Material Change Report

Item 1 Name and Address of Company

Alliance Mining Corp. (“the Company”)
823 Gleneagles Drive
Kamloops, BC V2E 1J9

Item 2 Date of Material Change

February 10, 2011

Item 3 News Release

The news release was disseminated on February 10, 2011 through the services of the Newswire.ca and Market News.

Item 4 Summary of Material Change

The Company announces that Geotech Ltd. of Aurora, Ontario has been retained to conduct a heli-borne geophysical survey to assess copper/gold porphyry potential.

The Company has also granted incentive stock options to consultants to purchase an aggregate of 450,000 common shares in the capital of the Company, exercisable at a price of $0.15 per share for a period of two years.

Item 5 Full Description of Material Change

5.1 Full Description of Material Change

The Company announces that Geotech Ltd. of Aurora Ontario has been retained to conduct a heli-borne geophysical survey. The objectives of the survey are to assist the Company in defining structures to depth and define drill targets.

The survey will also assist the Company in determining if in fact the structures and mineralization continues from the previously operating Copper Mines located at either end of Alliance’s properties, these past producers were closed due to low copper prices . Currently one of the adjacent past producing copper porphyry mines, is being privately advanced to feasibility. The geology at surface appears to be similar in nature and during a recent field trip in late January 2011 the Company conducted a broad sampling program, and results are expected shortly.

Alliance will continue to be focused on advancing and developing its precious metal assets but has decided to also take a broader look at the overall potential of a Copper-Gold porphyry system. The Company also intends to evaluate potential for lead, zinc and manganese.

Alliance has chosen Geotech’s award winning “Versatile Time-Domain Electromagnetic” (VTEM) system. The VTEM system is currently one of the most advanced airborne geophysical technologies in use by the mineral exploration industry.

The Airborne survey will fly approximately 350 line kilometers on selected mineral properties within the Company’s Placerita Project, which consist of numerous properties within a twenty-five mile radius in Yavapai County, Arizona..

The Company has granted incentive stock options to consultants to purchase an aggregate of 450,000 common shares in the capital of the Company, exercisable at a price of $0.15 per share for a period of two years.

5.2 Disclosure for Restructuring Transactions
