LEGAL DISCLAIMER

Final Prospectus

A final prospectus containing important information relating to the securities described in this document has been filed with the securities regulatory authorities in British Columbia, Ontario and Alberta.

A copy of the final prospectus, and any amendment, is required to be delivered with this document. This document does not provide full disclosure of all material facts relating to the securities offered. Investors should read the final prospectus, and any amendment, for disclosure of those facts, especially risk factors relating to the securities offered, before making an investment decision. The securities of the Company should be regarded as highly speculative due to the nature of the Company's business and its formative stage of development. An investment in the securities of the Company should only be made by persons who can afford a significant or total loss of their investment.

Forward Looking Information and Statements

This presentation contains "forward-looking information" for purposes of applicable Canadian securities laws. Forward-looking information includes statements that use forward-looking terminology such as "may", "could", "would", "will", "should", "intend", "target", "plan", "expect", "budget", "estimate", "forecast", "schedule", "anticipate", "believe", "continue", "potential", "view" or the negative or grammatical variation thereof or other variations thereof or comparable terminology. Such forward looking information includes, without limitation, statements with respect to the Company's expectations, strategies and plans for the Company's: expected costs, budgets, timing and results of planned and future exploration; estimated completion dates for certain milestones and the Company's plans; future financial or operating performance and condition of the Company and its business, operations and properties, including expectations regarding liquidity, capital structure, competitive position in its industry; and any other statement that may predict, forecast, indicate or imply future plans, intentions, levels of activity, results, performance or achievements.

Although the Company bases the forward-looking information contained in this presentation upon assumptions that it believes are reasonable, the Company cautions investors that actual results and developments (including its financial performance, financial condition and liquidity, and the development of the industry in which it operates) may differ materially from those made in or suggested by the forward-looking statements contained in this presentation. Despite a careful process to prepare and review the forward-looking statements, there can be no assurance that the underlying opinions, estimates and assumptions will prove to be correct. By their nature, forward-looking information and statements related thereto involve risks and uncertainties because they relate to events and depend upon circumstances that may or may not occur in the future. The Company believes that these risks and uncertainties include, but are not limited to, those described under "Risk Factors" in the final prospectus.

TILL SAMPLING – EXPLORATION TOOL

Rainy River Discovery Driven Largely by Till Sampling

TILL SAMPLING

Significant Pristine Gold Grains Indicate Proximal to Source

- **200 till samples**, 181 samples with gold grains and 91 samples with pristine gold grains, 100 contained modified gold grains, and 168 contained reshaped gold grains.
- Samples 3297755, 3297842 and 3297846 returned the highest number of pristine gold grains (**50, 215 and 1467 grains, respectively**), and highest gold assays of 321.4 ppb Au, 425.8 ppb Au, and 937.8 ppb Au, respectively.
- A basal till sampling program was completed in October 2021. Combining all till sample data show 2 distinct zones of anomalism:
 1. Around the Bonanza Trench to the south of Black Lake, with three samples returning better than 300 gold grains
 2. Smaller anomaly located approximately 1,500 m south of the Bonanza Trench area where there are no known mineral showings or rock samples to explain the source of the elevated gold grain counts
