MAMMOTH RESOURCES CORP.

FOR IMMEDIATE RELEASE: December 19, 2016 No. 11/16

MAMMOTH RESOURCES REPORTS RESULTS FROM ITS ANNUAL AND SPECIAL MEETING

Toronto, Canada - December 19, 2016 - Mammoth Resources Corp. (TSX-V: MTH), ("Mammoth" or the **"Company")** is pleased to announce that it received better than 66 2/3 percent support for all the resolutions put forward in the Company's annual and special meeting held December 14th, including election of auditor, number of board members, board members, option plan and share consolidation. The Company plans to proceed with the share consolidation process immediately with further information to follow.

In other news, the Company expects to release the results from its PIMA sampling program in the new year and has nearly finalized the contract with a drill contractor to drill up to 3,000 metres of diamond drill core wherein the contractor, a geologist himself and believing in the potential of the Company's High Sulphidation, Tenoriba precious metal project is expected to take a significant portion of the cost of the program in shares of Mammoth.

Previous work at Tenoriba by Mammoth has included detailed mapping and sampling, and a magnetometer and Induced Polarization surface geophysics program over approximately half of the large 15 square kilometre area of mineralization. Sampling to date has resulted in over 250 gold samples ranging from 0.3 grams per tonne (gpt) gold to as high as 26.9 gpt gold in channel samples from 1.0 to 2.5 metres in length and occasional grab samples. These samples also host geochemical characteristics typical of HS systems, including elevated values of Antimony, Mercury and Arsenic associated with gold. Prior to Mammoth's involvement at Tenoriba the property was covered by a soil geochemical survey and a small portion of the property, comprising approximately 20% of the total of 4,200 hectares of the property, was drill tested with 15 diamond drill holes results of which were announced in June 2008. Highlight intersections from this drilling included gold values ranging from as high as 46.9 gpt gold over a 1.9 metre core length, 2.26 gpt gold over a 11.5 metre core length and 1.03 gpt gold over a 34.4 metre core length (the orientation of the geological features in which the good was sampled is unknown at this time). All results of sampling are available in a technical report dated February 20, 2014 on the Company's web site.

About Mammoth Resources:

Mammoth **(TSX-V: MTH)** is a mineral exploration company focused on acquiring and defining precious metal resources in Mexico and other attractive mining friendly jurisdictions in the Americas. The Company has an option to acquire 100% in the Tenoriba Property located in the Sierra Madre Precious Metal Belt in southwestern Chihuahua State, Mexico. The company continues to seek other option agreements in the Americas on other properties it deems to host above average potential for economic concentrations of precious metals mineralization.
