Drilling was completed to test an area with veins and lenses of high grade copper and gold mineralization along the Lord Nelson/Del Norte property boundary. The drilling was located at the east edge of the copper-gold bearing zone to check for down dip extensions. It appears that the main zone has a shallow dip to the east and holes tested beneath it. Also it appears that there are higher gold-lower copper zones as well as the high grade copper-gold zones. Highlights of results from 9 holes are shown below:

Ed Kruchkowski, president of the Company states: *'the Lord Nelson tenures require more exploration to establish the dip and strike of the copper-gold bearing zones. There are* *numerous exposures of copper-gold bearing horizon traced for 1.2 km and a width of 200-300m. The horizon shows some similarities to the gold-copper replacement horizon called the O-Zone on the south side of the Del Norte claims. In the O- Zone, the best drill intercept was which ran 15.2m grading 3.63 g/t gold and 0.410% copper. The company also plans to run some metallic check assays for gold on some of the drill hole intersections."*

Analysis were performed by Activation Laboratories Ltd in Kamloops BC.

At present, the Company is actively exploring newly located claims near Mt Milligan which appear to have copper-molybdenum mineralization. In addition, the Company is starting a prospecting program on the lower levels of the Treasure Mountain property.
