

Form 51-102F3
Material Change Report

1. Name and Address of Company

Bam Bam Resources Corp.
700-838 West Hastings Street
Vancouver, British Columbia , V6C 0A6
(the "Company")

2. Dates of Material Change(s)

October 8, 2021

3. News Release(s)

News release was issued on October 11, 2021 and disseminated by Newsfile Corp. pursuant to section 7.1 of National Instrument 51-102.

4. Summaries of Material Changes

The Company announces it has granted an aggregate 6,300,000 restricted share units (the "RSUs") to consultants and a director of the Company. The RSUs are valid for a one-year term and are governed by the Company's RSU Plan, approved by the Company's shareholders on December 2, 2019.

5. Full Description of Material Changes

News Release dated October 11, 2021– See Schedule "A".

6. Reliance on subsection 7.1(2) or (3) of National Instrument 51-102

Not applicable.

7. Omitted Information

No information has been omitted.

8. Executive Officer

Mr. David C. Greenway, CEO of the Company, is knowledgeable about the material change contained herein and may be reached at (604) 318-0114.

9. Date of Report

This report is dated October 12, 2021.

SCHEDULE "A"

to the Material Change Report dated October 12, 2021

Bam Bam adds Second Drill at Majuba Hill Porphyry Copper Project

VANCOUVER, BC — October 11, 2021 — Bam Bam Resources Corp. (CSE: BBR / OTC: NPEZF / FSE: 4NPB) ("Bam Bam" or the "Company") is pleased to announce that a Second Drill Rig is being added at the Majuba Hill Porphyry Copper Project in Pershing County Nevada. Falcon Drilling has been engaged to drill 914 m (3000 ft) of core. The second drill rig is being added to expand the footprint of the Porphyry Copper deposit at Majuba.

Reverse-circulation ("RC") drilling with rig one began in the beginning of October and is making tremendous footage-production. The Company is very pleased with the results. The ongoing RC drilling program is focused on in-fill and expansion of the known oxide copper mineralization identified in previous drilling and mined from the historic underground Majuba Hill Mine.

Core drilling will be targeting the copper-gold target. Widespread soil geochemistry completed this summer has outlined a distinct copper-gold zone in a granodiorite intrusive. A mafic dike zone also cuts the widespread granodiorite intrusive. A small portion of the dike zone was mined by underground methods in the early 1900's at the historic Last Chance Mine.

The mafic dike zone is strongly coincident with a distinct magnetic anomaly from the Drone Mag Survey and a high-chargeability corridor from the most recent Induced Polarization/Resistivity Survey.

David Greenway, President and CEO, commented: *"I am very pleased that we are adding a second rig at Majuba. Bam Bam's drilling at Majuba has always been based on a systematic, staged exploration approach and it is exciting that the results are driving an expanded drill program."*

Quality Assurance/Quality Control ("QA/QC") Measures, Chain of Custody

The Company has implemented a QA/QC program using best industry practices at the Majuba Hill Project. The samples are transported from the BBR secure warehouse or directly from the drill to the ALS Sample Prep Facility in Reno or Elko, Nevada. ALS then transports the prepared pulps to their analytical lab in Reno, Nevada or Vancouver, B.C. Soil and rock chip samples are transported by the company directly to Elko or Reno, Nevada.

Drill core samples are sawn in half lengthwise and one half is placed in labeled cloth sample bags. All samples are analyzed for copper, gold, silver, and 33 other elements. Gold is determined by ALS method Au-AA23 which is a fire assay with an AAS finish on a 30 gram split. Copper, silver and the remaining 31 elements are determined by ALS method ME-ICP61 which is a four acid digestion and ICP-AES assay. Approximately 5% of the submitted samples are drill duplicates and copper-gold-porphyry commercial standard reference material pulps. The sample rejects and remaining pulps will be retrieved from ALS.

RSU Grant

Further, the Company has granted an aggregate 6,300,000 restricted share units (the "RSUs") to consultants and a director of the Company. The RSUs are valid for a one-year term and are governed by the Company's RSU Plan, approved by the Company's shareholders on December 2, 2019.

Qualified Person

The scientific and technical information contained in this news release has been reviewed by E.L. "Buster" Hunsaker III, CPG 8137, a non-independent consulting geologist who is a "Qualified Person" as such term is defined under *National Instrument 43-101 - Standards of Disclosure for Mineral Projects ("NI 43- 101")*.

About Bam Bam Resources Corp.

Bam Bam Resources Corp. (CSE: BBR / OTC: NPEZF / FSE: 4NPB) is engaged in the identification, review and acquisition of latter stage copper and copper/silver/gold assets. This is in direct response to the growing worldwide demand and lack of supply for precious metals fueled by the Green New Deal in the US and most other developed nations with similar programs aimed at addressing climate change. Such programs are heavily reliant on silver, gold and especially copper to produce Electric Vehicles and other renewable power sources, as well as building infrastructure to provide clean and affordable electricity.

The flagship project is the Majuba Hill copper, silver and gold District located 156 miles outside Reno, Nevada, USA. Management has been mandated to focus on safe, mining friendly jurisdictions where government regulations are supportive of mining operations.

Neither the Canadian Securities Exchange nor its Market Regulator (as that term is defined in the policies of the Canadian Securities Exchange) accepts responsibility for the adequacy or accuracy of this release.

On Behalf of the Board of Bam Bam Resources Corp.

"David Greenway"
