Form 51-102F3
MATERIAL CHANGE REPORT

Item 1. **Name & Address of Company**

BCGold Corp. (the "Company")
Suite 1400 – 625 Howe St.
Vancouver, British Columbia
V6C 2T6

Item 2. **Date of Material Change**

September 17, 2007

Item 3. **News Release**

A press release dated September 17, 2007 was issued to the British Columbia, Alberta and Ontario Securities Commissions, the TSX Venture Exchange and through the facilities of Marketwire via Canadian Timely Disclosure.

Item 4. **Summary of Material Change**

The Company announced that diamond drilling has commenced on the Company's ICE and WS Properties, situated approximately 220 kilometres north of Whitehorse, Yukon.

Item 5. **Full Description of Material Change**

Item 5.1 **Full Description of Material Change**

Please refer to the press release of the Company disseminated on September 17, 2007, attached hereto.

Item 5.2 **Disclosure for Restructuring Transactions**

Not applicable

Item 6. **Reliance on subsection 7.1(2) or (3) of National Instrument 51-102**

Not applicable.

Item 7. **Omitted Information**

None.

Item 8. **Executive Officer**

The following executive officer of the Company is knowledgeable about the material change and this report:
Brian P. Fowler, President
Phone: 604-646-1589
Email: bfowler@bcgoldcorp.com

Item 9. **Date of Report**

September 17, 2007

For Immediate Release

BCGOLD CORP EXTENDS CARMACKS COPPER-GOLD TREND AND COMMENCES DIAMOND DRILL PROGRAM ON CARMACKS COPPER-GOLD PROPERTIES, YUKON

Vancouver, BC - September 17, 2007 - BCGold Corp. ("BCGold" or "the Company") is pleased to announce that diamond drilling has commenced on the Company's ICE and WS Properties, situated approximately 220 kilometres north of Whitehorse, Yukon (Figure 1). Kluane Drilling of Whitehorse, Yukon has been contracted to drill 1,200 metres to test "Carmacks-style" copper-gold exploration targets defined earlier this year by a comprehensive Phase I exploration program.

Copper-Gold Exploration Targets

BCGold will drill test the recently discovered ICE Zone (BCG News Release August 13, 2007) and the Central Area of the newly defined WS MMI (Mobile Metal Ion) Copper Anomalies situated along strike and less than 2 kilometres from Western Copper Corporations No. 12 Zone. BCGold's Central Area WS MMI Copper Anomaly remains open to the south and has been defined for more than 2 kilometres along what appears to be the southern strike extension of Western Copper's Carmacks Trend (Figure 1). Aurum Geological Consultants Inc. is supervising all aspects of BCGold's $1.5 million Carmacks Copper-Gold Belt exploration program and Mr. Al Doherty, P.Geo., the Qualified Person for the purposes of National Instrument 43-101 has reviewed the technical content of this news release.

MMI® Geochemical Survey Defines Carmacks Copper-Gold Trend on BCGold's WS Property

BCGold recently reported the completion of a 3,295 line kilometre airborne geophysical survey and soil sample surveys on four BCGold properties north of the Minto Mine and three properties adjacent to the Carmacks (Williams Creek) deposit, 42 kilometres to the south (BCGold news release dated August 13, 2007). A total of 4,040 MMI samples were collected every 50 metres along 100 metre spaced lines and to date the Company has received results for 3,246 samples.

BCGold's MMI® geochemical survey immediately south of Western Copper Corporation's Carmacks property clearly defines an anomalous copper-in-soils "corridor" consisting of a number of large copper anomalies that appear to be the surface expression and extension of the Carmacks Copper-Gold Trend. This corridor measures up to 1 kilometre wide and can be traced southeast-ward for 4 kilometres. The southern terminus appears to be a narrow, north-trending magnetic low, possibly representing a fault structure that appears to juxtapose the corridor northward for approximately 1.5 kilometres. East of this north-trending linear break the anomalous WS copper anomaly trend can be traced for another 3 kilometres to the end of BCGold's survey coverage area and remains open.

"BCGold is very pleased with the results of our MMI® soil survey" states Brian P. Fowler, P.Geo and President of BCGold. "There can be little argument that the Carmacks Copper-Gold Trend extends onto BCGold's WS and ICE properties in a pronounced fashion. We have distinct and broad copper MMI anomalies over a 7 kilometre strike length that warrants systematic evaluation and prioritization by ground geophysics, trenching and drilling".

MMI® or Mobile Metal Ion Geochemistry Explained

MMI® or Mobile Metal Ion Geochemistry differs from conventional soil geochemistry in that it is a partial extraction only measuring weakly bonded or 'mobile' metallic ions. The mobile metal ion may be released from ore bodies and travel upward towards the surface. This technique can often detect deeply buried mineralization above barren or transported material. The measured values are very low compared to conventional sampling where the bulk of the material is digested, but the contrast of the anomalous values with background is often greater, resulting in better defined trends. Concentrations are measured in the same way as conventional geochemistry. For additional information on MMI®, the reader is referred to www.mmigeochem.com.

Carmacks Copper-Gold Belt Properties

BCGold is the largest landholder in the Carmacks Copper-Gold Belt, holding title to 17 properties encompassing 16,274 hectares strategically located near Sherwood Copper Corporation's Minto Mine and Western Copper Corporation's Carmacks project. The Company's exploration focus in the Carmacks Copper-Gold Belt is directed towards the discovery of stand-alone and satellite copper-gold deposits to supplement mill feed for the nearby Minto and future Carmacks mining operations.

Carmacks Copper-Gold Properties Ownership Agreement

BCGold will acquire a 100% interest in the Carmacks Copper-Gold Belt properties by making $300,000CAD in cash payments, incurring a minimum of $900,000CAD in work expenditures and issuing 1,000,000 Units to a private individual over a four-year term.

About BCGold Corp

BCGold Corp. (TSX-V: BCG) is a Vancouver-based junior resource company focused on base and precious metal exploration in under-explored historic mining and exploration districts in British Columbia and Yukon. BCGold acquires and advances conceptual, early and mid-stage, quality exploration opportunities towards resource development utilizing internal expertise and by engaging preferred joint venture partners.

On behalf of the Board of Directors,

Brian P. Fowler, P. Geo.
President & CEO
