DIOS acquires Pontax-North Lithium property

Montreal, Quebec, Canada – Management of **Dios Exploration Inc.** is very pleased to report **Dios** acquired the **Pontax-North lithium property** within James Bay prolific lithium region of central Quebec, Canada. It is located north of Pontax River and some 23km south of KM381 facilities.

Pontax-North lithium is also located some 6 km north (and west) of Pontax-Lithium prospect (1.16% Li₂O over 30.55m) of Striae Resources and about 23 km due south of Galaxy Resources James Bay/Cyr lithium deposit (40.3Mt @1.40%Li₂O resource) for which Canada Environment federal minister just gave its approval on January 16 to start this new lithium mine in James Bay.

The **Pontax-North** lithium project covers favourable rocks (paragneiss) along the margins of a 23 by 5-10 km magnetic felsic pluton with a prospective section some 10-11 km long. **Pontax-North** claims are also located in the axis of SW-NE glacial movement and along a cluster of lithium metal lake sediment anomalies combined with useful other anomalous critical elements.* The claims are also located in the vicinities of several magnetic features intersecting the general SW-NE magnetic trend. **Pontax-North lithium** totals 33 wholly-owned claims for 1760 hectares. Field work is planned in 2023.

Geochemical signature is comparable to Pivert-Rose deposit and Pontax-Lithium prospect with even higher values in secondary environment. Pontax-Lithium (lithium-tantalum-bearing pegmatite dikes) was discovered and successfully drilled in the scope of former joint **Dios/Sirios** Resources exploration project under supervision of Harold Desbiens M.Sc. P.Geo, V.P. of **Dios** & 43-101 Qualified Person, who reviewed this release.

* **Pontax-North** (Li over 15ppm, up to 22.5ppm; Cs>2ppm; Rb > 13ppm, up to 18.2ppm)
