CORPORATE UP DATE

Stewart, BC – Decade Resources Ltd. ("Decade") is providing an update on the Company properties in the prolific "Golden Triangle" area of northwestern British Columbia. The Company has concentrated its efforts on properties that are in close proximity to or include rocks of the Texas Creek Plutonic suite in the Stewart Area.

The Company has 3 main properties associated with these rocks; namely the Bow, Grassy and Red Cliff properties.

The Bow property is located along volcanic rocks on the boundary with the Summit Lake stock, part of the Texas Creek Plutonic suite in the Stewart Area. This suite of rocks is related to alteration and mineralization at the former producing Premier mine 20 km south of the property and the KSM copper-gold porphyries and Brucejack Lake gold deposits 20 kilometres north of the property. Jurassic age intrusions (193-195 Ma Premier Porphyries near Stewart; Mitchell intrusions at Kerr-Sulphurets-Mitchell deposits and Brucejack Lake) are related to these mineralizing events in the Stewart area and Sulphurets-Mitchell valleys.

The Bow property adjoins the southeast portion of the Pretium Resource Ltd property which hosts the Brucejack Lake gold deposits located 20 kilometres north of the property. At Brucejack lake, there are 2 main deposits, namely the VOK deposit which contains 1.2 million ounces of gold in the measured mineral resource category (two million tonnes grading 19.3 g/t gold), 7.5 million ounces of gold in the indicated mineral resource category (13.4 million tonnes grading 17.4 g/t gold) and 4.9 million ounces of gold in the inferred mineral resource category (5.9 million tonnes grading 25.6 g/t gold) www.Sedar.com. The West zone has reported resources of 4.9 million tonnes at a grade of 5.85 g/t Au in the measured and indicated category and 4 million tonnes in the inferred category at 6.44 g/t.

It is also 10 kilometres north of the Premier mine property presently being developed by Ascot Resources and the Silver Coin property. The Premier mine produced 2,192,612 oz Au and 40,877,602 oz Ag from 3,289,578 tons in the period 1918 – 1967. From 1989

– 1996, the Premier mine produced 258,372 oz Au and 3,556,425 oz Ag from 3,039,680 tons (average grade 0.085 oz/t Au and 1.67 oz/t Ag). A high grade resource is presently being developed in the area of the old mine workings and a large low grade resource is reported north of the old mine. The low grade resources reported on Sedar includes 2,204,000 oz Au in the indicated category from material averaging 0.85 g/T and 443,000 oz Au in the inferred category from material averaging 0.74 g/T.

Decade has ground 2 km east of the Silver Coin Deposit and is immediately adjacent to the area of drilling by Ascot Resources on the Premier project.

On the Silver Coin property, owned by Jayden Resources and Mountain Boy Minerals, a NI 43-101 compliant mineral resource was reported on Sedar. At the 0.3 g/t (Au) cut-off grade the estimated measured and indicated resource is 24.13 million tons grading 1.08 g/t gold for a total of 842,416 ounces of gold, 4.45 million ounces of silver and 91.17 million pounds of zinc. The estimated inferred resources comprise an additional 813,273 ounces of gold, 6.69 million ounces of silver, and 128 million lbs of zinc. This resource includes none of the drill hole assays from the large 2011 drilling program.

Highlights of drilling on the Bow claim in 2014 include:

- 15.25 g/t Au over 49.6 m in DDH-14-1
- 39.43 g/t Au over 12.66 m in DDH-14-2.

On the Red Cliff project, the Company and Mountain Boy Minerals are in joint venture on the Crown Granted portion of the property which is owned 65% by Decade and 35% by Mountain Boy. The Silver Crown 6 claim in which Decade is earning a 100 % interest is adjacent to the north portion of the crown grants. To the north of the Silver Crown 6 claim, Mountain Boy owns a 100 % interest in the MB property. The Red Cliff Extension claim owned 100 % by Decade is along the east side of the Silver Crown 6 claim.

A 43-101 report by Lawrence Dick, PhD., P.Geo filed on SEDAR states: “Mineralization intersected on the property to date indicates that the gold-bearing system is open along strike and to depth. The system has characteristics of a mesothermal or deep-seated system, and as such can be expected to have significant depth continuity, in addition to the along-strike continuity which is being shown by drill results. The width of the hosting structure, presence of high grades of gold, zones of stockwork mineralization peripheral to the vein hosted gold and associated sulphides, and depth extent shown by drilling, indicate significant untested potential within this large system.”

Highlights of drilling along this shear include some of the following gold intersection results:

- 10.63 g/t Au over 12.2 m of core length in DDH 2009 MON-2.
- 10.94 g/t Au over 25.91 m of core length in DDH 2010 MON-31.

- 43.91 g/t Au over 7.47 m of core length in DDH 2011 MON-11.
- 14.53 g/t Au over 30.64 m of core length in DDH 2011 MON-27.
- 10.85 g/t Au over 10.28 m of core length in DDH 2011 MON-29.
- 16.32 g/t Au over 8.32 m of core length in DDH 2011 MON-37.
- 62.51 g/t Au over 4.27 m of core length in DDH 2012 MON-03.
- 14.88 g/t Au over 14.02 m of core length in DDH 2012 MON-24.

Complete results can be viewed in the 43-101 report.

On the Grassy claim area, Ascot has reported on it activities at the nearby Premier Mine that include the newly discovered West zone as *"mineralization is focused in a structural zone ranging from 30 metres to 150 metres in thickness, which contains mineralized quartz stockwork, and quartz breccia bodies. Host rocks include both andesites and high-level Premier porphyry intrusives strongly potassic and sericite altered. Individual quartz breccia zones range in thickness from two metres to 50 metres and generally contain higher gold and silver grades, along with lead and zinc values. This system has a known strike length of over 1,600 metres and a dip length of up to 1,200 metres"* (Ascot Resource press release August 22, 2014).

Decade claim holdings are within 1200 metres of this large mineralized structure with claims both immediately east and north of this newly developed large zone.

The Company is in the process of conducting a financing in order to continue exploring the Red Cliff property.

Ed. Kruchkowski, P. Geo., a qualified person under National Instrument 43-101, is in charge of the exploration programs on behalf of the Company and is responsible for the contents of this release. E. Kruchkowski is not independent of Decade as he is the president of the Company.

Decade Resources Ltd. is a Canadian based mineral exploration company actively seeking opportunities in the resource sector. Decade holds numerous properties at various stages of development and exploration from basic grass roots to advanced ones. Its properties and projects are in Northern British Columbia. For a complete listing of the Company assets and developments, visit the Company website at www.decaderesources.ca which is presently being up dated.
