## **Ivanhoe Mines invites you to take a virtual site tour of the Platreef palladium, platinum, rhodium, nickel, copper and gold project**

JOHANNESBURG, SOUTH AFRICA – Ivanhoe Mines (TSX: IVN; OTCQX: IVPAF) is pleased to announce that the high-resolution site tour video, showcasing the talented team that is developing the world-scale Platreef palladium, platinum, rhodium, nickel, copper and gold project in South Africa.

The link to the high-resolution version of the Platreef site tour video is: <https://bit.ly/33C8sx2>

“The site tour video allows everyone to meet members of the team that is developing our Platreef discovery – one of the largest, richest precious metals deposits on the planet – into a state-of-the-art, automated mine with a very small environmental footprint,” said Mr. Friedland, Ivanhoe Mines’ Executive Co-Chairman. “We now see a clear path forward to building our second tier one mine to produce critical “green metals” the world urgently needs for a low-carbon society.

“The video highlights the spirit and resilience of the project’s team members, working together with a common vision and a common goal.”

The slide deck for the Platreef Investor Day is available at:

### **About Ivanhoe Mines**

Ivanhoe Mines is a Canadian mining company focused on advancing its three principal joint-venture projects in Southern Africa: the development of major new, mechanized, underground mines at the Kamoa-Kakula copper discoveries in the DRC and at the Platreef palladium-platinum-nickel-copper-rhodium-gold discovery in South Africa; and the extensive redevelopment and upgrading of the historic Kipushi zinc-copper-germanium-silver mine, also in the DRC. Kamoa-Kakula is expected to begin producing copper in July 2021 and, through phased expansions, is positioned to become one of the world's largest copper producers. Kamoa-Kakula and Kipushi will be powered by clean, renewable hydro-generated electricity and will be among the world’s lowest greenhouse gas emitters per unit of metal produced. Ivanhoe also is exploring for new copper discoveries on its wholly-owned Western Foreland exploration licences in the DRC, near the Kamoa-Kakula Project.
