This is the form of a material change report required under Section 85(1) of the *Securities Act* and Section 151 of the *Securities Rules*.

BC FORM 53-901F

Securities Act

MATERIAL CHANGE REPORT UNDER SECTION 85(1) OF THE ACT

Item 1. Reporting Issuer

Nova Uranium Corp.
520 - 470 Granville Street
Vancouver, B.C. V6C 1V5

Item 2. Date of Material Change

December 7th, 2005

Item 3. Press Release

News Release dated December 7th, 2005 was disseminated by Stockwatch and Market News.

Item 4. Summary of Material Change

Nova Uranium wishes to update shareholders on **Nova's** exploration progress and upcoming plans for uranium exploration and deposit delineation.

Item 5. Full Description of Material Change

Nova Uranium wishes to update shareholders on **Nova's** exploration progress and upcoming plans for uranium exploration and deposit delineation.

Nova's primary asset is its readily accessible Mont Laurier property in southern Quebec. The property is a single contiguous block of 309 map-staked claims. Nova owns 100% of 264 claims and has an option to earn 100% of the remaining 45 claims. 21 uranium showings are known to occur on the property and one of these, the Nova showing, appears to have the most potential economic significance. Historical calculations for the **Nova** "A" zone by Bomet Mines in 1979 based on core and rotary air blast drilling together with shallow bulk sampling estimate that it contains 77 million pounds of U_3O_8 in 32.36 million tons of material grading 2.4 lbs U_3O_8 per ton *(These calculations were carried out prior to the implementation of NI 43-101 and are therefore not compliant.* **Nova** has not undertaken any independent investigation of the resource estimate nor has it independently analyzed the results of the previous exploration work in order to verify the resources, and therefore the historical estimates should not be relied upon. However, **Nova** believes that these historical estimates provide a conceptual indication of the potential of the occurrence and are relevant to ongoing exploration).

Nova plans three levels of ongoing work on the Mont Laurier property: firstly, at the most advanced level, diamond drilling and bulk sampling of the **Nova** showing; secondly, at an intermediate level, detailed compilation and examination of the other 20 known uranium occurrences on the property and; thirdly, at a grassroots level, regional exploration of the balance of the extensive (180 square km) property.

To date, **Nova** has completed airborne radiometric and magnetic surveys over most of the property. Line cutting, ground magnetic and electromagnetic surveys have been carried out over the **Nova** and several other showings. A ground radiometric survey was recently completed over the **Nova** showing and a number of saw cut channel bedrock samples have been collected and submitted for analysis.

Nova's target is a straightforward and safely mineable open pit bulk tonnage deposit in an easily accessible, mining friendly jurisdiction in south central Canada.

Mr. Michael Moore, P.Geo is the qualified person who has reviewed the technical information contained in this news release on behalf of the Company.
