

Wistr AI Systems Announces Agentic AI-Driven 2026 Product Strategy and Launch of New Corporate and Investor Websites

Vancouver, British Columbia--(Newsfile Corp. - January 14, 2026) - **Wistr AI Systems Inc.** (CSE: WISR) ("Wistr AI" or the "Company"), a provider of agentic AI-powered risk intelligence solutions, is pleased to provide a corporate update highlighting the Company's Agentic AI platform strategy, introducing its 2026 commercial product lineup, and announcing the launch of its newly redesigned corporate and investor websites.

Why Agentic AI, Why Now

Artificial intelligence is rapidly evolving from assistive tools to autonomous, goal-driven systems. Industry forecasts indicate that more than **67% of enterprises expect AI agents to independently execute decisions and workflows by 2027¹**, while the market for autonomous AI agents is expected to generate up to **\$450 billion in economic value by 2028²**. At the same time, global cybercrime costs are expected to exceed **\$10.5 trillion annually³**, with third-party and supply-chain exposure now representing one of the fastest-growing sources of enterprise risk. Wistr AI was purpose-built for this moment.

Rather than relying on static dashboards or periodic assessments, Wistr AI deploys **Agentic AI**-digital workers that continuously observe global signals, reason across fragmented data, and dynamically reassess cyber, vendor, and supply-chain risk in real time. This shift enables organizations to move from reactive security operations to continuous, intelligence-driven decision-making.

2026 Product Line

For the first time, Wistr AI is formally unveiling its commercial product line, with the platform architecture structured around three integrated products that can be deployed independently or as a unified system.

- **Risk Intel** - Continuous cyber risk intelligence that ingests global threat signals and contextual data to surface emerging risks and prioritize action before disruption occurs.
- **Risk Assure** - Automated third-party risk and assurance that accelerates security assessments, streamlines vendor questionnaires, and enables continuous validation across vendor ecosystems.
- **Risk Central** - A unified command layer that connects organizational, vendor, and ecosystem risk into a single operational view, enabling executives and security teams to understand systemic exposure and cascading dependencies.

Together, these products form a scalable digital risk workforce designed to operate at machine speed across increasingly complex environments.

Government and Defence Applications

Further to Wistr AI's news release dated December 9, 2025, the Company is continuing to advance its government and defence-focused offerings built on the same agentic AI foundation, addressing sovereign data, supply-chain resilience, and critical infrastructure protection. Additional details on this initiative can be found here:

Launch of New Corporate and Investor Websites

To support its next phase of growth, **WISR AI** has launched a redesigned corporate website at <https://wizr.ai>, reflecting the Company's platform strategy, agentic AI positioning, and expanding market focus. The corporate website will serve as the primary source for the Company's latest product information and platform updates.

In parallel, the Company has launched a dedicated investor website at <https://wisraisystems.com>, providing centralized access to corporate updates, strategic context, and regulatory disclosures, and offering investors the ability to subscribe to the Company's investor distribution list.

Outlook

"Agentic AI represents a structural shift in how organizations manage risk, and cybersecurity and supply-chain resilience are among the first domains where this shift truly matters," said **Rob Goehring, Chief Executive Officer of WISR AI**. "Over the past year, we've transformed that vision into a clearly defined product platform and go-to-market strategy. With accelerating demand for autonomous, intelligence-driven risk management, we believe 2026 is a pivotal year for WISR AI, and we're excited about the opportunities ahead."

The Company expects to provide further updates on product availability, pilot programs, and strategic partnerships throughout 2026.

About WISR AI Systems Inc.

WISR AI Systems Inc. (CSE: WISR) is a Vancouver-based technology company building agentic AI platforms that predict, prioritize, and monitor cyber and third-party risk. Its solutions help enterprises ingest and interpret real-time global signals to manage complex vendor ecosystems and supply chains more intelligently. WISR AI empowers organizations with dynamic risk visibility and actionable intelligence to support stronger cybersecurity governance and operational resilience.

Forward-Looking Information:

This news release may contain statements that constitute "forward-looking information" within the meaning of applicable securities laws, including statements regarding the plans, intentions, beliefs and current expectations of the Company with respect to future business activities and operating performance. Forward-looking information is often identified by the words "may", "would", "could", "should", "will", "intend", "plan", "anticipate", "believe", "estimate", "expect" or similar expressions and includes information regarding, among other things, economic, business, and/or competitive factors.

Investors are cautioned that forward-looking information is not based on historical facts but instead reflects expectations of the Company's management, estimates or projections concerning future results or events based on the opinions, assumptions and estimates of management considered reasonable at the date the statements are made. Although the Company believes that the expectations reflected in

such forward-looking information are reasonable, such information involves risks and uncertainties, and undue reliance should not be placed on such information, as unknown or unpredictable factors could have material adverse effects on future results, performance or achievements of the Company. Among the key factors that could cause actual results to differ materially from those projected in the forward-looking information are the following: changes in general economic, business and political conditions, including changes in the financial markets; changes in applicable laws; and compliance with extensive government regulation. This forward-looking information may be affected by risks and uncertainties in the business of the Company and market conditions.

Should one or more of these risks or uncertainties materialize, or should assumptions underlying the forward-looking information prove incorrect, actual results may vary materially from those described herein as intended, planned, anticipated, believed, estimated or expected. Although the Company has attempted to identify important risks, uncertainties and factors which could cause actual results to differ materially, there may be others that cause results not to be as anticipated, estimated or intended. The Company does not intend, and does not assume any obligation, to update this forward-looking information except as required by applicable law.
