

GOLDEN RAPTURE ANNOUNCES HIGH-GRADE GOLD RESULTS AT ITS NEWLY ACQUIRED BULLY BOY MINE

Edmonton, Alberta, July 14, 2025—Golden Rapture Mining Corporation [CSE- GLDR] is pleased to announce high-grade gold results from its recent surface sampling program at its 50% owned Bully Boy Mine patented mineral claims located directly adjacent to our Phillips Township property, Rainy River District, NW Ontario.

This sampling program was designed to test surface quartz veins in the area of the main shaft.

"We are pleased to report that all grab samples returned gold values, with the best high-grade assay result being 78.79 g/t Au or 2.78 oz/t gold."

Full results of the sampling program included:

291122	0.131 g/t Au
291123	1.090 g/t Au
291124	0.406 g/t Au
291125	0.200 g/t Au
291126	0.100 g/t Au
291127	1.811 g/t Au
291128	13.101 g/t Au
291129	78.790 g/t Au
291130	9.781 g/t Au

History of the Bully Boy Mine

The historical records of the Bully Boy Mine are limited; however, archival Ontario Ministry of Mines files indicate that gold was first discovered in 1885 and that it was mined intermittently from 1898 to 1906:

In 1900, the mining workforce consisted of nine individuals, including six miners.

In 1904, the Arizona Camp Bay Gold Mining Company assumed ownership of the property. Equipment formerly used by the neighboring Boulder Mining Company—including a hoist, compressors, boilers, and other mining machinery—was transferred to the Bully Boy site, and two shafts were developed on the property, reaching depths of 56 and 165 feet.

In 1905, New accommodations were constructed to house approximately 30 workers. A ten-stamp mill, located two miles from the mine, processed up to 18 tons of ore per day.

By 1906, the main shaft was deepened by 60 feet, and lateral drifting was initiated at the 200-foot level, and a new compressor plant was also installed. By the end of the year, the shaft had reached 216 feet, with two 100-foot drifts extending north and south.

The ore extracted from the mine was estimated to contain gold values between \$12 to \$2,000 per ton, indicating very high gold grades, considering that gold was priced at \$20/ounce in 1906. The last reported info about the property was that a new mill was added to supplement the existing ten-stamp mill, but no additional mining activity or production numbers can be found for the last 119 years.

Qualified Person

The technical disclosure in this news release has been reviewed and approved by John Archibald, P.Geo., Qualified Person as defined by National Instrument 43-101 of the Canadian Securities Administrators.

Analytical Laboratory and QA/QC Procedures

All sampling completed by Golden Rapture Mining Corporation within its exploration programs is subject to a Company standard of internal quality control and quality assurance (QA/QC) programs, which include the insertion of certified reference materials, blank materials and a level of duplicate analysis. Surface grab samples from the 2025 summer program were all sent to AGAT Laboratories. AGAT Laboratories conform to the requirements of ISO/IEC Standard 17025 guidelines and meets assay requirements outlined for NI 43-101.

About Golden Rapture Mining

Golden Rapture Mining is an exploration company engaged in the acquisition, exploration and development of high-potential assets. Golden Rapture has now been listed on the CSE for over 1 year now and 37,469,390 shares are presently issued.

Forward-looking statements include predictions, projections, and forecasts and are often, but not always, identified by the use of words such as “seek”, “anticipate”, “believe”, “plan”, “estimate”, “forecast”, “expect”, “potential”, “project”, “target”, “schedule”, “budget” and “intend” and statements that an event or result “may”, “will”, “should”, “could” or “might” occur or be achieved and other similar expressions and includes the negatives thereof. All statements other than statements of historical fact included in this release, including, without limitation, statements regarding the Company’s planned exploration programs and drill programs and potential significance of results are forward-looking statements that involve various risks and uncertainties. There can be no assurance that such statements will prove to be accurate and actual results and future events could differ materially from those anticipated in such statements. Forward-looking statements are based on a number of material factors and assumptions. Important factors that could cause actual results to differ materially from Company’s expectations include actual exploration results, changes in project parameters as plans continue to be refined, results of future resource estimates, future metal prices, availability of capital, and financing on acceptable terms, general economic, market or

business conditions, uninsured risks, regulatory changes, defects in title, availability of personnel, materials, and equipment on a timely basis, accidents or equipment breakdowns, delays in receiving government approvals, unanticipated environmental impacts on operations and costs to remedy same, and other exploration or other risks detailed herein and from time to time in the filings made by the Company with securities regulators. Although the Company has attempted to identify important factors that could cause actual actions, events, or results to differ from those described in forward-looking statements, there may be other factors that cause such actions, events, or results to differ materially from those anticipated. There can be no assurance that forward-looking statements will prove to be accurate, and accordingly readers are cautioned not to place undue reliance on forward-looking statements.
