

FOR IMMEDIATE RELEASE

**NASDAQ:TRIL
TSX: TRIL**

**TRILLIUM THERAPEUTICS TO PRESENT AT INVESTOR AND SCIENTIFIC
CONFERENCES IN APRIL**

Toronto, March 29, 2017 – Trillium Therapeutics Inc. (Nasdaq/TSX: TRIL) a clinical stage immuno-oncology company developing innovative therapies for the treatment of cancer, announced today that the company is scheduled to present an update on the company's programs and progress at several upcoming conferences.

Investor Conference:

16th Annual Needham Healthcare Conference

Presenter: Niclas Stiernholm, Ph.D., President & Chief Executive Officer

Date and Time: April 5, 2017 at 4:40 p.m. ET

Location: The Westin NY Grand Central Hotel, New York

Scientific Conferences:

110th American Association for Cancer Research Annual Meeting 2017

Presenter: Gloria Lin, Ph.D., Trillium Research Scientist

Title: Intratumoral Delivery of TTI-621 (SIRPaFc), a CD47-Blocking Immunotherapeutic, Inhibits Tumor Growth and Prolongs Animal Survival in a Subcutaneous B cell Lymphoma Model

Date and Time: April 3, 2017, 1:00 p.m. - 5:00 p.m. ET

Location: Walter E. Washington Convention Center, Washington, D.C., Halls A-C, Poster Section 26

Presenter: Emma Linderorth, Ph.D., Trillium Research Scientist
Title: The Anti-Myeloma Activity of TTI-621 (SIRPαFc), a CD47-Blocking Immunotherapeutic, is Enhanced When Combined with a Proteasome Inhibitor
Date and Time: April 3, 2017, 1:00 p.m. - 5:00 p.m. ET
Location: Walter E. Washington Convention Center, Washington, D.C., Halls A-C, Poster Section 26

About Trillium Therapeutics

Trillium Therapeutics Inc. is a clinical stage immuno-oncology company developing innovative therapies for the treatment of cancer. The company's lead program, SIRPαFc (TTI-621), is a fusion protein that consists of the CD47-binding domain of human SIRPα linked to the Fc region of a human immunoglobulin (IgG1). It is designed to act as a soluble decoy receptor, preventing CD47 from delivering its inhibitory ("do not eat") signal. Neutralization of the inhibitory CD47 signal enables the activation of macrophage anti-tumor effects by pro-phagocytic ("eat") signals. A Phase 1 clinical trial ([NCT02663518](#)) evaluating SIRPαFc is ongoing in advanced hematologic malignancies, and a second Phase 1 trial is underway in solid tumors ([NCT02890368](#)). TTI-622 is an IgG4 SIRPαFc protein, which is primarily being developed for combination therapy. An IND filing is targeted for 2H/17. Trillium also has a proprietary medicinal chemistry platform, using unique fluorine chemistry, which permits the creation of new chemical entities from validated drugs and drug candidates with improved pharmacological properties. Stemming from this platform, the company's most advanced preclinical program is an orally-available bromodomain inhibitor, followed by an epidermal growth factor receptor antagonist with increased uptake in the brain. In addition, a number of compounds directed at undisclosed immuno-oncology targets are currently in the discovery phase.
