

FIDELITY ASIAN VALUES PLC

SEEKING UNRECOGNISED GROWTH POTENTIAL

Fidelity Asian Values PLC aims to produce long-term capital growth through investment in an actively managed portfolio of equities primarily in the South East Asian region (excluding Japan). The portfolio manager uses a bottom-up investment approach in the stock selection and portfolio construction process.

Launch date:	13/06/1996
Portfolio Manager:	John Lo
Appointed to trust:	01/09/2001
Years at Fidelity:	20

Investment available via ISA and Share Plan

PORTFOLIO MANAGER

The portfolio favours companies with management who have a proven track record of managing through extreme cycles. I focus on companies with entrenched market positions where this strength and solid management of the company is exhibited in the ability to grow market share while maintaining pricing power. Typically these companies are likely to emerge stronger after any downturn. I pay particular attention to balance sheet strength and hence tend to hold companies that have low leverage. I do acknowledge top-down factors to portfolio construction, however stocks need to fit criteria and hence the focus remains from a bottom-up perspective. Since understanding a company in isolation is insufficient, I also consider the long term trends in an industry and the market, which can deliver a tangible investment advantage. The fund typically holds between 30-70 stocks and tends to be fairly concentrated. I control risk in a number of ways such as holding a widely diversified portfolio of stocks invested across the Asian region, avoiding companies without sustainable growth models, weak management and corporate governance.

I believe markets have been increasingly driven more by fundamentals rather than sector/asset allocation. Looking over the long term, a sustained structural shift in favour of domestic consumption would continue to underpin growth in Asia and while there may be shorter term issues I am confident a continued focus on reforms is a positive for the region, notably in China. Furthermore, most Asian economies have the ability to use counter-cyclical fiscal and monetary policies to support their economies. Against this backdrop, I remain focused on stock level fundamentals rather than asset or sector allocation.

GLOSSARY

NAV

The total value of a company's assets less the total value of its liabilities is its net asset value (NAV). For valuation purposes it is common to divide net assets by the number of shares in issue to give the net assets per share. NAV calculations can include or exclude current financial year income. For the purposes of this factsheet, they are valued with assets including income and costs and with debt valued at the market.

DISCOUNT

If the share price of an investment company is lower than the net asset value (NAV) per share, the company is said to be trading at a discount. The discount is shown as a percentage of the NAV.

GEARING EXPOSURE

Investment trusts have the ability to borrow additional money to invest, known as gearing. The trust has the ability to use bank loans and bank overdrafts to increase its exposure to stocks.

OVERWEIGHT/UNDERWEIGHT

If a stock is deemed "overweight" this indicates that the portfolio has a higher exposure to a stock compared to its benchmark. If a stock is deemed "underweight" this indicates that portfolio has a lower exposure to a stock compared to its benchmark.

TOP 10 INVESTMENTS

The ten largest investments by value are valued at fair value and shown as a percentage of total assets less current liabilities, excluding loans.

SECTOR/GEOGRAPHICAL BREAKDOWNS

These are expressed as a percentage of total portfolio and cash.

FAIR VALUE

The fair value of the listed investments is measured at bid prices or last prices quoted, depending on the convention of the exchange on which they are listed. Where permitted, unlisted investments, where there is not an active market, are valued using an appropriate valuation technique so as to establish what the transaction price would have been and derivative instruments are valued at the quoted trade price for the contract.
