

Wedgemount Announces Operational Update

NOT FOR DISTRIBUTION TO UNITED STATES NEWSWIRE SERVICES OR FOR RELEASE, PUBLICATION, DISTRIBUTION, DISSEMINATION, DIRECTLY OR INDIRECTLY IN OR INTO THE UNITED STATES

Vancouver, BC – June 2, 2026 - Wedgemount Resources Corp. (CSE: WDGY) (FSE: 8H5) (“**Wedgemount**” or the “**Company**”), is pleased to provide an operational update on its ongoing production optimization program in west central Texas.

Production Update

Despite extremely wet weather and tough ground conditions in west central Texas over the past couple of weeks the Company reports current production of 125 barrels of oil equivalent per day (boepd), which is ahead of internal projections for June 1. Management is encouraged by the pace of production growth and the performance of the asset base to date. As handling facilities continue to be upgraded its anticipated that additional operating up-time will allow for further increases in volume of both oil and natural gas.

Operational Focus

Wedgemount’s operational team remains focused on a targeted surface facilities improvement program designed to enhance reliability, throughput, and overall efficiency. Current initiatives include:

- Returning McBeth injector well to full capacity
- Tank infrastructure improvements
- Separator optimization including natural gas condensates
- Ongoing well optimization through chemical treatments
- Upgrades and maintenance to compressors, flow lines and water handling facilities

These measures are expected to further support production growth and reduce downtime as the Company continues to advance its development program.

Management Commentary

“We are pleased to report that production is tracking ahead of our June 1 projections,” said Mark Vanry, President of Wedgemount Resources Corp. “Our team’s focus on surface facility improvements and well optimization is delivering results, and we remain committed to maximizing the performance of our asset base.”
