Press Release **July 14, 2025**

Giant Mining Aligns with White House "America First" Strategy to Fast-Track Critical Minerals and Reshore the U.S. Copper Supply Chain

VANCOUVER, BC — July 14, 2025 — Giant Mining Corp. (CSE: BFG | OTC: BFGFF | FWB: YW5 | CSE: BFG.WT.A | CSE: BFG.WT.B) ("Giant Mining" or the "Company") and its stakeholders at the flagship Majuba Hill Copper-Silver-Gold Project in Pershing County, Nevada, fully support the U.S. Government's renewed commitment to fast-track permitting for critical mineral projects as a matter of national security.

David Greenway, CEO of Giant Mining, commented: *"The 2025 Phase 1 drilling at Majuba Hill marked a bold leap forward — our most ambitious and technically advanced campaign yet, building on the exceptional grades we achieved in 2024. Under the strong leadership of President Trump, the United States has issued a clear call to action: secure* *the metals that power our energy independence, national defense, and critical infrastructure. Giant Mining stands ready to answer that call. With Majuba Hill, we are proud to lead the charge in reshoring copper production, revitalizing U.S. mining districts, and driving long-term value for shareholders — all while putting America First."*

The Company applauds the strategic initiatives announced by President Trump's administration, which align directly with Giant Mining's mission to develop secure, domestic copper supply chains. These initiatives include:

Fast-Tracked Permitting

Following the March 20, 2025, Executive Order, copper has been formally designated under FAST-41, significantly accelerating environmental and land-use reviews. The era of decade-long permitting delays is ending.

Defense Production Act Mobilization

The U.S. Government is deploying the Defense Production Act and launching new federal financing programs to expand domestic mining and reduce reliance on foreign supply—essential to national defense and economic security.

Federal Prioritization of Copper

U.S. federal agencies—including the Departments of Interior, Defense, Energy, and Agriculture—are now actively prioritizing the extraction of copper, rare earths, nickel, and lithium on public lands. This supports infrastructure development, clean energy initiatives, and military readiness.

Copper Tariffs to Reshore Production

In July 2025, the U.S. government imposed a 50% tariff on imported copper, a landmark policy designed to reduce reliance on foreign supply chains. This move made global headlines and has already triggered increased domestic demand for U.S.-sourced copper. For projects like Majuba Hill, this policy provides direct support by incentivizing local production and reinvigorating legacy mining districts across the country.[1]

Giant Mining is proud to answer the President's call to action — building strong, secure, and sovereign supply chains that support American jobs, energy independence, and economic security. With President Trump's clear directive to prioritize critical minerals under the "America First" agenda, we are committed to reshoring copper production and strengthening the backbone of the nation's

industrial future.

Project Development Update:

Giant Mining continues to advance exploration and development at Majuba Hill. The Company recently engaged RESPEC Engineering to complete a NI 43-101 Mineral Resource Estimate (**"MRE"**) and is incorporating data from its recently completed Spring drill program. Preparations are underway for an expanded Summer drill program, positioning the Company to apply for federal programs now available under the U.S. government's critical mineral initiatives. All Assays are now pending from our Spring 2025 drill program with results expected imminently.

President Donald J. Trump commented: "On July 8, I made it clear: America will no longer depend on foreign nations for the copper that powers our economy and our national defense. With a 50% tariff on imported copper, we are reshoring our supply chains, rebuilding American industry, and putting our workers first. This is about sovereignty, strength, and securing our future. We're done with the delays — it's time to mine and build in America again."

Majuba Hill's critically important characteristics are as follows:

Location:	Nevada, USA — a globally top-ranked mining jurisdiction, ranked #1 in the Fraser Institute's 2022 Annual Survey of Mining Companies.
Project Size:	9,684 Acres
Infrastructure:	The Majuba Hill property is 113 road km (70 miles) southwest of Winnemucca, Nevada, and 251 km (156 miles) northeast of Reno. Access is by well-maintained county roads from the Imlay; Nevada exit on U.S. Interstate 80 and traveling westward 23 miles. People, Roads, Power and Water are the basic elements when considering infrastructure and Majuba Hill already has a solid infrastructure foundation for building a large facility which will provide significant savings compared to more remote projects
History:	Historical Producer
Drilling:	Approximately 89,395 feet of drilling to date. Rough replacement value of drilling USD $12.1 Million using current costs.

Mineralization:	The project shows indications of a potentially large Cu – Ag +/- Au mineralized body with many features in common with both large porphyry copper, silver, and gold projects.
Expandability:	The IP survey, deep drilling, and step-out drilling indicate significant expansion potential, with mineralization open in all directions.
Fully Financed:	Secured funding for next phase of drilling at Majuba Hill in June 2025.

Quality Assurance/Quality Control ("QA/QC") Measures, Chain of Custody

The Company utilizes a QA/QC program using best industry practices at the Majuba Hill Project. The samples are placed in cloth sample bags and are transported from the Giant Mining secure warehouse to the ALS Labs Sample Prep Facility in Elko, Nevada. ALS Labs then securely transports the prepared pulps to their analytical lab in North Vancouver, B.C.

Drill core samples are sawn in half lengthwise and one half is placed in labeled cloth sample bags. All samples are analyzed for copper, gold, silver, and 33 other elements. Gold is determined by ALS Labs method Au-AA23 which is a fire assay with an AAS finish on a 30-gram split. Copper, silver, and the remaining 31 elements are determined by ALS Labs method ME-ICP61 which is a four-acid digestion and ICP-AES assay. Approximately 5% of the submitted samples are drill duplicates and copper-gold-porphyry commercial standard reference material pulps. The remaining pulps will be retrieved from ALS Labs.

Qualified Person

The scientific and technical information contained in this news release has been reviewed and approved by E.L. "Buster" Hunsaker III, CPG 8137, a non-independent consulting geologist who is a "Qualified Person" as such term is defined under *National Instrument 43-101 – Standards of Disclosure for Mineral Projects (**"NI 43- 101"**)*.

About Giant Mining Corp.

Giant Mining is focused on identifying, acquiring, and advancing late-stage copper and copper/silver/gold projects to meet the growing global demand for critical metals. This demand is driven by initiatives like the Green New Deal in the United States and similar climate-focused programs worldwide, which require substantial amounts of copper, silver, and gold for electric vehicles, renewable energy infrastructure, and the modernization of clean and affordable energy systems.

The Company's flagship asset is the Majuba Hill Copper, Silver, and Gold District, located 156 miles (251 km) from Reno, Nevada. Majuba Hill is situated in a mining-friendly jurisdiction with supportive regulations and has the potential to become one of the next major copper deposits, critical for meeting the increasing need for this red metal.

Neither the Canadian Securities Exchange nor its Market Regulator (as that term is defined in the policies of the Canadian Securities Exchange) accepts responsibility for the adequacy or accuracy of this release.

On Behalf of the Board of Giant Mining Corp.

"David Greenway"
