Manager Announcements
Company Announcements Office
ASX Limited
20 Bridge Street
Sydney NSW 2000

Dear Sir,

PRESENTATION

Attached is a copy of the Company's presentation to the Metals Pages Rare Earths 2011 Conference being held in Beijing.

A copy of this presentation will also be available on the Company's website www.alkane.com.au.

Yours faithfully,
for **ALKANE RESOURCES LTD**

A handwritten signature in black ink, appearing to read 'D I Chalmers', is positioned above the printed name.

D I Chalmers
Managing Director

Dubbo Zirconia Project

NSW Australia

*An alternate source of rare
earth and zirconium
products*

Alister MacDonald and Ian Chalmers

METAL • PAGES Rare Earths 2011 Beijing 14 - 17 September

Project Evaluation

1. The Resource – the ore minerals and the host rock
2. Process Development
3. Large scale confirmation of flow sheet – pilot plant
4. Market Development
5. Environmental Assessment
6. Financing
7. Production

Location and Business Strategy

Multi commodity explorer and miner, focussed in the Central West of New South Wales, Australia Region with substantial existing infrastructure

Dubbo Zirconia Project – world class resource of zirconium, hafnium, niobium, tantalum, yttrium and rare earths

Gold production from Peak Hill mine 1996 – 2005. New gold development planned at Tomingley based upon 650,000 oz resource

Major gold discovery at McPhillamys (~3 million oz) Joint Venture with Newmont

Develop multiple operations within tight geographic area over next five years. New discoveries at Cudal (Au-Zn), Bodangora (Au-Cu) and Galwagere (Cu-Au)

DZP Infrastructure

Dubbo region pop 80,000

State power grid

State gas grid

Major mixed agriculture

Transport hub

Substantial light industry

DZP Geology

DZP Geology

East-west cross section through centre of deposit

DZP Western contact of deposit

DZP Ore Mineralogy

Zirconium Heavy REs	eudialyte armstrongite	$\text{ZrSiO}_4 \pm \text{Ca, Y, HREE, H}_2\text{O} + ?\text{U}$	$< 2\mu\text{m} - 50\mu\text{m}$
Niobium/ Tantalum	natroniobite	$\text{NaNbO}_3 + \text{Ta} + ?\text{Th}$ also NbFeSiO_4	$< 30\mu\text{m}$
Rare Earths	calcian basnaesite	$\text{Ca(REE)(CO}_3\text{)F}$	$< 100\mu\text{m}$
	rare ancylite	$\text{Sr(REE)(CO}_3\text{)H}_2\text{O}$	

The deposit does not contain zircon; pyrochlore; or columbite
All ore minerals are soluble in H_2SO_4

DZP Resources

Measured Resource

0 - 55 metres

:

35.7 million tonnes grading

1.96% ZrO_2 , 0.04% HfO_2 , 0.46% Nb_2O_5 ,
0.03% Ta_2O_5 , 0.14% Y_2O_3 , 0.75% REO
(0.9% TREO)

Inferred Resource

55 - 100 metres

:

37.5 million tonnes at similar grades

TOTAL

:

73.2 million tonnes

Resource defined by 120 RC and diamond core, mostly vertical drill holes drilled on a staggered 50m grid

Major world resource of zirconium, hafnium, niobium, tantalum, yttrium and rare earth elements

The ore contains low levels of uranium and thorium.

Production of uranium is currently prohibited in NSW

DZP Flow Sheet

Whole of ore sulphuric acid leach, solvent extraction separation and refining, with chemical precipitation to produce final products.

Unique in the world today.

The process does not produce a mineral concentrate and does not concentrate the uranium and thorium.

These waste products are neutralised and dispersed in the residue storage facilities at less concentration than in the primary deposit.

DZP Demonstration Pilot Plant 2008

Marketing - Zirconium Applications

Zirconium Industry

ZIRCONIUM MATERIALS PYRAMID

China consumes about 50% of world's zircon output.

About 30% of that zircon is converted to downstream products.

China currently produces about 90% of world's ZOC and 60% of FZA.

China has limited domestic supply of zircon and acquires from major producers (Austria and South Africa).

DZP is the only short to medium term substitute for zircon as a source of Zr

Zircon	Zirconium silicate ZrSiO_4	Primary Zr mineral source	Value
2010	1.2 million tonnes	~US\$1.6 billion	→ US\$3.2B
Zirconium products	Zirconia ZrO_2 , Zirconium chemicals, Zr metal		
2010	120,000 tonnes	~US\$0.7 billion	→ US\$1.4B

Source: TCMS

Zircon Supply Demand Price

Zircon supply and demand: 1990-2020f

Zircon prices have escalated during 2010 and 2011 to >US\$2,300/t

Zircon price and supply will have a major impact on the cost and availability of zirconium chemicals, zirconia and zirconium metal. China and Japan have declared zirconium a strategic metal.

Source: TZMI

DZP Zircon - Zirconium Chemicals Pricing

PRODUCT	ZrO ₂	Q2 2010 US\$/T	Q1 2011 US\$/T	Q2 2011 US\$/T
Zircon (producer/trader) (100% ZrO ₂ basis)	65% 100%	\$900 - \$1,150 (\$1,440 - \$1,840)	\$1,500 - \$2,100 (\$2,400 - \$3,360)	\$1,700 - \$2,750 (\$2,720 - \$4,400)
ZOC (zirconium oxychloride) (100% ZrO ₂ basis)	36% 100%	\$1,350 - \$1,450 (\$3,750 - \$4,025)	\$2,300 - \$2,600 (\$6,400 - \$7,200)	\$3,600 - \$4,000 (\$10,000 - \$11,111)
ZBS (zirconium basic sulphate) (100% ZrO ₂ basis)	33% 100%	\$1,770 \$5,360	\$3,000 \$9,100	\$6,000 \$18,200
ZBC (zirconium basic carbonate) (100% ZrO ₂ basis)	40% 100%	\$2,100 \$5,250	\$3,400 \$8,500	\$5,400 \$13,500
Fused Zirconia	98.50%	\$2,900 - \$3,100	\$4,100 - \$4,400	\$6,000 - \$7,000
Chemical Zirconia	99.50%	\$4,200 - \$4,400	\$7,200 - \$7,500	\$10,000 - \$12,000
Chemical Zirconia	99.90%	\$5,300 - \$5,500	\$8,500 - \$10,500	\$12,000 - \$15,000

Marketing - Niobium Applications

Structure of Niobium Industry

CBMM in Brazil produces about 90% of world demand.

Early 2011 a Japanese Korean consortium acquired 15% of CBMM for US\$1.95B

September 2011 a Chinese consortium acquired 15% of CBMM for US\$1.95B

Ferro-niobium FeNb Niobium pentoxide Nb₂O₅ Value
2010 85,000 tonnes ~US\$2.0 billion → US\$3B

Source: TZMI

Niobium Demand and Price

Niobium 2010
 (Ferroniobium units)
consumption
 ~85,000t – 90% Brazil
Estimate for 2012
 ~100,000t

Ferroniobium price spiralled to US\$60/kg in March 07 and is currently around US\$40 - 45/kg

Sources: IAMGOLD / TZMI

Marketing - REE Applications

Rare Earth Supply - Demand

Will rare earth supply demand be in balance from 2015 with Lynas and Molycorp producing?

High probability for LREE but not HREE

The DZP has a 75% LREE - 25% HREE split which gives it a demand advantage

Separated rare earth products
2010 130,000 tonnes

Value
~US\$2.0 billion → US\$6.5B??

Source: IMCOA

Financial – DZP Product Output and Revenues

Base case of 400,000 tonnes pa and expanded 1 million tonnes pa of ore processed

Potential Production and Revenues				
Product	400,000 tonnes per annum		1,000,000 tonnes per annum	
ZBS, ZOH, ZBC, ZrO ₂	6,000tpa	US\$42M*	15,000tpa	US\$105M*
Nb -Ta concentrate	1,400tpa	US\$42M*	3,500tpa	US\$105M*
LREE concentrate	1,415tpa	US\$57M**	3,540tpa	US\$142M**
YHREE concentrate	425tpa	US\$24M**	1,070tpa	US\$63M**
AVERAGED TOTALS	9,240tpa	US\$160 - 170Mpa	23,110tpa	US\$400 - 450Mpa
*Zr @ US\$7.00/kg and Nb @ US\$30/kg as intermediate average prices ** Price average of Q4 2010 for REO basket and assumes concentrate at 70% of total separated REO value REO output based on average 50% recovery				

Full operating and capital costs will be detailed in the feasibility study nearing completion

- ZBS = zirconium basic sulphate; ZOH = zirconium hydroxide; ZBC = zirconium carbonate Equivalent ~99% ZrO₂ + HfO₂
- Nb-Ta concentrate = ~70% Nb₂O₅ + Ta₂O₅ calcined basis ▪ LREE = La, Ce, Nd, Pr ▪ YHREE = Y, Gd, Dy, Tb

DZP Marketing Developments

Three MOUs completed that should take all of the 1Mtpa zirconium output.

	Zirconium	Niobium	LREE	YHREE
100%	US\$125 – 150M			
75%				
50%		In Progress	In Progress	In Progress
25%				
0%				

Several other MOUs in discussion that will cover all niobium and rare earth outputs.

Resource is capable of supporting at least 100 year open pit life

DZP Strategic Significance

Majority of “downstream” zirconium products are derived from zircon, whose output is governed by ilmenite/rutile from mineral sands mining operations.

DZP is the only short to medium term substitute for zircon as a source of Zr

China dominates downstream zirconium business at ~90% but feed is zircon.

Niobium production dominated by one company, CBMM in Brazil with 90% of market.

Rare earth and yttrium production dominated by China (95%). DZP offers new source particularly for important Y and HREE.

Production costs are spread across the four metal outputs – zirconium (hafnium), niobium (tantalum), light rare earths and yttrium-heavy rare earths.

Project located in region with very favourable infrastructure and legislative framework, both at a State and Federal level.

The DZP provides an alternative and strategic source for a number of important metals, and is capable of producing for hundreds of years from one ore body.

Competent Person

The information in this presentation that relates to mineral exploration, mineral resources and ore reserves is based on information compiled by Mr D I Chalmers, FAusIMM, FAIG, (director of the Company) has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as Competent Person as defined in the 2004 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Ian Chalmers consents to the inclusion in the presentation of the matters based on his information in the form and context in which it appears.

DZP Resource Statement

Dubbo Zirconia Project

Toongi Deposit	Tonnage (Mt)	ZrO ₂ (%)	HfO ₂ (%)	Nb ₂ O ₅ (%)	Ta ₂ O ₅ (%)	Y ₂ O ₃ (%)	REO (%)	U ₃ O ₈ (%)
