FORM 51-102F3

MATERIAL CHANGE REPORT

ITEM 1 – NAME AND ADDRESS OF COMPANY

La Ronge Gold Corp. (the "Company")
Suite 701 – 675 West Hastings Street, Vancouver, British Columbia, V6B 1N2

ITEM 2 – DATE OF MATERIAL CHANGE

March 4, 2013

ITEM 3 – NEWS RELEASE

The Company issued a news release relating to the material change on March 4, 2013, which was disseminated to the TSX Venture Exchange and through Stockwatch and Marketnews and filed on SEDAR with the securities commissions of British Columbia and Alberta.

ITEM 4 – SUMMARY OF MATERIAL CHANGE

The Company announced that it has received additional drill assays from its Preview Property located in north-central Saskatchewan.

ITEM 5 – FULL DESCRIPTION OF MATERIAL CHANGE

See attached News Release.

ITEM 6 – RELIANCE ON SUBSECTION 7.1(2) OF NATIONAL INSTRUMENT 51-102

Not applicable.

ITEM 7 – OMITTED INFORMATION

No significant information has been omitted from this form on the basis that it is confidential information.

ITEM 8 – EXECUTIVE OFFICER

The following executive officer of the Company is knowledgeable about the material change and this Report:

Rasool Mohammad, Chief Executive Officer – Telephone: (604) 639-4533

ITEM 9 – DATE OF REPORT

March 5, 2013

NEWS RELEASE

633.61 g/t Au Intersected over 4.08 m including 1,123.25 g/t Au over 2.30 m in extension drilling at Preview SW Gold Deposit, Saskatchewan

HIGHLIGHTS

- **Hole PR13-151 drilled 633.61 grams per tonne of gold (g/t Au) over 4.08 m, including individual assays of 5.14 g/t Au over 0.77 m, 13.03 over 0.90 m and 4,279 g/t Au over 0.60 m**
- **Hole PR13-151 represents the best gold grade drilled to date in the La Ronge gold camp**
- **PR13-150 is drilled outside the deposit targeting one vein-structure extension; a coincident magnetic break at this location indicates a cross-cutting structure**
- Preview A and Preview North Prospects, two new prospects, are being drilled on strike from Preview SW Gold Deposit.
- Twenty (20) Drill holes completed to date testing mineralization outside of the Preview SW deposit.
- All the drill holes released to date confirm Preview SW Gold Deposit is open for expansion in all directions
- Engineering and Environmental studies are underway on the Preview SW Gold Deposit

March 4, 2013, Vancouver, British Columbia – La Ronge Gold Corp. (TSX-V: LAR) (the "Company") has received additional drill assays from its Preview Property located in north-central Saskatchewan. The holes released to date were drilled on the northeast and southwest margins of the Preview SW gold deposit, testing for extensions of gold mineralization outside the current resources as well as testing near surface gold mineralization within the deposit. Hole PR13-151 was designed to test one vein-structure outside the resource area. An obvious magnetic break may represent a cross-cutting structure at this location.

Drill Hole **PR13-151, drilled 75 m outside the defined resource to the northeast,** intersected:

- **633.61 g/t Au over 4.08 m** starting at 203.78 m including:
  - 1,123.25 g/t Au over 2.30 m including
    - **5.14 g/t Au over 0.77 m, 13.03 over 0.90 m, and 4,279 g/t Au over 0.60 m**

Assays from the initial holes of the program (PR13-144 to PR13-150) were previously released on February 4 and 26, 2013. Mineralized intervals are based on samples that vary in width from 0.6 m to 0.92 m utilizing 0.20 g/t gold cut-off levels with a maximum internal dilution of 0.86 metres. The attitude of mineralized intervals varies, and reported mineralized intersections may not represent true widths. Please follow this link to view the current area of drilling: http://www.larongegold.com/wp-content/uploads/2013/02/PSW-Drillhole-location-map-Feb-20131.jpg

2013 Drilling:

The primary objective of the 2013 program is to test mineralization outside the Preview SW Gold Deposit resource both along strike to the northeast and southwest as well as down-dip. Holes have been completed on the Preview A prospect as well as the Preview Adit prospect, which are located 430 m and 2620 m northeast, respectively, in the same northeasterly trending structural corridor that hosts the Preview SW deposit. Results from these holes will be released when assay results are received.

Company President and CEO Rasool Mohammad comments: "The spectacular results we received from hole PR13-151 are the highest grades reported in the La Ronge Gold belt to date. It is important to note that this intercept is outside the limits of our resource estimation blocks and should help in enlarging the deposit."

About the Preview SW Gold Deposit:

As reported in a News Release dated December 3, 2012, **the open pitable Preview SW gold deposit hosts** gold resources as summarized in the table below, using the base case estimate at a gold cut-off grade of 0.5 grams/tonne gold (g/t Au):

Preview SW Gold Resources

Category	Tonnes	Au g/t	Contained oz Au
INDICATED	1,958,400	2.12	138,100
INFERRED	3,714,600	2.09	257,300

The deposit remains open in all directions.

There are six known gold prospects on the Property: from north to south they are North/Adit, C, B, Preview SW, Clearwater A, and Clearwater B. In all zones, structurally controlled mesothermal lode gold is found in quartz veins within or on the margins of sheared dioritic-gabbroic sills and is associated with sulphides. The area of diorite-gabbro sills extends for 5200 m in a northeast-southwest direction across the property and reaches approximately 200 m in width.

The main Preview SW deposit is comprised of several sub-parallel northeast-trending gold-bearing structural (shear) zones. The shears trend northeast (020° to 045°) and dip 70° to 90° to the northwest. The en-echelon 1 to 10 m-wide structures are persistent at depth, and the zones bifurcate and merge at depth and along their length. The shears comprise major and minor shears that splay out and merge to form "horses" of undeformed rock within the shear zone.

Engineering and Environmental Studies:

In addition to the current exploration and expansion drilling at Preview SW deposit, the Company has initiated metallurgical studies on the Preview SW gold deposit. Preliminary engineering studies and base line environmental surveys will continue in 2013, and an updated resource estimate incorporating the results from this winter's drilling campaign will then become a part of a Preliminary Economic Analysis (PEA) on the Preview SW Deposit.

Samples of sawn drill core were analyzed by TSL Laboratories in Saskatoon with fire assay techniques. La Ronge Gold has implemented an industry standard QA/QC program consisting of randomly inserting standards, blanks, and duplicates into the sample stream to ensure assay accuracy and repeatability.

Gordon Davidson, P. Geol., the Company's Vice President of Exploration and a Qualified Person for the purposes of National Instrument 43-101, has reviewed the technical information in this News Release.

About La Ronge Gold Corp.

La Ronge Gold is a Vancouver-based rapidly advancing gold-resource growth and development company, focused on the expansion of high-grade gold deposits in one of Canada's emerging gold producing regions, the La Ronge Gold Belt, northern Saskatchewan. The Company has significant land positions (52,932 Ha. or 131,000 acres) in the region. **The Company also holds other gold projects located in Ontario, Canada, including Old Cabin Project in Wawa Ontario. This property is adjacent to the Island Gold Mine where Richmont Mines recently added a new high grade Inferred Mineral Resources of 508,000 ounces Au at a grade of 10.73 g/t Au.**
