DRILLING CAMPAIGN STARTED ON HEBERTO GOLD (Au33)

MONTRÉAL, QUÉBEC, CANADA – As planned following permitting, drilling crews and equipment were effectively mobilized this week ready to drill **HEBERTO GOLD**, a northsouth silicified quartz diorite DYKE STRUCTURE at least 30 m wide visible in outcrop and intruding a tonalite hydrothermal magmatic dome. The one visible contact returned 5.18 g/t gold over 5 m in association with disseminated fine grained pyrite along a 1.2 km long targeted northsouth induced polarization anomaly to be drilled. A sampled north-south striking 7 m wide mineralized envelope had graded 1.89 g/t gold from all channel samples over the 10 m northsouth area that could be surface sampled and it remains open along strike, at depth and to the west.

DIOS has 41 million shares outstanding, a very tight share structure and a positive working capital.

The Board granted 980,000 stock options under the Stock Option Incentive Plan to directors and employees at an exercise price of $0.10 per share, expiring five years from date of grant.
