

# Metals Creek Resources Corp. Provides Update on Dona Lake Gold Project, NW Ontario; Applies For Exploration and Work Permits

Toronto, Ontario--(Newsfile Corp. - October 16, 2019) - Metals Creek Resources Corp. (TSXV: MEK) (OTC: MCREF) (Metals Creek or the "Company") is pleased to provide the following update on the recently optioned Dona Lake Gold Project (the "Property").

Preliminary results from the recently completed airborne survey define a number of conductive trends associated with magnetic highs indicative of oxide iron formations which is the host to gold mineralization on the Dona Lake Gold Project. It is interpreted that the more pyrrhotite rich sections of the iron formation within the Dona Lake deposit tend to exhibit a strong spatial relationship to increased gold mineralization. This could be a result of pyrrhotite replacing magnetite, decreasing the magnetite content and magnetic signature. With pyrrhotite being highly conductive, modeling of the recently completed airborne will prioritize targets exhibiting strong conductivity and weaker magnetic signatures. Geophysical targets will be ground proofed and prioritized once the final airborne data is received and compiled in preparation for a diamond drill program.

The company has applied for an exploration permit on the Dona Lake Gold Project. Continued compilation is ongoing of historic geological and drill data with the aim of generating a 3D geological model. This model will aide in outlining prospective drill targets for an upcoming drill program. Upon completion and compilation of the airborne survey follow-up as well as upgrading of the access road, drilling will commence on the patented claims on the property.

In addition, the company has applied for a work permit to install culverts to improve road access to the property in anticipation of drilling. Installation of the culverts will commence as soon as the work permit is received.

The Dona Lake Gold Project has seen no modern Geophysical exploration and the company believes this airborne survey will further enhance our understanding of the geology as well as identify areas of increased conductivity possibly indicating areas of increased pyrrhotite mineralization.

About Metals Creek Resources Corp.

Metals Creek Resources Corp. is a junior exploration company incorporated under the laws of the Province of Ontario, is a reporting issuer in Alberta, British Columbia and Ontario, and has its common shares listed for trading on the Exchange under the symbol "MEK". Metals Creek has earned a 50% interest in the Ogden Gold Property from Newmont Goldcorp, including the former Naybob Gold mine, located 6 km south of Timmins, Ontario and has an 8 km strike length of the prolific Porcupine-Destor Fault (P-DF). In addition, Metals Creek has recently signed an agreement with Newmont Goldcorp, where Metals Creek can earn a 100% interest in the past producing Dona Lake Gold Project in the Pickle Lake Ming District of Ontario. Metals Creek also has an option agreement with Quadro Resources on Metals Creek's and Benton Resources Staghorn Gold Project in Newfoundland as well as two option agreements with Anaconda Mining Inc. on Metals Creek's Jacksons Arm and Tilt Cove Properties also in Newfoundland. The company also has an agreement with Manning Ventures on the Metals Creeks Squid East project located in the Yukon. Metals Creek is engaged in the identification, acquisition, exploration and development of other mineral resource properties, and presently has mining interests in Ontario, Yukon and Newfoundland and Labrador. Additional information concerning the Company is contained in documents filed by the Company with securities regulators, available under its profile at [www.sedar.com](http://www.sedar.com).

Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.
