| Item 2 | Date of Material Change<br><br>July 18, 2007 |
| Item 3 | News Release<br><br>Dissemination on July 18, 2007 by Sedar, Market News and Stock Watch |
| Item 4 | Summary of Material Change<br><br>Copper/Gold/Palladium acquisition |
| Item 5.1 | Full Description of Material Change<br><br>The Company announces that subject to regulatory approval, the Company has acquired a porphyry copper/gold/palladium property, the Miner Mountain project, optioned from the Messers Hopper, Brandys, and Omega Exploration Services. The property lies immediately NNE of Princeton, BC in the prolific porphyry copper camp that runs from Copper Mountain (approximately 50 years of open pit production) along the Allison Fault to Aspen Grove, BC. The project is approximately 15 km northeast of the former producing Copper Mountain Mine and is within the Traditional Territory of the Upper Similkameen Indian Band.<br><br>A Review and Recommendations Report has been received from Ronald Nethery, P.Eng., a Qualified Person, within which he states: “the aforementioned claims are essentially drift covered and offer good exploration potential due to the fact that they both border known mineralization.” The claims mentioned are a part of the Miner Mountain Project. He continues, “The mineral claims, owned by Hopper on the south side of the project area, are seen to be structurally prepared, as is evidenced by the frequency of quartz veinlets, some of which are copper-gold bearing and offer exploration targets.” In his summary he states, “The object of the exploration search on the property could lead to the discovery of a large zone of copper-gold (palladium) mineralization that may be conducive to open pit mining.” |
