Braveheart Resources Inc. Announces Second Round of Drilling Results at Alpine Mine Property near Nelson BC, intersects 33.6 g/t Au over 1.6m, including 66.1 g/t Au over 0.5m

Toronto, Ontario--(Newsfile Corp. - October 17, 2017) - Braveheart Resources Inc. (TSXV: BHT) ("Braveheart" or, the "Company") announces additional results from the recently completed 2017 Diamond Drilling Program at the Alpine Mine property (Alpine) with more than 1,600 meters drilled in 11 holes. Braveheart had reported the results from 5 holes, the best assay coming from Hole AL17004 returning 11.8 g/t Au over 1.5m (including 29.6 g/t Au over 0.5m).

The second round of results are from another 5 drill holes and can be seen in Table 1 below, shaded in gray. The best assay came from AL17008 grading **33.5 g/t Au over 1.6m**, including **66.1 g/t Au over 0.5m**. The results from the last drill hole AL17012 is anticipated to be forthcoming in the near future. The intervals reported are very close to true thickness as most holes were drilled at ninety degrees to the vein structure.

Phil Keele, Braveheart President and CEO stated, "These latest results further strengthen our belief in the larger potential of the Alpine. I would also like to report that the Company has retained the services of Giroux Consultants Ltd. Principal, Gary Giroux, P.Eng. will work closely with TerraLogic personnel to produce a NI 43-101 Resource Report for the Alpine Project. Braveheart anticipates that the report should be complete before the end of this Quarter."

Notes on analytical techniques

All core was analyzed by Activation Laboratories Inc. of Kamloops, BC utilizing an industry standard 30 elements ICP-MS technique following an aqua-regia digestion (UT-1M). In addition, all mineralized core was analyzed for gold on a large 500g split by fire-assay with an AA finish (1A2). A comprehensive external QAQC procedure was employed by TerraLogic which included regular and strategic inclusions of blanks, standards and duplicates into the sampling stream. Gravimetric analysis (FA-GRA) were completed on all over-detection (>5 g/t Au) fire assay results**.**
