

FORM 51-102F3
Material Change Report

Item 1: Name and Address of Company

PACIFIC CASCADE MINERALS INC.
Suite 1500 – 701 West Georgia Street
Vancouver, BC V7Y 1C6

Item 2: Date of Material Change

March 1, 2012

Item 3: News Release

March 1, 2012

Item 4: Summary of Material Change

Pacific Cascade Minerals Inc. (the "Company") provides Diamond Drill Program Results from the La Esperanza Prospect on its El Centenario project in Durango, Mexico.

Item 5: Full Description of Material Change

See attached news release.

Item 6: Reliance on subsection 7.1(2) or (3) of National Instrument 51-102

N/A

Item 7: Omitted Information

None

Item 8: Executive Officer

Harold Forzley, President
Telephone: (604)637-1341

Item 9: Date of Report

March 1, 2012

PRESS RELEASE
March 01, 2012
TSX-V: PCV
Pacific Cascade Minerals Provides Diamond Drill Program Results From the La Esperanza Prospect on the El Centenario Project

Pacific Cascade Minerals Inc. (the Company) is pleased to report the first 3 drill holes of the 12 hole Phase 1 drill program on the La Esperanza silver zone, El Centenario Property, Durango, Mexico. The Phase 1 program has tested 625 meters of strike length and the La Esperanza zone remains open to the north, south, and to depth. The 3 drill holes ESP 12-1,2,3 are summarized as to location, azimuth, and dip on the table below.

The initial program on the La Esperanza silver zone was designed to test for mineralization at the 50 meter and 100 meter level below the surface samples previously reported. Drill holes ESP 12-1,2,3 were drilled from the same drill setup.

Drill Hole	East	North	Azimuth	Dip
ESP-12-01	348253	2756351	115 ⁰	-60
ESP-12-02	348253	2756351	70 ⁰	-60
ESP-12-03	348253	2756351	70 ⁰	-80

ESP 12-01 intersected 2 zones of mineralization summarized in the following table:

ESP 12-01 Drill Hole Summary

Intersections	Width	Ag	Pb %	Zn %
32-50 meters	18 meters (59 feet)	41.4 ppm (1.45 ozs)	624 ppm (0.06%)	2491 ppm (0.248%)
126-134 meters	8 meters (26.2 feet)		604 ppm (0.06%)	2607 ppm (0.260%)

ESP 12-02 was drilled on an azimuth of 070 degrees with a -60 dip and was designed to intersect the La Esperanza silver base metal structure as sampled on surface. ESP 12-02 intersected silver and base metal mineralization over a 12.8 (42 feet) meter interval. It must be noted that the intersection has widened at depth from the surface sampling and represents sub-parallel mineralized structures previously not recognized or sampled.

ESP 12-02 Drill Hole Summary

Intersections	Width	Ag	Pb %	Zn %
32-44 meters	12.0 meters (39.4 feet)	143.8 ppm(5.07 ozs)	4335 ppm(.43%)	12765 ppm(1.28%)
32-41.85 meters	9.5 meters (32 feet)	164.7 ppm(5.81ozs)	5119 ppm(.51%)	14499 ppm(1.45%)
38-43 meters	5.0 meters	310 ppm(10.94 ozs)	9145 ppm(.91%)	26166 ppm(2.61%)

ESP 12-03 was drilled underneath ESP 12-02 to intersect mineralization 50 meters below the intersection in ESP12-02 at the 100 meter level. Drill hole ESP 12-03 ended at 93 meters in depth 27 meters short of its target depth.

Esp12-03 intersected a sub-parallel mineralized structure on the hanging wall of the La Esperanza structure.

ESP 12-03 Drill hole Summary

Intersections	Width	Ag	Pb	Zn
42-46.2 meters	4.2 meters(13.8 feet)	141ppm(4.97 ozs)	463 4 ppm(.46%)	17415.9 ppm(1.74%)
43.5-46.2 meters	2.7 meters(8.8 feet)	185 ppm(6.5 ozs)	581 6 ppm(.56%)	243333 ppm(2.43%)

The company is very pleased with the initial results of drilling as it confirms mineralization continues below the surface sampling and that multiple sub-parallel mineralized structures were intersected displaying a mineralized zone that widens at depth.

About the Project

The El Centenario project is situated 15km southwest of the La Cienega mine (owned by Fresnillo PLC) a structurally controlled gold-silver-lead-zinc mineral deposit that has been in production since early1999. To date, the La Cienega mine has produced more than 2M oz of gold and 50M oz of silver. Additionally, the world-class Metates deposit (27M oz gold equivalent owned by Chesapeake Gold Corporation (TSX-V: CKG) is located 10 km south-southeast of the El Centenario project. The project area encloses a historical, little-explored mining district that was active during the Spanish colonial times. The concession block contains dozens of mineral prospects and an abundance of small-scale mine workings. The style of mineralization varies from epithermal, low sulfidation, fracture-filling vein-stock-work breccia systems to skarn and sediment-hosted enriched disseminated zones.

Technical information in this news release has been reviewed by Derrick Strickland, P.Geo., a qualified person as defined in NI 43-101.
