

Vecima Unveils Entra® vCMTS for Next-Gen Broadband Access

- ***Entra® vCMTS is part of Vecima's Entra Cloud™ platform of open, interoperable, cloud-native applications***
- ***Built to support DOCSIS® 4.0 & Turbo DOCSIS® 3.1 with backwards compatibility***
- ***Fully containerized platform is dynamically scalable for operators of every size***
- ***Automation-driven platform is designed for simplified orchestration, provisioning, and operational efficiency***

VICTORIA, British Columbia--(BUSINESS WIRE)--March 11, 2024--Vecima Networks Inc. (TSX: VCM) today announced the Entra® Virtualized Cable Modem Termination System (vCMTS) as part of its Entra Cloud™ platform of open, interoperable, cloud-native applications that help cable operators transform their networks for next-generation broadband access. Entra vCMTS is built from the ground up to provide the scalability and throughput required for DOCSIS® 4.0 services.

The Entra vCMTS features an open, cloud-native design that is fully containerized and dynamically scalable for operators of every size at market-leading densities. Built on field-proven Vecima DOCSIS® technology, it is designed to maximize performance while minimizing space, power, and cost. It is interoperable with Vecima's widely deployed Remote PHY Devices (RPDs) and Vecima is fully committed to interoperability with other vendors.

Available for commercial off-the-shelf server hardware, the Entra vCMTS leverages Vecima's simplified host operating system and container orchestration methodology for maximum security and efficiency. By combining both Application Programming Interface (API) and Command Line Interface (CLI) approaches in one, the Entra vCMTS is a workforce multiplier for operators, offering a streamlined path for operators to transition from legacy platforms to a modern, highly automated, and high-reliability virtual DOCSIS platform.

"The Entra vCMTS represents our legacy of innovation and our commitment to providing open, flexible, and interoperable solutions that address the evolving and pressing needs in the market," said Colin Howlett, Chief Technology Officer at Vecima. "Vecima leads the industry in DOCSIS DAA interoperability and we're proud to bring this innovative platform to market."

The platform is currently entering lab trials with a Tier 1 operator in North America and will be ready for field trials worldwide in the fourth quarter of calendar 2024.

"Through over a decade of pioneering investment and development of Distributed Access Architecture, Vecima has built the comprehensive Entra portfolio with the singular purpose of supporting our operator partners as they transform their world-leading networks to the multigigabit era," said Sumit Kumar, Vecima President and CEO. "At our core, we believe these networks fuel global progress and empower communities everywhere. Our market-leading software that powers our entire Cable Access portfolio is flexible by design, and the virtualized Entra Cloud™ platform is a natural next step to once more support every operator with any architecture, underpinned by the common engine of our leading DAA intellectual property."

For more information about Vecima's Entra Cloud platform and Entra vCMTS, visit vecima.com/network-access/vcmts.

The Vecima Distributed Access Architecture (DAA) portfolio, recognized by the Dell'Oro Group as the North America market share leader in Remote MACPHY and 10G-EPON Remote Optical Line Terminal (R-OLT) solutions, is deployed by operators around the world. With full support for all next-generation cable access technologies, high-value legacy services, and proven interoperability, the networks of tomorrow are deployable today. About Vecima Networks

Vecima Networks Inc. (TSX: VCM) is leading the global evolution to the multigigabit, content-rich networks of the future. Our talented people deliver future-ready software, services, and integrated platforms that power broadband and video streaming networks, monitor and manage transportation, and transform experiences in homes, businesses, and everywhere people connect. We help our customers evolve their networks with cloud-based solutions that deliver groundbreaking speed, superior video quality, and exciting new services to their subscribers. There is power in connectivity – it enables people, businesses, and communities to grow and thrive. Learn more at vecima.com.
