Form 53-901.F Material Change Report
Under Section 85(1) of the *Securities Act* (British Columbia)

Form 27 Material Change Report
Under Section 118(1) of the *Securities Act* (Alberta)- Form 27

Item 1 Reporting Issuer

Decade Resources Ltd. (the "Company")
611 8th Street
Stewart, B. C. V0T 1W0

Item 2 Date of Material Change

Sept.3, 2014

Item 3 Press Release/Publication/Filing

Issued Sept.3, 2014 and distributed through the facilities of Canada Stockwatch and Market News.

Item 4 Summary of Material Change

New discovery Zone 15.25 grams Gold over 49.6 meters

Item 5 Full Description of Material Change

See attached press release.

Item 6 Reliance on Confidentiality Provisions of the Securities Acts

This report is not being filed on a confidential basis.

Item 7 Omitted Information

There are no significant facts required to be disclosed herein which have been omitted.

Item 8 Senior Officer

Contact: Randolph Kasum, Secretary
Telephone: (250) 636-9283

Item 9 Statement of Senior Officer/Director

The foregoing accurately discloses the material change referred to herein.

TSX.V Trading Symbol: DEC

September 3, 2014

15.25 g/t GOLD OVER 49.6 m INTERSECTED IN NEW DISCOVERY ZONE

Stewart, BC - Decade Resources Ltd. (“Decade”) reports that it is has received assays for the first diamond drill hole completed in 2014 on the Bow Property. To date the Company has completed 6 drill holes in this year’s program. Highlights of assays for the first hole include the following:

Drill Hole #	Azimuth (degrees)	Dip (degrees)	From (m)	To (m)	Width (m)	Au g/t
DDH-14-Bow-1	320	- 45	44.60	94.21	49.6	15.25
including			58.91	72.10	12.20	56.70

The first hole tested the newly discovered Sixties Zone which is a NE trending zone of pyrrhotite veins and stockworks with minor pyrite and chalcopyrite within andesitic volcanics in contact with argillites. The first hole tested north of the previously identified Blueberry zone, an east- west vein which is present along a fault zone that has offset and rotated the volcanics and sediments in this area. The area of the 2014 drilling is in an area obscured by glacial moraine and overburden. Within the first hole, logging the core indicated fine visible gold in 4 different sections within the above 49.6 m section. Mineralization starts at the volcanic-sediment contact and appears to be associated with strong dark chlorite alteration. True width of the zone which dips to the southeast is unknown at this time.

Drill holes 14-2 and 3 tested the area of the Big M vein discovered in 2013 with drill holes directed towards the west and drilled entirely within argillites. Fine visible gold was noted within several locations within a 13 m section in drill hole no 2. Mineralization in the Big M is associated with arsenopyrite, minor pyrrhotite-pyrite-chalcopyrite and rarely molybdenite. Holes 4 to 6 tested in the area of a historic geochemical anomaly in the area of the Sixties Zone. Core from drill holes 3 and 4 is presently being logged and cut.

Bow Property

The property consists of 2 claims totaling 471 hectares contiguous with the Scottie Gold mine Crown Granted claims 50 kilometres north of Stewart, BC, in the Skeena Mining Division. The Bow property adjoins the southeast portion of the Pretium Resource Ltd property which hosts the Brucejack Lake gold deposits: 1.2 million ounces of gold in the measured mineral resource category (two million tonnes grading 19.3 g/t gold), 7.5 million ounces of gold in the indicated mineral resource category (13.4 million tonnes grading 17.4 g/t gold) and 4.9 million ounces of gold in the inferred mineral resource category (5.9 million tonnes grading 25.6 g/t gold), 20 kilometres north of the Bow property. The source of this information was obtained from the filings by Pretium on WWW.Sedar.com.. The Company states that the geology and mineralization on the Brucejack Lake Property is not necessarily indicative of the geology and mineralization on the Company's Bow Property.

A map showing the 2014 drill plan will be posted on the website. Photos of the core from DDH-14-Bow 1 and 2 are posted on the website..

Ed. Kruchkowski, P. Geo., a qualified person under National Instrument 43-101, is in charge of the exploration programs on behalf of the Company and is responsible for the contents of this release. E Kruchkowski has conducted all the exploration on behalf of the Company on this property and was responsible for all the logging and sampling. All samples are assayed by Loring Laboratories of Calgary, Alberta. It is an ISO9001 certified laboratory. All gold assays are analyzed by fire methods which includes gravimetric finishes on the individual samples.

Decade Resources Ltd. is a Canadian based mineral exploration company actively seeking opportunities in the resource sector. Decade holds numerous properties at various stages of development and exploration from basic grass roots to advanced ones. Its properties and projects are in Northern British Columbia. For a complete listing of the Company assets and developments, visit the Company website at www.decaderesources.ca which is presently being up dated. For investor information please e-mail decadeinvestorrelations@outlook.com or contact Brian Morrison at 604-662-8184.

ON BEHALF OF THE BOARD OF DECADE RESOURCES LTD.
