NEWS RELEASE

WALKER ACQUIRES JAMES BAY GOLD PROJECT

Vancouver, B.C. December 02, 2014 - Walker River Resources Corp. ("**Walker**" or the "**Company**") (TSX-V: "**WRR**") is pleased to announce that it has entered into an agreement to acquire a 100% ownership in a gold exploration project in NW Quebec.

The property, consisting of 22 claims comprising approximately 1171 hectares, is located in the James Bay region, some 330 km north of Chibougamau in the Quebec Government`s Plan Nord territory.
The Quebec government`s ambitious Plan Nord project included the construction of a 240 km all season road to access and develop the Stornaway Renard diamond project, and in 2014 this road access resulted in the discovery of mineralized, rusted, and angular float boulders, with assays up to 142.5 gms/ton gold (ref: Press Release Visible Gold Mines Inc., 2014-11-04).

The new Walker River property is located some 13km northeast along glaciation strike (up ice direction) of the discovery of this mineralized float rock. Geology consists of the presence of the large sedimentary Otish Basin overlying Archean Basement rocks. The Otish Basin consists of sub horizontal strata covering an area 120 km long by 60 km wide. The older rocks of the area are Archean gneisses of the Opatica sub province, part of the Superior province. The gneisses enclose greenstone belts composed of amphibolites, mafic meta volcanites and associated volcanoclastites. This geological environment is highly prospective for precious and base metal deposits.

Walker River can acquire a 100% ownership in the property by the issuance of 1.6 million shares to 6645488 Canada Inc. and 400,000 shares to Services Geologiques T-Rex Inc. The vendors retain a total royalty of 1% NSR, which can be repurchased at any time for $ 500,000.00

This transaction is subject to the approval of the TSX Venture Exchange.

This acquisition adds to the company`s gold project portfolio, which now consists of a project in Nevada and one in Quebec.

The company`s Nevada Lapon Canyon gold property, is located within the Walker Lane tectonic Trend, some 60 km southeast of Yerington. As previously announced, the company has received its drilling permit from the BLM, with the initial planned drill program targeting potential high grade gold mineralization in cross cutting shear structures.

E. Gauthier,geol., Eng (OIQ), acts as the qualified person to the Company and has reviewed and approved the contents of this release.

ON BEHALF OF THE BOARD OF DIRECTORS

"Michel David"

____

Michel David,
Chief Executive Officer and Director
