

FORM 51-102F3

MATERIAL CHANGE REPORT

Item 1: Name and Address of Reporting Issuer

CLAIM POST RESOURCES INC.
4950 Yonge Street, Suite 1008
North York, Ontario M2N 7H1

Item 2: Date of Material Change

November 17, 2016

Item 3: News Release

The news release announcing the material change was released on November 17, 2016 through Newsfile Corp. and subsequently filed on the System for Electronic Document Analysis and Retrieval. A copy of the press release is attached hereto.

Item 4: Summary of Material Change

Claim Post Resources Inc. (“**Claim Post**” or the “**Company**”) announced that the Company has purchased 100% interest in 48 claim units (3 square miles) in Godfrey Township 11km west of the Hollinger Mine on the west border of Mountjoy Township. The purchase price was \$7,500 cash plus 400,000 common shares of Claim Post subject only to a 2% NSR Royalty with a buyout on 1%.

Item 5: Full Description of Material Change

The Company announced that that it has has purchased 100% interest in 48 claim units (3 square miles) in Godfrey Township 11km west of the Hollinger Mine on the west border of Mountjoy Township. The purchase price was \$7,500 cash plus 400,000 common shares of Claim Post subject only to a 2% NSR Royalty with a buyout on 1%.

This new property covers the claims where Hollinger Exploration intersected gold quartz veining in porphyries in the sediments on the west side of the Mattagami River Fault. The geological setting is similar to the Tahoe - Bristol Township porphyry zone. Claim Post’s 3,000 sample MMI program in 2012 indicated a multiple porphyry - gold trend through Mountjoy on the north side of the PDFZ continuing into Godfrey.

Directly south, on the south side of the PDFZ, the Metals Creek – Goldcorp JV just announced 5.73 g/t gold over 8.2m on November 15th, 2016 on their Ogden Project. Based on their website information, Metals Creek JV is drilling mainly porphyry hosted zones in sediments or conglomerates. Claim Post is very encouraged as the Mountjoy – Godfrey Gold MMI Project has a similar focus.

The Deloro Township Update

The following provides a brief update on Claim Post's press release issued on November 3rd, 2016 relating to the acquisition of 23 claim units in Deloro Township. The release made reference to a recognizing a 50 meter wide "**new gold discovery**" in Deloro when you combine the results of a historical 1940 diamond drill hole (DDH #5) plus 2010 SGX drilling and ground geophysics.

DDH #5 intersected 3 separate zones of gold mineralization; upper **2.2 g/t over 11.0m**, middle **1.8 g/t over 12.2m** and lower **3.3 g/t over 22 meters**. Within each zone there were higher grade intersections; upper **6.3 g/t**, middle **6.8g/t** and the lower zone **11.7 g/t** and **21.9 g/t** gold; each intersection was assayed over 1.5m of core length. DDH #5 was mineralized from 113m to 230 meters ending in mineralization. Gold was encountered in both porphyry and volcanic rocks.*

From 2008 to 2010, SGX Minerals explored the Lynx Project with ground geophysics plus drilled 4 diamond drill holes. The drill collar locations of the SGX holes were field checked with a GPS this week, relative to the outcrop under which DDH #5 was drilled. The 5 holes were also plotted on Magnetic, VLF and IP survey maps. A link to a Deloro – Ogden geology map shows the location of DDH #5 relative to Goldcorp, Metals Creek and Lexam land positions.

The SGX #2 hole which was drilled about 75m south of the DDH #5 intersected a mafic dike from 25 m to 191 m. The hole then intersected 45 meters of gold mineralization averaging .25 g/t from 191 to 235m. The SGX #2 hole should have intersected the IP anomaly at about 100m down the hole but stayed in an intrusive dike. The horizontal width of the gold system in SGX #2, drilled west to east, is about 30 meters wide whereas DDH #5 drilled east to west would be a minimum of 80 meters wide. Claim Post's main focus will be to re-drill DDH #5 as soon as drill funds are raised.**

* Historic drill intercepts and mining data from the Dictore Property (i.e. DDH #5) were sourced from historic files and assay logs – Assessment File 444 of Deloro Township; Timmins MNDM Office. QA/QC procedures and processes have not been audited by Claim Post. Historical results are not necessarily indicative of future results.

** Further drilling would be required to upgrade or verify the historical assay results. Claim Post is unaware of the existence of any technical report prepared in connection with the scientific and technical information in this news release. A Qualified Person (within the meaning of NI 43-101) has not done sufficient work to confirm the historical assay results reported.

Please see the attached press release for more information.

Item 6: Reliance of subsection 7.1(2) of NI 51-102

Not applicable.

Item 7: Omitted Information

Not applicable.

Item 8: Executive Officer

For further information please contact:

Charles Gryba, President

Tel.: (416) 801-6366

Item 9: Date of Report

November 28, 2016
