Form 53-901.F Material Change Report
Under Section 85(1) of the *Securities Act* (British Columbia)

Form 27 Material Change Report
Under Section 118(1) of the *Securities Act* (Alberta)- Form 27

Item 1 Reporting Issuer

Decade Resources Ltd. (the "Company")
611 8th Street
Stewart, B. C. V0T 1W0

Item 2 Date of Material Change

June 23, 2014

Item 3 Press Release/Publication/Filing

Issued June 23, 2014 and distributed through the facilities of Canada Stockwatch and Market News.

Item 4 Summary of Material Change

New Discovery BM on Bow Property

Item 5 Full Description of Material Change

See attached press release.

Item 6 Reliance on Confidentiality Provisions of the Securities Acts

This report is not being filed on a confidential basis.

Item 7 Omitted Information

There are no significant facts required to be disclosed herein which have been omitted.

Item 8 Senior Officer

Contact: Randolph Kasum, Secretary
Telephone: (250) 636-9283

Item 9 Statement of Senior Officer/Director

The foregoing accurately discloses the material change referred to herein.

'Ed Kruchkowski'

New Discovery of Big M Vein yields up to 3418.07 g/t Gold in Trench Sampling

Stewart, BC - Decade Resources Ltd. (“Decade”) reports that it is has received the final ICP analyses and gold assay results for the surface sampling from the Bow property. The property consists of 2 claims totaling 471 hectares and is contiguous with the Scottie Gold mine Crown Granted claims that host the former Scottie Gold mine 50 kilometres north of Stewart, BC, in the Skeena Mining Division. This mine which operated from 1981 to 1985 milled vein material averaging 16.20 g/t gold, producing 2,967,748 grams of gold (95,426 ounces gold) from 183,147 tonnes of mineralization. Previous work has indicated in excess of 13 different gold bearing veins in the Bow claim-Scottie Gold mine area. Exploration in 2013 outlined at least 4 new sulphide bearing veins on the Bow property, one of which contains visible gold associated with strong molybdenite mineralization. To date, at least 7 and possibly 8 mineralized veins have been located on the Bow claim.

The Bow property is located along volcanic rocks on the boundary with the Summit Lake stock, part of the Texas Creek Plutonic suite in the Stewart Area. This suite of rocks is related to alteration and mineralization at the former producing Premier mine (produced 2,000,000 oz gold) 20 km south of the property and the KSM copper-gold porphyries and Brucejack Lake gold deposits (Valley of the Kings deposit contains 1.2 million ounces of gold in the measured mineral resource category (two million tonnes grading 19.3 g/t gold); 7.5 million ounces of gold in the indicated mineral resource category (13.4 million tonnes grading 17.4 g/t gold); and, 4.9 million ounces of gold in the inferred mineral resource category (5.9 million tonnes grading 25.6 g/t gold – WWW.Sedar.com) 20 kilometres north of the property. The claims of the Bow property adjoin the southeast portion of the Pretium Resource Ltd property.

Of the 78 samples collected on the Big M vein, 10 samples assayed > 1000 g/t, 13 assayed from 500-1000 g/t, 10 assayed from 100-500 g/t, 9 assayed 50-100 g/t, 27 samples assayed 1-50 grams 9 assayed < 1 g/t gold. The vein is up to 4.5 m wide and has been traced over 25 metres with gold values obtained along the entire length. The vein intersects with the Blueberry at the north exposure of this vein. The Big M vein was exposed during pad building for drilling on the north end of the Blueberry vein. Subsequent to exposure, trenching was conducted along 25 m of this vein. Mineralization consists of a number of pyrrhotite-arsenopyrite-pyrite-molybdenite stringers up to 15 cm wide across 4.5 m of width. Sulphide content along the vein varies from 10-20 % overall.

Some of the results of the Big M vein sampling are shown in the table below:

Sample #	Vein Tested	Sample Type	Width Metres	Mo %	Au g/t

116740	Big M	Bedrock	Grab	0.044	832.35
116751	Big M	Bedrock	Grab	0.386	539.72
116752	Big M	Bedrock	Grab	0.246	488.25
116758	Big M	Bedrock	Grab	0.46	586.06
116766	Big M	Bedrock	4 m chip	0.009	280.50
116768	Big M	Bedrock	Grab	0.50	916.76
116769	Big M	Bedrock	Grab	0.43	1161.25
116774	Big M	Bedrock	Grab	0.488	1177.45
116775	Big M	Bedrock	Grab	0.527	2354.84
116776	Big M	Bedrock	Grab	0.38	3238.11
116779	Big M	Bedrock	Grab	0.525	3418.07
116788	Big M	Bedrock	3.5 m chip	0.182	179.75

All samples are assayed by Loring Laboratories of Calgary, Alberta. It is an ISO9001 certified laboratory. All gold assays are analyzed by fire methods which includes gravimetric finishes on the individual samples.

Decade's website has been updated to show data for the Bow Claim as well as the areas of 2013 surface sampling and diamond drilling. The Company is presently conducting a drill program in the area of the Big M and Blueberry veins.

Ed. Kruchkowski, P. Geo., a qualified person under National Instrument 43-101, is in charge of the exploration programs on behalf of the Company and is responsible for the contents of this release. E Kruchkowski has conducted all the exploration on behalf of the Company on this property and was responsible for all the logging and sampling.

Decade Resources Ltd. is a Canadian based mineral exploration company actively seeking opportunities in the resource sector. Decade holds numerous properties at various stages of development and exploration from basic grass roots to advanced ones. Its properties and projects are in Northern British Columbia. For a complete listing of the Company assets and developments, visit the Company website at www.decaderesources.ca which is presently being up dated.
