Ecolomondo Releases 2025 Annual Results

Montreal, Québec, May 4, 2026 — Ecolomondo Corporation (TSXV: ECM) (OTCQB: ECLMF) (the "**Company**" or "**Ecolomondo**"), a leading Canadian innovator in sustainable scrap tire recycling technology, announces that it has released its audited consolidated financial statements and notes thereto (the "**Annual Financial Statements**") and its related management discussion and analysis ("**MD&A**") as of and for the year ended December 31, 2025. These documents are available on SEDAR at www.sedar.com.

During the fiscal year 2025, the Company achieved several milestones in the areas of Thermal Decomposition Process ("**TDP**"), tire shredding and recovered carbon black ("**rCB**") departments, while continuing to work on the ramp-up of the Hawkesbury TDP turnkey facility built in Ontario, Canada.

In 2025, the Company:

- Appointed Forvis Mazars LLP as auditors;
- Operational Progress
  - Achieved an important milestone in installation, commissioning and ramp-up of the new rCB milling and post-processing line, important to the overall performance of the Hawkesbury TDP facility;
- Financing & Capital
  - Concluded 2 credit facilities from Export Development Canada ("**EDC**") to the Company's subsidiary, Ecolomondo Environmental (Hawkesbury) Inc., owner of the Hawkesbury plant:
    - A $2 million credit facility in early 2025, and
    - An additional $2.7 million credit facility, concluded in January 2026;
  - Completed 2 private placements, for a total amount of $1.5 million;
- Strategic Expansion
  - Executed an important joint venture and EPC engineering agreement with Alternativas Riojanas Eolicas y Solares S.L. ("ARESOL"), a large European business group in renewable energy projects to build four TDP turnkey facilities in the European Union using Ecolomondo's TDP proprietary technology;
  - Secured sufficient feedstock for its planned Shamrock, Texas TDP facility, with multiple letters of intent executed with tire retailers and municipalities confirming committed volumes.

The effective performance of the rCB milling and processing line allowed the facility to achieve better output and higher sales. Sales of end-products and tipping fees increased considerably throughout the year 2025:

$193,681 in the first quarter, $256,103 in the second quarter, $415,192 in the third quarter and $434,448 in the fourth quarter, representing an increase of 112% overall for the year over 2024.

It is crucial that all 3 departments work in tandem with each other to avoid production bottlenecks to achieve the anticipated revenue streams and to avoid costly delays.

Highlights of the audited Consolidated Annual Financial Statements are:

- The company had revenues of $1,427,835 compared to $481,647 for the fiscal year ended December 31, 2024, an increase of 196%;
- As of December 31, 2025, capital expenditures for the Hawkesbury facility totaled $53,404,967 (net of depreciation), an increase of $13,003,653 compared to December 31, 2024;
- As at December 31, 2025, the Company had a loss before income taxes of $3,314,362, compared to $4,006,353 for the fiscal year ended December 31, 2024, a reduction of 17%.

Reflecting early-stage commercialization and improving cost controls as operations scale.

The Company expects to raise additional capital to support working capital requirements and accelerate execution of its strategic growth initiatives.

About Ecolomondo Corporation

Ecolomondo Corporation, headquartered in Quebec, is a Canadian cleantech company focused on its proprietary Thermal Decomposition Process ("TDP") technology, which recovers high-value commodities from scrap tire waste, including recovered carbon black (rCB), tire-derived oil (TDO), syngas, fiber, and steel. Visit www.ecolomondo.com for more.

Revenue Streams of TDP Facilities

Revenue streams from the TDP turnkey facilities will come from the sale of end-products manufactured on-site, namely rCB, oil, steel and syngas, as well as tipping fees for the processing of scrap tires.

About the Hawkesbury Plant – A 2-Reactor TDP Facility

The Hawkesbury facility building is 46,200 sq.ft and has an indoor clearance of 28 feet. It is modern and houses 3 main production departments, tire shredding, thermal decomposition and recovered carbon black refining. Once fully operational, this facility is expected to process approximately 1.3M to 1.5M scrap tires per year and produce on the average approximately 4,000 MT of recovered carbon black, 5,000 MT of pyrolysis oil, 2,000MT of steel, and 1,200 MT of process gas.

About the Shamrock Project – A 6-Reactor TDP Facility

Processing capabilities for the Shamrock facility is projected at 5 million end-of-life tires per year, yielding approximately 15,000 MT of recovered carbon black, 18,000 MT of oil, 7,500 MT of steel, and to process 4,500 MT of syngas; roughly three times the size of the Company's Hawkesbury (Ontario) plant output that is expected to soon commence regular commercial operations, roughly three times the size of the Ontario Hawkesbury TDP facility.

Our Mission, Vision & Strategy

Ecolomondo's mission is to be a contributing participant in a dynamic Circular Economy and to increase shareholder value by producing and supplying large quantities of recovered resources to be re-used in the manufacture of new products.

Ecolomondo's vision is to be a leading producer and reseller of recovered resources by building and operating TDP facilities, strategically located in industrialized countries, close to feedstock, labor and offtake clients.

Our strategy is to become a major global builder and operator of TDP turnkey facilities, for now specializing in the processing of ELTs. Our intent is to expand aggressively in North America and Europe. Our experience and modular technology should help us get there faster and better. We plan to keep performing ongoing research and development to ensure that Ecolomondo remains technologically advanced.

ISCC Certification

A confirmation of the Company's successful process lies in the recent International Sustainability and Carbon Certification ("ISCC") for its Hawkesbury TDP facility, another step forward that should help improve demand for TDP. ISCC is a Global Sustainability Certification System and offers chain-of-custody certification systems to ensure traceability and feedstock identity, which can add commercial value to the Company's end-products as they remain traceable in the supply chain.

Environmental, Social & Governance (ESG)

On the social aspect the Company plans to measure global health and safety, injury rate and gender diversity, and finally in the corporate governance aspect, the Company is measuring ethics and anticorruption, ESG reporting and board independence.

About TDP

The TDP process is technically proven and more advanced than most other pyrolysis technologies. Over the years, our Technological teams were able to overcome all uncertainties that plagued most competitors especially in these areas: pre-filtration, reactor cooling, reactor rotation, water recycling, processing of rCB, (hydrocarbon removal), mass monitoring, heat curve development, humidity and water removal, safety testing, system automation, emissions control and monitoring.

TDP is Environmentally Friendly – CO_2 Reduction

By producing rCB, TDP reduces GHG emissions by 90% versus the production of virgin carbon black. The production of rCB at the Hawkesbury and Shamrock facilities are expected to reduce CO_2 emissions by 15,000 and 45,000 tons per year, respectively.
