## Commentary at a glance

## Performance

In the month under review the Company's NAV total return was 0.5% and the FTSE All-Share Index total return was 0.9%.

## Contributors/detractors

The biggest positive contributor to relative performance was Imperial Brands, the tobacco company. The biggest detractor was RELX, the provider of information and analytics to businesses, lawyers and scientists.

## Outlook

We think the valuation of UK equities is compelling compared with equivalents overseas. In particular, the dividend yields on offer are attractive relative to the main alternatives.

## Company overview

## Objective

The Company's objective is to provide long-term growth in income and capital, principally by investment in equities listed on the London Stock Exchange. The Board fully recognises the importance of dividend income to shareholders.

## Highlights

Renowned for its record-setting annual dividend increases since 1966, the Company targets long-term income and capital growth.

## Fund Manager commentary

### Investment environment

At the start of August it emerged that US jobs growth in July was weaker than forecast. Meanwhile, jobs data for May and June was also sharply revised downwards.

US Federal Reserve (Fed) Chair Jerome Powell hinted that policymakers would ease borrowing conditions by cutting interest rates in September. While this proved positive for world equity markets, it put downward pressure on the US dollar.

In the UK, the FTSE All-Share Index rose 0.9% in sterling terms (3.0% in US dollar terms). The Bank of England (BoE) lowered its benchmark rate by 25 basis points (bps) to 4.0%. The decision was reached only after a second vote and by a narrow 5 to 4 majority.

The annual UK inflation rate accelerated to 3.8% in July from June's 3.6% rise. This fuelled expectations that the BoE would delay its next interest-rate cut.

### Portfolio review

The biggest positive contributor to performance relative to the benchmark was Imperial Brands, the tobacco company. This was followed by not holding a position in Compass, the contract caterer, which saw its share price fall.

The biggest detractor from performance was RELX, the provider of information and analytics to businesses, lawyers and scientists. The second biggest detractor was AstraZeneca, the pharmaceutical company, where we hold an underweight position compared with the FTSE All-Share Index.

We added to the holding in Unilever, the global consumer products company. We believe that Unilever, which is in the process of demerging its ice cream division, has the potential to improve the organic growth rate of the rest of its business. We also added to the position in Big Yellow, the leading UK self-storage company, which we feel is well-placed to benefit from the growth of its sector.

We sold the holding in Anglo American, the mining company, after its disappointing interim dividend declaration, delays in the sale of its remaining coal assets in Australia, and concerns about the outlook for De Beers (its diamond subsidiary). In early September, Anglo American announced a plan to merge with Teck, the Canadian mining company. We also sold the holding in Hays, the recruitment agency, given the downturn in its share price is proving longer and more severe than we had expected.

### Manager outlook

Rising trade tariffs are viewed negatively by most investors given the likely adverse implications for inflation and economic growth. We think the UK economy is likely to be relatively less affected given its bias towards services.

Some 60% of the revenues earned by companies that we invest in are from outside the UK, which provides useful diversification, even though the companies are predominantly listed on the London Stock Exchange.

We think the valuation of UK equities is compelling compared with the equivalents overseas, possibly due to the low allocation from domestic, institutional investors. In particular, we find the dividend yield of UK equities attractive relative to the main alternatives.

## Glossary

### Discount/Premium

The amount by which the price per share of an investment company is either lower (at a discount) or higher (at a premium) than the net asset value per share (cum income), expressed as a percentage of the net asset value per share.

### Gearing

The effect of borrowing money for investment purposes (financial gearing). The amount a company can “gear” is the amount it can borrow in order to invest. Gearing is used in the expectation that the returns on the investments bought will exceed the costs of the borrowings that funded the purchase. This Company can also use synthetic gearing through derivatives and foreign exchange hedging and/or other non-fully funded instruments or techniques.

### Leverage

The Company's leverage is the sum of financial gearing and synthetic gearing. Details of the Company's leverage limits can be found in both the Key Information Document and Annual Report. Where a company utilises leverage, the profits and losses incurred by the company can be greater than those of a company that does not use leverage.

### Market capitalisation

Share price multiplied by the number of shares in issue, excluding treasury shares, at month end. Shares typically priced mid-market at month-end closing.

### Net Asset Value (NAV)

The total value of a Company's assets less its liabilities.

### NAV (Cum Income)

The value of investments and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

### NAV (Ex Income)

The value of investments and cash, excluding current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

### NAV total return

The theoretical total return on shareholders' funds per share reflecting the change in Net Asset Value (NAV) assuming that dividends paid to shareholders were reinvested at NAV at the time the shares were quoted ex-dividend. A way of measuring investment management performance of investment trusts which is not affected by movements in discounts/premiums.

### Net assets

Total assets minus any liabilities such as bank loans or creditors.

### Net cash

A company's net exposure to cash/cash equivalents expressed as a percentage of shareholders' funds, after any offset against its gearing. This is only shown for companies that have gearing in place.

### Net gearing

A company's total assets (less cash/cash equivalents) divided by shareholders' funds expressed as a percentage.

### Ongoing charges

The total expenses for the financial year (excluding performance fee), divided by the average daily net assets, multiplied by 100.

### Share price

Closing mid-market share price at month end.

### Share price total return

The theoretical total return to the investor assuming that all dividends received were reinvested in the shares of the company at the time the shares were quoted ex-dividend. Transaction costs are not taken into account.

### Total assets

Cum Income NAV multiplied by the number of shares, plus prior charges at fair value.

### Yield

Calculated by dividing the current financial year's dividends per share (this will include prospective dividends) by the current price per share, then multiplying by 100 to arrive at a percentage figure.

## Company specific risks

- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- Active management techniques that have worked well in normal market conditions could prove ineffective or negative for performance at other times.
- The Company maintains a portfolio with a bias towards income-generating companies. This may result in the Company significantly underperforming or outperforming the wider market.
- A persistent reduction in dividend income from investee companies could adversely affect the Company's ability to maintain its record of paying a growing dividend each year.
- This Company is suitable to be used as one component of several within a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested in this Company.
- The Company could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Company.
- The return on your investment is directly related to the prevailing market price of the Company's shares, which will trade at a varying discount (or premium) relative to the value of the underlying assets of the Company. As a result, losses (or gains) may be higher or lower than those of the Company's assets.
- If a Company's portfolio is concentrated towards a particular country or geographical region, the investment carries greater risk than a portfolio that is diversified across more countries.
- Where the Company invests in assets that are denominated in currencies other than the base currency, the currency exchange rate movements may cause the value of investments to fall as well as rise.
- The Company may use gearing (borrowing to invest) as part of its investment strategy. If the Company utilises its ability to gear, the profits and losses incurred by the Company can be greater than those of a Company that does not use gearing.
- All or part of the Company's management fee is taken from its capital. While this allows more income to be paid, it may also restrict capital growth or even result in capital erosion over time.
