Commentary at a glance

Performance

In the month under review the Company's NAV total return was 3.0% and the FTSE All-Share Index total return was 3.7%.

Contributors/detractors

The biggest positive contributor to performance relative to the benchmark was not holding Rolls Royce. The biggest relative detractor was AstraZeneca, where there is an underweight position.

Outlook

We think the valuation of UK equities is compelling compared with equivalents overseas. In particular, the dividend yields on offer are attractive to us relative to the main alternatives.

Company overview

Objective

The Company's objective is to provide long-term growth in income and capital, principally by investment in equities listed on the London Stock Exchange. The Board fully recognises the importance of dividend income to shareholders.

Highlights

Renowned for its record-setting annual dividend increases since 1966, the Company targets long-term income and capital growth.

Fund Manager commentary

Investment environment

The FTSE All-Share Index rose 3.7%, helped by some upbeat corporate results and updates, better-than-expected UK inflation data and improved global trade relations. The rally boosted the index to another all-time high.

In the US, the Federal Reserve (Fed) cut its main interest rate by 25 basis points to 4.0%, although it warned that another reduction in December was not a certainty. The European Central Bank (ECB) left its key interest rate unchanged at 2.0%.

Portfolio review

The biggest single positive contributor to performance relative to the benchmark was not holding Rolls Royce, the aero engine manufacturer. The second biggest contributor was the holding in NatWest, the bank.

The biggest detractor was AstraZeneca, the pharmaceutical company, which is held in the portfolio but at a significantly underweight position compared with the index. The second biggest detractor was BAE Systems, the defence company.

We added to the holding in Diageo, the global alcoholic beverages company that owns leading brands including Johnnie Walker (whisky), Don Julio (tequila) and Guinness. We also added to the positions in British Land, the real estate investment trust (REIT) which owns well-located London offices and retail warehouses across the

We added to the holding in Diageo, the global alcoholic beverages company that owns leading brands including Johnnie Walker (whisky), Don Julio (tequila) and Guinness. We also added to the positions in British Land, the real estate investment trust (REIT) which owns well-located London offices and retail warehouses across the UK, and which have been experiencing rental growth. We took some profits in the holding in SSE, the electricity utility company.

Manager outlook

Rising trade tariffs are viewed negatively by most investors given the likely adverse implications for inflation and economic growth. Some 60% of the revenues earned by companies that we are invested in are from outside the UK, which provides useful diversification, even though the companies are predominantly listed on the London Stock Exchange.

We think the valuation of UK equities is compelling compared with the equivalents overseas, possibly due to the low allocation from domestic, institutional investors. In particular, we find the dividend yield of UK equities attractive relative to the main alternatives.

Glossary

Discount/Premium

The amount by which the price per share of an investment company is either lower (at a discount) or higher (at a premium) than the net asset value per share (cum income), expressed as a percentage of the net asset value per share.

Gearing

The effect of borrowing money for investment purposes (financial gearing). The amount a company can “gear” is the amount it can borrow in order to invest. Gearing is used in the expectation that the returns on the investments bought will exceed the costs of the borrowings that funded the purchase. This Company can also use synthetic gearing through derivatives and foreign exchange hedging and/or other non-fully funded instruments or techniques.

Leverage

The Company's leverage is the sum of financial gearing and synthetic gearing. Details of the Company's leverage limits can be found in both the Key Information Document and Annual Report. Where a company utilises leverage, the profits and losses incurred by the company can be greater than those of a company that does not use leverage.

Market capitalisation

Share price multiplied by the number of shares in issue, excluding treasury shares, at month end. Shares typically priced mid-market at month-end closing.

Net Asset Value (NAV)

The total value of a Company's assets less its liabilities.

NAV (Cum Income)

The value of investments and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV (Ex Income)

The value of investments and cash, excluding current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV total return

The theoretical total return on shareholders' funds per share reflecting the change in Net Asset Value (NAV) assuming that dividends paid to shareholders were reinvested at NAV at the time the shares were quoted ex-dividend. A way of measuring investment management performance of investment trusts which is not affected by movements in discounts/premiums.

Net assets

Total assets minus any liabilities such as bank loans or creditors.

Net cash

A company's net exposure to cash/cash equivalents expressed as a percentage of shareholders' funds, after any offset against its gearing. This is only shown for companies that have gearing in place.

Net gearing

A company's total assets (less cash/cash equivalents) divided by shareholders' funds expressed as a percentage.

Ongoing charges

The total expenses for the financial year (excluding performance fee), divided by the average daily net assets, multiplied by 100.

Share price

Closing mid-market share price at month end.

Share price total return

The theoretical total return to the investor assuming that all dividends received were reinvested in the shares of the company at the time the shares were quoted ex-dividend. Transaction costs are not taken into account.

Total assets

Cum Income NAV multiplied by the number of shares, plus prior charges at fair value.

Yield

Calculated by dividing the current financial year's dividends per share (this will include prospective dividends) by the current price per share, then multiplying by 100 to arrive at a percentage figure.

Company specific risks

- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- Active management techniques that have worked well in normal market conditions could prove ineffective or negative for performance at other times.
- The Company maintains a portfolio with a bias towards income-generating companies. This may result in the Company significantly underperforming or outperforming the wider market.
- A persistent reduction in dividend income from investee companies could adversely affect the Company's ability to maintain its record of paying a growing dividend each year.
- This Company is suitable to be used as one component of several within a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested in this Company.
- The Company could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Company.
- The return on your investment is directly related to the prevailing market price of the Company's shares, which will trade at a varying discount (or premium) relative to the value of the underlying assets of the Company. As a result, losses (or gains) may be higher or lower than those of the Company's assets.
- If a Company's portfolio is concentrated towards a particular country or geographical region, the investment carries greater risk than a portfolio that is diversified across more countries.
- Where the Company invests in assets that are denominated in currencies other than the base currency, the currency exchange rate movements may cause the value of investments to fall as well as rise.
- The Company may use gearing (borrowing to invest) as part of its investment strategy. If the Company utilises its ability to gear, the profits and losses incurred by the Company can be greater than those of a Company that does not use gearing.
- All or part of the Company's management fee is taken from its capital. While this allows more income to be paid, it may also restrict capital growth or even result in capital erosion over time.

Not for onward distribution. Before investing in an investment trust referred to in this document, you should satisfy yourself as to its suitability and the risks involved, you may wish to consult a financial adviser. This is a marketing communication. Please refer to the AIFMD Disclosure document and Annual Report of the AIF before making any final investment decisions. Past performance does not predict future returns. The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested.
