

This is the form of material change report required under section 85(1) of the *Securities Act* and section 151 of the *Securities Rules*.

**FORM 53-901F
(Previously Form 27)**

**MATERIAL CHANGE REPORT UNDER
SECTION 85(1) OF THE SECURITIES ACT (BRITISH COLUMBIA)**

This form is intended as a guideline. A letter or other document may be used if the substantive requirements of this are complied with.

Every report required to be filed under section 85(1) of the *Securities Act* (the "Act") shall be sent to the British Columbia Securities Commission (the "Commission") in an envelope addressed to the Commission and marked "Continuous Disclosure".

WHERE THIS REPORT IS FILED ON A CONFIDENTIAL BASIS PUT AT THE BEGINNING OF THE REPORT IN BLOCK CAPITALS "CONFIDENTIAL - SECTION 85", AND EVERYTHING THAT IS REQUIRED TO BE FILED SHALL BE PLACED IN AN ENVELOPE ADDRESSED TO THE SECRETARY OF THE COMMISSION MARKED "CONFIDENTIAL".

West Vancouver, British Columbia V7V 1E1

Telephone (604) 922-2030

(the "Company")

2 Date of Material Change

May 26, 2008

3 Press Release

Issued in West Vancouver, B.C. on May 26, 2008 under Section 85 (1) of the Act and disseminated through the facilities of Market News and Stockwatch.

4 Summary of Material Change

The Company is awaiting authorization for its Notice of Work permit and will then proceed with a surface trenching program for a high grade copper target on its Steele Skarn Property.

5 Full Description of Material Change

The Company announced that it is awaiting authorization for its "Notice of Work" permit so that it can proceed with its planned surface trenching program on its copper-gold property located on northern Vancouver Island, British Columbia (the "Steele Skarn Property").

The trenching program will commence upon receipt of the permit and will consist of opening up 1.5 km of old logging road followed by six, 100 metre excavator trenches. The trenches are designed to test the width and continuity of the high grade copper mineralization discovered and mapped in August 2007 by Brent Hemmingway, Geologist and vendor of the Property. The newly discovered mineralized skarn zone was mapped and measured to be approximately 11 metres wide and consists of massive chalcopryite pods within a garnet-actinolite skarn. Three selected grab samples of the mineralization at the showing were assayed at Acme Laboratories of Vancouver ("Acme") and returned values of 23.69% Cu, 6.89% Cu and 16.68% Cu. Acme's analytical technique consisted of pulverizing and digesting a one gram sample in an aqua regia acid solution. The resulting solution

was analysed by Inductively Coupled Plasma Emission Spectrometry ("ICP"). Samples running greater than the maximum value for standard ICP analysis were re-analysed by diluting the sample so that the ICP was capable of giving a more accurate reading.

The trenching program is intended to evaluate the continuity of this new copper discovery. This work will be followed by detailed geophysics, geological mapping and, upon success, core drilling.

John Kowalchuk, P.Geo., has reviewed this release and is the Qualified Person for the Company's Steele Skarn Property.

The Company is in the business of the exploration and development of natural resource properties. For further information, contact Mr. Clive Shallow, investor communications, at 604-922-2030 or visit the Company's website at www.bethlehemmining.com.
