FORM 52-102F3
MATERIAL CHANGE REPORT

1. Name and Address of Company

Weststar Resources Corp.
Suite 200-551 Howe Street
Vancouver, British Columbia V6C 2C2P

2. **Date of Material Change**

April 21, 2009

3. **Press Release**

The Press Release dated April 21, 2009 was disseminated via Market News Publishing and Canada Stockwatch.

4. **Summary of Material Change**

The Company announced the receipt of results for 16 coal samples from drill hole A on the Tobin Lake Property and a non brokered private placement of up to 7,000,000 units at $0.10 per unit.

5. **Full Description of Material Change**

See attached press release dated April 21, 2009

6. **Reliance on Subsection 7.1(2) or (3) of National Instrument 51-102**

Not Applicable

7. **Omitted Information**

Not Applicable

8. **Executive Officer**

Mitchell Adam

604-669-9330

9. **Date of Report**

April 22, 2009

Schedule “A”

CONFIRMS THERMAL COAL QUALITY AT TOBIN LAKE COAL PROPERTY SASKATCHEWAN

April 21, 2009 - Vancouver, BC: Weststar Resources Corp. (TSX-V: WER Frankfurt: HN3) (the "Company") is in receipt of results for 16 coal samples from drill hole A, where a total of 17.7 meters of coal is indicated, and potentially up to 4 meters of coal was left in the hole as suggested by gamma logs and drill core. Based on proximate analysis of the samples the coal samples vary in rank approximately from Subbituminous C to Lignite B coal. Calorific values range from 6,463 Kj/Kg to 18,469 Kj/Kg on a Dry Basis.

Mitchell Adam, President, stated: "We are encouraged by the overall results of this winter’s program in that they demonstrate a near-surface coal deposit with good calorific values. The tested area is showing evidence that it may be at the edge of a sub basin, similar to that encountered by Goldsource Mines where coal thicknesses of up to 100m have been discovered.”

Preparations for a spring EM survey are progressing and will focus on the development of additional drill targets near the discovery area, and other parts of the overall permit area.

Within the region, airborne EM surveys have demonstrated their usefullenes in outlining the coal basins within the Manville Formation. The Company believes that this will be an extremely cost effective method of quickly targeting locations with potential to host the thickest accumulations of coal near Tobin Lake.

Future drill activities will await the completion of a property-wide full-spectrum Time-Domain airborne electromagnetic (EM) survey. The survey will be used to delineate both the Manville Coal seams within the property, and the elevations of the Devonian basement, thereby identifying locations with potential for the thickest accumulations of coal. The Tobin Lake Property measures 20 by 30 kilometers. The area tested by the winter drill program represents only a small portion of the property, measuring less than 1 by 1 kilometers.

All analyses were carried out by Loring Laboratories Ltd. of Calgary, Alberta. Loring is a certified laboratory and has extensive experience in the analysis and ranking of Canadian coals.

The Company has arranged, subject to TSX Venture Exchange approval, a non brokered private placement of up to 7,000,000 units at $0.10 per unit. Each unit consists of one common share and one transferable share purchase warrant, with each warrant exercisable into one additional common share at a price of $0.15 per share for a period of two years from the date of closing. Proceeds of the placement will be used to fund the Company’s upcoming EM survey and Phase 2 drill program and for general working capital. The Company is paying the maximum allowable finder’s fees under TSXV exchange policy.

About the Company: Weststar Resources Corp. (WER: TSX-V) is a mineral exploration company focused on discovering and advancing mineral properties by utilizing modern geological science to evaluate historical known discoveries. Weststar's portfolio is currently focused in Canada and is primarily invested in coal properties with known historical coal discoveries. The Company's Saskatchewan Tobin Lake 18 Meter Coal Property is currently the main focus of exploration activity.
