Form 51-102F1
Management's Discussion and Analysis
Three Months Ended March 31, 2015

BACKGROUND

Desert Gold Ventures Inc. ("Desert Gold" or the "Company") is an exploration stage company actively engaged in the acquisition, exploration and development of mineral resource properties. The Company is listed on the TSX-V, OTCQX, and Frankfurt Stock Exchange under the symbols TSX-DAU, OTCQX-DAUGF, and Frankfurt Exchange - QXR1 respectively.

The following management's discussion and analysis ("MD&A") provides an analysis of the Company's business and operating results for the three months ended March 31, 2015. It is recommended that this MD&A be read in conjunction with the Company's unaudited condensed consolidated interim financial statements for the same period and the audited consolidated financial statements for the recent year ended December 31, 2014 which have been prepared in accordance with International Financial Reporting Standards ("IFRS").

This MD&A is dated May 29, 2015

Readers are encouraged to review the Company's statutory filings and other disclosure documents through Internet on the Canadian System for Electronic Document Analysis and Retrieval (SEDAR) at www.sedar.com., or to review general information, including maps, on the Company's website at www.desertgold.ca.

FORWARD LOOKING INFORMATION

This MD&A contains "forward-looking information" which may include, but is not limited to, statements with respect to the future financial or operating performance of the Company, its projects, exploration expenditures, costs and timing of the development of new deposits, costs and timing of future exploration, requirements for additional capital, government regulation of mining exploration, environmental risks, title disputes or claims and limitations of insurance coverage.

Readers are cautioned not to place undue reliance on these forward looking statements, which speak only to management's views as of the date the statements were made. Often, but not always, forward-looking statements can be identified by words and phrases about the future, such as: anticipate, expect, plan, intend, predict, goal, target, project, potential, strategy and outlook.

There are a number of factors which may cause results to vary considerably from these predictions, involving known and unknown risks, and uncertainties. Such factors include, among others, general business, economic, competitive, political and social uncertainties; the actual cost of conducting our exploration program may differ significantly from estimates; we may be adversely affected by foreign currency exchange rates or taxes including fluctuations in the relative value of US and Canadian currency; we are subject to the risk inherent in variations in ore grade or recovery rates and commodity prices, equipment may fail, we may experience labour unrest, accidents and other risks inherent in mining; we may be subject to political risks in developing countries, insurrection or war; delays in obtaining required permits, licenses, and approvals. More specifically, although Desert Gold primarily operates in African countries with stable democratic governments with mining regulations in place, these countries may still be subject to political upheaval such as military coups or rebel insurrection by factions within the country; we discuss geopolitical, economic and other such factors in more depth in the section entitled "Risk and Uncertainties" in this MD&A. Although Desert Gold has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results to differ from those anticipated, estimated or intended. The Company does not undertake or assume any obligation to release publicly any revisions to these forward-looking statements to reflect events or *circumstances after the date hereof or to reflect the occurrence of unanticipated events, except as required by securities law.*

The following table outlines certain significant forward-looking statements contained in this MD&A and provides the material assumptions used to develop such forward-looking statements and material risk factors that could cause actual results to differ materially from the forward looking statements.

Forward-looking statements	***Assumptions***	***Risk factors***
Management believes the liquidity and resources on hand may not be adequate to finance the Company's operations over the next 12-month operating period. The Company plans to finance its future operation by either debt or equity financing.	*The cash outflow during 2015 will be similar to the past year*	*Unexpected changes in expenditure pattern in 2015*

OVERALL PERFORMANCE

Exploration Update

Current exploration permits held by the company are focused around key areas of interest in Mali and in Rwanda (Fig. 1).

Figure 1. Map of Africa.

RWANDA

The company, through its wholly owned subsidiary TransAfrika Rwanda Gold S.A.R.L, has 100% ownership of Exploration Permit No 107/16.03/05 issued on November 13, 2007, referred to as the Byumba prospect. Byumba has a surface extent of approximately 90,119 ha, its located 20 km north of the capital city of Kigali, easily accessible by road. The prospect lies in the Central African Kibaran Orogen, which hosts gold resources of more than 10 million ounces of gold in the nearby South Kivu Province of the DRC.

Exploration started in 2007, comprising a grass root exploration programme over both the Byumba prospect and the relinquished Rusizi prospect. Following initial soil geochemistry a 3.5 km linear north-northwest trending gold anomaly was discovered on the Byumba prospect.

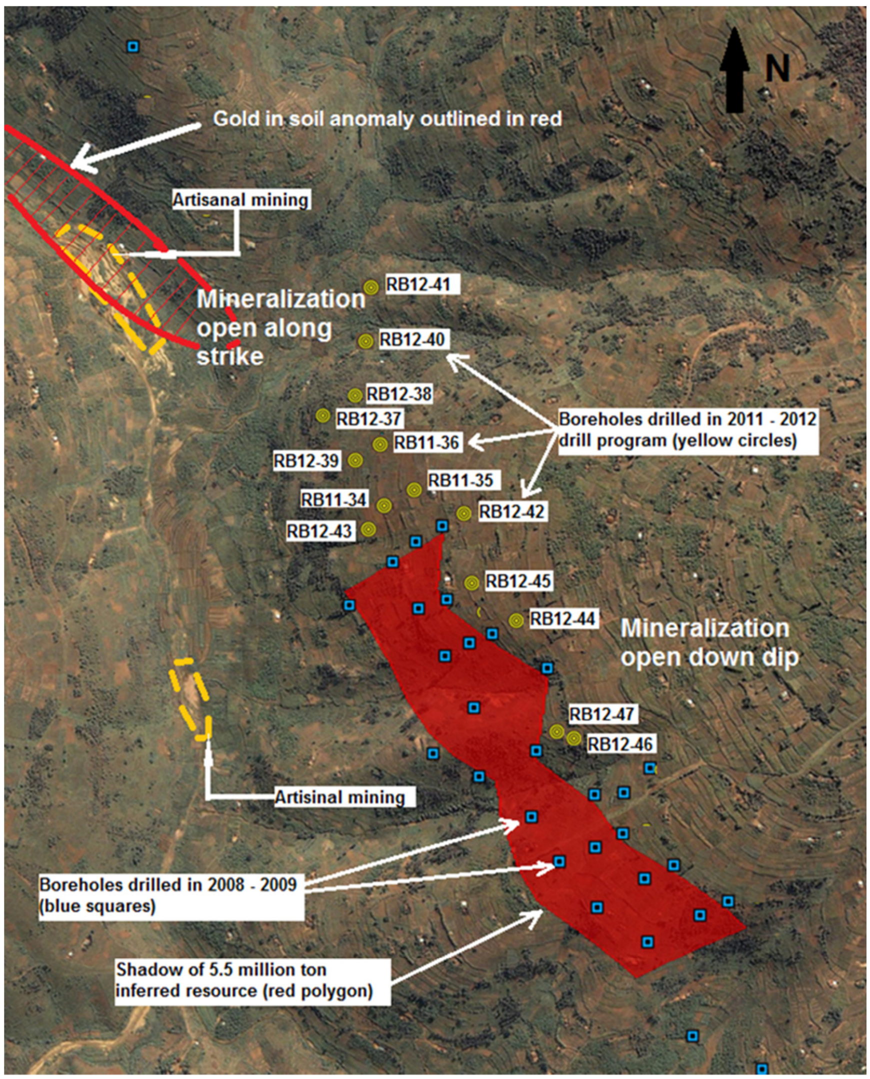

Figure 2. Locatility plan showing drilling completed to date. Red polygon and blue squares outline the initial resource and drilling. Yellow circles show the location of the second phase of drilling. Areas of artisanal mining activities are shown by the yellow dashed lines.

Diamond drilling on this geochemical anomaly led to the discovery of a significant resource. Drilling continued on the initial discovery to define a NI 43-101 compliant inferred gold resource of 265,000 oz Au contained in 5,551,000 tonnes at an average grade of 1.48 g/t (February 6, 2012). A second phase of exploration focused a drilling program to test the gold mineralisation along strike to the north and down dip extent (Fig. 2). This drilling programme confirms the mineralisation to be continuous northward and in depth.

Further resource estimation work is being completed by Minxcon Consulting, Johannesburg, South Africa. The evaluation is current.

MALI

In Mali the company is operating three permits, the projects are referred to as, Farabantourou, Segala Ouest and Djimbala. Farabantourou and Segala Ouest are located in the Kenieba Birimian inlier in well-established gold mining districts characterised by world class producing gold mines. Djimbala is situated south of Bamako in the Bougouni Birimian inlier within the Yanfolila Gold Belt (Fig. 3).

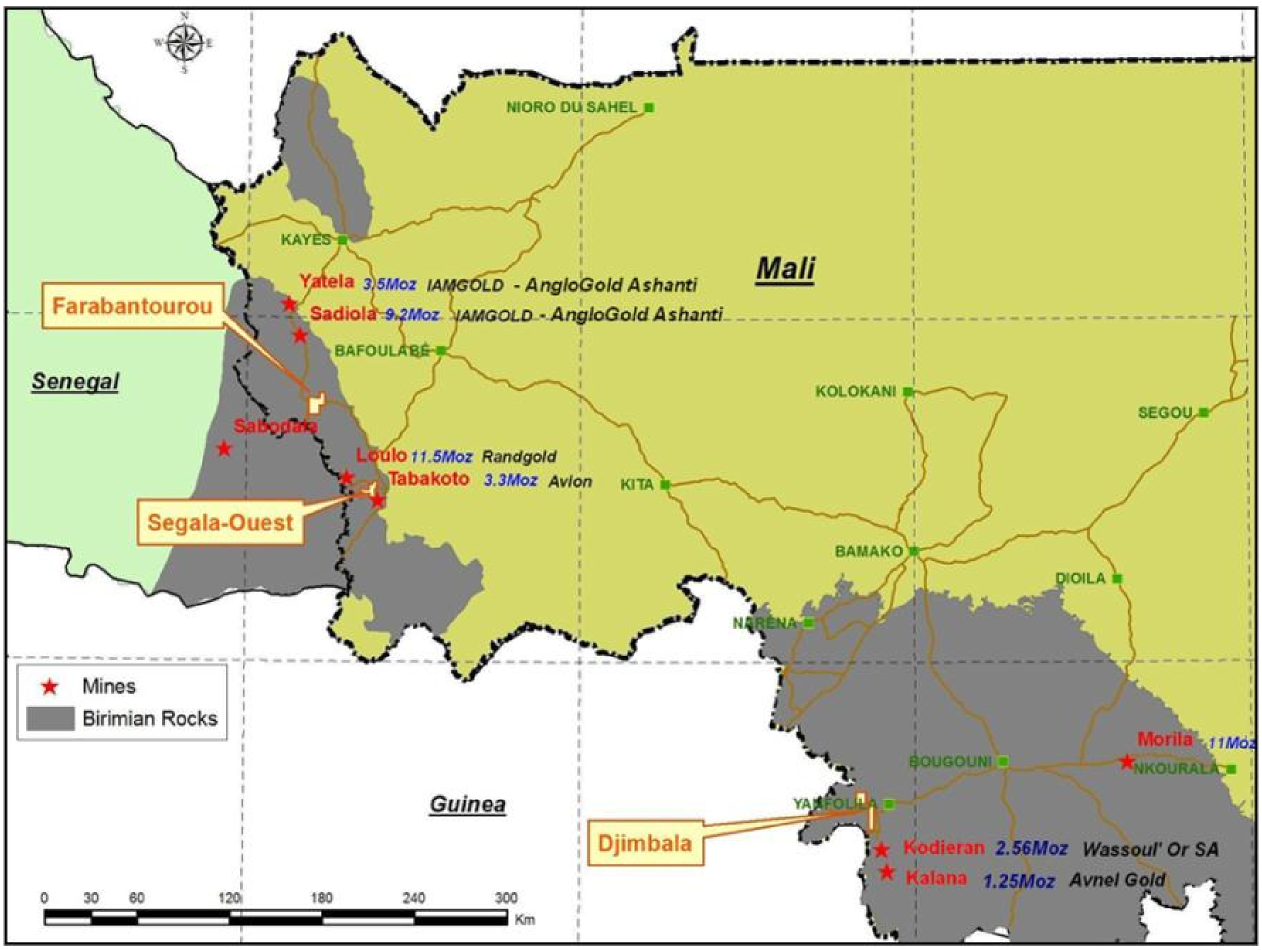

Figure 3. Locality plan of the Mali projects.

FARABANTOUROU PROJECT

The tenement is owned by TransAfrika Mali SA, a joint venture company incorporated in Mali and held 74% by TransAfrika Belgique SA and 13% by each of two joint venture partners, governed by a standard Convention Minière detailing the fiscal and legal regime under which the exploration permits are granted. The exploration permit was renewed in November 2014. This tenure is the last of the renewals and expires in November 2016.

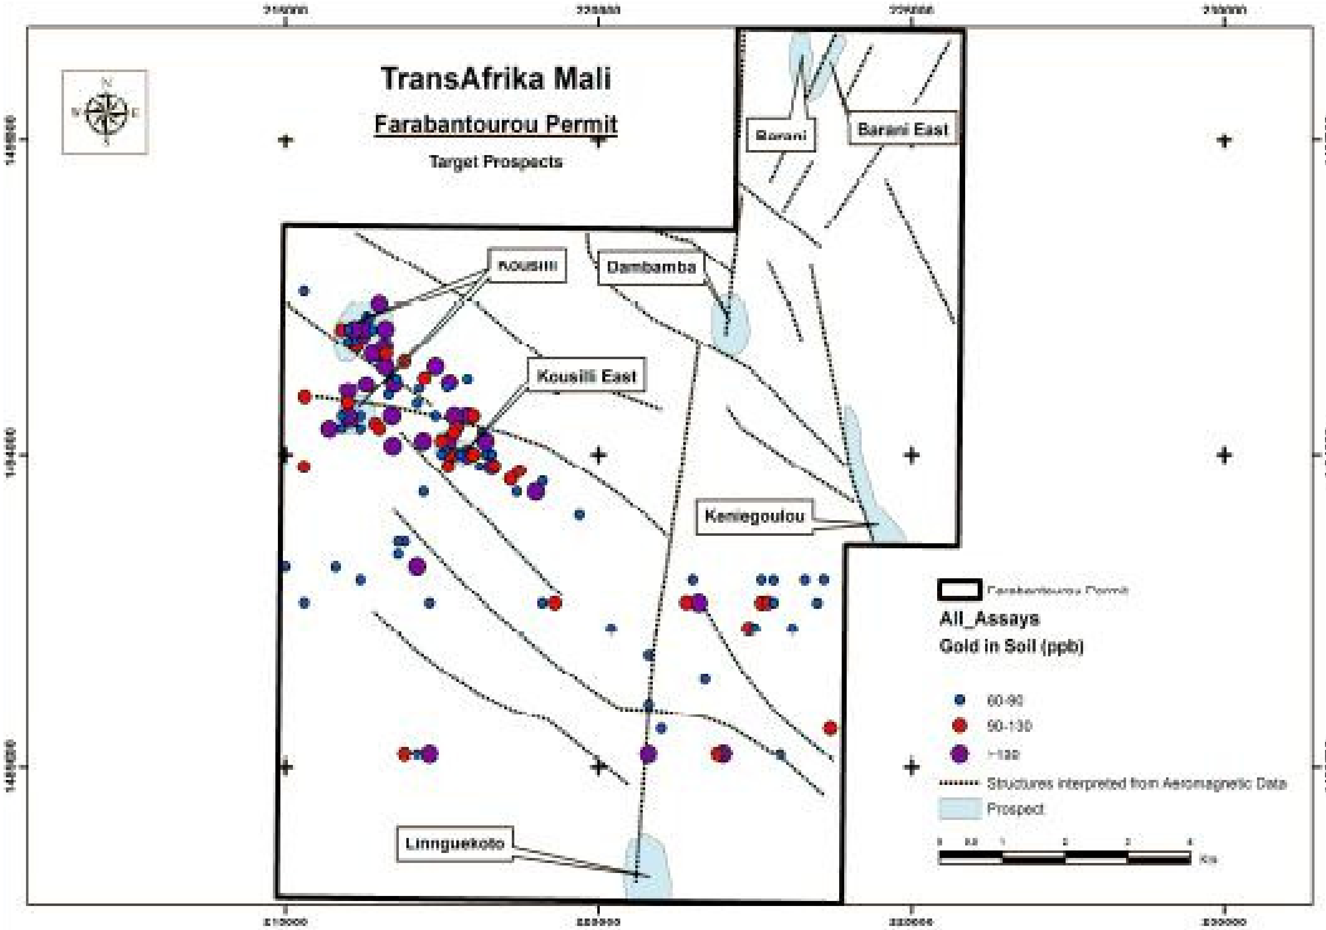

Figure 4. Locality plan showing the location of the gold mineralised prospects within the Farabantourou exploration permit.

The Farabantourou project is located some 50 km south of Sadiola and Yatela and is proximal to the Senegal-Mali shear zone, which hosts the mines Loulo, Sadiola and Yatela amongst others. The property was previously explored by another company. Their work delineated 6 areas of gold mineralisation within the tenement (Fig. 4). TransAfrika completed soil geochemical surveys, ground geophysical surveys (IP- induced polarisation) and follow up drilling over these previously defined areas of gold mineralisation. Drilling focused on Kousilli and on Barani East. The results were encouraging defining shallow mineralisation.

In 2012 the company focused on a drilling program to complete a mineral resource estimate on the Barani East prospect. Barani East contains a total of 108,100 oz gold in the indicated and inferred categories with average grades around 2.50 g/t (Table 1). This resource is defined to a maximum depth of 250 m below surface over a strike length of 400m. The deposit is tabular, NNE trending, dipping to the east between 45^{o} and 60^{o}. The gold mineralisation is associated with quartz hematite rocks and kaolinite veins within siltstone and shale. Widths of the mineralisation vary from 4.5 m to 15 m.

Initial metallurgical test work on two samples of mineralisation of approximately 2 kg in mass proved the gold to be recoverable to 98% by a combined gravity separation process and a cyanide leach. Although the individual prospect's mineral resources are small, Desert Gold is currently investigating the feasibility to exploiting as a collective these prospects by small scale mining operations, starting with Barani East.

	Tonnes	Grade(g/t)	Gold Ounces
Indicated Mineral Resources	514,000	2.46	40,600
Inferred Mineral Resources	828,000	2.53	67,500

Cut-off grade of 1.0g/t assuming an open pit extraction scenario

Table 1. Barani East estimated mineral resource (April 2013).

Ore processing was addressed by collecting a two ton near surface bulk sample of the ore from the northern sub-outcrop of the Barani East ore body for metallurgical tests which were conducted by the Peacocke and Simpson minerals processing laboratory at Harare, Zimbabwe. The company is also working closely with an engineering design team from APT (Johannesburg, South Africa). APT specialise in the manufacturing of modular mineral processing plants and are designing a plant to optimise exploitation of the resource. The tests point to a relatively low capital cost plant comprising a wash and screen (2 mm) circuit, with minor crushing, feeding to a Knelson gravity concentrator – this circuit will recover 40.3% of the gold. The tailings from the Knelson concentrator will be fed to a Knelson continuous variable discharge concentrator (CVD) from which concentrates with a mass yield of approximately 11% will be subject to a cyanide leach from which an additional 25% of the gold will be recovered. Although this process generates a lower recovery of the gold (65%) compared to other processing alternatives, this configuration requires the least capital investment. The CAPEX required for this option is approximately 20% that of the alternative processing routes that produce higher recoveries and also has significantly lower operational costs.

Minxcon from Johannesburg, South Africa, were commissioned to research an optimum mining schedule to exploit the Barani East ore body. Minxcon have an optimised pit design (Fig. 5). The mining method to be implemented is conventional open pit mining, using truck and excavator combinations. All mining activities will be performed by a mining contractor. The present optimised pit is based on the mining strategy focused on producing enough ore for a 40 ktpm plant throughput using the above described ore treatment plant. A NI 43-101 technical report, which includes the preliminary economic assessment, was released September 2014.

Current exploration efforts are focused on defining for the next dry season drill targets at the other prospects. Towards this end, all exploration data are being reassessed and interpreted.

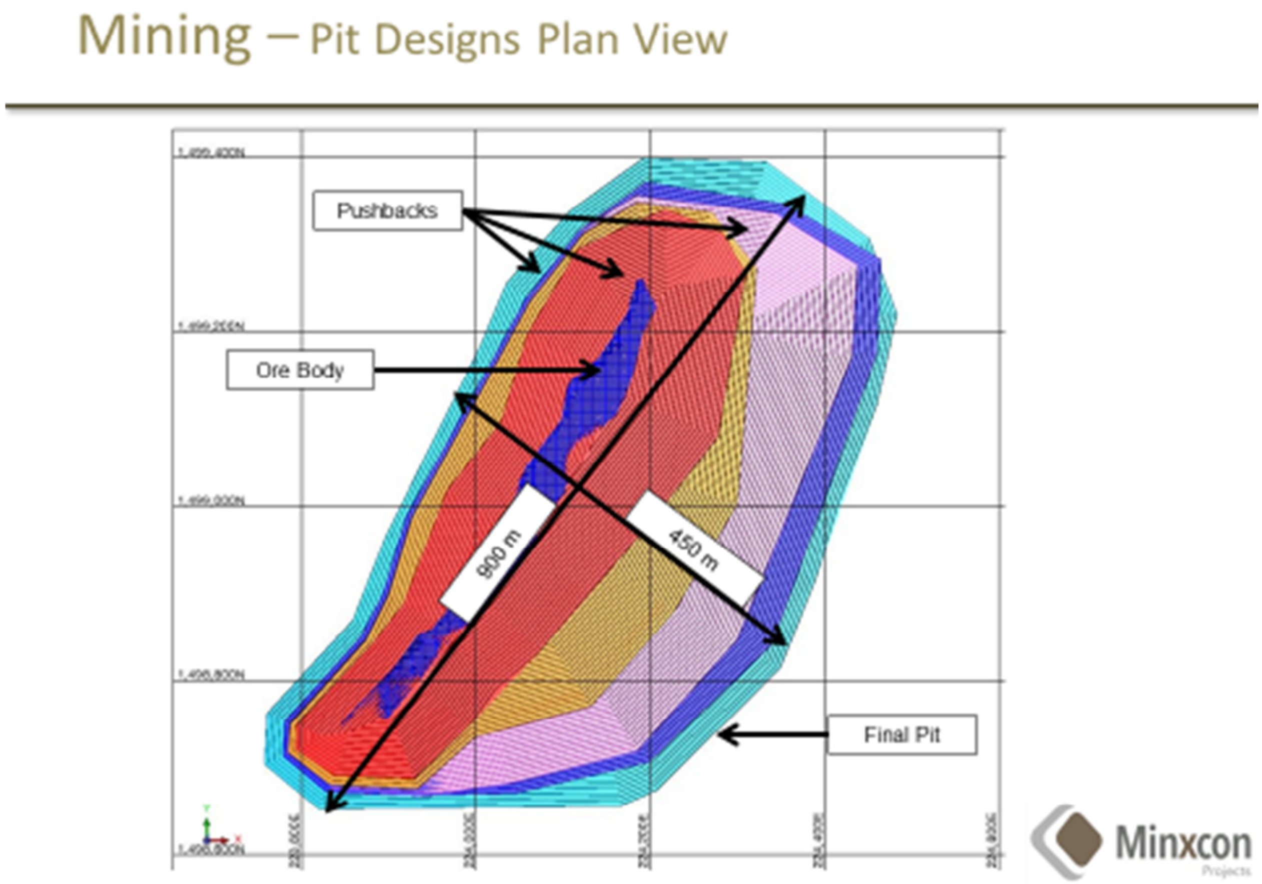

Figure 5. Pit design for the 40 ktpm ore production schedule.

SEGALA OUEST PROJECT

The tenement is owned by TransAfrika Mali SA, a joint venture company incorporated in Mali and held 74% by TransAfrika Belgique SA and 13% by each of two joint venture partners, governed by a standard Convention Minière detailing the fiscal and legal regime under which the exploration permits are granted. The exploration permit expires during November 2015 and is renewable for a further 2 years. We have complied with the statutory requirements and the company will apply for renewal.

The prospect is located some 5 km NW of Endeavour's Tabakoto mine and their Segala mine abuts the eastern boundary of the permit. To date the permit is blanket covered by soil geochemical surveys. Some ground geophysical surveys, trenching and drilling were selectively performed on the property. Results of this work supports widespread evidence of gold mineralisation within the tenement. Particularly, within a large soil geochemical anomaly which traverses the property in a northwesterly trend (Fig. 6). This anomalous Au in soil zone covers an area approximately 24 km^2 and is the focus of current exploration activities.

Desert Gold's exploration programme includes a continued evaluation of the past work, analyses of soil geochemical surveys and geological mapping with a specific focus on the analysis of structure within and outside the tenement. The gold mineralisation styles at the neighbouring Tabakoto and Segala mines point to structurally controlled deposits. Field work will resume after the rain season. The company plans several trenches in the south to test the soil geochemical anomalies followed by drilling.

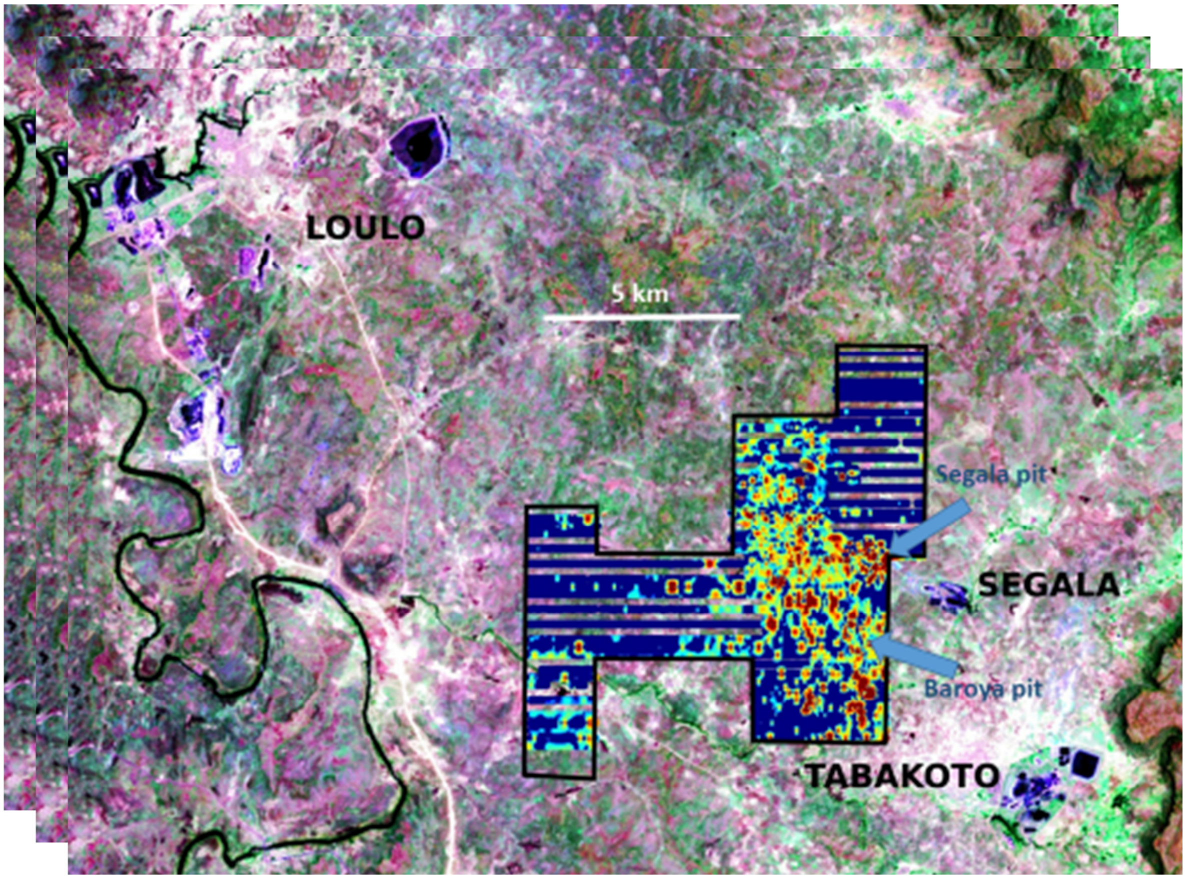

Figure 6. Locality plan of Segala Ouest in relation to the neighbouring mines, Tabakoto and Segala in the east and, the Loulo complex to the west. Infill colours are relative soil geochemical values with the blue colouration being background below20 ppb Au. The yellow to red colours reflect the spread of anomalous values. Blue arrows point to extensive artisanal mining activity.

DJIMBALA PROJECT

The tenement is owned by TransAfrika Mali SA, a joint venture company incorporated in Mali and held 74% by TransAfrika Belgique SA and 13% by each of two joint venture partners, governed by a standard Convention Minière detailing the fiscal and legal regime under which the exploration permits are granted. The status of tenure of this permit is in the first renewal period, which will expire December 2016.

Djimbala is located some 220 km south of Bamako and covers an area approximately 125 km^2. The permit is west of the town of Yanfolila and is surrounded by a significant number of active gold prospecting permits with gold mineralisation (Fig. 7). The company is planning a complete blanket cover of soil geochemical sampling. Presently, an initial soil sampling programme on part of the property (area 3, Fig. 7) is complete with a spread of encouraging anomalous Au in soil results. The area to the north (4, Fig. 7) was recently sampled. Field work will resume in the dry season. Further geophysical follow up work and/or drilling will follow targets defined by the geochemical surveys.

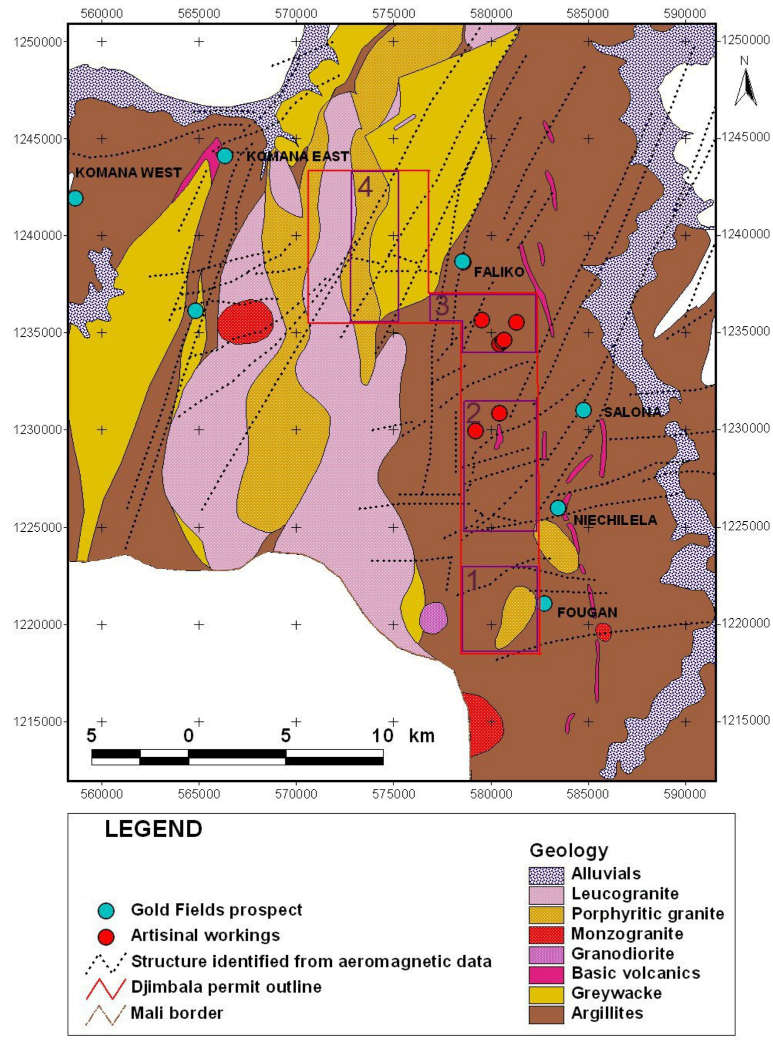

Figure 7. Interpretative geology of the Djimbala permit.

Summary of exploration costs incurred

During three months ended March 31, 2015, the Company incurred the following exploration expenses:

	Rwanda	Mali			Total
Three months ended March 31, 2015		**Faraban-tourou**	**Segala-Ouest**	**Djimbala**	
	$	**$**	**$**	**$**	**$**
Maintenance and transport	-	3,741	3,327	2,243	9,311
Geological studies	-	268	-	-	268
Staff cost and support	-	38,711	36,611	26,292	101,614
	-	42,720	39,938	28,535	111,193

The Company's prospecting rights and exploration expenses summary for the prior years ended December 31, 2012 and 2013 and 2014 are presented in the Company's audited annual financial statements for the years ended December 31, 2012, 2013 and 2014 respectively.

We invite readers to visit our website at www.desertgold.ca, and www.sedar.com, to view more information regarding Desert Gold's projects in Africa.

Corporate update

On January 8, 2015, the Company issued 8,000,000 units at CAD$0.05 per unit for proceeds of CAD $400,000 (equivalent to $317,224). Each unit consist of one common share of the Company and one share purchase warrant. Each warrant can be exercisable into one common share of the Company for a period of five years from closing at CAD$0.05 per share. If at any time following the date of issuance, the closing price of the Company's common shares on the TSX Venture Exchange is greater than CAD$0.50 for 30 consecutive trading days, the Company may give notice to the holders of the warrants that the expiry time of the warrants has been accelerated and the warrants will expire on the 20th business day following the date of such notice.

The Company's shareholders approved, on the Company's annual general meeting held on May 4, 2015, to re-price the exercise price of options held by management from $0.80/share to $0.10/share.

SUMMARY OF QUARTERLY RESULTS

Following are the Company's quarterly information of the Company's most recent eight quarters ended on:

	3/31/15	12/31/14	9/30/14	6/30/14	3/31/14	12/31/13	9/30/13	6/30/13
	$	$	$	$	$	$	$	$
Revenue	-	-	-	-	-	-	-	-
Earnings (loss) from operations	(244,464)	(295,243)	(415,500)	(329,687)	(417,181)	(675,383)	(408,299)	(342,251)
Earnings (loss) per share from operations, basic and diluted	(0.00)	(0.00)	(0.01)	(0.01)	(0.01)	(0.01)	(0.01)	(0.01)

The Company is in the business of exploration and development of resource properties, thus the income and loss is not subject to seasonal fluctuations. The Company is in the exploration stage, has not earned revenue previously, and does not expect to earn revenue in the near future.

The fluctuation of the Company's earnings (loss) is directly related to the amount of exploration work done in each particular quarter as well as the occurrence of incidental events such as disposition of the Company's assets or issuance of stock options to employees and consultants. Management expects the Company's quarterly results may fluctuate in the future with the amount of actual exploration done and with the occurrence of any incidental events that may happen in the future.

DISCUSSION OF OPERATIONS

Three months ended March 31, 2015 ("2015 Q1")

The Company's loss in 2015 Q1 was $244,464 compared with a loss of $417,181 in the same period of 2014, an improvement of $172,717.

The decrease of losses was mainly a combined result of the following:

1) A decrease of administrative expense of $69,426 (2015 Q1 - $129,817; 2014 Q1 - $199,243). The main components of the administrative expenses are as follows:

	2015 -2014 Q1 (decreases)/increase	2015 Q1	2014 Q1
	$	$	$
Rental	(1,685)	11,272	12,957
Professional and consultant fees	(66,993)	91,257	158,250
Office and administrative	2,768	22,908	20,140

Administrative expenses were not significantly different as the Company was in the same line of businesses in these two years.

2) A decrease in prospecting rights and exploration expenses of $106,506, (2015 Q1 - $111,193; 2014 Q1 -$217,699). The Company has been finishing its exploration activities in 2014; thus incurred less exploration expenditures in 2015 Q1.

With respect to the assets and liabilities on the balance sheet, major movements from the last year end (12/31/2014) included the following:

- Cash increased by $15,099 (12/31/2014 - $298,717; 3/31/2015 - $313,816);
- Accounts payable and accrued liabilities increased by $28,076 (12/31/2014 – $269,454; 3/31/2015 – $297,530).
- Subscription receipt decreases by $43,100 (12/31/2014 - $43,100; 3/31/2015 - $Nil)
- Share capital increased by $317,224 (12/31/2014 – $15,645,000; 3/31/2015 – $15,962,824).

The increase in cash was mainly a result of receiving $274,124 cash net of $50,000 already received in prior year in connection with a private placement closed during 2015 Q1, which was partially offset by using $248,956 in operating activities.

LIQUIDITY AND CAPITAL RESOURCES

On March 31, 2015, the Company had $313,816 cash and working capital of $25,973. The Company used $1,107,678 cash in its operations in Fiscal 2014. Management believes the liquidity and resources on hand may not be adequate to finance the Company's operations over the next 12-month operating period.

The Company has no operations that generate cash inflow and may need to raise additional funds to meet its long term business objectives. While the Company has a history of financing its operation through debt or equity financing, there are no guarantees that the Company can do so in the future.

During 2015 Q1, the Company received $274,124 from its investing activities (issuance of units from a private placement)

The Company is not subject to external capital commitments.

OFF-BALANCE SHEET ARRANGEMENTS

The Company does not utilize off-balance sheet transactions.

TRANSACTIONS WITH RELATED PARTIES

Refer to Note 9 of the Company's condensed consolidate interim financial statements for three months ended March 31, 2015.

PROPOSED TRANSACTIONS

Other than the option re-pricing discussed in the "corporate update" subsection, the Company does not have proposed transactions that may materially affect the Company.

FINANCIAL INSTRUMENTS AND OTHER INSTRUMENTS

Refer to Note 3 and 11 to the Company's audited consolidated financial statements for the year ended December 31, 2014 for the details for the Company's approach to managing the financial instrument risks and for classification of the Company's financial instruments. Refer to Note 11 to the Company's condensed consolidated interim financial statements for three months ended March 31, 2015 for the breakdown of the Company's financial instruments as at March 31, 2015.

SIGNIFICANT ACCOUNTING POLICIES

Refer to Note 3 to the Company's audited consolidated financial statements for the year ended December 31, 2014 and Note 3 to the Company's condensed consolidated interim financial statements for three months ended March 31, 2015.

SHARE DATA

As of the date of this MD&A, the Company has 52,068,035 common shares, 8,000,000 share purchase warrant, and 2,575,000 stock options outstanding. Share purchase warrants and stock options can be converted into the common shares of the Company on one-to-one basis.

RISKS AND UNCERTAINTIES

The Company's principal activity is mineral exploration and development. Companies in this industry are subject to many and varied kinds of risks, including, but not limited to, environmental, political, financing, and economic risks.

The Company has no significant source of operating cash flow and no revenues from operations. The Company has not yet determined whether its mineral properties contain mineral reserves that are economically recoverable. The Company has limited financial resources. Substantial expenditures are required to be made by the Company to establish reserves. There is no guarantee that the Company will be able to contribute or obtain all necessary resources and funds for the exploration and exploitation of its permits, and may fail to meet its exploration commitments.

The Company has options to earn an interest in multiple properties, however, all are in the exploration stage, are without known bodies of commercial mineralization, and have no on-going mining operations. Mineral exploration involves a high degree of risk and few properties which are explored are ultimately developed into producing mines.

Exploration of the Company's mineral properties may not result in any discoveries of commercial bodies of mineralization. If the Company's efforts do not result in any discovery of commercial mineralization, the Company will be forced to look for other exploration projects or cease operations.

The Company is subject to the laws and regulations relating to environmental matters in all jurisdictions in which it operates, including provisions relating to property reclamation, discharge of hazardous material and other matters. The Company faces a number of risks in its efforts to conduct its exploration activities and to conduct business, including those described below.

Mining Industry

The mineral exploration business is risky and most exploration projects will not become mines. The Company may offer an opportunity to a mining company to acquire an interest in a property in return for funding all or part of the exploration and development of the property. Major expenses may be required to establish ore reserves, to develop metallurgical processes and to construct mining and processing facilities at a particular site. For the funding of property acquisitions and exploration that the Company conducts, the Company depends on the issue of shares from treasury to investors. These stock issues depend on numerous factors including a positive mineral exploration environment, positive stock market conditions, a company's track record, and the experience of management.

It is impossible to ensure that the current exploration programs planned by the Company will result in a profitable commercial mining operation. Whether a mineral deposit will be commercially viable depends on a number of factors, some of which are the particular attributes of the deposit, such as size, grade and proximity to infrastructure, as well as metal prices which are highly cyclical and government regulations, including regulations relating to prices, taxes, royalties, land tenure, land use, importing and exporting of minerals and environmental protection.

The exact effect of these factors cannot be accurately predicted, but the combination of these factors may result in the Company not receiving an adequate return on invested capital. Mining operations generally involve a high degree of risk. The Company's operations are subject to all the hazards and risks normally encountered in the exploration, development and production of ore, including unusual and unexpected geology formations, rock bursts, cave-ins, flooding and other conditions involved in the drilling and removal of material, any of which could result in damage to, or destruction of, mines and other producing facilities, damage to life or property, environmental damage and possible legal liability. Although adequate precautions to minimize risk will be taken, milling operations are subject to hazards such as equipment failure or failure of retaining dams around tailings disposal areas, which may result in environmental pollution and consequent liability.

Government Regulation

The exploration activities of the Company are subject to various federal, provincial and local laws governing prospecting, development, production, taxes, labour standards and occupational health, mine safety, toxic substance, and other matters. Exploration activities are also subject to various federal, provincial and local laws and regulations relating to the protection of the environment. These laws mandate, among other things, the maintenance of air and water quality standards, and land reclamation. These laws also set forth limitations on the generation, transportation, storage and disposal of solid and hazardous waste.

Although the Company's exploration activities are currently carried out in accordance with all applicable rules and regulations, no assurance can be given that new rules and regulations will not be enacted or that existing rules and regulations will not be applied in a manner which could limit or curtail production or development. Whenever possible, agreements are signed directly with governments and periodic assessment of the political situation in countries where we operate keeps management up to date on factors that may affect our operations.

The Company may operate in foreign countries where government regulation is subject to change without notice which could have an adverse effect on operations, if the government were to impose taxes or duties that were excessive or unexpected the Company may be unable to meet the obligation to pay such costs and it could result in a slow down or ceasing of operations either temporarily or permanently.

Title, Permits, Licenses and Mineral Rights

The exploitation and development of mineral properties may require the Company to obtain regulatory or other permits and licenses from various governmental licensing bodies. There can be no assurance that the Company will be able to obtain and retain all necessary permits and licenses that may be required to carry out exploration, development and mining operations on its properties.

To increase the security of mining tenures where we operate, we have engaged a mineral rights lawyer to ensure compliance with mining laws and regulations in Rwanda, Mali. He looks after Desert Gold's interests and compliance is reviewed monthly by executive management and legal opinions have been obtain regarding security of tenure and compliance for all material permits of the group. Continuous interaction with the relevant departments in countries of operation in regard to permit compliance and administration further reduces risk of loss of tenure.

Although the Company has obtained title opinions with respect to certain of its properties, there may still be undetected title defects affecting such properties. Accordingly, such properties may be subject to prior unregistered liens, agreements, transfers or claims, and title may be affected by, among other things, undetected defects which could have a material adverse impact on the Company's operations.

Environmental Risks and Hazards

All phases of the Company's mineral exploration operations are subject to environmental regulation in the various jurisdictions in which it operates. Environmental legislation is evolving in a manner which will require stricter standards and enforcement, increased fines and penalties for non-compliance, more stringent environmental assessments of proposed projects and a heightened degree of responsibility for companies and their officers, directors and employees.

There is no assurance that future changes in environmental regulation, if any, will not adversely affect the Company's operations. Environmental hazards may exist on the properties on which the Company holds interests which are unknown to the Company at present, which have been caused, by previous or existing owners or operators of the properties. The Company may become liable for such environmental hazards caused by previous owners and operators of the properties even where it has attempted to contractually limit its liability. Government approvals and permits are currently, and may in the future be, required in connection with the Company's operations. To the extent such approvals are required and not obtained; the Company may be curtailed or prohibited from proceeding with planned exploration or development of mineral properties.

Failure to comply with applicable laws, regulations and permitting requirements may result in enforcement actions thereunder, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment, or remedial actions. Parties engaged in mining operations may be required to compensate those suffering loss or damage by reason of the mining activities and may have civil or criminal fines or penalties imposed for violations of applicable laws or regulations.

Amendments to current laws, regulations and permits governing operations and activities of mining companies, or more stringent implementation thereof, could have a material adverse impact on the Company and cause increases in exploration expenses, capital expenditures or production costs or reduction in levels of production at producing properties or require abandonment or delays in development of new mining properties.

Production of mineral properties may involve the use of dangerous and hazardous substances such as sodium cyanide. While all steps will be taken to prevent discharges of pollutants into the ground water the environment, the Company may become subject to liability for hazards that cannot be insured against.

However, the potential for environmental damage is limited during the exploration phase, and a policy of minimal environmental damage has been adopted; consultants have been appointed in Rwanda to conduct detailed environmental impact studies and assessments with no concerns having been identified thus far, and local environmental management programs will ensure compliance with applicable regulations.

Social & Security

Our reputation and credibility may be damaged if we fail to manage social responsibility expectations and commitments to local, governmental and media stakeholders. Factors influencing the risk are population density, level of education and the security situation in the operating countries.

We take a proactive approach to managing social develop and engage in government and community relations in the areas in which we operate and we provide for social responsibility projects in our budgeting.

Commodity Prices

The profitability of mining operations is significantly affected by changes in the market price of gold and other minerals. The level of interest rates, the rate of inflation, world supply of these minerals and stability of exchange rates can all cause significant fluctuations in base metal prices. Such external economic factors are in turn influenced by changes in international investment patterns and monetary systems and political developments. The price of gold and other minerals has fluctuated widely in recent years, and future serious price declines could cause continued commercial production to be impracticable.

Depending on the price of gold and other minerals, cash flow from mining operations may not be sufficient. Any figures for reserves presented by the Company will be estimates and no assurance can be given that the anticipated tonnages and grades will be achieved or that the indicated level of recovery will be realized. Market fluctuations and the price of gold and other minerals may render reserves uneconomical. Moreover, short-term operating factors relating to the reserves, such as the need for orderly development of the ore bodies or the processing of new or different grades of ore, may cause a mining operation to be unprofitable in any particular accounting period.

Foreign Currency Risk

The Company operates in foreign countries and is subject to foreign currency exchange rates and fluctuations which may have an impact on our future costs or on future cash flows. The economies of some of the countries in which we have operations may be subject to high rates of inflation which could adversely affect our financial situation. Funds will be invested in currencies to match the currency profile of forecast expenditure, taking into account currency and interest rate movements and we maintain excess funds in Canadian banking institutions.

Event and Uninsured Risks

The Company may carry insurance to protect against certain risks in such amounts as it considers adequate. Risks not insured against include environmental pollution or other hazards against which such corporations cannot insure or against which they may elect not to insure. The occurrence of an abnormal event resulting in damage to assets may occur, however, the potential for environmental damage is limited during the exploration phase and local environmental management programs will ensure compliance with applicable regulations.

Internal Control (Fraud)

The Company may be subject to internal risk of financial loss due to fraud or theft; the risk is limited by stringent treasury control over the funds available in each jurisdiction, and the adoption of policies, compliance monitoring by management, and low staff complement reduces the risk of collusion.

Reliance on Key Personnel

The Company does not carry insurance on its key personnel and the loss of any one of its directors or officers could have an adverse effect on the Company's operations. The Company has only one qualified person on its team, as that term is defined in NI43-101, on whom they rely to review and oversee the exploration program and as such, the loss of such person could result in a setback from which the Company may not be able to recover. The Company has a nominating and governance committee whose role includes maintaining lists of suitable candidates to fill such vacancies should they arise.

Conflicts of Interest

Certain of the directors of the Company also serve as directors and/or officers of other companies involved in natural resource exploration and development. Consequently, there exists the possibility for such directors to be in a position of conflict. Any decision made by such directors involving the Company will be made in accordance with their duties and obligations to deal fairly and in good faith with the Company and such other companies. In addition, such directors will declare, and refrain from voting on, any matter in which such directors may have a conflict of interest.

Operational Performance

While the Company strives to execute its program as planned, execution may not be in compliance, incurring delays and additional cost due to productivity and climatic factors. We monitor productivity of operations through weekly and monthly reporting from country offices and contractors to evaluate progress and ensure programs are on track, experienced geologists are appointed to head exploration programs, and countries with extreme weather conditions are recognized as a risk to operational
performance and planning acknowledges the risk.

Safety & Health in the Workplace

The Company operates in jurisdictions where health risks may exist and may operate in remote camps with limited access to emergency services. The mining industry has inherent risks and injuries or disease to personnel in operational jurisdictions may lead to liabilities for the Company. We conduct risk assessments and promote safe practices on site through instruction, written safety management systems where applicable, and contractual obligations to comply with health and safety regulations. As activity increases there is provision to put in place a group health and safety manager to lead and monitor compliance.

FINANCIAL AND DISCLOSURE CONTROLS AND PROCEDURES

The management of the Company is responsible for establishing and maintaining appropriate information systems, procedures and controls to ensure that information used internally and disclosed externally is complete, reliable and timely. Management is also responsible for establishing adequate internal controls over financial reporting to provide sufficient knowledge to support the representations made in this MD&A and the Company's condensed consolidated interim financial statements.

The management of the Company has filed the Venture Issuer Basic Certificate on SEDAR at www.sedar.com. In contrast to the certificate required for non-venture issuers under National Instrument 52-109 Certification of Disclosure in Issuers' Annual and Interim Filings ("NI 52-109"), the venture issuer basic certificate does not include representations relating to the establishment and maintenance of disclosure controls and procedures ("DC&P") and internal control over financial reporting ("ICFR"), as defined in NI 52-109. Investors should be aware that inherent limitations on the ability of certifying officers of a venture issuer to design and implement on a cost effective basis DC&P and ICFR as defined in NI 52-109 may result in additional risks to the quality, reliability, transparency, and timeliness of interim and annual filings and other reports provided under securities legislation.
