

# FIDELITY ASIAN VALUES PLC

## SEEKING UNRECOGNISED GROWTH POTENTIAL

Fidelity Asian Values PLC aims to produce long-term capital growth through investment in an actively managed portfolio of equities primarily in the South East Asian region (excluding Japan). The portfolio manager uses a bottom-up investment approach in the stock selection and portfolio construction process.

Launch date:	13/06/1996
Portfolio Manager:	John Lo
Appointed to trust:	01/09/2001
Years at Fidelity:	19

Investment available via ISA and Share Plan

### PORTFOLIO MANAGER

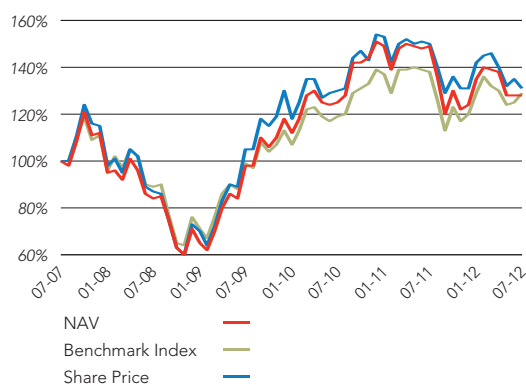

*The prospects for the global economy remain divergent as the US continues to register moderate growth, whilst continuing sovereign debt crisis in Europe fuels uncertainty. Despite signs of moderation in the Chinese economy, growth in Asia is likely to be strong given falling inflation, healthy government balance sheets and the availability of multiple policy tools to boost growth. Notwithstanding near term uncertainty, the market currently offers investment opportunities in quality companies with strong fundamentals at attractive valuations.*

John Lo, Portfolio Manager

### INVESTMENT HIGHLIGHTS

The fund underperformed the index, due to positions in IT, consumer discretionary, consumer staples and the telecom sector. An overweight in SouFun Holdings, which provides marketing, technology and information consultancy services to the real estate and home furnishing sectors in China, retreated due to a challenging property market. Shares in games producer NCSoft weighed on returns due to doubts about the popularity of its recently launched games. In contrast, the bias towards Bank Mandiri and the underweight in China Construction Bank boosted performance. The former proved rewarding given improved earnings expectations, driven by strong loan growth, stable margins, low credit cost and higher cost efficiency as the bank slows its expansion to focus on productivity.

## GLOSSARY

## NAV

The total value of a company's assets less the total value of its liabilities is its net asset value (NAV). For valuation purposes it is common to divide net assets by the number of shares in issue to give the net assets per share. NAV calculations can include or exclude current financial year income. For the purposes of this factsheet, they are valued with assets including income and costs and with debt valued at the market.

## DISCOUNT

If the share price of an investment company is lower than the net asset value (NAV) per share, the company is said to be trading at a discount. The discount is shown as a percentage of the NAV.

## GEARING EXPOSURE

Investment trusts have the ability to borrow additional money to invest, known as gearing. The trust has the ability to use bank loans and bank overdrafts to increase its exposure to stocks.

## OVERWEIGHT/UNDERWEIGHT

If a stock is deemed "overweight" this indicates that the portfolio has a higher exposure to a stock compared to its benchmark. If a stock is deemed "underweight" this indicates that portfolio has a lower exposure to a stock compared to its benchmark.

## TOP 10 INVESTMENTS

The ten largest investments by value are valued at fair value and shown as a percentage of total assets less current liabilities, excluding loans.

## SECTOR/GEOGRAPHICAL BREAKDOWNS

These are expressed as a percentage of total portfolio and cash.

## FAIR VALUE

The fair value of the listed investments is measured at bid prices or last prices quoted, depending on the convention of the exchange on which they are listed. Where permitted, unlisted investments, where there is not an active market, are valued using an appropriate valuation technique so as to establish what the transaction price would have been and derivative instruments are valued at the quoted trade price for the contract.
