Form 51-102F3
Material Change Report

Item 1: Name and Address of Company

Indigo Exploration Inc.
Suite 880 – 580 Hornby Street
Vancouver, BC V6C 3B6

Item 2: Date of Material Change

February 5, 2021

Item 3: News Release

News Release dated February 5, 2021 disseminated via Newsfile Corp.

Item 4: Summary of Material Change

On February 5, 2021 the Company reported that the auger drilling program over the Djelinfing and Forela artisanal workings/gold targets on the Djimbala Permit in southern Mali has been completed with samples now in the lab for assays. Results will be reported when available. The Djimbala Permit is situated in the Yanfolila Gold Belt and is surrounded by a significant number of gold deposits, mines and prospecting permits.

Item 5: Full Description of Material Change

On February 5, 2021 the Company reported that the auger drilling program over the Djelinfing and Forela artisanal workings/gold targets on the Djimbala Permit in southern Mali has been completed with samples now in the lab for assays. Results will be reported when available. The Djimbala Permit is situated in the Yanfolila Gold Belt and is surrounded by a significant number of gold deposits, mines and prospecting permits.

The 602 vertical auger holes completed with an average depth of 7.8 meters and spaced 25 metres apart along 10 transect lines will provide a 2.0 kilometre strikelength by 2.5 kilometre wide test of the Djelinfing and Forela gold targets with the aim to prioritize subsequent aircore fence drilling this year.

In addition, the Company reports that its VP Exploration, Tom Henricksen made a recent site visit to the Djimbala permit and Djelinfing and Forela artisanal workings during the auger drilling program. Tom observed an active systematic surface mining operation on the Djelinfing trend by artisanal workers extracting a 2-metre bench of laterite over a 250 metre by 50 metre area, to-date, that is being processed by gravity method and extracting particulate gold.

The Djelinfing target covers an area 2.5 kilometres by 2 kilometres of artisanal working that appear to express at least 3 north-south to northeast oriented trends of mineralization. Some 300m north of the permit, historic drilling intercepted 2.59 g/t Au over 6m which appears to strike towards the Djelinfing area. The 1.5 kilometre long north-trending Forela target area aligns with historic drilling 300m north of the Djimbala Permit where they returned drill intercepts of 4.75 g/t Au over 6m, 3.13 g/t Au over 6m and 2.45 g/t Au over 8m.

The Company has an option to earn 100% interest in Djimbala from Desert Gold Ventures Inc.

Item 6: Reliance on subsection 7.1(2) or (3) of National Instrument 51-102

N/A

Item 7: Omitted Information
