

FOR IMMEDIATE RELEASE

EXO U to Launch Ormiboard Pro Visual Creation Software at InfoComm 2016

New whiteboarding software offers instant sharing to any student device, classroom management, and advanced interactivity building without an internet connection

(MONTREAL, CANADA) June 8, 2016 — At InfoComm 2016, [EXO U](#) Inc. (“EXO U” or the “Corporation”) (TSXV: EXO), a software development company, will launch [Ormiboard Pro](#), a first-of-its-kind front-of-class visual creation and collaboration tool. Ormiboard Pro gives teachers and students the freedom to build lessons, activities, and interactive games for use in any classroom that has displays and/or mobile devices.

The [device-agnostic](#) Ormiboard Pro goes beyond presenting and testing by opening up whole-class creation and participation. With ping-pong sharing and group collaboration, Ormiboard Pro users create sessions where everyone can watch and participate in the lessons. In a classroom setting, teachers can select a screen from a student device and share it on the front-of-class display.

Ormiboard Pro is designed for schools and districts and is primarily offered through distribution channels. Ormiboard Pro is an installed software with a perpetual license and enables complete device integration and collaborative sharing over existing networks via local WIFI (no internet access required). Ormiboard Pro is optimized for fast speed and split-view capabilities for multi-touch panels and tables, and gives administrators dashboard control over building, classroom, teacher, user and content grouping.

EXO U will also release its Ormiboard Go edition on June 26th at ISTE 2016 in Denver, Colorado. The Ormiboard Go edition is designed for teachers and is accessed via web browser; enabling students to easily connect and collaborate online. Ormiboard Go is offered at a subscription rate of \$89 per year and seamlessly integrates with resources like Dropbox, Evernote, Google Classroom, Drive and other cloud-based services. Ormiboard Pro users are provided with a simple upgrade path.

“After launching Ormi, we gathered input from the marketplace that consistently favored a few key aspects of the Ormi platform,” said Kevin Pawsey, CEO of EXO U. “This feedback from partners and educators alike enabled us to build Ormiboard. It’s the best of Ormi, with a simplified experience for whole class teaching and collaboration and with applications that extend well beyond the classroom into other markets.”

A limited evaluation trial is available at [Ormiboard.com](#). InfoComm participants can see Ormiboard in person by visiting EXO U’s partner booths C5834 and C6308, or by calling (866) 608-8751, x1.

About EXO U

EXO U’s shares trade on the TSX Venture Exchange under the ticker symbol EXO. EXO U develops an innovative software platform which enables businesses and educational

institutions to securely mobilize and manage their mobile workforce and students by delivering engaging experiences spanning desktop and mobile applications. At the core of EXO U's platform is the smart and agnostic EXO engine that unifies multiple software platforms, allowing devices to interact and communicate seamlessly together. EXO U was recently a finalist for the 2016 [SIIA CODiE Awards](#) (the "CODiE Awards"). For more information, visit <http://www.exou.com> and follow us on Twitter [@exo_u](#).
