

INTACT GOLD ANNOUNCES RESULTS OF DRILLING ON THE BELLETERRE PROJECT IN QUEBEC

December 19, 2017 – Vancouver, BC - Intact Gold Corp. (TSX-V: ITG) (FSE: 1A5) (the “Company” or “Intact Gold”), is pleased to announce positive results from diamond drilling on the **Belleterre Gold Project** in western Quebec. The 2017 diamond drilling program intercepted near surface gold mineralization in 5 holes on the Old Shafts zone including minor visible gold.

Significant results from the drilling program are tabulated below:

Hole ID	From (m)	To (m)	Interval (m)	Au g / t
IG-17-06	11.00	15.00	4.00	2.14
Including	12.55	13.60	1.05	5.03
IG-17-07	10.50	22.00	11.50	3.92
Including	10.50	11.00	0.5	35.06
Including	12.00	13.20	1.20	7.7
IG-17-07	30.30	31.30	1.00	5.00
IG-17-09	6.05	9.10	3.05	7.74
Including	7.65	9.10	1.45	15.77
IG-17-09	14.00	19.90	5.90	5.16
Including	18.00	18.95	0.95	19.69
IG-17-10	6.30	8.00	1.70	3.94
IG-17-11	8.00	9.00	1.00	4.09

The intercepts as reported are as drilled intercepts and do not represent true widths.

The drill program consisted of 957m in 12 holes. The program was designed to test continuity and follow up on promising results from exploration programs by previous operators. The first three holes targeted previously untested northeast-trending gold-in-soil anomalies coincident with conductors and magnetic anomalies. The next eight holes tested the extension of a gold-bearing structure drilled in 2010-2011 by Exploration Aurtois. Two shafts were sunk on this structure in the 1940’s and the area remains open along strike. The last hole was designed to step out 1996 and 1999 drilling which intersected gold-bearing quartz veins along a northeast-trending structure.

Locations of diamond drill holes in 2017 program in NAD83 Zone 17N:

Hole	Easting	Northing	Area	Azimuth	Dip	Length (m)
IG-17-01	677460	5251476	Corigias	155	-45	171
IG-17-02	677874	5251659	Corigias	135	-45	159
IG-17-03	677977	5251919	Corigias	132	-45	150.3
IG-17-04	677677	5252633	Old Shafts	320	-45	39
IG-17-05	677684	5252626	Old Shafts	320	-42	30
IG-17-06	677684	5252626	Old Shafts	320	-60	42
IG-17-07	677665	5252618	Old Shafts	320	-45	42
IG-17-08	677665	5252618	Old Shafts	320	-60	63
IG-17-09	677645	5252635	Old Shafts	140	-44	30
IG-17-10	677645	5252635	Old Shafts	140	-60	27
IG-17-11	677645	5252635	Old Shafts	140	-70	51
IG-17-12	677547	5252794	Artonabi	168	-50	145

Notes on Sampling and Assaying:

Drill intersections are all NQ size core. After drilling, the core was logged for geology and structure then marked for sampling and photographed. Samples were split in half lengthwise using a hydraulic core splitter in the logging facility. Half core samples were bagged and sealed before being transported to the analytical lab. Half-cores are stored on site for future reference. Samples were sent to AGAT laboratories in Val d'Or, Quebec for preparation where the samples were crushed and pulverized to 85% passing 200mesh. A 250g split was then sent to AGAT Laboratories in Mississauga and analyzed for gold by fire assay with an ICP-OES finish. Select samples were also analysed for Platinum and Palladium by fire assay. Samples where visible gold was observed during logging received gold analysis by fire assay with a screened metallic preparation. Quality Assurance and Control (QA/QC) included insertion of both high and low-grade standards as well as blanks into the sample stream at a rate of 10 QA/QC samples per 100 samples. The samples were rerun at AGAT for gold by fire assay using AAS finish and the pulps and coarse rejects from the AGAT preparation facility were shipped to ACME Laboratories in Timmins, Ontario where they underwent preparation and analysis. Gold by fire assay with AAS finish was performed and gold by metallic screen fire assay was performed on select samples with anomalous gold. The issuer is independent of both laboratories used. The company is considering the results from ACME Laboratories to be the most representative after reviewing the QA/QC samples.

About the Belleterre Project

The Project comprises 42 claims previously referred to as the Belleterre Extrême-Est, Guillet, and Ortona blocks covering an area of approximately 1,700 hectares. The Project covers part of a greenstone belt measuring 50 kilometres by 10 kilometres and is located fewer than two kilometres from the past producing Belleterre Mine. Previous work on the Project dates back to 1934 and consists of 567 drill holes totalling 65,800m and a historic bulk sample taken in 2005/2006 from the Lake Expanse gold zone, which returned 11,539 tonnes of 3.28 grams per tonne gold (Theberge 2014).

In 2007, a historic estimate of Mineral Resources was produced in the same area of the bulk sample and results were as follows*:

- Measured: 19,487 tonnes of 2.16 g/t Au
- Indicated: 301,463 tonnes of 2.66 g/t Au
- Inferred: 76,570 tonnes of 2.31 g/t Au

* Details of the Historic Resource are summarized from:

Kelly, D., Gagnon, Y., May 25, 2007. Évaluation des Ressources, Projet Lake Expansé, Propriété Guillet Canton Guillet, prepared for Vantex Resources Ltd. The reader is cautioned that a qualified person has not performed sufficient work to classify the historical estimate as current resources and Intact Gold is not treating the historical estimate as current mineral resources.

The assumptions and parameters used in the Historic Mineral Resource Estimate are described as follows:

- The database used was comprised of diamond drill holes and channel samples.
- Interpretations of a low grade and high-grade zone were prepared on cross section and then transcribed to 5m spaced level plans.
- Mineral resources were estimated using polygonal methods on 10 level plans for the upper 50m and on 6 NS sections below that.
- A cut-off of 1 g/t Au and a minimum true thickness of 2.5 m was applied.
- Sample grade was capped at 1 oz./t.
- Grade was projected a maximum distance of 15 m from drill intersections
- Tonnage and grades did not take into account external dilution, except from stockpiled material which was added to the in situ Mineral Resources.
- The Mineral Resources were classified as Measured, Indicated and Inferred.
 - Measured – from surface channel samples
 - Indicated – from drill hole samples
 - Inferred – not described
 - Stockpiled material was classified as Measured
