

EnerDynamic Sale of Second Grow Unit to Apothio

NIAGARA FALLS, ON and ARVIN, CA / ACCESSWIRE / November 16, 2020 / EnerDynamic Hybrid Technologies Corp. ("EHT") (TSXV:EHT) is pleased to announce that it has sold a second Grow Unit to Apothio, LLC and Affiliates ("Apothio").

Apothio is purchasing its second 18,000 sq. ft. Grow Unit from EHT in order to expand their operations in Canada. Apothio will pay \$2,700,000 plus taxes for the unit and will also pay in full upfront for the unit, the same as is doing for the first unit announced November 9, 2020. This second unit, which will be delivered in the second half of 2021, is required by Apothio to keep up with the demand of their specialty oils that they sell to their international customers.

Apothio is a global leader in developing U.S.-patented, non-GMO, all natural hemp and cannabis cultivation programs that yield proprietary hemp and cannabis chemovars that are designed to treat a broad spectrum of human and animal diseases. With access to more than 200 hemp and 300 cannabis chemovars that are set to be genomically mapped, grown, formulated and placed into clinical trials, Apothio is in a unique position to research and determine the best whole plant extracted hemp and cannabis formulations by delivery device, dosage, and disease.

Apothio grows its hemp and cannabis genetics in both indoor and outdoor settings. After years of research, Apothio objectively believes that EHT manufactures one of the best Indoor Cultivation Growing facilities worldwide. The ability to sustainably grow off-grid, anywhere in the world, while enjoying a closed, standardized growing environment, is very rare. EHT has designed and is producing an incredible facility that ensures pharmaceutical grade production.

Dr. Trent Jones, CEO of Apothio, commented: "We are all very excited, and this second purchase is the next step towards a much larger business model with EHT and its Team."

John Gamble, CEO of EHT, commented: "This is great news, our order book for next year is now filling up very nicely."

About Apothio LLC

Apothio is dedicated to pioneering technology that redefines standards for safety and toxicology, objectively demonstrating the efficacy of its hemp-derived cannabinoid formulations, and collaborating with patients across the country to develop the most unique and customized plant based formulations on the market.

About EnerDynamic Hybrid Technologies

EHT delivers proprietary, turn-key energy solutions which are intelligent, bankable and sustainable. EHT's expertise includes the development of its ENERTEC module structures with full integration of smart energy solutions. Using a proprietary skin and foam core that is stronger than traditional wood or steel structural insulated panels, EHT provides exceptional thermal energy efficiency in modular homes, cold storage facilities, residential/commercial out buildings and emergency/temporary shelters. EHT works with its partners worldwide to erect the buildings on-site utilizing EHT staff and local crews. In addition to traditional support to established electrical networks, ENERTEC buildings excel where no electrical grid exists.

About ENERTEC

The EHT advanced ENERTEC Modular Wall and Roof System uses a proprietary skin and foam core that is stronger and more energy efficient than traditional wood or steel structures providing the highest ratings for energy efficiency. EHT works with its partners worldwide to erect the buildings on-site utilizing EHT staff and local crews. After installation, each structure can be furnished and finished to meet the customer's requirements including siding, tile, kitchens and bathrooms or segregated commercial rooms. The finished wall product can be shipped on pallets and delivered via rail, truck or water in standard formats.

At the core of the ENERTEC product line is the ENERTEC Embedded Solar Roof Module. Solar cells are embedded in a proprietary fire proof skin resulting in substantial cost savings by eliminating heavy glass panels and aluminum racking required for traditional solar panels. Two barriers to greater adoption of solar energy are weight limitations of the roof on which solar panels could be deployed and onerous shipping and labour costs. A lighter product at a better price point will open a larger market for solar due to the faster return of capital investment especially for rural and remote users looking to go off-grid. Furthermore, the entire EHT embedded solar roof becomes a massive solar panel capable of producing significantly more energy than the home requires, allowing the structure to then become an important source of power for the local micro grid or large battery storage systems.
