

FIDELITY ASIAN VALUES PLC

SEEKING UNRECOGNISED GROWTH POTENTIAL

Fidelity Asian Values PLC aims to produce long-term capital growth through investment in an actively managed portfolio of equities primarily in the South East Asian region (excluding Japan). The portfolio manager uses a bottom-up investment approach in the stock selection and portfolio construction process.

PORTFOLIO MANAGER

While there remain questions regarding the health of the US and the frail economic conditions in Europe, I am positive towards the Asian region looking into the year ahead. Growth is likely to remain attractive with inflation under control and debt at low levels. Most Asian economies have the ability to use counter-cyclical fiscal and monetary policies to support their economies. Balance sheets and cashflows among Asian corporates remain healthy, whilst valuations are attractive. My strategy has remained focused towards better quality businesses.

John Lo, Portfolio Manager

INVESTMENT HIGHLIGHTS

The trust underperformed the index during the quarter as stock selection and positioning within the consumer discretionary and staples sectors eroded value. The South Korea-based holdings within both these sectors declined due to a combination of missed earnings expectations as well as due to fears about declining consumption growth in China. Security selection in the health care and energy space also hampered performance. In contrast, information technology added value, although selected names were among leading detractors.

GLOSSARY

NAV

The total value of a company's assets less the total value of its liabilities is its net asset value (NAV). For valuation purposes it is common to divide net assets by the number of shares in issue to give the net assets per share. NAV calculations can include or exclude current financial year income. For the purposes of this factsheet, they are valued with assets including income and costs and with debt valued at the market.

DISCOUNT

If the share price of an investment company is lower than the net asset value (NAV) per share, the company is said to be trading at a discount. The discount is shown as a percentage of the NAV.

GEARING EXPOSURE

Investment trusts have the ability to borrow additional money to invest, known as gearing. The trust has the ability to use bank loans and bank overdrafts to increase its exposure to stocks.

OVERWEIGHT/UNDERWEIGHT

If a stock is deemed "overweight" this indicates that the portfolio has a higher exposure to a stock compared to its benchmark. If a stock is deemed "underweight" this indicates that portfolio has a lower exposure to a stock compared to its benchmark.

TOP 10 INVESTMENTS

The ten largest investments by value are valued at fair value and shown as a percentage of total assets less current liabilities, excluding loans.

SECTOR/GEOGRAPHICAL BREAKDOWNS

These are expressed as a percentage of total portfolio and cash.

FAIR VALUE

The fair value of the listed investments is measured at bid prices or last prices quoted, depending on the convention of the exchange on which they are listed. Where permitted, unlisted investments, where there is not an active market, are valued using an appropriate valuation technique so as to establish what the transaction price would have been and derivative instruments are valued at the quoted trade price for the contract.
