

BC FORM 51-102F3

MATERIAL CHANGE REPORT

UNDER SUBSECTION 7.1(1) OF NATIONAL INSTRUMENT 51-102

Item 1 Name and Address of Company

Crystal Lake Mining Corporation (the "Issuer")
13236 Cliffstone Court, Lake Country, BC V4V 2R1

Item 2 Date of Material Change

September 14, 2016

Item 3 News Release

Date of dissemination – Sept 14, 2016
Method of dissemination - SEDAR, Stockwatch, Market News Publishing Inc., Kitco,

Item 4 Summary of Material Change

The Issuer announced the first exploration results on its optioned property in NW Ontario referred to as the EL5 Farm Property. The results are from a second geochemical survey, designated Farm - 2, of a portion of anomaly EL 1 - 5 (aka Farm).The Farm - 2 survey results replace the results, previously reported (Aug 2016) from an earlier SGH survey.

Item 5 Full Description of Material Change

See attached news release dated September 14, 2016

Item 6 Reliance on Section 7.1(2) OR (3) Of National Instrument 51-102

The Company is not relying on subsection 7.1(2) or (3) of National Instrument 51-102.

Item 7 Omitted Information

There is no omitted information.

Item 8 Senior Officers

Wally Boguski, a director of the Company, is knowledgeable about the material change and this report. His business telephone no. is: (480) 575-1220.

Item 9 Dated the 15th day of September, 2016.

"Wally Boguski"

FAVORABLE GEOCHEMICAL (SGH) RESULTS; ANOMALY EL 1 - 5 (FARM)

Vancouver, BC – Crystal Lake Mining Corporation (TSX-V: "CLM"), the "Company" is pleased to announce the first exploration results on its optioned property in NW Ontario referred to as the EL5 Farm Property.

Crystal Lake Mining Corp (BC; TSX - V: CLM) would like to report the results from a second geochemical (SGH) survey, designated Farm - 2, of a portion of anomaly EL 1 - 5 (aka Farm). The Farm - 2 survey results replace the results, previously reported (Aug 2016) from an earlier SGH survey.

The detailed report authored by the Forensic Scientist, Organics Manager-Director of Research of Activation Laboratories Ltd. (Actlabs) located in Ancaster, Ontario states (page 36) that "The overall SGH rating at the Farm-2 survey relative to the presence of CU-Ni- PGE mineralization is 4.5 on a scale of 6.0 in intervals of 0.5 feet".

The author also stated that "The degree of confidence in the SGH Rating only starts to be "good" at a level of 4.0".

The Director concluded that "The awesome symmetry of the associated Redox cell greatly supports that the associated general N-S trending of the Cu, Ni, and Platinum / Palladium is real". In fact the planar presentation illustrates that the better than "good" anomalies align into multiple N - S trending linear anomalies. Given such an endorsement as to the composition and relative strength of the SGH anomalies, Crystal Lake will begin planning a follow - up exploration program involving diamond drilling.

Frank P Puskas , honors BSc geology / chemistry, M Sc geology / chemistry fulfills the requirements to be a " Qualified Person" as set out in NI 43 -101 by reason of my education, affiliation with a professional association and past relevant work experience. He has reviewed and approved the technical contents of this press release.
