NEWS RELEASE **SEPTEMBER 12, 2016**

Advantage Lithium to Acquire Interest in 4 Lithium Brine Projects in Mexico

Projects focused on large closed basin salar targets, analogous to Clayton Valley

Vancouver, British Columbia, September 12, 2016 – Advantage Lithium Corp. (the "**Company**" or "**Advantage Lithium**") (**TSXV: AAL**) has entered into letter of intent (the "LOI") with Radius Gold Inc. ("Radius") pursuant to which the Company has acquired an option to earn up to a 70% interest in three lithium brine exploration projects (the "Projects") located in Chihuahua, Northwest Mexico from Radius Gold Inc.

Project Highlights

- The four projects covering a total of approximately 37,000 hectares and held by claim applications are located in the states of Chihuahua (La Union, La Union 2 and Santa Maria) and Coahuila (La Viesca)
- All projects are located in large, salar closed basins, in geological settings analogous to the Clayton Valley Basin, Nevada host of Albemarle's Silver Peak lithium producing mine operation
- Historic work in the area by the Mexican Geologic Survey included a 1982 drill hole at La Union which returned a brine sample of 283 ppm Li
- Radius conducted controlled surface samples which resulted in numerous anomalous lithium results including 189ppm Li at La Viesca
- Region is underexplored
- Mexico is considered a mining friendly supportive jurisdiction. The area has excellent infrastructure and is road accessible, leading to potentially low exploration costs

Key geographical highlights similar to Clayton Valley and/or associated with brine deposits

- Located in a desert climate with historic evaporate ponds.
- Large closed basin salar targets
- Geothermal hotsprings observed at La Union and Viesca salars
- Suitable lithium source-rocks
- Subsurface highly saline aquifers described in historic data
- Basin formation post Tertiary

David Sidoo, President and Director, of Advantage Lithium, commented: "*We are extremely pleased with these lithium brine projects. They are in a closed basin with salar targets and surface-level lithium – directly analogous to Clayton Valley. The region has seen little prior exploration and is an ideal setting for our technical team, which includes the award-winning geologist, Ross McElroy, who has a track record of making major discoveries in underexplored areas. We are looking forward to working with Radius to close the agreement and begin active exploration.*"

Project Details

State	Project	Approx Property Size (ha)
Chihauhau	**La Union**	**10,000**
	La Union 2	**7,000**
	Santa Maria	**10,000**
Coahuila	**La Viesca**	**10,000**

Upon closing of the agreement, Simon Ridgway will be appointed to the Advisory Board. Mr. Ridgway is a prospector, a mining financier and a Casey Research Explorer's League inductee. Grass roots exploration has provided him with a successful career as a prospector since starting out in the Yukon Territory in the late 70s. Simon and the exploration teams under his guidance have discovered gold deposits in Honduras, Guatemala, Nicaragua and continue that success globally. Companies operating under the Gold Group banner have raised over $400 million for exploration and development projects since 2003. Simon is a founder and Chairman of Fortuna Silver Mines, and founder and CEO of Radius Gold, Medgold Resources and Focus Ventures.

Details of the LOI

In order to acquire the option, the Company will pay $25,000 and must pay an additional $50,000 and issue 250,000 shares within two business days of TSXV acceptance.

Under the terms of the LOI, the Company has an option (the "First Option") to earn a 55% interest in the Projects by issuing 750,000 shares and spending $1,500,000 in exploration expenditures over a three-year period.

Upon exercise of the First Option to earn a 55% interest, the Company may elect to either: (a) form a 55:45 joint venture on industry standard terms, with Radius for further exploration and development of the Projects; or (b) receive an option (the "Second Option") to acquire a further 15% interest in one or more of the Projects. In order to exercise the Second Option and increase its interest to 70%, the Company must complete a NI 43-101 compliant preliminary feasibility study within 24 months of the election date. Upon exercise of the Second Option, the Company and Radius will form a 70:30, industry standard joint venture.

The Company has the right for a period of 60 days after the exercise of the Second Option on any Project, to purchase Radius' 30% interest in the Project at a price based on an independent valuation.

The Company will be the operator of the Projects during the option periods.

The parties intend to negotiate a definitive agreement to reflect the terms of the LOI together with customary terms.

Upon formation of a joint venture, neither party may transfer its interest in the joint venture without first offering it to the other party.

The technical information in this news release has been prepared in accordance with the Canadian regulatory requirements set out in National Instrument 43-101 and reviewed on behalf of the company by Ross McElroy, P.Geol., Technical Advisor to Advantage Lithium Corp., and the Designated Qualified person for the company.
