on 4 April 2023.

Rating

Summarised below are the main actions on the ratings of the Bank taken by the international agencies in 2024:
– Morningstar DBRS confirmed ratings and outlook of Intesa Sanpaolo on 23 May. On 4 November the rating agency improved the Bank's long-term trend to "positive", while confirming its ratings . Both rating actions followed up on similar rating actions on the sovereign ratings and trend for Italy, announced by Morningstar DBRS on 26 April and 25 October, respectively;
– Fitch Ratings affirmed the ratings on Intesa Sanpaolo and revised the outlook on the Bank to "positive" on 31 October, after doing the same for Italy's sovereign ratings on 18 October[154];
– Moody's affirmed Intesa Sanpaolo's ratings and outlook on 30 October;
– S&P Global Ratings left ratings and outlook on Intesa Sanpaolo unchanged (aligned with Italy's ratings, also after Italy's sovereign ratings and outlook affirmation dated 18 October).

The ratings assigned to Intesa Sanpaolo by the main international agencies, which were unchanged as at the data of approval of these financial statements, are shown below.

Alternative Performance Measures and Other information

Alternative Performance Measures

Introduction

Pursuant to Article 16 of Regulation 1095/2010/EU, the European Securities and Markets Authority (ESMA) has issued specific Guidelines[155] on the presentation criteria for Alternative Performance Measures (APMs) included by European issuers in regulated information (including the Report on operations in the Annual Report, the Half-yearly report on operations in the Half-yearly report, and the Reports on operations in the Interim Statements), where such measures are not defined or provided for in the rules on financial reporting. These guidelines, in force since 3 July 2016, are designed to promote the utility and transparency of APMs included in the regulated information, by confirming a shared approach to the use of such measures, in order to improve their comparability, reliability, comprehensibility and consistency over time, with resulting benefits for end users. Consob[156] has transposed the Guidelines in Italy and incorporated them into its supervisory practices.
According to the definition provided in the ESMA Guidelines, an Alternative Performance Measure is a financial measure of historical or future financial performance, financial position, or cash flows, other than a financial measure defined or specified in the applicable financial reporting framework. APMs are typically based on financial statement line captions prepared in accordance with applicable financial reporting rules. What sets them apart is that APMs are not defined in the financial reporting framework, yet their use is still widespread, with the role of conveying a view of the entity's performance that is closer to the management's perspective than would be possible using only the defined measures.
Measures published in application of prudential rules, including those laid down in the Regulation and Directive on capital requirements (CRR/CRD IV), physical or non-financial measures and social and environmental measures do not come within the narrow definition of APMs.

Intesa Sanpaolo's Alternative Performance Measures

In accordance with Legislative Decree 38 of 28 February 2005, Intesa Sanpaolo prepares its financial statements in compliance with the IAS/IFRS issued by the International Accounting Standards Board (IASB) and the related interpretations of the International Financial Reporting Standards – Interpretations Committee (IFRS-IC), endorsed by the European Commission as provided for by EC Regulation 1606 of 19 July 2002, based on the "Instructions for the preparation of the separate and consolidated financial statements of banks and financial companies, which are parent companies of banking groups" issued by the Bank of Italy (Circular 262/2005 as amended), and disclosed in detail in Part A of the Notes to the financial statements.
To facilitate the understanding of the income statement and balance sheet figures, Intesa Sanpaolo also uses various Alternative Performance Measures (APMs) to provide a clear, concise and immediate account of the operating results, the financial position and the performance achieved. Intesa Sanpaolo's APMs – commonly used in banking and finance – are also used by the management in decision-making processes of both an operational and strategic nature.
It should be noted in this regard that the Alternative Performance Measures used are supplementary to the measures defined within the IFRS framework. The measures – described below in accordance with the above-mentioned ESMA Guidelines – include the margins of the reclassified income statement and the aggregates of the reclassified balance sheet, in addition to other measures calculated on the basis of the figures presented in the financial statements. The figures used are thoroughly reconciled with the related figures defined in the IFRS framework through the disclosures provided in the Report on operations and reconciliation statements included in the Attachments to the Financial Statements. The figures used are normally restated to enable like-for-like comparison when this restatement is necessary and material.

With regard to the war between Russia and Ukraine, in accordance with the ESMA Guidelines, no new measures have been added, nor have any changes been made to the measures normally used.

155 Guidelines on Alternative Performance Measures – ESMA/2015/1415en. Orientamenti Indicatori alternativi di performance - ESMA/2015/1415it.
156 Consob Communication No. 0092543 of 3 December 2015

Margins of the reclassified income statement

With regard to the reclassified income statement, the following aggregates and margins have been identified as Alternative Performance Measures.

Operating income: this aggregate includes core income and other income/expenses strictly correlated with operating activity. It is calculated as the sum of the following captions of the reclassified income statement:
- Net interest income;
- Net fee and commission income;
- Income from insurance business;
- Profits (losses) on financial assets and liabilities at fair value;
- Other operating income (expenses).

Operating costs: this aggregate includes costs and expenses relating to the operating activity presented in the following captions of the reclassified income statement:
- Personnel expenses;
- Administrative expenses;
- Adjustments to property, equipment and intangible assets.

Operating margin: margin measured as the difference between Operating income and Operating costs, as described above, representing the result of operations.

Gross income: operating margin that takes into account the effects of adjustments, provisions and impairment losses and realised gains/losses on loans and other assets. It is obtained by subtracting/adding the following captions of the reclassified income statement to the operating margin:
- Net adjustments to loans;
- Other net provisions and net impairment losses on other assets;
- Other income (expenses);
- Income (Loss) from discontinued operations.

Lastly, Net income (loss) includes income components beyond the company's control (taxes, levies and charges aimed at maintaining the stability of the banking industry), items of an "accounting" nature (effects of purchase price allocations and the impairment (net of tax) of goodwill and other intangible assets), as well as expenses related to restructuring/reorganisation processes. The following captions of the reclassified income statement are considered:
- Taxes on income;
- Charges (net of tax) for integration and exit incentives;
- Effect of purchase price allocation (net of tax);
- Levies and other charges concerning the banking and insurance industry (net of tax)
- Impairment (net of tax) of goodwill and other intangible assets;
- Minority interests.

For detailed information on the breakdown of the individual captions of the reclassified income statement cited above, see the chapter "Economic results and balance sheet aggregates" of this Report on operations. Reconciliations of the individual captions of the reclassified income statement with the captions of the financial statements are presented in an attachment to the financial statements, as also required by Consob in its Communication 6064293 of 28 July 2006. Where comparative figures and/or figures for the reporting period have been restated, a thorough reconciliation is provided in the attachments to the financial statements.

Aggregates of the reclassified balance sheet

With regard to the reclassified balance sheet, which is primarily intended to provide a summary with respect to the financial statements, the following have been identified as Alternative Performance Measures, while the chapter "Economic results and balance sheet aggregates" of this Report provides details of the remaining captions of the reclassified balance sheet derived directly from the financial statements. Reconciliations of the individual captions of the reclassified balance sheet with the captions of the financial statements are presented in an attachment to the financial statements, as also required by Consob in its Communication 6064293 of 28 July 2006. Where the comparative figures have been restated, a thorough reconciliation is provided in the attachments to the financial statements.

Loans to customers
This aggregate includes the captions typical of the lending business with customers relating to the banking segment.
It mainly consists of loans to customers classified as Financial assets measured at amortised cost and, to a lesser extent, exposures in securities (issued by non-financial companies, public entities and others) representing loans to customers. It also includes any portions of loans to customers classified under Financial assets held for trading, Financial assets designated at fair value, Other financial assets mandatorily measured at fair value and Financial assets measured at fair value through other comprehensive income.

Other banking business financial assets and liabilities
This aggregate comprises financial assets and liabilities of banking business (thereby excluding financial assets and liabilities pertaining to insurance companies) other than loans. In detail, the following captions of the reclassified balance sheet assets are included, as defined below: Financial assets measured at amortised cost which do not constitute loans; Financial assets measured at fair value through profit or loss and Financial assets measured at fair value through other comprehensive income. This aggregate also includes Financial liabilities held for trading in reclassified balance sheet liabilities, held by the banking segment, considered net of investment certificates, as they are included in direct deposits from banking business.

Financial assets measured at amortised cost which do not constitute loans
This aggregate includes portions of Financial assets measured at amortised cost (both amounts due from banks and loans to customers) of the banking segment not held for financing purposes. These are essentially debt securities of banks, governments, financial institutions and insurance companies. The breakdown of this caption is provided in the detail table included in the chapter “Economic results and balance sheet aggregates”.

Financial assets measured at fair value through profit or loss
These include Financial assets held for trading, designated at fair value and mandatorily measured at fair value pertaining to the banking segment, other than those representing loans to customers and due from banks, which are classified to the specific aggregates. The breakdown of this caption is provided in the detail table included in the chapter “Economic results and balance sheet aggregates”.

Financial assets measured at fair value through other comprehensive income
These include Financial assets measured at fair value through other comprehensive income of the banking segment, except for portions that represent loans to customers and due from banks, which are classified to the specific aggregates. The breakdown of this caption is provided in the detail table included in the chapter “Economic results and balance sheet aggregates”.

Customer financial assets
This aggregate represents total financial assets deposited by customers of the Group, in the various types of direct deposits from banking and insurance business and indirect deposits, as defined further below. In order to avoid duplications, the aggregate is constructed by netting those components of indirect customer deposits that also constitute types of direct deposits.

Direct deposits from banking business
This aggregate includes captions relating to funding from customers. In addition to the financial liabilities measured at amortised cost represented by amounts Due to customers (net of lease payables reclassified to Other liabilities) and Securities issued, it also includes funding – in the form of investment certificates and, to a marginal extent, other instruments – classified under the captions Financial liabilities held for trading and Financial liabilities designated at fair value.

Direct deposits from insurance business
This aggregate groups together funding items from the insurance segment and includes Insurance liabilities recognised on the balance sheet, Financial liabilities designated at fair value pertaining to insurance companies recognised on the reclassified balance sheet, and Other insurance deposits. This last item consists of securities issued and amounts due to customers recognised under Financial liabilities at amortised cost pertaining to insurance companies on the reclassified balance sheet, and includes subordinated liabilities.

Indirect customer deposits
This aggregate refers to investment and distribution activity – for securities, mutual funds, portfolio management schemes and insurance – carried out on behalf of third parties or in connection with the management of securities portfolios. The assets are measured at market prices. Indirect customer deposits are broken down into Assets under management (mutual funds, portfolio management schemes, insurance policies, pension funds and individual pension policies) and Assets under administration (all securities under administration and custody not attributable to assets under management: government bonds, Equities, Third-party bonds, etc.).

Amounts due from and to banks - net interbank position
Amounts due from and to banks include typical asset and liability items relating to interbank dealings in the banking segment.
The aggregate *due from banks* consists primarily of Amounts due from banks recognised as Financial assets measured at amortised cost, plus any financing to banks classified as Financial assets held for trading, Financial assets designated at fair value, Other financial assets mandatorily measured at fair value, or Financial assets measured at fair value through other comprehensive income.
Amounts *due to banks* include the corresponding caption under Financial liabilities measured at amortised cost, net of lease payables, which are reclassified to Other liabilities.
The *net interbank position* shows the net balance of amounts due from and to banks. It is calculated also including, on the asset side, on-demand deposits held with Central Banks and other banks, which strarting from September 2022 are recognised under Cash and cash equivalents, in accordance with the instructions of Bank of Italy Circular 262.

Other Alternative Performance Measures

In addition to the Alternative Performance Measures represented by the margins of the Reclassified income statement and the aggregates of the Reclassified balance sheet described above, Intesa Sanpaolo also publishes the following APMs.

Profitability ratios

Cost/income ratio
The measure is calculated as the ratio of operating costs (personnel expenses, administrative expenses and adjustments to property, equipment and intangible assets) to the operating income presented in the Reclassified income statement for the year/period and provides a synthetic overview of operating efficiency. For information regarding the breakdown of the captions included in the numerator and denominator of this ratio, see the above and the reconciliation statements attached to the financial statements for a detailed reconciliation.

ROE – Return On Equity
This measure is calculated as the ratio of net income or loss to shareholders' equity and represents the profitability generated by available shareholders' equity. In particular:
- the net income or loss presented in the Income statement for the year/period is used in the numerator; in exceptional cases only, net income or loss may be adjusted to account for any non-recurring components, which are precisely identified. In interim reporting, net income or loss is annualised (except for any non-recurring components, not annualised);
- in the denominator, the shareholders' equity considered is the amount pertaining to the Group at the end of the year/period and does not take into account the AT1 capital instruments and the net income or loss for the year/period.

ROA – Return On Assets
The measure is calculated by comparing the net income or loss to total assets and provides an overview of the profitability of company assets. In particular:
- the net income or loss presented in the Income statement for the year/period is used in the numerator; in exceptional cases only, net income or loss may be adjusted to account for any non-recurring components, which are precisely identified. In interim reporting, net income or loss is annualised (except for any non-recurring components, not annualised);
- in the denominator, period/year-end total assets are used.

Indicators relating to the Intesa Sanpaolo shares

Price/Book value
This measure, which reflects the value attributed by the market to Intesa Sanpaolo, and thus indirectly to its overall assets, is calculated by comparing the market capitalisation to shareholders' equity. It is published on the basis of a time series consisting of average data from the last 5 years/periods, in addition to the calculation on the basis of period-end values at the reporting date. Specifically:
- the average capitalisation for the reporting period/year is used in the numerator. The average capitalisation is calculated on the basis of the average price of shares (arithmetic average of the daily closing prices of trading on Borsa Italiana), multiplied by the weighted average number of shares making up the share capital during the reporting year/period.
  In addition to average capitalisation, the period/year-end capitalisation is also published, which is used to calculate the price/book value on the basis of period/year-end figures. Period/year-end capitalisation is calculated by multiplying the closing price of trading on Borsa Italiana on the last trading day, multiplied by the number of shares at the end of the period/year;
- the average Group shareholders' equity, calculated as the semi-sum of Group shareholders' equity at the beginning and end of the period/year, is used in the denominator. In addition to average shareholders' equity, the value of shareholders' equity at the end of the period/year is published in order to calculate the price/book value on the basis of period/year-end figures.

Payout ratio
This measure, published in table form in the Annual Report based on a time series consisting of data from the last 5 financial years, is the ratio between the amount assigned for the remuneration of shareholders and the total amount of the net income produced. In particular:
- the amount of cash dividends that have been proposed or approved for distribution to the shareholders, inclusive of any amounts arising from the distribution of available reserves, is used in the numerator;
- the net income or loss presented in the Consolidated income statement is used in the denominator, only exceptionally adjusted to account for any non-recurring items, which are duly identified.

Dividend Yield
This measure, published in table form in the Annual Report based on a time series consisting of data from the last 5 financial years, refers to the percentage return on the shares, calculated as the ratio between the dividend and the market price. Specifically:
- the amount of the divided per share proposed/approved is used in the numerator;
- the average price of the share, calculated as the annual arithmetic average of the daily closing prices of trading on Borsa Italiana, is used in the denominator.

Risk ratios

Net bad loans/Net loans to customers
The measure is calculated as the ratio of Bad loans to total Loans to customers outstanding at the year/period end, thus providing synthetic indications of the loan portfolio quality. The figures are taken from the financial statements, i.e. net of the related adjustments, and do not include loans to be disposed of that are recognised as assets held for sale. For the definition of the aggregate Loans to customers, see the above. The measure is also calculated with reference to gross values, i.e. before adjustments.

Net non-performing loans/Net loans to customers
This measure is calculated as the ratio of the amount of Non-performing loans (bad loans, unlikely-to-pay loans and past due loans) to total Loans to customers outstanding at the year/period end, thus providing synthetic indications of the loan portfolio quality. The figures are taken from the financial statements, i.e. net of the related adjustments, and do not include loans to be disposed of that are recognised as assets held for sale. For the definition of the aggregate Loans to customers, see the above. The measure is also calculated with reference to gross values, i.e. before adjustments.

Cumulated adjustments on bad loans/Gross bad loans to customers
This measure states the total amount of cumulated adjustments on Bad loans to customers as a ratio of total Bad loans to customers gross of adjustments outstanding at the end of the year/period, thus providing an indicator of the coverage ratio for bad loans. The figures do not include loans to be disposed of that are recognised as assets held for sale. For the definition of the aggregate Loans to customers, see the above.

Cumulated adjustments on non-performing loans/Gross non-performing loans
This measure states total cumulated adjustments on Non-performing loans (bad loans, unlikely-to-pay loans and past due loans) as a ratio of total Non-performing loans gross of the related adjustments outstanding at the end of year/period, thus providing an indicator of the coverage ratio for Non-performing loans. The values do not include loans to be disposed ofthat are recognised as assets held for sale. For the definition of the aggregate Loans to customers, see the above.

Cost of credit/Cost of risk
This measure is calculated as the ratio of the amount of net adjustments to loans for the period/year in the Reclassified income statement to the amount of Loans to customers at period/year-end, thus providing synthetic indications of the level of adjustments on the portfolio during the period/year. To enable a valuation more closely linked to ordinary operations, this measure may be accompanied by a version of the same measure calculated with the isolation of particularly significant non-recurring elements, which are precisely identified.
For the definition of the aggregate Loans to customers, see the above. In interim reporting, the numerator is annualised (except for any non-recurring components, not annualised).

Other measures

Loan-to-deposit ratio
This measure is calculated as the ratio of Net loans to customers to the amount of Direct deposits from banking business, thus providing synthetic indications of the structure of the customer lending and deposit activity. For the definitions of the aggregates Loans to customers and Direct deposits from banking business, see the above.

Absorbed capital
Absorbed capital is a measure of the risk capital associated with each Group Division in relation to its specific operations. For each Division, the absorbed capital is calculated on the basis of the Risk Weighted Assets (RWAs) measured in accordance with the applicable regulations and supplemented, where necessary, with management data on "economic" capital[157] to take into account the risks not covered by the regulatory metric.

[157] Economic capital consists of an internal estimate of the maximum "unexpected" loss the Group may incur in a given time horizon and considering the desired level of confidence. It aims to quantify the potential economic losses related to the individual risks to which the Group is exposed.

Other information

With regard to information to be included in the Annual Report as required by specific provisions please note the following:

- the list of Group companies and subsidiaries is provided in the Notes to the consolidated financial statements (Part A, Section 3 – Scope of consolidation and consolidation methods and Part B, Assets – Section 7), in accordance with Bank of Italy instructions;
- Part E - Information on risks and relative hedging policies of the Notes to the consolidated financial statements, in the introductory section on the Manager responsible for preparing the Company's financial reports, also provides information on the certification of compliance, during the year 2024, with the conditions required by Article 15 of Consob Market Regulation 20249/2017 (as amended) for the listing of shares of companies controlling companies established and regulated under the laws of non-EU countries;
- to enable a comprehensive understanding, all the information relating to the Bank's and the Group's connections and transactions with related parties, not only that required by IAS 24 but also that required by Article 5, paragraph 8, of Consob Regulation 17221 of 12 March 2010 (adopted pursuant to Article 2391-bis of the Italian Civil Code), is provided in Part H of the Notes to the consolidated financial statements;
- the information on the own shares of the Parent Company Intesa Sanpaolo held and traded at consolidated level is provided in Part F of the Notes to the consolidated financial statements;
- with regard to the information on corporate governance and ownership structure required by Article 123-bis of the Consolidated Law on Finance, Intesa Sanpaolo has opted to present this information in a separate document from the Report on operations, approved by the Board of Directors and published together with the Report. Accordingly, in addition to the summary provided in the chapter "Corporate Governance and remuneration policies" of this Report, see the "Report on Corporate Governance and Ownership Structures" available in the Governance section of the Group's website, at www.group.intesasanpaolo.com;
- with regard to the information on the remuneration paid to members of the Management and control bodies, General Managers and Key Managers and on the Parent Company shares held by them, as well as the assignment of financial instruments to board members and general managers or employees pursuant to Article 123-ter of the Consolidated Law on Finance, in addition to the summary provided in the already mentioned chapter "Corporate Governance and remuneration policies" of this Report, see the specific "Report on remuneration policy and compensation paid" published in the "Governance" section of the Group's website;
- the public disclosure concerning Basel 3 Pillar 3, contained in a specific separate file, is published on the Group's website in the Governance, Risk Management section;
- finally, the Country-by-Country Report required by Article 89 of Directive 2013/36/EU of the European Parliament and of the Council (CRD IV) is also published on the Group's website in the Governance, Risk Management section.

Forecast for 2025

The most recent consensus estimates for 2025 point to moderate GDP growth for Italy, the Eurozone and the United States, but still with a wide growth differential favouring the American economy. In Italy, a modest acceleration in economic growth is expected, driven by household consumption. There are widespread expectations that inflation will move closer to central bank targets, supporting further cuts in official interest rates. Currently, markets are pricing in a reduction of 75 to 100 basis points in the Eurozone, on top of the 25-basis-point cut already implemented on 30 January, and around 40 basis points in the United States. The outlook remains subject to an unusual level of uncertainty due to the lingering risk of an escalation in the Middle East conflict, which could cause sudden hikes in gas and oil prices, in addition to the sharp discontinuity that has characterized US economic policies since President Trump's inauguration. In particular, there are concerns that significant restrictions on foreign imports may be introduced, and that the extension of tax breaks may not be adequately offset, leading to a greater increase in debt and market tensions affecting US interest rates and government bond yields.

The economic outlook for the countries where Intesa Sanpaolo has subsidiaries reflects a diverse landscape. In Central and Southeastern Europe (CEE and SEE), growth is expected to be driven by consumption and infrastructure investments financed by EU funds, although this growth may be constrained by weak foreign demand and stagnation in Germany. In Eastern Europe (EE), GDP is likely to be impacted by geopolitical tensions and low investor confidence. Meanwhile, in Egypt, consumer price pressures could influence Central Bank decisions, consequently affecting GDP growth rates. On the inflation front, a decline is estimated in the CEE and SEE countries. In contrast, increased inflationary pressures are expected in Eastern Europe – largely due to the war in Ukraine – and in Egypt, where restrictive monetary policy may persist. The CEE and SEE countries are likely to favour a gradual reduction in interest rates in response to the fall in inflation. Conversely, Eastern Europe and Egypt may adopt a more cautious and restrictive approach due to geopolitical conditions and rising inflationary pressures. Overall, 2025 is set to be a year focused on finding a balance between supporting growth and maintaining macroeconomic stability within a challenging international environment.

In 2025, the Italian banking industry is expected to face continued weak demand for credit from businesses, due to their reliance on self-financing and uncertainties surrounding global trade, as well as the performance of Italy's major foreign partners and some industrial sectors. However, more favourable financial conditions by the end of the year may lead to a stabilisation of lending to businesses. The recovery in mortgage loans to households is estimated to continue, driven by a combination of strong demand and readily available supply, with the expectation that the deterioration rate will remain at a low level. Demand for mortgages will continue to be sustained by lower interest rates, expectations of a steady recovery in real estate transactions, and the positive trend in house prices.

Deposits are expected to normalise, following the significant outflows in 2023 towards more remunerative instruments and the recovery in 2024. Assuming that the reallocation of excess liquidity on current accounts has almost run its course, deposits as a whole will enter a consolidation phase. Household deposits will continue to be influenced by the attractiveness of government bonds, but not as strongly as in 2023, with this influence diminishing over time. Deposits from businesses are likely to show signs of a reversal, reflecting the decline in company earnings. The continued fall in interest rates will result in a reduction of the positive spread between the rates on time deposits and demand deposits, leading to a further slowdown for the former. For bonds, the more moderate growth is estimated to continue in 2025, supporting overall funding from customers.

The decline in lending rates is expected to accelerate, while the downward trajectory of borrowing rates will be characterised by stickiness, particularly for rates on current accounts. The overall cost of funding from customers will also be affected by the shift towards more expensive forms. As a result, the bank's spread between lending and borrowing rates will shrink significantly compared to 2024, by around half a percentage point, but will still remain high in historical terms.

Continued interest rate cuts are expected to lead to a moderate recovery in asset management and life insurance business volumes. Inflows of investments to these segments may be fuelled by the stock of cash that has flowed into deposits and securities under administration in previous years, in a scenario where interest in direct investment in fixed-income securities is expected to diminish.

With regard to the Intesa Sanpaolo Group, the implementation of the 2022-2025 Business Plan is proceeding at full speed, with the outlook for 2025 net income raised to well above 9 billion euro.

The forecast for 2025 envisages:

- increasing revenues, with: net interest income resilience (in relation to higher contribution from core deposits hedging and increase in loans volume); growth in net fee and commission income and income from insurance business which leverages on the Group's leadership in Wealth Management, Protection & Advisory; growth in profits from trading;
- decreasing operating costs, despite investment in technology, with: trade union agreement relating to Italy for 4,000 voluntary exits by 2027 of people close to retirement age, 2,350 of which by 2025 (already around 950 exits as at 1 January 2025), and 3,500 new hires of young people by the first half of 2028, 1,500 of which as Global Advisors for the Network commercial activities, specifically in Wealth Management & Protection; by 2027, through natural turnover of people, 3,000 exits in Italy, 1,000 of which by 2025, and 2,000 net exits in international subsidiaries, 500 of which by 2025; additional benefits deriving from technology (e.g., branch network rationalisation and IT processes streamlining); real-estate rationalisation;
- low cost of risk, with: low NPL stock; high-quality loan portfolio; proactive credit management;
- lower levies and other charges concerning the banking and insurance industry due to no further contribution to the deposit guarantee scheme.

A strong value distribution is envisaged:

- cash payout ratio of 70% of the consolidated net income for each year of the Business Plan, with an increase in the dividend per share for 2025 versus the dividend per share for 2024[158];
- buyback of 2 billion euro to be launched in June 2025 (authorised by the ECB)[159];
- additional distribution for 2025 to be quantified when full-year results are approved.

A solid capital position is envisaged, with the Common Equity Tier 1 ratio – confirming the Basel 3/Basel 4 target of above 12% over the 2022-2025 Business Plan horizon – expected to stand in 2025 at over 14% pre Basel 4, at around 13.7% post 2025 Basel 4 impact of around 40 basis points, and at around 14.5% post overall Basel 4 impact of around 60 basis points (of which around 20 in 2026-2033, including around 10 in 2026 relating to FRTB) and including the absorption of DTAs after 2025 of around 100 basis points (mostly by 2028), taking into account the above-mentioned payout ratio envisaged for the years covered by the Business Plan, the buyback to be launched in June 2025 and not considering an additional distribution for 2025.

The Board of Directors

Turin, 27 February 2025

158 Subject to the approval from the Shareholders' Meeting.

159 See the previous note.

(*) With regard to the disclosure required by par. 44 B of IAS 7, it is noted that the changes in liabilities deriving from financing activities amount to 47,124 million euro (cash flow used) and comprise -45,522 million euro in cash flows, -4,221 million euro in fair value changes and +2,619 million euro in other changes.

Notes to the consolidated financial statements

Part A – Accounting policies

A.1 – GENERAL CRITERIA

SECTION 1 – DECLARATION OF COMPLIANCE WITH IAS/IFRS

As set forth by Legislative Decree 38 of 28 February 2005, the Intesa Sanpaolo Group's Consolidated financial statements have been prepared in compliance with the IAS/IFRS issued by the International Accounting Standards Board (IASB) and the related interpretations of the International Financial Reporting Standards - Interpretations Committee (IFRS-IC) and endorsed by the European Commission as provided for by EC Regulation 1606 of 19 July 2002.
The Consolidated financial statements as at 31 December 2024 have been prepared based on the "Instructions for the preparation of the separate and consolidated financial statements of banks and financial companies, which are parent companies of banking groups" issued by the Bank of Italy, in the exercise of powers set forth by Art. 43 of Legislative Decree 136/2015[160], with Regulation of 22 December 2005, which issued Circular 262/2005, and subsequent updates. Specifically, these consolidated financial statements have been prepared in accordance with the format and preparation rules of the 8th update of 17 November 2022[161].
These Instructions set out compulsory financial statement forms, as well as the contents of the Notes to the consolidated financial statements.
The financial statements have been prepared using the IAS/IFRS endorsed and in force as at 31 December 2024 (including the SIC and IFRIC interpretation documents) as listed in the attachments to these financial statements.
The table below shows the new standards or amendments to existing ones, together with the related European Commission endorsement regulations, which came into force in 2024.

IFRS endorsed as at 31.12.2024 in force since 2024

Endorsement Regulation	Amendments to Standards/Interpretations	Effective date
2579/2023	Amendments to IFRS 16 Leases - Lease Liability in a Sale and Leaseback	01/01/2024 First financial year starting on or after 01/01/2024
2822/2023	Amendments to IAS 1 Presentation of Financial Statements - Classification of Liabilities as Current or Non-current and Non-current Liabilities with Covenants	01/01/2024 First financial year starting on or after 01/01/2024
1317/2024	Amendments to IAS 7 Statement of Cash Flows and to IFRS 7 Financial Instruments: Disclosure - Supplier Finance Arrangements	01/01/2024 First financial year starting on or after 01/01/2024

As shown in the above table, the financial statements as at 31 December 2024 reflect the provisions of Regulation no. 2579/2023 Amendment to IFRS 16 Leases – Lease Liability in a Sale and Leaseback
of 20 November 2023, Regulation no. 2822/2023 – Amendments to IAS 1 Presentation of Financial Statements – Classification of Liabilities as Current or Non-current and Non-current Liabilities with Covenants of 19 December 2023, and Regulation no. 1317/2024 Supplier Finance Arrangements – Amendments to IAS 7 and IFRS 7 of 15 May 2024. There were no significant aspects of this for the Group. Below is a brief summary of their main content.

[160] Art. 43 of Legislative Decree 136/2015 confirmed to the Bank of Italy the powers concerning the layouts of financial statements already previously attributed to the same Authority by Legislative Decree 38/2005.
[161] The 8th update of 17 November 2022, which amended Circular 262 to take account of the new reporting standard, IFRS 17 Insurance Contracts, which became effective on 1 January 2023, applies from the financial statements for the periods ending on or after 31 December 2023. The financial statements as at 31 December 2024 also reflect the provisions introduced by IVASS Order no. 152 of 26 November 2024 applicable to insurance contracts. Indeed, IVASS provisions are also directly applicable pursuant to Bank of Italy Circular 262/2005 for topics relating to insurance contracts pertaining to consolidated insurance companies.

Regulation no. 2579/2023 - Amendments to IFRS 16 Leases – Lease Liability in a Sale and Leaseback
Regulation no. 2579/2023 of 20 November 2023 amends IFRS 16 Leases with respect to lease liabilities in a sale and leaseback transaction, published by the IASB on 22 September 2022.
The limited amendments introduced relate to the recognition of sale and leaseback transactions[162] by the seller-lessee in the event of variable lease payments and when the transfer of the asset is a sale pursuant to IFRS 15.
The amendment was requested by the IFRS-IC, which identified a gap in the rules governing the recognition of right-of-use assets and lease liabilities in sale and leaseback transactions with variable lease payments. Specifically, reference is made to variable lease payments that are not based on an index or rate, e.g., those based on a percentage of the lessee-seller's sales generated by the use of the asset.
The amendments clarify that:

– upon initial recognition, the seller-lessee shall also include variable lease payments, including those that are not based on an index or rate, in the measurement of the lease liabilities in sale and leaseback transactions;
– subsequent to initial recognition, the seller-lessee applies the provisions of IFRS 16 to subsequently measure lease liabilities in a way that ensures that no gains or losses are recognised on the part of the right of use retained.

The seller-lessee may adopt different approaches in order to comply with the new provisions. Indeed, in response to the feedback received following the publication of the Exposure Draft, the IASB decided not to introduce specific requirements to measure the lease liability in a sale and leaseback, leaving the definition of an accounting policy to individual entities.
The amendments are mandatory for annual reporting periods beginning on or after 1 January 2024. A seller-lessee applies the amendments retrospectively in accordance with IAS 8 to sale and leaseback transactions entered into after the date of initial application of IFRS 16, i.e., 1 January 2019.
These amendments are not particularly significant for the Intesa Sanpaolo Group given the characteristics of its existing sale and leaseback agreements, which have no variable or insignificant variable payments.

Regulation no. 2822/2023 – Amendments to IAS 1 Presentation of Financial Statements – Classification of Liabilities as Current or Non-current and Non-current Liabilities with Covenants
Regulation no. 2822 of 19 December 2023 introduces some limited amendments to IAS 1 Presentation of Financial Statements. The clarifications aim to promote consistency in applying IAS 1 across companies to determine whether, in the statement of financial position, payables and other liabilities with an uncertain settlement date are to be classified as current (due or potentially to be paid within one year) or non-current.
Specifically, IAS 1 requires that an entity may classify a liability as non-current only where the entity has the right at the reporting date to defer settlement of the liability for at least twelve months. However, the right to defer settlement of a liability may be subject to covenants. The amendments to IAS 1 specify that covenants to be met after the reporting date (for example, a covenant based on the entity's financial position six months after the end of the reporting period), do not influence the classification of the payable as current or non-current at the reporting date.
On the other hand, the entity shall disclose information in the notes that enables users of financial statements to understand the risk that the liabilities could become repayable within 12 months after the reporting period.
Given the content of the amendment and the obligation to apply the formats set forth in Bank of Italy Circular no. 262/05, the limited amendments to IAS 1 are not significant for banks.

Regulation no. 1317/2024 Supply Finance Arrangements – Amendments to IAS 7 and IFRS 7
The amendments to IAS 7 Statement of Cash Flows and to IFRS 7 Financial Instruments: Disclosures aim to introduce new transparency requirements for supplier finance arrangements (also known as "supply chain finance" or reverse factoring). The new requirements aim to provide users of financial statements with information that enables them to assess the effects of those arrangements on the entity's liabilities and cash flows, to understand the effect of supplier finance arrangements on a company's exposure to liquidity risk and how the company might be affected if the arrangements were no longer available to it.
The proposed amendments introduced by Regulation no. 1317 of 15 May 2024 concern entities that enter into finance agreements in the role of purchasers, and not the financing entities. Therefore, the case has no direct effect for the Intesa Sanpaolo Group, which acts solely as a financier in supply finance arrangements.

The table below shows the new standards and amendments to existing ones, together with the related European Commission endorsement regulations, which will become mandatory after 2024, and for which the Intesa Sanpaolo Group has not exercised the option of early adoption.

[162] Sale and leaseback transactions are transactions in which an entity sells one of its assets and then immediately leases it back from the new owner.

IFRS endorsed as at 31.12.2024 applicable subsequent to 31.12.2024

Endorsement Regulation	Amendments to Standards/Interpretations	Effective date
2862/2024	Amendments to IAS 21 The Effects of Changes in Foreign Exchange Rates: Lack of Exchangeability	01/01/2025 First financial year starting on or after 01/01/2025

Regulation no. 2862/2024 of 12 November 2024 Amendments to IAS 21 The Effects of Changes in Foreign Exchange Rates - Lack of Exchangeability

Regulation no. 2862/2024 of 12 November 2024 amends IAS 21 specifying when a currency is exchangeable into another currency and how to determine the exchange rate when it is not and the disclosure required.

Specifically, the amendments:

- introduce the definition of “exchangeability”[163] and an application guidance to assist entities in determining when a currency is exchangeable (for example, by clarifying how to assess the time frame to obtain the currency);
- cover the estimate of the spot exchange rate when a currency is not exchangeable into another currency, using an observable exchange rate or another estimation technique. In this respect, the IASB opted not to provide specific requirements on how to estimate spot exchange rates - since such estimate may depend on circumstances specific to the entity and the relevant economic/legal environment. However, some examples are provided to assist practitioners in their assessments;
- cover the required disclosure that would enable users of the financial statements to evaluate how a currency’s lack of exchangeability affects, or is expected to affect, its financial performance, financial position and cash flows. Furthermore, an entity shall disclose information about the estimation process and the risks to which it is exposed because of the currency not being exchangeable into another currency.

The amendments apply to annual reporting periods beginning on or after 1 January 2025.

As also noted by the IASB the cases subject to regulatory intervention are not frequent. Therefore, given the current context, these amendments are not expected to be particularly significant for the Intesa Sanpaolo Group.

The table below shows the new international financial reporting standards or amendments to existing standards that have not yet been endorsed by the European Commission.

IFRS not endorsed as at 31.12.2024

New Standards/Interpretations		Date of issue
IFRS 18	Presentation and Disclosure in Financial Statements	09/04/2024
IFRS 19	Subsidiaries without Public Accountability: Disclosures	09/05/2024
Amendments to Standards/Interpretations		
IFRS 9	Amendments to the Classification and Measurements of Financial Instruments	30/05/2024
IFRS 7	Amendments to the Classification and Measurements of Financial Instruments	30/05/2024
Several IAS/IFRS (*)	Annual Improvements - Volume 11	18/07/2024
IFRS 9	Contracts Referencing Nature-dependent Electricity	18/12/2024
IFRS 7	Contracts Referencing Nature-dependent Electricity	18/12/2024

(*) The Annual Improvements relate to: Cost Method (Amendments to IAS 7), Credit Risk Disclosures (Amendments to Illustrative Examples accompanying IFRS 7), Determination of a ‘De Facto Agent’ (Amendments to IFRS 10), Disclosure of Deferred Difference between Fair Value and Transaction Price (Amendments to Illustrative Guidance accompanying IFRS 7), Gain or Loss on Derecognition (Amendments to IFRS 7), Hedge Accounting by a First-time Adopter (Amendments to IFRS 1), Lessee Derecognition of Lease Liabilities (Amendments to IFRS 9), Transaction Price (Amendments to IFRS 9)

[163] IAS 21.8: “A currency is exchangeable into another currency when an entity is able to obtain the other currency within a time frame that allows for a normal administrative delay and through a market or exchange mechanism in which an exchange transaction would create enforceable rights and obligations.”

As regards the IASB documents introducing new standards or amending existing accounting standards pending endorsement, the following is noted:

IFRS 18 Presentation and Disclosure in Financial Statements

IFRS 18 Presentation and Disclosure in Financial Statements was issued by the IASB on 9 April 2024. Its application is mandatory for annual reporting periods starting from 1 January 2027 onwards but earlier application is permitted, subject to the completion of the endorsement process. Comparative information needs to be disclosed in respect of the previous period.
The standard will not affect how companies measure their financial performance, but only the presentation. Indeed, the following will be required:

1. Introduce defined subtotals in the statement of profit or loss

Under IFRS 18, entities need to classify items of income and expense in 5 categories: operating, investing and financing - covered by the new definition introduced by IFRS 18 - in addition to income taxes and discontinued operations, which are unchanged.
With respect to specific operating segments, such as banking, insurance and financial conglomerates, items of income and expense that would normally be classified in the investing or financing categories contribute to the operating performance since for these entities, investing or financing to customers are the main business activity.

2. Management-defined performance measures (MPMs)

Management-defined performance measures (MPMs) are the subtotals of income and expenses, other than those covered by IFRS 18 or specifically required by other IFRS, that an entity uses in public communications outside financial statements (including the report on operations) to communicate to investors management's view of an aspect of the financial performance of the entity. Under IFRS 18, an entity shall disclose information about its MPMs in a single note to the financial statements, including information that enables users of financial statements to understand them.

3. Grouping (aggregation and disaggregation) of information

Finally, IFRS 18 provides application guidance on aggregating information in the primary financial statements and accompanying notes, which have complementary roles. With respect to the expense items to be included in the operating category, under IFRS 18, entities must present these items in a way that provides the most useful structured summary of them, by either the "nature" or "function" of the expense. However, a "mixed" (by both nature and function) presentation is also allowed by disclosing the specific expenses by nature in the notes to the financial statements.
Although the mandatory first-time adoption of this standard is not imminent (it will become mandatory for annual reporting periods starting from 1 January 2027), its provisions are currently being analysed in order to assess their relevance for the Intesa Sanpaolo Group, specifically with respect to the presentation of the items comprising the statement of profit or loss (primary and reclassified). In any case, Italian banks will have to wait for the Bank of Italy's initiatives to adapt to the new standard, in particular, with reference to Circular 262/2005, also in order to assess the consequences on application systems.

Amendments to the Classification and Measurement of Financial Instruments — Amendments to IFRS 9 and IFRS 7

On 30 May 2024, the IASB published "Amendments to the Classification and Measurement of Financial Instruments - Amendments to IFRS 9 and IFRS 7" to address matters identified during the post-implementation review (PIR) of the classification and measurement requirements of IFRS 9 Financial Instruments.
The amendments cover the following aspects:

1. Classification of financial assets

The application guidance provides clarification for assessing the characteristics of contractual cash flows, i.e., the so-called solely payments of principal and interest (SPPI) criterion which, if met, leads to the classification of assets at amortised cost.
This includes the amendments that clarify the treatment for the SPPI test of financial assets with features linked to Environmental, Social and Governance (ESG) factors which, upon achieving (or failing to achieve) specific ESG KPIs, provide for a variability of the interest rate which is contractually defined (usually the increase and/or decrease of a specific number of basis points). Under the proposed approach, contracts where the contingent event does not relate directly to changes in basic lending risks and costs (with an example of reduction of carbon emissions), the entity should define an internal policy in order to assess that the cash flows of the instrument are not significantly different from those of a financial instrument with identical contractual terms, but without such a contingent feature.

2. Derecognition of financial liabilities settled through an electronic cash transfer system

Under the amendments, a financial liability is derecognised at the settlement date, unless the entity opts for the application of the new provisions whereby a financial liability can be derecognised at an earlier date if the cash transfer takes place through an electronic payment system and specific conditions are met. The amendment introduced by the IASB provides for the possibility (and not the obligation) to adopt an accounting policy to be applied consistently to all settlements made through a specific electronic payment system.

3. New disclosure requirements

The IFRS 7 was amended to introduce additional disclosure requirements relating to:

– financial instruments with contractual terms that could change the amount of cash flows based on the occurrence (or non-occurrence) of a contingent event that does not relate directly to changes in basic lending risks and costs, e.g. in the case of ESG instruments;
– equity instruments designated at FVOCI.

The amendments are effective mandatorily for annual reporting periods beginning on or after 1 January 2026, subject to the completion of the endorsement process. Furthermore, earlier application is permitted or, alternatively, entities can decide to early adopt only the amendments related to the classification of financial assets and the related disclosures. The amendments are required to be applied retrospectively, in accordance with the requirements of IAS 8, though restatement of prior periods is not required (similarly to the first-time adoption of IFRS 9). With respect to the issues of greatest interest to the Group – the SPPI test for products with ESG features and the related disclosure - several analyses are currently underway in order to define the application methods and update corporate processes as part of a specific project that involves all the affected structures.

Contracts Referencing Nature-dependent Electricity - Amendments to IFRS 9 and IFRS 7

On 18 December 2024, the IASB published amendments to IFRS 9 and IFRS 7 – Contracts Referencing Nature-dependent Electricity, to help companies better report the financial effects of nature-dependent electricity contracts, which are often structured as power purchase agreements (PPA)[164]. The IASB acted swiftly in the light of the increased use of these contracts which help companies to secure their electricity supply from renewable sources such as wind and solar power, at a fixed price per unit of energy purchased or sold. The amount of electricity generated under these contracts can vary based on uncontrollable factors such as weather conditions and, at certain times (e.g. weekends or during the night), the entity may not consume all of the purchased energy, resulting in the need to resell it on the market, as energy cannot be stored.

The amendments include:

– clarifying the application of the "own-use" requirements;
  The aim of the amendments is to enable application of the exception envisaged by IFRS 9 for entities that enter into these agreements for the purpose of the receipt of energy in accordance with the entity's expected usage, thereby avoiding the classification as financial instruments to be measured at fair value;
– allow hedge accounting requirements when these agreements are used as hedging instruments (e.g. via a virtual PPA). These amendments essentially allow a cash flow hedge, avoiding the need to designate a specific amount by reference to the volume of the electricity transaction, as is normally required under IFRS 9 to promote the effectiveness of the hedging relationship;
– new disclosure requirements which enable investors to understand the effect of these agreements on the performance and cash flows of an entity. Specifically, entities are required to provide information about the terms and conditions of these agreements and quantitative and qualitative information about the agreements and their financial effect.

The mandatory effective date of the amendments is for annual reporting periods beginning on or after 1 January 2026, with earlier application permitted subject to the completion of the endorsement process.

The PPAs were also covered by ESMA in Priorities 2023 given the importance of these instruments, specifically in certain industries, in the context of climate-related policies. There are currently no significant instances applicable to the Intesa Sanpaolo Group.

IFRS 19 Subsidiaries without Public Accountability: Disclosures

IFRS 19 Subsidiaries without Public Accountability: Disclosures was issued by the IASB in May 2024 and permits subsidiaries that are eligible to provide reduced disclosures instead of the disclosure requirements of other IAS/IFRS.

IFRS 19 does not apply to the preparation of the Intesa Sanpaolo Group's consolidated financial statements, nor of Intesa Sanpaolo's separate financial statements. Overall, the scope of the standard is narrowed for banks, financial intermediaries and insurance companies (which often meet the public accountability criterion).

Annual Improvements - Volume 11

The IASB issued some narrow scope amendments to IAS/IFRS on 18 July 2024 as part of the annual improvements of financial reporting standards. All amendments will be effective for annual reporting periods beginning on or after 1 January 2026, with earlier application permitted subject to the completion of the endorsement process.

Given their limited nature, the amendments are not particularly important for the Intesa Sanpaolo Group.

[164] Specifically, PPAs may refer to:

– the signing of a renewable power purchase agreement (physical PPA) whereby an entity undertakes to purchase a certain amount of electricity produced from renewable sources (e.g. all energy produced by a wind turbine) at a predetermined fixed price for a certain number of years (even a very long time, e.g. 20 years);
– virtual agreements (or virtual PPAs) whereby there is no physical delivery of energy; in these agreements, the difference between the fixed price determined in the PPA and the spot price at which energy can be purchased/sold in the market is settled.

SECTION 2 – GENERAL PREPARATION PRINCIPLES

The Consolidated financial statements are made up of the Balance sheet, the Income statement, the Statement of comprehensive income, the Changes in shareholders' equity, the Statement of cash flows, the Notes to the consolidated financial statements and the related comparative information; the Report on operations prepared by the Directors, on the economic results achieved and on the Intesa Sanpaolo Group's balance sheet and financial position has also been included.
In compliance with the provisions of Article 5 of Legislative Decree 38/2005, the financial statements have been drawn up in euro as functional currency.
The amounts indicated in the financial statements and in the Notes to the consolidated financial statements as well as those in the Report on operations are expressed in millions of euro, unless otherwise specified.
The financial statements are prepared with the application of the general principles set out by IAS 1 and the specific financial reporting standards endorsed by the European Commission and illustrated in Part A.2 of these Notes to the financial statements, as well as in compliance with the general assumptions set forth by the Conceptual Framework for the preparation and presentation of Financial Statements issued by IASB.
No exceptions to the application of IAS/IFRS have been made.
The Report on operations and the Notes to the consolidated financial statements contain all information required by the IAS/IFRS, by current regulations, by the Bank of Italy, by Consob (Italian Securities and Exchange Commission) and by the European Securities and Markets Authority - ESMA, in addition to other information which is not compulsory but is nonetheless deemed to be necessary in order to give a true and fair presentation of the Group's situation.

Where the conditions exist pursuant to IFRS 5, among the reclassified components held for sale, resulting from the consolidated balance sheet accounting schedules as of 31 December 2024 and the related details in the Notes to the consolidated financial statements, the main ones include: (i) the 22.5% investment in Cronos Vita Assicurazioni, acquired by Intesa Sanpaolo Assicurazioni (formerly Intesa Sanpaolo Vita) as part of the system-wide transaction aimed at protecting the policyholders of Eurovita, which involved five leading Italian insurance companies, for which there was a clear intention from the outset on the part of the shareholder companies to hold the investment for a limited period of time (classified among held for sale as early as December 2023 and confirmed also at the end of 2024); (ii) properties, including those subject to transfer under the agreement between Intesa Sanpaolo and COIMA entered into on 19 April 2024, with a total value of around 0.5 billion euro, due to be completed in 2025; and (iii) non-performing loans of 0.3 billion euro gross, due to be sold under a de-risking transaction approved in December 2024.
With respect to the non-performing loans included under assets held for sale as at 31 December 2023, comprising unlikely-to-pay loans and high-risk performing loans for a total of approximately 0.2 billion euro, almost the entire portfolio was sold on 15 April 2024, with marginal exposures remaining that will be sold in 2025.

The financial statement forms and the Notes to the consolidated financial statements show, in addition to the figures for the reference period, the corresponding comparative figures for 2023.
The Attachments include the reconciliation statements to the balance sheet and income statement originally published in the 2023 financial statements, together with specific reconciliations between the latter financial statements and the reclassified statements included in the Report on operations accompanying these financial statements.

Contents of financial statement forms

Balance sheet and income statement

The compulsory forms of the balance sheet and income statement are made up of captions, subcaptions and further detailed information (specified as the "of which" items in the captions and subcaptions).
In the interests of completeness, it should be noted that with regard to the compulsory forms defined by the Bank of Italy, captions which do not have amounts for the reporting year and the previous year have also been shown. In the income statement revenues are indicated without sign, whereas costs are preceded by the minus sign.

Statement of comprehensive income

The statement of comprehensive income shows, starting from the net income/(loss) for the year, the income components recognised as a balancing entry in valuation reserves, net of the tax effect, in compliance with international financial reporting standards.
Consolidated comprehensive income is represented by providing separate recognition of the income components that will not be reversed to the income statement in the future and those which, conversely, could later be reclassified to income/(loss) for the year under specific conditions. The statement also distinguishes between the portion of income pertaining to the Parent Company and that pertaining to minority interests. Similarly to the balance sheet and the income statement, with respect to the compulsory forms defined by the Bank of Italy, captions which do not present amounts for the reporting year and the previous year are in any case included. Negative amounts are preceded by the minus sign.

Changes in shareholders' equity

The statement of changes in shareholders' equity presents shareholders' equity accounts and changes which occurred in the reference year and in the previous year, broken down in share capital, reserves, reserves from retained earnings, valuation reserves and net income. Treasury shares are deducted from shareholders' equity. The table is presented by inverting the rows and the columns with respect to the same form provided for by the updating of Bank of Italy Circular 262/2005.

Statement of cash flows

The statement of cash flows registered in the reference year and in the previous year is prepared using the indirect method, on the basis of which cash flows from operating activities are represented by net income adjusted for the effects of non-cash transactions.
Cash flows are broken down into flows from operating activities, from investing activities and from financing activities.
In the form, cash flows generated in the year are indicated without sign, whereas cash flows absorbed are preceded by the minus sign.

Contents of the Notes to the consolidated financial statements

The Notes to the financial statements include the information provided for by International Financial Reporting Standards and Circular 262 issued by the Bank of Italy on 22 December 2005 and subsequently amended, applicable for the preparation of these financial statements. They have been supplemented in accordance with IVASS guidance based on the updates to Regulation 7 of 13 July 2007, directly applicable also pursuant to Circular 262/2005, for the disclosure required by IFRS 17 for insurance contracts pertaining to consolidated insurance companies.

SECTION 3 – SCOPE OF CONSOLIDATION AND CONSOLIDATION METHODS

Scope of consolidation

The Consolidated financial statements include Intesa Sanpaolo and the companies that it directly and indirectly controls and consider in the scope of consolidation – as specifically set out by IAS/IFRS – also the companies operating in dissimilar sectors from the Parent Company as well as private equity investments. Similarly, structured entities are included when the requisite of effective control recurs, even if there is no stake in the company.
Companies are considered subsidiaries where Intesa Sanpaolo is exposed to, or has rights to, variable returns from its involvement with them, and has the ability to affect those returns by exercising its own power over the entity in question.
Control only exists if all of the following conditions are met:

- the power to direct the relevant activities of the subsidiary;
- the exposure, or rights, to variable returns from the involvement with the investee;
- the ability to use the power over the investee to affect the amount of the investor's returns.

Companies are considered as subject to joint control if control is directly or indirectly contractually shared by the Parent Company with one or more other parties external to the Group, or where the decisions about the relevant activities require the unanimous consent of all the parties sharing control.
Companies are considered associates, that is subject to significant influence, when Intesa Sanpaolo, directly or indirectly, holds 20% or more of the voting rights (including "potential" voting rights) or when the Parent Company – despite a lower percentage of voting rights due to specific legal agreements such as the participation of voting syndicates – has the power of participating in the determination of the financial and operating policies of the company.
Certain companies in which the Parent Company holds an equity stake exceeding 20% of voting share capital are excluded from the scope of consolidation and are classified based on the provisions of IFRS 9, since they are of limited absolute amount, or since Intesa Sanpaolo, directly or indirectly, exclusively holds rights on a portion of the rewards of the investment, and does not have access to management policies and may exercise limited governance rights to safeguard its economic interest.
Equity investments held, directly or through funds, in companies involved in the venture capital business are also excluded from the line-by-line scope of consolidation. These equity investments are included in the category of Financial assets measured at fair value through profit or loss.
Companies for which the shares have been received as pledges with voting rights exceeding 20% are not consolidated, in consideration of the substance underlying the pledge, which has the purpose of guaranteeing loans and not of exercising control and direction over financial and economic policies in order to benefit from the economic return on the shares.
Intesa Sanpaolo does not perform management and coordination activity over Risanamento S.p.A. and its subsidiaries pursuant to Article 2497 et seq. of the Italian Civil Code.

With respect to 31 December 2023, the changes in the line-by-line consolidation area involved the entry of:

- First Bank S.A. – Romania following its acquisition by Intesa Sanpaolo S.p.A. on 31 May 2024;
- Alpian S.A. due to the change in the consolidation method from Equity to Line-by-Line following the increase in the percentage ownership with resulting change in classification from associate to subsidiary with effect from 1 August 2024;

and the exit of:

- IN.FRA - Investire nelle Infrastrutture S.r.l. in liquidation, Compagnia Italiana Finanziaria S.r.l. in liquidation and Iniziative Logistiche S.r.l. in liquidation following their removal from the Company Register;
- Lux Gest Asset Management S.A. following the sale to third parties;
- IW Private Investments SIM S.p.A., merged into Fideuram - Intesa Sanpaolo Private Banking S.p.A.;
- Intesa Sanpaolo RBM Salute S.p.A., merged into Intesa Sanpaolo Protezione S.p.A. (formerly Intesa Sanpaolo Assicura S.p.A.).

Finally, for completeness, it is noted that Intesa Sanpaolo Vita S.p.A. changed its name to Intesa Sanpaolo Assicurazioni S.p.A. with the related change in the name of the Intesa Sanpaolo Vita Insurance Group to Intesa Sanpaolo Assicurazioni Group.

The following table lists the investments in exclusively controlled companies at 31 December 2024.

1. Exclusively controlled companies

	Companies	Place of business	Registered office	Type of relation-ship (a)	INVESTMENT Direct ownership	% held	Votes available (b)
1	Acantus S.p.A.	Milan	Milan	1	Intesa Sanpaolo S.p.A.	80.00	
	Capital 1,000,000 euro						
2	Alpian S.A.	Geneva	Geneva	1	Fideuram Intesa Sanpaolo Private Banking S.p.A.	51.14	
	Capital CHF 43,087,601				REYL & Cie S.A.	10.46	
						61.60

(a) Type of relationship:

1 - majority of voting rights in the shareholders' meeting;

2 - other forms of control.

(b) Where different from the % portion, the availability of the votes in the Ordinary Shareholders' Meeting is indicated, distinguishing between the effective (*) and potential (**) voting rights, where applicable.

(c) Company consolidated using the equity method given its limited materiality.

(d) Minority shareholders are subject to a legal commitment to purchase 0.7% of share capital.

(e) Company controlled pursuant to IFRS 10, although the Group does not hold any equity stake in the company capital.

(f) Company not subject to the management and coordination activities pursuant to Article 2497 and following of the Italian Civil Code.

(g) In the event of liquidation of the equity investment, the minority shareholder has the right to sell, and Intesa Sanpaolo is required to purchase, the entire minority investment.

(h) Please note that there are put and call option agreements on 35.00% of share capital held by minority shareholders.

(i) A closed-end alternative real estate investment fund managed by COIMA SGR S.p.A.

(j) Please note that there are put and call option agreements on 24% of share capital held by minority shareholders.

(k) Please note that there are put and call option agreements on 44.74% of share capital held by minority shareholders.

(l) Intesa Sanpaolo S.p.A. also holds 100% of the equity instruments issued by the investee.

2. Significant evaluations and assumptions in determining the scope of consolidation

As stated above, companies are considered subsidiaries where Intesa Sanpaolo is exposed to, or has rights to, variable returns from its involvement with them, and has the ability to affect those returns by exercising its own power over the entity in question.
Control only exists if all of the following conditions are met:
- the power to direct the relevant activities of the subsidiary;
- the exposure, or rights, to variable returns from the involvement with the investee;
- the ability to use the power over the investee to affect the amount of the investor's returns.

In particular, the Group considers the following factors in evaluating the existence of control:
- the purpose and the structure of the investee in order to identify its aims and relevant activities, or the activities that significantly affect the investee's returns, and how those activities are governed;
- power, in order to understand whether the Group has the contractual right to manage the relevant activities;
- the exposure to variable returns from the investee in order to evaluate whether the return recognised by the Group is subject to variations depending on the investee's returns.

Furthermore, in order to evaluate the existence of control, potential principal-agent relationships are taken into consideration. In order to evaluate whether the investee is acting as a principal or an agent, the Group takes account of the following factors:
- the decision-making power on the relevant activities of the subsidiary;
- the rights of other parties;
- the payments to which the Group is entitled;
- the Group's exposure to variable returns resulting from any investment in the investee.

IFRS 10 identifies relevant activities as activities of the investee that significantly affect the investee's returns.
In general terms, when the relevant activities are managed through voting rights, the following factors determine evidence of control:
- direct ownership, or indirect ownership through its subsidiaries, of more than half the voting rights of an entity, unless in exceptional circumstances it can be clearly demonstrated that such ownership does not constitute control;
- ownership of half, or less, of the votes which can be cast at the shareholders' meeting, and the practical ability unilaterally to govern the relevant activities through:
  - the control of more than half the voting rights as enshrined in an agreement with other investors;
  - the power to determine the financial and operational policies of the entity, as conferred by the Articles of Association or by contract;
  - the power to nominate or remove the majority of the members of the Board of Directors or of the equivalent corporate governance body;
  - the power to cast the majority of the votes at meetings of the Board of Directors or of the equivalent corporate governance body.

In order to exercise power, it is necessary for the rights that the Group has over the investee to be material; to be material, the Group must have the ability to use its rights when decisions relating to relevant activities are taken.
The existence and the effect of potential voting rights, where material, are taken into consideration in evaluating whether power exists to shape the managerial and financial policies of another entity.
Sometimes the Group has "de facto" control over certain entities when it possesses rights to determine unilaterally the relevant activities of the investee, even though it does not have the majority of the voting rights.
On the contrary, cases may emerge where the Group, though holding more than half of the voting rights, does not control the investee since, consequently to agreements with other investors, the exposure to variable returns from the involvement with the investees is not considered significant.
Subsidiaries can also include "structured entities" in which the voting rights are not the dominant factor in deciding who controls the entity; this includes special purpose vehicles (SPEs/SPVs) and investment funds. Structured entities are considered to be controlled where:
- the Group has powers enshrined in contractual rights allowing it to govern the relevant activities; and
- the Group is exposed to the variable returns deriving from such activities.

3. Investments in subsidiaries with significant minority interests

3.1 Minority interests, minority voting rights and dividends distributed to minorities

	Companies	Minority interests %	Minority voting rights % (1)	Dividends distributed to minority shareholders
1	Acantus S.p.A.	20.00	20.00	-
2	Alpian S.A.	36.07	36.07	-
3	Bank of Alexandria	20.00	20.00	6
4	Banka Intesa Sanpaolo D.D.	0.87	0.87	-
5	Eurizon Capital Real Asset SGR S.p.A.	40.01	24.50	-
6	Eurizon SLJ Capital Limited	35.00	35.00	-
7	Exetra S.p.A.	15.00	15.00	-
8	First Bank S.A.	0.02	0.02	-
9	Fondo Porta Nuova Gioia	10.00	10.00	-

11	Intesa Sanpaolo Assicurazioni S.p.A.	0.01	0.01	-
12	Intesa Sanpaolo Banka D.D. Bosna I Hercegovina	0.01	-	-
13	Reyl & Cie S.A.	24.00	24.00	1
14	Risanamento S.p.A.	51.12	51.12	-
15	VUB Generali Dochodkova Spravcovska Spolocnost A.S.	44.74	44.74	3

(1) Available voting rights at Ordinary Shareholders' Meeting.

3.2 Investments in companies with significant minority interests: financial highlights

(millions of euro)

	Companies	Total assets	Cash and cash equivalents	Financial assets	Property, equipment and intangible assets	Financial liabilities	Shareholders' equity	Interest margin	Net interest and other banking income	Operating expenses	Income (loss) before tax from continuing operations	Income (loss) after tax from continuing operations	Income (loss) after tax from discontinued operations	Net income (loss) (1)	Other comprehensive income (net of tax) (2)	Consolidated comprehensive income (3) = (1) + (2)
1	Bank of Alexandria	4,154	62	3,869	115	3,302	569	400	440	-153	230	153	-	153	38	191

4. Significant restrictions

In terms of significant restrictions, it is noted that the Intesa Sanpaolo Group is subject to the supervisory rules provided for by Directive 2013/36/EU (CRD IV) and Regulation (EU) 575/2013 (CRR), amended by Directive 2019/878/EU (CRD V) and Regulation (EU) 876/2019 (CRR II), respectively, and controls financial institutions subject to the same or similar regulations aimed at maintaining an adequate level of regulatory capital in relation to risks taken; therefore, the ability of subsidiary banks or financial institutions to distribute capital or dividends is dependent on the fulfilment of the regulatory thresholds set in those regulations.

In view of the above, with regard to the disclosures to be made in accordance with IFRS 12, the limitations currently set by the Russian regulations essentially impose restrictions on repayments and payments to parties resident in unfriendly countries, which also affect the subsidiary Banca Intesa Russia. In this regard, it should also be noted that the current legal restrictions on transferring monetary resources beyond the country's borders do not prejudice in any way the ownership of the amounts (due to the creditor banks), nor do they constitute an obstacle to maintaining control over the Russian subsidiary. For more information, see the "Section 5 – Other aspects – Risks, uncertainties and impacts of the Russian/Ukrainian crisis" below.

Lastly, within the Group, there are insurance companies subject to the Solvency Capital Requirements of insurance companies established by the Solvency II legislation.

5. Other information

In preparing the Intesa Sanpaolo consolidated financial statements, the financial statements of all subsidiaries have the same financial year-end, except for that reported below for the Ukrainian subsidiary Pravex Bank and Risanamento in the following paragraph on Consolidation methods.

Consolidation methods

Full consolidation

This method involves the “line by line” aggregation of the individual amounts reported in the balance sheets and income statements of the subsidiary companies concerned. Following the allocation to minority shareholders of their interests, in a specific caption, in equity and in the result for the period, the residual value is eliminated against the book value of the subsidiaries concerned.
Any positive differences arising on consolidation, after the allocation to the assets and liabilities of the consolidated subsidiary, are recorded under Intangible assets as goodwill or other intangible assets. Negative differences are recognised in the income statement.
Assets, liabilities, income and expenses between consolidated companies are totally eliminated.
Business combinations must be accounted for using the "acquisition method" in accordance with IFRS 3, whereby identifiable assets acquired or liabilities assumed (including contingent liabilities) are recognised at their fair value at the acquisition date. Moreover, for each business combination, any minority interest in the acquired company can be recognised at fair value or in proportion to the minority investment in the net identifiable assets of the acquired company. Any excess of the consideration transferred (being the fair value of the assets sold, the liabilities incurred and the equity instruments issued) over the fair value recognition of minority interests with respect to the fair value of the assets acquired and the liabilities assumed is recognised as goodwill. If the consideration is lower, the difference is taken to the income statement.
The "acquisition method" is applied starting from the acquisition date, that is from the moment in which control of the acquired company is obtained. Therefore, the economic results of a subsidiary acquired in the reference period are included in the Consolidated financial statements starting from the acquisition date. Likewise, economic results of a subsidiary sold are included in the Consolidated financial statements until the date in which control ceased. The difference between sale price and book value at the date of disposal (including foreign exchange differences recorded in shareholders’ equity on consolidation, over time) is accounted for in the income statement.
Where necessary – and apart from entirely marginal cases – the financial statements of consolidated companies which are drawn up using different accounting criteria are restated to be compliant with the standards used by the Group.

With regard to the Ukrainian subsidiary Pravex Bank, as a result of the continuation of the critical situation in Kyiv (where the subsidiary’s offices are located), it was decided, with a view to reducing “operational” risk, that it was best to retain, in the December 2024 consolidation, the accounting values produced by Pravex for the consolidation of September 2024. Thus, for the financial statements as at 31 December 2024, the balance sheet and income statement results of Pravex were included based on a consolidation package, drawn up in compliance with the IAS/IFRSs, as set out in the Group Accounting Policies, related to 30 September 2024, using the exchange rate as at 31 December 2024 for conversion into Euro.
The decision to use the data as at 30 September 2024 for the line-by-line consolidation of Pravex, also taken in light of the slight materiality of the subsidiary, and motivated by objective operational restrictions, is also based on the indications in IFRS 10, though for specific cases[165].

With regard to the subsidiary Risanamento, over which Intesa Sanpaolo does not exercise the management and coordination envisaged in Article 2497 and following of the Italian Civil Code, by the date of approval of Intesa Sanpaolo’s financial statements there had been no board meetings of the company approving the related accounts as at 31 December 2024, and it was therefore not possible to include them in Intesa Sanpaolo’s consolidated financial statements, in accordance with the Group’s policy which stipulates that the income statements and balance sheet data of the subsidiaries must have been approved beforehand by their respective Boards of Directors in order to be included in the Group’s consolidated financial statements. Consequently, the data of the Risanamento Group as at 30 September 2024 was used for the contribution to the consolidated financial statements of Intesa Sanpaolo as at 31 December 2024, adjusted prudentially based on the information available at the time to take account of the uncertainty mainly related to additional costs for the remediation works, without any material effects on Intesa Sanpaolo’s consolidated income statement.

[165] IFRS 10 states that, where it is not possible to use the subsidiary’s data updated to the same reporting date as the consolidated financial statements, it is permitted to use the previous accounting data, provided that previous date is no more than 3 months prior. For more details, see the following paragraphs of IFRS 10: IFRS 10.B92 “*The financial statements of the parent and its subsidiaries used in the preparation of the consolidated financial statements shall have the same reporting date. When the end of the reporting period of the parent is different from that of a subsidiary, the subsidiary prepares, for consolidation purposes, additional financial information as of the same date as the financial statements of the parent to enable the parent to consolidate the financial information of the subsidiary, unless it is impracticable to do so*”; IFRS 10.B93 “*If it is impracticable to do so, the parent shall consolidate the financial information of the subsidiary using the most recent financial statements of the subsidiary adjusted for the effects of significant transactions or events that occur between the date of those financial statements and the date of the consolidated financial statements. In any case, the difference between the date of the subsidiary’s financial statements and that of the consolidated financial statements shall be no more than three months, and the length of the reporting periods and any difference between the dates of the financial statements shall be the same from period to period.*”

Measurement using the equity method

Associates and companies subject to joint control are consolidated with the equity method.
The equity method requires the initial recognition of the equity investment at cost and its subsequent value adjustment based on the stake in the shareholders' equity of the company.
Any difference between the value of the equity investment and the shareholders' equity of the company involved is recorded in the book value of the company.
The valuation of the portion of shareholders' equity does not consider any potential voting rights.
The portion of the company's results for the period pertaining to the Group is recorded in a specific caption of the consolidated income statement.
If there is evidence of impairment, the recoverable amount of the investment is estimated, considering the present value of the future cash flows which may be generated by the investment, including the final disposal value. If the recoverable amount is lower than the carrying value, the difference is recorded in the income statement.
For the consolidation of the companies subject to joint control and investments in associates, the most recent approved (annual or interim) figures have been used. In certain marginal cases, the companies do not apply IAS/IFRS and, therefore, for such companies it was verified that the adoption of IAS/IFRS would not have produced significant effects on the Intesa Sanpaolo Group's Consolidated financial statements.

Conversion of financial statements in currencies other than the euro

The financial statements of non-Eurozone companies are translated into euro by applying the spot exchange rate at the year end to assets and liabilities in the Balance sheet, and the average exchange rate for the year to Income statement captions.
Foreign exchange differences from the conversion of the financial statements of such companies, deriving from the application of different foreign exchange rates to assets and liabilities and the income statement, are recorded in Valuation reserves under shareholders' equity. Foreign exchange differences on the shareholders' equity of the subsidiaries are also recorded in Valuation reserves.
All foreign exchange differences are reversed to the income statement of the year in which the foreign operation is sold.

SECTION 4 – SIGNIFICANT EVENTS AFTER THE REPORTING DATE

On 4 February 2025, at the time of the approval of the annual and consolidated results as at 31 December 2024, the Board of Directors of Intesa Sanpaolo resolved to submit a proposal to the forthcoming Ordinary Shareholders' Meeting of 29 April 2025 for a purchase of own shares for annulment for 2 billion euro, already authorised by the ECB, to be launched in June 2025 subject to approval from the Shareholders' Meeting.

On 28 January 2025, Intesa Sanpaolo announced the signing of an industrial partnership in the operational leasing of capital goods with Grenke AG, leader in Italy in the sector through its subsidiary Grenke Locazione S.r.l. This type of lease strategically complements the traditional financial offering by allowing companies to renew their operational equipment without weighing on their financial structure and the tax deductibility of expenses.
The partnership, following the necessary authorisations, will involve the contribution of the entire stake (equal to 100% of the share capital) held by Intesa Sanpaolo in Intesa Sanpaolo Rent Foryou S.p.A. to Grenke Locazione. Following the contribution, Intesa Sanpaolo will retain a stake of around 17% in the company controlled by the Grenke AG Group, which will retain the remaining 83% of the capital. This partnership will create a new market player thanks to the Intesa Sanpaolo's branch network and customer base and Grenke's strong competitive positioning.

SECTION 5 - OTHER ASPECTS

RISKS, UNCERTAINTIES AND IMPACTS OF THE RUSSIAN/UKRAINIAN CRISIS

The extremely serious situation arising following the outbreak of the conflict between Russia and Ukraine on 24 February 2022 was immediately closely monitored and assessed by Intesa Sanpaolo, also in light of the related guidance provided by the regulators, given that the Group has:
- a direct presence with two subsidiaries in the warring countries, Pravex Bank Joint-Stock Company (Pravex) and Joint-Stock Company Banca Intesa (Banca Intesa Russia), and is therefore particularly exposed to the consequences of the conflict;
- cross-border exposures stemming from its corporate and investment banking activities.

In its lending activities, the IMI CIB Division had over time financed counterparties resident in the Russian Federation. More than two-thirds of the loans to Russian customers disbursed before the conflict involved leading industrial groups, which have established commercial relationships with customers belonging to the main international supply chains, a significant amount of which derives from commodity exports.

At the outbreak of hostilities, loans to Russian customers represented around 1% of the Intesa Sanpaolo Group’s total loans to customers, net of Export Credit Agency - ECA guarantees. Due to the existence of those guarantees, the credit risk on those exposures can be considered as not referring to either Russia or Ukraine.

That being said, in this section we note some information relating to the Russian and Ukrainian subsidiaries:
- Banca Intesa Russia: this is a Moscow-based corporate bank, 47% owned by Intesa Sanpaolo and 53% by Intesa Sanpaolo Holding International, part of the IMI Corporate Investment Banking Division. It operates with 22 branches and 797 staff;
- Pravex is a small commercial bank, wholly-owned by Intesa Sanpaolo and based in Kyiv, part of the International Banks Division. It operates with 39 branches (mainly in the Kyiv region) and 612 staff.

Despite the objective constraints imposed by the current situation, particularly for Pravex, the two subsidiaries are continuing to operate with the support of the Parent Company structures while the overall exposure to the Russian Federation has decreased significantly over the past three years, as required by the European regulators and the ECB recommendations, the latest of which was issued in December 2024 (“Decision establishing prudential requirements relating to further reduction of the risks connected with the Supervised Entity’s business in Russia”). The Decision Letter imposes restrictions on Intesa Sanpaolo directly aimed at the operations of Banca Intesa Russia, along with a recommendation regarding the Group’s cross-border operations in Russia. The measures set out for Banca Intesa Russia consist of reducing i) the loan portfolio; ii) the volume of customer deposits; iii) the placement of deposits with financial institutions domiciled in Russia; and iv) payment activities originating from Russia, in currencies other than the rouble.

Also for the purposes of the 2024 Financial Statements, as previously illustrated in the 2023 Financial Statements, Intesa Sanpaolo’s continuing control over the two entities has been confirmed, which can be evidenced from various points of view:
- in accounting/administrative terms, by acquiring the accounts for consolidation purposes. Specifically, as explained in greater detail in Part A: Section 3 - Scope of consolidation and consolidation methods, and also in line with the methodological choices made for the 2022 and 2023 Annual Report, for the Russian subsidiary, the accounts as at 31 December 2024 were acquired accurately and in a timely manner, while for Pravex, it was decided to maintain the accounts produced for consolidation as at 30 September 2024, valued at the exchange rate as at 31 December, considering the specific operating difficulties of the subsidiary, as well as in light of the substantial immateriality of its balance sheet figures at Group level;
- in terms of statutory regulations, with specific regard to the Russian subsidiary, the Parent Company was able to exercise its power to determine, in compliance with Russian regulations, the composition of the management body of Banca Intesa Russia at the Shareholders’ Meeting of 26 June 2024. The turnover of officers was the result of appointments proposed by the Parent Company that passed the approval process of the Russian Central Bank. Also for the Ukraine subsidiary, there was routine turnover in the governance bodies in 2024, based on the nominations expressed by the Parent Company;
- in terms of steering the business, the two entities continue to move ahead with their business following the instructions of the Parent Company;
- in terms of coordination and control, as the Parent Company’s control functions (including the support function of the Manager responsible for preparing the Company’s financial reports, namely Administrative and Financial Governance) continue to carry out their roles through the regular receipt and analysis of the planned information flows, interacting with the structures of the subsidiaries through the communication channels available, in line with any limitations that may arise over time, also handled using contingency solutions.

Moreover, the conclusions regarding the maintenance of control over Banca Intesa Russia are not invalidated by the limitations currently set by Russian regulations which, substantially, impose restrictions to repayments and payments to parties resident in “unfriendly” countries. Aware of the restrictions imposed by the specific regulatory framework, Banca Intesa Russia credited to specific Russian accounts, as provided by law, the monetary resources for the repayment of intragroup exposures that matured in the meantime. The potential use of the resources credited to those accounts – equal to around 24 million euro at the end of December 2024 – is limited to several specific purposes within Russia. In this context, it must be considered that the current limitations do not constitute the “expropriation” of the amounts in any way (nor are they even indicators of a loss of control over the subsidiary’s assets). Rather, they derive from the temporary legal “freezing” of the free availability of amounts which, based on economic rights, would otherwise be available for their owner.

In addition, the “valuation” approaches for the credit exposures to Russian and Ukrainian counterparties adopted for the 2024 Annual Report are substantially consistent with those adopted for the 2023 Annual Report. For a more complete discussion of the quantitative and valuation aspects of the Group’s exposures to Russian and Ukrainian counterparties, for which the de-risking already initiated in the period 2022-2023 was continued in 2024, see Part E (Section 2 “Risks of the Prudential Consolidation”) of these Consolidated Financial Statements.

Lastly, given the importance of these issues, the Report on operations contains a section specifically dedicated to “The military conflict between Russia and Ukraine”, which summarises – among the other topics – the aspects regarding the framework of sanctions against the Russian Federation and cybersecurity.

ADDITIONAL INFORMATION ON THE INTEREST RATE BENCHMARK REFORM

Based on the instructions in Circular 262, this section sets out the disclosure in accordance with IFRS 7, paragraphs 24 I and 24 J relating to the Interest Rate Benchmark Reform (IBOR Reform).

As at 31 December 2024, there were no longer any financial instruments – financial assets, financial liabilities and derivative contracts – indexed to interest rates that still had to transition to an alternative benchmark rate. The transitions for the last remaining positions on USD LIBOR were successfully completed, with its synthetic publication ceasing at the end of September 2024, and on the Canadian Offered Rate (CDOR), which ended on 28 June 2024.
The financial instruments linked to the Euribor were already subject to reform in November 2019, through the adoption of a hybrid calculation method, which fully meets the requirements for critical benchmarks set out in the Benchmark Regulation EU 2016/1011 and the IOSCO principles.

In view of the regulatory changes and the actions undertaken since 2016, the Group has completed the transition within the set deadlines. Specifically, to manage the stock of existing instruments, the Group set out the mass adoption of the new Risk Free Rates (RFR) on the financial instruments newly subscribed, thus abandoning the use of the benchmarks impacted by the reform and stabilising the stock of transactions to be transitioned, on the one hand, while setting up the solutions for the transition to the new RFR, defined based on the main international recommendations, capable of minimising the financial impacts of the transition, on the other.
As at 31 December 2024, the Group did not hold any hedges index-linked to benchmarks impacted by the reform.

SIGNIFICANT JUDGEMENTS IN APPLYING IFRS 17

With regard to the insurance companies included in the consolidation, the disclosure required by IFRS 17 Insurance Contracts, paragraphs 117 to 120, on significant judgments made in applying the standard, to ensure consistency of treatment, is provided in the Accounting Policies, Section A.2 Main financial statement captions in relation to the insurance assets and liabilities, which describes, among others, the methods used to determine the discount rates and the risk adjustment for non-financial risk, and to estimate the future fulfilment cash flows for the insurance contracts. The quantitative details of the yield curve used to discount cash flows, required by paragraph 120 of IFRS 17, are provided in Part E in relation to the Insurance Risks.

CLIMATE-RELATED MATTERS

The issue of potential impacts of climate-related matters on financial statement items is a significant concern for the various regulators, which are asking companies to pay increasing attention to ESG issues, and climate-related issues in particular, in the preparation of financial statements, and to strengthen the connectivity between financial disclosures and those provided in the sustainability statement.
For the preparation of the financial statements, the Intesa Sanpaolo Group has, as usual, taken into account the ESMA recommendations “European common enforcement priorities for 2024 annual financial reports” published in October 2024.
In particular, as recommended in the ESMA Priorities published from 2021 onwards – and reiterated in those of 2024 – issuers are asked to consider the potential impacts that climate-related matters may have on the financial statement items and to disclose them when material. The content of the ESMA Priorities was also reiterated by CONSOB in the Notice issued on 20 December 2024, which urges issuers to report the impacts of climate factors when they are material and can be reliably estimated – with information explaining the considerations adopted and the causes of uncertainty in the estimates – and to promote consistency between financial and sustainability reporting.
In its communications ESMA also referred to the IASB’s educational material, which gives illustrative examples of some potential financial implications of climate-related risks. Although the IFRS framework does not contain explicit references to ESG issues, companies are required to consider climate-related matters in the application of the IFRS accounting standards when these issues have a material impact, as clarified in the Educational Material - Effects of climate-related matters on financial statements.
More recently, in April 2024, the IFRIC published the Agenda Decision “Climate-related Commitments (IAS 37)”, which clarifies that companies’ commitments regarding sustainability should only be recognised in the financial statements when they translate into concrete actions that result in an actual obligation. In July 2024, the IASB published an Exposure Draft “Climate-related and Other Uncertainties in the Financial Statements” that proposes to include illustrative examples within the IAS/IFRS accounting standards. These examples aim to assist entities in preparing financial statement disclosures, providing guidance on how to apply existing IFRS Accounting Standards to report the effects of climate-related and other uncertainties in the financial statements.
Given their growing importance, ESG risks, and in particular climate risk, are subject to constant attention by the Intesa Sanpaolo Group, with a view to possible further developments, also within the overall Risk Management framework, which, as described in more detail in Part E, involves a materiality analysis, the establishment of specific controls within the RAF, the performance of scenario analyses, and the monitoring of ESG risks divided across the different risk categories (e.g. credit, market, liquidity). The materiality analysis contributed to determining the financial materiality envisaged in the Consolidated Sustainability Statement, included in the Report on operations, which should be referred to for more details, in order to identify the material risks the Group is exposed to, which may also influence the measurement of the various financial statement items potentially impacted by climate risks and the related disclosures. Indeed, the Intesa Sanpaolo Group recognises the importance of developing techniques that can more accurately identify how and to what extent environmental risks, and in

particular climate-related risks, may translate into financial risks, by incorporating environmental forward-looking information into its valuation models.
In addition, when identifying the time horizon over which environmental risks may generate an impact, it is necessary to consider the difficulty in determining the timing of the related effects with reasonable certainty. In this regard, the EBA in its "Report on the role of environmental and social risks in the prudential framework" of October 2023 notes that chronic physical risks may reasonably have an impact over a relatively long-term time horizon and only some acute physical risks, as well as transitional risks, may materialise over a short to medium term time horizon. The results of the impact assessments conducted so far by the Intesa Sanpaolo Group (materiality assessment and climate scenario analysis) have shown that, due to its business sector, the Group is not exposed to a material extent to climate risks in the short term.
With regard to the recognition and measurement of financial statement items in accordance with the IFRS Accounting Standards, the Intesa Sanpaolo Group carefully monitors the relevant changes and developments, although so far the scope of the initiatives undertaken has varied based on the materiality of the potential impact, which currently remains insignificant overall. However, this is still an evolving topic, and in some areas, a robust market and/or academic approach has not yet emerged for integrating the effects of climate variables in the measurement of certain financial statement items (for example, the fair value measurement of equity instruments).
Given the nature of the items recognised in the financial statements and in view of the Group's operations, credit is the category for which climate risk is potentially most significant for the Intesa Sanpaolo Group, in relation to which, as set out in Part E, the Group is continually developing its internal valuation models to include ESG and climate-related factors, within its credit risk, which currently do not appear to have an appreciable effect on the valuations produced by the models. In particular, for the measurement of the ECL (Expected Credit Loss) of loans, the Intesa Sanpaolo Group has taken steps to also include climate risk among the emerging risk factors in the risk-sensitive overlay, as detailed in Part E, Credit Risk, 2.3 Methods for measuring expected losses.

For the measurements made in the 2024 Annual Report, the methodological framework used for the calculation of the fair value of financial instruments and real estate has been strengthened, with regard to climate-related risks, without this having resulted in any significant impacts.
Alongside the management of the potential climate risks outlined above, the Group has undertaken a series of management actions primarily aimed at directing loans granted to customers towards activities that support the ecological transition, as detailed below.

"ESG" FINANCIAL INSTRUMENTS

The Intesa Sanpaolo Group supports customers in the ESG transition by granting new loans and opening credit lines for projects related to the green economy, circular economy and climate transition, as described in more detail in the Consolidated Sustainability Statement, included from this year in the Report on operations.
With regard to the loans aimed at supporting the ESG transition, a specific framework of incentives/benefits in terms of the rate applied has been developed, based on the purposes of the initiative and the alignment with the European Taxonomy. These may entail a subsequent variation of the rate depending on whether or not the borrower achieves specific ESG KPIs, or may be definitively acquired at the time of signing and therefore do not entail subsequent variability of the interest rate.
With regard to the loans with possible subsequent variability of the interest rate, the Group's offering is made up of highly standardised products, mainly offered by the Banca dei Territori Division (as at 31 December the related remaining exposure amounted to around 5 billion euro) or more customised products, mainly offered by the IMI Corporate & Investment Banking Division (as at 31 December the related remaining exposure amounted to around 10 billion euro).
These loans are subject to subsequent variability considered to be not significant, following analyses verifying the nature and impact, in absolute and relative terms, of these clauses on the contractual flows.
The support provided by Intesa Sanpaolo Group to its customers during the transition phase is further reflected in the investments in sustainable securities classified under the Hold to Collect and Hold to Collect and Sell business models.
The exposure in securities included sustainable-linked bonds, which are subject to possible (upward) variability of the interest rate, with a non-material nominal amount as at 31 December 2024. The expected impacts on net interest income in subsequent years, resulting from the failure of issuers to achieve the KPIs, are considered minimal.
With regard to the SPPI tests on financial instruments subject to possible subsequent variability of the interest rate depending on whether or not the borrower or the issuer achieves specific ESG KPIs, these clauses are not considered critical when there are qualitative-quantitative analyses in place aimed at verifying the minimal nature of the related impact on the overall contractual cash flows of the instrument.
Lastly, with regard to Intesa Sanpaolo's institutional funding, as at 31 December 2024, the balance sheet liabilities included green and social bond issues with a total nominal value of around 11 billion euro. These bonds do not entail a subsequent variability of the interest rate linked to specific KPIs of the issuer.

OTHER ASPECTS

Option for the national fiscal consolidation provisions

Intesa Sanpaolo and the Group's Italian companies have adopted the "national fiscal consolidation", set forth by Articles 117-129 of the Combined Tax Regulations, introduced by Legislative Decree 344/2003. It provides an option, based on which the total net income or fiscal loss of every subsidiary taking part in the fiscal consolidation procedure – together with withholding tax, tax deductions and tax credits – is transferred to the parent company, which determines a single taxable income or loss carried forward (that is the result of the sum of its own income/loss and of the income/loss of the participating subsidiaries) and, consequently, a sole tax debit/credit. Based on this option, Group companies that opted for the "national fiscal consolidation" determine the tax charge pertaining to them and the corresponding taxable income is transferred to the Parent Company.

Set up of a VAT Group

Intesa Sanpaolo and all of the Group companies that meet the requirements for participation opted to set up the VAT Group, governed by Articles from 70-bis to 70-duodecies of Presidential Decree 633/1972.
This option takes effect from 1 January 2019 and has a duration of three years, automatically renewed each year, unless revoked.
As a result of this option, the tax will not apply to either the provision of services and sales of goods between participating parties, with a few exceptions. Sales of goods and provision of services by a participating party to an external party shall be considered made out by the Group. Sales of goods and provision of services by an external party to a participating party shall be considered made to the Group.

"Cooperative compliance" regime

Intesa Sanpaolo applied for and obtained from the Italian Revenue Agency admission to the "cooperative compliance" regime set out in Legislative Decree 128/2015. The admission is effective from the tax period 2017.
The purpose of this regime is to promote the use of enhanced forms of communication and cooperation based on the reciprocal trust between the tax authorities and the taxpayer, as well as favouring the prevention and resolution of tax disputes, in the common interest of the parties.
Under the regime, Intesa Sanpaolo is required to maintain an appropriate system of recognition, measurement and management of tax risk as well as act in a cooperative and transparent manner, and the Italian Revenue Agency is required to promote a relationship based on the principles of transparency, cooperation and fairness.
In addition to Intesa Sanpaolo, the following companies applied for admission and were admitted to the regime: Fideuram - Intesa Sanpaolo Private Banking (with effect from 2018), as well as Intesa Sanpaolo Assicurazioni (formerly Intesa Sanpaolo Vita), Intesa Sanpaolo Protezione (formerly Intesa Sanpaolo Assicura), Fideuram Vita, Eurizon SGR and Epsilon SGR (with effect from 2019). Intesa Sanpaolo Private Banking, Fideuram Asset Management SGR and SIREF were admitted in 2021 with effect from 2020.

Auditing

EY S.p.A. audited the Consolidated financial statements, in execution of the Shareholders' Meeting resolution of 30 April 2019, which appointed the company as independent auditor for the years from 2021 to 2029, included.

Other aspects

A reformulation of the rules on the transparency of government grants laid down in Article 1, paragraphs 125-129 of Law No. 124/2017 has been introduced in Article 35 of Decree Law 34/2019 (the "Growth" Decree), converted by Law 58/2019. This reformulation indicates that the scope of transparency obligations applies to information regarding grants, subsidies, advantages, contributions or aid, in cash or in kind, "not of a general character and which do not represent consideration, remuneration or compensation" effectively disbursed by public authorities and the entities indicated in Article 2-bis of Legislative Decree 33/2013.
In the light of this reformulation, additional interpretative clarification provided in Assonime Circular No. 32 of 23 December 2019 has confirmed that the transparency obligation applies to awards of economic benefits arising from a bilateral relationship between a public entity and a specific beneficiary. Sums received by a company as consideration for a service rendered, as remuneration for an assignment received or as compensation for damages are expressly excluded. Economic advantages received in application of a general regime, such as tax or contribution relief accessible to all parties who meet certain conditions, are also excluded.
In consideration of the above, there were no cases to report in 2024 for the Group's Italian companies.
In the interest of completeness, reference should also be made to the National State Aid Registry, available for public consultation on the relevant website, in which aid measures and the related individual aid packages granted and recorded in the system by the managing entities are published, although, given the foregoing, for the Group's Italian companies the circumstances indicated therein for the year 2024 are not subject to financial statement transparency obligations pursuant to paragraphs 125 and 125-*bis*.

A.2 – MAIN FINANCIAL STATEMENT CAPTIONS

To ensure uniformity in the accounting policies used for the financial statements, the Intesa Sanpaolo Group has adopted an internal set of rules and policies for the various operational and organisational areas.

The methodological document used for the application of the accounting standards is the "Group Accounting Policies", which describes the application models adopted by the Group, within the framework of the standards and the legislation applicable to the various companies/subsidiaries, and sets out the choices made when the regulations envisage alternative or optional accounting treatments.

With regard to the valuation processes, the Group, in the document "Guidelines for the valuation of Balance Sheet Items", has drawn up the principles and regulatory framework for the valuation of the balance sheet items and the roles and responsibilities of the Corporate Bodies, the Manager responsible for preparing the Company's financial reports and the Parent Company's corporate functions involved in the valuation process; the prerequisites for the existing valuation processes and the control system necessary to ensure proper valuation; the general valuation processes based on accounting standards specific to the various categories of balance sheet items being measured (assets and liabilities); and the rules for guidance and coordination of Group companies on the valuation of balance sheet items.

The guidelines and policies also include the Business Model Rules, the Rules on the measurement of Expected Credit Loss in accordance with IFRS 9 (Impairment Policy), and the Rules for Valuation of Financial Instruments at Fair Value (former Fair Value Policy), in addition to more specific documents relating to non-performing loans, equity investments, and the management of hedging financial instruments.

Finally, with regard to prudential supervision, the Group has drawn up a specific document called "Harmonised Prudential Supervision Rules".

In general, these documents are approved by the competent Corporate Bodies. They are updated by the management structures in response to needs arising both from external factors (e.g. changes in regulations) and from internal factors within the Group (e.g. new operations and products). Those documents are subject to a specific approval process, based on the significance and scope of the changes made.

1. Financial assets measured at fair value through profit or loss (FVTPL)

Classification criteria

This category contains the financial assets not classified as Financial assets measured at fair value through other comprehensive income or as Financial assets measured at amortised cost. This caption includes in particular:

- financial assets held for trading, essentially consisting of debt securities and equity instruments and the positive value of derivative contracts held for trading;
- financial assets mandatorily measured at fair value through profit or loss, consisting of financial assets that do not meet the requirements for measurement at amortised cost or at fair value through other comprehensive income. These are financial assets whose contractual terms do not solely envisage payments of principal and interest on the principal amount outstanding (SPPI Test not passed) or that are not held under a Hold to Collect business model or a Hold to Collect and Sell business model;
- financial assets designated at fair value, i.e. financial assets that are defined as such upon initial recognition and when the conditions apply. In relation to this case, an entity may irrevocably designate a financial asset as measured at fair value through profit or loss only if it eliminates or significantly reduces a measurement inconsistency.

This caption therefore includes:

- debt securities and loans that are included in an Other/Trading business model (i.e., that do not come under the Hold to Collect or Hold to Collect and Sell business models) or that do not pass the SPPI Test, including the portions of syndicated loans subscribed or other types of loans that are originally intended to be sold and are not part of a Hold to Collect and Sell business model. It also includes the debt securities of the Insurance Division covering the liabilities to insured parties represented by unit-linked products, multi-line products and pension funds;
- equity instruments – that do not qualify as investments in subsidiaries, associates or joint ventures – held for trading purposes or for which the option was not exercised, upon initial recognition, to designate them at fair value through other comprehensive income;
- quotas of UCI (Undertakings for Collective Investment).

This caption also includes the derivatives, recognised under financial assets held for trading, which are presented as assets if the fair value is positive and as liabilities if the fair value is negative. The positive and negative current values arising from transactions with the same counterparty – also between derivatives allocated to the trading book and hedging derivatives, as envisaged by the Bank of Italy Circular 262 – may be offset only when the legal right to offset amounts recognised for accounting purposes currently exists and the net settlement of positions subject to offsetting is carried out.
Derivatives also include those embedded in combined financial contracts – where the host contract is a financial liability – which are subject to separate accounting when:

- their economic characteristics and risks are not closely related to the characteristics of the host contract;
- the embedded instruments, even though separate, fully meet the definition of derivative;
- the combined instruments are not measured at fair value with changes in fair value recognised through profit or loss.

According to the general rules established by IFRS 9 on the reclassification of financial assets (except for equity instruments, for which no reclassification is permitted), reclassifications to other categories of financial assets are not permitted unless the entity changes its business model for those financial assets. In such cases, which are expected to be highly infrequent, the financial assets may be reclassified from those measured at fair value through profit or loss to one of the other two categories established by IFRS 9 (Financial assets measured at amortised cost or Financial assets measured at fair value through other comprehensive income). The transfer value is the fair value at the time of the reclassification and the effects of the reclassification apply prospectively from the reclassification date. In this case, the effective interest rate of the reclassified financial asset is determined based on its fair value at the reclassification date and that date is considered as the initial recognition date for the credit risk stage assignment for impairment purposes.
For more information regarding the classification criteria for the financial instruments see the paragraph below "Classification drivers for the financial assets".

Recognition criteria

Initial recognition of financial assets occurs at settlement date for debt securities and equity instruments, at disbursement date for loans and at trade date for derivative contracts.
On initial recognition, financial assets measured at fair value through profit or loss are recognised at fair value, without considering transaction costs or revenues directly attributable to the instrument.

Measurement criteria

After initial recognition, the financial assets measured at fair value through profit or loss are recorded at fair value. The effects of the application of this measurement criterion are recorded in the income statement.
For the determination of the fair value of financial instruments quoted on active markets, market quotations are used. If the market for a financial instrument is not active, standard practice estimation methods and valuation techniques are used which consider all the risk factors correlated to the instruments and that are based on market elements such as: valuation of quoted instruments with the same characteristics, calculation of discounted cash flows, option pricing models, recent comparable transactions, etc. For equities and derivative instruments that have equities as underlying assets, which are not quoted on an active market, the cost approach is used as the estimate of fair value only on a residual basis and in a small number of circumstances, i.e., when all the measurement methods referred to above cannot be applied, or when there are a wide range of possible measurements of fair value, in which cost represents the most significant estimate.
For more information regarding the criteria for the determination of fair value, see the Section "A.4 – Information on Fair Value".

Derecognition criteria

Financial assets are derecognised solely if the sale leads to the substantial transfer of all the risks and rewards connected to the assets. Conversely, if a significant part of the risks and rewards relative to the disposed financial assets is maintained, they continue to be recorded in the financial statements, even though their title has been transferred.
When it is not possible to ascertain the substantial transfer of risks and rewards, the financial assets are derecognised where no control over the assets has been maintained. If this is not the case, when control, even partial, is maintained, the assets continue to be recognised for the entity's continuing involvement, measured by the exposure to changes in value of assets sold and to variations in the relevant cash flows.
Lastly, disposed financial assets are derecognised if the entity retains the contractual rights to receive the cash flows of the asset, but signs a simultaneous obligation to pay such cash flows, and only such cash flows, without significant delay to third parties.

2. Financial assets measured at fair value through other comprehensive income (FVOCI)

Classification criteria

This category includes the financial assets that meet both the following conditions:

- the financial asset is held under a business model whose objective is achieved both through the collection of expected contractual cash flows and through sale (Hold to Collect and Sell business model), and
- the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding ("SPPI Test" passed).

This caption also includes equity instruments, not held for trading, for which the option was exercised upon initial recognition of their designation at fair value through other comprehensive income.

In particular, this caption includes:

- debt securities that can be attributed to a Hold to Collect and Sell business model and that have passed the SPPI test;
- equity interests, that do not qualify as investments in subsidiaries, associates or joint ventures and are not held for trading, for which the option has been exercised of their designation at fair value through other comprehensive income;
- loans that are attributable to a Hold to Collect and Sell business model and have passed the SPPI Test, including the portions of syndicated loans subscribed or other types of loans that are originally intended to be sold and are part of a Hold to Collect and Sell business model.

According to the general rules established by IFRS 9 on the reclassification of financial assets (except for equity instruments, for which no reclassification is permitted), reclassifications to other categories of financial assets are not permitted unless the entity changes its business model for those financial assets.
In such cases, which are expected to be highly infrequent, the financial assets may be reclassified from those measured at fair value through other comprehensive income to one of the other two categories established by IFRS 9 (Financial assets measured at amortised cost or Financial assets measured at fair value through profit or loss). The transfer value is the fair value at the time of the reclassification and the effects of the reclassification apply prospectively from the reclassification date. In the event of reclassification from this category to the amortised cost category, the cumulative gain (loss) recognised in the valuation reserve is allocated as an adjustment to the fair value of the financial asset at the reclassification date. In the event of reclassification to the fair value through profit or loss category, the cumulative gain (loss) previously recognised in the valuation reserve is reclassified from shareholders' equity to net income (loss).
For more information regarding the classification criteria for the financial instruments see the paragraph below "Classification drivers for the financial assets".

Recognition criteria

Initial recognition of financial assets occurs at settlement date for debt securities and equity instruments and at disbursement date for loans. On initial recognition, assets are recorded at fair value, including transaction costs and revenues directly attributable to the instrument.

Measurement criteria

After initial recognition, the Assets classified at fair value through other comprehensive income, other than equity instruments, are measured at fair value, with the recognition in profit or loss of the impact resulting from the application of the amortised cost, the impairment effects and any exchange rate effect, whereas the other gains and losses resulting from a change in fair value are recognised in a specific shareholders' equity reserve until the financial asset is derecognised. Upon the total or partial sale, the cumulative gain or loss in the valuation reserve is transferred, in whole or in part, to the income statement.
Equity instruments, for which the choice has been made to classify them in this category, are measured at fair value and the amounts recognised in other comprehensive income cannot be subsequently transferred to profit or loss, not even if they are sold. The only component related to these equities that is recognised through profit or loss is their dividends.
Fair value is determined on the basis of the criteria already described for Financial assets measured at fair value through profit or loss.
For the equity instruments included in this category, which are not quoted on an active market, the cost approach is used as the estimate of fair value only on a residual basis and in a small number of circumstances, i.e., when all the measurement methods referred to above cannot be applied, or when there are a wide range of possible measurements of fair value, in which cost represents the most significant estimate.
For more information regarding the criteria for the determination of fair value, see the Section "A.4 – Information on Fair Value".

Financial assets measured at fair value through other comprehensive income – both in the form of debt securities and loans – are subject to the verification of the significant increase in credit risk (impairment) required by IFRS 9, in the same way as Assets measured at amortised cost, with the consequent recognition through profit or loss of a value adjustment to cover the expected losses. More specifically, for instruments classified as stage 1 (i.e., financial assets at origination, when not impaired, and instruments for which there has not been a significant increase in credit risk since the initial recognition date), a 12-month expected loss is recognised on the initial recognition date and at each subsequent reporting date. For instruments classified as stage 2 (performing for which there has been a significant increase in credit risk since the initial recognition date) and as stage 3 (credit-impaired exposures), a lifetime expected loss for the financial instrument is recognised.
Equity instruments are not subject to the impairment process.
See the paragraph below "Impairment of financial assets" for more details.

Derecognition criteria

Financial assets are derecognised solely if the sale leads to the substantial transfer of all the risks and rewards connected to the assets. Conversely, if a significant part of the risks and rewards relative to the disposed financial assets is maintained, they continue to be recorded in the financial statements, even though their title has been transferred.

When it is not possible to ascertain the substantial transfer of risks and rewards, the financial assets are derecognised where no control over the assets has been maintained. If this is not the case, when control, even partial, is maintained, the assets continue to be recognised for the entity's continuing involvement, measured by the exposure to changes in value of assets sold and to variations in the relevant cash flows.

Lastly, disposed financial assets are derecognised if the entity retains the contractual rights to receive the cash flows of the asset, but signs a simultaneous obligation to pay such cash flows, and only such cash flows, without significant delay to third parties.

3. Financial assets measured at amortised cost

Classification criteria

This category includes the financial assets (in particular loans and debt securities) that meet both the following conditions:

- the financial asset is held under a business model whose objective is achieved through the collection of expected contractual cash flows (Hold to Collect business model), and
- the contractual terms of the financial asset give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding ("SPPI Test" passed).

More specifically, the following are recognised in this caption:

- loans to banks in their various forms that meet the requirements referred to above;
- loans to customers in their various forms that meet the requirements referred to above;
- debt securities that meet the requirements referred to above.

This category also includes the operating loans and receivables connected to the provision of financial activities and services as defined by the Consolidated Law on Banking and the Consolidated Law on Finance (e.g. for the distribution of financial products and servicing activities).

According to the general rules established by IFRS 9 on the reclassification of financial assets, reclassifications to other categories of financial assets are not permitted unless the entity changes its business model for those financial assets. In such cases, which are expected to be highly infrequent, the financial assets may be reclassified from the amortised cost category to one of the other two categories established by IFRS 9 (Financial assets measured at fair value through other comprehensive income or Financial assets measured at fair value through profit or loss). The transfer value is the fair value at the time of the reclassification and the effects of the reclassification apply prospectively from the reclassification date. Gains and losses resulting from the difference between the amortised cost of a financial asset and its fair value are recognised through profit or loss in the event of reclassification to Financial assets measured at fair value through profit or loss and under Shareholders' equity, in the specific valuation reserve, in the event of reclassification to Financial assets measured at fair value through other comprehensive income.

For more information regarding the classification criteria for the financial instruments see the paragraph below "Classification drivers for the financial assets".

Recognition criteria

Initial recognition of the financial asset occurs at settlement date for debt securities and at disbursement date for loans. On initial recognition, assets are recorded at fair value, including transaction costs and revenues directly attributable to the instrument.

In particular, for loans, the disbursement date is usually the same as the date of signing of the contract. Should this not be the case, a commitment to disburse funds is made along with the subscription of the contract, which will cease to exist upon disbursement of the loan. The loan is recognised based on its fair value, equal to the amount disbursed or subscription price, inclusive of the costs/revenues directly attributable to the single loan and determinable from inception, even when settled at a later date. Costs that, even with the aforementioned characteristics, are reimbursed by the borrower or are classifiable as normal internal administrative costs are excluded.

Repurchase agreements and reverse repurchase agreements are recognised as funding or lending transactions. Specifically, repurchase agreements are recognised as payables for the spot amount received, whereas reverse repurchase agreements are recognised as receivables for the spot amount paid.

Measurement criteria

After the initial recognition, these financial assets are measured at amortised cost, using the effective interest method. The assets are recognised in the balance sheet at an amount equal to their initial carrying amount less principal repayments, plus or minus the cumulative amortisation (calculated using the effective interest method) of the difference between this initial amount and the amount at maturity (typically attributable to costs/income directly attributable to the individual asset) and adjusted by any provision for losses. The effective interest rate is the rate that exactly discounts estimated future cash payments of the asset, as principal and interest, to the amount disbursed inclusive of the costs/revenues attributable to that financial asset. This measurement method uses a financial approach and allows distribution of the economic effect of the costs/income directly attributable to a financial asset over its expected lifetime.

The amortised cost method is not used for assets, measured at historical cost, whose short duration makes the effect of discounting negligible, or for assets without a definite maturity or revocable loans.

The measurement criteria, as described in more detail in the paragraph "Impairment of financial assets", are closely linked to the inclusion of these instruments in one of the three stages of credit risk established by IFRS 9, the last of which (stage 3) consists of non-performing financial assets and the remaining (stages 1 and 2) of performing financial assets.

With regard to the accounting representation of the above measurement effects, the adjustments for this type of asset are recognised in profit or loss:

- on initial recognition, for an amount equal to the 12-month expected credit loss;
- on subsequent measurement of the asset, when the credit risk has not increased significantly since initial recognition, in relation to changes in the amount of adjustments for the 12-month expected credit losses;
- on subsequent measurement of the asset, when the credit risk has increased significantly since initial recognition, in relation to the recognition of adjustments for expected credit losses over the contractually agreed remaining lifetime of the asset;
- on subsequent measurement of the asset, where – after a significant increase in credit risk has occurred since initial recognition – the increase is no longer "significant" due to the alignment of the cumulative value adjustments to take account of the change from a lifetime expected credit loss to a 12-month expected credit loss for the instrument.

These financial assets, when they are performing, are subject to an assessment, aimed at establishing the value adjustments to be recognised in the financial statements, at the level of individual loan (or "tranches" of securities), according to the risk parameters consisting of Probability of Default (PD), Loss Given Default (LGD) and Exposure at Default (EAD), derived from the AIRB models, and duly adjusted to take account of the provisions of IFRS 9.

If, in addition to a significant increase in credit risk, there is also objective evidence of impairment, the amount of the loss is measured as the difference between the carrying amount of the asset – classified as "non-performing", like all the other relationships with the same counterparty – and the present value of the estimated future cash flows, discounted using the original effective interest rate. The amount of the loss, to be recognised through profit or loss, is established based on individual measurement or determined according to uniform categories and, then, individually allocated to each position, and, as detailed in the paragraph "Impairment of financial assets", takes account of forward-looking information and possible alternative recovery scenarios.

Non-performing assets include financial assets classified as bad, unlikely-to-pay or past due by over ninety days according to the rules issued by the Bank of Italy, in line with the IAS/IFRS and EU Supervisory Regulations.

The expected cash flows take into account the expected recovery times and the estimated realisable value of any guarantees.

The original effective rate of each asset remains unchanged over time even if the relationship has been restructured with a variation of the contractual interest rate and even if the relationship, in practice, no longer bears contractual interest.

If the reasons for impairment are no longer applicable following an event subsequent to the registration of impairment, recoveries are recorded in the income statement. The size of the recovery must not lead the carrying value of the financial asset to exceed the amortised cost had no impairment losses been recognised in previous periods.

Recoveries on impairment with time value effects are recognised in net interest income.

In some cases, during the lifetime of these financial assets, and of loans in particular, the original contractual conditions may be subsequently modified by the parties to the contract. When the contractual clauses are subject to change during the lifetime of an instrument, it is necessary to verify whether the original asset should continue to be recognised in the balance sheet or whether, instead, the original instrument needs to be derecognised and a new financial instrument needs to be recognised.

In general, changes to a financial asset lead to its derecognition and the recognition of a new asset when they are "substantial". The assessment of the "substantial nature" of the change must be made using both qualitative and quantitative information. In some cases, in fact, it may be clear, without resorting to complex analysis, that the changes introduced substantially modify the characteristics and/or contractual flows of a particular asset while, in other cases, further analysis (including quantitative analysis) will need to be carried out to assess the effects of the changes and verify whether or not to derecognise the asset and recognise a new financial instrument.

The qualitative and quantitative analyses aimed at defining the "substantial nature" of contractual changes made to a financial asset must therefore consider:

- the purposes for which the changes were made: e.g. renegotiations for commercial reasons and forbearance measures due to financial difficulties of the counterparty:
  - the former, aimed at "retaining" the customer, involve a borrower that is not in financial difficulty. This category includes all renegotiations aimed at aligning the cost of the debt to market conditions. These operations involve a change in the original conditions of the contract, usually requested by the borrower and relating to aspects concerning the cost of the debt, with a consequent economic benefit for the borrower. In general, whenever the bank carries out a renegotiation to avoid losing its customer, that renegotiation should be considered as substantial because, if it were not carried out, the customer could borrow from another intermediary and the bank would incur a decrease in expected future revenues;
  - the latter, carried out for "reasons of credit risk" (forbearance measures), relate to the bank's attempt to maximise the recovery of the cash flows of the original loan. The underlying risks and rewards, following the changes, are not normally substantially transferred and, consequently, the accounting representation that provides the most relevant information for the readers of the financial statements (apart from the triggers discussed below) is "modification accounting" – which involves the recognition through profit or loss of the difference between the carrying value and the present value of the modified cash flows discounted at the original interest rate – rather than derecognition;
- the presence of specific triggers that affect the contractual characteristics and/or cash flows of the financial instrument (such as, for example, a change in currency or a modification of the type of risk the financial instrument is exposed to, when correlated to equity and commodity parameters), which are considered to result in derecognition due to their impact (expected to be significant) on the original contractual cash flows.

Conversely, the amendments to financial assets following the Interest Rate Benchmark Reform (so-called IBOR Reform), relating to the change in the basis for determining contractual cash flows (the replacement of the existing interest rate benchmark with an alternative benchmark rate), do not constitute a derecognition event, but are to be considered a modification from an accounting standpoint. Such amendments, if made as a direct consequence of the IBOR Reform and applied on equivalent economic bases, are represented with a prospective adjustment of the effective interest rate - by applying paragraph B5.4.5 of IFRS 9 instead of modification accounting, with impacts on net interest income in future periods.

Derecognition criteria

Financial assets are derecognised solely if the sale leads to the substantial transfer of all the risks and rewards connected to the assets. Conversely, if a significant part of the risks and rewards relative to the disposed financial assets is maintained, they continue to be recorded in the financial statements, even though their title has been transferred.
When it is not possible to ascertain the substantial transfer of risks and rewards, the financial assets are derecognised where no control over the assets has been maintained. If this is not the case, when control, even partial, is maintained, the assets continue to be recognised for the entity's continuing involvement, measured by the exposure to changes in value of assets sold and to variations in the relevant cash flows.
Lastly, disposed financial assets are derecognised if the entity retains the contractual rights to receive the cash flows of the asset, but signs a simultaneous obligation to pay such cash flows, and only such cash flows, without significant delay to third parties.

4. Hedging transactions

The Intesa Sanpaolo Group has exercised the option, provided for on the introduction of IFRS 9, of continuing to fully apply the provisions of IAS 39 on hedge accounting (in the carved-out version endorsed by the European Commission) for each type of hedge (both for micro hedges and macro hedges).

Classification criteria: type of hedge

Hedging transactions are aimed at neutralising potential losses on a specific item or group of items, attributable to a certain risk, if such a risk should actually occur.
The following types of hedging transactions are used:

- fair value hedge, which has the objective of covering exposure to changes in the fair value (attributable to the different risk categories) of assets and liabilities in the balance sheet, or on a portion of these, of groups of assets/liabilities, of binding commitments and portfolios of financial assets and liabilities, including core deposits, as permitted by IAS 39 endorsed by the European Commission. Fair value macro hedges are aimed at reducing fluctuations in the fair value, as a result of interest rate risk, of a sum of money flowing from a portfolio of financial assets or liabilities. Net amounts resulting from mismatches between assets and liabilities cannot be subject to macro hedges;
- cash flow hedge, which has the objective of covering exposure to variability in future cash flows attributable to particular risks associated with balance sheet captions. This type of hedge is essentially used to stabilise the interest flow on floating rate funding to the extent that the latter finances fixed rate investments. In certain circumstances, similar transactions are carried out with respect to some types of floating rate investments;
- hedges of net investments in foreign currency, which refer to the coverage of the risks of net investments in foreign operations expressed in their original currency.

Only hedging transactions which involve counterparties outside the Group may qualify for hedge accounting.
The choice made by the Group to take advantage of the possibility of continuing to fully apply the IAS 39 rules for hedging relationships means that the equity instruments classified as Financial assets measured at fair value through other comprehensive income (FVOCI) cannot be measured as hedged items for price or exchange rate risk, since these instruments are not recognised through profit or loss, not even if they are sold (except for dividends that are recognised through profit or loss).

Recognition criteria

Hedging derivatives, like all derivatives, are initially recognised and subsequently measured at fair value.
A relationship qualifies as a hedging relationship, and is appropriately reported in the financial statements only if, all of the following conditions are met:

- at the inception of the hedge, the hedging relationship is formally designated and documented, including the company's risk management objectives and strategy in undertaking the hedge. This documentation includes the identification of the hedging instrument, the item or transaction hedged, the nature of the risk being hedged, and how the entity will assess the hedging instrument's effectiveness in offsetting the exposures to changes in the fair value of the item hedged or in the cash flows attributable to the risk hedged;
- the hedge is expected to be highly effective;
- the planned transaction hedged, to hedge the cash flows, is highly probable and has an exposure to changes in cash flows that could have effects on the income statement;
- the effectiveness of the hedge can be reliably measured;
- the hedge is measured on an ongoing basis and is considered highly effective for all the financial years in which it is designated.

Measurement criteria

Hedging derivatives are measured at fair value. In particular:

- in the case of fair value hedges, the change in the fair value of the hedged item is offset by the change in fair value of the hedging instrument. Offsetting is recognised via the registration in the income statement of the gains and losses referred to both the hedged item (with regard to the variations produced by the underlying risk factor), and the hedging instrument. Any difference, which represents the partial ineffectiveness of the hedge, is therefore the net economic effect. In case of fair value macro hedges, fair value changes related to the hedged risk of assets and liabilities in hedged portfolios are allocated to the balance sheet under caption 60. "Fair value change of financial assets in hedged portfolios" or under caption 50. "Fair value change of financial liabilities in hedged portfolios";

- in the case of cash flow hedges, changes in fair value of the derivative are recorded in equity, for the effective portion of the hedge, and these are registered in the income statement only when, with reference to the hedged item, there is a variation in the flows to be offset or if the hedge is ineffective;
- hedges of net investments in foreign currency are treated in the same way as cash flow hedges.

The effectiveness of the hedge depends on the extent to which changes in the fair value of the hedged item or the relating expected cash flows are offset by those of the hedging instrument. Therefore, effectiveness is appraised by comparing the aforementioned changes, considering the intent pursued by the entity at the time in which it entered the hedging transaction. A hedge is effective when the variations in fair value (or cash flows) of the hedging financial instrument almost completely neutralise, that is within the 80-125% range, the changes in the fair value of the hedged item, for the type of risk being hedged.

Effectiveness is assessed at every close of annual or interim financial statements using:
- prospective tests, which justify the application of hedge accounting, since these prove the expected effectiveness of the hedge;
- retrospective tests, which demonstrate the effectiveness of the hedge for the reference period, or measure how much the effective results diverge from perfect coverage.

Fair value hedge accounting is discontinued prospectively in the following cases:
- the hedging instrument expires or is sold, terminated, or exercised;
- the hedge no longer meets the hedge accounting criteria described above;
- the entity revokes the designation.

If such assessments do not confirm hedge effectiveness, from that moment hedge accounting is discontinued, the derivative is reclassified in instruments held for trading and the hedged item is measured on the basis of its classification in the balance sheet. If the assets or liabilities hedged are measured at amortised cost, the higher or lower value resulting from the fair value measurement due to the hedge becoming ineffective is recognised through profit or loss, using the effective interest rate method. When a fair value macrohedging relationship is discontinued, the cumulative change in fair value losses carried under caption 60 "Fair value change of financial assets in hedged portfolios" or caption 50. “Fair value change of financial liabilities in hedged portfolios” are transferred to the income statement among interest income or expense over the residual life of the original hedging relationships, without prejudice to verification that the requirements have been met.

An entity must discontinue cash flow hedge accounting prospectively in each of the following circumstances:
- the hedging instrument expires or is sold, terminated, or exercised (for this purpose the replacement or exchange of one hedging instrument with another hedging instrument is not a conclusion or termination if that replacement or exchange forms part of an entity’s documented hedging strategy). In this case the total profit (or loss) on the hedging instrument continues to be recognised directly in shareholders’ equity until the end of the reporting period in which the hedge became effective and it continues to be recognised separately until the programmed transaction, being hedged, occurs;
- the hedge no longer meets the criteria for hedge accounting. In this case the total profit or loss on the hedging instrument is recognised directly in shareholders’ equity starting from the reporting period in which the hedge became effective and continues to be recognised separately in shareholders’ equity until the programmed transaction occurs;
- it is no longer considered that the future transaction will occur, in which case any related total profit or loss on the hedging instrument recognised directly in equity starting from the reporting period in which the hedge became effective must be recognised through profit or loss;
- the entity revokes the designation. For hedges of a programmed transaction, total profits or losses on the hedging instrument recognised directly in shareholders’ equity starting from the reporting period in which the hedge became effective continue to be recognised separately in shareholders’ equity until the programmed transaction occurs or it is expected that it will no longer occur.

As an exception to the provisions of IAS 39 discontinuation following an update of the documentation of the hedging relationship (due to modification of the hedged risk, the hedged underlying or the hedging derivative, or of the method for verifying hedge effectiveness) does not apply in the case of modifications required as a direct consequence of the Interest Rate Benchmark Reform (so-called IBOR Reform) and applied on equivalent economic bases.

5. Investments in associates and companies subject to joint control

Classification, recognition and measurement criteria
The caption includes investments in companies subject to joint control and associates.
Entities are considered to be companies subject to joint control if control is contractually shared between the Group and one or more other parties, or where the decisions about the relevant activities require the unanimous consent from all parties sharing control.
Companies are considered subject to significant influence (associates) when the Group holds 20% or more of the voting rights (including “potential” voting rights) or if it – with a lower equity stake – has the power of participating in the determination of financial and management policies of the company based on specific juridical relations, such as the participation in voting syndicates.
Certain companies in which the Group holds a stake exceeding 20% are not considered subject to significant influence since it solely has economic rights on a portion of the returns generated by the investment, but does not have access to management policies and may exercise governance rights limited to the safeguarding of its economic interests.

The investments in associates and companies subject to joint control are measured at cost and accounted for according to the equity method. If there is evidence of impairment, the recoverable amount of the investment is estimated, considering the present value of the future cash flows which may be generated by the investment, including the final disposal value.
If the recoverable amount is lower than the carrying value, the difference is recorded in the income statement.
If the reasons for impairment are no longer applicable following an event subsequent to the registration of impairment, recoveries are recorded in the income statement.

Derecognition criteria
The investments in associates and companies subject to joint control are derecognised when the contractual rights to the cash flows from the assets expire or when the investment is sold, substantially transferring all the risks and rewards connected to the assets.

6. Property and equipment

Classification criteria
Property and equipment include land, owner-occupied property, investment property, valuable art assets, technical plants, furniture and fittings and any type of equipment that are expected to be used during more than one period.
Property and equipment held for use in the production or supply of goods and services are classified as "Property and equipment used in operations", in accordance with IAS 16. Real estate owned for investment purposes (to obtain rental income or gains on the capital invested) is classified as "Investment property" based on IAS 40.
This caption also includes property and equipment classified in accordance with IAS 2 - Inventories, which refer both to assets resulting from the enforcement of guarantees or from purchase at auction that the company intends to sell in the near future, without carrying out major renovation work, and which do not meet the requirements for classification in the previous categories, and to the real estate portfolio of the Group's real estate companies, including building sites, properties under construction, properties completed for sale and real estate development initiatives, held for sale.
Finally, this caption also includes the rights of use acquired through leases and relating to the use of an item of property and equipment (for the lessee companies) and the assets leased under operating leases (for the lessor companies).

Recognition criteria
Property and equipment are initially measured at cost which comprises in addition to their purchase price any costs directly attributable to the purchase and required for them to be operational.
Extraordinary maintenance expenses which lead to a rise in future economic benefits are attributed to increase the value of assets, while other ordinary maintenance costs are recorded in the income statement.

Measurement criteria
Property and equipment are measured at cost, net of depreciation and impairment losses, except for owner-occupied properties and valuable art assets, which are measured according to the revaluation model.
The investment properties are measured with the fair value method.

For the property and equipment subject to assessment according to the revaluation model:
- if the carrying value of an asset is increased following a revaluation, the increase must be recognised in the Statement of comprehensive income and accumulated in the shareholders' equity under the caption revaluation reserve; conversely, in the case where an impairment loss on the same asset recognised previously in the income statement is recovered, it must be recognised as income;
- if the carrying value of an asset is decreased following the revaluation, the decrease must be recognised in the Statement of comprehensive income to the extent in which there are possible credit balances in the revaluation reserve referring to this asset; otherwise, this reduction is recorded in the Income statement.

Property and equipment are systematically depreciated, adopting the straight-line method over their useful life. The depreciable amount is the cost of the goods (or the net value recalculated if the method adopted for the valuation is the revaluation model) net of the residual value at the end of the depreciation period, if significant. Buildings are depreciated for a portion deemed to be suitable to represent their deterioration over time following their use, considering extraordinary maintenance expenses, which are recognised in the carrying value of the assets. In order to determine the useful life of the various types of assets and the corresponding depreciation rates, the Group's real estate assets have been divided into four clusters: (i) Historical and particularly prestigious properties (useful life of 65 years), (ii) Entire buildings (useful life of 33 years), (iii) Banking branches (useful life of 20 years) and (iv) Other properties (useful life of 20 years). These clusters do not include the New Intesa Sanpaolo Headquarters in Turin, for which the useful life was estimated through a specific analysis which considered the peculiar architectural features of the building. Other property and equipment is depreciated based on the following useful lives: furniture from 5 to 10 years, plants from 4 to 10 years, hardware and IT equipment for a period from 4 to 8 years and, lastly, other assets from 3 to 13 years.

The following are not depreciated:
- land, irrespective of whether acquired individually or embedded in the value of buildings, since it has an indefinite useful life;
- the valuable art assets, the other historical, artistic and decorative assets, since their useful life cannot be estimated and their value is normally destined to increase over time;
- the investment properties, as required by IAS 40, are measured at fair value through profit or loss and therefore they must not be depreciated.

If there is some evidence that property and equipment measured at cost may have been impaired, the carrying amount of the asset and its recoverable amount are compared. Any impairment losses are recorded in the income statement.
If the reasons for impairment cease to exist, a value recovery is recorded and may not exceed the value that the asset would have had, net of depreciation, determined in the absence of previous impairment losses.

With regard to the property and equipment recognised in accordance with IAS 2, these are measured at the lesser of cost and net realisable value, without prejudice to the comparison between the asset's carrying amount and its recoverable amount where there is an indication that the asset may have been impaired. Any impairment losses are recorded in the income statement.

Property and equipment consisting of the right-of-use of assets subject to leases

According to IFRS 16, a lease is a contract or part of a contract that conveys the right to use an asset (the underlying asset) for a period of time in exchange for consideration.

According to IFRS 16, leases are accounted for on the basis of the right of use model, where, at the initial date, the lessee has a financial obligation to make payments due to the lessor to compensate for its right of use of the underlying asset during the lease term.
When the asset is made available to the lessee for use (initial date), the lessee recognises both the liability and the asset consisting of the right of use.
In particular, the right of use acquired with a lease is measured as the sum of the present value of the future payments over the term of the contract, the lease payments made at or before the commencement date, the lease incentives received, if any, the initial direct costs and any estimated costs of dismantling or restoring the underlying asset.
The financial liability recognised corresponds to the present value of the payments to be made for the lease.

With regard to the discount rate, based on the requirements of IFRS 16, the Group uses the implicit interest rate for each lease contract, when it is available. For leases from the lessee's point of view, in some cases, for example for rental agreements, the implicit interest rate cannot always be readily determined without using estimates and assumptions (the lessee does not have enough information about the unguaranteed residual value of the leased asset). In these cases, the Group has developed a methodology for setting the incremental interest rate as an alternative to the implicit interest rate and has decided to adopt the Funds Transfer Pricing (FTP) method. This is based on an unsecured and amortising rate curve, which envisages lease payments for the lease contract that are typically constant over the lease term, rather than a single payment upon maturity. The FTP method takes into account the creditworthiness of the lessee, the term of the lease, as well as the economic environment in which the transaction takes place and is therefore in line with the requirements of the standard.

The lease term is determined taking into account:
- periods covered by an option to extend the lease if the lessee is reasonably certain to exercise that option;
- periods covered by an option to terminate the lease if the lessee is reasonably certain to exercise that option.

During the course of the lease term a lessee shall:
- measure the right-of-use at cost less accumulated depreciation and accumulated impairment losses determined and recognised based on the provisions of IAS 36 "Impairment of assets", adjusted to take account of any remeasurement of the lease liability;
- increase the liability arising from the lease following the accrual of interest expense calculated at the interest rate implicit in the lease or alternatively at the incremental borrowing rate, and decrease it for payments of principal and interest made.

If changes are made to the lease payments, then the lease liability must be remeasured and the impact of the remeasurement of the liability is recognised against the right-of-use asset.

Derecognition criteria
Property and equipment are derecognised from the balance sheet on disposal or when the asset is permanently withdrawn from use and no future economic benefits are expected from its disposal.

7. Intangible assets

Classification criteria
Intangible assets consist of goodwill and other intangible assets governed by IAS 38. They may include the rights of use acquired under a lease and relating to the use of an intangible asset (for lessees) and assets leased under an operating lease (for lessors).
Intangible assets are recognised as such if they may be identified and stem from legal or contractual rights. Intangible assets include goodwill, which represents the positive difference between purchase price and fair value of assets and liabilities pertaining to the acquired company.

Recognition and measurement criteria
Intangible assets are recognised at cost, adjusted for any accessory charges only if it is probable that the future economic benefits attributable to the assets will be realised and if the cost of the asset may be reliably determined. If this is not the case, the cost of the intangible asset is recorded in the income statement in the year in which it was incurred.

For assets with finite useful life, the cost is amortised on a straight-line basis or in decreasing portions determined on the basis of the economic benefits expected from the asset. Assets with indefinite useful life are not subject to systematic amortisation, but are periodically subjected to impairment testing.
If there is any indication that an asset may have suffered impairment losses, the asset's recoverable amount is estimated. The impairment loss, which is recorded in the income statement, is equal to the difference between the carrying value of the assets and the recoverable amount.

In particular, intangible assets include:
- technology-related intangible assets, such as software applications, which are amortised mainly on the basis of their expected technological obsolescence or, if lower, their expected use, and in any case generally no longer than a period of seven years. An exception are the core banking system platforms, whose useful life is estimated on a case-by-case basis, and, as a result, amortised over longer periods (from 10 to 15 years). Moreover, the costs incurred for the development of software are considered as intangible assets and are recognised under assets only when all the following conditions are met: i) the cost attributable to the intangible asset during its development can be measured reliably, ii) there is the intention, the availability of financial resources and the technical ability of making the intangible asset available for use or sale, iii) the future economic benefits to be generated by the asset can be demonstrated. Software development capitalised costs only comprise the costs directly attributable to the development process. Capitalised software development costs are amortised systematically over the estimated useful life of the relevant product/service so as to reflect the pattern in which the asset's future economic benefits are expected to be consumed by the entity from the beginning of production over the product's estimated life;
- customer-related intangibles mainly represented, in business combinations, by asset management relations, non-financial activities related to provision of services and insurance portfolios classified as investments. Such assets, with a finite life, are originally measured by the discounting, using a rate representing the time value of money and the asset's specific risks, of the income margins on the ongoing relations at the time of the business combination over a period which expresses their residual, contractual or estimated life. For asset management relations and non-financial activities related to provision of services, they are amortised on a straight-line basis over the period of greater significance of the expected economic benefits in case of relations which do not have a predetermined duration and, for relations from insurance products classified as investments, generally in decreasing portions corresponding to the duration of the contract in case of relations with predetermined expiry (residual lives of the policies);
- marketing-related intangibles represented by the measurement of the brand name which is also recorded at the time of business combinations. This asset is considered as having indefinite life since it is deemed to contribute for an indefinite period of time to the formation of income flows.

Lastly, intangible assets include goodwill.

With respect to business combinations, goodwill may be recorded when the positive difference between the consideration transferred and the fair value recognition, if any, of minority interests, and the fair value of shareholders' equity acquired is representative of the future income-generation potential of the equity investment.
If this difference is negative or if goodwill may not be attributed considering future income-generation potential of the equity investments, the same difference is directly recorded in the income statement.
Once a year (or every time that there is evidence of impairment losses), an impairment test is carried out for goodwill. This requires the identification of the Cash Generating Unit (or CGU) to which goodwill is allocated. The cash-generating units of the Intesa Sanpaolo Group correspond to the operating divisions presented in segment reporting. Any impairment losses are determined on the basis of the difference between the recognition value of goodwill and its recoverable amount, if lower. The recoverable amount is equal to the higher between the fair value of the cash-generating unit, less any cost to sell, and the relative value in use. The consequent adjustments are posted in the income statement.
With regard to the intangible asset represented by the brand name, if the reference CGU does not have any goodwill allocated, then an independent and specific valuation is made of the intangible on the basis of the fair value certified by the appraisal of an independent expert. If the fair value of the brand name is not higher than its carrying amount, the recoverable amount of the CGU is estimated, calculated based on future cash flows.

It is also noted that, where a CGU which is allocated both goodwill and a brand name has a value in use lower than the carrying amount, by an amount that exceeds the total value of the intangibles with indefinite life allocated, without prejudice to the full write-down of goodwill, an autonomous valuation of the brand name is carried out based on the fair value stated in the specific appraisal.

Derecognition criteria
Intangible assets are derecognised from the balance sheet on disposal and if no future economic benefits are expected.

8. Other assets
Other assets essentially consist of items awaiting classification and items not attributable to the other balance-sheet captions, including receivables arising from the supply of goods and non-financial services, sundry tax items other than those recognised in their own caption (e.g., connected to withholding agent activities), gold, silver and precious metal, the tax credits connected with the "Cura Italia" and "Rilancio" Decree Laws and accrued income other than that capitalised on the related financial assets, including the income resulting from contracts with customers in accordance with IFRS 15, paragraphs 116 and following. As required by paragraphs 91 and following of IFRS 15, the costs incurred for the acquisition and fulfilment of long-term contracts with customers are capitalised and amortised when they are incremental and are expected to be recovered.

9. Non-current assets held for sale and discontinued operations and Liabilities associated with non-current assets held for sale and discontinued operations

Non-current assets/liabilities for which a disposal process has commenced and for which disposal is deemed to be extremely probable are recorded in assets under Non-current assets held for sale and discontinued operations and in liabilities under Liabilities associated with non-current assets held for sale and discontinued operations. These assets/liabilities are measured at the lower of the carrying amount and fair value less cost to sell, except for some type of assets (e.g., financial assets within the scope of IFRS 9) for which IFRS 5 specifically establishes that the measurement principles of the applicable accounting standard must be used. The assets that are subject to amortisation/depreciation under the IAS/IFRS are no longer amortised/depreciated when they are classified under non-current assets held for sale and discontinued operations.

Non-current assets held for sale and discontinued operations may include portfolios of assets for which there are no prices in an active market. In such case, where an agreement has been reached with the purchaser, they are measured at fair value by referring to the sale prices resulting from that agreement. Where there is no agreement, they are measured using specific valuation techniques based on the asset and, where necessary, by employing external fairness opinions.

The income and charges (net of tax effect) attributable to non-current assets held for sale and discontinued operations or recorded as such in the year are recognised in the income statement in a separate caption.

10. Current and deferred tax

Taxes on income[166], calculated according to domestic tax regulations, are accounted for as a cost on an accruals basis, in line with the method followed to include, in the financial statements, the costs and income that generated them. Therefore, they represent the balance of current and deferred income taxes[167] for the year. Current tax assets and liabilities include the balances of the Group companies due to the relevant Italian and foreign tax authorities relating to direct taxation. More specifically, these captions include the net balance of tax liabilities from previous years and the current year, calculated on the basis of a prudent estimate of the tax charges due for the year, assessed according to the tax regulations currently in force, and the current tax assets represented by advances, by withholding taxes borne or other tax credits. The risk inherent in such proceedings and the risks inherent in proceedings where preliminary disbursements have not been requested are evaluated in applying the principles contained in IAS 37 regarding the best estimate of the economic resources required.

Considering the Group's adoption of the national fiscal consolidation provisions, tax positions which may be referred to the Italian Group companies are managed separately from an administrative standpoint.

Deferred taxation is calculated according to the balance sheet liability method, taking into account the tax effect of the temporary differences between the book value of the assets and liabilities and their value for taxation purposes, which will determine taxable income or deductible amounts in the future. To this end, "taxable temporary differences" are differences which will give rise to taxable income in future years while "deductible temporary differences" are those which will give rise to deductible amounts in future years.

Deferred tax liabilities are calculated by applying the tax rates currently in force to taxable temporary differences that are likely to generate a tax burden, and to the deductible temporary differences for which it is likely that there will be future taxable amounts at the time when the related tax deductibility occurs (so-called probability test). Deferred tax assets and liabilities related to the same tax and due in the same period are offset.

If deferred tax assets and liabilities refer to items affecting the Income statement, the balancing entry is represented by taxes on income.

Where deferred tax assets and liabilities relate to transactions that have been recorded in shareholders' equity without affecting earnings (such as adjustments on IAS/IFRS first-time adoption, measurements of financial assets recognised at fair value through other comprehensive income or of cash flow hedge derivative contracts), the balancing entry is made in shareholders' equity, under specific reserves where so provided (e.g. valuation reserves).

Latent taxation on equity reserves that will become taxable "however used" is charged against shareholders' equity. No provision is made for reserves subject to latent taxation only in the event of distribution, since the size of the available reserves which have already been taxed leads to the belief that no transactions will be undertaken which may cause taxation of the untaxed reserves.

Deferred tax liabilities referred to Italian companies included in the fiscal consolidation are reported in their financial statements, in application of the accrual basis principle and in consideration of the fact that the effects of fiscal consolidation are limited to the settlement of current tax positions.

Latent taxation on shareholders' equity items of consolidated companies is not recorded in the financial statements if it is unlikely that any tax liability will actually arise, also bearing in mind the permanent nature of the investment.

[166] Pursuant to IAS 12, taxes on income also include those relating to the tax laws that implement the Global Minimum Tax.

[167] With respect to deferred taxation, it is noted that, under IAS 12, deferred tax assets and liabilities relating to taxes on income under the so-called Global Minimum Tax are not to be recognised or disclosed.

11. Allowances for risks and charges

Allowances for risks and charges for commitments and guarantees given

This sub-caption of the allowances for risks and charges contains the allowances for credit risk recognised for loan commitments and guarantees given that come under the scope of the IFRS 9 impairment rules. For these cases, in general, the methods described for financial assets measured at amortised cost or at fair value through other comprehensive income are adopted for the assignment to the three credit risk stages and the calculation of the expected credit loss.

This aggregate also includes allowances for risks and charges made to cover other types of commitments and guarantees given that, due to their specific characteristics, do not fall under the scope of impairment pursuant to IFRS 9.

Post-employment benefits

Company post-employment benefits are based on agreements and qualify as defined benefit plans. Liabilities related to such plans and the relative cost of current service are determined on the basis of actuarial assumptions based on the Projected Unit Credit Method. This method sets out that future obligations are forecast using past time-series analyses and the demographic curve and that such future cash flows are discounted based on a market interest rate. The provisions made in each year of service are considered separately and give rise to an additional unit of benefit entitlement for the purposes of the final obligation. The discounting rate is determined on the basis of market returns, surveyed as at the date of measurement, on high-quality corporate bonds, taking account of the residual average life of the liability. The present value of the liability at the reporting date is also adjusted by the fair value of any plan assets.

Actuarial profits and losses (namely the changes in the current value of the obligation resulting from changes in the actuarial assumptions and adjustments based on past experience) are recognised in the statement of comprehensive income.

Other allowances

Other allowances for risks and charges record provisions related to legal obligations or connected to labour relationships or to litigations, also of a fiscal nature, originating from a past event for which a disbursement will probably arise to settle the obligations, provided that the amount of the disbursement may be estimated reliably.

Consequently, a provision is recognised when, and only when:

- there is a present obligation (legal or constructive) as a result of a past event;
- it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation; and
- a reliable estimate can be made of the amount of the obligation.

The amount recognised as a provision is the best estimate of the expenditure required to settle the present obligation at the reporting date and takes into account the risks and uncertainties that inevitably surround many events and circumstances. Where time value is significant, provisions are discounted using current market rates. Provisions and increases due to time value are recorded in the income statement.

If it is no longer probable that an outflow of resources embodying economic benefits will be required to settle the obligation or when the obligation is settled, the provision should be reversed.

The caption also includes long-term benefits to employees, whose charges are determined with the same actuarial criteria described for post-employment benefits. Actuarial profits and losses are all immediately recognised in the income statement.

12. Financial liabilities measured at amortised cost

Classification criteria

Amounts Due to banks, Due to customers and Securities issued include various forms of funding on the interbank market and with customers, repurchase agreements with commitment to repurchase and funding via certificates of deposit, bonds issued and other funding instruments in circulation, net of any amounts repurchased.

It also includes the payables recorded by the entity in the capacity of lessee in lease transactions.

Recognition criteria

Initial recognition of these financial liabilities occurs at the date of subscription of the contract, which usually coincides with the time of collection of the sums deposited or the issue of debt securities.

Initial recognition is based on the fair value of the liabilities, normally equal to the amount collected or the issue price, increased by any additional charges/revenues directly attributable to the single funding or issuing transaction. Internal administrative costs are excluded.

Lease payables are recognised at the present value of the future lease payments, discounted using the implicit interest rate of the transaction or, where it cannot be determined, the marginal financing rate.

Measurement criteria

After initial recognition, financial liabilities are measured at amortised cost with the effective interest method.

An exception is made for short-term liabilities, where time value is immaterial, which are stated at collected amount.

Lease payables are remeasured when there is a lease modification (e.g. a change in the contract which is not accounted for/considered as a separate contract); the effect of the remeasurement will be a corresponding adjustment to the right-of-use asset.

Derecognition criteria

Financial liabilities are derecognised from the balance sheet when they have expired or extinguished. Derecognition also occurs for repurchase of previously-issued bonds. The difference between book value of the liability and amount paid for repurchase is recorded in the income statement.

Placement of own securities, after their repurchase, is considered a new issue with recognition at the new placement price.

13. Financial liabilities held for trading

Recognition criteria

These financial instruments are recognised at the subscription or issue date at the fair value of the instrument, without taking into account directly attributable transaction costs or revenues.
This liability category includes, in particular, the negative fair value of trading derivatives, as well as embedded derivatives with a negative fair value separated from liabilities measured at amortised cost.
It also includes liabilities determined by short selling generated by trading of securities and certificates forming part of the trading business model.

Measurement criteria

All financial liabilities held for trading are measured at fair value through profit or loss.

Derecognition criteria

Financial liabilities held for trading are derecognised when the contractual rights to the related cash flows expire or when the financial liability is disposed of with the substantial transfer of all the risks and rewards connected to it.

14. Financial liabilities designated at fair value

Classification criteria

Financial liabilities designated at fair value are recorded under this caption, on the basis of the fair value option given to companies by IFRS 9 and in compliance with the cases contemplated in the reference regulations.
With reference to the financial liabilities of the subsidiary insurance companies, which do not fall within the scope of application of IFRS 17, the Group has availed itself of the possibility of designating as fair value liabilities products of a financial nature without a significant insurance risk and which are not included in separate management and therefore do not provide elements of discretionary participation features. Investments relating to these forms of funding, as already set out above, are also measured at fair value through profit or loss as they are managed according to an "Other" Business Model.

This category of liabilities also includes certificates included in the banking book business model.

Recognition criteria

These liabilities are recorded at fair value as at the date of issue, including the value of any embedded derivatives, net of placement fees paid.

Measurement criteria

These liabilities are measured at fair value according to the following rules established by IFRS 9:
- changes in fair value attributable to changes in own credit risk must be recognised in the statement of comprehensive income (shareholders' equity);
- the remaining changes in fair value must be recognised in the income statement.

The amounts recognised in the statement of comprehensive income are not subsequently recycled to the income statement. This method of accounting must not be applied when recognition of the effects of own credit risk on shareholders' equity results in or accentuates an accounting mismatch in the income statement. In this case, gains and losses associated with the liability, including those resulting from changes in own credit risk, must be recognised in the income statement.

Derecognition criteria

The financial liabilities designated at fair value are derecognised when the contractual rights to the related cash flows expire or when the financial liability is disposed with the substantial transfer of all the risks and rewards connected to it.

15. Foreign currency transactions

Definition

The foreign currency is a currency that is not the functional currency of the entity, which is in turn the currency of the primary economic environment in which the entity operates.

Initial recognition

Foreign currency transactions are recorded, on initial recognition, in the functional currency, by applying to the foreign currency amount the spot exchange rate at the date of the transaction.

Subsequent measurement

At every close of annual or interim financial statements, captions in foreign currency are measured as follows:
- foreign currency monetary items are translated using the closing rate;
- non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rate at the date of the transaction;
- non-monetary items that are measured at fair value in a foreign currency are translated using the closing rates.

Exchange differences arising on the settlement of monetary items or on translating monetary items at rates different from those at which they were translated on initial recognition during the period or in previous financial statements are recognised through profit or loss in the period in which they arise.

When a gain or loss on a non-monetary item is recognised directly in equity, any exchange component of that gain or loss is recognised directly in equity. Conversely, when a gain or loss on a non-monetary item is recognised through profit or loss, any exchange component of that gain or loss is recognised through profit or loss.

With regard to the "Conversion of financial statements in currencies other than the euro" for the purposes of consolidation and accounting for the related foreign exchange differences, reference is made to the specific paragraph of Part A: Section 3 - Scope of consolidation and consolidation methods of these Notes to the consolidated financial statements.

16. Insurance assets and liabilities

Classification criteria

This category contains the insurance assets and liabilities within the scope of application of IFRS 17 Insurance Contracts.
Specifically, the caption insurance liabilities presents the liabilities recognised by the Group for contracts for which insurance risk is deemed significant and which include: temporary class I life policies and income and mixed policies with guaranteed fixed conversion rates at the time of issue, and certain types of unit-linked policies, insurance pension funds and damage cover, as well as reinsurance components.
This caption also includes liabilities recognised for investment products that entail discretionary participation features (separate management schemes) as well as mixed class I products and class V capitalisation policies.
Note that the financial products issued by insurance companies that do not have significant insurance risk and no not provide for discretionary participation features are recognised in the financial statements as financial liabilities and accounted for pursuant to IFRS 9. Specifically, the Group measures those products at fair value, exercising the option provided by the standards (Fair Value Option) to avoid accounting mismatches with the correlated investments measured at fair value. These financial products substantially include unit-linked policies without extra return clauses.
Their classification as assets or liabilities is based on the net balance of the portfolio the contracts belong to. Generically, the insurance contracts present a balance payable (insurance liabilities) while reinsurance contracts present a balance receivable (insurance assets).

Recognition criteria

When the contract is signed with the policyholder, a liability is recognised whose amount represents the sum of the present value of all of the expected contractual cash flows (Present value of future cash flows), discounted and also including an appropriate Risk Adjustment (for non-financial risks) and the Contractual Service Margin which represents the present value of the future profits.
Contracts are recognised by groups (units of account), not contract by contract. In order to identify the units of account, the contracts issued are firstly divided into "portfolios", or groups of contracts with similar risks, which are managed as a unit. Each portfolio is then divided into profitability buckets, distinguishing between onerous contracts at the time of initial recognition, contracts which have no significant possibility of becoming onerous at the time of initial recognition and groups composed of other contracts in the portfolio. A specific test is conducted to define the profitability classes (onerousness test).
Lastly, groups of contracts shall not contain contracts issued more than 12 months previously (grouping by "cohorts"), with the exception of contracts linked to separate management schemes, for which the European Commission's endorsement of IFRS 17 provided the option to depart from that requirement (carve-out).
The Intesa Sanpaolo Group aggregates the contracts belonging to the Non-Life Business based on the Solvency II Line of Business ("LoB") they belong to. For the Life Business, groups of contracts are aggregated for products included in the same Separate Management, for Multi-management products in the same combination of Separate Management, Multi-Line products linked to the same Separate Management, Unit-Linked products, products linked to Pension Funds and pure risk products (e.g. temporary life policies).
With regard to contracts relating to Multi-Line products or linked to one or more Separate Management schemes, the Group exercises the option not to apply the Annual Cohort requirement (so-called "carve-out"), as allowed in the IFRS 17 Endorsement Regulation at European level, and therefore aggregates these types of contracts only based on the concept of sharing similar risks and uniform management as well as belonging to the same profitability bucket.
Contract boundaries are the expected cash flows to be considered when projecting the cash flows of an insurance contract. The determination of the contract boundaries is used to establish whether a particular contractual option is to be included in the cash-flow projection as soon as the contract is issued or whether the exercise of that option will result in the generation of a new group of contracts. The IFRS 17 contract boundaries include all the contractual options that establish the predetermined exercise conditions in terms of pricing, already at the time when the contracts are issued. If the exercise of the option does not have conditions predetermined upon issue and the conditions are only defined at a later date or at the time of exercise by the policyholder, they are not included in the IFRS 17 contract boundaries and are not projected in the cash flows of the host contract; the exercise of the option generates a group of contracts different from that of the host contract.

Measurement criteria

IFRS 17 requires the measurement of insurance liabilities (or assets if of opposite sign) based on up-to-date information that reflects the conditions existing at the measurement date.
Specifically, the standard sets out:
- a reference accounting model (General Model) used for life insurance contracts without contractual links to other assets and liabilities (life policy products and credit protection insurance) and for long-term non-life contracts ineligible for the simplified model;
- a model that modifies the General Model called the Variable Fee Approach, which is mandatory for measuring certain specific types of liabilities (for example, contracts linked to separate management schemes or Unit-Linked products); and
- an optional simplified approach called the Premium Allocation Approach.

For the General Model and the Variable Fee Approach, the standard requires, at the initial measurement date, the measurement of a group of contracts as the sum of the expected contractual cash flows (Present value future cash flow), a risk adjustment – a liability that reflects the uncertainty of cash flows due to non-financial risks – and the Contractual Service Margin, which represents the unaccrued profits that the entity will recognise gradually as it provides the service provided for by the group of insurance contracts.

Insurance liabilities comprise:
- the liability for remaining coverage (LRC): this is the liability related to the hedged event and consists of the sum of the expected contractual cash flows (Present value future cash flows), the Risk Adjustment and the Contractual Service Margin;
- the liability for incurred claims (LIC): this is the liability representing events that have already occurred and is composed of the sum of the related expected contractual cash flows (Present value future cash flows) and Risk Adjustment.

To determine the expected cash flows, all flows directly linked to the performance of the insurance contracts are considered. Because the insurance products in the Intesa Sanpaolo Group are mainly distributed by Group companies other than those in the Insurance Division, to quantify the cash flows and thus, the Contractual Service Margin at consolidated level, only the real costs incurred by the Group due to third parties are considered.

Following initial recognition, the carrying amount of a group of insurance contracts at each reporting date must be revised based on the most up-to-date assumptions, both operational (i.e. costs of claims, expenses) and financial (i.e. interest rate).
At each accounting closing it is thus necessary to update the balances of the present value of future cash flows and the risk adjustment. In this context, the General Model of measurement envisages the following:
- the update of the present value of future cash flows or the risk adjustment attributable to operational assumptions (i.e. the update to the estimated future claims) is recorded as an offsetting entry to the contractual service margin (i.e. a reduction in the present value of future cash flows due to a decrease in expected claims is recorded as an increase in the contractual service margin);
- the update of the present value of future cash flows or the risk adjustment attributable to financial changes (i.e. the update to the interest rate) is recognised, instead, in the income statement (i.e. as a reduction in the present value of future cash flows due to an increase in the discount rate is recognised in the income statement).

Once the changes attributable to operational assumptions of the expected contractual cash flows and the risk adjustments have been applied, the Contractual Service Margin for the insurance service provided during the period is released to the income statement. The release method follows the service provided over the term of the contract (coverage unit), which the Group calculates using the projected and discounted insured amounts for the life business and the earned premiums for the non-life business.
With respect to the Life business products measured under the Variable Fee Approach, in addition to the release of the Contractual Service Margin calculated using the Coverage Units, there is the release of the Systematic Economic Variance (ESR) which is equal to the difference between the prospective period-end Contractual Service Margin before the release under the Real World assumption and the prospective period-end Contractual Service Margin before the release under the Risk Neutral assumption.
For groups of onerous contracts, the standard requires that the overall estimated loss over the entire life of the policies be immediately recognised in the income statement.
The differences between the expected cash flows for the period and the corresponding actual figure also contribute to the adjustment of the Contractual Service Margin. In particular, with respect to the benefits provided by the contracts, the following must be calculated:
- the actual/expected difference relating to the non-distinct investment component (amounts that are paid to the holder of the contract in all circumstances, net of any components relating to insurance risks), which was identified for all products in portfolio with reference to the surrender value payable by the Company at the request of the holder of the contract, net of any penalties;
- the actual / expected difference relating to the premiums paid by the holder of the contract and related commissions, with reference only to the component relating to future services.

For insurance contracts with direct participation features (life products whose value is influenced by the underlying assets), the standard requires the mandatory application of a modified version of the General Model called the Variable Fee Approach.
A contract has direct participating features if its terms and conditions envisage that:
- the policyholder obtains returns linked to a clearly identified group of underlying items;
- the entity expects to pay out a substantial share of the fair value returns on the underlying assets;
- a substantial proportion of the cash flows that the issuer expects to pay the policyholder will vary with the change in the fair value of the underlying assets.

The Variable Fee Approach has the same rules of initial recognition as the General Model, but provides several variants on the changes in subsequent measurements.
Under the Variable Fee Approach, the contractual service margin includes, in addition to that set out in the General Model, the financial profits pertaining to the Group deriving from the management of the assets underlying contracts measured using the Variable Fee Approach.
To determine whether discretionary participation features are significant, the Group performs both a qualitative and quantitative test to verify the requirements. Within the Insurance Division's products, all the linked insurance contracts and pension funds and all the contracts linked to a separate management, both individual and Multi-Line, are measured using the Variable Fee Approach.

Lastly, IFRS 17 requires the application of the Premium Allocation Approach to simplify the measurement of a group of insurance contracts if the coverage period of each contract in the group (including the insurance services deriving from all premiums included within the contractual limit) does not exceed 12 months or if the application of that approach does not provide results that deviate significantly from the application of the General Model.

That approach does not require the identification of the single components of liabilities for future coverage (present value of future cash flows, risk adjustment and contractual service margin) but the identification of an "overall" insurance liability. The Intesa Sanpaolo Group applies this approach solely to the Non-Life Business, with the general rule being to use the Premium Allocation Approach for insurance policies with a duration of one year or less.

In some cases, the interaction between IFRS 17 and IFRS 9 may generate mismatches between the way insurance contracts and related financial assets are accounted for. In order to reduce these mismatches, IFRS 17 allows for a disaggregation of financial income and expenses from insurance contracts between the profit or loss (financial result) and the statement of comprehensive income.
The decision to carry out disaggregation is made for groups of contracts in applying IFRS 17 with the following methods:

- with regard to contracts valued using the General Model and the Premium Allocation Approach, the financial revaluation of future cash flows and risk adjustment at historical rates is recognised through profit or loss, while the difference between the revaluation at historical and current rates is recognised through other comprehensive income;
- for contracts valued under the Variable Fee Approach, IFRS 17 requires the financial result of insurance contracts to be disaggregated between profit or loss and other comprehensive income. In essence, the difference between the financial result of insurance contracts and the financial result through profit or loss arising from the underlying financial instruments is reclassified to other comprehensive income (mirroring).

In line with the decisions to classify the securities under assets to cover the insurance products, and to reduce potential accounting mismatches, the Intesa Sanpaolo Group adopts the disaggregation illustrated above (also known as the "OCI option") on all portfolios of insurance contracts, except those relating to unit-linked policies not linked to multi-line products or open pension funds.

Modification and derecognition criteria
According to IFRS 17, an insurance contract is derecognised from the accounts when, and only when, the contract is extinguished, i.e., when the specific obligation in the insurance contract has expired or has been fulfilled or eliminated.

Moreover, following contractual modifications (agreed between the parties or due to changes in regulations) that reflect at least one of the following conditions:

- the modified contract would have been excluded from the scope of application of IFRS 17 if the modified terms had been included in the contract on initial recognition; the separation of the different components, bringing a different contract to be measured under IFRS 17; or a substantially different "contract boundary" or the assignment of a different group of contracts;
- the original contract meets the definition of insurance contract with direct participation features, but the modified contract no longer does, and vice versa;
- the original contract is measured using the simplified approach or the premium allocation approach, but the modified contract no longer meets the eligibility criteria to be measured using this approach.

IFRS 17 requires that the original contract be derecognised and the new contract be recognised. Conversely, if the contractual modifications meet none of the conditions listed above, they shall be treated as changes in the measurement assumptions of the present value of future cash flows and, as a result, shall modify the previously calculated risk adjustment and contractual service margin.

Use of estimates to determine the insurance liabilities pursuant to IFRS 17

Discount rate
In accordance with IFRS 17, the Intesa Sanpaolo Group defined a methodology for calculating discount rates for the measurement of insurance contracts.
Specifically, the Intesa Sanpaolo Group follows a bottom-up approach, defining a discount rate structure that includes both risk-free interest rates and an adjustment to reflect the illiquid nature of insurance products.
In order to determine the risk-free interest rate structure, the Group first observes the market data on interest rates that are deemed sufficiently liquid. At present, the Intesa Sanpaolo Group considers sufficiently liquid the swap rate observations up to the 20-year maturity (LLP or Last Liquid Point). In order to ensure the use of a risk-free structure, the Group subsequently excludes the credit risk component from the valuation of swap rates, which is quantified (similarly to EIOPA) through the calculation of credit risk adjustment (CRA).
The risk-free rates calculated accordingly as swaps less CRA are extrapolated beyond the LLP, using specific market methodologies, also defining a risk-free interest rate on long maturities of the curve (60y), assessed by also considering inflation expectations[168].
On the other hand, with respect to the liquidity premium to be added to the risk-free rates calculated accordingly, the Intesa Sanpaolo Group first defines, for each insurance contract to be valued, the appropriate reference asset portfolio to calculate this premium. The Group elected to use the following reference portfolios for the different types of insurance contracts:

- for contracts relating to the non-life business, the asset portfolio of the company is used;
- for contracts relating to the life unit-linked business and pension funds, the company's total portfolio of assets relating to the unit-linked business and pension funds is used;
