APPENDICES

- "A" – REPORT OF MANAGEMENT AND DIRECTORS ON OIL AND GAS DISCLOSURE
- "B" – REPORT ON RESERVES DATA BY INDEPENDENT QUALIFIED RESERVES EVALUATOR OR AUDITOR
- "C" – AUDIT COMMITTEE CHARTER

GLOSSARY OF TERMS

Selected Defined Terms

"**2025 AGM**" has the meaning ascribed thereto under the heading "*General Development of the Business – Three Year History – 2025 – Board of Directors Changes*";

"**ABCA**" means the *Business Corporations Act* (Alberta), together with any or all regulations promulgated thereunder, as amended from time to time;

"**Acquired Assets**" has the meaning ascribed thereto under the heading "*General Development of the Business – Three Year History – 2024 – Charlie Lake and Montney Asset Acquisition*";

"**Acquisition**" has the meaning ascribed thereto under the heading "*General Development of the Business – Three Year History – 2024 – Charlie Lake and Montney Asset Acquisition*";

"**Advantage**" or the "**Corporation**" means Advantage Energy Ltd., a corporation amalgamated under the ABCA. All references to "**Advantage**" or the "**Corporation**", unless the context otherwise requires, are references to Advantage Energy Ltd. and its predecessors and subsidiaries;

"**Agreement**" has the meaning ascribed thereto under the heading "*General Development of the Business – Three Year History – 2025 – Board of Directors Changes*";

"**Board of Directors**" or "**Board**" means the board of directors of Advantage;

"**Brookfield**" has the meaning ascribed thereto under the heading "*General Development of the Business – Three Year History – 2023 – Entropy Strategic Financing Agreement*";

"**CCO**" has the meaning ascribed thereto under the heading "*General Development of the Business – Three Year History – 2023 – Entropy Strategic Financing Agreement*";

"**CCS**" means carbon capture and storage;

"**CGF**" has the meaning ascribed thereto under the heading "*General Development of the Business – Three Year History – 2023 – Entropy Strategic Financing Agreement*";

"**Common Shares**" means the common shares of Advantage;

"**Conroy Area**" has the meaning ascribed thereto under the heading "*General Development of the Business – Three Year History – 2023 – Conroy Acquisition*";

"**Credit Facilities**" has the meaning ascribed thereto under the heading "*General Development of the Business – Three Year History – 2024 – Increase in Credit Facility*";

"**Debentures**" has the meaning ascribed thereto under the heading "*General Development of the Business – Three Year History – 2024 – Bought Deal Financing*";

"**Entropy**" means Entropy Inc., a corporation incorporated under the ABCA and a subsidiary of Advantage;

"**IFRS**" means International Financial Reporting Standards as issued by the International Accounting Standards Board;

"**Indenture**" has the meaning ascribed thereto under the heading "*Description of the Corporation's Securities – Debentures*";

"**Kimmeridge**" has the meaning ascribed thereto under the heading "*General Development of the Business – Three Year History – 2025 – Board of Directors Changes*";

"**MOU**" means memorandum of understanding;

"**NCIB**" means normal course issuer bid;

"**NDA**" means non-disclosure agreement;

"**NI 52-110**" means National Instrument 52-110 - *Audit Committees*;

"**NYMEX**" means New York Mercantile Exchange;

"**Offering**" has the meaning ascribed thereto under the heading "*General Development of the Business – Three Year History – 2024 – Bought Deal Financing*";

"**OPEC**" means the Organization of Petroleum Exporting Countries;

"**Shareholders**" means the holders from time to time of one or more Common Shares, as shown on the register of such holders maintained by the Corporation or by the transfer agent of the Common Shares, on behalf of the Corporation;

"**Special Committee**" has the meaning ascribed thereto under the heading "*General Development of the Business – Three Year History – 2025 – Formation of Special Committee*";

"**Subscription Receipts**" has the meaning ascribed thereto under the heading "*General Development of the Business – Three Year History – 2024 – Bought Deal Financing*";

"**TSX**" means the Toronto Stock Exchange; and

"**U.S.**" means the United States of America.

Selected Defined Oil and Gas Terms

"**abandonment and reclamation costs**" means all costs associated with the process of restoring a property that has been disturbed by oil and gas activities to a standard imposed by applicable government or regulatory authorities;

"**API**" means the American Petroleum Institute;

"**API gravity**" means the API gravity expressed in degrees in relation to liquids, which is a measure of how heavy or light a petroleum liquid is compared to water. If a petroleum liquid's API gravity is greater than 10, it is lighter and floats on water; if less than 10, it is heavier than water and sinks. API gravity is thus a measure of the relative density of a petroleum liquid and the density of water and is used to compare the relative densities of petroleum liquids;

"**COGE Handbook**" means the "Canadian Oil and Gas Evaluation Handbook" maintained by the Society of Petroleum Evaluation Engineers (Calgary Chapter), as amended from time to time;

"**conventional natural gas**" means natural gas that has been generated elsewhere and has migrated as a result of hydrodynamic forces and is trapped in discrete accumulations by seals that may be formed by localized structural, depositional or erosional geological features;

"developed non-producing reserves" are those reserves that either have not been on production, or have previously been on production, but are shut-in, and the date of resumption of production is unknown;

"developed producing reserves" are those reserves that are expected to be recovered from completion intervals open at the time of the estimate. These reserves may be currently producing or, if shut-in, they must have previously been on production, and the date of resumption of production must be known with reasonable certainty;

"developed reserves" are those reserves that are expected to be recovered from existing wells and installed facilities or, if facilities have not been installed, that would involve a low expenditure (for example, when compared to the cost of drilling a well) to put the reserves on production. The developed category may be subdivided into developed producing reserves and developed non-producing reserves;

"development costs" means costs incurred to obtain access to reserves and to provide facilities for extracting, treating, gathering and storing the oil and gas from reserves. More specifically, development costs, including applicable operating costs of support equipment and facilities and other costs of development activities, are costs incurred to:

- (a) gain access to and prepare well locations for drilling, including surveying well locations for the purpose of determining specific development drilling sites, clearing ground, draining, road building, and relocating public roads, gas lines and power lines, to the extent necessary in developing the reserves;
- (b) drill and equip development wells, development type stratigraphic test wells and service wells, including the costs of platforms and of well equipment such as casing, tubing, pumping equipment and wellhead assembly;
- (c) acquire, construct and install production facilities such as flow lines, separators, treaters, heaters, manifolds, measuring devices and production storage tanks, natural gas cycling and processing plants, and central utility and waste disposal systems; and
- (d) provide improved recovery systems;

"exploration costs" means costs incurred in identifying areas that may warrant examination and in examining specific areas that are considered to have prospects that may contain oil and gas reserves, including costs of drilling exploratory wells and exploratory type stratigraphic test wells. Exploration costs may be incurred both before acquiring the related property (sometimes referred to as "prospecting costs") and after acquiring the property. Exploration costs, which include applicable operating costs of support equipment and facilities and other costs of exploration activities, are:

- (a) costs of topographical, geochemical, geological and geophysical studies, rights of access to properties to conduct those studies, and salaries and other expenses of geologists, geophysical crews and others conducting those studies (collectively referred to as "geological and geophysical costs");
- (b) costs of carrying and retaining unproved properties, such as delay rentals, taxes (other than income and capital taxes) on properties, legal costs for title defence, and the maintenance of land and lease records;
- (c) dry hole contributions and bottom hole contributions;
- (d) costs of drilling and equipping exploratory wells; and
- (e) costs of drilling exploratory type stratigraphic test wells;

"forecast prices and costs" means future prices and costs that are:

- (a) generally accepted as being a reasonable outlook of the future; or

- (b) if, and only to the extent that, there are fixed or presently determinable future prices or costs to which the Corporation is legally bound by a contractual or other obligation to supply a physical product, including those for an extension period of a contract that is likely to be extended, those prices or costs rather than the prices and costs referred to in subparagraph (a);

"future net revenue" means a forecast of revenue, estimated using forecast prices and costs, arising from the anticipated development and production of resources, net of the associated royalties, operating costs, development costs, and abandonment and reclamation costs;

"gross" means:

- (a) in relation to an entity's interest in production and reserves, its "company gross reserves", which are such entity's working interest (operating or non-operating) share before deduction of royalties and without including any royalty interest of such entity;
- (b) in relation to wells, the total number of wells in which an entity has an interest; and
- (c) in relation to properties, the total area of properties in which an entity has an interest;

"hydrocarbon" means a compound consisting of hydrogen and carbon, which, when naturally occurring, may also contain other elements such as sulphur;

"light crude oil" means crude oil with a relative density greater than 31.1 degrees API gravity;

"LNG" means liquefied natural gas;

"McDaniel" has the meaning ascribed thereto under the heading *"Statement of Reserves Data and Other Oil and Gas Information – Disclosure of Reserves Data"*;

"McDaniel Report" has the meaning ascribed thereto under the heading *"Statement of Reserves Data and Other Oil and Gas Information – Disclosure of Reserves Data"*;

"medium crude oil" means crude oil with a relative density greater than 22.3 degrees API gravity and less than or equal to 31.1 degrees API gravity;

"natural gas" means a naturally occurring mixture of hydrocarbon gases and other gases;

"natural gas liquids" or "NGLs" means those hydrocarbon components that can be recovered from natural gas as a liquid including, but not limited to, ethane, propane, butanes, pentanes plus, and condensates;

"net" means:

- (a) in relation to an entity's interest in production and reserves, such entity's working interest (operating or non-operating) share after deduction of royalty obligations, plus the entity's royalty interests in production or reserves;
- (b) in relation to an entity's interest in wells, the number of wells obtained by aggregating an entity's working interest in each of its gross wells; and
- (c) in relation to an entity's interest in a property, the total area in which an entity has an interest multiplied by the working interest owned by it;

"**NGTL**" means the natural gas gathering and transportation system in Alberta and northeastern British Columbia, owned by Nova Gas Transmission Ltd., a subsidiary of TC Energy Corporation;

"**NI 51-101**" means National Instrument 51-101 - *Standards of Disclosure for Oil and Gas Activities*;

"**probable reserves**" are those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves;

"**property**" includes: (a) fee ownership or a lease, concession, agreement, permit, licence or other interest representing the right to extract oil or gas subject to such terms as may be imposed by the conveyance of that interest; (b) royalty interests, production payments payable in oil or gas, and other non-operating interests in properties operated by others; and (c) an agreement with a foreign government or authority under which a reporting issuer participates in the operation of properties or otherwise serves as "producer" of the underlying reserves (in contrast to being an independent purchaser, broker, dealer or importer). A property does not include supply agreements, or contracts that represent a right to purchase, rather than extract, oil or gas;

"**proved reserves**" are those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves;

"**reserves**" are estimated remaining quantities of oil and natural gas and related substances anticipated to be recoverable from known accumulations, as of a given date, based on: (a) analysis of drilling, geological, geophysical and engineering data; (b) the use of established technology; and (c) specified economic conditions, which are generally accepted as being reasonable. Reserves are classified according to the degree of certainty associated with the estimates;

"**resource play**" refers to drilling programs targeted at regionally distributed crude oil or natural gas accumulations; successful exploitation of these reservoirs is dependent upon technologies such as horizontal drilling and multi-stage fracture stimulation to access large rock volumes in order to produce economic quantities of oil or natural gas;

"**shale gas**" means natural gas: (a) contained in dense organic-rich rocks, including low-permeability shales, siltstones and carbonates, in which the natural gas is primarily adsorbed on the kerogen or clay minerals; and (b) that usually requires the use of hydraulic fracturing to achieve economic production rates; and

"**undeveloped reserves**" are those reserves expected to be recovered from known accumulations where a significant expenditure (for example, when compared to the cost of drilling a well) is required to render them capable of production. They must fully meet the requirements of the reserves classification (proved, probable) to which they are assigned.

Words importing the singular number only include the plural, and *vice versa*, and words importing any gender include all genders. All dollar amounts set forth in this annual information form are in Canadian dollars, except where otherwise indicated.

ABBREVIATIONS AND OIL AND GAS ADVISORIES

Crude Oil and Natural Gas Liquids		Natural Gas	
bbl	barrel	Mcf	thousand cubic feet
bbls	barrels	MMcf	million cubic feet
Mbbls	thousand barrels	bcf/d	billion cubic feet per day
NGLs	natural gas liquids	Mcf/d	thousand cubic feet per day
BOE or boe	barrel of oil equivalent	MMcf/d	million cubic feet per day
Mboe	thousand barrels of oil equivalent	Mcfe	thousand cubic feet of natural gas equivalent
MMboe	million barrels of oil equivalent	MMcfe/d	million cubic feet of natural gas equivalent per day
boe/d	barrels of oil equivalent per day	MMbtu	million British Thermal Units
bbls/d	barrels of oil or liquids per day	GJ/d	Gigajoules per day
Other			
AECO	a notional market point on the NGTL system, located at the AECO 'C' hub in Southeastern Alberta, where the purchase and sale of natural gas is transacted		
APEGA	The Association of Professional Engineers and Geoscientists of Alberta		
CCS	Carbon capture and storage		
CCUS	Carbon capture, utilization and storage		
Henry Hub	a central delivery location, located near Louisiana's Gulf Coast connecting several intrastate and interstate pipelines, that serves as the official delivery location for futures contracts on the NYMEX		
WTI	means West Texas Intermediate, the reference price paid in U.S. dollars at Cushing, Oklahoma for the crude oil standard grade		

The term "boe" or barrels of oil equivalent and "Mcfe" or thousand cubic feet equivalent may be misleading, particularly if used in isolation. A boe or Mcfe conversion ratio of six thousand cubic feet of natural gas to one barrel of oil equivalent (6 Mcf: 1 bbl) is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead. As the value ratio between natural gas and crude oil based on the current prices of natural gas and crude oil is significantly different from the energy equivalency of 6:1, utilizing a conversion on a 6:1 basis may be misleading as an indication of value.

This annual information form contains certain oil and gas metrics, which do not have standardized meanings or standard methods of calculation and therefore such measures may not be comparable to similar measures used by other companies and should not be used to make comparisons. Such metrics have been included herein to provide readers with additional measures to evaluate the Corporation's performance; however, such measures are not reliable indicators of the future performance of the Corporation and future performance may not compare to the performance in previous periods and therefore such metrics should not be unduly relied upon.

References in this annual information form to short-term production rates are useful in confirming the presence of hydrocarbons, however such rates are not determinative of the rates at which such wells will commence production and decline thereafter and are not indicative of long-term performance or of ultimate recovery. Additionally, such rates may also include recovered "load oil" fluids used in well completion stimulation. While encouraging, readers are cautioned not to place reliance on such rates in calculating the aggregate production of Advantage.

Certain other terms used herein but not defined herein are defined in NI 51-101 and, unless the context otherwise requires, shall have the same meanings herein as in NI 51-101.

CONVERSION

The following table sets forth certain conversions between Standard Imperial Units and the International System of Units (or metric units).

To Convert From	To	Multiply By
Mcf	cubic metres	28.317
cubic metres	cubic feet	35.315
bbls	cubic metres	0.159
cubic metres	bbls	6.289
feet	metres	0.305
metres	feet	3.281
miles	kilometres	1.609
kilometres	miles	0.621
acres	hectares	0.405
hectares	acres	2.471
gigajoules	MMbtu	0.950
MMbtu	gigajoules	1.0526

FORWARD-LOOKING STATEMENTS

Certain statements contained in this annual information form constitute forward-looking statements. These statements relate to future events or our future performance. All statements other than statements of historical fact may be forward looking-statements. Forward looking-statements are often, but not always, identified by the use of words such as "seek", "anticipate", "plan", "continue", "estimate", "expect", "may", "will", "project", "predict", "potential", "targeting", "intend", "could", "might", "should", "believe" and similar expressions. These statements involve known and unknown risks, uncertainties and other factors that may cause actual results or events to differ materially from those anticipated in such forward-looking statements. Advantage believes the expectations reflected in those forward-looking statements are reasonable but no assurance can be given that these expectations will prove to be correct and such forward looking statements included in, or incorporated by reference into, this annual information form should not be unduly relied upon. These statements speak only as of the date of this annual information form.

In particular, this annual information form contains forward-looking statements pertaining to, but not limited to, the following:

- the Corporation's strategy, focus and plans;
- the performance characteristics of the Corporation's assets;
- crude oil, natural gas and NGL production levels;
- the anticipated timing of when the Glacier Phase 2 CCS Project will come onstream and the anticipated capture capacity thereof;
- the anticipated benefits to be derived from Entropy's existing MOUs and NDAs and the expectation that they will result in completed CCS projects;
- the Corporation's intended use of Entropy's technology and the anticipated benefits to be derived therefrom;
- the anticipated benefits to be derived from the Corporation's working interest land in the Conroy Area;
- the Corporation's 2026 capital budget and three-year strategic plan, including its anticipated production growth, targeted investment and the goals and focus thereof;
- Advantage's expectations regarding its intrinsic value and long-term prospects;
- the Corporation's net debt target, and intentions once such target is reached and the anticipated benefits in connection therewith;

- the Corporation's development plan, including the expansion of its processing facilities at Progress and Valhalla and the anticipated benefits to be derived therefrom;
- the Corporation's expectations and anticipated benefits to be derived from the Corporation's transportation commitments;
- the anticipated means that Advantage will use to fulfill its commitments for future physical deliveries of crude oil and natural gas;
- the anticipated benefits to be derived from Advantage's long-term natural gas supply agreement for CPV Three Rivers Energy Center;
- the Corporation's anticipated processing capacity in 2026;
- projections of market prices and costs and supply and demand for crude oil, natural gas and NGLs;
- expectations regarding the ability to raise capital or access long-term debt to finance any acquisitions;
- expectations that interest or other funding costs would not make further development of the Corporation's assets uneconomic;
- drilling and future development plans for the Corporation's assets, including the anticipated timing thereof and estimated production therefrom and capital expenditures related thereto;
- expectations that the Corporation will maintain a safe and environmentally responsible workplace and that it will provide training, equipment and procedures to all individuals in adhering to its policies;
- timing of development of undeveloped reserves and associated future capital expenditures;
- the anticipated timing of the construction of the Progress Gas Plant and the anticipated benefits, including the anticipated additional synergies, growth from our assets, lower operating cost, stronger operating netbacks and additional natural gas processing capacity available to the Corporation, resulting therefrom:
- future abandonment and reclamation costs;
- expectation that Advantage has sufficient processing capacity to ensure the efficient development of our Charlie Lake properties;
- the Corporation's hedging activities;
- tax horizons and treatment under governmental regulatory regimes and tax laws;
- Advantage's expectations that it will not be subject to cash income taxes until calendar year 2029;
- terms of the Credit Facilities, including the effect of revisions or changes in reserve estimates and commodity prices on the borrowing base of the Credit Facilities;
- the Corporation's dividend policy and timing of any future dividend;
- expected land expiries;
- the anticipated benefits to be derived from Entropy's strategic investment agreements with Brookfield and CGF;
- the anticipated benefits to be derived from Entropy's CCO with CGF;
- that no anticipated material changes in the Corporation's business will occur in 2026;
- the Corporation's financial risk management strategy;
- that the Corporation will continue using all financing alternatives available to it to continue pursuing its development strategy;
- that the Corporation does not anticipate that interest or other funding costs would make further development of any of the Corporation's assets uneconomic; and
- the anticipated growth in Entropy's business and in the CCS industry as a whole.

Statements relating to "reserves" are deemed to be forward-looking statements, as they involve the implied assessment, based on certain estimates and assumptions, that the reserves described can be profitably produced in the future. The forward-looking statements contained in this annual information form are expressly qualified by this cautionary statement.

The actual results could differ materially from those anticipated in these forward-looking statements as a result of the risk factors set forth below and elsewhere in this annual information form. Such risks include, but are not limited to: risks related to changes in general economic conditions (including as a result of demand and supply effects resulting from the actions of OPEC and non-OPEC countries) which will, among other things, impact demand for and market prices

of the Corporation's products, market and business conditions; continued volatility in market prices for crude oil, NGLs and natural gas; the impact of significant declines in market prices for crude oil, NGLs and natural gas; stock market volatility; changes to legislation and regulations, including environmental regulations, and how they are interpreted and enforced; the Corporation's ability to comply with current and future environmental or other laws; actions by governmental or regulatory authorities including increasing taxes, changes in investment or other regulations; changes in tax laws, royalty regimes and incentive programs relating to the crude oil and natural gas industry; the effect of acquisitions; Advantage's success at acquisition, exploitation and development of reserves; unexpected drilling results; failure to achieve production targets on timelines anticipated or at all; the potential for management and reserves evaluators' estimates and assumptions to be inaccurate; changes in commodity prices, currency exchange rates, capital expenditures, reserves or reserves estimates and debt service requirements; the occurrence of unexpected events involved in the exploration for, and the operation and development of, crude oil and natural gas properties; hazards such as fire, explosion, blowouts, cratering, and spills, each of which could result in substantial damage to wells, production facilities, other property and the environment or in personal injury; geological, technical, drilling and processing problems and other difficulties in producing petroleum reserves; changes or fluctuations in production levels; individual well productivity; delays in anticipated timing of drilling and completion of wells; the failure to extend the Credit Facilities at each annual review; competition from other producers for, among other things, capital, acquisitions of reserves, undeveloped lands and skilled personnel; the lack of availability of qualified personnel or management; the lack of available capacity on pipelines; ability to access sufficient capital from internal and external sources; credit risk; the risk that (i) negotiations between the U.S. and Canadian governments are not successful and one or both of such governments implements announced tariffs, increases the rate or scope of announced tariffs, or imposes new tariffs on the import of goods from one country to the other, including on oil and natural gas, (ii) the U.S. and/or Canada imposes any other form of tax, restriction or prohibition on the import or export of products from one country to the other, including on oil and natural gas, and (iii) the tariffs imposed by the U.S. on other countries and responses thereto could have a material adverse effect on the Canadian, U.S. and global economies, and by extension the Canadian oil and natural gas industry and the Corporation; the risk that Entropy's existing MOUs and NDAs may not result in completed CCS projects; the risk that the price of and market for carbon credits and offsets may be different than anticipated; current and future carbon prices and royalty regimes; the risk that the global demand for oil may decrease; the risk that Entropy may not realize the anticipated benefits to be derived from Entropy's strategic investment agreements with Brookfield and CGF; the risk that Entropy's CCO with CGF may not lead to the benefits anticipated; the risk that the Corporation may not meet its 2026 capital budget or three-year strategic plan or realize the anticipated benefits thereof; the risk that the Corporation does not have sufficient processing capacity to ensure the efficient development of our Charlie Lake assets; the risk that the Corporation's processing capacity in 2026 may be less than anticipated; the risk that the Corporation may be subject to cash income tax prior to calendar year 2029; the risk that the Corporation may not have sufficient financial resources to buyback its shares; the risk that the construction of the Progress Gas Plant may not be completed when anticipated, or at all; the risk that the completion of the Progress gas plant may not result in the anticipated benefits thereof, including the anticipated additional synergies, growth from our assets, lower operating costs, stronger operating netbacks and additional natural gas processing capacity available to the Corporation therefrom; the risk that the Glacier Phase 2 CCS Project may not come onstream when anticipated, or at all; the risk that Advantage's long-term natural gas supply agreement for CPV Three Rivers Energy Center may not lead to the benefits anticipated; the other factors discussed under "*Risk Factors*"; and other factors, many of which are beyond the control of the Corporation. Readers are cautioned that the foregoing list of factors is not exhaustive.

Although the forward-looking statements contained in this annual information form are based upon assumptions which Advantage believes to be reasonable, Advantage cannot assure Shareholders that actual results will be consistent with these forward-looking statements. With respect to forward-looking statements contained in this annual information form, Advantage has made assumptions regarding, but not limited to: that the current commodity price and foreign exchange environment will continue or improve; conditions in general economic and financial markets; current and future commodity prices, carbon prices and royalty regimes; the price of and market for carbon credits and offsets; availability of skilled labour; timing and amount of capital expenditures; future exchange rates; availability of pipeline capacity; the impact of increasing competition; conditions in general economic and financial markets; availability of drilling and related equipment; effects of regulation by governmental agencies; royalty rates; future operating costs;

that the Corporation will have sufficient cash flow, debt or equity sources or other financial resources required to fund its capital and operating expenditures and requirements as needed; that the Corporation's conduct and results of operations will be consistent with its expectations; that the Corporation will have the ability to develop the Corporation's crude oil and natural gas properties in the manner currently contemplated; that current or, where applicable, proposed assumed industry conditions, laws and regulations will continue in effect or as anticipated as described herein; that the tariffs that have been publicly announced by the U.S. and Canadian governments (but which are not yet in effect) do not come into effect, but that if such tariffs do come into effect, the potential impact of such tariffs, and that other than the tariffs that have been announced, neither the U.S. nor Canada (i) increases the rate or scope of such tariffs, or imposes new tariffs, on the import of goods from one country to the other, including on oil and natural gas, and/or (ii) imposes any other form of tax, restriction or prohibition on the import or export of products from one country to the other, including on oil and natural gas; that the estimates of the Corporation's reserves volumes and the assumptions related thereto (including commodity prices and development costs) are accurate in all material respects; that the Corporation will have sufficient financial resources to buyback its shares; that Entropy's existing MOUs and NDAs will lead to completed CCS projects; that Entropy will benefit from the strategic investment agreements with Brookfield and CGF; anticipated timing of when the Glacier Phase 2 CCS Project will come onstream; the Corporation will achieve the anticipated benefits from the long-term natural gas supply agreement for the CPV Three Rivers Energy Center; and other matters.

Advantage has included the above summary of assumptions and risks related to forward-looking information provided in this annual information form in order to provide Shareholders with a more complete perspective on the Corporation's current and future operations and such information may not be appropriate for other purposes. The Corporation's actual results, performance or achievement could differ materially from those expressed in, or implied by, these forward-looking statements and, accordingly, no assurance can be given that any of the events anticipated by the forward-looking statements will transpire or occur, or if any of them do so, what benefits Advantage will derive therefrom.

These forward-looking statements are made as of the date of this annual information form and Advantage disclaims any intent or obligation to update publicly any forward-looking statements, whether as a result of new information, future events or results or otherwise, other than as required by applicable securities laws.

The future acquisition by the Corporation of Common Shares pursuant to its share buyback program (including through its NCIB), if any, and the level thereof is uncertain. Any decision to acquire Common Shares pursuant to the share buyback program will be subject to the discretion of the board of directors of the Corporation and may depend on a variety of factors, including, without limitation, the Corporation's business performance, financial condition, financial requirements, growth plans, expected capital requirements and other conditions existing at such future time including, without limitation, contractual restrictions and satisfaction of the solvency tests imposed on the Corporation under applicable corporate law. There can be no assurance of the number of Common Shares that the Corporation will acquire pursuant to its share buyback program, if any, in the future.

This annual information form contains information that may be considered a financial outlook under applicable securities laws about the Corporation's potential financial position, including, but not limited to, the Corporation's 2026 capital budget and three-year strategic plan, including its targeted investment; projections of market prices and costs and supply and demand for crude oil, natural gas and NGLs; future abandonment and reclamation costs; the Corporation's hedging activities; and Advantage's expectations that it will not be subject to cash income taxes until calendar year 2029, all of which are subject to numerous assumptions, risk factors, limitations and qualifications, including those set forth in the above paragraphs. The actual results of operations of the Corporation and the resulting financial results will vary from the amounts set forth in this annual information form and such variations may be material. This information has been provided for illustration only and with respect to future periods are based on budgets and forecasts that are speculative and are subject to a variety of contingencies and may not be appropriate for other purposes. Accordingly, these estimates are not to be relied upon as indicative of future results. Except as required by applicable securities laws, the Corporation undertakes no obligation to update such financial outlook. The financial outlook contained in this annual information form was made as of the date of this annual information form and was provided for the purpose of providing further information about the Corporation's potential future business operations. Readers are cautioned that the financial outlook contained in this annual information form is not conclusive and is subject to change.

CORPORATE STRUCTURE

The Corporation was formed pursuant to the amalgamation of Advantage Oil & Gas Ltd., 1335703 Alberta Ltd., SET Resources Inc. and Sound ExchangeCo Ltd. under the ABCA on September 5, 2007. On July 9, 2009, the articles of the Corporation were amended to change the number of issued and outstanding Common Shares to equal the number of trust units of Advantage Energy Income Fund (the "**Trust**") outstanding immediately prior to the plan of arrangement pursuant to Section 193 of the ABCA, which closed on July 9, 2009 and pursuant to which, among other things, the Trust was dissolved and the Corporation became Advantage Oil & Gas Ltd. On May 18, 2021, the Corporation amended its articles to change its name from Advantage Oil & Gas Ltd. to Advantage Energy Ltd. Unless the context otherwise requires, references to "we", "us", "our" or similar terms refer to the Corporation. In 2021, the Advantage announced the creation of Entropy, a company incorporated under the ABCA, focused on commercializing energy-transition technologies.

The Corporation is a reporting issuer in each of the provinces of Canada and the Common Shares are listed on the TSX under the symbol "AAV". The Debentures are listed on the TSX under the symbol "AAV.DB".

The head office of the Corporation is located at Suite 2200, 440 – 2nd Avenue S.W., Calgary, Alberta T2P 5E9 and its registered office is located at 2400, 525 – 8th Avenue S.W., Calgary, Alberta T2P 1G1.

The following diagram illustrates material intercorporate relationship between the Corporation and its subsidiaries, the percentage of common shares owned of the subsidiaries, or controlled or directed, directly or indirectly, by the Corporation and the jurisdiction of incorporation of the subsidiaries.

GENERAL DEVELOPMENT OF THE BUSINESS

General

The Corporation is engaged in the business of natural gas, crude oil and NGLs exploitation, development, acquisition and production in the Province of Alberta, whereby the Corporation is focused on development and growth of its extensive Montney and Charlie Lake resources plays at Glacier, Valhalla, Progress, Wembley and Gordondale, while having multiple future Montney development plays in the Province of British Columbia at Conroy and Attachie. See "*Description of our Business and Operations*".

The Corporation's subsidiary Entropy provides carbon capture and storage solutions to emitters of carbon dioxide and is pursuing a global business strategy. Entropy currently captures and sequesters carbon at Advantage's Glacier Gas Plant. Entropy is financed by two investors who have provided capital commitments of \$300 million and \$200 million, respectively, in the form of unsecured debentures, which are non-recourse to Advantage. As at December 31, 2025, based on the outstanding balance of unsecured debentures, Advantage would own 50% of Entropy if the unsecured debentures were converted for common shares.

Three Year History

A detailed description of the historical development of the business of the Corporation for the years ended December 31, 2023, 2024 and 2025 is outlined below.

2023

Normal Course Issuer Bid Renewal

On April 6, 2023, Advantage announced that the TSX approved the Corporation renewing its NCIB. Pursuant to the NCIB, Advantage purchased 10,113,081 Common Shares between April 13, 2023 and April 12, 2024. The Corporation also entered into an automatic share purchase plan with a broker in order to facilitate repurchases of Common Shares under the NCIB.

Conroy Acquisition

In July of 2023, Advantage acquired equivalent to 53 net sections of contiguous 100% working interest land in the Northeast British Columbia ("**Conroy Area**") liquids-rich Montney trend for \$10 million. The acquired lands have a long tenure with no incremental drilling required until 2029, providing a possible development horizon post the commencement of LNG operations in Canada.

2024 Capital Budget and Development Plan

In November of 2023, Advantage announced its 2024 capital budget which targeted investment between \$260 million and \$290 million. The Corporation's 2024 capital budget was focused on high rate-of-return development drilling, whereby Advantage planned to drill approximately 25 net wells per year to achieve production growth targets of 10%.

Entropy Strategic Financing Agreement

On December 20, 2023, Entropy announced that it had entered into a strategic investment agreement with Canada Growth Fund Inc. ("**CGF**") to scale up deployment of Entropy's CCS technology. Under the terms of the strategic investment agreement, CGF provided a capital commitment of \$200 million, and Entropy will issue a hybrid security in the form of unsecured debentures to fund CCS projects in Canada that reach final investment decision as certain predetermined return thresholds are met.

Additionally, CGF agreed to a fixed-price carbon credit purchase agreement ("**CCO**") of up to one million tonnes per annum ("**tpa**"). This CCO helps to de-risk and accelerate CCS investment by establishing carbon price certainty for Canadian projects.

Entropy previously entered into a strategic investment agreement with Brookfield Global Transition Fund ("**Brookfield**"). Under the terms of the strategic investment agreement, Brookfield provided a capital commitment of \$300 million, and Entropy will issue a hybrid security in the form of unsecured debentures to fund CCS projects that reach final investment decision as certain predetermined return thresholds are met. Entropy had received an aggregate of \$40 million from Brookfield as of December 31, 2023.

Glacier Phase 1b CCS Project

During the fourth quarter of 2023, Entropy completed construction and commissioning of the Glacier Phase 1b CCS project, with first carbon injected into permanent geological storage during December 2023.

2024

Management Retirement and Appointment

Mr. David Sterna, Vice President, Marketing and Commercial retired from Advantage effective May 31, 2024 and Mr. Brian Bagnell was appointed to the position of Vice President, Commodities and Capital Markets effective June 1, 2024.

Board of Directors Changes

On March 12, 2024, Mr. John L. Festival, was appointed as a director of the Corporation and Mr. Paul G. Haggis retired from the Board of Directors.

On September 1, 2024, Mr. David G. Smith, was appointed as a director of the Corporation.

Normal Course Issuer Bid

On May 9, 2024, Advantage announced that the TSX approved the Corporation renewing its NCIB. Pursuant to the NCIB, Advantage purchased 502,300 Common Shares between May 14, 2024 and May 13, 2025. The Corporation also entered into an automatic share purchase plan with a broker in order to facilitate repurchases of Common Shares under the NCIB.

Charlie Lake and Montney Asset Acquisition

On June 10, 2024, Advantage announced that it entered into a definitive asset purchase agreement to acquire high-quality, synergistic Charlie Lake and Montney assets (the "**Acquired Assets**") from a private seller for cash consideration of \$445 million (the "**Acquisition**"). The Acquisition closed on June 24, 2024, and added approximately 14,100 boe/d (6,685 bbls/d light and medium crude oil, 810 bbls/d NGLs, and 39.7 mmcf/d conventional natural gas) of production in Valhalla, Progress, and Gordondale, enabling multi-zone development across portions of our existing land base. The Acquired Assets included complementary infrastructure, with over 60 mmcf/d of gas handling capacity and 22,500 bbl/d of liquids handling capacity.

Bought Deal Financing

In connection with the financing for the Acquisition, on June 18, 2024 the Corporation announced that it had completed a bought deal financing (the "**Offering**") whereby Advantage, through a syndicate of underwriters co-led by TD Securities Inc. and Scotiabank, issued a total of 5,910,000 subscription receipts (the "**Subscription Receipts**") at a price of \$11.00 per Subscription Receipt and \$143,750,000 aggregate principal amount of 5.0% extendible convertible unsecured subordinated debentures (the "**Debentures**") at a price of \$1,000 per Debenture for aggregate gross proceeds of the Offering of \$208,760,000, which included the full exercise of the over-allotment option with respect to the Debentures on June 24, 2024. Upon the closing of the Acquisition, the Subscription Receipts were exchanged for an equivalent number of Common Shares.

Increase in Credit Facility

In connection with the financing of the Acquisition, on June 24, 2024, the Corporation amended and restated its credit agreement with a syndicate of financial institutions to increase the credit facilities available thereunder to \$650 million (the "**Credit Facilities**").

Glacier Phase 2 CCS Project Final Investment Decision ("**FID**")

On July 9, 2024, Entropy announced FID of the Glacier Phase 2 CCS Project, Entropy's first investment into the clean power generation market. Glacier Phase 2 is Entropy's second post-combustion carbon capture and storage project, with an onstream date expected in the second quarter of 2026. Total CO₂ capture capacity is expected to be 160,000 tonnes per annum, from nine gas-fired engines plus one gas-fired power generation turbine.

2025 Capital Budget and Updated Three-Year Development Plan

In December of 2024, Advantage announced its 2025 capital budget which targeted investment between \$270 million and \$300 million. The Corporation's 2025 capital program continued its focus on growing adjusted funds flow per share via high rate-of-return development drilling. Production was forecast to increase by approximately 16% in 2025, reflecting an organic growth rate of 9% plus a full year of incremental production associated with the Acquired Assets. Advantage's updated three-year plan included expected production growth at a long-term average rate of approximately 10% through 2028.

2025

Board of Directors Changes

On February 25, 2025, Advantage announced that Mr. Stephen Balog would be retiring from the position of Chair of the Board and director of the Corporation at Advantage's annual general meeting of shareholders held on May 6, 2025 (the "**2025 AGM**"). Replacing Mr. Balog as Chair of the Board would be Mr. John Festival, who has been a director of Advantage since March 12, 2024.

Formation of Special Committee

On February 28, 2025, Advantage announced the formation of a special committee of independent directors (the "**Special Committee**") comprised of Messrs. Norman MacDonald (Chair) and David Smith, to review strategic opportunities that are in the best interests of Advantage and its shareholders and that may become available to the Corporation.

Board of Directors Changes

On March 6, 2025, Advantage announced that two new independent members, Messrs. Lawrence Massaro and Daniel Farb, were appointed to the Board of Directors. In connection with the appointment of Messrs. Massaro and Farb, Advantage entered into an agreement (the "**Agreement**") with Kimmeridge Energy Management Company, LLC ("**Kimmeridge**") under which Kimmeridge agreed, among other things, that it will vote its common shares in favor of Advantage's directors at the 2025 AGM. Messrs. Massaro and Farb also joined the Special Committee, and such committee was reconstituted to be comprised of Messrs. Norman MacDonald (Chair), David Smith, Lawrence Massaro and Daniel Farb. Pursuant to the Agreement, Advantage also included an additional independent director nominated by Kimmeridge on the list of nominee directors set forth in Advantage's management proxy circular for the 2025 AGM.

Ms. Janine McArdle also retired from the Board effective March 6, 2026.

Board of Directors Changes

Ms. Katherine L. Minyard was elected to the Board at the 2025 AGM.

Messrs. Stephen E. Balog and Andy J. Mah did not stand for re-election at the 2025 AGM and accordingly retired from the Board.

Normal Course Issuer Bid

On May 8, 2025, Advantage announced that the TSX approved the Corporation renewing its NCIB. Pursuant to the NCIB, Advantage is able to purchase for cancellation, from time to time, as it considers advisable, up to a maximum of 10% of the public float, as of April 30, 2025. The NCIB commenced on May 14, 2025 and will terminate on May 13, 2026 or such earlier time as the NCIB is completed or terminated at the option of Advantage.

Entropy Acquisition of Strategic Carbon Storage Assets

On June 23, 2025, Entropy announced it entered into a definitive agreement to purchase an interest in three carbon hubs from a Canadian oil and natural gas producer for \$20 million and contingent payments of approximately \$15 million based on commercial milestones achieved by various projects. The all-cash transaction encompassed a portfolio of strategic subsurface assets, along with associated commercial contracts, licenses, and other intellectual property. The acquired assets are the Belle Plaine carbon hub and the North Battleford carbon hub, located in Saskatchewan, as well as a 50% interest in the Rolling Hills carbon hub located in southern Alberta.

2026 Capital Budget and Updated Three-Year Development Plan

In December of 2025, Advantage announced its 2026 capital budget which targets investment between \$300 million and \$330 million. The Corporation's 2026 capital program continues its focus on growing adjusted funds flow per share via high rate-of-return development drilling. Production is expected to average between 81,000 and 85,000 boe/d for 2026 (approximately 76,000 boe/d during the first half and 90,000 boe/d during the second half). When net debt is within the target range, it is expected that free cash flow will be used to opportunistically buy back shares, driving an expected 14% increase in production per share.

Recent Developments

2026

Conclusion of Strategic Review

On February 12, 2026, the Corporation announced the conclusion of the strategic review process. The Special Committee thoroughly evaluated various strategic options, including a sale, merger, and other transactions, as part of its mandate. The Special Committee unanimously concluded that none of the proposals received, or strategic alternatives evaluated were in the best interests of the Corporation and its shareholders, as they were inferior to the Corporation's intrinsic value and long-term prospects. The Special Committee presented its findings to the Board and recommended the dissolution of the Special Committee, having fully satisfied its mandate. The Board agreed with the Special Committee's conclusions and recommendations, terminating the Special Committee's mandate.

2026 Capital Reduced \$20 Million

On February 12, 2026, the Corporation announced an approximate \$20 million reduction to its 2026 capital program, to between \$280 million and \$310 million, achieved by deferring the lowest rate-of-return wells in its drilling program, with 2026 production guidance unchanged.

Anticipated Changes in the Business

As at the date hereof and other than as disclosed herein, the Corporation does not anticipate that any material change in its business will occur during the balance of the 2026 financial year.

Significant Acquisitions

Neither the Corporation nor any of its subsidiaries completed any acquisitions during the year ended December 31, 2025 for which disclosure is required under Part 8 of National Instrument 51-102 - *Continuous Disclosure Obligations*.

As part of its ongoing business, the Corporation evaluates potential acquisitions of all types of petroleum and natural gas assets. The Corporation is normally in the process of evaluating various potential acquisitions at any one time which individually or together could be material. As of the date hereof, the Corporation has not reached agreement on the price or terms of any potential material acquisitions. The Corporation cannot predict whether any current or future opportunities will result in one or more acquisitions for the Corporation.

DESCRIPTION OF OUR BUSINESS AND OPERATIONS

General

Advantage is engaged in the business of natural gas, crude oil, and NGLs exploitation, development, acquisition and production in the Provinces of Alberta and British Columbia.

Advantage's current exploitation and development program is focused on its natural gas, crude oil and NGLs in the Montney and Charlie Lake formations in the Glacier, Valhalla, Progress, Wembley and Gordondale areas of Alberta. Additionally, the Corporation holds Montney resources at Conroy and Attachie areas of British Columbia. As current and future practice, Advantage has established a financial risk management strategy and may manage the risk associated with changes in commodity prices by entering into derivatives. See "*Risk Factors*". Although Advantage has a significant capital development program, it also actively evaluates growth opportunities through crude oil and natural gas asset acquisitions, as well as through corporate acquisitions. Advantage targets acquisitions that support and augment its Montney development and long-term strategy. It is currently intended that Advantage will finance any acquisitions and investments through the Credit Facilities, the issuance of additional Common Shares from treasury, or accessing long-term debt instruments to maintain prudent leverage. In addition, Advantage may pursue other long-term financing mechanisms to finance oil and gas reserves development including its liquids development program.

Entropy is a privately-owned company, founded by Advantage to apply sophisticated science and engineering to commercialize CCS. The first deployment of Entropy's technology was at Advantage's Glacier Gas Plant. On July 9, 2024 Entropy announced FID of the Glacier Phase 2 CCS Project, which is expected to have CO₂ capture capacity of 160,000 tonnes per annum, from nine gas-fired engines plus one gas-fired power generation turbine. See "*General Development of the Business – Three Year History – 2024 – Glacier Phase 2 CCS Project Final Investment Decision ("FID")*". Entropy additionally owns and operates the Belle Plaine carbon hub and the North Battleford carbon hub, located in Saskatchewan, as well as a 50% interest in the Rolling Hills carbon hub located in southern Alberta.

Reorganizations

As at the date hereof, there have been no material reorganizations of Advantage and/or any of its subsidiaries within the three most recently completed financial years and there are currently no material reorganizations of Advantage proposed for the current financial year.

Bankruptcy and Similar Procedures

There have been no bankruptcy, receivership or similar proceedings against the Corporation or any of its subsidiaries or related entities, or any voluntary bankruptcy, receivership or similar proceeding by the Corporation or any of its subsidiaries or related entities since the inception of the Corporation or during or proposed for the current financial year.

Specialized Skill and Knowledge

Advantage and Entropy employ individuals with various professional skills in the course of pursuing its business plan. These professional skills include, but are not limited to, geology, geophysics, engineering, financial and business skills, which are widely available in the industry. Drawing on significant experience in the oil and gas business, Advantage believes its management team has a demonstrated track record of bringing together all of the key components to a successful exploration and production company, including: strong technical skills; expertise in planning and financial controls; ability to execute on business development opportunities; capital markets expertise; and an entrepreneurial spirit that allows Advantage to effectively identify, evaluate and execute on its business plan. Individuals that provide services to Entropy have a strong track record that lends to the development of CCS, through their experience with Advantage and other oil and gas production companies.

Intellectual Property, Patents and Trademarks

Entropy is the owner of all intellectual property rights related to: (i) clean technologies; recycling technologies related to carbon capture; and CCS inventions, technologies and processes; and (ii) the granted patent solvent class developed in conjunction with the University of Regina. Entropy has filed provisional patent applications for its CCS process and additional classes of solvents.

Human Resources

As at December 31, 2025, the Corporation employed 99 full-time employees, 84 of which are located in the head office and 15 of which are located in the field. The Corporation also retained 8 consultants in the head office. Certain employees of Advantage provide services to Entropy, for a fee, pursuant to a Management Services Agreement between Advantage and Entropy.

STATEMENT OF RESERVES DATA AND OTHER OIL AND GAS INFORMATION

The statement of reserves data and other oil and gas information set forth below is dated February 12, 2026, with the effective date being December 31, 2025.

Disclosure of Reserves Data

The reserves data set forth below is based upon an evaluation by McDaniel & Associates Consultants Ltd. ("**McDaniel**") with an effective date of December 31, 2025 contained in a report of McDaniel dated February 12, 2026 (the "**McDaniel Report**"). The McDaniel Report evaluated, as at December 31, 2025, the crude oil, NGLs, shale gas and conventional natural gas reserves of Advantage. The reserves data summarizes Advantage's crude oil, NGLs and natural gas reserves and the net present values of future net revenue for these reserves using forecast prices and costs. All of the Corporation's reserves are in Canada and, specifically, in the Province of Alberta. The McDaniel Report has been prepared in accordance with the standards contained in the COGE Handbook and the reserve definitions contained in NI 51-101 and the COGE Handbook. Additional information not required by NI 51-101 has been presented to provide continuity and additional information which the Corporation believes is important to readers of this annual information form. McDaniel was engaged to provide evaluations of proved and proved plus probable reserves and no attempt was made to evaluate possible reserves. Reserves data prior to December 31, 2024 were based upon evaluations by Sproule Associates Limited ("**Sproule**"), the Corporation's previous independent qualified reserves evaluator.

The report of management and directors on oil and gas disclosure in Form 51-101F3 and the report on reserves data by McDaniel in Form 51-101F2 are attached as Appendix "A" and "B" to this annual information form, respectively, which forms are incorporated herein by reference.

There are numerous uncertainties inherent in estimating quantities of crude oil, NGLs, shale gas and conventional natural gas reserves and the future cash flows attributed to such reserves. The reserves and associated cash flow information set forth herein are estimates only. In general, estimates of economically recoverable crude oil, NGLs, shale gas and conventional natural gas reserves and the future net cash flows therefrom are based upon a number of variable factors and assumptions, such as historical production from the properties, production rates, ultimate reserve recovery, timing and amount of capital expenditures, marketability of oil and natural gas, royalty rates, the assumed effects of regulation by governmental agencies and future operating costs, all of which may vary materially from actual results. For those reasons, estimates of the economically recoverable crude oil, NGL, shale gas and conventional natural gas reserves attributable to any particular group of properties, classification of such reserves based on risk of recovery and estimates of future net revenues associated with reserves prepared by different engineers, or by the same engineers at different times, may vary. The Corporation's actual production, revenues, taxes and development and operating expenditures with respect to its reserves will vary from estimates thereof and such variations could be material.

It should not be assumed that the estimates of future net revenues presented in the tables below represent the fair market value of the reserves. There is no assurance that the forecast prices and costs assumptions will be attained and variances could be material. The recovery and reserve estimates of our crude oil, NGLs, shale gas and conventional natural gas reserves provided herein are estimates only and there is no guarantee that the estimated reserves will be recovered. Actual crude oil, NGLs, shale gas and conventional natural gas reserves may be greater than or less than the estimates provided herein.

The information relating to the Corporation's consolidated crude oil, NGLs, shale gas and conventional natural gas reserves contains forward-looking statements relating to future net revenues, forecast capital expenditures, future development plans and costs related thereto, forecast operating costs, anticipated production and abandonment costs. See "*Forward-Looking Statements*", "*Industry Conditions*" and "*Risk Factors – Reserves Estimates*".

In certain of the tables set forth below, the columns may not add due to rounding.

Summary of Oil and Gas Reserves as at December 31, 2025 – Forecast Prices and Costs

Reserves Category	Reserves			
	Light Crude Oil and Medium Crude Oil		Natural Gas Liquids	
	Gross (Mbbbls)	Net (Mbbbls)	Gross (Mbbbls)	Net (Mbbbls)

⁽¹⁾ Advantage's light crude oil and medium crude oil, conventional natural gas, shale gas and NGL reserves were evaluated using an average evaluator price forecast effective as of January 1, 2026, which was derived as an average of the price forecasts published by three major oil and gas evaluation consultant companies, prior to interests, debt service charges and general and administrative expenses. It should not be assumed that the future net revenue estimated by McDaniel represents the fair market value of the reserves.

⁽²⁾ Assumes that development of corporate reserves will occur, without regard to the likely availability to the Corporation of funding required for that development.

⁽³⁾ Future net revenue incorporates management's estimates of required abandonment and reclamation costs, including expected timing such costs will be incurred, associated with all wells (including undrilled wells that have been attributed reserves), facilities and infrastructure. No abandonment and reclamation costs have been excluded.

⁽⁴⁾ The unit values are based on net reserve volumes.

⁽⁵⁾ Values are calculated by considering existing tax pools for Advantage in the evaluation of Advantage's oil and gas properties, and take into account current federal tax regulations. Values do not represent an estimate of the value at the business entity level, which may be significantly different. For information at the business entity level, please see Advantage's Consolidated Financial Statements and Management's Discussion and Analysis for the year ended December 31, 2025, which are available on SEDAR+ at www.sedarplus.ca and the Corporation's website at www.advantageog.com.

Total Proved Reserves	2,813,282	
Proved Plus Probable Reserves		
Light Crude Oil and Medium Crude Oil ⁽¹⁾	940,095	27.55
Conventional Natural Gas ⁽²⁾	19,921	1.53
Shale Gas ⁽²⁾	3,184,768	1.09
Proved Plus Probable Reserves	4,144,784	

⁽¹⁾ Including solution gas and other by-products.

⁽²⁾ Including by-products but excluding solution gas and by-products from oil wells.

⁽³⁾ Unit values are calculated using the 10% discount rate divided by the Major Product Type Net reserves for each group.

Pricing Assumptions

The following tables set forth the benchmark reference prices, as at January 1, 2026, reflected in the reserves data. The forecast of prices, inflation and exchange rates provided in the table below were computed using the average of the forecasts ("IQRE Average January 1, 2026"). The inflation forecast was applied uniformly to prices beyond the forecast interval, and to all future costs.

Summary of Pricing and Inflation Rate Assumptions as at January 1, 2026 – Forecast Prices and Costs

Year	Edmonton Light Sweet Crude Oil 40° API (\$Cdn/bbl)	AECO-C Spot (\$Cdn/MMbtu)	Edmonton Cond. & Natural Gasolines (\$Cdn/bbl)	Edmonton Butane (\$Cdn/bbl)	Edmonton Propane (\$Cdn/bbl)	Capital/ Operating Cost Inflation Rate %/year	Exchange Rate (\$US/\$Cdn) ⁽³⁾
2026	77.54	3.00	80.01	36.95	25.10	-	0.73
2027	83.60	3.30	86.19	39.79	27.28	2.00	0.74
2028	90.17	3.49	92.83	42.87	29.67	2.00	0.74
2029	92.32	3.58	95.04	43.89	30.37	2.00	0.74
2030	94.17	3.65	96.94	44.77	30.98	2.00	0.74
2031	96.06	3.72	98.89	45.66	31.60	2.00	0.74
2032	97.98	3.80	100.86	46.58	32.23	2.00	0.74
2033	99.93	3.88	102.88	47.51	32.87	2.00	0.74
2034	101.93	3.95	104.94	48.46	33.53	2.00	0.74
2035	103.97	4.03	107.04	49.43	34.20	2.00	0.74
2036	106.05	4.11	109.18	50.42	34.89	2.00	0.74
Thereafter	+2%/year	+2%/year	+2%/year	+2%/year	+2%/year	2.00	0.74

(1) This summary table identifies benchmark reference pricing schedules that might apply to a reporting issuer.

(2) Product sale prices will reflect these reference prices with further adjustments for quality and transportation to point of sale.

(3) Exchange rates used to generate the benchmark reference prices in this table.

Weighted average historical prices, excluding derivatives, realized by the Corporation for the year ended December 31, 2025, were \$84.64/bbl for light crude oil and medium crude oil, \$57.92/bbl for NGLs and \$2.50/Mcf for conventional natural gas and shale gas.

Reconciliations of Changes in Reserves

Key highlights of the changes in reserves includes:

- **Extensions and improved recovery:** Reserves were added from 25.5 net wells brought on production concurrent with Advantage's 2025 capital program.
- **Technical revisions:** Total technical revisions are largely driven by adjustments to Glacier liquid yield recovery and shrinkage estimates and rescheduling of locations due to deferrals in the Wembley Montney area.
- **Economic factors:** Changes in forecast pricing for both crude oil and natural gas resulted in minor, negative impact to total reserves. Less than one per cent of total proved and total proved plus probable reserves were removed due to changes in forecast pricing.
- **Dispositions:** Minor reserves were removed related to the sale of non-core assets in 2025.

Reconciliation of Company Gross Reserves by Product Type as at December 31, 2025 – Forecast Prices and Costs

The following table sets forth a reconciliation of the Corporation's total gross proved, total gross probable and total gross proved plus probable reserves as at December 31, 2025 against such reserves as at December 31, 2024 based on forecast prices and cost assumptions.

FACTORS	Light Crude Oil and Medium Crude Oil (Mbbbls)	Conventional Natural Gas (MMcf)	Shale Gas (MMcf)	Natural Gas Liquids ⁽²⁾ (Mbbbls)	Total Oil Equivalent (Mboe)

⁽¹⁾ Reserve additions for Infill Drilling, Extensions and Improved Recovery are combined and reported as "Extensions and Improved Recovery".

⁽²⁾ Natural gas liquids include condensate.

Additional Information Relating to Reserves Data

Undeveloped Reserves

Undeveloped reserves are attributed by McDaniel in accordance with standards and procedures contained in the COGE Handbook. Proved undeveloped reserves are those reserves that can be estimated with a high degree of certainty and are expected to be recovered from known accumulations where a significant expenditure is required to render them capable of production. Probable undeveloped reserves are those reserves that are less certain to be recovered than proved reserves and are expected to be recovered from known accumulations where a significant expenditure is required to render them capable of production. Proved and probable undeveloped reserves have been assigned in accordance with engineering and geological practices as defined under NI 51-101.

In general, undeveloped reserves are planned to be developed over the next ten years. There are a number of factors that could result in delayed or cancelled development, including the following: (i) changing economic conditions (due to pricing, operating and capital expenditure fluctuations); (ii) changing technical conditions (including production anomalies, such as water breakthrough or accelerated depletion); (iii) multi-zone developments (for instance, a prospective formation completion may be delayed until the initial completion is no longer economic); (iv) a larger development program may need to be spread out over several years to optimize capital allocation and facility utilization; and (v) surface access issues (including those relating to land owners, weather conditions and regulatory approvals). For more information, see *"Statement of Reserves Data and Other Oil and Gas Information – Additional Information Relating to Reserves Data – Proved Undeveloped Reserves"* and *"Statement of Reserves Data and Other Oil and Gas Information – Additional Information Relating to Reserves Data – Probable Undeveloped Reserves"* below and *"Risk Factors"* herein.

The following tables set forth the proved undeveloped reserves and the probable undeveloped reserves, each by product type, first attributed to us in each of the following financial years.

Proved Undeveloped Reserves

Year	Light Crude Oil and Medium Crude Oil (Mbbbl)		Conventional Natural Gas (MMcf)		Shale Gas (MMcf)		NGLs (Mbbbl)	
	First Attributed	Cumulative at Year End	First Attributed	Cumulative at Year End	First Attributed	Cumulative at Year End	First Attributed	Cumulative at Year End
2023	2,312	8,343	482,024	1,455,505	-	-	7,327	18,210
2024	15,412	23,134	85,144	144,210	56,473	1,367,962	2,494	21,628
2025	2,886	20,454	18,191	125,270	143,125	1,395,775	2,119	21,003

McDaniel has assigned 295.0 MMboe of gross proved undeveloped reserves in the McDaniel Report under forecast prices and costs, together with \$2.2 billion of associated undiscounted future capital expenditures. Proved undeveloped capital spending in the first two forecast years of the McDaniel Report accounts for \$798.4 million, or 36%, of the total forecast. These figures increase to \$1,836.4 million or 83%, during the first five years of the McDaniel Report. These figures increase to \$2,197.7 million or 99%, during the first seven years of the McDaniel Report.

For proved undeveloped reserves, McDaniel assigns reserves based on a 90% probability that the estimated reserves will be recovered. Advantage's expectation is to develop the reserves in a similar timeframe as forecasted by McDaniel, which approximates drilling over the next seven years. As at December 31, 2025, proved undeveloped reserves represented approximately 62% of the Corporation's total proved reserves.

The Corporation has a large inventory of development opportunities in its portfolio and its capital spending activities are prioritized to optimize development plans, achieve strategic goals and maximize shareholder value. Advantage is focused on developing the proved undeveloped reserves in all properties. The vast majority (95%) of the proved undeveloped reserves are in its Glacier/Valhalla/Progress/Gordondale areas where available processing capacity exists, and future processing capacity expansions are forecast to take place. Scheduling of the proved undeveloped locations takes place over seven years which is greater than the 5-year period normally expected for resource plays. In the development

forecast, McDaniel has included capital costs and scheduling that accommodates throughput capacity expansion of the Corporation's natural gas processing capacity from 425 MMcf/d of raw gas to 575 MMcf/d. The work required for the expansion of the Corporation's natural gas processing capacity includes the addition of the Progress Gas Plant which would accommodate 150 MMcf/d, accompanied with the Corporation's existing 425 MMcf/d Glacier Gas Plant. The work required for the construction of the Progress Gas Plant takes place over the first two years of the forecast with the additional natural gas processing capacity of 150 MMcf/d being available in 2028. All proved undeveloped locations are developed within 5 years of the newly constructed Progress Gas Plant as per the COGE Handbook. The construction of the Progress Gas Plant is required to support development of the significant inventory of drilling locations targeting multiple layers across the Corporation's extensive Montney resource play that has been under development for the last 14 years with multi-stage hydraulically fractured horizontal wells. The reserves are serviced by significant gathering and gas processing infrastructure, egress infrastructure and long-term transportation contracts. The Glacier Gas Plant services production, via an integrated design from the Glacier, Valhalla, and Progress properties. The addition of the Progress Gas Plant will provide the Corporation the ability to service production from the Valhalla and Progress areas, while freeing up capacity at the Glacier Gas Plant for continued development at our Glacier area. At our Wembley property, production is serviced by third-party processing plants with long term contracted processing capacity.

Probable Undeveloped Reserves

Year	Light Crude Oil and Medium Crude Oil (Mbbl)		Conventional Natural Gas (MMcf)		Shale Gas (MMcf)		NGLs (Mbbl)	
	First Attributed	Cumulative at Year End	First Attributed	Cumulative at Year End	First Attributed	Cumulative at Year End	First Attributed	Cumulative at Year End
2023	1,854	5,708	142,481	721,076	-	-	3,051	9,677
2024	7,550	12,675	40,038	78,925	13,626	756,347	630	11,487
2025	1,915	14,027	15,252	93,718	11,733	749,315	982	11,297

McDaniel has assigned 165.8 MMboe of gross probable undeveloped reserves in the McDaniel Report under forecast prices and costs, together with \$643.2 million of associated undiscounted future capital expenditures. Probable undeveloped capital spending in the first five forecast years of the McDaniel Report accounts for \$191.1 million, or 30%, of the total forecast. These figures increase to \$635.1 million, or 99%, during the first ten years of the McDaniel Report.

For proved plus probable reserves, McDaniel assigns reserves based on a 50% probability that at least the sum of the estimated proved reserves plus probable reserves will be recovered. Advantage's expectation is to develop the reserves in a similar timeframe as forecasted by McDaniel, which approximates drilling over the next ten years. As at December 31, 2025, probable undeveloped reserves represented approximately 24% of the Corporation's total proved plus probable reserves.

The Corporation has a large inventory of development opportunities in its portfolio and its capital spending activities are prioritized to optimize development plans, achieve strategic goals and maximize shareholder value. Advantage is focused on developing the probable undeveloped reserves in all properties. The vast majority (92%) of the probable undeveloped reserves are in its Glacier/Valhalla/Progress/Gordondale areas where available processing capacity exists, and future processing capacity expansions are forecast to take place. Scheduling of the probable undeveloped locations takes place over ten years which is within the 10-year expectation for resource plays.

In the development forecast, McDaniel has included capital costs and scheduling that accommodates a throughput capacity expansion of the Corporation's natural gas processing capacity from 425 MMcf/d of raw gas to 575 MMcf/d, with the construction of the Progress Gas Plant of 150 MMcf/d. The work required for the construction of the Progress Gas Plant takes place over the first two years of the forecast with the additional natural gas processing capacity of 150 MMcf/d being available in 2028. All probable undeveloped locations are developed within ten years. The construction of the Progress Gas Plant is required to support development of the significant inventory of drilling locations targeting multiple layers across the Corporation's extensive Montney resource play that has been under development for the last 14 years with multi-stage hydraulically fractured horizontal wells. The reserves are serviced by significant gathering and gas processing infrastructure, egress infrastructure, long term transportation contracts, and ongoing long term emission

reduction investments. The Glacier Gas Plant services production, via an integrated design from the Glacier, Valhalla, and Progress properties. The addition of the Progress Gas Plant will provide the Corporation the ability to service production from the Valhalla and Progress areas, while freeing up capacity at the Glacier Gas Plant for continued development at our Glacier area. At our Wembley property, production is serviced by third-party processing plants with long-term contracted processing capacity.

Approximately 40% of the proved undeveloped locations are forecast on production within the first two years of the forecast period. The remainder of the proved undeveloped locations are forecast to be on production within the five years following the start-up of the newly constructed Progress Gas Plant. All the proved undeveloped locations are developed within a seven-year time frame. Approximately 39% of the probable undeveloped locations are forecast to be drilled within the first five years of the forecast period. The remainder of the probable undeveloped locations are forecast to be drilled over the following five years.

Significant Factors or Uncertainties

General

The process of estimating reserves is complex. It requires significant judgments and decisions based on available geological, geophysical, engineering, and economic data. These estimates may change substantially as additional data from ongoing development activities and production performance becomes available and as economic conditions impacting oil and gas prices and costs change. The reserve estimates contained herein are based on production forecasts, prices and economic conditions. The Corporation's reserves are evaluated by McDaniel.

As circumstances change and additional data become available, reserve estimates also change. Estimates made are reviewed and revised, either upward or downward, as warranted by the new information. Revisions are often required due to changes in well performance, commodity prices, economic conditions and governmental restrictions.

Although every reasonable effort is made to ensure that reserve estimates are accurate, reserve estimation is an inferential science. As a result, the subjective decisions, new geological or production information and a changing environment may impact these estimates. Revisions to reserve estimates can arise from changes in year-end oil and gas prices, and reservoir performance. Such revisions can be either positive or negative.

Abandonment and Reclamation Costs

Abandonment and reclamation costs are based on management's estimate of costs to abandon, remediate and reclaim all of its surface leases, wells (including undrilled wells that have been attributed reserves), facilities, and pipelines based on its working interest, the current regulatory standards, actual abandonment cost history, estimated timing of such expenditures and excludes salvage values. These costs relate to wells and facilities in properties that may or may not have reserves attributed to them. Abandonment and reclamation costs include the Corporation's existing crude oil and natural gas activities and costs associated with future development activities including all development drilling, and dedicated gathering and processing facility expansions or builds, required to enable production of the forecast development in the McDaniel Report. All existing and future abandonment and reclamation costs are reflected in McDaniel's estimate of future net revenue.

The approximate net cost to abandon and reclaim all wells and facilities, discounted at 10%, totals \$41.4 million (\$418.6 million undiscounted and inflated at 2.0% per annum), all of which are included in the estimate of future net revenue. Management has estimated the net cost to abandon and reclaim all existing wells and facilities totalling \$163.4 million undiscounted and uninflated, along with the cost to abandon and reclaim all future facilities and undrilled wells that have been attributed reserves, which has been reviewed by McDaniel for reasonableness. Undiscounted, uninflated abandonment and reclamation costs expected to be paid over the next three years aggregate \$12.8 million, while the majority of the remaining costs are expected to be incurred between 2040 and 2075.

Future Development Costs

The following table sets forth development costs deducted in the estimation of the Corporation's future net revenue attributable to the reserve categories noted below.

Year	Future Development Cost (\$ millions)	
	Proved Reserves	Proved Plus Probable Reserves
2026	291.8	302.0
2027	526.2	532.3
2028	431.3	456.1
2029	396.0	438.9
2030	222.3	329.0
Remaining	374.8	827.3
Total: Undiscounted for all years	2,242.4	2,885.6

To fund Advantage's capital program, including future development costs, the Corporation has many financing alternatives available, including partial retention of cash provided by operating activities, bank debt financing, issuance of additional Common Shares and other financial instruments. Advantage evaluates the appropriate financing alternatives closely and has made use of all these options dependent on the given investment situation and the capital markets. The Corporation maintains a capital structure that is intended to maximize the investment return to Shareholders as compared to the cost of financing. Advantage expects to continue using all financing alternatives available to continue pursuing its development strategy. The assorted financing instruments have certain inherent costs which are considered in the economic evaluation of pursuing any development opportunity.

There can be no guarantee that funds will be available or that we will allocate funding to develop all of the reserves attributed in the McDaniel Report. Failure to develop those reserves would have a negative impact on future production and cash flow and could result in negative revisions to reserves. The interest or other costs of external funding are not included in the reserves and future net revenue estimates set forth above and would reduce the reserves and future net revenue to some degree depending upon the funding sources utilized. The Corporation does not anticipate that interest or other funding costs would make further development of any of the Corporation's assets uneconomic.

Other Oil and Gas Information

Advantage is a natural gas, crude oil and NGLs growth-oriented Corporation with a significant position in the Montney resource play at Glacier, Valhalla, Progress, Wembley and Gordondale, Alberta. The Corporation operates the majority of its assets, which allows the Corporation to control the nature and timing of the capital investments necessary to maximize the potential in developing this asset.

Property Descriptions

The following property descriptions are as of December 31, 2025, unless otherwise noted and reserves quoted are as reported in the McDaniel Report.

The below map outlines the Corporation's properties:

Alberta, Canada - Glacier, Valhalla, Progress, Wembley, and Gordondale Areas

The Corporation's Alberta properties lie along the Alberta side of the border with British Columbia between Grande Prairie, Alberta and Dawson Creek, British Columbia. The primary zones of interest are within the Triassic Charlie Lake, Doig and Montney formation. All of the Corporation's properties are onshore properties. Advantage holds a total of 225 net sections (144,000 net acres) of Doig/Montney rights. Advantage also holds 251 net sections (160,640 net acres) of Charlie Lake rights at Gordondale, Progress, and Valhalla. At Valhalla, Wembley and Progress, ongoing industry drilling and production activity has demonstrated attractive liquid yields and gas rates. Drilling on and adjacent to our lands have targeted multiple Montney layers with results demonstrating liquids-rich gas accumulations in all layers to date.

Activity on our Charlie Lake properties (Valhalla/Progress/Gordondale) was steady during 2025, consisting of 20 gross (15.1 net) wells drilled, 17 gross (12.0 net) wells completed, and 19 gross (14.0 net) wells placed on production. During the first half of 2025, Advantage physically connected our main 16-29 Valhalla battery to the NorthRiver Midstream Gordondale East plant. The plant expansion is now complete, and we are delivering up to 25 MMcf/d of raw gas to the facility. This connection combined with our extensive owned gas processing and liquid handling infrastructure provides sufficient processing capacity to ensure the efficient development of our Charlie Lake properties.

During 2025 activity at our Glacier property consisted of 13 gross (12.6 net) wells drilled, 10 gross (10.0 net) wells completed, and 11 gross (11.0 net) wells placed on production.

During 2025 activity at our Montney Valhalla property consisted of 2 gross (2.0 net) wells drilled, 2 gross (2.0 net) wells completed, and 2 gross (2.0 net) wells placed on production. The two new Montney wells were brought on production at restricted rates due to low gas prices and pipeline constraints. The constraints will be removed when Valhalla gas is redirected to our new Progress 4-21 gas plant in the second quarter of 2026.

At our Progress Montney asset, construction of the Phase 1 75 MMcf/d 4-21 gas plant was deferred to early 2026, with no impact on 2025 production. Construction at the Progress 4-21 gas plant resumed in the fourth quarter of 2025 with

commissioning taking place in the second quarter of 2026. The acid gas disposal well that services the plant was drilled and completed during the third quarter 2025. All key regulatory components for the facility are in place.

The completion and commissioning of the Progress gas plant in the second quarter of 2026 will unlock significant synergies and growth from our assets through regional infrastructure and production optimization, resulting in lower operating costs and stronger operating netbacks. The Progress gas plant will also provide incremental processing capacity for our next phase of low-cost production growth at Glacier.

2025 activity at our Wembley property consisted of 3 gross (3.0 net) wells drilled, 3 gross (3.0 net) wells completed, and 3 gross (3.0 net) wells placed on production. The Wembley asset is connected to two third-party gas processing facilities and utilizes existing capacity in our 100% owned Wembley compressor site and liquids handling hub.

Advantage owns and operates the following major facilities in Alberta:

- Glacier: 87.5% working interest gas plant with 425 MMcf/d raw gas and 6,800 bbls/d hydrocarbon liquid capacity
- Valhalla: 100% working interest liquid hub with 45 MMcf/d raw gas and 2,000 bbls/d hydrocarbon liquid capacity
- Wembley: 100% working interest liquid hub with 38 MMcf/d raw gas and 5,000 bbls/d hydrocarbon liquid capacity
- Progress: 100% working interest liquid hub with 25 MMcf/d raw gas and 5,000 bbls/d hydrocarbon liquid capacity

Advantage's strategy of owning and operating the majority of its infrastructure has helped us achieve a low-cost structure and provides opportunities to diversify revenue streams for the Corporation. The operating cost structure of the Corporation is very favorable with operating costs averaging \$5.34/boe in 2025.

Gas is sold through Advantage's sales pipeline system into the NGTL system and the Alliance pipeline system.

British Columbia, Canada – Conroy and Attachie Areas

At Conroy and Attachie, Advantage holds the equivalent of 90.5 net sections (57,916 acres) of land in northeast British Columbia within the liquids-rich Montney trend. In addition to its land positions, the Corporation owns an idled sour gas processing facility with capacity of approximately 100 MMcf/d, which is located in close proximity to the Corporation's Conroy lands.

The Corporation's British Columbia land base is characterized by long-tenure acreage, providing a potential future development opportunity. This land position offers optionality for development following the commencement of liquefied natural gas operations in Canada.

Oil and Gas Wells

The following table sets forth the number and status of wells as at December 31, 2025 in which the Corporation has a working interest.

	Oil Wells				Natural Gas Wells			
	Producing		Non-Producing ⁽³⁾		Producing		Non-Producing ⁽³⁾	
	Gross ⁽¹⁾	Net ⁽²⁾	Gross	Net	Gross ⁽¹⁾	Net ⁽²⁾	Gross	Net
Alberta	229.0	181.3	80.0	49.4	320.0	293.0	189.0	145.6
British Columbia	2.0	2.0	5.0	5.0	5.0	4.5	14.0	13.0
Total	231.0	183.3	85.0	54.4	325.0	297.5	203.0	158.6

⁽¹⁾ "Gross" wells means the number of wells in which the Corporation has a working interest.

⁽²⁾ "Net" wells means the aggregate number of wells obtained by multiplying each gross well by the Corporation's percentage working interest therein.

⁽³⁾ Non-producing includes wellbores shut-in for economic reasons, wellbores not capable of production and wellbores used for disposal.

Properties with no Attributed Reserves

The following table sets out our unproved properties (undeveloped) as at December 31, 2025.

	Gross Acres	Net Acres
Alberta	150,920	123,463
British Columbia	60,913	56,069
Total	211,833	179,532

There are 21 sections (13,440 net acres) of our undeveloped land holdings that are scheduled to expire by December 31, 2026. However, the land expiries do not take into account the Corporation's 2026 exploitation and development program that should result in 16 sections (10,240 net acres) being continued. This will be accomplished by validation of lands using banked earned sections or continuations based on prior drillings or new drills that will eliminate such potential expirations. We closely monitor land expiries and plan our development program with the strategy of minimizing expiries of undeveloped lands. Development of the Corporation's properties with no attributed reserves are subject to current industry conditions and uncertainties as indicated under "*Industry Conditions*" and "*Risk Factors*" herein.

Forward Contracts

The Corporation's financial results and condition are impacted primarily by the prices received for natural gas, crude oil and NGLs production. Natural gas, crude oil and NGLs prices have fluctuated widely and are determined by supply and demand factors, including available access to pipelines and markets, weather, general economic conditions in natural gas consuming and producing regions throughout North America and political factors. Any upward or downward movement in crude oil, NGLs and natural gas prices could have an effect on our financial condition and capital development. Additionally, the Corporation is exposed to fluctuations in foreign exchange rates as a portion of the Corporation's revenues are earned in United States Dollars ("**USD**"). Finally, the Corporation's Credit Facilities are exposed to fluctuations in interest rates posted by the lenders thereunder, which impacts the amount of finance expense charged to the Corporation.

Advantage has a board approved hedging policy that utilizes, amongst others, floors, puts, swaps, swaptions, calls, costless collars and fixed price swaps to hedge up to 60% of its gross crude oil, NGLs and natural gas production for a period of one year, up to 50% over the second year and third year, and 20% over the fourth and fifth year period. In addition, Advantage is able to enter into basis swap arrangements to any natural gas price point in North America for up to 100,000 MMBtu/day with a maximum term of seven years. Basis swap arrangements do not count against the limitations on hedged production. The Corporation will limit the total corporate interest amounts hedged to no more than 25% of such interest for a term not to exceed two years, along with limiting the total corporate foreign exchange amounts hedged to no more than 50% of such foreign exchange, unless prior Board approval to exceed these limits is received.

These commodity, foreign exchange and interest rate risk management activities could expose the Corporation to losses or gains. To the extent that the Corporation engages in risk management activities related to commodity prices, foreign exchange and interest rates, it will be subject to credit risk associated with the parties with which it contracts. This credit risk will be mitigated by entering into contracts with only stable and creditworthy parties and through the frequent review of the Corporation's exposure to these entities. See "*Risk Factors*".

For further information regarding forward contracts in place, see "*Financial risk management*" in our audited annual consolidated financial statements for the year ended December 31, 2025.

Marketing and Transportation Commitments

As part of normal business operations, the Corporation enters into firm service arrangements for the transportation of its natural gas, crude oil and NGLs production volumes. Transportation commitments are required to ensure our production is delivered to sales markets and Advantage actively manages our portfolio in conjunction with our future development plans ensuring we are properly diversified to multiple markets. Advantage has proactively committed to additional natural gas transportation to diversify natural gas production to the Dawn, Empress and Emerson markets, with the objective of reducing price volatility.

Advantage's commitments for future physical deliveries of crude oil and natural gas are not expected to vary materially from Advantage's future forecasted production. Advantage continually monitors its transportation requirements on an ongoing basis and actively manages its commitments to ensure that costs associated with any excess transportation is mitigated as best as possible. Additionally, Advantage expects to fulfill these commitments through ongoing exploration and development activities, subject to our development plans, well performance, and disruptions or constraints at facilities and pipelines.

For further information regarding transportation commitments, see "*Commitments*" in our audited annual consolidated financial statements for the year ended December 31, 2025.

Our natural gas, crude oil and NGL production is primarily sold through marketing companies at current market prices. Risk management price hedging is done outside of our marketing contracts. Advantage has a portfolio of natural gas contracts with various terms and delivery locations. As at December 31, 2025, the Corporation has the following physical natural gas contracts in place for the purpose of diversifying a portion of its natural gas sales portfolio with incremental production sold into the AECO market:

Physical Market Diversification	Remaining Term ⁽¹⁾	Volume	Price
Dawn, Ontario	January 2026 to October 2027	52,706 Mcf/d	Dawn
Dawn, Ontario	April 2027 to March 2032	25,000 mcf/d	Dawn less US \$0.82/mcf
Emerson, Manitoba	January 2026 to October 2032	26,823 Mcf/d	Emerson
Empress, Alberta	January 2026 to March 2026	74,806 Mcf/d	Empress
Empress, Alberta	April 2026 to March 2027	88,284 Mcf/d	Empress
Empress, Alberta	April 2027 to October 2030	111,980 Mcf/d	Empress
Empress, Alberta	November 2030 to March 2032	109,872 Mcf/d	Empress
Empress, Alberta	April 2032 to October 2032	133,567 Mcf/d	Empress
Empress, Alberta	November 2032 to March 2046	160,391 Mcf/d	Empress
Empress, Alberta	April 2046 to March 2049	108,261 Mcf/d	Empress
Empress, Alberta	April 2049 to March 2052	84,565 Mcf/d	Empress
Empress, Alberta	April 2052 to March 2053	56,869 Mcf/d	Empress
Chicago, Illinois	January 2026 to March 2035	16,448 Mcf/d	Chicago Citygate
Chicago, Illinois ⁽²⁾	January 2026 to October 2035	25,000 Mcf/d	PJM electricity price
Ventura, Iowa	April 2029 to March 2036	21,326 Mcf/d	Ventura less US \$0.99/Mcf

⁽¹⁾ The above sales hub diversification contracts do not include term extensions from future potential renewals.

⁽²⁾ Advantage has a long-term natural gas supply agreement for CPV Three Rivers Energy Center in Grundy County, Illinois. Advantage will supply 25,000 MMBtu per day of natural gas, ending in 2035. Commercial terms of the agreement are based upon a spark-spread pricing formula, providing Advantage revenue diversification through exposure to PJM electricity prices, back-stopped with a natural gas price collar for the first 10 years of the term.

Incremental physical natural gas is sold at AECO, where the Corporation enters marketing contracts for one year or less. Crude oil and NGL contracts are typically renegotiated annually and run for one-year terms.

Tax Horizon

In 2025, Advantage did not pay any income related taxes and it is expected, based on current legislation, that no cash income taxes are to be paid by Advantage prior to 2029. See "Risk Factors".

Capital Expenditures

The following tables summarize capital expenditures (including capitalized general and administrative expenses) related to our activities for the year ended December 31, 2025:

(\$000s)	Year ended December 31, 2025
Property Acquisition Cost	
Proved Properties	1,300
Unproved Properties	-
Property Dispositions Cost	(4,000)
Exploration Cost	-
Development Cost	280,173
Corporate Capital Expenditures ⁽¹⁾	10,225
Entropy Capital Expenditures	131,198
Total	418,896

⁽¹⁾ Corporate includes workovers, turnaround cost, seismic, capitalized G&A, and office furniture and equipment.

Exploration and Development Activities

The following table sets forth the gross and net wells in which we participated during the year ended December 31, 2025:

By Well Type	Development Wells	
	Gross	Net
Crude oil wells	20.0	15.1
Natural gas wells	18.0	17.6
Stratigraphic test wells	-	-
Service wells	3.0	3.0
Dry holes	-	-
Total	41.0	35.7

⁽¹⁾ Number of wells based on rig release dates.

⁽²⁾ The Corporation did not participate in any exploratory wells during the year ended December 31, 2025.

See "Other Oil and Gas Information – Property Descriptions" for a description of the Corporation's exploration and development activities.

Production Estimates

The following table sets out the volume of our production estimated for the year ended December 31, 2026 reflected in the estimate of future net revenue disclosed in the tables contained under "*Disclosure of Reserves Data*".

Reserves Category	Light Crude Oil and Medium Crude Oil		Natural Gas Liquids	
	Gross (bbls/d)	Net (bbls/d)	Gross (bbls/d)	Net (bbls/d)
Proved Developed Producing	5,820	4,702	3,645	3,012
Proved Developed Non-Producing	41	37	60	43
Proved Undeveloped	1,418	1,327	914	864
Total Proved	7,279	6,067	4,619	3,918
Total Probable	783	612	341	286
Total Proved Plus Probable	8,062	6,679	4,960	4,204

Reserves Category	Conventional Natural Gas		Shale Gas	
	Gross (Mcf/d)	Net (Mcf/d)	Gross (Mcf/d)	Net (Mcf/d)
Proved Developed Producing	47,393	44,350	282,599	265,837
Proved Developed Non-Producing	218	207	7,085	6,595
Proved Undeveloped	5,132	4,860	60,753	57,465
Total Proved	52,743	49,416	350,437	329,897
Total Probable	4,638	4,334	25,834	24,308
Total Proved Plus Probable	57,381	53,750	376,271	354,205

Reserves Category	Total Oil Equivalent	
	Gross (boe/d)	Net (boe/d)
Proved Developed Producing	64,464	59,412
Proved Developed Non-Producing	1,318	1,213
Proved Undeveloped	13,313	12,578
Total Proved	79,094	73,204
Total Probable	6,203	5,672
Total Proved Plus Probable	85,297	78,876

The following table includes fields that account for more than 20% of our total proved plus probable production estimates for the year ended December 31, 2026:

Property	Shale Gas (Mcf/d)		Natural Gas Liquids (bbls/d)		Total (Boe/d)	
	Gross	Net	Gross	Net	Gross	Net
Glacier (Alberta)	341,821	321,776	2,366	2,000	59,336	55,630

Production History

The following table summarizes certain information in respect of production, prices received, royalties paid, operating expenses and resulting netback for the periods indicated below:

	Quarter Ended				Year Ended
	Mar. 31	Jun. 30	Sep. 30	Dec. 31	Dec. 31, 2025
Average Daily Production ⁽¹⁾					
Light Crude Oil and Medium Crude Oil (bbls/d)	8,487	7,627	8,483	7,372	7,991
NGLs (bbls/d)	4,786	4,251	3,656	4,400	4,270
Conventional Natural Gas (Mcf/d)	39,754	34,759	36,530	34,178	36,291
Shale Gas (Mcf/d)	383,244	362,620	319,529	374,129	359,745
Combined (boe/d)	83,773	78,108	71,482	79,823	78,267
Average Prices Received					
Light Crude Oil and Medium Crude Oil (\$/bbl)	94.63	82.85	84.34	75.60	84.64
NGLs (\$/bbl)	67.64	57.33	52.91	52.26	57.91
Conventional Natural Gas (\$/Mcf)	3.16	2.35	1.44	2.91	2.47
Shale Gas (\$/Mcf)	3.16	2.35	1.44	2.91	2.51
Combined (\$/boe)	29.42	23.16	19.89	24.76	24.47
Royalties Paid ⁽²⁾					
Light Crude Oil and Medium Crude Oil (\$/bbl)	18.37	15.60	14.71	13.90	15.69
NGLs (\$/bbl)	15.55	8.98	10.33	7.52	10.71
Conventional Natural Gas (\$/Mcf)	0.01	(0.03)	(0.08)	0.03	(0.02)
Shale Gas (\$/Mcf)	0.01	(0.03)	(0.07)	0.02	(0.02)
Combined (\$/boe)	2.80	1.86	1.87	1.83	2.10
Production Costs ⁽³⁾⁽⁴⁾					
Light Crude Oil and Medium Crude Oil (\$/bbl)	4.76	4.90	5.82	5.93	5.35
NGLs (\$/bbl)	4.76	4.90	5.82	5.93	5.32
Conventional Natural Gas (\$/Mcf)	0.79	0.82	0.97	0.99	0.89
Shale Gas (\$/Mcf)	0.79	0.82	0.97	0.99	0.89
Combined (\$/boe)	4.76	4.90	5.82	5.93	5.34
Transportation Costs					
Light Crude Oil and Medium Crude Oil (\$/bbl)	4.60	4.58	5.44	4.93	4.89
NGLs (\$/bbl)	4.60	4.58	5.44	4.93	4.86
Conventional Natural Gas (\$/Mcf)	0.66	0.66	0.66	0.64	0.65
Shale Gas (\$/Mcf)	0.66	0.66	0.66	0.64	0.65
Combined (\$/boe)	4.06	4.03	4.21	4.01	4.07

Production History (continued)

	Quarter Ended				Year Ended
	Mar. 31	Jun. 30	Sep. 30	Dec. 31	Dec. 31, 2025
Netback Received ⁽⁵⁾⁽⁶⁾					
Light Crude Oil and Medium Crude Oil (\$/bbl)	66.90	57.77	58.37	50.84	58.71
NGLs (\$/bbl)	42.73	38.87	31.32	33.88	37.02
Conventional Natural Gas (\$/Mcf)	1.70	0.90	(0.11)	1.25	0.95
Shale Gas (\$/Mcf)	1.70	0.90	(0.12)	1.26	0.99
Combined (\$/boe)	17.80	12.37	7.99	12.99	12.96

⁽¹⁾ Before deduction of royalties.

⁽²⁾ Gas cost allowance credits are initially applied against conventional natural gas and shale gas. If the gas cost allowance credits exceeds conventional natural gas and shale gas royalties paid, the remaining credits are applied against natural gas liquids.

⁽³⁾ This figure includes all field production costs.

⁽⁴⁾ The Corporation does not record production costs on a commodity basis. Information in respect of operating expenses for crude oil and NGLs (\$/bbl) and shale gas and conventional natural gas (\$/Mcf) has been determined by allocating expenses on a relative volume of crude oil, NGLs, shale gas and conventional natural gas production basis.

⁽⁵⁾ Information in respect of netbacks received for crude oil and NGLs (\$/bbl) and shale gas and conventional natural gas (\$/Mcf) is calculated using production cost figures for crude oil and NGLs (\$/bbl) and shale gas and conventional natural gas (\$/Mcf), which figures have been estimated. See note (4) above.

⁽⁶⁾ Netbacks are calculated by subtracting royalties, production costs and transportation costs from revenues.

The following table indicates our approximate average daily production from our fields that account for more than 20% of our total production for the year ended December 31, 2025:

Property	Shale Gas (Mcf/d)	Natural Gas Liquids (bbls/d)	Total (Boe/d)
Glacier (Alberta)	308,805	1,662	53,130

Cyclical and Seasonal Impact of Industry

Our operational results and financial condition will be dependent on the prices received for oil, NGLs and natural gas production. Oil, NGLs and natural gas prices have fluctuated widely during recent years and are determined by supply and demand factors, including available access to transportation, weather, general economic conditions in consuming and producing regions throughout North America and political factors. Any decline in oil, NGL and natural gas prices could have an adverse effect on our financial condition. We mitigate such price risk through closely monitoring the various commodity markets, diversifying our sales portfolio and establishing hedging programs, as deemed necessary, to improve netbacks on production volumes. See "Statement of Reserves Data and Other Oil and Gas Information – Forward Contracts" for our current hedging program.

Environmental Considerations

Advantage is pro-active in its approach to environmental concerns. Procedures are in place to ensure that significant care is taken in the day-to-day management of its oil and gas properties. Government regulations and procedures are followed in strict adherence to the law. We believe in well abandonment and site restoration in a timely manner and this practice also lowers overall costs to us. Our Environmental Management System is continuously updated and meets or exceeds the Canadian Association of Petroleum Producers Environmental Management Guidelines.

Health, Safety and Environmental

Advantage is committed to a comprehensive and effective health, safety and environmental program that meets or exceeds regulatory and corporate requirements.

The Reserves and Health, Safety, Environmental Committee (the "**Reserves Committee**") is responsible for developing the Corporation's approach to, among others, matters concerning health, safety and the environment, and, from time-to-time, to review and make recommendations to the Board as to such matters. With respect to health, safety and environmental matters, the Reserves Committee reviews the Corporation's policies, programs and internal control systems regarding health, workforce safety, asset integrity, process safety and environmental protection and monitors the Corporation's performance relative to internal improvement objectives and industry practices. Further, the Reserves Committee reviews the Corporation's policies, programs and internal control systems with respect to field operations and monitors the Corporation's field operating capabilities, field operating practices and process safety practices.

The Reserves Committee also reviews and reports to the Board:

- on the Corporation's performance in the areas of health, workforce safety, process safety, environmental protection, field operations and compliance with codes, standards, regulations and applicable laws;
- on emerging trends, issues and regulations related to health, workforce safety, process safety, environmental protection and field operations;
- the findings of any significant report by regulatory agencies, external health, safety and environmental consultants or auditors concerning the Corporation's performance in health, safety and environment and any necessary corrective measures taken to address issues and risks with regards to the Corporation's performance in the areas of health, safety and environment that have been identified by the Corporation, external auditors or by regulatory agencies;
- the results of any review with management, outside accountants and legal advisors of the implications of major corporate undertakings such as the acquisition or expansion of facilities or decommissioning of facilities;
- a framework for management's decisions on abandonment and reclamation, including appropriate decommissioning liability determination; and
- policies and other directives of the Corporation relating to security and the safeguarding of the Corporation's premises, installations, assets and personnel.

Advantage participates in the Certificate of Recognition ("**COR**") Safety Program and has received certification for the last nine years, achieving first-quartile results in each year. The COR Health and Safety Auditing and the COR Safety Program require commitment to continuous improvement in environment, health and safety management practices, including sound planning and implementation. The program is externally audited every three years and internally audited every other year. The program ensures open communication and measured performance to maintain such program.

Management, employees and all contractors are responsible and accountable for the overall health, safety and environmental program. Advantage operates in compliance with all applicable regulations and ensures all staff and contractors employ sound practices to protect the environment and to ensure employee and public health and safety.

In 2025, the Corporation participated in multiple enhanced production audits, all of which it passed. Advantage's incident ratings in 2025 were below industry averages. In addition, a total of 9 reclamation certificates were received by Advantage in 2025. Over the last ten years, Advantage's spill volume was negligible, contained on lease and cleaned up.

The Corporation maintains and will continue to maintain a safe and environmentally responsible workplace, and will continue to provide training, equipment and procedures to all individuals in adhering to our policies. The Corporation will also solicit and take into consideration input from our neighbours, communities and other stakeholders in regard to protecting people and the environment.

Competitive Conditions

There is considerable competition in the worldwide oil and natural gas industry, including the Province of Alberta where the Corporation's assets, activities, and employees are located. We are a member of the petroleum industry, which is highly competitive at all levels. We compete with other companies for all of our business inputs, including exploitation and development prospects, access to commodity markets, acquisition opportunities, available capital and staffing. We strive to be competitive by maintaining a strong financial condition and by utilizing current technologies to enhance exploitation, development and operational activities. See "*Risk Factors*".

DIRECTORS AND OFFICERS

The following table sets forth the name, place of residence, date first elected as a director of Advantage and positions for each of the directors and officers of Advantage as at the date hereof, together with their principal occupations during the last five years.

Name, Province and Country of Residence	Position Held and Period Served as a Director or Officer ⁽⁶⁾⁽⁷⁾	Principal Occupations During Past Five Years
Michael Belenkie Alberta, Canada	Director since January 1, 2022, President since November 11, 2019 and Chief Executive Officer since January 1, 2022	Mr. Belenkie joined Advantage in October 2018 as Chief Operating Officer and was promoted to President and Chief Operating Officer in November 2019 and then to President and Chief Executive Officer in January 2022. From 2012 to 2018, Mr. Belenkie was founder and Vice President of Engineering of Modern Resources Inc., a successful private oil and gas company in Alberta's Deep Basin. Between 2008 and 2011, Mr. Belenkie held various roles at Painted Pony Energy Ltd. (" Painted Pony "), including Vice President of Reservoir Engineering and Corporate Development. Prior thereto, he held various roles at Talisman Energy (1995 to 2008) within their North American assets, including Team Lead of Montney and northeastern British Columbia. During 2006 and 2007, Mr. Belenkie also developed and implemented strategic realignment and operational excellence strategies with leadership teams in two major producers in Alaska and Canada while working with the management consulting firm, RLG International, during his tenure at Talisman. Received his BSc. in Mechanical Engineering from University of Calgary in 1997 and is a registered professional engineer with the Association of Professional Engineers and Geoscientists of Alberta.
John L. Festival ⁽²⁾ Alberta, Canada	Director since March 12, 2024, Chairman since May 6, 2025	Mr. Festival has over 40 years of experience in the energy industry and has held multiple senior executive positions. Mr. Festival graduated from the University of Saskatchewan with a Bachelor of Science in Chemical Engineering. He spent the next 38 years in the oil industry of western Canada. He worked mainly in the areas of primary heavy oil and thermal oil production with a focus on creating shareholder value. Mr. Festival held the position of President & CEO of BlackRock Ventures Inc. from 1999 to 2006 and President & CEO of BlackPearl Resources Inc. from 2009 to 2019. Mr. Festival is currently the President & CEO of Broadview Energy Ltd., a private oil and gas company focused on heavy oil development. He also serves on the board of directors of each of Athabasca Oil Corporation, Cardinal Energy Ltd., and i3 Energy PLC.

Name, Province and Country of Residence	Position Held and Period Served as a Director or Officer⁽⁶⁾⁽⁷⁾	Principal Occupations During Past Five Years
Jill T. Angevine ⁽²⁾⁽³⁾ Alberta, Canada	Director since May 27, 2015	President of Brownstone Asset Management since August 2021. Prior thereto Managing Director, Palisade Capital Management Ltd. and prior thereto Vice President and Portfolio Manager, Matco Financial Inc. Director of Tourmaline Oil Corp. since November 2015. Director of Grey Wolf Animal Health Corp. since November 2022. Director of Ero Copper Corp. since August 2022. Director of Chinook Energy Inc. from November 2014 to April 2020. Ms. Angevine holds a Bachelor of Commerce degree from the University of Calgary and has earned the Chartered Professional Accountant, the Chartered Financial Analyst, and the Institute of Corporate Directors designations.
Katherine L. Minyard ⁽¹⁾⁽²⁾ Colorado, United States	Director since May 6, 2025	Ms. Minyard has over 25 years of experience in investment valuation and capital allocation in the energy industry. She was an Investment Principal and Partner at Cambiar Investors, a long-only, relative value-focused global asset manager from 2014 to 2021, covering international energy, metals and mining, industrials, basic materials and utility equities, while leading the Europe Select strategy as a portfolio manager. Prior to joining Cambiar, Ms. Minyard was an Executive Director on the Equity Research Team at J.P. Morgan where she covered U.S. Integrated Oil, Refining, Canadian Oil and U.S. E&P companies. From 2021 to 2023, Ms. Minyard served as an Independent Director of Ovintiv Inc. Earlier in her career, Ms. Minyard served energy clients at Accenture and McKinsey & Company. Ms. Minyard holds a Master in Business Administration from INSEAD in France and a Bachelor of Science in Applied Mathematics from Texas A&M University. She also holds the Chartered Financial Analyst designation and the CERT Certificate for Cybersecurity Oversight.
Lawrence S. Massaro ⁽³⁾⁽⁵⁾ Texas, United States	Director since March 6, 2025	Mr. Massaro was the Chief Executive Officer of Silverado Oil & Gas from 2019 to 2022. Prior thereto, Mr. Massaro was the Chief Financial Officer and Executive Vice President of Newfield Exploration from 2011 to 2019. Prior to joining Newfield, Mr. Massaro was Managing Director at JP Morgan and Head of Acquisitions and Divestitures from 2005 to 2011. Mr. Massaro holds a Master of Business Administration from Southern Methodist University and a Bachelor of Science in Petroleum Engineering from Texas A&M University.

Name, Province and Country of Residence	Position Held and Period Served as a Director or Officer ⁽⁶⁾⁽⁷⁾	Principal Occupations During Past Five Years
Daniel S. Farb ⁽²⁾⁽⁴⁾⁽⁵⁾ Massachusetts, United States	Director since March 6, 2025	Daniel Farb is an experienced investor and is currently the Managing Member of Mill Pond Capital. He has worked with Mill Pond Capital since 2021 and Highfields Capital from 2001 to 2021, where he was Managing Director from 2001 to 2019. Prior to Highfields Capital, he worked at Goldman, Sachs & Co. in the Mergers & Acquisition and Principal Investment Groups. Mr. Farb served as a director of Pharmacyte Biotech Inc. in 2022 and served as a director of MEG Energy Corp. from 2017 to 2018. Mr. Farb is a graduate from Harvard Business School, where he was a Baker and Loeb Scholar and holds a Bachelor of Commerce in Finance from McGill University.
Donald M. Clague ⁽¹⁾⁽³⁾ Alberta, Canada	Director since June 16, 2020	Mr. Clague is a corporate director and has had an extensive 35 year working career in oil and gas, including diverse experience in North American domestic and frontier areas, as well as internationally in North Africa, Norway and the United Kingdom. His experience includes a broad range of technical and leadership roles with Dome Petroleum, Amoco Canada, Alberta Energy, Amerada Hess Canada, Hardy Oil and Gas Canada, Petro-Canada and Suncor Energy. In 2002, he became VP, Production (North American Natural Gas) at Petro-Canada, responsible for the safe, efficient operations in all field locations across Alberta and British Columbia, including all engineering functions supporting those areas. He spent 3 years in Denver as President, Petro-Canada Resources (USA) focused on tight oil and coalbed methane assets. Upon returning to Canada, he became VP, In Situ Development and Operations, and after the merger with Suncor was appointed VP, Firebag Operations. In 2012, Mr. Clague became the Senior VP, In Situ Business Unit. He moved to the role of Senior VP, Oil Sands Technical and Upstream Services in 2015. In 2018, he retired as the Senior VP, Exploration and Production Business Unit, with personnel in Calgary, St. John's, Aberdeen, Tripoli, and Stavanger. Mr. Clague graduated from the University of Calgary in 1983 with a BSc. in Geophysics. He remains active at the University, sitting on the Dean of Engineering's Schulich Industry Advisory Council. He is a registered Professional Geophysicist with APEGA, obtained the Institute of Corporate Directors ICD.D designation in 2022, and has served on executive policy groups with the Canadian Association of Petroleum Producers (CAPP) and the Colorado Oil and Gas Association (COGA).

Name, Province and Country of Residence	Position Held and Period Served as a Director or Officer ⁽⁶⁾⁽⁷⁾	Principal Occupations During Past Five Years
Deirdre M. Choate ⁽¹⁾⁽⁴⁾ Alberta, Canada	Director since May 6, 2021	Ms. Choate is a corporate director with over 30 years of experience in international tax, treasury, insurance, governance and risk management. From 2007 to March 2021, Ms. Choate was General Manager, Vice President Tax, and subsequently Vice President Tax & Treasurer at Husky Energy Inc. Prior thereto, Ms. Choate was an Associate Partner in International Tax Services at PricewaterhouseCoopers LLP. Earlier in her career, Ms. Choate was Managing Director of Nowsco Well Service (Ireland) Limited. Ms. Choate is a Chartered Professional Accountant in Alberta and Fellow Chartered Accountant in Ireland and obtained the Institute of Corporate Directors ICD.D designation in 2020. Ms. Choate holds a Bachelor of Civil Law degree from the University College Dublin.
Norman W. MacDonald ⁽³⁾⁽⁴⁾⁽⁵⁾ Ontario, Canada	Director since May 6, 2021	Mr. MacDonald is an independent businessman and his experience in asset management spans over 25 years in various roles with the sole focus on the natural resource sector. Mr. MacDonald began his investment career at Ontario Teachers Pension Plan Board, where he worked for three years in progressive roles from Research Assistant to Portfolio Manager. His next role was as a VP and Partner at Beutel, Goodman & Co. Ltd. Mr. MacDonald was a Senior Portfolio Manager at Invesco from 2008 to 2020 and prior to joining Invesco, Mr. MacDonald was a VP and Portfolio Manager at Salida Capital. Mr. MacDonald sits on the board of G Mining Ventures and is the Chairman of OR Royalties (formerly Osisko Royalties). Mr. MacDonald earned a Bachelor of Commerce Degree from the University of Windsor and is a Chartered Financial Analyst Charterholder.

Name, Province and Country of Residence	Position Held and Period Served as a Director or Officer⁽⁶⁾⁽⁷⁾	Principal Occupations During Past Five Years
David G. Smith ⁽¹⁾⁽⁴⁾⁽⁵⁾ Alberta, Canada	Director since September 1, 2024	Mr. Smith has over 38 years of experience in the western Canadian oil and gas industry. Mr. Smith currently serves as a director of Wajax Corp. and previously served as a director of Crew Energy Inc. Mr. Smith had an extensive career at Keyera Corp. and played a key role in its formation, evolution and growth. From 2015 to 2020, he served as President and CEO of Keyera, and prior to that, as President and Chief Operating Officer. He also served as Keyera's Executive Vice President – Liquids Business Unit, and before that, Executive Vice President, Chief Financial Officer and Corporate Secretary. Prior to joining Keyera, Mr. Smith held progressively senior finance roles at Gulf Canada Resources Limited and Imperial Oil Limited. Mr. Smith holds a Bachelor of Mathematics degree from the University of Waterloo and a Master of Business Administration from Harvard University. He also holds the ICD.D designation from the Institute of Corporate Directors.
Craig Blackwood Alberta, Canada	Chief Financial Officer since August 1, 2013	Chief Financial Officer of Advantage since August 1, 2013. Vice President, Finance of Advantage from January 27, 2009 to August 1, 2019 and Director of Finance of Advantage from November 2004 to January 27, 2009. Chief Financial Officer of Longview Oil Corp. from March 4, 2010 to February 4, 2014. Mr. Blackwood is a Chartered Professional Accountant in Alberta and holds a Bachelor of Commerce degree from the University of Newfoundland.
Neil Bokenfohr Alberta, Canada	Senior Vice President, since March 27, 2014	Senior Vice President of Advantage since March 27, 2014. Vice-President, Exploitation of Advantage from June 23, 2006 to March 27, 2014. Vice-President, Exploitation of Longview Oil Corp. from May 13, 2011 to November 7, 2013. Prior thereto, Vice President Exploitation and Operations of Ketch Resources Ltd. from January 2005 to June 2006. Vice President, Engineering of Bear Creek Energy Ltd. (and Crossfield Gas Corp. prior thereto) from March 2002 to January 2005. Mr. Bokenfohr is a graduate of the University of Alberta, B. Sc. Petroleum Engineering in 1989. He is a member of APEGA and serves on the Board of Governors of The Explorers and Producers Association of Canada (EPAC).
John Quaife Alberta, Canada	Vice President, Finance, since August 1, 2019	Vice President, Finance of Advantage since August 1, 2019. Mr. Quaife joined Advantage in 2008 as Manager of Taxation, progressing through positions of increasing responsibility from Manager of Finance and Taxation, Controller and was Director of Finance of Advantage from April 2017 to August 1, 2019. Mr. Quaife is a Chartered Professional Accountant in Alberta and holds a Bachelor of Commerce degree from the University of Calgary.

Name, Province and Country of Residence	Position Held and Period Served as a Director or Officer⁽⁶⁾⁽⁷⁾	Principal Occupations During Past Five Years
Darren Tisdale Alberta, Canada	Vice President, Geosciences, since January 1, 2022	Vice President, Geosciences of Advantage since January 1, 2022. Mr. Tisdale joined Advantage in August 2019 as Chief Geologist prior to being promoted to Vice President, Geosciences. Prior to this he was a founding member and Vice President Geosciences of Modern Resources, a Deep Basin producer. Mr. Tisdale has over 20 years of experience as a geologist including an extensive knowledge of the Montney. Mr. Tisdale led the initial development of Painted Pony's Montney Assets in NEBC leading to the corporate shift to a Montney focused company. Earlier experiences included a range of unconventional resource exploration and development and international base metal exploration. He received his BSc. in Geology from the University of Saskatchewan and is a registered professional Geologist with APEGA.
Geoff Keyser Alberta, Canada	Vice President, Corporate Development, since January 1, 2022	Vice President, Corporate Development of Advantage since January 1, 2022. Mr. Keyser joined Advantage in November 2020 as Director of Corporate Development prior to being promoted to Vice President, Corporate Development. Prior to this he was Vice President Engineering at Modern Resources. Prior to this, he has held business development, reservoir, exploitation, completions and facility engineering roles at Painted Pony, Cenovus, and EnCana. He is graduate of Mechanical Engineering from Queen's University and a licensed member of APEGA.
Brian Bagnell, Alberta Canada	Vice President, Commodities and Capital Markets since June 1, 2024	Mr. Bagnell has over 15 years of experience in energy and financial markets. Mr. Bagnell joined Advantage in October 2023 as Director, Commodities and Capital Markets and was promoted to Vice President, Commodities and Capital Markets in June 2024. Prior thereto, he was a Senior Vice President at Macquarie Group, spanning roles in equity research and commodities. Mr. Bagnell has a Bachelor of Business Administration from University of New Brunswick. He is also a CFA Charterholder and an FRM Certified Professional.
Jay P. Reid Alberta, Canada	Corporate Secretary, since April, 2001	Mr. Reid is a partner at the Calgary based law firm of Burnet, Duckworth & Palmer LLP and has practiced corporate and securities law since 1990. Mr. Reid has served, and continues to serve, as a director or Corporate Secretary of a number of private and publicly listed issuers.

Notes:

- (1) Member of the Audit Committee.
- (2) Member of the Compensation Committee.
- (3) Member of the Reserves and Health, Safety and Environment Committee.
- (4) Member of the Governance & Sustainability Committee.
- (5) Member of the Special Committee as at December 31, 2025.
- (6) Advantage does not have an executive committee of the Board.
- (7) Advantage's directors shall hold office until the next annual general meeting of Shareholders or until each director's successor is appointed or elected pursuant to the ABCA.

As at March 5, 2026, the directors and executive officers of Advantage, as a group, beneficially owned, directly or indirectly, or exercised control or direction over 5,341,714 Common Shares, or approximately 3.2% of the issued and outstanding Common Shares.

Cease Trade Orders, Bankruptcies, Penalties or Sanctions

Other than as set forth below:

- (a) no director or executive officer of Advantage has, within the last ten years prior to the date of this annual information form, been a director, chief executive officer or chief financial officer of any issuer (including Advantage) that, (i) while the person was acting in the capacity as director, chief executive officer or chief financial officer, was the subject of a cease trade or similar order or an order that denied the company access to any exemption under securities legislation, that was in effect for a period of more than thirty (30) consecutive days; or (ii) was subject to an order that was issued after the director or executive officer ceased to be a director, chief executive officer or chief financial officer of an issuer, in the issuer being the subject of a cease trade or similar order or an order that denied the relevant issuer access to any exemption under securities legislation, for a period of more than thirty (30) consecutive days, which resulted from an event that occurred while that person was acting as a director, chief executive officer or chief financial officer of the issuer;
- (b) no director or executive officer of Advantage or security holder holding a sufficient number of securities of Advantage to affect materially the control of Advantage is, as at the date of this annual information form, or has, within the last ten years prior to the date of this annual information form, been a director or executive officer of any company (including Advantage) that, while such person was acting in that capacity, or within a year of that person ceasing to act in that capacity, became bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency or was subject to or instituted any proceedings, arrangement for compromise with creditors or had a receiver, receiver manager or trustee appointed to hold its assets;
- (c) no director or executive officer of Advantage or securityholder holding a sufficient number of securities of Advantage to affect materially the control of Advantage has, within the last ten years prior to the date of this document, become bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency, or become subject to or instituted any proceedings, arrangement or compromise with creditors, or had a receiver, receiver manager or trustee appointed to hold the assets of the director, officer or securityholder; and
- (d) no director or executive officer of Advantage or securityholder holding a sufficient number of securities of Advantage to affect materially the control of Advantage has been subject to: (i) any penalties or sanctions imposed by a court relating to securities legislation or by a securities regulatory authority or has entered into a settlement agreement with a securities regulatory authority; or (ii) any other penalties or sanctions imposed by a court or regulatory body that would likely be considered important to a reasonable investor in making an investment decision.

Conflicts of Interest

The directors and officers of Advantage may, from time-to-time, be involved in the business and operations of other issuers, in which case a conflict may arise. The ABCA provides that in the event a director has an interest in a contract or proposed contract or agreement, the director shall disclose his interest in such contract or agreement and shall refrain from voting on any matter in respect of such contract or agreement unless otherwise provided under the ABCA. To the extent that conflicts of interests arise, such conflicts will be resolved in accordance with the provisions of the ABCA.

As at March 5, 2026, other than as disclosed herein, the Corporation was not aware of any existing or potential material conflicts of interest between the Corporation and a director or officer of the Corporation.

DIVIDEND POLICY

Neither the Corporation nor any of its subsidiaries paid any dividends during the years ended December 31, 2025, 2024, and 2023, does not anticipate paying dividends in the immediate future and instead intends to direct cash flow to capital

expenditures, debt reduction and share buybacks. The amount of future cash dividends, if any, is not assured and will be subject to the discretion of the Board of Directors and the board of directors of Advantage's subsidiaries, as applicable, and may vary depending on a variety of factors, including fluctuations in commodity prices, production levels, capital expenditure requirements, debt service requirements, operating costs, royalty burdens, foreign exchange rates, contractual restrictions (including under the Credit Facilities and Debentures), financing agreement covenants, solvency tests imposed by corporate law and other factors that the Board of Directors and the board of directors of Advantage's subsidiaries, as applicable, may deem relevant. See "*Risk Factors*".

DESCRIPTION OF THE CORPORATION'S SECURITIES

Share Capital

The Corporation is authorized to issue an unlimited number of Common Shares, non-voting shares, preferred shares and exchangeable shares. As of December 31, 2025, there were 166,941,610 Common Shares issued and outstanding and there were no non-voting shares, preferred shares or exchangeable shares issued and outstanding.

The following is a description of the rights attaching to the Common Shares, the non-voting shares, the preferred shares and the exchangeable shares.

Common Shares

Each Common Share entitles its holder to receive notice of and to attend all meetings of the shareholders of Advantage and to one vote at such meetings. The holders of Common Shares are, at the discretion of the Advantage Board of Directors and subject to applicable legal restrictions, entitled to receive any dividends declared by the Board of Directors on the Common Shares. The holders of Common Shares are entitled to share equally in any distribution of the assets of Advantage upon the liquidation, dissolution, bankruptcy or winding up of Advantage or other distribution of its assets among its shareholders for the purpose of winding up its affairs. Such participation is subject to the rights, privileges, restrictions and conditions attaching to any instruments having priority over the Common Shares.

Non-Voting Shares

The non-voting shares have identical rights to the Common Shares except that holders of non-voting shares are not generally entitled to receive notice of or attend at meetings of shareholders of Advantage or to vote their shares at such meetings.

Preferred Shares

The preferred shares may be issued, from time-to-time, in one or more series, each series consisting of such number of preferred shares as determined by the Board of Directors, who may also fix the designations, rights, privileges, restrictions and conditions attached to the shares of each series of preferred shares. The preferred shares of each series shall, with respect to payment of dividends and distributions of assets in the event of liquidation, dissolution or winding-up of Advantage, whether voluntary or involuntary, or any other distribution of the assets of Advantage among its Shareholders for the purpose of winding-up its affairs, rank on a parity with the preferred shares of every other series and shall be entitled to preference over the Common Shares and the shares of any other class ranking junior to the preferred shares.

Exchangeable Shares

The exchangeable shares may be issued, from time-to-time, in one or more series, each series consisting of such number of exchangeable shares as determined by the Board of Directors, who may also fix the designations, rights, privileges, restrictions and conditions attached to the shares of each series of exchangeable shares. The exchangeable shares of each series shall, with respect to payment of dividends and distributions of assets in the event of liquidation, dissolution or winding-up of Advantage, whether voluntary or involuntary, or any other distribution of the assets of Advantage among its Shareholders for the purpose of winding-up its affairs, rank on a parity with the exchangeable shares of every other series and shall be entitled to preference over the Common Shares and the shares of any other class ranking junior to the exchangeable shares.

Debentures

The Debentures were issued in connection with the financing of the Acquisition under and pursuant to the provisions of the trust indenture (the "**Indenture**") between Computershare Trust Company of Canada, as trustee, and the Corporation. See "*General Development of the Business – Three Year History – 2024 – Bought Deal Financing*".

The following is a summary of the material attributes and characteristics of the outstanding Debentures. This summary does not purport to be complete and is subject to and qualified in its entirety by reference to the terms of the Indenture which may be viewed under the Corporation's profile on SEDAR+ at www.sedarplus.ca.

The Debentures will mature and be repayable on June 30, 2029 and will accrue interest at the rate of 5.0% per annum payable semi-annually in arrears on June 30 and December 31 of each year, commencing December 31, 2024.

At the Debenture holder's option, the Debentures may be convertible into Common Shares at any time prior to the close of business on the earlier of the business day immediately preceding (i) the maturity date, (ii) if called for redemption, the date fixed for redemption by the Corporation, or (iii) if called for repurchase in the event of a change of control, the payment date, at a conversion price of \$14.58 per Common Share, subject to adjustment in certain events. This represents a conversion rate of approximately 68.5871 Common Shares for each \$1,000 principal amount of the Debentures, subject to the operation of certain antidilution provisions. In the event of a change of control of the Corporation or the redemption of the Debentures by Advantage, subject to certain terms and conditions, holders of the Debentures will be entitled to convert their Debentures and, subject to certain limitations, receive, in addition to the number of Common Shares they would otherwise be entitled to receive, an additional number of Common Shares per \$1,000 principal amount of the Debentures.

PRICE RANGE AND TRADING VOLUME OF SECURITIES

Common Shares

The Common Shares are listed and trade on the TSX and commenced trading under the symbol "AAV" on July 9, 2009. The following table sets forth the trading history of the Common Shares for the periods indicated.

<u>Period</u>	<u>High</u>	<u>Low</u>	<u>Volume</u>
	(\$)	(\$)	
<u>2025</u>			
January	10.66	9.04	10,570,944
February	10.23	8.99	7,446,076
March	10.88	8.87	13,798,194
April	11.15	7.81	10,270,611
May	11.53	9.80	10,276,311
June	12.75	11.20	12,971,972
July	11.91	10.64	9,941,793
August	11.80	10.06	10,151,050
September	11.76	10.64	11,344,852
October	12.47	10.75	9,628,275
November	12.69	11.05	9,061,701
December	13.20	11.26	8,627,724

December	113.91	110.00	284,000
<u>2026</u>			
January	109.28	106.25	655,000
February	106.50	104.30	130,000

Prior Sales

During the year ended December 31, 2025, the Corporation granted 1,233,959 performance share units pursuant to the Corporation's restricted and performance award incentive plan. On March 27, 2025, 621,668 Performance Share Units vested and were settled with the issuance of 671,870 Common Shares.

ESCROWED SECURITIES AND SECURITIES SUBJECT TO CONTRACTUAL RESTRICTIONS ON TRANSFER

There are presently no Advantage securities held in escrow or subject to contractual restrictions on transfer.

LEGAL PROCEEDINGS

There are no outstanding legal proceedings and Advantage and its subsidiaries were not involved in any legal proceedings during the year ended December 31, 2025, which involved claims in excess of 10% of the Corporation's current asset value and to which Advantage or its subsidiaries were a party or in respect of which any of its properties are subject, nor are there any such proceedings known to be contemplated.

REGULATORY ACTIONS

During the year ended December 31, 2025 there were: (i) no penalties or sanctions imposed against Advantage or its subsidiaries by a court relating to securities legislation or by a securities regulatory authority; (ii) no other penalties or sanctions imposed by a court or regulatory body against Advantage or its subsidiaries that would likely be considered important to a reasonable investor in making an investment decision; and (iii) no settlement agreements Advantage or its subsidiaries entered into before a court relating to securities legislation or with a securities regulatory authority.

INTEREST OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

There were no material interests, direct or indirect, of directors and executive officers of Advantage or its subsidiaries or nominees for director of Advantage or its subsidiaries, any Shareholder who beneficially owns or directs or controls more than 10% of the Common Shares or any known associate or affiliate of such persons in any transaction during the year ended December 31, 2025 or in any proposed transaction which has materially affected or would materially affect Advantage or its subsidiaries.

MATERIAL CONTRACTS

Except for contracts entered into by the Corporation in the ordinary course of business or otherwise disclosed herein, the Corporation has the following agreements which are material to Advantage or its subsidiaries:

- The Eighth Amended and Restated Syndicated Credit Agreement for the Credit Facilities; and
- the Indenture.

Copies of the above agreements are available on SEDAR+ at www.sedarplus.ca. See "*General Development of the Business – Three Year History – 2024*".

INTEREST OF EXPERTS

There is no person or company whose profession or business gives authority to a statement made by such person or company and who is named as having prepared or certified a statement, report or valuation described or included in a filing, or referred to in a filing, made under National Instrument 51-102 - *Continuous Disclosure Obligations* by Advantage during, or related to, the most recently completed financial year other than McDaniel, our independent engineering evaluator and PricewaterhouseCoopers LLP, our current external auditors. As at the date hereof, none of the principals of McDaniel had any registered or beneficial interests, direct or indirect, in any securities or other property of Advantage or of its associates or affiliates either at the time they prepared the statement, report or valuation prepared by it, at any time thereafter or to be received by them.

The Corporation's independent auditors are PricewaterhouseCoopers LLP, Chartered Professional Accountants, who have prepared an independent auditor's report dated March 5, 2026 in respect of the Corporation's consolidated financial statements as at December 31, 2025 and December 31, 2024 and for the years then ended. PricewaterhouseCoopers LLP has advised that they are independent with respect to the Corporation within the meaning of the relevant rules and related interpretations prescribed by the relevant professional bodies in Canada, including the Rules of Professional Conduct with Guidance Chartered Professional Accountants of Alberta, and any applicable legislation or regulations.

In addition, none of the aforementioned persons or companies, nor any director, officer or employee of any of the aforementioned persons or companies, is or is expected to be elected, appointed or employed as a director, officer or employee of Advantage or of any associate or affiliate of Advantage.

AUDITORS, TRANSFER AGENT AND REGISTRAR

Advantage's auditors are PricewaterhouseCoopers LLP, Calgary, Alberta.

Computershare Trust Company of Canada at its offices in Calgary, Alberta and Toronto, Ontario acts as the transfer agent and registrar for the Common Shares and Debentures.

AUDIT COMMITTEE INFORMATION

NI 52-110 has mandated certain disclosures for inclusion in this annual information form. The text of the charter of the Corporation's audit committee (the "**Audit Committee**") is attached as Appendix "C" to this annual information form.

Composition of the Audit Committee

The Audit Committee is comprised of Deirdre Choate (Chair), Katherine Minyard, Donald Clague, and David Smith. The following chart sets out the assessment of each Audit Committee member's independence, financial literacy and relevant educational background and experience supporting such financial literacy

Name, Province and Country of Residence	Independent	Financially Literate	Relevant Education and Experience
Deirdre M. Choate Alberta, Canada	Yes	Yes	Ms. Choate is a corporate director with over 30 years of experience in international tax, treasury, insurance, governance and risk management. From 2007 to March 2021, Ms. Choate was General Manager, Vice President Tax, and subsequently Vice President Tax & Treasurer at Husky Energy Inc. Prior thereto, Ms. Choate was an Associate Partner in International Tax Services at PricewaterhouseCoopers LLP. Earlier in her career, Ms. Choate was Managing Director of Newsco Well Service (Ireland) Limited. Ms. Choate is a Chartered Professional Accountant in Alberta and Fellow Chartered Accountant in Ireland and obtained the Institute of Corporate Directors ICD.D designation in 2020. Ms. Choate holds a Bachelor of Civil Law degree from the University College Dublin.
Katherine L. Minyard Colorado, United States	Yes	Yes	Ms. Minyard has over 25 years of experience in investment valuation and capital allocation in the energy industry. She was an Investment Principal and Partner at Cambiar Investors, a long-only, relative value-focused global asset manager from 2014 to 2021, covering international energy, metals and mining, industrials, basic materials and utility equities, while leading the Europe Select strategy as a portfolio manager. Prior to joining Cambiar, Ms. Minyard was an Executive Director on the Equity Research Team at J.P. Morgan where she covered U.S. Integrated Oil, Refining, Canadian Oil and U.S. E&P companies. From 2021 to 2023, Ms. Minyard served as an Independent Director of Ovintiv Inc. Earlier in her career, Ms. Minyard served energy clients at Accenture and McKinsey & Company. Ms. Minyard holds a Master in Business Administration from INSEAD in France and a Bachelor of Science in Applied Mathematics from Texas A&M University. She also holds the Chartered Financial Analyst designation and the CERT Certificate for Cybersecurity Oversight.

Name, Province and Country of Residence	Independent	Financially Literate	Relevant Education and Experience
Donald M. Clague Alberta, Canada	Yes	Yes	Mr. Clague is a corporate director and has had an extensive 35 year working career in oil and gas, including diverse experience in North American domestic and frontier areas, as well as internationally in North Africa, Norway and the United Kingdom. His experience includes a broad range of technical and leadership roles with Dome Petroleum, Amoco Canada, Alberta Energy, Amerada Hess Canada, Hardy Oil and Gas Canada, Petro-Canada and Suncor Energy. In 2002, he became VP, Production (North American Natural Gas) at Petro-Canada, responsible for the safe, efficient operations in all field locations across Alberta and British Columbia, including all engineering functions supporting those areas. He spent 3 years in Denver as President, Petro-Canada Resources (USA) focused on tight oil and coalbed methane assets. Upon returning to Canada, he became VP, In Situ Development and Operations, and after the merger with Suncor was appointed VP, Firebag Operations. In 2012, Mr. Clague became the Senior VP, In Situ Business Unit. He moved to the role of Senior VP, Oil Sands Technical and Upstream Services in 2015. In 2018, he retired as the Senior VP, Exploration and Production Business Unit, with personnel in Calgary, St. John's, Aberdeen, Tripoli, and Stavanger. Mr. Clague graduated from the University of Calgary in 1983 with a BSc. in Geophysics. He remains active at the University, sitting on the Dean of Engineering's Schulich Industry Advisory Council. He is a registered Professional Geophysicist with APEGA, obtained the Institute of Corporate Directors ICD.D designation in 2022, and has served on executive policy groups with the Canadian Association of Petroleum Producers (CAPP) and the Colorado Oil and Gas Association (COGA).
David G. Smith, Alberta, Canada	Yes	Yes	Mr. Smith has over 38 years of experience in the western Canadian oil and gas industry. Mr. Smith currently serves as a director at Wajax Corp. and previously served as a director of Crew Energy Inc. Mr. Smith had an extensive career at Keyera Corp. and played a key role in its formation, evolution and growth. From 2015 to 2020, he served as President and CEO of Keyera, and prior to that, as President and Chief Operating Officer. He also served as Keyera's Executive Vice President – Liquids Business Unit, and before that, Executive Vice President, Chief Financial Officer and Corporate Secretary. Prior to joining Keyera, Mr. Smith held progressively senior finance roles at Gulf Canada Resources Limited and Imperial Oil Limited. Mr. Smith holds a Bachelor of Mathematics degree from the University of Waterloo and a Master of Business Administration from Harvard University. He also holds the ICD.D designation from the Institute of Corporate Directors.

Pre-Approval of Policies and Procedures

We have adopted policies and procedures with respect to the pre-approval of audit and permitted non-audit services to be provided by PricewaterhouseCoopers LLP as set forth in item 24 of the Audit Committee charter, which is attached as Appendix "C" to this annual information form. The Audit Committee has approved the provision of a specified list of audit and permitted non-audit services that the Audit Committee believes to be typical, reoccurring or otherwise likely to be provided by PricewaterhouseCoopers LLP during the current fiscal year. The list of services is sufficiently detailed as to the particular services to be provided to ensure that the Audit Committee knows precisely what services it is being asked to pre-approve and it is not necessary for any member of management to make a judgment as to whether a proposed service fits within pre-approved services.

AUDIT SERVICE FEES

Auditor Services Fees

The following table discloses fees billed to us by our independent auditors, PricewaterhouseCoopers LLP.

Type of Services Provided	2025	2024
Audit Fees ⁽¹⁾	492,000	461,500
Audit-Related Fees ⁽²⁾	63,000	195,000
Tax Fees ⁽³⁾	76,000	27,500
All Other Fees	-	-
Total	631,000	684,000

- (1) "Audit Fees" include fees necessary to perform the annual audit of the Corporation's consolidated financial statements, including fees for the audit of the Corporation's subsidiary, Entropy.
- (2) "Audit-Related Fees" include services that are traditionally performed by the auditor. These audit-related services include quarterly reviews of the Corporation's consolidated financial statements, fees related to the prospectus filing and an audit of a government grant.
- (3) "Tax Fees" include fees for all tax services other than those included in "Audit Fees" and "Audit-Related Fees". This category includes fees for tax compliance, tax planning and general tax advice, including the preparation and filing of Scientific Research & Experimental Development Tax Credits.

INDUSTRY CONDITIONS

Companies operating in the Canadian oil and gas industry are subject to extensive regulation and control of operations, including with respect to land tenure, exploration, development, production, refining and upgrading, transportation, and marketing. Legislation has been enacted by, and agreements have been entered into between, various levels of government regarding the pricing and taxation of petroleum and natural gas, all of which should be carefully considered by investors in the Corporation. All current legislation is a matter of public record; however the Corporation is unable to predict what additional legislation or amendments governments may enact in the future.

The Corporation's assets and operations are regulated by administrative agencies that derive their authority from legislation enacted by the applicable level of government. Regulated aspects of the Corporation's upstream oil and natural gas business include all activities associated with the exploration for and production of oil and natural gas, including, among other matters: (i) permits for drilling wells and constructing related infrastructure; (ii) technical drilling and well requirements; (iii) permitted locations and access to operation sites; (iv) operating standards regarding conservation of produced substances and avoidance of waste, such as restrictions on flaring and venting; (v) minimizing environmental impacts, including reducing emissions or emission intensity from operations; (vi) storage, injection and disposal of substances associated with production operations; and (vii) abandonment and reclamation of impacted sites. To conduct oil and natural gas operations and remain in good standing with the applicable regulatory regimes, producers must comply with applicable legislation, regulations, orders, directives and other directions (all of which are subject to governmental oversight, review and revision, from time to time). Compliance in this regard can be costly and a breach of the same may result in fines or other sanctions.

The discussion below outlines some of the principal aspects of legislation, regulations, agreements, orders, directives, and other pertinent conditions that impact the oil and gas industry in Western Canada, where the Corporation's assets are located. While these matters do not affect the Corporation's operations in any manner that is materially different from the way they affect other similarly sized industry participants with comparable assets and operations, investors should consider such matters carefully.

Exports of Crude Oil, Natural Gas and NGLs from Canada

Over the past year, U.S. tariffs on certain Canadian products, including energy, along with Canada's reciprocal measures, have added complexity to cross-border energy trade. The U.S.-Canada tariff environment remains volatile, with duties affecting products that do not qualify for United States-Mexico-Canada Agreement ("USMCA") exemptions. **On February 20, 2026, the U.S. Supreme Court ("SCOTUS") held that the Trump administration lacked legal authority to impose certain tariffs under the International Emergency Economic Powers Act and U.S. Customs and Border Protection announced that it would cease collecting the affected tariffs. In response to the SCOTUS decision, the Trump administration indicated that it intends to impose alternative tariffs or adopt other trade measures on its trading partners, including Canada. SCOTUS' decision, the Trump's administration's response and the ongoing USMCA review add further uncertainty regarding whether crude oil, natural gas, and NGL exports to the U.S. could ultimately be subject to tariffs or other trade measures. These dynamics influence export costs, market access, and demand for Canadian energy products. The impact of continuing or new tariffs or other trade measures on the Canadian economy and Canadian energy producers is uncertain.**

In recent years, Canada has expanded oil and gas exports beyond the U.S. The completion of the Trans Mountain pipeline expansion has enabled crude shipments to Asia and Europe, with China, South Korea, and India emerging as major buyers. Seaborne exports to Europe have also increased. With respect to natural gas, Canada's first large-scale liquefied natural gas ("LNG") terminal began operations in mid-2025, opening access to global markets. These developments mark a strategic shift toward diversified energy export destinations; however, the U.S. remains the largest customer of Canadian energy products. As a result, actions taken by the U.S. administration or other events impacting U.S. demand for Canadian energy products could have a significant impact on the pricing the Corporation and other Canadian producers receive for their energy products.

Pricing and Marketing in Canada

The price of crude oil, natural gas, and NGLs is negotiated between buyers and sellers. Various factors may influence prices, including global supply and demand, product quality, distance to market, availability of transportation, value of refined products, prices of competing products, price of competing stock, contract terms, weather conditions, supply/demand balance and other contractual provisions.

Transportation Constraints and Market Access

Despite having significant capacity to move crude oil, natural gas, and NGLs from Western Canada, much of this transportation infrastructure is oriented toward the United States. As a result, even though Western Canada possesses the ability to transport large volumes, market access remains constrained because limited capacity is available for deliveries to Eastern Canada and overseas markets. This reliance on U.S.-bound infrastructure continues to restrict Canada's ability to diversify export destinations. Many proposed projects that could broaden access, particularly those aimed at enabling greater movement to other international markets, have been cancelled or delayed due to regulatory hurdles, court challenges, and economic or socio-political factors.

Oil Pipelines

In Canada, producers negotiate with pipeline operators to transport their products to market on a firm, spot or interruptible basis depending on the specific pipeline and the specific substance. Transportation availability is highly variable across different jurisdictions and regions. This variability can determine the nature of transportation commitments available, the number of potential customers and the price received.

Under Canadian constitutional law, the development and operation of interprovincial and international pipelines fall within federal jurisdiction and, under the *Canadian Energy Regulator Act*, new interprovincial and international pipelines require a federal regulatory review and Cabinet approval before they can proceed. In recent years, however, there has been a perceived lack of policy and regulatory certainty in this regard such that, even when projects are approved, they often face delays due to actions taken by provincial and municipal governments and legal opposition related to issues such as Indigenous rights and title, the government's duty to consult and accommodate Indigenous peoples and the sufficiency of relevant environmental review processes. Export pipelines from Canada to the United States face additional unpredictability as such pipelines also require approvals from several levels of government in the United States.

In June 2025, Bill C-5 (the *One Canadian Economy Act*) came into force, granting the federal government authority to expedite approval of "national interest" infrastructure projects, including pipelines. While the legislation aims to reduce regulatory delays, it has drawn mixed reactions: industry stakeholders generally support its streamlining measures, whereas certain rights holders, particularly Indigenous groups, have expressed concerns regarding its implications. The federal government is currently engaged in consultations with provinces, territories, and Indigenous communities regarding implementation.

On November 27, 2025, the governments of Canada and Alberta signed a MOU to collaborate on supporting the development of oil and gas resources, renewable energy, critical minerals, and other resource sectors in Western Canada. The MOU includes a federal government commitment to not implement the Oil and Gas Sector Greenhouse Gas Emissions Cap Regulations ("**Oil and Gas Emissions Cap**") and the commitment of both levels of government to design and commit to sector-specific stringency factors for large Alberta emitters under Alberta's Technology Innovation and Emissions Reduction Regulation ("**TIER**"), and to continue the annual carbon tax rate increase up to \$130 per tonne.

The agreements to be established under the MOU are expected to be finalized in 2026 and 2027.

Natural Gas and LNG

Natural gas prices in Western Canada have been constrained in recent years, reaching among record lows in 2025 due to increasing North American supply, limited market access and restricted storage capacity. Companies that secure firm access to infrastructure for transporting natural gas out of Western Canada may be able to access additional markets and achieve better pricing. Companies without firm access may be forced to accept spot pricing in Western Canada,

which is generally lower than the prices received in other North American regions. The Corporation has entered into firm service commitments in order to mitigate its exposure to AECO pricing. Firm service agreements provide the Corporation with geographical diversification across North America, including Empress, Emerson, Dawn and Chicago.

In October 2020, TC Energy Corporation received federal approval to expand the NGTL. The NGTL system is currently implementing a \$9.9 billion infrastructure program to add 3.58 billion cubic feet per day of capacity between 2020 to 2024. In July 2024, TC announced an historic equity interest purchase agreement with an Indigenous-owned investment partnership which will enable up to 72 Indigenous communities to become equity owners of the network of infrastructure assets spanning Western Canada, however as of September 2024, the deal has been delayed.

In 2025, LNG Canada became fully operational as the country's first large-scale LNG export terminal, marking a significant milestone in Canada's emergence as a global LNG supplier. The project exported its first cargo from the Kitimat terminal in July 2025, and by September had already shipped ten cargoes to international markets, with export volumes continuing to rise thereafter. In addition, on August 6, 2025, JGC and Fluor were awarded a contract to update the Front-End Engineering and Design for the proposed Phase 2 expansion, which aims to double the facility's annual LNG production capacity.

A wide range of energy infrastructure projects, including natural gas pipelines, oil pipelines, LNG export facilities, and related transmission upgrades, remain in various stages of development across Canada. These include projects that are under construction, as well as others that are proposed, awaiting regulatory approvals, or still pending final investment decisions. Together, these projects reflect a significant pipeline of potential development subject to evolving market conditions, regulatory processes, and investment decisions.

Land Tenure

Mineral rights

Except in Manitoba, each provincial government in Western Canada owns most of the mineral rights to oil and natural gas located within its borders. Provincial governments grant rights to explore for and produce oil and natural gas through leases, licences, and permits (collectively referred to as "leases") for varying terms and subject to conditions set forth in provincial legislation, including requirements to perform specific work or make payments in lieu thereof. Provincial governments in Western Canada conduct land sales where oil and natural gas companies bid for leases necessary to explore for and produce provincially owned oil and natural gas. These leases generally have fixed terms but may be continued beyond their initial terms if the required conditions are satisfied.

Private ownership of oil and natural gas (i.e., freehold mineral lands) also exists in Western Canada. Rights to explore for and produce privately owned oil and natural gas are granted by a lease or other contract on terms and conditions negotiated between the mineral rights holder and companies seeking to explore for and/or develop oil and natural gas reserves.

Where the Corporation operates on, or near, First Nation reserve lands or in areas subject to Indigenous rights or title, its success is closely tied to building and maintaining strong, respectful, and durable relationships with Indigenous peoples. This may take various forms, including the negotiation of Impact Benefit Agreements, participation in equity ownership frameworks, collaboration on environmental stewardship, and engagement protocols that reflect the priorities, governance structures, and decision-making processes of the potentially affected Nations. Many proposed and ongoing energy and infrastructure projects across Canada increasingly require proactive partnership with Indigenous communities, both to secure regulatory approvals and to support long-term operational certainty. As such, constructive engagement, grounded in transparency, mutual benefit, and recognition of Indigenous rights, is a critical component of the Corporation's ability to advance and sustain its activities in these regions.

An additional category of mineral rights ownership is Canadian federal government ownership of mineral rights on First Nation reserve lands (as designated under the Indian Act), which is managed and regulated by a separate government body under distinct legislation. The Corporation does not have operations on reserve lands.

Surface rights

To develop oil and natural gas resources, producers must also secure access rights to the surface lands required to conduct operations. For Crown lands, surface access rights can be obtained directly from the government. For private lands, access rights are typically negotiated with the landowner. Where an agreement cannot be reached, each province has developed its own process that producers can follow to obtain and maintain the surface access necessary to conduct operations.

Royalties and Incentives

Each province has legislation and regulations in place to govern Crown royalties and establish the royalty rates that producers must pay for the production of Crown resources. Provincial royalty regimes operate in conjunction with applicable federal and provincial taxes and are a significant factor in the profitability of oil sands projects and oil, natural gas and NGL production.

Royalties payable on production from lands where the Crown does not hold the mineral rights are negotiated between the mineral freehold owner and the lessee, although certain provincial taxes and other charges on production or revenues may still apply. Royalties from production on Crown lands are determined by provincial regulation and are generally calculated as a percentage of the value of production.

Producers and working interest owners of oil and natural gas rights may create additional royalties or royalty-like interests, such as overriding royalties, net profits interests and net carried interests, through private transactions, the terms of which are subject to negotiation.

From time to time, the federal and provincial governments create incentive programs for businesses operating in specific industries, such as oil and gas. These programs are often introduced when commodity prices are low to encourage exploration and development activity. They may provide volume-based incentives, royalty rate reductions, royalty holidays, or royalty tax credits. Governments may also introduce incentive programs to encourage producers to prioritize certain kinds of development or to utilize technologies that enhance recovery of oil, natural gas, and NGLs, or improve environmental performance.

Regulatory Authorities and Environmental Regulation

The Canadian oil and gas industry is subject to environmental regulation under a variety of federal, provincial, territorial, and municipal laws and regulations, all of which are subject to governmental review and revision from time to time. These regulations provide for, among other things, restrictions and prohibitions on the spill, release or emission of substances produced in association with certain oil and gas operations, such as sulphur dioxide and nitrous oxide. Regulatory regimes also establish requirements for oilfield waste handling and storage, habitat protection and the proper operation, maintenance, abandonment and reclamation of well, facility and pipeline sites. Compliance with such regulations can require significant expenditures and breaches may result in suspension or revocation of licences and authorizations, civil liability, and the imposition of material fines and penalties. In addition, future changes to environmental legislation, including legislation related to air pollution and greenhouse gas ("GHG") emissions (typically measured in terms of global warming potential and expressed as carbon dioxide equivalent ("CO₂e")), may impose further requirements on operators and other companies in the oil and gas industry. Companies engaged in hydraulic fracturing operations are subject to additional operational regulatory and reporting requirements.

Liability Management

The Alberta Energy Regulator ("AER") administers several liability management programs to manage liability for most conventional upstream oil and natural gas wells, facilities, and pipelines in Alberta. The province continues to transition from a prescriptive framework toward a more holistic approach under its Liability Management Framework.

Alberta maintains an orphan fund to cover the costs of suspending, abandoning, remediating, and reclaiming wells, facilities, or pipelines included in certain AER programs if a licensee or working interest participant becomes insolvent or is otherwise unable to meet its obligations. The orphan fund is financed through levies imposed on industry

participants and provincial loans. In March 2025, the Alberta government approved a \$144.45 million levy for the Orphan Well Association's 2025/26 operating budget.

The Supreme Court of Canada's ("SCC") decision in *Orphan Well Association v. Grant Thornton* (often referred to as the "Redwater" decision) continues to shape Alberta's liability management regime. As a result of the Redwater decision, receivers and trustees can no longer avoid the AER's legislated authority to impose abandonment orders or require security deposits before approving licence transfers during insolvency proceedings. Insolvent estates can no longer disclaim assets that have reached the end of their productive lives to prioritize valuable assets without first satisfying abandonment and reclamation obligations. The burden of a defunct licensee's obligations first falls on its working interest partners; thereafter, the AER may direct the orphan fund to assume care and custody and accelerate clean-up of wells or sites which do not have a responsible owner.

To address abandonment and reclamation liabilities, the AER periodically implements programs to encourage the decommissioning, remediation, and reclamation of inactive or marginal oil and natural gas infrastructure. In late 2025, the AER introduced mandatory annual closure spending requirements effective in 2026, reinforcing proactive liability reduction measures.

Similar to Alberta, British Columbia's regulator has moved away from formulaic liability management toward a holistic assessment of a permit holder's ability to meet abandonment and reclamation obligations. B.C. also maintains an orphan site program. The British Columbia Dormancy and Shutdown Regulation, amended effective April 1, 2025, establishes legally binding timelines for restoring oil and natural gas wells, aiming for 100% reclamation of currently dormant sites by 2036, with additional timelines for sites that became dormant between 2019 and 2023 and those becoming dormant after 2024.

Saskatchewan administers liability management through its Licensee Liability Rating program and the Inactive Liability Reduction Program, which mandates annual decommissioning expenditures. Saskatchewan's orphan fund, funded entirely by industry, continues to reclaim orphaned wells and facilities, with over 1,000 inactive sites restored as of early 2025.

Manitoba has not implemented a formal liability management rating program like those in other Western Canadian provinces. However, the province has processes in place to sell or abandon wells or facilities when a licensee or permittee fails to comply with a shutdown order, including rehabilitating abandoned sites and addressing any adverse property impacts.

Climate Change Regulation

Climate change regulation is a significant aspect of the operating environment for Canada's oil and gas industry. International agreements, federal initiatives, and provincial programs continue to shape emissions reduction targets, carbon pricing mechanisms, and reporting requirements. Current frameworks include measures such as carbon taxes, emissions caps, and incentives for low-carbon technologies, with ongoing reviews aimed at tightening standards to meet Canada's climate commitments.

Federal

Canada is a signatory to the United Nations Framework Convention on Climate Change and ratified the Paris Agreement, committing to reduce greenhouse gas emissions by 30% below 2005 levels by 2030. In 2021, Canada strengthened this target to a 40–45% reduction by 2030 and net-zero emissions by 2050. Canada has also pledged to reduce methane emissions from the oil and gas sector by 75% from 2012 levels by 2030; cap emissions from the oil and gas sector; and phase out thermal coal exports by 2030. At the 2023 United Nations Climate Change Conference, Canada reaffirmed its commitment to transition away from fossil fuels and accelerate greenhouse gas reductions.

The Government of Canada launched the Pan-Canadian Framework on Clean Growth and Climate Change in 2016 and, in 2018, enacted the *Greenhouse Gas Pollution Pricing Act*. This legislation established a federal carbon pricing system composed of two key elements: a fuel charge applied to fossil fuels, and an Output-Based Pricing System ("OBPS") for large industrial emitters. The federal regime applied nationwide unless a province or territory implemented a system that met or exceeded federal benchmarks. However, effective April 1, 2025, the federal government introduced

regulations that eliminated the federal fuel charge and removed the requirement for provinces and territories to maintain a consumer-facing carbon price.

Canada also regulates methane emissions under the Federal Methane Regulations, which came into force in 2020 and initially targeted a 40–45% reduction below 2012 levels by 2025. In December 2023, the federal government proposed amendments to achieve a 75% reduction by 2030, introducing stricter limits, new prohibitions, and continuous monitoring requirements. These amendments are expected to take effect in 2027.

Additional federal measures include the Multi-Sector Air Pollutants Regulation, which limits emissions of nitrogen oxides and sulphur dioxide from industrial equipment, and commitments to cap oil and gas sector emissions and phase out thermal coal exports.

The *Canadian Net-Zero Emissions Accountability Act* ("**CNEAA**"), in force since 2021, commits Canada to achieving net-zero emissions by 2050. It establishes rolling five-year emissions reduction targets, requires detailed plans to meet each target, and mandates annual progress reporting.

Under the CNEAA, Canada released its 2030 Emissions Reduction Plan in March 2022, outlining measures to cut emissions 40–45% below 2005 levels by 2030. The plan includes incentives for electric vehicles ("**EV**"), renewable electricity, and an emissions cap for the oil and gas sector.

The federal government continues to implement and revise measures aimed at reducing greenhouse gas emissions, creating ongoing regulatory uncertainty for industry. The Clean Fuel Regulations, effective July 2023, impose increasingly stringent carbon-intensity reduction requirements and operate through a compliance credit market, which may affect fuel supply costs and credit availability. The federal Greenhouse Gas Offset Credit System, launched in 2022, allows eligible projects to generate offset credits for use under the federal OBPS, but future protocol development, credit supply, and pricing remain uncertain.

In November 2024, the federal government released proposed Oil and Gas Emissions Cap Regulations, which would establish a sector-wide cap-and-trade system for upstream oil and gas emissions. Although originally expected to take effect in 2026, the November 2025 federal budget introduced significant changes to Canada's climate-policy framework, creating uncertainty about whether the emissions cap will be implemented as proposed, revised, or withdrawn. Changes to federal carbon-pricing requirements, compliance mechanisms and potential new reporting obligations may increase compliance costs and affect the Corporation's operations, investment decisions, and long-term planning.

Canada's Carbon Management Strategy aims to deploy technologies such as carbon capture to help achieve climate targets. As part of this strategy, the federal government has committed \$319 million over seven years to research and development. In June 2024, the government enacted the Carbon Capture, Utilization, and Storage Investment Tax Credit, a refundable credit available for eligible projects from January 1, 2022 until December 31, 2040, with a 50% reduction in credit value beginning in 2031.

As discussed under "Oil Pipelines", in November 2025, the governments of Canada and Alberta signed an MOU pursuant to which the federal government committed to not implementing the Oil and Gas Emissions Cap and both governments committed to developing sector-specific stringency factors for large Alberta emitters under TIER, concluding an agreement on industrial carbon pricing, and establishing a minimum effective credit price of \$130 per tonne.

In February 2026, the federal government introduced an updated national automotive strategy that includes more than \$3 billion in planned financial commitments to support industry expansion, modernization, and diversification into additional export markets. As part of this initiative, the federal government will implement a new program to lower the cost of EVs for Canadians, introduce new EV purchase and lease incentives for individuals and businesses, expand charging infrastructure, and advance a broader trade framework intended to enhance the competitiveness of the automotive sector. It also replaces the Electric Vehicle Availability Standard (which required automakers to sell an increasing percentage of zero emission light-duty vehicles, reaching 100% by 2035) with updated greenhouse gas emissions standards and new targets of achieving 75% EV sales by 2035 and 90% by 2040. The Corporation is unable to predict how this new automotive strategy will impact the demand for fossil fuels and Canadian energy products.

Provincial

In December 2016, the *Oil Sands Emissions Limit Act* (Alberta) came into force, establishing an annual 100 megatonne limit for GHG emissions from all oil sands sites, but the regulations necessary to enforce the limit have not yet been developed. The delay in drafting these regulations has been inconsequential thus far, as Alberta's oil sands emitted roughly 85 megatonnes of GHG in 2024, well below the 100 megatonne limit.

On January 1, 2020, Alberta's TIER regulation came into effect for large emitters. It meets the federal benchmark's stringency requirements, allowing relevant facilities to remain under TIER rather than the federal OBPS. Since its introduction, TIER has undergone various amendments and program updates intended to refine compliance mechanisms and maintain alignment with federal benchmark stringency requirements.

In contrast, Saskatchewan and Manitoba do not have provincial equivalents, so the federal OBPS applies in full to their large industrial emitters. British Columbia, having implemented its own provincial OBPS on April 1, 2024, is exempt from the federal system as its program meets federal equivalency standards.

Alberta committed to reducing methane emissions by 45% from 2014 levels by 2025 and achieved this goal three years early. The province enacted the Methane Emission Reduction Regulation on January 1, 2020. Later that year, Alberta and Canada signed a five-year equivalency agreement exempting Alberta from the Federal Methane Regulations. In October 2025, the parties renewed the agreement, with some modifications, extending the exemption through 2030.

Indigenous Rights

Constitutionally mandated government-led consultation with, and if applicable, accommodation of the rights of, Indigenous groups impacted by regulated industrial activity, as well as proponent-led consultation and accommodation or benefit sharing initiatives, play an increasingly important role in the Western Canadian oil and gas industry. In addition, Canada is a signatory to the United Nations Declaration on the Rights of Indigenous Peoples ("UNDRIP") and the principles set forth therein may continue to influence the role of Indigenous engagement in the development of the oil and gas industry in Western Canada. For example, in November 2019, the Declaration on the Rights of Indigenous Peoples Act ("DRIPA") became law in British Columbia. The DRIPA aims to align British Columbia's laws with UNDRIP. In June 2021, the United Nations Declaration on the Rights of Indigenous Peoples Act ("UNDRIP Act") came into force federally in Canada. Similar to British Columbia's DRIPA, the UNDRIP Act requires the Government of Canada to take all measures necessary to ensure the laws of Canada are consistent with the principles of UNDRIP and to implement an action plan to address UNDRIP's objectives.

As of June 2022, the federal government has sought to implement the UNDRIP Act by, among other things, creating a Secretariat within the Department of Justice to support Indigenous participation in the implementation of UNDRIP (the "**Implementation Secretariat**"), consulting with Indigenous peoples to identify their priorities, drafting an action plan to align federal laws with UNDRIP, and implementing efforts to educate federal departments on UNDRIP principles. On June 21, 2023, the Implementation Secretariat released Canada's UNDRIP Action Plan (the "**Action Plan**") with respect to aligning federal laws with UNDRIP, which has a 2023-2028 implementation timeframe. In August 2025, the federal government tabled its Fourth Annual Progress Report on the implementation of the UNDRIP Act, which provides various progress updates, including on the implementation of the Action Plan.

The federal government is in the process of developing various regulatory regimes that could create new requirements when doing business with Indigenous groups and on or near First Nation lands, for example, the National Strategy Respecting Environmental Racism and Environmental Justice Act which received royal assent in June 2024 and the new Indigenous co-administration agreement provisions of the Impact Assessment Act for which regulations, policy, guidance and procedures are forthcoming.

On June 29, 2021, the B.C. Supreme Court's *Yahey v. British Columbia* held that cumulative impacts of industrial development on the traditional territory of Blueberry River First Nation ("**BRFN**") breached BRFN's Treaty 8 rights. On January 18, 2023, B.C. and BRFN signed the Blueberry River First Nations Implementation Agreement ("**BRFN Agreement**"), introducing key measures such as a \$200 million restoration fund, ecosystem-based land-use planning, limits on new oil and gas development, and revenue-sharing provisions. Under the agreement, BRFN will receive \$87.5

million over three years, with potential for additional benefits. In July 2024, BRFN filed a civil claim challenging the first implementation plan, highlighting concerns about execution.

The BRFN Agreement has served as a template for other Treaty 8 arrangements. Later in January 2023, B.C. and four First Nations (Fort Nelson, Saulteau, Halfway River, and Doig River) reached consensus on a collaborative approach to land and resource planning, adopting similar principles to implement cumulative effects management, new land-use plans, and revenue-sharing. However, two of these Nations later sued the B.C. government, alleging deception, misrepresentation, and withholding of information during negotiations. These disputes underscore the implementation challenges of such agreements.

Similar claims have been brought by First Nations in Alberta, including Beaver Lake Cree Nation's ("**BLCN**") claim against the Government of Alberta in 2008 and Duncan's First Nation's lawsuit against the Government of Alberta in 2022. After years of litigation, the BLCN case led to an SCC decision which established a new legal test for advance costs in public interest litigation. This ruling clarified that First Nations should not have to exhaust community resources or impoverish themselves to pursue constitutional claims, setting an important precedent for access to justice in treaty rights cases. The long-term impacts of these lawsuits on the Canadian oil and gas industry remain uncertain.

Recent British Columbia court decisions have the potential to influence the interpretation of Aboriginal title and the duty to consult framework in the province. In *Cowichan Tribes v Canada (Attorney General)*, the Supreme Court of British Columbia declared portions of the City of Richmond to be subject to Aboriginal title, a finding that raises unresolved questions regarding the interaction between Aboriginal title and existing fee simple ownership. In *Gitxaala v British Columbia (Chief Gold Commissioner)*, the British Columbia Court of Appeal held that British Columbia's DRIPA incorporates UNDRIP into domestic law and creates legally enforceable obligations on the Province, including positive duties to ensure that provincial laws are consistent with UNDRIP. Premier David Eby has since announced plans to amend DRIPA to limit judicial involvement in that process.

While these developments may have limited direct application in Alberta given Alberta's treaty landscape and the absence of province-level UNDRIP implementation legislation, they underscore the rapidly evolving nature of Indigenous rights jurisprudence. Indigenous rights claims may still arise in Alberta on different factual or legal grounds, and these decisions nonetheless highlight the increasing importance of early, proactive, and sustained engagement with Indigenous Nations in regulatory, land-use, and project-development contexts.

RISK FACTORS

The following is a summary of certain risk factors relating to the business of Advantage. The following information is a summary only of certain risk factors and is qualified in its entirety by reference to, and must be read in conjunction with, the detailed information appearing elsewhere in this annual information form.

Investors should carefully consider the risk factors set out below and consider all other information contained herein and in the Corporation's other public filings before making an investment decision. The risks set out below are not an exhaustive list and should not be taken as a complete summary or description of all the risks associated with the Corporation's business and the oil and natural gas business generally.

Prices, Markets and Marketing

Various factors may adversely impact the marketability of oil and natural gas, affecting net production revenue, production volumes and development and exploration activities

Numerous factors beyond the Corporation's control do, and will continue to, affect the marketability and price of oil and natural gas acquired, produced, or discovered by the Corporation. The Corporation's ability to market its oil and natural gas may depend upon its ability to acquire capacity in pipelines that deliver oil and natural gas to commercial markets or contract for the delivery of oil by rail. Deliverability uncertainties related to the distance of the Corporation's reserves from pipelines, railway lines, processing and storage facilities; operational problems affecting pipelines, railway lines and processing and storage facilities; and government regulation relating to prices, taxes, royalties, land tenure, allowable production, the export of oil and natural gas and many other aspects of the oil and natural gas business may also affect the Corporation.

Oil and natural gas prices may be volatile for a variety of reasons including market uncertainties over the supply and demand of these commodities due to the current state of the world economies, actions of OPEC, political uncertainties, sanctions imposed on certain oil producing nations by other countries, the Russian Ukrainian war, conflicts in the Middle East, geopolitical developments in Venezuela, or other adverse economic or political development in the United States, South America, Europe, or Asia. Additionally, the occurrence or threat of terrorist attacks in the United States or other countries could adversely affect the global economy. Prices of oil and natural gas are also subject to the availability of foreign markets and the Corporation's ability to access such markets.

A material decline in prices could result in a reduction of the Corporation's net production revenue. The economics of producing from some wells may change because of lower prices, which could result in reduced production of oil or natural gas and a reduction in the volumes and the value of the Corporation's reserves. The Corporation may also elect not to produce from certain wells at lower prices. Any substantial and extended decline in the price of oil and natural gas would have an adverse effect on the Corporation's carrying value of its reserves, borrowing capacity, revenues, profitability and cash flows from operations and may have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects. See "*Industry Conditions – Transportation Constraints and Market Access*".

Volatile oil and natural gas prices make it difficult to estimate the value of producing properties for acquisitions and often cause disruption in the market for oil and natural gas producing properties, as buyers and sellers have difficulty agreeing on such value. Price volatility also makes it difficult to budget for, and project the return on, acquisitions and development and exploitation projects.

Geopolitical Risks and Trade Wars

The Corporation's business may be adversely affected by political and social events and decisions made in Canada, the United States, South America, Europe, the Middle East and elsewhere

The Corporation's results may be adversely impacted by political, legal, or regulatory developments in Canada and elsewhere that affect local operations and local and international markets. Changes in government, government policy or regulations, changes in law or interpretation of settled law, third-party opposition to industrial activity generally or projects specifically, and duration of regulatory reviews could impact the Corporation's existing operations and planned

projects. This includes actions by regulators or other political actors to delay or deny necessary licences or permits for the Corporation's activities or restrict the operation of third-party infrastructure on which the Corporation relies. Additionally, changes in environmental regulations, assessment processes or other laws, and increasing and expanding stakeholder consultation (including Indigenous stakeholders), may increase the cost of compliance or reduce or delay available business opportunities and adversely impact the Corporation's results.

The current U.S.-Canada tariff environment remains highly dynamic and uncertain. Legislative or regulatory changes by the U.S. administration could materially impact the Corporation's operations and financial condition. In March 2025, the United States imposed a series of tariffs on goods imported from Canada and other countries, triggering a *de facto* global trade war, and prompting Canada and several trading partners to implement retaliatory measures. Since then, tariff policies have continued to evolve, creating ongoing uncertainty regarding U.S. support for existing trade agreements, including the USMCA.

At present, the United States maintains tariffs on a range of Canadian exports and Canada has implemented certain reciprocal tariffs. Additionally, U.S. tariffs apply to Canadian potash and energy products that do not qualify for USMCA exemptions. On February 20, 2026, the U.S. Supreme Court held that the Trump administration lacked legal authority to impose certain tariffs under the *International Emergency Economic Powers Act* and the Trump administration indicated that it intends to impose alternative tariffs or adopt other trade measures. Changes to existing tariffs or new trade restrictions could materially impact the Canadian economy, the oil and gas sector, and the Corporation. Additionally, further U.S. tariffs on other countries could exacerbate global trade tensions, increase costs, reduce U.S. demand for the Corporation's products, and negatively affect its operations.

Other government and political factors that could adversely affect the Corporation's financial results include increases in taxes or government royalty rates (including retroactive claims) and changes in trade policies and agreements. Further, the adoption of regulations mandating efficiency standards, or the use of alternative fuels or uncompetitive fuel components could affect the Corporation's operations. Many governments are providing tax advantages and other subsidies to support alternative energy sources or are mandating the use of specific fuels or technologies. Governments and others are also promoting research into new technologies to reduce the cost and increase the scalability of alternative energy sources. The success of these initiatives may decrease demand for the Corporation's products.

A change in federal, provincial or municipal governments in Canada may have an impact on the directions taken by such governments on matters that may impact the oil and natural gas industry including the balance between economic development and environmental policy. The oil and natural gas industry has become an increasingly politically polarizing topic resulting in a rise in civil disobedience surrounding oil and natural gas development—particularly with respect to infrastructure projects. Protests, blockades and demonstrations have the potential to delay and disrupt the Corporation's activities. See "*Industry Conditions – Regulatory Authorities and Environmental Regulation*" and "*Industry Conditions – Transportation Constraints and Market Access*".

Middle Eastern Conflicts

The Corporation's business may be adversely affected by geopolitical conflicts abroad

Hostilities that began in October 2023 between Israel and Hamas have evolved into a broader regional conflict. The Syrian Assad regime collapsed in late 2025, and the political climate remains in flux.

In June 2025, U.S. airspace strikes targeted Iranian nuclear facilities at Fordow, Natanz, and Isfahan, prompting Iranian missile attacks on U.S. assets in Qatar. A ceasefire between Hamas and Israel has held since mid-2025, but tensions remain high, with sporadic clashes continuing in Gaza and southern Lebanon. In January 2026, the Trump administration threatened to attack government targets in Iran due to the government's violent suppression of civilian protests in Iran.

On February 28, 2026, the U.S. and Israel launched a large scale coordinated missile and airstrike campaign across Iran striking multiple military and governmental sites. Supreme Leader Ayatollah Ali Khamenei and various other senior regime leaders were killed in the campaign. Iran immediately retaliated with missile and drone attacks targeting U.S. and Israeli assets across the region as well as neighbouring Middle East countries. This conflict has resulted and is expected to continue to result in disruptions to global energy supply and transportation routes.

These developments present continuing risks to regional stability in the Middle East, a critical hub of global oil and gas production. The duration and long-term consequences of the conflict remain uncertain, particularly regarding future Middle Eastern oil and gas output and the movement of those commodities worldwide. Any sustained or intensified conflict could further disrupt supply chains, increase volatility in global energy markets, and adversely affect the global economy. It is uncertain how these developments will impact the Canadian oil and natural gas industry and the Corporation.

Russian Ukrainian War

The Corporation's business may be adversely affected by geopolitical conflicts abroad

Russia's invasion of Ukraine in February 2022 has developed into a prolonged and intense conflict, with heavy fighting continuing in eastern Ukraine and ongoing missile and drone attacks. The North Atlantic Treaty Organization and allied nations, including Canada, have provided substantial military and financial support to Ukraine, while maintaining strict sanctions against Russia. Although peace negotiations have advanced, no comprehensive settlement has been reached, and territorial and security issues remain unresolved. These developments pose ongoing risks to regional stability, global energy and industrial supply chains, and international markets, which could negatively impact the world economy, the Canadian oil and gas industry as a whole, including the Corporation.

U.S. Venezuela Conflict

The Corporation's business may be adversely affected by geopolitical conflicts abroad

On January 3, 2026, United States military forces conducted an operation in Caracas, Venezuela, resulting in the capture of President Nicolás Maduro and his spouse. Subsequent statements by U.S. leadership indicated an intention to administer Venezuela temporarily and facilitate significant investment by American oil companies in Venezuela's petroleum sector. These actions have drawn widespread international attention, and the extent of resulting political and economic repercussions remains uncertain. Given that the United States is the primary destination for Canadian crude oil exports, increased U.S. access to Venezuela's substantial crude oil reserves could reduce U.S. demand for Canadian crude oil imports and negatively affect pricing and market competitiveness.

Exploration, Development and Production Risks

The Corporation's future performance may be affected by the financial, operational, environmental and safety risks associated with the exploration, development and production of oil and natural gas

Oil and natural gas operations involve many risks that even a combination of experience, knowledge and careful evaluation may not be able to overcome. The long-term commercial success of the Corporation depends on its ability to find, acquire, develop and commercially produce oil and natural gas reserves. Without the continual addition of new reserves, the Corporation's existing reserves, and the production from them, will decline over time as the Corporation produces from such reserves. A future increase in the Corporation's reserves will depend on both the ability of the Corporation to explore and develop its existing properties and its ability to select and acquire suitable producing properties or prospects. There is no assurance that the Corporation will be able to continue to find satisfactory properties to acquire or participate in. Moreover, management of the Corporation may determine that current markets, terms of acquisition, or participation or pricing conditions make potential acquisitions or participation uneconomic. There is also no assurance that the Corporation will discover or acquire further commercial quantities of oil or natural gas.

Future oil and natural gas exploration may involve unprofitable efforts from dry wells or from wells that are productive but do not produce sufficient petroleum substances to return a profit after drilling, completing (including hydraulic fracturing), operating and other costs. Completion of a well does not ensure a profit on the investment or recovery of drilling, completion and operating costs.

Drilling hazards, environmental damage and various field operating conditions could greatly increase the cost of operations and adversely affect the production from successful wells. Field operating conditions include, but are not limited to, delays in obtaining governmental approvals or consents, shut ins of wells resulting from extreme weather conditions, insufficient storage or transportation capacity or geological and mechanical conditions. While diligent well

supervision, effective maintenance operations and the development of enhanced oil recovery technologies can contribute to maximizing production rates over time, it is not possible to eliminate production delays and declines from normal field operating conditions, which can negatively affect revenue and cash flow levels to varying degrees.

Oil and natural gas exploration, development and production operations are subject to all the risks and hazards typically associated with such operations, including, but not limited to, fire, explosion, blowouts, cratering, sour gas releases, spills and other environmental hazards. These typical risks and hazards could result in substantial damage to oil and natural gas wells, production facilities, other property and the environment and cause personal injury or threaten wildlife. Particularly, the Corporation may explore for and produce sour gas in certain areas. An unintentional leak of sour gas could result in personal injury, loss of life or damage to property and may necessitate an evacuation of populated areas, all of which could result in liability to the Corporation.

Oil and natural gas production operations are also subject to geological and seismic risks, including encountering unexpected formations or pressures, premature decline of reservoirs and the invasion of water into producing formations. Losses resulting from the occurrence of any of these risks may have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects.

As is standard industry practice, the Corporation is not fully insured against all risks, nor are all risks insurable. Although the Corporation maintains liability insurance and business interruption insurance in an amount it considers consistent with industry practice, liabilities associated with certain risks could exceed policy limits or not be covered. In either event, the Corporation could incur significant costs. See "*Risk Factors – Insurance*".

Gathering and Processing Facilities, Pipeline Systems and Rail

Lack of capacity and/or regulatory constraints on gathering and processing facilities, pipeline systems and railway lines may have a negative impact on the Corporation's ability to produce and sell its oil and natural gas

The Corporation delivers its products through gathering and processing facilities, pipeline systems and, in certain circumstances, by truck and rail. The amount of oil and natural gas that the Corporation can produce and sell is subject to the accessibility, availability, proximity and capacity of these gathering and processing facilities, pipeline systems, trucking routes and railway lines. The lack of firm pipeline capacity, production limits and limits on availability of capacity in gathering and processing facilities, pipeline systems or railway lines continues to affect the oil and natural gas industry and limits the ability to transport produced oil and natural gas to market. In particular, the limited pipeline capacity to tidewater and the lack of liquified natural gas facilities in Canada significantly impacts the ability of Canadian oil and natural gas companies to export their products outside of North America which limits demand for their products and results in lower prices. This limited ability to export oil and natural gas outside of North America puts Canadian oil and natural companies at greater risk with the United States' recent imposition of tariffs on Canadian imports into the United States. The inability to export oil and natural gas could result in the Corporation's inability to realize the full economic potential of its production or in a reduction of the price the Corporation receives for its products. Unexpected shutdowns or curtailment of capacity of pipelines for maintenance or integrity work or because of actions taken by regulators could also affect the Corporation's anticipated production, operations and financial results.

A portion of the Corporation's production may, from time to time, be processed through facilities owned by third parties and over which the Corporation does not have control. From time to time, these facilities may discontinue or decrease operations either as a result of normal servicing requirements or as a result of unexpected events. A discontinuation or decrease of operations could have a material adverse effect on the Corporation's ability to process its production and deliver the same to market. Midstream and pipeline companies may take actions to maximize their return on investment, which may in turn adversely affect producers and shippers, especially when combined with a regulatory framework that may not always align with the interests of shippers.

Project Risks

The success of the Corporation's operations may be negatively impacted by factors outside of its control resulting in operational delays and cost overruns

The Corporation manages a variety of small and large projects in the conduct of its business. Project interruptions may delay expected revenues from operations. Significant project cost overruns could make a project uneconomic. The Corporation's ability to execute projects and market oil and natural gas depends upon numerous factors beyond the Corporation's control, including:

- the availability of processing capacity;
- the availability and proximity of pipeline capacity;
- the availability of storage capacity;
- the availability of, and the ability to acquire, water supplies needed for drilling, hydraulic fracturing, and waterfloods or the Corporation's ability to dispose of water used or removed from strata at a reasonable cost and in accordance with applicable environmental regulations;
- the effects of inclement and severe weather events, including fire, drought, extreme cold and flooding;
- the availability of drilling and related equipment;
- unexpected cost increases;
- accidental events;
- currency fluctuations;
- regulatory changes;
- availability and productivity of skilled labour;
- political uncertainty;
- environmental and Indigenous activism that may result in delays or cancellations of projects; and
- the regulation of the oil and natural gas industry by various levels of government and governmental agencies.

Because of these factors, the Corporation may be unable to execute projects on time, on budget, or at all.

Reserves Estimates

The Corporation's estimated reserves are based on numerous factors and assumptions which may prove incorrect and which may affect the Corporation

There are numerous uncertainties inherent in estimating reserves and the future cash flows attributed to such reserves. The reserves and associated cash flow information set forth in this document are estimates only. Generally, estimates of economically recoverable oil and natural gas reserves (including the breakdown of reserves by product type) and the future net cash flows from such estimated reserves are based upon a number of variable factors and assumptions, such as:

- historical production from properties;
- production rates;
- ultimate reserve recovery;
- timing and amount of capital expenditures;
- marketability of oil and natural gas;
- royalty rates; and
- the assumed effects of regulation by governmental agencies and future operating costs (all of which may vary materially from actual results).

For those reasons, estimates of the economically recoverable oil and natural gas reserves attributable to any particular group of properties, classification of such reserves based on risk of recovery and estimates of future net revenues associated with reserves prepared by different engineers, or by the same engineers at different times, may vary. The Corporation's actual production, revenues, taxes and development and operating expenditures with respect to its reserves will vary from estimates and such variations could be material.

The estimation of proved reserves that may be developed and produced in the future is often based upon volumetric calculations and upon analogy to similar types of reserves rather than actual production history. Recovery factors and drainage areas are often estimated by experience and analogy to similar producing pools. Estimates based on these methods are generally less reliable than those based on actual production history. Subsequent evaluation of the same reserves based upon production history and production practices will result in potentially material variations in the estimated reserves.

In accordance with applicable securities laws, the Corporation's independent reserves evaluator has used forecast prices and costs in estimating the reserves and future net cash flows as summarized herein. Actual future net cash flows will be affected by other factors, including actual production levels, supply and demand for oil and natural gas, curtailments or increases in consumption by oil and natural gas purchasers, changes in governmental regulation and taxation and the impact of inflation on costs.

Actual production and cash flows derived from the Corporation's oil and natural gas reserves will vary from the estimates contained in the reserve evaluation, and such variations could be material. The reserve evaluation is based in part on the assumed success of activities the Corporation intends to undertake in future years. The reserves and estimated cash flows to be derived therefrom and contained in the reserve evaluation will be reduced to the extent that such activities do not achieve the level of success assumed in the reserve evaluation. The reserve evaluation is effective as of a specific effective date and, except as may be specifically stated, has not been updated and therefore does not reflect changes in the Corporation's reserves since that date.

Hedging

Hedging activities expose the Corporation to the risk of financial loss and counter party risk

From time to time, the Corporation may enter into agreements to receive fixed prices or derivative contracts on its oil and natural gas production to offset the risk of revenue losses if commodity prices decline. However, to the extent that the Corporation engages in price risk management activities to protect itself from commodity price declines, it may also be prevented from realizing the full benefits of price increases above the levels of the derivative instruments used to manage price risk. In addition, the Corporation's hedging arrangements may expose it to the risk of financial loss in certain circumstances, including instances in which:

- production falls short of the hedged volumes or prices fall significantly lower than projected;
- there is a widening of price-basis differentials between delivery points for production and the delivery point assumed in the hedge arrangement;
- the counterparties to the hedging arrangements or other price risk management contracts fail to perform under those arrangements; or
- a sudden unexpected event materially impacts oil or natural gas prices.

Similarly, from time to time, the Corporation may enter into agreements to fix the exchange rate of Canadian dollars to United States dollars or other currencies in order to offset the risk of revenue losses if the Canadian dollar increases in value compared to other currencies. However, if the Canadian dollar declines in value compared to such fixed currencies, the Corporation will not benefit from the fluctuating exchange rate.

Credit Facility Arrangements

Failing to comply with covenants under the Credit Facilities could result in restricted access to additional capital or being required to repay all amounts owing thereunder

The Credit Facilities and the amount authorized thereunder is dependent on the borrowing base determined by its lenders. The Corporation is expected to require credit facilities from time to time, as needed to fund its operations and meet its financial obligations. The Corporation is required to comply with covenants under the Credit Facilities which may, in certain cases, include certain financial ratio tests, which, from time to time, may either affect the availability, or price, of additional funding. If the Corporation does not comply with these covenants, the Corporation's access to capital could be restricted or repayment could be required. Events beyond the Corporation's control may contribute to the failure of the Corporation to comply with such covenants. A failure to comply with covenants could result in default under the Credit Facilities, which could result in the Corporation being required to repay amounts owing thereunder. The acceleration of the Corporation's indebtedness under one agreement may permit acceleration of indebtedness under other agreements that contain cross default or cross-acceleration provisions. In addition, the Credit Facilities may impose operating and financial restrictions on the Corporation that could include restrictions on the payment of dividends, repurchase or making of other distributions with respect to the Corporation's securities, incurring of additional indebtedness, the provision of guarantees, the assumption of loans, making of capital expenditures, entering into of amalgamations, mergers, take-over bids or disposition of assets, among others.

The Corporation's lenders use the Corporation's reserves, commodity prices, applicable discount rate and other factors to periodically determine the Corporation's borrowing base. Commodity prices have recently increased but remain volatile as a result of various factors including limited egress options for Western Canadian oil and natural gas producers, global geopolitical tensions, actions taken to limit OPEC and non-OPEC production and increasing production by U.S. shale producers. Depressed commodity prices could reduce the Corporation's borrowing base, reducing the funds available to the Corporation under the Credit Facilities. This could result in the requirement to repay a portion, or all, of the Corporation's indebtedness.

If the Corporation's lenders require repayment of all or a portion of the amounts outstanding under the Credit Facilities for any reason, including for a default of a covenant or the reduction of a borrowing base, there is no certainty that the Corporation would be in a position to make such repayment. Even if the Corporation is able to obtain new financing in order to make any required repayment under the Credit Facilities, such financing may not be on commercially reasonable terms, or terms that are acceptable to the Corporation. If the Corporation is unable to repay amounts owing under the Credit Facilities, the lenders under the Credit Facilities could proceed to foreclose or otherwise realize upon the collateral granted to them to secure the indebtedness.

Forward-Looking Statements

Forward-looking statements may prove inaccurate

Shareholders and prospective investors are cautioned not to place undue reliance on the Corporation's forward-looking statements. By their nature, forward-looking statements involve numerous assumptions, known and unknown risks and uncertainties, of both a general and specific nature, that could cause actual results to differ materially from those suggested by the forward-looking statements or contribute to the possibility that predictions, forecasts or projections will prove to be materially inaccurate. See "Risk Factors" – "Reserves Estimates".

Substantial Capital Requirements

The Corporation's access to capital may be limited or restricted as a result of factors related and unrelated to it, impacting its ability to conduct future operations and acquire and develop reserves

The Corporation anticipates making substantial capital expenditures for the acquisition, exploration, development and production of oil and natural gas reserves in the future. As future capital expenditures will be financed out of cash generated from operations, borrowings, proceeds from asset sales and possible future equity sales, the Corporation's ability to do so is dependent on, among other factors:

- the overall state of the capital markets;
- the Corporation's credit rating (if applicable);
- commodity prices;

- interest rates;
- royalty rates;
- tax burden due to current and future tax laws; and
- investor appetite for investments in the energy industry and the Corporation's securities.

Further, if the Corporation's revenues or reserves decline, it may not have access to the capital necessary to undertake or complete future drilling programs. The conditions in, or those affecting, the oil and natural gas industry have negatively impacted the ability of oil and natural gas companies, including the Corporation, to access financing and/or the cost thereof. There can be no assurance that debt or equity financing, or cash generated by operations will be available or sufficient to meet these requirements or for other corporate purposes or, if debt or equity financing is available, that it will be on terms acceptable to the Corporation. The Corporation may be required to seek additional equity financing on terms that are highly dilutive to existing Shareholders. The inability of the Corporation to access sufficient capital for its operations could have a material adverse effect on the Corporation's business financial condition, results of operations and prospects.

Additional Funding Requirements

The Corporation may require additional financing, from time to time, to fund the acquisition, exploration and development of properties and its ability to obtain such financing in a timely fashion and on acceptable terms may be negatively impacted by current economic conditions and global market volatility

The Corporation's cash flow from its reserves may not be sufficient to fund its ongoing activities at all times and, from time to time, the Corporation may require additional financing in order to carry out its oil and natural gas acquisition, exploration and development activities. Failure to obtain financing on a timely basis could cause the Corporation to forfeit its interest in certain properties, miss certain acquisition opportunities and reduce its operations.

As a result of global economic and political volatility, the Corporation may, from time to time, have restricted access to capital and increased borrowing costs. Failure to obtain suitable financing on a timely basis could cause the Corporation to forfeit its interest in certain properties, miss certain acquisition opportunities and reduce or terminate its operations. If the Corporation's revenues from its reserves decrease as a result of lower oil and natural gas prices or otherwise, it will affect the Corporation's ability to expend the necessary capital to replace its reserves or to maintain its production. To the extent that external sources of capital become limited, unavailable or available on onerous terms, the Corporation's ability to make capital investments and maintain existing assets may be impaired, and its assets, liabilities, business, financial condition and results of operations may be affected materially and adversely as a result. In addition, the future development of the Corporation's petroleum properties may require additional financing and there are no assurances that such financing will be available or, if available, will be available upon acceptable terms. Alternatively, any available financing may be highly dilutive to existing Shareholders. Failure to obtain any financing necessary for the Corporation's capital expenditure or acquisition plans may result in a delay in development of or production from the Corporation's properties.

Asset Concentration

The Corporation's operations and drilling activities are vulnerable to risks associated with operating in a limited geographic area

The Corporation's producing and undeveloped properties are geographically concentrated in the province of Alberta. Demand for and costs of personnel, equipment, power, services, and resources in such geographic area remain high. This high level of demand could result in a delay or inability to secure such personnel, equipment, power, services, and resources. Any delay or inability to secure the personnel, equipment, power, services or resources could result in oil and natural gas production volumes being below the Corporation's forecast. In addition, any such negative effect on production volumes, or significant increases in costs, could have a material adverse effect on the Corporation's financial conditions, results of operations, cash flow, and profitability.

As a result of this geographical concentration, the Corporation may be disproportionately exposed to the impact of delays or interruptions of operations or production in this area caused by external factors such as governmental regulation, provincial politics, Indigenous rights claims, market limitations, supply shortages, or extreme weather-related conditions.

Royalty Regimes

Changes to royalty regimes may negatively impact the Corporation's cash flows

Governments in the jurisdictions in which the Corporation has assets may adopt new royalty regimes, or modify the existing ones, which may affect the economic viability of the Corporation's projects. An increase in royalties will reduce the Corporation's earnings and could make future capital investments, or operations, less economic. See "*Industry Conditions – Royalties and Incentives*".

Management of Growth

The Corporation may not be able to effectively manage the growth of its business

The Corporation may be subject to growth related risks including capacity constraints and pressure on its internal systems and controls. To continue to manage growth effectively, the Corporation will need to continue to implement and improve its operational and financial systems and to train and manage and potentially expand its employee base. If the Corporation is unable to deal with such growth, it may have a material adverse effect on the Corporation's business, financial condition, results of operations or prospects.

Reliance on a Skilled Workforce and Key Personnel

An inability to recruit and retain a skilled workforce and key personnel may negatively impact the Corporation

The operations and management of the Corporation require the recruitment and retention of a skilled workforce, including engineers, technical personnel and other professionals. The loss of key members of such workforce, or a substantial portion of the workforce as a whole, could result in the failure to implement the Corporation's business plans which could have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects.

Competition for qualified personnel in the oil and natural gas industry is intense and there can be no assurance that the Corporation will be able to continue to attract and retain all personnel necessary for the development and operation of its business. The Corporation does not have any key personnel insurance in place. Contributions of the existing management team to the immediate and near-term operations of the Corporation are likely to be of central importance. In addition, certain of the Corporation's current employees may have significant institutional knowledge that must be transferred to other employees prior to their departure from the workforce. If the Corporation is unable to retain current employees, successfully complete effective knowledge transfers and/or recruit new employees with the requisite knowledge and experience, the Corporation could be negatively impacted. In addition, the Corporation could experience increased costs to retain and recruit these professionals. Investors must rely upon the ability, expertise, judgment, discretion, integrity and good faith of the management of the Corporation.

Information Technology Systems and Cyber-Security

Breaches of the Corporation's cyber-security and loss of, or access to, electronic data may adversely impact the Corporation's operations and financial position

The Corporation has become increasingly dependent upon the availability, capacity, reliability and security of its information technology infrastructure, and its ability to expand and continually update this infrastructure, to conduct daily operations. The Corporation depends on various information technology systems to estimate reserve quantities, process and record financial data, manage the Corporation's land base, manage financial resources, analyze seismic information, administer contracts with operators and lessees and communicate with employees and third-party partners.

Further, the Corporation is subject to a variety of information technology and system risks as a part of its normal course operations including potential breakdown, invasion, virus, cyber-attack, cyber-fraud, security breach, and destruction or interruption of the Corporation's information technology systems by third parties or insiders. Unauthorized access to these systems by employees or third parties could lead to corruption or exposure of confidential, fiduciary or proprietary information, interruption to communications or operations or disruption to business activities or the Corporation's competitive position.

Phishing attacks (i.e., fraudulent attempts to obtain sensitive information such as passwords, financial details, or funds) have become increasingly sophisticated. A successful attack could result in loss of financial resources, theft of critical data, or compromise of the Corporation's technology infrastructure. Employees are frequent targets, often through emails that appear legitimate but direct recipients to fraudulent websites, request confidential information, or install malware such as "Trojan horse" programs.

The Corporation maintains policies and procedures that address and implement employee protocols with respect to electronic communications and electronic devices and conducts annual cyber-security risk assessments. Despite the Corporation's efforts to mitigate such phishing attacks through education and training, phishing activities remain a serious problem that may damage the Corporation's information technology infrastructure. The Corporation applies technical and process controls in line with industry-accepted standards to protect its information, assets and systems, including a written incident response plan for responding to a cyber-security incident. However, these controls may not adequately prevent cyber-security breaches. Disruption of critical information technology services, or breaches of information security, could have a negative effect on the Corporation's performance and earnings, as well as on its reputation, and any damages sustained may not be adequately covered by the Corporation's current insurance coverage, or at all. The significance of any such event is difficult to quantify, and may in certain circumstances be material and could have a material adverse effect on the Corporation's business, financial condition and results of operations.

The Corporation's IT systems may incorporate artificial intelligence ("AI"), and development of these capabilities is ongoing. AI introduces risks and unintended consequences that could affect adoption and business operations. Algorithms and training methods may be flawed, and reliance on AI without adequate safeguards can lead to inaccurate outcomes or operational vulnerabilities.

AI also poses data privacy, cyber-security, and intellectual property risks. Improper use may result in unauthorized disclosure of sensitive information or outputs that infringe copyrights, patents, or privacy rights. As legal and regulatory frameworks for AI remain uncertain, future compliance obligations could impose significant costs or limit the Corporation's ability to integrate AI tools.

Data Protection

The handling of secure information exposes the Corporation to potential data security risks that could result in monetary damages against the Corporation and could otherwise damage its reputation, and adversely affect its business, financial condition and results of operations.

The protection of customer, employee, and company data is critical to the Corporation's business. The regulatory environment in Canada surrounding information security and privacy is increasingly demanding, with the frequent imposition of new and evolving requirements. Certain legislation, including the *Personal Information Protection and Electronic Documents Act* in Canada, require documents to be securely destroyed to avoid identity theft and inadvertent disclosure of confidential and sensitive information. A significant breach of customer, employee, or company data could attract a substantial amount of media attention, damage the Corporation's customer relationships and reputation, and result in lost sales, fines, or lawsuits. In addition, an increasing number of countries have introduced and/or increased enforcement of comprehensive privacy laws or are expected to do so. The continued emphasis on information security as well as increasing concerns about government surveillance may lead customers to request the Corporation to take additional measures to enhance security and/or assume higher liability under its contracts. As a result of legislative initiatives and customer demands, the Corporation may have to modify its operations to further improve data security. Any such modifications may result in increased expenses and operational complexity, and adversely affect its reputation, business, financial condition and results of operations.

Market Price

The trading price of the Corporation's Common Shares may be adversely affected by factors related and unrelated to the oil and natural gas industry

The trading price of the securities of oil and natural gas issuers is subject to substantial volatility often based on factors related and unrelated to the financial performance or prospects of issuers. Factors unrelated to the Corporation's performance could include macroeconomic developments nationally, within North America or globally, domestic and global commodity prices and changing perceptions of the oil and natural gas market. In recent years, the volatility of commodities prices has increased due in part to the implementation of computerized trading and the decrease of discretionary commodity trading. In addition, the volatility, trading volume and share price of issuers have been impacted by increasing investment levels in passive funds that track major indices, as such funds that only purchase securities included in such indices. Similarly, the market price of the Common Shares of the Corporation could be subject to significant fluctuations in response to variations in the Corporation's operating results, financial condition, liquidity and other internal factors. Accordingly, the price at which the Common Shares of the Corporation will trade cannot be accurately predicted.

Impact of Future Financings on Market Price

The Corporation's future financings may negatively impact the market price of the Common Shares

In order to finance future operations or acquisition opportunities, the Corporation may raise funds through the issuance of Common Shares or the issuance of debt instruments or securities convertible into Common Shares. The Corporation cannot predict the size of future issuances of Common Shares or the issuance of debt instruments or other securities convertible into Common Shares or the effect, if any, that future issuances and sales of the Corporation's securities will have on the market price of the Common Shares.

Dilution

The Corporation may issue additional Common Shares or other dilutive securities, diluting current Shareholders

The Corporation may make future acquisitions or enter into financings or other transactions involving the issuance of securities of the Corporation, which may be dilutive to Shareholders.

Industry Competition

The Corporation competes with other oil and natural gas companies, some of which have greater financial and operational resources

The petroleum industry is competitive in all of its phases. The Corporation competes with numerous other entities in the exploration for, and the development, production and marketing of, oil and natural gas. The Corporation's competitors include oil and natural gas companies that have substantially greater financial resources, staff and facilities than those of the Corporation. Some of these companies not only explore for, develop and produce oil and natural gas, but also carry on refining operations and market oil and natural gas on an international basis. As a result of these complementary activities, some of these competitors may have greater and more diverse competitive resources to draw on than the Corporation. The Corporation's ability to increase its reserves in the future will depend not only on its ability to explore and develop its present properties, but also on its ability to select and acquire other suitable producing properties or prospects for exploratory drilling. Competitive factors in the distribution and marketing of oil and natural gas include price, process, methods, and reliability of delivery and storage.

Environmental Regulation

Compliance with environmental regulations requires the dedication of a portion of the Corporation's financial and operational resources

All phases of the oil and natural gas business present environmental risks and hazards and are subject to environmental regulation pursuant to a variety of federal, provincial and local laws and regulations. Environmental legislation provides for, among other things, the initiation and approval of new oil and natural gas projects, and restrictions and prohibitions

on the spill, release or emission of various substances produced in association with oil and natural gas industry operations. In addition, such legislation sets out the requirements with respect to oilfield waste handling and storage, habitat protection and the satisfactory operation, maintenance, abandonment and reclamation of well and facility sites. New environmental legislation at the federal and provincial levels may increase uncertainty among oil and natural gas industry participants as the new laws are implemented, and the effects of the new rules and standards are felt in the oil and natural gas industry. See "*Industry Conditions – Regulatory Authorities and Environmental Regulation*".

Compliance with environmental legislation can require significant expenditures and a breach of applicable environmental legislation may result in the imposition of fines and penalties, some of which may be material. Environmental legislation is evolving in a manner expected to result in stricter standards and enforcement, larger fines and liabilities and potentially increased capital expenditures and operating costs. The discharge of oil, natural gas or other pollutants into the air, soil or water may give rise to liabilities to governments and third parties and may require the Corporation to incur costs to remedy such discharge. In November 2024, the federal government published a draft of the proposed Oil and Gas Sector Greenhouse Gas Emissions Cap Regulations, which, if enacted as drafted, would cap emissions from a range of industrial activities in the oil and gas sector, establish a cap-and-trade system for emissions allowances, and require facility operators to comply with various reporting and remittance obligations. Such proposed regulations, which could affect investor confidence, increase decarbonization initiatives and lead to production cuts, are expected to be finalized and come into force in 2026.

Although the Corporation believes that it is in material compliance with current applicable environmental legislation, no assurance can be given that environmental compliance requirements will not result in a curtailment of production or a material increase in the costs of production, development or exploration activities or otherwise have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects.

Disposal of Fluids used in Operations

Regulations regarding the disposal of fluids used in the Corporation's operations may increase its costs of compliance or subject it to regulatory penalties or litigation

The safe disposal of the hydraulic fracturing fluids (including the additives) and water recovered from oil and natural gas wells is subject to ongoing regulatory review by the federal and provincial governments, including its effect on fresh water supplies and the ability of such water to be recycled, amongst other things. While it is difficult to predict the impact of any regulations that may be enacted in response to such review, the implementation of stricter regulations may increase the Corporation's costs of compliance.

Carbon Pricing Risk

Taxes on carbon emissions affect the demand for oil and natural gas, the Corporation's operating expenses and may impair the Corporation's ability to compete

The majority of countries across the globe have agreed to reduce their carbon emissions in accordance with the Paris Agreement. In Canada, the federal government implemented legislation aimed at incentivizing the use of alternative fuels and in turn reducing carbon emissions. The federal system currently applies in provinces and territories without their own system that meets federal standards. The federal regime is subject to a number of court challenges. See "*Industry Conditions – Climate Change Regulation*". Any taxes placed on carbon emissions may have the effect of decreasing the demand for oil and natural gas products while at the same time, increasing the Corporation's operating expenses, each of which may have a material adverse effect on the Corporation's profitability and financial condition. Further, the imposition of carbon taxes puts the Corporation at a disadvantage with its counterparts who operate in jurisdictions where there are less costly carbon regulations. Retaining ownership of Entropy mitigates the Corporation's carbon pricing risk if the subsidiary can execute its plans to develop CCS project for third-party emitters.

Climate Change

Climate change concerns could result in increased operating costs and reduced demand for the Corporation's products and shares, while the potential physical effects of climate change could disrupt the Corporation's production and cause it to incur significant costs in preparing for or responding to those effects

Global climate issues continue to attract public and scientific attention. Numerous reports, including reports from the United Nations Intergovernmental Panel on Climate Change, have engendered concern about the impacts of human activity, especially fossil fuel combustion, on global climate issues. In turn, increasing public, government, and investor attention is being paid to global climate issues and to emissions of GHG, including emissions of carbon dioxide and methane from the production and use of oil and natural gas. The majority of countries, including Canada, have agreed to reduce their carbon emissions in accordance with the Paris Agreement. And in November 2025 at COP30 in Berlin, Canada reaffirmed its commitments to transitioning away from fossil fuels in line with the Paris Agreement. As discussed below, the Corporation faces both transition risks and physical risks associated with climate change and climate change policy and regulations. See "*Industry Conditions – Climate Change Regulation*".

Transition risks

Foreign and domestic governments continue to evaluate and implement policy, legislation, and regulations focused on restricting GHG emissions and promoting adaptation to climate change and the transition to a low-carbon economy. It is not possible to predict what measures foreign and domestic governments may implement in this regard, nor is it possible to predict the requirements that such measures may impose or when such measures may be implemented. However, international multilateral agreements, the obligations adopted thereunder and legal challenges concerning the adequacy of climate-related policy brought against foreign and domestic governments may accelerate the implementation of such measures. Given the evolving nature of climate change policy and the control of GHG emissions and resulting requirements, including carbon taxes and carbon pricing schemes implemented by varying levels of government, it is expected that current and future climate change regulations will have the effect of increasing the Corporation's operating expenses, and, in the long-term, potentially reducing the demand for oil and natural gas and related products, resulting in a decrease in the Corporation's profitability and a reduction in the value of its assets.

Claims have been made against certain energy companies alleging that GHG emissions from oil and natural gas operations constitute a public nuisance under certain laws or that such energy companies provided misleading disclosure to the public and investors of current or future risks associated with climate change. Individuals, governmental authorities, or other organizations may make claims against oil and natural gas companies, including the Corporation, for alleged personal injury, property damage, or other potential liabilities. While the Corporation is not currently a party to any such litigation or proceedings, it could be named in actions making similar allegations. An unfavourable ruling in any such case could adversely affect the demand for and price of securities issued by the Corporation, impact its operations and have an adverse impact on its financial condition.

Due to long-term risks from environmental policy changes, regulations, legal challenges, and market shifts related to climate change, recent efforts have targeted the financial sector. Investment advisors, banks, pension funds, universities, and other institutional investors are engaging companies on climate action, using voting rights, and reallocating capital toward low-carbon assets while divesting from high-emission businesses. Stakeholders are also pressuring insurers and banks to stop financing or insuring oil, gas, and related infrastructure. The impact of such efforts requires our management to dedicate significant time and resources to these climate change-related concerns, and may adversely affect our operations, the demand for and price of our securities and our cost of capital and access to capital markets.

Climate-related regulations and reporting standards continue to evolve. In June 2023, the International Sustainability Standards Board (the "**ISSB**") issued two global disclosure standards, IFRS S1 and S2, to promote consistent, comparable, and reliable environmental reporting. In December 2024, the Canadian Sustainability Standards Board finalized similar Canadian Standards, CSDS 1 and CSDS 2. In December 2025, ISSB announced targeted amendments to IFRS S2; whether the Canadian Standards will be revised remains uncertain. Meanwhile, in April 2025, due to significant changes in the global economic and geopolitical landscape, the Canadian Securities Administrators paused work on its own climate disclosure initiative. If we are not able to meet future climate-related reporting requirements of regulators or current

and future expectations of investors, lenders, insurance providers, or other stakeholders, our business and ability to attract and retain skilled employees, obtain regulatory permits, licences, registrations, approvals, and authorizations from various governmental authorities, and raise capital, may be adversely affected. See "*Industry Conditions – Climate Change Regulation*".

Physical risks

The potential physical risks resulting from climate change are long-term in nature and associated with a high degree of uncertainty regarding timing, scope, and severity of potential impacts. Many experts believe global climate change could increase extreme variability in weather patterns such as increased frequency of severe weather, rising mean temperature and sea levels, and long-term changes in precipitation patterns. Extreme hot and cold weather, heavy snowfall, heavy rainfall, drought and wildfires may restrict the Corporation's ability to access its properties and cause operational difficulties, including damage to equipment and infrastructure. Extreme weather also increases the risk of personnel injury as a result of dangerous working conditions. Certain of the Corporation's assets are proximate to forests and rivers and a wildfire or flood may lead to significant downtime and/or damage to the Corporation's assets or cause disruptions to the production and transport of its products or the delivery of goods and services in its supply chain.

Regulatory Landscapes

Modification to current, or implementation of additional, regulations may reduce the demand for oil and natural gas, increase the Corporation's costs and delay planned operations

The implementation of new regulations or the modification of existing regulations affecting the oil and natural gas industry could reduce demand for oil and natural gas and increase the Corporation's costs, either of which may have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects. Further, third-party challenges to regulatory decisions and orders can reduce the efficiency of the regulatory regime, as the implementation of decisions and orders may be delayed resulting in uncertainty and interruption to the business of the oil and natural gas industry.

To conduct oil and natural gas operations, the Corporation requires regulatory permits, licences, registrations, approvals and authorizations from various governmental authorities at the municipal, provincial and federal level. There can be no assurance that the Corporation will be able to obtain all of the permits, licences, registrations, approvals and authorizations that may be required to conduct operations that it may wish to undertake. In addition, certain federal legislation such as the *Competition Act* and the *Investment Canada Act* could negatively affect the Corporation's business, financial condition and the market value of its Common Shares or its assets, particularly when undertaking, or attempting to undertake, acquisition or disposition activity. See "*Industry Conditions – Regulatory Authorities and Environmental Regulation*".

Hydraulic Fracturing

Implementation of new regulations on hydraulic fracturing may lead to operational delays, increased costs and/or decreased production volumes, adversely affecting the Corporation's financial position; the Corporation's operations are dependent upon the availability of water and its ability to dispose of produced water from drilling and production activities

Hydraulic fracturing involves the injection of water, sand, and additives under pressure into rock formations to stimulate the production of oil and natural gas. Specifically, hydraulic fracturing enables the production of commercial quantities of oil and natural gas from previously unproductive reservoirs. Certain areas in Alberta and other provinces have been prone to seismic activity and as a result, additional protocols relating to hydraulic fracturing and seismic monitoring have been implemented in such areas. Any new laws, regulations, or permitting requirements regarding hydraulic fracturing could lead to operational delays, increased operating costs, and/or third-party or governmental claims, and could increase the Corporation's costs of compliance and doing business, as well as delay the development of oil and natural gas resources from shale formations, which are not commercial without the use of hydraulic fracturing. Restrictions or bans on hydraulic fracturing in the areas where the Corporation operates could result in the Corporation being unable

to economically recover its oil and natural gas reserves, which would result in a significant decrease in the value of the Corporation's assets.

Water is an essential component of the Corporation's drilling and hydraulic fracturing processes. Limitations or restrictions on the Corporation's ability to secure sufficient amounts of water (including limitations resulting from natural causes such as drought), could materially and adversely impact its operations. Severe drought conditions can result in local water authorities taking steps to restrict the use of water in their jurisdiction for drilling and hydraulic fracturing in order to protect the local water supply. If the Corporation is unable to obtain water to use in its operations from local sources, water may need to be obtained from new sources and transported to drilling sites, resulting in increased costs. Cost increases could have a material adverse effect on drilling economics resulting in delays or suspensions of drilling which would ultimately have a detrimental effect on the financial condition, results of operations, and cash flows of the Corporation.

The Corporation must dispose of the fluids produced from oil and natural gas production operations, including produced water. It does so directly or through the use of third-party vendors. The legal requirements related to the disposal of produced water into a non-producing geologic formation by means of underground injection wells are subject to change based on concerns of the public or governmental authorities.

Another consequence of seismic events may be lawsuits alleging that disposal well operations have caused damage to neighbouring properties or otherwise violated laws and regulations regarding waste disposal. These developments could result in additional regulation and restrictions on the use of injection wells by the Corporation or by commercial disposal well vendors that the Corporation may use from time to time to dispose of produced water. Increased regulation and attention given to induced seismicity could also lead to greater opposition, including litigation to limit or prohibit oil and natural gas activities utilizing injection wells for produced water disposal. Any one or more of these developments may result in the Corporation or its vendors having to limit disposal well volumes, disposal rates, pressures or locations, or require the Corporation or its vendors to shut down or curtail the injection of produced water into disposal wells, which events could have a material adverse effect on the Corporation's business, financial condition, and results of operations.

Variations in Foreign Exchange Rates and Interest Rates

Variations in foreign exchange rates and interest rates could adversely affect the Corporation's financial condition

World oil and natural gas prices are quoted in United States dollars. The Canadian/United States dollar exchange rate, which fluctuates over time, consequently affects the price received by Canadian producers of oil and natural gas. Material increases in the value of the Canadian dollar relative to the United States dollar will negatively affect the Corporation's production revenues. Accordingly, exchange rates between Canada and the United States could affect the future value of the Corporation's reserves as determined by independent evaluators. Although a low value of the Canadian dollar relative to the United States dollar may positively affect the price the Corporation receives for its oil and natural gas production, it could also result in an increase in the price for certain goods used in the Corporation's operations, which may have a negative impact on the Corporation's financial results.

To the extent that the Corporation engages in risk management activities related to foreign exchange rates and interest rates, there is a credit risk associated with counterparties with which the Corporation may contract.

An increase in interest rates could result in a significant increase in the amount the Corporation pays to service debt, resulting in a reduced amount of funds available to fund its exploration and development activities, and if applicable, the cash available for dividends. Such an increase could also negatively impact the market price of the Common Shares of the Corporation.

Changing Investor Sentiment

Changing investor sentiment toward the oil and natural gas industry may impact the Corporation's access to, and cost of, capital

A number of factors, including the concerns of the effects of the use of fossil fuels on climate change, the impact of oil and natural gas operations on the environment, environmental damage resulting from spills of petroleum products

during production and transportation, and Indigenous rights have affected certain investors' sentiments toward the oil and natural gas industry. As a result of these concerns, some institutional, retail and public investors have announced that they are no longer willing to fund or invest in oil and natural gas properties or companies or are reducing the amount thereof over time. In addition, certain institutional investors are requesting that issuers develop and implement more robust social, environmental and governance policies and practices. Developing and implementing such policies and practices can involve significant costs and require a significant time commitment from the Board of Directors, management and employees of the Corporation. Failing to implement the policies and practices as requested by institutional investors may result in such investors reducing their investment in the Corporation, or not investing in the Corporation at all. Any reduction in the investor base interested or willing to invest in the oil and natural gas industry and more specifically, the Corporation, may limit the Corporation's access to capital, thereby increasing the cost of capital, and decreasing the price and liquidity of the Corporation's securities even if the Corporation's operating results, underlying asset values or prospects have not changed.

Insurance

Not all risks of pursuing oil and natural gas opportunities are insurable and the occurrence of an uninsurable event may have a materially adverse effect on the Corporation

The Corporation's involvement in the exploration for and development of oil and natural gas properties may result in the Corporation becoming subject to liability for pollution, blowouts, sour gas leaks, property damage, personal injury or other hazards. Although the Corporation maintains insurance in accordance with industry standards to address certain of these risks, such insurance has limitations on liability and may not be sufficient to cover the full extent of such liabilities. In addition, certain risks are not, in all circumstances, insurable or, in certain circumstances, the Corporation may elect not to obtain insurance to deal with specific risks due to the high premiums associated with such insurance or other reasons. The payment of any uninsured liabilities would reduce the funds available to the Corporation. The occurrence of a significant event that the Corporation is not fully insured against, or the insolvency of the insurer of such event, may have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects.

The Corporation's insurance policies are generally renewed on an annual basis and, depending on factors such as market conditions, the premiums, policy limits and/or deductibles for certain insurance policies can vary substantially. In some instances, certain insurance may become unavailable or available only for reduced amounts of coverage. Significantly increased premiums could lead the Corporation to decide to reduce or possibly eliminate, coverage. In addition, insurance is purchased from a number of third-party insurers, often in layered insurance arrangements, some of which may discontinue providing insurance coverage for their own policy or strategic reasons. Should any of these insurers refuse to continue to provide insurance coverage, the Corporation's overall risk exposure could increase and the Corporation could incur significant costs.

Third-Party Credit Risk

The Corporation is exposed to credit risk of its partners and third-party operators or partners of properties in which it has an interest

The Corporation may be exposed to third-party credit risk through its contractual arrangements with its current or future joint venture partners, marketers of its oil and natural gas production and other parties. In addition, the Corporation may be exposed to third-party credit risk from operators of properties in which the Corporation has a working or royalty interest. In the event such entities fail to meet their contractual or other obligations to the Corporation, such failures may have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects. In addition, poor credit conditions in the industry, generally, and of the Corporation's joint venture partners may affect a joint venture partner's willingness to participate in the Corporation's ongoing capital program, potentially delaying the program and the results of such program until the Corporation finds a suitable alternative partner. To the extent that any of such third parties go bankrupt, become insolvent or make a proposal or institute any proceedings relating to bankruptcy or insolvency, it could result in the Corporation being unable to collect all or a portion of any

money owing from such parties. Any of these factors could materially adversely affect the Corporation's financial and operational results.

Tax Horizon

The Corporation's projections regarding its tax horizons may be inaccurate, resulting in a requirement to pay taxes sooner than expected

It is expected, based upon current legislation, the projections contained in the McDaniel Report and various other assumptions that no cash income taxes are to be paid by the Corporation prior to 2029. A lower level of capital expenditures than those contained in the McDaniel Report or should the assumptions used by the Corporation prove to be inaccurate, the Corporation may be required to pay cash income taxes sooner than anticipated, which will reduce cash flow available to the Corporation.

Operational Dependence

The successful operation of a portion of the Corporation's properties is dependent on third parties

On a limited basis, other companies operate some of the assets in which the Corporation has an interest. The Corporation has limited ability to exercise influence over the operation of those assets and their associated costs, which could adversely affect the Corporation's financial performance. The Corporation's return on assets operated by others depends upon a number of factors that may be outside of the Corporation's control, including, but not limited to, the timing and amount of capital expenditures, the operator's expertise and financial resources, the approval of other participants, the selection of technology and risk management practices.

In addition, due to volatile commodity prices, many companies, including companies that may operate some of the assets in which the Corporation has an interest, may encounter financial difficulty. This could impact their ability to fund and pursue capital expenditures, carry out their operations in a safe and effective manner and satisfy regulatory requirements with respect to abandonment and reclamation obligations. If companies that operate some of the assets in which the Corporation has an interest fail to satisfy regulatory requirements with respect to abandonment and reclamation obligations, the Corporation may be required to satisfy such obligations and to seek reimbursement from such companies. To the extent that any such companies go bankrupt, become insolvent or make a proposal or institute any proceedings relating to bankruptcy or insolvency, it could result in such assets being shut-in, the Corporation potentially becoming subject to additional liabilities relating to such assets and the Corporation having difficulty collecting revenue due from such operators or recovering amounts owing to the Corporation from such operators for their share of abandonment and reclamation obligations. Any of these factors could have a material adverse effect on the Corporation's financial and operational results.

Title to and Right to Produce from Assets

Defects in the title or rights to produce the Corporation's properties may result in a financial loss

The Corporation's actual title to and interest in its properties, and its right to produce and sell the oil and natural gas therefrom, may vary from the Corporation's records. In addition, there may be valid legal challenges or legislative changes that affect the Corporation's title to and right to produce from its oil and natural gas properties, which could impair the Corporation's activities and result in a reduction of the revenue received by the Corporation.

If a defect exists in the chain of title or in the Corporation's right to produce, or a legal challenge or legislative change arises, it is possible that the Corporation may lose all or a portion of the properties to which the title defect relates and/or its right to produce from such properties. This may have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects.

Expiration of Licences and Leases

The Corporation, or its working interest partners, may fail to meet the requirements of a licence or lease, causing its termination or expiry

The Corporation's properties are held in the form of licences and leases and working interests in licences and leases. If the Corporation, or the holder of a licence or lease, fails to meet a specific requirement of the licence or lease, the licence or lease may terminate or expire. There can be no assurance that any of the obligations required to maintain each licence or lease will be met. The termination or expiration of the Corporation's licences or leases or the working interests relating to a licence or lease and the associated abandonment and reclamation obligations may have a material adverse effect on the Corporation's business, financial condition, results of operations and prospects.

Failure to Realize Anticipated Benefits of Acquisitions and Dispositions

The anticipated benefits of acquisitions may not be achieved and the Corporation may dispose of non-core assets for less than their carrying value on the financial statements as a result of weak market conditions

The Corporation considers acquisitions and dispositions of businesses and assets in the ordinary course of business. Achieving the benefits of acquisitions depends on successfully consolidating functions and integrating operations and procedures in a timely and efficient manner and the Corporation's ability to realize the anticipated growth opportunities and synergies from combining the acquired businesses and operations with those of the Corporation. The integration of acquired businesses and assets may require substantial managerial effort, time and resources diverting management's focus from other strategic opportunities and operational matters. Management continually assesses the value and contribution of services provided by third parties and the resources required to provide such services. In this regard, non core assets may be periodically disposed of so the Corporation can focus its efforts and resources more efficiently. Depending on the state of the market for such non-core assets, certain non-core assets of the Corporation, if disposed of, may realize less on disposition than their assessed carrying value on the financial statements of the Corporation.

Reputational Risk Associated with the Corporation's Operations

The Corporation relies on its reputation to continue its operations and to attract and retain investors and employees

The Corporation's business, operations or financial condition may be negatively impacted by any negative public opinion toward the Corporation or as a result of any negative sentiment toward, or in respect of, the Corporation's reputation with stakeholders, special interest groups, political leadership, the media or other entities. Public opinion may be influenced by certain media and special interest groups' negative portrayal of the industry in which the Corporation operates as well as such groups' opposition to certain oil and natural gas projects. Potential impacts of negative public opinion or reputational issues may include delays or interruptions in operations, legal or regulatory actions or challenges, blockades, increased regulatory oversight, reduced support for, delays in, challenges to, or the revocation of regulatory approvals, permits and/or licences and increased costs and/or cost overruns. The Corporation's reputation and public opinion could also be impacted by the actions and activities of other companies operating in the oil and natural gas industry, particularly other producers, over which the Corporation has no control. Similarly, the Corporation's reputation could be impacted by negative publicity related to loss of life, injury or damage to property and the environment caused by the Corporation's operations. In addition, if the Corporation develops a reputation of having an unsafe work site, this may impact the ability of the Corporation to attract and retain the necessary skilled employees and consultants to operate its business. Opposition from special interest groups opposed to oil and natural gas development and the possibility of climate-related litigation against governments and fossil fuel companies may impact the Corporation's reputation. See "*Risk Factors – Climate Change*".

Reputational risk cannot be managed in isolation from other forms of risk. Credit, market, operational, insurance, regulatory and legal risks, among others, must all be managed effectively to safeguard the Corporation's reputation. Damage to the Corporation's reputation could result in negative investor sentiment toward the Corporation, which may result in limiting the Corporation's access to capital, increasing the cost of capital, and decreasing the price and liquidity of the Corporation's securities.

Issuance of Debt

Increased debt levels may impair the Corporation's ability to borrow additional capital on a timely basis to fund opportunities as they arise

From time to time, the Corporation may enter into transactions to acquire assets or shares of other organizations. These transactions may be financed in whole or in part with debt, which could increase the Corporation's debt levels above industry standards for oil and natural gas companies of similar size. Depending on future exploration and development plans, the Corporation may require additional debt financing that may not be available or, if available, may not be available on favourable terms. Neither the Corporation's articles nor its by laws limit the amount of indebtedness that the Corporation may incur. The level of the Corporation's indebtedness from time to time could impair the Corporation's ability to obtain additional financing on a timely basis to take advantage of business opportunities that may arise.

Conflicts of Interest

Conflicts of interest may arise for the Corporation's directors and officers who are also involved with other industry participants

Certain directors or officers of the Corporation may also be directors or officers of other oil and natural gas companies and as such may, in certain circumstances, have a conflict of interest. Conflicts of interest, if any, will be subject to and governed by procedures prescribed by the ABCA which require a director or officer of a corporation who is a party to, or is a director or an officer of, or has a material interest in any person who is a party to, a material contract or proposed material contract with the Corporation to disclose his or her interest and, in the case of directors, to refrain from voting on any matter in respect of such contract unless otherwise permitted under the ABCA.

Cost of New Technologies

The Corporation's ability to successfully implement new technologies into its operations in a timely and efficient manner will affect its ability to compete

The petroleum industry is characterized by rapid and significant technological advancements and introductions of new products and services utilizing new technologies. Other companies may have greater financial, technical and personnel resources that allow them to implement and benefit from technological advantages. There can be no assurance that the Corporation will be able to respond to such competitive pressures and implement such technologies on a timely basis, or at a reasonable cost. If the Corporation does implement such technologies, there is no assurance that the Corporation will do so successfully. One or more of the technologies currently utilized by the Corporation or potentially implemented in the future may become obsolete. If the Corporation is unable to utilize the most advanced commercially available technology, or is unsuccessful in implementing certain technologies, its business, financial condition and results of operations could also be adversely affected, potentially in a material way.

Alternatives to and Changing Demand for Petroleum Products

Changes to the demand for oil and natural gas products and the rise of petroleum alternatives may negatively affect the Corporation's financial condition, results of operations and cash flow

Fuel conservation measures, alternative fuel requirements, increasing consumer demand for alternatives to oil and natural gas and technological advances in fuel economy and renewable energy generation systems could reduce the demand for oil and natural gas. Recently, certain jurisdictions have implemented policies or incentives to decrease the use of fossil fuels and encourage the use of renewable fuel alternatives, which may lessen the demand for petroleum products and put downward pressure on commodity prices. Advancements in energy-efficient products have a similar effect on the demand for oil and natural gas products. The Corporation cannot predict the impact of changing demand for oil and natural gas products, and any major changes may have a material adverse effect on the Corporation's business, financial condition, results of operations and cash flow by decreasing the Corporation's profitability, increasing its costs, limiting its access to capital and decreasing the value of its assets.

Litigation

The Corporation may be involved in litigation in the course of its normal operations and the outcome of any such litigation may adversely affect the Corporation and its reputation

In the normal course of the Corporation's operations, it may become involved in, be named as a party to, or be the subject of, legal proceedings, including regulatory proceedings, tax proceedings and legal actions. Potential litigation

may develop in relation to personal injuries, including resulting from exposure to hazardous substances, property damage, property taxes, land and access rights, and environmental issues, including claims relating to contamination or natural resource damages and contract disputes. The outcome with respect to outstanding, pending or future proceedings cannot be predicted and may be determined adversely to the Corporation and could have a material adverse effect on the Corporation's assets, liabilities, business, financial condition and results of operations at such time. Even if the Corporation prevails in any such legal proceedings, the proceedings could be costly and time-consuming and may divert the attention of management and key personnel from business operations, which could have an adverse effect on the Corporation's financial condition.

Breach of Confidentiality

Breach of confidentiality by a third-party could impact the Corporation's competitive advantage or put it at risk of litigation

While discussing potential business relationships or other transactions with third parties, the Corporation may disclose confidential information relating to its business, operations or affairs. Although confidentiality agreements are generally signed by third parties prior to the disclosure of any confidential information, a breach could put the Corporation at competitive risk and may cause significant damage to its business. The harm to the Corporation's business from a breach of confidentiality cannot be predicted but may be material and may not be compensable in damages. There is no assurance that, in the event of a breach of confidentiality, the Corporation would be able to obtain equitable remedies, such as injunctive relief, from a court of competent jurisdiction in a timely manner, if at all, in order to prevent or mitigate any damage to its business that such breach of confidentiality may cause.

Internal Controls

Material weaknesses in the Corporation's internal controls may negatively affect the Corporation and the market price of the Common Shares

Effective internal controls are necessary for the Corporation to provide reliable financial reports and to help prevent fraud. Although the Corporation will undertake a number of procedures in order to help ensure the reliability of its financial reports, including those imposed on it under Canadian securities laws, the Corporation cannot be certain that such measures will ensure that the Corporation will maintain adequate control over financial processes and reporting. Failure to implement required new or improved controls, or difficulties encountered in their implementation, could harm the Corporation's results of operations or cause it to fail to meet its reporting obligations. If the Corporation or its independent auditors discover a material weakness, the disclosure of that fact, even if quickly remedied, could reduce the market's confidence in the Corporation's financial statements and harm the trading price of the Common Shares.

Income Taxes

Taxation authorities may reassess the Corporation's tax returns

The Corporation files all required income tax returns and believes that it is in full compliance with the provisions of the Income Tax Act and all applicable provincial tax legislation. However, such returns are subject to reassessment by the applicable taxation authority. In the event of a successful reassessment of the Corporation, whether by re-characterization of exploration and development expenditures or otherwise, such reassessment may have an impact on current and future taxes payable.

Income tax laws relating to the oil and natural gas industry, such as the treatment of resource taxation or dividends, may in the future be changed or interpreted in a manner that adversely affects the Corporation. Furthermore, tax authorities having jurisdiction over the Corporation may disagree with how the Corporation calculates its income for tax purposes or could change administrative practices to the Corporation's detriment.

Availability of Drilling Equipment and Access

Restrictions on the availability of and access to drilling equipment may impede the Corporation's exploration and development activities

Oil and natural gas exploration, development and operating activities are dependent on the availability and cost of specialized materials and equipment (typically leased from third parties) in the areas where such activities are conducted. The availability of such material and equipment is limited. An increase in demand or cost, or a decrease in the availability of such materials and equipment may impede the Corporation's exploration, development and operating activities.

Seasonality

Oil and natural gas operations are subject to seasonal weather conditions and the Corporation may experience significant operational delays as a result

The level of activity in the Canadian oil and natural gas industry is influenced by seasonal weather patterns. Wet weather and spring thaw may make the ground unstable. Consequently, municipal and provincial transportation departments enforce road bans that restrict the movement of rigs and other heavy equipment, thereby reducing activity levels. Road bans and other restrictions generally result in a reduction of drilling and exploratory activities and may also result in the shut-in of some of the Corporation's production. Certain oil and natural gas producing assets are located in areas that are inaccessible other than during the winter months because the ground surrounding the sites in these areas consists of muskeg. In addition, extreme cold weather, heavy snowfall and heavy rainfall may restrict access to properties in which the Corporation has an interest and cause operational difficulties. Seasonal factors and unexpected weather patterns may lead to declines in exploration and production activity and corresponding decreases in the demand for the goods and services of the Corporation.

Inflation and Interest Rates

A failure to secure the services and equipment necessary to the Corporation's operations for the expected price, on the expected timeline, or at all, may have an adverse effect on the Corporation's financial performance and cash flows

The Corporation's financial performance and cash flows may be adversely affected by inflationary pressures and fluctuations in interest rates. Inflation can lead to increased operating costs through higher prices for labour, equipment, materials, and services, as well as contribute to supply chain disruptions and regulatory changes. If the Corporation is unable to effectively manage these cost increases, project economics and future development decisions may be negatively impacted.

Although interest rates have begun to decline, they remained elevated for an extended period as central banks implemented measures to curb inflation. Higher borrowing costs during these periods may affect the Corporation's financing expenses and reduce returns on capital projects. Sustained periods of elevated interest rates can also slow economic growth, reduce energy demand, depress commodity prices, and limit industry activity. The duration and combined impact of inflationary pressures and interest rate volatility on energy demand, commodity pricing, and the Corporation's operations remain uncertain.

Indigenous Land and Rights Claims

Opposition by Indigenous groups to the conduct of the Corporation's operations, development or exploratory activities may negatively impact the Corporation

Opposition by Indigenous groups to the conduct of the Corporation's operations, development or exploratory activities in any of the jurisdictions in which the Corporation conducts business may negatively impact it in terms of public perception, diversion of management's time and resources, and legal and other advisory expenses, and could adversely impact the Corporation's progress and ability to explore and develop properties.

Indigenous groups across Canada have established and asserted Indigenous treaty entitlements, title to land and Aboriginal rights. Although there are no treaty, title or rights claims on lands where the Corporation operates, no certainty exists that any lands currently unaffected by such claims brought by Indigenous groups will remain unaffected by future claims. Such claims, if successful, could have a material adverse effect on its operations or pace of growth.

The Canadian federal and provincial governments have a duty to consult with Indigenous peoples when contemplating actions that may adversely affect asserted or proven Indigenous or treaty rights and, in certain circumstances,

accommodate them. The scope of the duty to consult by federal and provincial governments varies upon the circumstances and is often the subject of litigation. The fulfillment of the duty to consult Indigenous peoples and any associated accommodations may adversely affect the Corporation's ability to, or increase the timeline to, obtain or renew, permits, leases, licences and other approvals, or to meet the terms and conditions of those approvals. In 2021, the British Columbia Supreme Court determined that the cumulative impacts of government sanctioned industrial development on the traditional territories of a First Nation in northeast British Columbia breached that group's treaty rights. In 2023, the Government of British Columbia and the First Nation came to an agreement relating to further industrial activities in the area. The developments in northeastern British Columbia relating to Indigenous rights may lead to similar claims of cumulative effects across Canada in other areas covered by treaties. The long-term impacts and associated risks of the decision on the Canadian oil and natural gas industry and the Corporation remain uncertain.

The federal government has enacted federal legislation to implement the UNDRIP and British Columbia has adopted similar provincial legislation under the *Declaration on the Rights of Indigenous Peoples Act* ("**DRIPA**"). The practical implications of these statutes have remained uncertain; however, recent judicial decisions in 2025 provide important guidance.

In February 2025, the Federal Court in *Kebaowek First Nation v Canadian Nuclear Laboratories* directed a decision-maker to reconsider whether the duty to consult and accommodate had been satisfied in light of UNDRIP principles. In December 2025, the British Columbia Court of Appeal in *Gitxaala v British Columbia (Chief Gold Commissioner)* held that DRIPA imposes immediate, positive statutory obligations on the provincial government, including taking concrete and diligent steps to align provincial laws with UNDRIP. British Columbia Premier David Eby has since announced plans to amend DRIPA to remove the courts' ability to scrutinize that alignment process.

Although the scope of continues to evolve, these recent decisions demonstrate a judicial willingness to confer substantive legal effect on UNDRIP both in British Columbia and federally. Additional processes may be created and legislation associated with project development and operations may be amended or introduced, further increasing uncertainty with respect to project regulatory approval timelines and requirements.. See "*Industry Conditions – Indigenous Rights*".

Share Buybacks

There is no assurance that the Corporation will repurchase its Common Shares in the future

The future acquisition by the Corporation of Common Shares pursuant to its share buyback program (including through its NCIB), if any, and the level thereof is uncertain. Any decision to acquire Common Shares pursuant to the share buyback program will be subject to the discretion of the board of directors of the Corporation and may depend on a variety of factors, including, without limitation, the Corporation's business performance, financial condition, financial requirements, growth plans, expected capital requirements and other conditions existing at such future time including, without limitation, contractual restrictions and satisfaction of the solvency tests imposed on the Corporation under applicable corporate law. There can be no assurance of the number of Common Shares that the Corporation will acquire pursuant to its share buyback program, if any, in the future.

Dividends

The Corporation does not pay dividends and there is no assurance that it will do so in the future

The Corporation has not paid any dividends on its outstanding shares. Payment of dividends in the future will be dependent on, among other things, the cash flow, results of operations, financial condition of the Corporation, the need for funds to finance ongoing operations and other considerations, as the Board of Directors considers relevant.

Expansion into New Activities

Expanding the Corporation's business exposes it to new risks and uncertainties

The operations and expertise of the Corporation's management are currently focused primarily on oil and natural gas production, exploration and development in Western Canada, and in particular Alberta. In the future, the Corporation may acquire or move into new industry-related activities or new geographical areas and may acquire different energy-

related assets. As a result, the Corporation may face unexpected risks or, alternatively, its exposure to one or more existing risk factors may be significantly increased, which may in turn result in the Corporation's future operational and financial conditions being adversely affected.

Abandonment and Reclamation Costs

The Corporation may have to pay certain costs associated with abandonment and reclamation

The Corporation will need to comply with the terms and conditions of environmental and regulatory approvals and all legislation regarding the abandonment of its projects and reclamation of the project lands at the end of their economic life, which may result in substantial abandonment and reclamation costs. Any failure to comply with the terms and conditions of the Corporation's approvals and legislation may result in the imposition of potentially material fines and penalties. Generally, abandonment and reclamation costs are substantial and, while the Corporation accrues a reserve in its financial statements for such costs in accordance with IFRS Accounting Standards such accruals may be insufficient.

It is challenging to estimate abandonment and reclamation costs reliably since they will, in part, depend on future economic factors and regulatory requirements. In addition, in the future, the Corporation may determine it prudent or be required by applicable laws, regulations or regulatory approvals to settle or fund future abandonment and reclamation costs earlier than contemplated that could adversely affect its liquidity and cash flow.

Alberta has developed liability management programs designed to prevent taxpayers from incurring costs associated with suspension, abandonment, remediation and reclamation of wells, facilities and pipelines if a licensee or permit holder is unable to satisfy its regulatory obligations. The implementation of or changes to the requirements of liability management programs may result in significant increases to the security that must be posted by licensees, increased and more frequent financial disclosure obligations or may result in the denial of licence or permit transfers, which could impact the availability of capital to be spent by such licensees which could in turn materially adversely affect the Corporation's business and financial condition. In addition, these liability management programs may prevent or interfere with a licensee's ability to acquire or dispose of assets, as both the vendor and the purchaser of oil and natural gas assets must comply with the liability management programs (both before and after the transfer of the assets) for the applicable regulatory agency to allow for the transfer of such assets.

Reliance on Royalty Payors

A portion of the Corporation's revenues from royalty payors and certain of its operations are dependent on the financial and operational capacity of third-party working interest owners to develop and produce from the Corporation's properties, over which it has limited influence

On a limited basis, the Corporation relies on other companies drilling and producing from lands in which the Corporation has a royalty interest. The Corporation has very limited ability to exercise influence over the decision of companies to drill and produce from lands in which the Corporation has a royalty interest. The Corporation's return on lands in which it has a royalty interest depends upon a number of factors that may be outside of the Corporation's control, including the capital expenditure budgets and financial resources of the operators who have a working interest in such lands, the ability to efficiently produce the resources from such lands and commodity prices.

In addition, companies that have a working interest in the lands in which the Corporation has a royalty interest may encounter financial difficulty, which could affect their ability to fund and pursue capital expenditures on such lands. Any reduction in the drilling and production from lands in which the Corporation has a royalty interest would negatively affect the Corporation's cash flows and financial results.

Any financial difficulty of companies that have assets in which the Corporation has a royalty interest may affect the Corporation's ability to collect royalty payments, especially if such companies go bankrupt, become insolvent or make a proposal or institute any proceedings relating to bankruptcy or insolvency. In addition, to the extent any companies who have assets in which the Corporation has a royalty interest go bankrupt, become insolvent or make a proposal or institute any proceedings relating to bankruptcy or insolvency it is possible that the Corporation's royalty interest may not be (or may not be recognized as) an interest in land and as such the Corporation's royalty interest may not survive such bankruptcy or insolvency proceedings.

Take-in-Kind

Most agreements the Corporation has entered into that create new royalties stipulate that the royalty interest so acquired by the Corporation is an interest in land and as such is separate and distinct from the interest of the royalty payor. In addition, all of these new royalty agreements provide the Corporation with the right, but not the obligation, to take its share of production in kind rather than have the royalty payor sell the Corporation's royalty production on behalf of the Corporation as agent for the Corporation. These provisions serve to mitigate the counterparty risk attributable to any financial difficulty of the royalty payors under these agreements. The previously discussed provisions may not exist in certain of the royalty agreements previously entered into by other royalty recipients who subsequently sold their respective interest as a royalty recipient to the Corporation.

Intellectual Property Litigation

Unauthorized use of intellectual property may cause the Corporation to engage in, or be the subject of, litigation

Rapid advances in oil and gas technology increase the risk of intellectual property disputes. The Corporation may face claims of infringement or initiate actions against others for infringing its rights. Such litigation can be costly, disrupt assets development and divert technical and management resources, even if resolved in the Corporation's favour. In the event of an adverse outcome as a defendant in any such litigation, the Corporation may, among other things, be required to:

- pay substantial damages and/or cease the development, use, sale or importation of processes that infringe upon other patented intellectual property;
- expend significant resources to develop or acquire non-infringing intellectual property;
- discontinue processes incorporating infringing technology; or
- obtain licences to the infringing intellectual property.

However, the Corporation may not be successful in such development or acquisition, or such licences may not be available on reasonable terms. Any such development, acquisition or licence could require the expenditure of substantial time and other resources and could have a material adverse effect on the Corporation's business and financial position.

Forced or Child Labour in Supply Chains

The introduction of new supply chain due diligence and reporting requirements could expose the Corporation to certain risks

In May 2023, the *Fighting Against Forced Labour and Child Labour in Supply Chains Act* was passed and came into force on January 1, 2024. Pursuant to the new legislation, any company that is subject to the reporting requirements, including the Corporation, is required to file an annual report with respect to its supply chains. In late 2024 the federal government signalled its intention to create a new and more onerous supply chain due diligence regime overseen by a new oversight agency, whereby reporting entities will be required to scrutinize their supply chains for human rights risks and take action to resolve any such risks. Although the Corporation is currently unaware of any forced or child labour within its supply chains, heightened scrutiny of Canadian companies could reveal risks or instances of such practices in a supply chain connected to the Corporation, potentially harming its reputation. In addition, complying with any new legislative requirements related to due diligence of its supply chains will increase the Corporation's costs and regulatory burdens.

Natural Disasters, Terrorist Acts, Civil Unrest, Pandemics and Other Disruptions and Dislocations

Natural Disasters, Terrorist Acts, Civil Unrest, Pandemics and Other Disruptions and Dislocations, may adversely affect the Corporation

Events such as natural disasters, war, riots, or civil unrest can severely disrupt recovery efforts in affected regions. This may have a material adverse impact on the Corporation, its customers, and their operations. Other risks include terrorist attacks, public health crises (such as epidemics, pandemics, or new infectious diseases), trade and infrastructure disruptions, civil disobedience, national emergencies, acts of war, and technological attacks. These events can create

volatility and disrupt supply chains, operations, workforce mobility, and financial markets. Such disruptions may lead to a significant decline in economic activity in Canada and globally, reduce demand for oil and natural gas, and affect interest rates, credit ratings, inflation, and overall business conditions. These factors could negatively impact the Corporation's reputation, business, financial condition, and operations, and may worsen other risks identified herein.

RISK FACTORS - ENTROPY

Risks Related to Entropy and the Industry in which it Operates

Entropy is subject to CCS industry risk, including risk that the industry in which Entropy operates may not develop at sufficient speed

Entropy is subject to various market specific risks related to the CCS industry, as further outlined below, and should these risks materialize they may have a material adverse effect on Entropy.

The CCS industry risks materializing in respect of a slow ramp-up of CCS in the global market, reduced or delayed CO₂ tax and incentive increases, and/or supply chain uncertainty and challenges in new market conditions may have a negative impact on Entropy's operations and development.

Evolving climate targets and stronger investment incentives are expected to add momentum to the CCS industry; however, should such favorable regulatory policies and financial support no longer be available or be reduced, such change(s) may have an adverse effect on development of the industry in which Entropy operates, which in turn may have an adverse effect on Entropy's ability to expand its operations and ultimately on Entropy's financial position and results. The speed of the transition into a low-carbon economy will also affect the realization of carbon capture projects and governmental support and environmental regulation are key factors that will influence the speed of this transition.

Entropy intends to derive revenue from the sale of environmental attributes including emission performance credits, emission offset credits, and other instruments created by governments to represent a price on carbon. Entropy expects to sell these instruments in the open market and the price received is therefore subject to typical market risks including supply, demand and general lack of available markets and liquidity.

Entropy may not be able to successfully implement its CCS cost reduction strategies or achieve its forecasted CCS cost reductions

For CCS to remain a competitive alternative, it is necessary to reduce CCS costs. Cost reduction is viewed as a key strategic pillar to execute Entropy's strategy to improve project economics. Should Entropy fail to successfully implement strategies for CCS cost reduction, such failure may have a material adverse effect on Entropy's ability to be competitive.

Tax credits or other government policies related to the development and adoption of CCS may not be implemented in the manner that Entropy expects, or at all. Even if tax credits or government policies are implemented, Entropy may fail to implement its CCS program in a manner that allows it to take advantage of these credits.

The Government of Canada has signaled its intention to introduce a tax credit program to incentivize and reward the development and adoption of CCS. Entropy intends to be in a position to take advantage of certain contemplated government policies through its CCS program. However, Entropy cannot predict when or if any new government policy will be adopted, promulgated or become effective. Entropy expects to incur significant capital expenditures in connection with its CCS program. If tax credits or other government policies related to the development and adoption of CCS are not implemented in the manner that Entropy expects, or at all, Entropy's business, financial condition, results of operations and prospects could be materially and adversely affected.

Even if tax credits or government policies related to the development and adoption of CCS are implemented, Entropy may fail to implement its CCS program in a manner that allows it to take advantage of these credits. Entropy's future CCS technology may prove not to be commercially viable, efficient, or operationally effective and efforts to respond to technological innovations may require significant financial investments and resources. Additionally, CCS projects are dependent on prevailing carbon prices. A reduction in prevailing carbon prices could lead to CCS projects not being economical. Failure by Entropy to respond to changes in technology and innovations may render Entropy's future CCS operations non-competitive and may have a material, negative effect on Entropy's results of operations, financial condition and future prospects.

Entropy is operating in a rapidly changing technological environment

The low-carbon, renewable and clean technologies energy sector is developing rapidly. Unexpected positive results from competing energy technologies may reduce the market potential for CCS and reduce demand for Entropy's products and services. This may have a material adverse effect on Entropy's business and future opportunities.

Carbon capture technology is also under development around the world and, as such, there are alternative potential solutions offered in the market. Market changes and developments may be driven by competitors of Entropy with substantially greater resources than those of Entropy and the attractiveness of Entropy's solutions relative to other providers' solutions is uncertain. Additionally, an increased number of competitors seeking low-cost applications could result in reduced market share in the CCS industry. In particular, more effective or more cost-efficient technologies than Entropy's technology solution may be made available. This may ultimately have a material adverse effect on Entropy's financial results and position.

Entropy's current technology, and any further technology under development by it, may prove not to be commercially viable, efficient, or operationally effective and efforts to respond to technological innovations may require significant financial investments and resources. Additionally, CCS projects are dependent on prevailing carbon prices. A reduction in prevailing carbon prices could lead to CCS projects not being economical. Failure by Entropy to respond to changes in technology and innovations may render Entropy's operations non-competitive and may have a material, negative effect on Entropy's results of operations, financial condition and future prospects.

Entropy has a small organization and is dependent on third-parties

Entropy has a limited number of employees and is therefore vulnerable to key employees leaving Entropy, which in turn may have a material adverse effect on Entropy and its operations. Entropy will also be dependent on third-parties, such as Advantage, ABC and the University of Regina's Clean Energy Technology Research Institute, providing Entropy with access to various services and for resources required for development of its business and execution of its projects. If Entropy is not able to employ or retain qualified personnel, including certain key employees, it may experience difficulties in its project execution, risk delays in its current projects, cost overruns and ultimately risk that it is not able to obtain its operational and financial targets. This may in turn have a material adverse effect on Entropy's financial results and position, in addition to its growth ambitions.

Entropy is subject to general counterparty risk

Entropy is dependent on service providers as sub-contractors to execute its projects. Suppliers within the industry in which Entropy operates are limited and Entropy may not be able to engage technological or commercial suitable sub-contractors or partners to secure contracts and execute the business as anticipated. Should any of these circumstances occur, it may have an adverse effect on Entropy's ability to execute its projects on time or at all, and ultimately affect the financial performance and results of Entropy negatively. Additionally, Entropy plans to undertake CCS projects which require long-term, flue gas supply from counterparties. Entropy is therefore subject to risk that counterparties fail to supply the required flue gas as forecasted. Should this occur, it will negatively affect the financial performance of Entropy.

Entropy has a limited operating history

Entropy was established in November 2020. Therefore, Entropy has a limited operating history. Accordingly, there may not be a reliable basis for evaluating Entropy's business prospects. Entropy may experience fluctuations in its results, which may vary from those projected by management. Entropy's business strategy may not be successful, and, if unsuccessful, Entropy may be unable to modify it in a timely and successful manner. Entropy cannot give any assurance that it will be able to continue to implement its strategy on a timely basis, if at all. Entropy may also be subject to both transition and growth-related risks, including capacity constraints and pressure on its internal systems and controls. Entropy's lack of operating history and track record also means that a number of policies, procedures and business systems, that are not currently in place, will be developed and instituted to govern and effectively manage operations.

Although Entropy has gained experience and its founders have decades of related experience, Entropy may be subject to various risks in relation to its limited operating history which may have an adverse effect on Entropy, its operations,

its financial position and results should they materialize. Entropy has continued to develop its CCS business and has entered into MOUs and NDAs with numerous counterparties with respect to future projects. However, there is a risk that Entropy's existing MOUs, NDAs and other business development initiatives may not lead to new commercial projects.

Entropy is subject to risk related to the volatility of global economic and social conditions

The uncertainties and recent downturn of the global economy and other macroeconomic factors could adversely affect Entropy's business. The prospects for global economic growth remain uncertain and this may impact the availability of credit and terms thereof, liquidity more generally, interest rates and exchange rates, which in turn could have a material adverse effect on Entropy's financial position and its ability to grow. In addition, volatility in the global economy may have an adverse impact on the market's interest in technology development and funding of such. Without a stable and/or growing global economy, the business of Entropy may therefore be adversely affected, both financially and operationally.

Entropy is subject to risk related to local development resistance and local opinion

Entropy plans to be involved in projects of varying sizes across numerous jurisdictions. The projects will have an impact on local interests and the public, therefore, Entropy may be subject to risk in respect of local development resistance and local opinion. Despite Entropy working to ensure minimal impact on local population and environment during construction and operation, there is a risk that public perception may slow down the market development in certain geographies, which in turn may affect Entropy's ability to expand its operations. This may in turn have a material adverse effect on Entropy's financial results and position.

Risks Relating to Entropy's Operations

Entropy may fail to execute, or change, its strategy

Entropy may, due to external factors, such as regulatory or market conditions, and/or internal factors and decisions, change its current strategy and pursue alternative strategies. Entropy may also fail to execute its strategy due to changed market conditions, regulatory framework(s), available expertise and resources, and funding. Entropy's failure to execute its strategy, including an amendment of the current strategy, may have a material adverse effect on the business, results of operations and financial condition of Entropy.

Entropy is dependent on the use of certain technology and intellectual property rights, which may be difficult or costly to defend and maintain

Entropy's business is dependent upon its proprietary technology, including its solvent and process designs. Entropy's technology is based on a combination of provisional patents, trade secrets, know-how and confidential procedures and contractual provisions to maintain secrecy and prevent un-authorized use. Entropy cannot guarantee that its measures for preserving the secrecy of its know-how and trade secrets are sufficient to prevent others from obtaining such information and use the know-how.

The extent of Entropy's intellectual property rights may vary in different countries, and filing, prosecuting, maintaining and defending Entropy's patents throughout the world could be highly expensive. Consequently, Entropy may be unable to prevent third-parties from using its inventions in certain countries, especially in jurisdictions offering no or little protection of intellectual property rights, or in jurisdictions where enforcement may be difficult. Competitors could potentially also use Entropy's technology in jurisdictions where Entropy has not obtained patent protection.

In particular, proceedings to enforce Entropy's intellectual property rights could result in substantial costs and divert Entropy's efforts and attention from other aspects of its business, put its patents at risk of being invalidated or interpreted narrowly and its patent applications at risk of not being issued. Proceedings could furthermore provoke third-parties to assert patent infringement or other claims against Entropy and Entropy may be liable for damages or other remedies for any lawsuits that Entropy initiates. Accordingly, Entropy's efforts to enforce its intellectual property rights may be inadequate to obtain a significant commercial advantage from the intellectual property that Entropy develops or licenses from third-parties.

There is also a risk that third-parties may claim that Entropy does not have rights or exclusive rights to the intellectual property it uses. Entropy may, as a consequence of this, be a party to litigation to determine the scope and validity of its intellectual property, which, if resolved adversely to Entropy, could invalidate or render unenforceable its intellectual property or generally preclude Entropy from using such intellectual property, or Entropy could be forced to pay substantial royalties. A successful claim of infringement against Entropy, or its failure or inability to develop non-infringing technology or license the infringed technology could materially and adversely affect its business and results of operations, and/or prospects.

Entropy cannot assure that its know-how and trade secrets will provide Entropy with any competitive advantage, as the know-how and trade secrets may become known to or be independently developed by others including Entropy's competitors, regardless of measures Entropy may take to try to preserve the confidentiality. Entropy cannot give assurance that its measures for preserving the secrecy of its trade secrets and confidential information are sufficient to prevent others from obtaining such information.

If Entropy's proprietary technology, trade secrets, know-how, etc. becomes known to the public, or third-parties develop similar technology, or the patents are held to be invalid, this could have a material adverse effect on Entropy, its financial position and future prospects.

Entropy may not be able to develop new technology that may be required to expand and/or keep up with competitors

Entropy has a growth strategy and is targeting an expansion of its customer base for existing and new projects. Research and development can be expensive, time-consuming, and generally entails considerable uncertainty with respect to both achieving positive results and, if successful, the ability to commercially deploy such technology. Due to long development processes, changing regulatory requirements, changing market conditions and customer preferences and other factors, new variants of existing technologies or new technologies may take longer and cost more to develop and may be less successful than Entropy anticipates. It is expected that an increased target market and customer base will result in increased competition, and also attract established industrial companies and other potential customers to develop their own CCS technologies and solutions, which in turn may reduce the potential client base of Entropy. Furthermore, Entropy may be unable to reduce costs as required to maintain its competitive position. No assurance can be given that any new technologies under research and development will be commercially successful. If Entropy is unable to keep up with competitors, develop new technology or have commercial success with its technology under research and development, this could adversely affect the future development of Entropy's business, financial condition, results of operations and/or prospects.

Entropy is subject to project execution and contractual risk associated with the engineering and construction of facilities

There are numerous risks associated with engineering and construction of facilities, including but not limited to risks of delay and failure to deliver according to the agreed or required specifications (including any potential performance levels guaranteed), risks of early termination of contracts by customers and suppliers, risk of changes to the scope of work and amendments due to design development resulting in extension of time and increased cost.

The agreed pricing model in customer contracts is to a certain extent based on prevailing carbon prices and other project specific details. The estimates used for setting the prices may be based on wrong or inaccurate assumptions and facts which may result in cost over-run and reduced profit or loss for Entropy.

If Entropy is unable to meet certain requirements under contracts, the customers may be able to terminate their contracts or, pursuant to the term of the contracts, require Entropy to compensate them for losses. In the event that Entropy does not satisfy its obligations or commitments under such contracts, Entropy's business, results of operations, financial position, cash flows and/or prospects could be materially adversely affected if one or more long-term customers terminate their contracts with Entropy, or if Entropy is obligated to compensate them for losses.

Entropy must comply with comprehensive requirements and practices relating to its development of carbon capture facilities, including health, safety and environmental ("HSE") requirements and training of employees. There is a risk that Entropy, subcontractors or other third-parties with responsibility for the operations may not be able to meet applicable

standards, which may disrupt the operations (e.g. due to suspension or closing of operations). In addition, there is an inherent risk of delay or hindrances in production due to mechanical or manual failure or malfunction, human error or other unforeseen events, which could result in delays of whole or parts of the operations, leading to costs or damages. Any failure in the operations could have a material adverse effect on Entropy's business, financial condition, results of operations, reputation and/or prospects.

Entropy may also, as part of certain contractual commitments to its customers, provide functional performance guarantees. Such guarantees may include CO₂ capture rates or volumes and operational uptime. Breach or non-achievement of performance guarantees may affect the financial performance of the project and Entropy negatively.

Entropy's business relies on the experience and expertise of its senior management, as well as on its ability generally to retain existing, or hire additional, skilled personnel

Entropy's success depends upon the continued service and performance of its senior management and experts. The loss of the services of any of these individuals could delay or prevent the continued successful implementation of its growth strategy, or could otherwise affect its ability to manage Entropy effectively and to carry out its business plan. Members of the senior management team may resign at any time and there can be no assurance that Entropy may be able to continue to retain such individuals. This may in turn result in a material adverse effect on Entropy's business, results of operations and financial results and position.

Entropy's growth and success will to a certain extent depend on its ability to attract, hire and retain additional highly qualified and skilled technical, research, managerial and finance personnel as well as experienced and skilled engineers. Competition for such skilled personnel is high and the unexpected loss of an employee with a particular skill could materially and adversely affect Entropy's operations until a replacement can be found and trained. If Entropy experiences a shortage of skilled personnel, Entropy may not be able to continue its operations. Furthermore, any failure to effectively integrate new personnel could prevent Entropy from successfully growing which in turn may have a material adverse effect on Entropy's financial condition.

Entropy may fail to effectively manage its growth

Entropy is targeting a growth in its business, and Entropy's future financial performance and its ability to enter into and complete future projects will depend, in part, on its ability to manage any future growth effectively. Entropy expects to make investments to enable future growth through, among other things, new technologies and development of additional projects.

Entropy must also be prepared to expand its work force and to train, motivate and manage additional employees as the need for additional personnel and resources arises. Entropy's personnel, facilities, systems, procedures and controls may not be adequate to support its future operations, and Advantage and ABC – through agreements with Entropy – may not be able to provide such additional services and work force. Any failure to manage future growth effectively could have a material adverse effect on Entropy's business, results of operations, financial condition, cash flows and/or prospects.

Entropy will be responsible for the long-term custody of a polluting substance

Entropy plans to transport and dispose of carbon dioxide via pipelines and long-term geologic sequestration. In the event the carbon dioxide escapes containment and is released to the atmosphere, Entropy may face liability for such release, which may result in negative financial consequences.

Interruptions in information technology systems and cyber security issues could adversely affect Entropy's business

Entropy relies on the efficient and uninterrupted operation of several information technology systems and networks to operate its business. Any significant disruptions to Entropy's systems or networks, including, but not limited to, new system implementations, computer viruses, security breaches, cyber-attacks, facility issues, natural disasters, terrorism, war, telecommunication failures or energy blackouts could have a material adverse impact on Entropy's operations, sales and operating results.

Entropy's third-party service providers and other vendors have access to certain portions of Entropy's information technologies system. Certain failure or negligence of these service providers may cause material disruptions in Entropy's operations, which could affect Entropy's ability to perform in a timely manner. Any such failure to perform due to failure or negligence from the service providers may in turn have a material adverse effect on Entropy's cash flow, financial results and conditions.

Entropy may in the future take on debt which in turn could limit Entropy's cash flow and limit Entropy's operational flexibility

Entropy may take on additional debt in the future. This may require Entropy to agree to restrictions and limitations on Entropy's business operations and capital structure, to force Entropy to dispose of current long-term assets or to issue additional equity, possibly on unfavourable terms, increase Entropy's vulnerability to adverse economic and industry conditions, limit Entropy's flexibility to make, or react to, changes in the business and industry, and/or place Entropy at a competitive disadvantage. Furthermore, should Entropy take on debt in the future, any fluctuations in the interest rates may affect Entropy's interest costs, which in turn may reduce its cash flows.

If Entropy enters into any debt financing, Entropy may have to comply with a number of financial and other covenants and clauses, including change of control provisions, cross default provisions and performance requirements, which could affect the operational and financial flexibility of Entropy. Such restrictions could affect, and in many respects limit or prohibit, among other things, Entropy's ability to pay dividends, create liens, sell assets, or engage in mergers or acquisitions. In addition, covenants under debt instruments may pledge Entropy's assets as collateral and any negative pledge with respect to Entropy's intellectual property could limit its ability to obtain additional debt financing on acceptable and/or commercially reasonable terms, or even at all. Any breach of covenants could result in defaults under instruments governing applicable indebtedness and cross-default provisions could be triggered in the event of default on other indebtedness and may require Entropy to repay or restructure indebtedness. Failure to make payments or comply with any covenants under future debt instruments could result in an event of default and acceleration of amounts due, and could have a material adverse effect on Entropy's business, operations, assets and/or prospects.

Risks Relating to Legal and Regulatory Matters in Respect of Entropy

Entropy's business is dependent upon government approval to obtain sequestration sites for CO₂

Governments generally have the authority over the granting of access and on-going operation of possible geologic sequestration sites for CO₂. With respect to storage in geological reservoirs on land in particular, public resistance may cause the government not to authorize storage sites or to cancel their authority to operate. Since the ability to store large volumes of carbon dioxide is a corollary to the provision of carbon capture services, Entropy is dependent upon the governmental as well as public support, in order to secure sufficient sequestration pore space for its projects. A lack of storage capacity will impede Entropy's business by slowing down market development and leading to materially adverse consequences for Entropy until sequestration capacity is sufficient to meet demand. Should there be periods with insufficient sequestration capacity, this may have a material adverse effect on Entropy's ability to achieve positive cash flow in its operations.

Realization of business opportunities may be dependent upon government or other non-commercial funding, licenses, governmental approvals and various public policies, including the price on carbon emissions

Realization of carbon capture projects, including the required infrastructure, is capital intensive and will take time to recover such costs and become profitable, dependent on prevailing carbon prices. Investments in CCS by the industry will, to a large extent, be dependent upon government support and funding, and a regulatory framework which provides for incentives for industry to invest in CCS initiatives. In the long-term, CCS must become commercially attractive without reliance on governmental support. The perceived benefit of CCS must over time exceed the customer's alternative cost, which normally relates to the price of carbon credits and offsets, local CO₂ tax levels, CO₂ tax credit schemes or other CO₂ policy regimes. Should such perceived benefits not be realized, Entropy may not be able to achieve positive cash flow in its operations.

The policies for government incentives are still under development and vary in the jurisdictions in which Entropy intends to operate. Changes in the relevant authorities' policies, including targets for reduction in CO₂ emissions and associated regulations, will be critical to Entropy's ability to attract clients and execute its business plan and may have a material adverse effect on Entropy's financial results and position.

Entropy is subject to a wide variety of laws and regulations and may be dependent on governmental licenses and approvals to commence and continue its operations. There is a risk that Entropy will not obtain the necessary licenses or approvals, or that obtaining such licenses or approvals will require significant resources from Entropy that in turn may have a negative effect on Entropy's financial position, operations and results. Furthermore, there is a risk that the relevant governments may change the requirements for obtaining such licenses, rendering it more expensive, difficult or even impossible for Entropy or Entropy's potential clients to obtain the necessary licenses, which in turn may have a material adverse effect on Entropy's operations, ability to execute projects and ultimately on its financial condition and ability to grow.

Entropy's business comprises handling of potentially hazardous substances which could take on fire, explode, be contaminated or lead to personal injuries

Entropy's carbon capture solutions involve controlled use of potentially harmful hazardous materials, including volatile solvents and chemicals. Entropy faces the risk of fire, explosion, contamination or injury from the use, storage, handling and disposal of these and other materials. In the event of fire, explosion, contamination or injury, Entropy could be subject to civil or criminal sanctions or fines or be held liable for damages, operating licenses could be revoked, or Entropy could be required to suspend or modify its operations. This could in turn have a material adverse effect on Entropy's financial position and its business and could ultimately lead to insolvency or bankruptcy.

Entropy's employees, as well as employees of clients at sites where carbon capture facilities are or are in the process of being installed, may from time-to-time be at risk of coming into contact with hazardous substances. This may lead to personal injuries which Entropy may be liable for. This may also be the case for individuals otherwise being exposed to hazardous substances used in the construction or operation of CCS facilities or infra-structure. In addition to human suffering, this may have an adverse effect on Entropy's financial position and its general reputation.

ADDITIONAL INFORMATION

Additional information relating to the Corporation can be found on SEDAR+ at www.sedarplus.ca and the Corporation's website at www.advantageog.com.

Additional information, including directors' and officers' remuneration and indebtedness, principal holders of Common Shares and securities authorized for issuance under equity compensation plans, will be contained in the Corporation's Information Circular for the most recent annual meeting of shareholders that involved the election of directors of Advantage. Additional financial information is provided for in the Corporation's Consolidated financial statements and management's discussion and analysis for the year ended December 31, 2025.

APPENDIX "A"

REPORT OF MANAGEMENT AND DIRECTORS ON OIL AND GAS DISCLOSURE (FORM 51-101F3)

Report of Management and Directors on Reserves Data and Other Information

Management of Advantage Energy Ltd. (the "**Company**") are responsible for the preparation and disclosure of information with respect to the Company's oil and gas activities in accordance with securities regulatory requirements. This information includes reserves data.

An independent qualified reserves evaluator has evaluated the Company's reserves data. The report of the independent qualified reserves evaluator is presented below.

The Reserves Committee of the board of directors of the Company has:

- (a) reviewed the Company's procedures for providing information to the independent qualified reserves evaluator;
- (b) met with the independent qualified reserves evaluator to determine whether any restrictions affected the ability of the independent qualified reserves evaluator to report without reservation; and
- (c) reviewed the reserves data with management and the independent qualified reserves evaluator.

The Reserves Committee of the board of directors has reviewed the Company's procedures for assembling and reporting other information associated with oil and gas activities and has reviewed that information with management. The board of directors has, on the recommendation of the Reserves Committee, approved:

- (a) the content and filing with securities regulatory authorities of Form 51-101F1 containing reserves data and other oil and gas information;
- (b) the filing of Form 51-101F2 which is the report of the independent qualified reserves evaluator on the reserves data, contingent resources data, or prospective resources data; and
- (c) the content and filing of this report.

Because the reserves data are based on judgements regarding future events, actual results will vary and the variations may be material.

APPENDIX "B"
REPORT ON RESERVES DATA
BY INDEPENDENT QUALIFIED RESERVES EVALUATOR OR AUDITOR
(FORM 51-101F2)

Report on Reserves Data by Independent Qualified Reserves Evaluator or Auditor

To the board of directors of Advantage Energy Ltd. (the "**Company**"):

1. We have evaluated the Company's reserves data as at December 31, 2025. The reserves data are estimates of proved reserves and probable reserves and related future net revenue as at December 31, 2025, estimated using forecast prices and costs.
2. The reserves data are the responsibility of the Company's management. Our responsibility is to express an opinion on the reserves data based on our evaluation.
3. We carried out our evaluation in accordance with standards set out in the Canadian Oil and Gas Evaluation Handbook as amended from time to time (the "**COGE Handbook**") maintained by the Society of Petroleum Evaluation Engineers (Calgary Chapter).
4. Those standards require that we plan and perform an evaluation to obtain reasonable assurance as to whether the reserves data are free of material misstatement. An evaluation also includes assessing whether the reserves data are in accordance with principles and definitions presented in the COGE Handbook.
5. The following table shows the net present value of future net revenue (before deduction of income taxes) attributed to proved plus probable reserves, estimated using forecast prices and costs and calculated using a discount rate of 10 percent, included in the reserves data of the Company evaluated for the year ended December 31, 2025, and identifies the respective portions thereof that we have evaluated and reported on to the Company's Board of Directors:

Independent Qualified Reserves Evaluator	Effective Date of Evaluation Report	Location of Reserves	Net Present Value of Future Net Revenue \$M (Before Income Taxes, 10% discount rate)			
			Audited	Evaluated	Reviewed	Total
McDaniel	December 31, 2025	Canada	-	4,144,784	-	4,144,784

6. In our opinion, the reserves data respectively evaluated by us have, in all material respects, been determined and are in accordance with the COGE Handbook, consistently applied. We express no opinion on the reserves data that we reviewed but did not audit or evaluate.
7. We have no responsibility to update our reports referred to in paragraph 5 for events and circumstances occurring after the effective date of our report.
8. Because the reserves data are based on judgements regarding future events, actual results will vary and the variations may be material.

EXECUTED as to our report referred to above:

MCDANIEL & ASSOCIATES CONSULTANTS LTD.

(signed) "Michael Verney"

Michael Verney, P. Eng., Executive Vice President

APPENDIX "C"

Audit Committee Charter

The following is our Audit Committee Charter approved by the Board of Directors.

I. PURPOSE

The primary function of the Audit Committee is to assist the Board of Directors (the "Board of Directors" or "Board") of Advantage Energy Ltd. ("Advantage" or the "Corporation") in fulfilling its responsibilities by reviewing: the financial reports and other financial information provided by Advantage to any governmental body or the public; Advantage's systems of internal controls regarding finance, accounting, legal compliance and ethics that management and the Board have established; and Advantage's auditing, accounting and financial reporting processes generally. Consistent with this function, the Audit Committee should endeavour to encourage continuous improvement of, and should endeavour to foster adherence to, the Corporation's policies, procedures and practices at all levels. In performing its duties, the external auditor is to report directly to the Audit Committee. The Audit Committee's primary objectives are:

1. To assist directors in meeting their responsibilities (especially for accountability) in respect of the preparation and disclosure of the financial statements of the Corporation and related matters;
2. To review the risks that may affect Advantage and the risk management policies and procedures of the Corporation.
3. To provide better communication between directors and external auditors;
4. To assist the Board's oversight of the auditor's qualifications and independence;
5. To assist the Board's oversight of the credibility, integrity and objectivity of financial reports;
6. To strengthen the role of the outside directors by facilitating discussions between directors on the Audit Committee, management and external auditors;
7. To assist the Board's oversight of the performance of the Corporation's internal audit function and independent auditors;
8. To assist the Board's oversight of the Corporation's compliance with legal and regulatory requirements;

II. COMPOSITION

The Audit Committee shall be comprised of three or more directors as determined by the Board of Directors, none of whom are members of management of Advantage and all of whom are "independent" (as such term is defined in (a) National Instrument 52-110 — Audit Committees ("NI 52-110")). All of the members of the Audit Committee shall be "financially literate". The Board of Directors has adopted the definition for "financial literacy" used in NI 52-110, which definition is set forth in Schedule "A" attached hereto. Audit Committee members may enhance their familiarity with finance and accounting by participating in educational programs conducted by the Corporation or an outside consultant. In addition, at least one member of the Audit Committee must have accounting or related financial management expertise, as the Corporation's Board of Directors interprets such qualification in its business judgment.

The members of the Audit Committee shall be elected by the Board of Directors at the annual organizational meeting of the Board of Directors and remain as members of the Audit Committee until their successors shall be duly elected and qualified. Unless a Chair is elected by the full Board of Directors,

the members of the Audit Committee may designate a Chair by majority vote of the full Audit Committee membership.

In connection with the election of the members of the Audit Committee, the Board will determine whether any proposed nominee for the Audit Committee serves on the Audit Committees of more than three public companies. To the extent that any proposed nominee of the Corporation serves on the Audit Committees of more than three public companies, the Board will make a determination as to whether such simultaneous services would impair the ability of such member to effectively serve on the Corporation's Audit Committee and will disclose such determination in the Corporation's annual information circular.

III. MEETINGS

The Audit Committee shall meet at least four times annually, or more frequently as circumstances dictate. As part of its job to foster open communication, the Audit Committee should meet at least annually with management, internal auditors (if any) and the independent auditors in separate executive sessions to discuss any matters that the Audit Committee or each of these groups believe should be discussed privately. In addition, the Audit Committee or at least its Chair should meet with the independent auditors and management quarterly to review the Corporation's financials consistent with Section IV.4 below. The Audit Committee should also meet with management and independent auditors on an annual basis to review and discuss annual financial statements and the management's discussion and analysis of financial conditions and results of operations. Attached as Schedule "B" is an example of an annual meeting schedule/agenda.

A quorum for meetings of the Audit Committee shall be a majority of its members, and the rules for calling, holding, conducting and adjourning meetings of the Audit Committee shall be the same as those governing the Board.

IV. RESPONSIBILITIES AND DUTIES

To fulfill its responsibilities and duties, the Audit Committee shall endeavour to:

Documents/Reports Review

9. Review and update this Charter periodically, at least annually, as conditions dictate.
10. Review and recommend to the Board the organization's annual and interim financial statements, MD&A, earnings press releases and review any reports or other financial information submitted to any governmental body or the public, including any certification, report, opinion or review rendered by the independent auditors.
11. Review the reports to management prepared by the independent auditors and management's responses.
12. Review with financial management and the independent auditors the quarterly financial statements prior to their filing or prior to the release of earnings. The Chair of the Audit Committee may represent the entire Audit Committee for purposes of this review.
13. Review significant findings during the year, including the status of previous significant audit recommendations.
14. Periodically assess the adequacy of procedures for the review of corporate disclosure that is derived or extracted from the financial statements.
15. Report regularly to the Board any issues that arise with respect to the quality or integrity of the Corporation's financial statements, compliance with legal or regulatory requirements,

performance and independence of the Corporation's auditors, or performance of the internal audit function.

16. To prepare, if required, an Audit Committee report to be included in the Corporation's annual information form.
17. Preparing an annual performance evaluation of the Audit Committee.
18. At least annually, obtaining and reviewing the report by the independent auditors describing the Corporation's internal quality control procedures, any material issues raised by the most recent interim quality-control review, or peer review, of the Corporation or by any inquiry or investigation by governmental or professional authorities, within the preceding five years, respecting one or more independent audits carried out by the firm, and any steps to deal with any such issues.

Corporate Risk Management

19. Review the systems that identify and manage principal business risks, including cyber security risks.
20. Periodically discuss guidelines and policies to govern the processes by which the Chief Executive Officer and senior management assess and manage the Corporation's exposure to risk.
21. Review risk management policies and procedures of Advantage (i.e., litigation and insurance).

Independent Auditors

22. Recommend to the Board the external auditors to be nominated for appointment by the shareholders.
23. Approve the compensation of the external auditors.
24. On an annual basis, the Audit Committee should review and discuss with the auditors all significant relationships the auditors have with the Corporation to determine the auditors' independence. In addition, the Audit Committee will ensure the rotation of the lead audit partner every seven years and, in order to ensure continuing auditor independence, consider the rotation of the audit firm itself.
25. Review and, as appropriate, resolve any material disagreements between management and the independent auditors and review, consider and make a recommendation to the Board regarding any proposed discharge of the auditors when circumstances warrant.
26. When there is to be a change in auditors, review the issues related to the change and the information to be included in the required notice to securities regulators of such change.
27. Periodically consult with the independent auditors, without the presence of management, about internal controls and the fullness and accuracy of the organization's financial statements.
28. Oversee the establishment of an internal audit function.
29. Periodically assess the Corporation's internal audit function, including Corporation's risk management processes and system of internal controls.
30. Review the audit scope and plan of the independent auditor.
31. Oversee the work of the external auditors engaged for the purpose of preparing or issuing an auditor's report or performing other audit, review or attest services for Advantage.

32. Pre-approve the completion of any non-audit services by the external auditors and determine which non-audit services the external auditor is prohibited from providing. The Audit Committee may delegate to one or more members of the Audit Committee authority to pre-approve non-audit services in satisfaction of this requirement and if such delegation occurs, the pre-approval of non-audit services by the Audit Committee member to whom authority has been delegated must be presented to the Audit Committee at its first scheduled meeting following such pre-approval. The Audit Committee shall be entitled to adopt specific policies and procedures for the engagement of non-audit services if:

- (a) the pre-approval policies and procedures are detailed as to the particular service;
- (b) the Audit Committee is informed of each non-audit service; and
- (c) the procedures do not include delegation of the Audit Committee's responsibilities to management.

The Audit Committee will satisfy the pre-approval requirement set forth in this paragraph 22 if:

- (a) the aggregate amount of all non-audit services that were not pre-approved is reasonably expected to constitute no more than 5% of the total amount of fees paid by Advantage and its subsidiary entities to the auditors during the fiscal year in which the services are provided;
- (b) Advantage or a subsidiary entity, as the case may be, did not recognize the services as non-audit services at the time of the engagement;
- (c) the services are promptly brought to the attention of the Audit Committee and approved, prior to completion of the audit, by the Audit Committee or by one or more of its members to whom authority to grant such approvals has been delegated by the Audit Committee; and

33. Review, set and approve hiring policies relating to staff of current and former auditors.

Financial Reporting Processes

34. In consultation with the independent auditors, annually review the integrity of the organization's financial reporting processes, both internal and external.
35. In consultation with the independent auditors, consider annually the quality and appropriateness of the Corporation's accounting principles as applied in its financial reporting.
36. Consider and approve, if appropriate, major changes to the Corporation's auditing and accounting principles and practices as suggested by the independent auditors or management.

Process Improvement

37. Request reporting to the Audit Committee by each of management and the independent auditors of any significant judgments made in the management's preparation of the financial statements and the view of each group as to appropriateness of such judgments.
38. Following completion of the annual audit, review separately with each of management and the independent auditors any significant difficulties encountered during the course of the audit, including any restrictions on the scope of work or access to required information.
39. Review any significant disagreements among management and the independent auditors in connection with the preparation of the financial statements.

40. Review with the independent auditors and management the extent to which changes or improvements in financial or accounting practices, as approved by the Audit Committee, have been implemented. (This review should be conducted at an appropriate time subsequent to implementation of changes or improvements, as decided by the Audit Committee.)
41. Conduct and authorize investigations into any matters brought to the Audit Committee's attention and within the Audit Committee's scope of responsibilities. The Audit Committee shall be empowered to retain and to approve compensation for any independent counsel and other professionals to assist in the conduct of any investigation.
42. Establish a procedure for:
 - the receipt, retention and treatment of complaints received by the Corporation regarding accounting, internal accounting controls or auditing matters; and
 - the confidential, anonymous submission by employees of Advantage of concerns regarding questionable accounting matters, auditing matters and matters set forth in Advantage's Code of Business Conduct and Ethics;
 which procedure shall be set forth in a "whistle blower program" to be adopted by the Audit Committee in connection with such matters.

Ethical and Legal Compliance

43. Establish, review and update periodically a Code of Ethical Conduct and ensure that management has established a system to enforce this code.
44. Review management's monitoring of the Corporation's compliance with the organization's Code of Ethical Conduct.
45. In consultation with the auditors, consider the review system established by management regarding the Corporation's financial statements, reports and other financial information disseminated to governmental organizations and the public in the context of the applicable legal requirements.
46. On at least an annual basis, review with the Corporation's auditors or counsel, as appropriate, any legal matters that could have a significant impact on the organization's financial statements, the Corporation's compliance with applicable laws and regulations and inquiries received from regulators or government agencies.
47. Review with the organization's counsel legal compliance matters including the trading policies of securities.

Other

48. Perform any other activities consistent with this Charter, Advantage's by-laws and governing law, as the Audit Committee or the Board of Directors deems necessary or appropriate.
49. In connection with the performance of its responsibilities as set forth above, the Audit Committee shall have the authority to engage outside advisors and to pay outside auditors and advisors.

SCHEDULE "A"

**AUDIT COMMITTEE OF THE BOARD OF DIRECTORS OF
ADVANTAGE ENERGY LTD.**

CHARTER

Definitions – In this Charter:

"financially literate" means the ability to read and understand a set of financial statements that present a breadth and level of complexity of accounting issues that are generally comparable to the breadth and complexity of the issues that can reasonably be expected to be raised by the issuer's financial statements.

SCHEDULE "B"**Example of Audit Committee Meeting Agenda for Year**

As noted previously, it is important to review the completeness of the Audit Committee charter as well as the agenda established for each meeting. The following is an example of topics that could be covered in each Audit Committee meeting. This example assumes a December year-end with four audit committee meetings scheduled in connection with quarterly earnings releases.
