TAD's VTEM Survey Encounters Multiple Conductive Anomalies on Patterson Uranium  
Prospect in the Athabasca Basin

TAD Mineral Exploration Inc. ("TAD" or the "Company") (TJ—TSX Venture Exchange) wishes to announce that the VTEM system resolved a deep seated structural conductor on all three survey lines. The conductor is related to a strong magnetic feature, and may be interpreted as a fault structure. Additional data is required to fully define the highest priority targets within the Patterson Uranium Prospect in the world class Athabasca Basin.

Mr. James Nelson, Director of TAD states, "We are encouraged to have the VTEM encounter structural conductors on all the lines surveyed. Additional work is being planned at this time with the goal of narrowing down the highest priority drill targets. In addition to this data on the Patterson Uranium Prospect, TAD recently also acquired significant acreage bordering NexGen Energy Ltd (NXE-TSX.v) in the Athabasca Basin now giving TAD multiple prospects that the company plans to aggressively work on."

Mr. Gregory Thomson, P.Geo., is the qualified person for the project as defined by National Instrument 43-101 and has reviewed this news release.
