

MedReleaf to Sponsor Cancer Trial in Collaboration with the Ontario Clinical Oncology Group

In affiliation with Hamilton Health Sciences and the Department of Oncology at McMaster University

MARKHAM, ON, July 12, 2018 – MedReleaf Corp. (TSX:LEAF) (“MedReleaf” or the “Company”), in collaboration with the Ontario Clinical Oncology Group (“OCOG”) today announced it will sponsor a cancer trial to improve the management of cancer pain using medical grade cannabis oil.

The OCOG directed by Dr. Mark Levine will coordinate the trial. Dr. Marissa Slaven, a specialist in pain management and palliative care is the Principal Investigator. The study will be conducted at the HHS Juravinski Cancer Centre in Hamilton over a one-two year period. Patients with cancer related pain will be administered MedReleaf’s uniquely formatted cannabis oil capsules with the objective of improving pain management.

Cancer patients experiencing pain despite other pain medications may be eligible to participate. The aim of the trial is to assess the effect of cannabis oil in relieving their symptoms and to gain information on the best oral dosing regimen. Patients will receive an oil combining THC and CBD.

“Patients with cancer often suffer from significant pain and we know that while managing the pain with narcotics is often necessary, it is also fraught with issues,” said Dr. Marissa Slaven. “Anecdotally, cancer patients have been telling us that cannabis products help their pain. Thanks to MedReleaf’s commitment to advancing medical science we will now be able to start gathering the data needed to help our patients live better.”

“Collaborating with the Ontario Oncology Group under the direction of Dr. Levine and its affiliates speaks to MedReleaf’s foundation as an R&D driven company,” said Neil Closner, CEO MedReleaf. “We are thrilled to have the opportunity to be involved in this important cancer trial which has the potential to positively impact the lives of cancer patients while advancing our understanding of the therapeutic benefits of medical cannabis and validating new treatment options for patients.”

About OCOG

OCOG is an academic trials group based in the Escarpment Cancer Research Institute, a joint research institute of Hamilton Health Sciences and McMaster University. OCOG works with networks of investigators to design and conduct cancer clinical trials provincially, nationally, and beyond. OCOG was established in 1982 and since then over 12,000 patients have been entered in OCOG studies. The results of which have impacted on clinical care.
